A work of obviously great public utility, not confined to the legal profession, is Mr. Frederic J. Stimson's 'American Statute Law,' about to be issued by Charles C. Soule, Boston. It is a systematic comparison and statement "of the laws of all the States on every subject pertaining to the persons and property of citizens." Its value to legislators can hardly be overrated. The prospectus says: "It is surprising to find how few changes are made in substantive law by the annual or biennial legislatures. It has taken a year to pass this volume through the press, and yet the addenda rendered necessary by the new session-laws published during that period cover only two octavo pages." A biennial supplement is contemplated.

The New Church Board of Publication in this city issue a prospectus of the first edition in English of Swedenborg's 'De Anima,' translated and edited by Frank Sewall, A.M.

The full title of the autobiography of C. M. Clay which we announced last week reads: 'The History of his Thirty Years of Contention for Constitutional Liberty and Equal Rights under the Law of All the People of America, as Presented in the Memoirs, Writings, and Speeches of Cassius Marcellus Clay, of Kentucky,' etc. (Cincinnati: J. Fletcher Brennan & Co.). The materials for entertainment and instruction in Mr. Clay's remarkable career are such as ought to make a highly interesting work.

Part of Mr. Clay's reminiscences will be ministerial—from Russia. J. B. Lippincott Co.

have in press 'Consular Reminiscences,' by G. Henry Horstmann, late United States Consul at Munich and at Nuremberg. Also, 'Transactions and Changes in the Society of Friends,' by Joshua Maule.

Henry Holt & Co. will publish shortly 'The Romance of the Moon,' sixteen pen-and-ink drawings by Mr. J. A. Mitchell, artist-editor of *Life*.

An American edition of George Rae's 'Country Banker: His Clients, Cares, and Work'; and the 'Boat Sailer's Manual,' by Lieut. Edward F. Qualtrough, of the Navy, are promised by Charles Scribner's Sons.

'Thackeray as an Artist,' by James Schönberg, with seven characteristic illustrations after Thackeray, both colored and uncolored, is in the press of William Evarts Benjamin, 744 Broadway.

Roberts Bros. will publish shortly 'Glimpses of Three Coasts,' by the late Helen Hunt Jackson; 'Prince Otto,' by Robert Louis Stevenson; Lord Ronald Gower's 'Last Days of Marie Antoinette,' and 'Golden Mediocrity,' a novel by Mrs. Eugénie Hamerton, wife of the well-known art critic.

D. Lothrop & Co., Boston, announce 'A New Departure for Girls,' by Margaret Sidney; and 'With Reed and Lyre,' by Clinton Scollard.

The late Henry Stevens, according to the *Athenæum*, had in press at the time of his death 'Recollections of Mr. James Lenox, of New York.' It will still be printed, with portraits of author and subject, by Mr. H. N. Stevens, who succeeds to his father's business.

McCarty's 'Annual Statistician' for 1886 (San Francisco: L. P. McCarty; New York: F. E. Grant), though containing only a few more pages than last year's issue, appears to be a good deal larger, since it is printed on heavier paper. The style of binding is different and handsomer, and altogether the volume presents a much improved appearance. The contents are of the same general character as heretofore, the edition of 1886 quite maintaining the high reputation of the 'Statistician' as a useful and convenient book of reference. The returns of population in those States which in 1885 took a State census are fuller and more complete than those contained in the other annuals. In nine States there were enumerations in 1870, 1875, 1880, and 1885. These were Iowa, Kansas, Massachusetts, Michigan (in 1874 and 1884), Minnesota, Nebraska, New Jersey, Rhode Island, and Wisconsin. In 1880 these nine States had a little less than one-fifth the population of the country. Between 1870 and 1875 the rate of increase was 18.65 per cent., from 1875 to 1880 it was 21.39 per cent., and from 1880 to 1885 18.28 per cent. So far as these States may be taken as a fair sample of the whole country, it would appear that the aggregate population is growing a little more slowly than during the last decade.

One of the most curious volumes of the census of 1880 is that just issued from the Government Printing Office, viz., 'The United States Mining Laws,' compiled under the direction of Clarence King. The State and Territorial Laws occupy but 243 pages out of nearly 700. The rest are occupied with local mining laws and regulations, a "mine" of instruction as to the way in which the rude and heterogeneous communities drawn together by the precious-metal fever found a *modus vivendi*. The local nomenclature is highly amusing, and is conveniently displayed in the index. Big Bug Mining District, Drytown, Con Cow, Poppysquash, Sebastipool, Hungry Creek, Little Humbug Creek, Lower Humbug, Shirttail, Consolidated Ten Mile, Helltown, Jack Rabbit, Devil's Gate and Chinatown, Jackass and Poor Man's Creek, Rising Sun, Rough and Ready, are some of the oddest. Greeley Flat, Grizzly Flat, and Sucker Flat occur, but Bret Harte's Poker Flat is unrecorded. The transcripts from the minutes of miners' meetings bring one very close to the organization of primitive society on the Pacific Slope.

If M. Clédat's edition of the 'Chanson de Roland' (Paris: Garnier; Boston: Schoenhof) did not present itself as a book for schools, an *édition classique*, it might deserve high praise. The editor offers an entirely new text. He holds that the song of Roland is of *French* not of Norman or Anglo-Norman origin, and in accordance with this theory he changes the hitherto received versions so as to make of the poem as pure a specimen as he can give of the old *Langue d'oïl*, of the dialect of the Île de France. Thus *empereire* become *emperédre; Carles, castel, Blancandrin* becomes *Charles, chastel, Blanchandrin*; *ad ested* is changed to *at estet*, etc. The result is a curious, and to a student of old French a very interesting, reconstruction or rather transposition of the old poem, but not at all the 'Chanson de Roland' as it should be presented to a beginner. There is an instructive preface, in which, however, the editor presupposes too little acquaintance with Latin. The glossary at the end is excellent. Everything is well explained, with numerous allusions to modern French. It is the best partial vocabulary of the *Langue d'oïl* that has yet been made, although a few of the etymologies might be contested; but owing to its elementary character there is nothing better that could be recommended to a beginner.

Viewed both as a French traveller and a writer, the author of 'L'Empire Russe en 1885' (Paris: Dreyfous; New York: F. W. Christern), M. G. Combes de Lestrade (or C. Combes de Lestrade, or Combes de l'Estrade, or Combes Lestrade; for we find all these forms on the covers and first pages of the volume), is a real phenomenon. He passed only a very short time—possibly a few months—in the great empire to which he devotes his book. He had "forgotten the once known Leroy-Beaulieu and Mackenzie Wallace," and gives us more sweeping and striking generalizations than either of those authors, after many years of the closest study, ever dared to broach on the same subject. A part of his generalizations he seems to have drawn from talk with fair representatives of that wonderful being, "la femme russe," in fair Paris, and a part from intuitive sources. All the book lacks is detail, evidence of observation, good sense, wit, style, and grammar. The following are its first sentences: "Cet ouvrage est sans prétentions. Une seule peut-être: c'est d'être vrai et encore. . . . Ce serait un si grand mérite.—Disons d'être consciencieux. J'ai laissé à la frontière tous mes sentiments républicains. . . ." And these are the last: "Deux Russes, Skobeleff et Gortschakoff, deux Français, Gambetta et Chanzy, sont morts trop tôt. Leur souvenir survit, leur paroles subsistent. Nous les prenons, ces paroles, nous les crions, et elles deviendront le chant de guerre qui nous mènera au combat." This ardent anti-German sentiment may palliate in French eyes many a slip of diction and punctuation; but the sins are too many.

Since commenting on the members of the Goethe Gesellschaft (*Nation* No. 1084) a revised list has come to hand which brings their number in America up to 17, a better "shine" than England's. New York State furnishes 7; Ohio, Wisconsin, and Massachusetts 2 each; Illinois, Connecticut, Missouri, and Virginia 1 each. (Ithaca and New York city number 3 each; Boston none, unless Wellesley College should be credited to Boston.) Nine names suggest American, 8 German extraction, and 8 members are college professors. A copy, by the way, of the first report of the managers will be sent on application to B. Westermann & Co., in this city.

Nine new instalments of the abridged 'Allgemeine Weltgeschichte' of Flathe, Hertzberg, Justi, Philippson, etc. (Westermann & Co.) embrace the thirty-seventh. They conclude the history of Rome down to the division of the Empire in 395, and review the whole course of it in a chronological table. The illustrations continue plentiful, fresh, and of the best quality, most of the engravings of buildings and of statuary being from photographs. Some colored plates are admirable.

From the same firm we have parts 6-10 of the 'Geschichte der deutschen Kunst,' which drive a three-in-hand of Painting, Sculpture, and Architecture (by Janitschek, Bode, and Dohme respectively), with a fine array of woodcuts and chromolithographs.

Of the 'Allgemeine Naturkunde' (Westermann) parts 18-24 are on our table, wholly devoted to man, his development, nourishment, etc. (by Dr. Johannes Ranke), and rich in the most authentic representations in black and white and in color.

The third volume of the fourth edition of 'Meyers' Konversations Lexikon' (Westermann) is now completed, closing with the name Chimbote. The geographical articles are, as usual, full and up to date, Bulgaria furnishing an example. Notable among the maps are those of Brandenburg, Brunswick (duchy and city), Bremen, Chemnitz, Budapest; the firebrand provinces Bosnia and Herzegovina, with Montenegro and parts of Servia and Albania, from Belgrade to Dulcigno. From the article Book Trade we learn that the unfinished work of the late Dr. Friedrich Kapp, on the German book trade, is in the press. Great American names are not numerous in the portion of alphabet covered by these instalments, but the omission of Aaron Burr is a failure of proportion only magnified by the insertion of "Artemus Ward." Fame is again illustrated by the fact that this lesser Browne and John Brown are each designated as "bekannter"; and while the bibliography of the humorist is carefully indicated, not a single reference is given for the hero of Harper's Ferry. Mr. G. W. Cable is admitted to the ranks. The large space allowed to Byron is significant of his lingering hold on the Continental imagination. His five columns contrast with the three given to Calvin and Cervantes, or the two to Burke and Carlyle, respectively.

The larger Brockhaus (L. W. Schmidt), in its thirteenth edition, touches *Raum* in Part 188. Poland, Portugal, and Prussia are the leading political articles. The list of planets is to be remarked. The chief maps are one of the European rainfall, another of the South Polar region, and a third of East and West Prussia. There is a beautiful colored plate of edible mushrooms. The editor has overlooked in his Poe bibliography the latest and best life, by Mr. G. E. Woodberry.

The lesser Brockhaus in its forty-fifth number ends with Northumberland. Here we have the poisonous mushrooms in their true colors, and maps of Spain and Portugal and of Switzerland —the latter too fine for the unaided eye.

The German and English collections of short tales published every three weeks by L. Schick, Chicago, and known as the "Collection Schick" and the "Overland Library," already require a shelf to themselves. Paul Heyse, K. E. Franzos, G. Droz, Rudolf and Paul Lindau, J. Rodenberg, E. Eckstein, W. Jensen, Sacher-Masoch, Turgeneff, Fanny Lewald, are some of the authors represented in one or both collections. When in both, the learner and the teacher of German sometimes have the same story in the two languages—a practical convenience. The argument in favor of the use of Roman type is reinforced by the contrast in legibility between the German and the English series.

Prof. Willard Fiske has printed at Florence for his own convenience a 'Hand-book of Petrarch Editions in the Florentine Public Libraries.' A

list of special Petrarch bibliographies concludes this *brochure* of 12 pp. 8vo, in which one remarks the small proportion of works obelized to show that they are not contained in Mr. Fiske's own extraordinary collection.

The clerical press in Rome has made a great outcry against the municipality for its destruction of the ancient monuments in its endeavor to extirpate the squalor and pestilence of certain quarters. This has been incautiously caught up in Germany by Herman Grimm and Gregorovius, in the *Rundschau* and the *Allgemeine Zeitung*. The *Popolo Romano* and *Italie* have made effective replies, both in direct negation, and in showing what the boasted conservatism of the Papacy did in allowing these monuments to be encumbered and built over for base uses. A large part of the labor of the city government has been expended in undoing this very neglect. Grimm's article, however, is translated in full in a supplement to the Roman *Rassegna* of March 21.

A Committee of the American Society for Psychical Research on Apparitions and Haunted Houses consists of Josiah Royce, T. W. Higginson, and F. E. Abbot, Cambridge, Mass.; Morton Prince, M.D., John C. Ropes (No. 40 State Street), and Roland Thaxter (No. 98 Pinckney Street), Boston; and Woodward Hudson, Concord, Mass. They desire authentic communications concerning the apparitions of absent or deceased persons; and any member of the Committee will, on application, send a circular of instructions as to the kind of evidence desired—*i. e.*, as to what points should be certified.

New circulars of the Egypt Exploration Fund, with particulars concerning the labors past and future in the Delta region, may now be had on application to the Rev. W. C. Winslow, No. 429 Beacon Street, Boston, who, as honorary treasurer of the fund for the United States, will be glad to receive contributions towards the above object.

—No. 12 of Mr. J. H. Hickcox's Monthly Catalogue of United States Government Publications (906 M St., W., Washington, D. C.) completes the first volume; and not with the customary alphabetical list alone for the current session of Congress up to January 1, 1886, but with an index to the volume. For the first time, therefore, in the history of the country its public documents are grouped, classified, and made accessible. This simple statement conveys all that need be said to the intelligent, yet it is discouraging to learn that Mr. Hickcox's admirable and self-denying labors have not met with adequate support, even from the public libraries. He will go on, however, both continuing and improving his work. The truth is, that he is really the Government's servant, and should be officially recognized as such. The task he has undertaken properly devolves on the Government, and were a place found for Mr. Hickcox in one of the departments (say in the Bureau of Education), with an adequate salary, it would be an economy, since his Catalogue furnishes an indispensable basis for the control of our extravagant and wasteful publishing. In time there might grow out of this a proper system of selling the products of the Government Printing Office.

—The autobiography of literary men is interesting because it satisfies a justifiable popular curiosity in regard to those persons who achieve eminence and become public characters, or because it affords valuable lessons to the young who may be ambitious to try a similar career. Whether the department which *Lippincott's* for April opens, under the title of "Our Experience Meetings," is likely to prove useful in either way, is doubtful; but the first instalment does not rise above the level of personal gossip by the writers about themselves. The reporters will find their occupation gone if this sort of thing is to go on and the Court Circular of Scribbledom is to be written by the lions of the day. The authors who march serenely to the magazine confessional this month are Julian Hawthorne, Edgar Fawcett, and Joel Chandler Harris. The hour of their formal biographies is still distant, and at present they can confide only the history of their start, and their attitude toward the profession. Mr. Hawthorne was early warned off by his father, and took up the pen to support his family because he found it a means of getting ready money; he writes lightly, not to say cynically, and regards the matter as a kind of joke. Mr. Harris flatly denies that he is a literary man, more than hints that he would not be if he could, and looks on his rabbit stories as a freak of an otherwise well-regulated journalistic genius. But no budding poet ever took himself more seriously than Edgar Fawcett: he tells of his novels, etc., in the copy-books of his childhood, and of his later poems and novels; he declares himself well satisfied with results, both literary and pecuniary; poetry is his "most authentic gift," but he can do a novel with cleverness, and he may give us another drama, though the time for American drama, he suggests, has perhaps not arrived. He is evidently troubled by the "acid" critics who are "ignorant of so-called aristocratic New York doings"; and the sentences with which from time to time he switches these gad-flies off from his Pegasus are delightfully confidential. But really ought not some one to intimate that autobiography in men under forty is probably an impertinence?

—The *Century*, besides its usual variety of fiction, travel, and poetry, has two articles on public questions. One, on the all-absorbing topic of arbitration in the disputes of industry, is of considerable value merely by its clear and brief exposition of the modes of the foreign tribunals, especially the French, which have been long established and can be studied in their actual working. The method of arbitration is not a new idea, but, on the contrary, is just one of those matters about which we may profitably try to learn from "abroad." The sketch of Sir Titus Salt's labor village is effectively drawn, and makes a telling conclusion to a plea which errs only by its breadth. Rev. Washington Gladden, in another article, attempts to show that a reform in education is the pressing need; he would have it made by introducing industrial training and moral instruction, and he defends both on the ground of Christianity. The topics are old, but are treated in a fresh and forcible way. In regard to "moral instruction," it is most doubtful whether the question can be put on the ground of practical debate before a text-book is offered which shall remove the distrust of many as to whether morals can be presented to the young in a purely secular and prudential form; and at the same time the second question would be tested, as to whether the advocates of the reform would really be satisfied by a scientific compendium in which morals should be separated from the religious motives of conduct. It is to be noted that Mr. Gladden does not think direct religious instruction desirable under present circumstances.

—The early New England worthies figure largely in volume 6 (Bot-Bro.) of Leslie Stephen's 'Dictionary of National Biography' (Macmillan): John Brereton, Gosnold's companion in the voyage to Cape Cod and shortlived settlement in Buzzard's Bay in 1602 (not 1603, as here); Elder Brewster, of the *Mayflower*, and his companion, William Bradford; and Anne Bradstreet, poetess and the ancestor of poets in Dana and Holmes, reckoning also Channing among her posterity. William Bradford, the printer, is found between the same covers. All the foregoing belong rather to the New than to the Old World. Among military and naval notables associated with this country are Braddock; the more fortunate Indian fighter, Henry Bouquet; General Brock, the victor over General Hull; Sir Philip Broke, whose *Shannon* captured the *Chesapeake* in our waters: and the two brothers, natives of Rhode Island, Captain Edward Pelham Brenton, R. N., and Vice-Admiral Sir Jaleel Brenton. The actors, Gustavus V. Brooke and John Brougham, belong in part—the latter in great part—to the American stage. Joseph Bramah's cisatlantic relations consisted in having his famous lock picked by the Yankee Hobbs in 1851. One name is missing from the Anglo-American list which well merited a place there, and, if there is to be a supplement to this Dictionary, should certainly not be overlooked again. We mean the Rev. George Bourne, who brought to his adopted country a thorough hatred of slavery, and first on either side of the Atlantic demanded in print its immediate abolition. Pioneers and originators to be remarked in the strictly British portion are Matthew Boulton, partner with Watt in perfecting the steam-engine; George Bradshaw, the inventor of railway guides; Alderman John Boydell, whose illustrated Shakspere was the first great undertaking of the kind by English artists; Lord Brougham, founder of the Society for the Diffusion of Useful Knowledge; Baron Berners, first translator of Froissart into English; and Henry Boyd, who first turned Dante into English verse (1785). The notice of Brougham is kindly; that of Dr. Bowring more sympathetic. Leslie Stephen's account of Charlotte Brontë comprehends the entire family, and treats at length of the mad Branwell, in order to put at rest the scandals which he propagated. A critical estimate of the author of 'Jane Eyre' is not attempted. Bracton is the chief legal luminary in this volume, his birth-place (like the spelling of his name) being still undetermined. Science is represented by Robert Boyle, a "philosopher" in the older sense of the term; by James Bradley, the astronomer; by Richard Bright, the discoverer of the too familiar disease which bears his name. Anne Bracegirdle and John Braham stand for the dramatic and lyric stage. Thomas Bowdler it was whose Shaksperian expurgations suggested to Gen. Perronet Thompson the term to *bowdlerize*. Lord Mayo's is one of the latest political names we meet with, and fresher still is that of Charles Bray, the friend of George Eliot.

—"A Non-Political Scientist" writes us:

"The article about Huxley in the *Nation* of April 8 is capital; but can't you get the writer to match it by the 'scientific politician,' taking the last words of wisdom of the G. O. M. on the subject of Genesis in the *Nineteenth Century*?"

—The north coast of the South American continent is inhabited by a number of tribes belonging to the so-called Carib family. This race also found scattered to a considerable distance in land, as on the Lower and Middle Orinoco; and in the Goajira peninsula one of the most barbaric Carib tribes has for some time made travelling dangerous or impossible. (See the *Nation*, No. 1077.) There is an isolated tract of mountains, rising up to 6,000 metres, in the northern part of the Colombian States, the Sierra Nevada de Santa Marta, around which are gathered several distinct populations of the Carib stock hardly known to this day except by name. Among these we have the Köggaba, the Chimila, probably mixed with the historical Tairones, the Bintakua, and the Guamaka, who live at Marocasa and El Rosario. The presbyter Rafael Celedón, favorably known by his Goajira grammar and dictionary, recently visited the above tribes for scienti-

fic purposes. Though some of them did not receive him amicably, he succeeded in gathering sufficient material to publish a grammar, catechism, and vocabulary of the Köggaba tongue, which in its phonetics recalls at once the Goajira. His work has been published this year by Maisonneuve & Co., Paris, with introduction and text in Spanish. The Vocabulary forms two parts: Spanish-Köggaba and Köggaba-Spanish, each containing about 1,250 vocables. The sixteen concluding pages of the volume are filled with comparative vocabularies of Guamaka (of which Celedón had previously published a short vocabulary), of Chimila, and of Bintakua. Even readers who are not linguists will find themselves deeply interested in the historic and ethnologic introduction. The novelty of the sketches taken in a country so little known and visited is as charming as the graphic delineation of the Indian tribes studied by the author, who presides over an educational establishment at Santa Marta.

—Joseph Victor von Scheffel, whom death relieved from intense sufferings on April 10, was unquestionably the most popular German poet of this generation. His popularity was evinced not only by the extraordinary success of his "Trompeter von Säckingen"—which has passed through seventy-seven editions—but by the great number of disciples and imitators whom his muse called forth, so that his influence on rising German poets is perhaps only inferior to that of Heine. Scheffel revived with astonishing success the interest in the days and lays of the minnesingers which was always supposed to linger in every German breast, but which did not become vital until his own songs wove past and present into a charming reality. And though "working a vein"—a proceeding generally fatal to true poetry—he often touched the heart of Germany as only Uhland's ballads did before him. His "Gaudeamus" and other songs made him the idol of German universities, while the local color which he infused not only into his "Ekkehard" and other pseudo-mediæval poems but also into his antediluvian and prehistoric humor, testified to the range of his scholarly attainments. Like Uhland, Geibel, and Bodenstedt, at once a scholar and a poet of the people, Scheffel was manly and liberal in things poetical, political, and religious. He was one of the most gifted sons of Baden, which occupies so enviable a position among German States, and which, at the approaching jubilee of the Heidelberg University, would have honored him according to his deserts. He had just celebrated his sixtieth birthday amidst the congratulations of all Germany.

—In a recent number of the *Zeitschrift für Völkerpsychologie und Sprachwissenschaft*, Steinthal, with his usual vigor, decides in favor of Greek against Latin. If the youthful generation is overburdened, and one or the other must go, away with the Latin. What is the good of Latin? he asks. The jurist, if he needs it, can learn it at the university; and not every jurist needs it. The theologian does not need it; least of all, the physician. There is no substitute for Greek. Translations from the Greek are only enjoyable to those who know something of Greek, something of Hellenism. We are all barbarians—the Romans as well as ourselves. There is only one road to humanity, and that leads through Greece, as there is but one road to religion, and that leads through Palestine. This is Wilhelm von Humboldt's creed, and Steinthal repeats it. Steinthal does not undertake to decide for or against the thesis that the Germans have a congeniality with the Greeks. If the congeniality is denied, then the study of Greek is so much the more necessary. Not that every numskull is to study Greek, but the upper ten thousand, the upper hundred thousand, must be impregnated with Greek. One cannot experiment with history, and no one can tell what the higher life of Germany will be like when Greek vanishes. Steinthal believes that there will be a condition of absolute unculture, and that Germany will lose its high rank in physics and chemistry, its primacy in physiology, when the German gymnasium and German philosophy cease to be. If Steinthal had looked back into the history of the Middle Ages, and watched the attitude of the mediæval mind toward the unknown background of such culture as was then possessed, he might have found some experimental evidence for his thesis, which, with all its exaggeration, carries with it a certain lesson. Every element of culture that has become national is indefeasible. The only question is the question of proportion.

SCHUMANN AS MIRRORED IN HIS LETTERS.

Jugendbriefe von Robert Schumann. Nach den Originalen mitgetheilt von Clara Schumann. Leipzig: Breitkopf & Härtel. 1886. Pp. 315.

Clara Schumann, the most gifted woman that has ever chosen music as a profession, and who, at the age of sixty-seven, still continues to be among the most fascinating of pianists, has placed the musical world under additional obligations by issuing this collection of private letters, written by Schumann between the ages of eighteen and thirty (1827–40), partly to her, partly to his mother, and other relatives, friends, and business associates. She was prompted to this act not only by the consciousness that there are many literary gems in the correspondence which should not be lost to the world, but by the thought that more is generally known of Schumann's eccentricities than of his real traits of character. Inasmuch as a wretched script was one of the most conspicuous of these eccentricities, it is fortunate that his wife lived to edit his letters; but even she, though familiar with his handwriting during many years of courtship and marriage, is not infrequently obliged to interpolate a conjectural word. Schumann had a genuine vein of humor, which he reveals in his correspondence as in his compositions and criticisms. He was aware that his manuscript was not a model of caligraphy, but, on being remonstrated with, he passionately declared he could not do any better, promising, however, sarcastically that, as a predestined diplomat, he would keep an amanuensis in future. And on page 245 begins a long letter to Clara which presents a curious appearance. Every twentieth word or so is placed between two vertical lines, regarding which the reader is kept in the dark until he comes to this postscript: "In great haste, owing to business affairs, I add a sort of lexicon of indistinctly written words, which I have placed within brackets. This will probably make the letter appear very picturesque and piquant. The idea is not so bad. Adio, clarissima Cara, cara Clarissima." Then follows the "lexicon" of twenty words, including his own signature.

Although, in a semi-humorous vein, Schumann repeatedly alludes in these letters to the "foregone conclusion" that they will some day be printed, there is hardly any indication that such a thought was ever in his mind while writing them. They are, in fact, full of confidences and confessions, some of which he could not have been very ambitious to see in print; such as his frequent appeals for "more ducats," during his student days, and his sophistically ingenious excuses for needing so much money, placed side by side with his frank admission that he had no talent for economy, and was very fond of cigars, wine, and especially travelling. In one of the most amusing of the letters, he advances twelve reasons why his mother should send him about $200 to enable him to see Switzerland and Italy. As a last, convincing argument he gently hints that it is very easy for a student in Heidelberg to borrow money at 10 per cent. interest. He got the money and enjoyed his Swiss tour, mostly on foot and alone; but in Italy various misfortunes overtook him—he fell ill, his money ran out, and he was only too glad to return to Heidelberg in the same condition as when he had first arrived there, on which occasion the state of his purse compelled him to make the last part of the journey from Leipzig on foot. On this trip he enjoyed that unique emotional thrill of the German, the first sight of the Rhine, with which he was so enchanted that he went to the extreme forward end of the deck, smoking a good cigar given him by an Englishman: "Thus I sat alone all the afternoon, revelling in the wild storm which ploughed through my hair, and composing a poem of praise to the Northeast wind"—for Schumann often indulged in poetic efforts, especially when inspired to flights of fancy by his favorite author, Jean Paul.

At Heidelberg, which he called "ein ganzes Paradies von Natur," he spent one of the happiest years of his life. Student life at this town he thus compares with Leipzig:

> "In and near Heidelberg the student is the most prominent and respected individual, since it is he who supports the town, so that the citizens and Philistines are naturally excessively courteous. I consider it a disadvantage for a young man, especially for a student, to live in a town where the student only and solely rules and flourishes. Repression alone favors the free development of a youth, and the everlasting loafing with students greatly limits many-sidedness of thought, and consequently exerts a bad influence on practical life. This is one great advantage Leipzig has over Heidelberg, which, in fact, a large city always has over a small one. . . . On the other hand, Heidelberg has this advantage, that the grandeur and beauty of the natural scenery prevent the students from spending so much of their time in drinking; for which reason the students here are ten times more sober than in Leipzig."

Schumann himself, as we have said, was fond of a glass of good wine. On his first journey at Prague, he tells us, the Tokay made him happy. And in another place he exclaims, "Every day I should like to drink champagne to excite myself." But, though of a solitary disposition, he did not care to drink alone, for "only in the intimate circle of sympathetic hearts does the vine's blood become transfused into our own, and warm it to enthusiasm." Schumann's special vice was the constant smoking of very strong cigars; nor does he appear to have devoted to gastronomic matters the attention necessary to nourish such an abnormally active brain as his. At one time he lived on potatoes alone for several weeks; at another he saved on his meals to get money for French lessons; and although he took enough interest in a good *menu* to copy it in a letter, he repeatedly laments the time which is uselessly wasted in eating. Such a policy, combined with his smoking habit, doubtless helped to shatter his powers, leading finally to the lunatic asylum and a comparatively early death.

His frequent fits of melancholy may also perhaps be traced in part to these early habits. Though probably unacquainted with Burton, he held that "there is in melancholy sentiments something extremely attractive and even invigorating to the imagination." Attempts were frequently made by his friends to teach him more sociable habits. Thus, at Leipzig, "Dr. Carus's family are anxious to introduce me to innumerable families — 'it would be good for my prospects,' they think, and so do I, and yet I don't get there, and in fact seldom go out at all. Indeed, I am often very leathery, dry, disagreeable, and laugh much inwardly." That his apparent coldness and indifference to his

neighbors and friends were due chiefly to his absorption in his world of ideas, and his consequent want of sympathy with the artificial usages of society, becomes apparent from this confession, written to Clara in 1838:

"I should like to confide to you many other things regarding my character—how people often wonder that I meet the warmest expressions of love with coldness and reserve, and often offend and humiliate precisely those who are most sincerely devoted to me. Often have I queried and reproached myself for this, for inwardly I acknowledge even the most trifling favor, understand every wink, every subtle trait in the heart of another, and yet I so often blunder in what I say and do."

In these melancholy moods nature was his refuge and consolation. He objected to Leipzig, because there were no delights of nature—"everything artificially transformed; no valley, no mountain, where I might revel in my thoughts: no place where I can be alone, except in the bolted room, with the eternal noise and turmoil below." Although he had but a few intimate friends, he was liked by all the students, and even enjoyed the name of "a favorite of the Heidelberg public." One of his intimate friends was Flechsig, but even of him he paradoxically complains that he is too sympathetic: "He never cheers me up; if I am occasionally in a melancholy mood, he ought not to be the same, and he ought to have sufficient humanity to stir me up. That I often need cheering up, I know very well." Yet he was as often in a state of extreme happiness and enjoyment of life and his talents. He even, on occasion, indulged in students' pranks. On his journey to Heidelberg he induced the postillion to let him take the reins: "Thunder! how the horses ran, and how extravagantly happy I was, and how we stopped at every tavern to get fodder, and how I entertained the whole company, and how sorry they all were when I parted from them at Wiesbaden!!" At Frankfort, one morning, he writes: "I felt an extraordinary longing to play on a piano. So I calmly went to the nearest dealer, told him I was the tutor of a young English lord who wished to buy a grand piano, and then I played, to the wonder and delight of the bystanders, for three hours. I promised to return in two days and inform them if the lord wanted the instrument; but on that date I was at Rüdesheim drinking Rüdesheimer." In another place he gives an account of "a scene worthy of Van Dyck, and a most genial evening" he spent with some students at a tavern filled with peasants. They had some grog, and at the request of the peasants one of the students declaimed, and Schumann played. Then a dance was arranged. "The peasants beat time with their feet. We were in high spirits, and danced dizzily among the peasant feet, and finally took a touching farewell of the company by giving all the peasant girls, Minchen, etc., smacking kisses on the lips."

Were women, like men, afflicted with retrospective jealousy, Schumann's widow, in editing these letters, would have received a pang from many other passages revealing Schumann's fondness for the fair sex. He allowed no good-looking woman to pass him on the street without taking the opportunity to cultivate his sense of beauty. After his engagement to Clara he gives her fair warning that he has the "very mischievous habit" of being a great admirer of beautiful women and girls. "They make me positively smirk, and I swim in panegyrics on your sex. Consequently, if at some future time we walk along the streets of Vienna and meet a beauty, and I exclaim, 'Oh, Clara! see this heavenly vision,' or something of the sort, you must not be alarmed nor scold me." He had a number of transient passions before he discovered that Clara was his only true love. There was Nanni, his "guardian angel," who saved him from the perils of the world and hovered before his vision like a saint. "I feel like kneeling before her and adoring her like a Madonna." But Nanni had a dangerous rival in Liddy. Not long, however, for he found Liddy silly, cold as marble, and—fatal defect—she could not sympathize with him regarding Jean Paul. "The exalted image of my ideal disappears when I think of the remarks she made about Jean Paul. Let the dead rest in peace."

Several of his flames are not alluded to in this correspondence. On his travels he appears to have had the habit of noting down in his diary the prevalence and peculiarities of feminine beauty. He complains that from Mainz to Heidelberg he "did not see a single pretty face." Yet as a whole the Rhine maidens seem to have won his admiration:

"What characteristic faces among the lowest classes! On the west shore of the Rhine the girls have very delicate features, indicating amiability rather than intelligence; the noses are mostly Greek, the face very oval and artistically symmetrical, the hair brown; I did not see a single blonde. The complexion is soft, delicate, with more white than red; melancholy rather than sanguine. The Frankfort girls, on the other hand, have in common a sisterly trait—the character of German, manly, sad earnestness which we often find in our quondam free cities, and which toward the east gradually merges into a gentle softness. Characteristic are the faces of all the Frankfort girls: intellectual or beautiful few of them; the noses mostly Greek, often snub-noses; the dialect I did not like."

The English type of beauty appears to have especially won his approval. "When she spoke it sounded like the whispering of angels," he says of an Englishwoman, "as pretty as a picture," whom he met. Elsewhere he says, laconically: "On the 24th I arrived at Mainz with the steamer, in company with twenty to thirty Englishmen and women. Next day the number of English increased to fifty. If I ever marry, it must be an English woman." Some years later, however, with the fickleness of genius, he writes about Ernestine, the daughter of a rich Bohemian Baron, "a delightfully innocent, childish soul, tender and pensive, attached to me and to everything artistic by the most sincere love, extremely musical—in short, just the kind of a girl I could wish to marry." He did get engaged to her, but the following year the engagement was dissolved; and soon after this he discovered that his artistic admiration for Clara Wieck had assumed the form of love. Although her father opposed their union several years, on account of Schumann's poverty, the young couple often met, and not only in the music-room. In 1833 he writes to his mother regarding Clara: "The other day when we went to Connewitz (we take a two or three hours' walk almost daily), I heard her say to herself, 'How happy I am! how happy!' Who would not like to hear that! On this road there are a number of very useless stones, in the midst of the footpath. Now, as it happens in conversation that I more frequently look up than down, she always walks behind me and gently pulls my coat at every stone, lest I may fall."

It was most fortunate for Schumann that his bride and wife was one of the greatest living pianists. For, owing to the accident to his hand, though he could still improvise, he could not appear in public to interpret his own compositions, which depended so much for their success on a sympathetic performance, since they differed so greatly from the prevalent style of Hummel and the classical masters that even so gifted a musician as Mendelssohn failed to understand them. But Clara made it the task of her life to secure him recognition, and this was an additional bond that united their souls. "When you are mine," he writes, "you will occasionally hear something new from me; I believe you will often inspire me, and the mere fact that I shall then frequently hear my own compositions will cheer me up." "Your Romance showed me once more that we must become man and wife. Every one of your thoughts comes from my soul, even as I owe all my music to you." To Dorn he writes that many of his compositions, including the Noveletten, the Kreisleriana, and the Kinderscenen, were inspired by Clara; and it is well known that his love became the incentive to the composition, in one year, of over a hundred wonderful songs—his previous compositions, up to 1840, having all been for piano alone. "I have discovered," he writes in 1838, "that nothing is so apt to give wings to the imagination as expectation and longing for something, as happened again in the last few days, when I was awaiting a letter from you and meanwhile composed whole volumes—strange, crazy, most majestic things; how you will open your eyes when you play them. In brief, I am often so full of music now that I feel as if I should burst." In the last letter of this collection he says: "Sometimes it appears to me as if I were treading entirely new paths in music"; and there are many other passages showing that he realized well that the very things which his contemporaries criticised and decried as eccentric and obscure (Hummel, *e. g.*, on page 179, objects to his frequent changes of harmony and his originality!), were really his most inspired efforts. Though he never allowed the desire for popularity to influence his work, yet he occasionally craves appreciation. "I am willing to confess that I should be greatly pleased if I could succeed in composing something which would impel the public, after hearing you play it, to run against the walls in their delight; for vain we composers are, even though we have no reason to be so." It must have given him a strange shock when an amateur asked him, at one of his wife's concerts in Vienna, if he also was musical!

In her efforts to win appreciation for her husband, Clara was nobly assisted by Liszt. Just like Wagner, Schumann was not at first very favorably impressed with Liszt, owing to the sensational flavor of his early performances. But he soon changed his mind, especially when Liszt played some of his (Schumann's) compositions. "Many things were different from my conception of them, but always '*genial*,' and marked by a tenderness and boldness of expression which even he presumably has not at his command every day. Becker was the only other person present, and he had tears in his eyes." And two days later: "But I must tell you that Liszt appears to me grander every day. This morning he again played at Raimund Härtel's, in a way to make us all tremble and rejoice, some études of Chopin, a number of the Rossini soirées, and other things." Of other contemporary pianists Hummel, "ten years behind the times," and Thalberg, whom he liked better as pianist than as composer, are alluded to. Yet he writes in 1830 that he intends going to Weimar "for the sly reason of being able to *call myself* a pupil of Hummel." Wieck, his father-in-law, he esteemed greatly as teacher and adviser, but it offended him deeply that Wieck should have followed the common error of estimating genius with a yardstick, and asked where were his "Don Juan" and his "Freischütz"? His enthusiasm for Schubert, Chopin, and especially for Bach finds frequent expression. Bach's "Well-Tempered Clavichord," he declares is his "grammar, and the best of all grammars. The fugues I have analyzed successively to the minutest details; the advantage resulting from this is great, and has a morally bracing effect on the whole system, for Bach was a man through and through; in him there is nothing done by halves, nothing morbid,

but all is written for time eternal." Six years later: "Bach is my daily bread; from him I derive gratification and get new ideas—'compared with him we are all children,' Beethoven has said, I believe." One day a caller remarked that Bach was old and wrote in an old-fashioned manner: "but I told him he was neither old nor new, but much more than that, namely, eternal. I came near losing my temper." Concerning the unappreciative Mendelssohn, he writes to Clara:

"I am told that he is not well disposed toward me. I should feel sorry if that were true, since I am conscious of having preserved noble sentiments toward him. If you know anything let me hear it on occasion; that will at least make me cautious, and I do not wish to squander anything where I am ill-spoken of. Concerning my relations toward him as a musician [1838], I am quite aware that I could learn of him for years; but he, too, some things of me. Brought up under similar circumstances, destined for music from childhood, I would surpass you all—that I feel from the energy of my inventive powers."

Concerning this energy he says, some time after this, when he had just finished a dozen songs: "Again I have composed so much that I am sometimes visited by a mysterious feeling. Alas! I cannot help it. I could wish to sing myself to death, like a nightingale."

One of the most interesting bits of information contained in this correspondence is that, when quite a young man, Schumann commenced a treatise on musical æsthetics. In view of the many epoch-making thoughts contained in his two volumes of collected criticisms, it is very much to be regretted that this plan was not carried out. On one question of musical psychology light is thrown by several of these letters. Like many other composers, it seems that Schumann often, if not generally, had some pictorial image or event in his mind in composing. "When I composed my first songs," he writes to Clara, "I was entirely within you. Without such a bride one cannot write such music." "I am affected by everything that goes on in the world—politics, literature, mankind. In my own manner I meditate on everything, which then seeks utterance in music. That is why many of my compositions are so difficult to understand, because they relate to remote affairs; and often significant, because all that's remarkable in our time affects me, and I have to give it expression in musical language." One of the letters to Clara begins: "Tell me what the first part of the Fantasia suggests to you. Does it not bring many pictures before your mind?" Concerning the "Phantasiestücke" he writes: "When they were finished I was delighted to find the story of Hero and Leander in them. . . . Tell me if you, too, find this picture fitting the music." "The Papillons," he says once more, are intended to be a musical translation of the final scene in Jean Paul's "Flegeljahre."

Believers in telepathy will be interested in the following additional instance of composing with a visual object in the mind (p. 301): "I wrote to you concerning a presentiment; it occurred to me on the days from March 24 to 27, when I was at work on my new composition. There is a place in it to which I constantly recurred; it is as if some one sighed, 'Ach, Gott!' from the bottom of his heart. While composing, I constantly saw funeral processions, coffins, unhappy people in despair; and when I had finished, and long searched for a title, the word 'corpse-fantasia' continually obtruded itself. Is not that remarkable? During the composition, moreover, I was often so deeply affected that tears came to my eyes, and yet I knew not why and had no reason—till Theresa's letter arrived, which made everything clear." His brother was on his death-bed.

RECENT LAW BOOKS.

In Prof. John Chipman Gray's slender octavo, ('The Rule against Perpetuities,' Boston: Little, Brown & Co.) we have a book to be thankful for—a really masterly book, in which the author has given to his profession in a compact, simple, unpedantic form the results of thorough research. There are one or two good English treatises on this subject, especially one by Lewis; but there is nothing so good as the book now before us, which will rank, indeed, with the very best legal treatises on any subject in our language.

The topic is a narrow one, but beset with difficulty, full of ambiguity, and peculiarly embarrassed by ill-instructed opinions; it deals with the most recondite and technical parts of our law, but is yet of great and every-day importance. "There are few lawyers," says Professor Gray in his preface, in a passage that will have many an echo, "of any practice in drawing wills and settlements who have not at some time either fallen into the net which the Rule spreads for the unwary, or have not at least shuddered to think how narrowly they have escaped it." The Rule against Perpetuities is popularly known as a rule to prevent a man from tying up his property beyond a life or lives in being and twenty-one years and ten months thereafter; or for a term longer than twenty-one years, if the time be measured merely by years. This conception of the rule has led to many errors. "An interest," says our author, "is not obnoxious to the Rule against Perpetuities if it begins within lives in being and twenty-one years, although it may end beyond them." And again, he speaks of "the mistaken idea that a trust violates the Rule against Perpetuities because it is to last indefinitely." Professor Gray emphasizes the infelicity of the word "perpetuities," a word which is yoked with monopolies and thundered against in several of the State constitutions, with a certain mistaken or ambiguous uproar, thus: "Perpetuities and monopolies are contrary to the genius of a republic and shall not be allowed." The Rule is not concerned directly with preventing what appears to be here intended, the tying up of property and taking it out of commerce: that consideration does not supply the proper test; it is directed against the creation of remote future interests. In preventing this it incidentally accomplishes the first-named result, but the Rule may apply although there is no tying up of property. The author says in his preface:

"The Rule against Perpetuities should have been called the Rule against Remoteness. It is aimed at the control of future interests; it has nothing to do, save incidentally, with present interests. But its name is a constant temptation to treat it as aimed against restraints on the alienation of present interests. Hence frequent lapses into error, from which the courts have recovered themselves slowly and painfully; and hence also statutes, like those of New York, whose interpretation has cost and will cost a subsidy. If this book has any merit, it is in the more or less successful attempt to free the subject from this source of confusion and mistake."

The Rule itself is stated by Professor Gray, clearly and compactly, thus: "No interest subject to a condition precedent is good, unless the condition must be fulfilled, if at all, within twenty-one years after some life in being at the creation of the interest." Within the meaning of this Rule a life in being includes one that is begotten, and so covers the period of gestation. But is there not a defect in this statement of the Rule, from omitting to include in it, in terms, the case of a gross term of twenty-one years having no reference to any infancy? That case is fully considered by the author, and in a mathematical sense is, perhaps, covered; but ought it not to be taken up explicitly into the terms of the Rule?

Two chapters of the book, the second and fifth, will be found particularly valuable and full of interest. The second chapter shows how all restraints on the creation of future interests in property have been done away, except those arising from remoteness: "Of all that forest of learning there remains here and there only a stump over which an unlucky testator may stumble." The fifth chapter states and traces in a masterly way the origin and history of this judge-made law—a most instructive piece of reading. No one without experience in such attempts can appreciate fully the skill that Professor Gray has shown in this part of his work, and, indeed, throughout, in condensing his material. And yet he has ranged over the whole field of legal decision, in England, and in all our States; and we find him able to put his finger upon a certain case as the only one there is on either side of the water passing upon a certain point, and we come upon the statement that there are just three cases or eleven cases which hold this or the other doctrine. This absolutely thorough treatment of his subject, by one who yet remains master of all his material, and who presents his results in a shape perfectly simple, intelligible, and helpful to the profession, is wholly admirable. The book presents a model for those who would write on legal subjects: choose a narrow topic and do your work thoroughly. As fast as such books are written, we shall be ready for the question of codification; not before. If any one would see the peril, the scandal, the waste there is in hasty and ignorant legislation, and what a field there is for such books as this in preparing the way for good legislation, let him read the following passages from Professor Gray's appendix:

"Upon the consideration of the New York Statutes [the Revised Statutes of 1828] two remarks suggest themselves. *First.* Those statutes evidently start with the theory that the immediate object of the Rule against Perpetuities is to limit restraints upon alienation. This idea has been common, and decisions have been based upon it; but the difficulties and confusion arising therefrom have caused the idea to be recognized as erroneous, and the decisions to be overruled or disapproved. This erroneous theory is crystallized in the New York Statutes. *Secondly.* The common-law Rule of Perpetuities grew out of the ordinary usages of the community, and is fitted to them. A will drawn as testators generally wish their wills drawn does not violate the Rule. The limit of lives in being is a natural limit. The Rule strikes down only unusual provisions. But the limit of two lives, fixed by the New York statute, is an arbitrary limit It cuts through and defeats the most ordinary provisions. To allow future estates, and yet to confine them within bounds so purely arbitrary, would seem to be an invitation to litigation. And so the event has proved. The joint effect of these two causes is, that in no civilized country is the making of a will so delicate an operation and so likely to fail of success as in New York. Before the passage of the Revised Statutes there seems to have been but one case before the courts in that State in which the remoteness of a limitation was called in issue, and that presented only a simple question of construction. Since the passage of the Revised Statutes there have been over one hundred and seventy reported cases on questions of remoteness. They are given in a note."

Mr. Field's Codes had better wait. For the present let us be content with amendment or revision merely.

The last volume of Deering's 'Codes and Statutes of California' (San Francisco: A. L. Bancroft & Co.) contains the Penal Code and certain statutes now in force and not elsewhere printed in the Codes. A full general index to the four volumes follows. The annotations are numerous and take a wide range; but in the main the book is of merely local interest. As a code the work here edited is not remarkable.

Some use of Mr. George Merrill's 'Studies in Comparative Jurisprudence and the Conflict of

Laws' (Boston: Little, Brown & Co.) leads us to think it a good and accurate contribution to the subject. The author's personal experience "as an American lawyer in Paris for a period of more than fifteen years" gives a precision to his knowledge of actual questions and the way of dealing with them which shows itself throughout the book. The reader observes with dissatisfaction that the author sometimes takes his cases at second-hand, and that his examination of certain questions has not been searching enough; but criticism is disarmed by the statement in the preface that the writer "lost his sight before his work was commenced, and has since remained almost blind—wholly so, in fact, as regards the power of reading and writing." The book deals with the subjects of Nationality, Domicile, the Rights, etc., of Aliens, certain Contracts, and Bankruptcy and Insolvency.

Mr. Charles E. Grinnell's 'Law of Deceit and Incidents in its Practice, illustrated by an Analysis of Massachusetts Cases and by References to some other Authorities' (Boston: Little, Brown & Co.) is a small book, intended, as the title indicates, for local use. The author has evidently taken much pains with it: "I have read," he says, "and analyzed every case which I have cited." How many law writers can say that? The book presents a preliminary general account of the legal nature and essentials of deceit, and then "a separate and detailed study of the Massachusetts cases as a distinct body of law and practice"—a study which the author originally made for his own use and found serviceable. The writer's aim is a definite one: to aid working lawyers, especially at the beginning, in the practice of the law in Massachusetts; and they will certainly profit by help which is so conscientiously and intelligently prepared. In another edition the author might well give his readers the benefit of a chronological arrangement of the cases, and of what occurs to him from a contemplation of them in that order; nothing is more fruitful than that.

'Military Law,' in two volumes (Washington: W. H. Morrison), by Lieut.-Col. William Winthrop, Deputy Judge-Advocate General of the United States Army, is a valuable book, but its value is impaired by omitting an index of cases. Military law, as the author remarks, suffers from the all but invincible unwillingness of mankind to discriminate it from martial law; this, as he says, is partly accounted for by the unfortunate name that is fastened upon the courts of the military community—"courts-*martial*." Specifically, it is the "law governing the army as a separate community," both in peace and war; a law which is older than our constitutions, and is recognized by them. It has its written, and to a small extent its unwritten, law, and is enforced by its "courts," but these courts are no part of the judiciary: "they are, in fact, simply instrumentalities of the executive power" for governing, disciplining, and punishing the army. There is also what the author calls "the law of war," covering both the military government of conquered regions and "martial law" proper. The author uses martial law in the specific meaning of military rule, exercised by the State and nation over its own citizens in an emergency justifying it. In the third part of Colonel Winthrop's treatise he deals with the functions and relations of the military as assistants to the civil power. A careful examination of this book leads us to form a high opinion of its merits. It deals not alone with the technical matters of military-legal practice, but also with the historical development of military law, illustrated, in the appendix, by valuable documents; with our problems of the reconstruction period; and with the grave questions of constitutional law which the war of secession engendered. The author writes as one not only learned but accomplished in his subject.

Among certain curious as well as valuable documents in the appendix, there is an ordinance of the English King Richard I. for keeping the peace aboard his ships on the voyage of his soldiers to the Holy Land. As Americans, we are interested in noticing that the art of tarring and feathering was known to this energetic prince in the year of grace 1190; this also we have inherited from England. A robber, says Richard, "shall have his head cropped after the manner of a champion, and boiling pitch shall be poured thereon, and then the feathers of a cushion shall be shaken out upon him, so that he may be known, and at the first land at which the ships shall touch he shall be set on shore."

The thirteenth edition of Story's 'Equity Jurisprudence' (Boston: Little, Brown & Co.) is edited by Dr. Melville M. Bigelow. The wide scope of this great magazine of learning and its body of notes, is seen by observing that the table of cases alone fills ninety-two pages of double columns. This edition proceeds upon the excellent plan of restoring the text to the precise shape in which the author left it in his last edition, the fourth, published after his death, and of rewriting the entire body of editor's notes; three chapters, however, written by Judge Redfield, a former editor, are retained at the end of the work. "For better or worse," says Dr. Bigelow, "each note of the present edition is a unit. Many of the annotations, too, on the more important subjects have taken the form, and the editor hopes may prove to have some of the merits, of monographs. These . . . should be read through to be fully understood, at least by the student." These changes will add much to the convenience of the reader. The notes on mistake of law and of fact, misrepresentation, equitable estoppel, clouds on title, specific performance and injunctions, are full and valuable.

Mr. James L. High, after an interval of ten years, publishes now the second edition of his useful work on 'The Law of Receivers' (Chicago: Callaghan & Co.). This is a branch of procedure in equity which has received a great development in our time. The terrible collapse in our Western railroads raised many grave questions under this title, and the author tells us that the law relating to receivers over railways has been largely the growth of the period since his first edition. To this branch of his subject he gives careful attention. Upon this, as well as upon the topics of more general professional interest, such as receivers in cases of partnership and the claims of judgment creditors, the work is a valuable manual of practice. The chief desideratum that we remark is some tracing of the historical development of the subject.

The first volume has been published (Berlin: Carl Habel) of a 'Handbuch des Völkerrechts,' by Prof. von Holtzendorff, acting in coöperation with other eminent German authorities. There are to be four volumes. The one now issued is introductory, and comprises a learned consideration of certain fundamental conceptions in international law and of the history and literature of the subject.

RECENT FRENCH BOOKS.

M. Ernest Renan has given to the world another *drame philosophique* in his new work, "Le Prêtre de Nemi" (Paris: Calmann Lévy; Boston: Schoenhof). As in "Caliban" and "L'Eau de Jouvence," the dramatic element is subordinated to the philosophical, without being totally sacrificed to it; which is perhaps only saying that M. Renan is a writer of genius, who can give life to any form into which he chooses to throw his thought. The form he has chosen is the only one, he says in his preface, which seems suitable to him for the exposition of certain philosophical ideas concerning the highest problems of humanity—those which, from their nature, ought neither to be directly affirmed nor directly denied, but rather presented in all their varying aspects. "L'envers de chaque pensée doit être indiqué, de manière que le lecteur saisisse d'un seul coup d'œil les deux faces opposées dont se compose toute vérité." It is to express more vividly the many-sidedness of his ideas that M. Renan has chosen to incarnate them in the personages of his drama, which is at the same time political and religious, antique and modern, but always abstract and universal. The action takes place, indeed, at Alba Longa and at Nemi near by, and in the distance the little hill crowned with walls is the Palatine with the newly founded Roma Quadrata; but, in a certain sense, the narrow stage holds within its limits all time and space and all humanity. "By the side of the actual history which has happened," says M. Renan, "is the ideal history which materially has never taken place, but which, in an ideal sense, has happened a thousand times." It is thus that the French Republic, the Commune and the German invasion, the Comte de Chambord and the Pope, the conservatives, the opportunists, and the anarchists of recent political history, are divined through the Alban state and people of the drama; that the moral and religious questions of to-day are indicated in the intrigues and contentions, the struggles and defeats of Antistius and his supporters and opponents. Nowhere has M. Renan shown his wonderful power of expression in a greater degree than in "Le Prêtre de Nemi." All the precision and clearness of which French prose is capable is woven by this great enchanter into a magical veil, through which he reveals to his readers and conceals from them by turns the ideal which never descends from the remoteness of his own conception into the glare of positive assertion. It is the most subtle essence of his thought which he gives, not the thought itself. M. Renan is too much of a poet not to feel how much he would sacrifice by any other method; and if his readers do not seize all the illusive and changing shades of his ideas, they at least have the great and rare enjoyment of accompanying in thought one of the most suggestive and inspiring of writers.

The philosophical dramas of M. Renan were never intended for the stage, and have only enough of the dramatic quality in them to carry the sympathetic reader through the mental and moral changes of the characters. But at the celebration of the anniversary of Victor Hugo a few weeks ago a little "Dialogue des Morts," which he had consented to write for the occasion, was produced upon the stage of the Théâtre-Français. It is entitled "1802," and is very short, only a few pages in length. The immortal shades of Corneille, Racine, Boileau, Voltaire, Diderot express their hopes and desires concerning the poets who are to continue their work in the new century just begun. At the close a little winged genius, who passes continually between the Elysian Fields and the world of mortals, brings them information of the birth of Victor Hugo, in whom will be united "le poète sublime que veut Corneille, le poète de la pitié que veut Racine, le génie large et profond que rêve Despréaux, le patriarche ami des hommes qu'imagine Voltaire." Not very much should have been expected from this slight sketch, and M. Renan has shown once more that to write an effective dramatic scene requires something more than even great poetic genius.

M. Paul Bourget has published the second and, as he informs us, the last volume of his 'Essais de Psychologie contemporaine' (Paris: Lemerre; Boston: Schoenhof). These had all appeared previously in the *Nouvelle Revue*, and the pre-

face is therefore very appropriately addressed to the editor of that periodical, Mme. Edmond Adam. The main idea that runs through the two volumes is that the *états de l'âme* peculiar to a generation are contained in germ in the theories and dreams of the preceding generation. This idea M. Bourget has continued to develop in the present volume, in which he studies the state of souls under the Second Empire, as manifested in the writings of Dumas the younger, Leconte de Lisle, the Goncourt brothers, Turgeneff, and Amiel. The result is not cheerful. The world has become sadly pessimistic. The *mal du siècle* of René has had for its successor the moral nihilism of later writers, *la fatigue de vivre*, a gloomy perception of the vanity of every effort. M. Bourget seeks the cause for this. What he finds seems to apply especially to France, and yet it would be possible to discover like symptoms elsewhere, from different causes, assuredly. A distantly analogous state of mind in Russia has received the name of *oblomovism*, from the novel of 'Oblomoff,' by Gontcharoff, of which a part was translated and published in French two years ago. But it must be confessed the expression of this negation in France, whether in 'Bel-Ami' of M. de Maupassant or in 'À Rebours' of M. Huysmans, has not been savory or calculated to raise the spirits of the reader. It would seem to justify the recent remarks of M. Pailleron in the Academy to the effect that French gayety was dying out. Nor does the author propose a remedy. He studies the present state of things, describes it, not complacently, as some of his critics have accused him of doing, but seriously, sincerely, and minutely. To look upon M. Bourget's work merely as a piece of literary criticism would be to do it injustice, yet it is one of the most important contributions to this branch of literature since Sainte Beuve's day. For him, no less than for that eminent critic, the form is of the highest importance, and, although he claims that in his analysis he leaves aside æsthetic theories, he says what scarcely any one but a French critic could say and fully feel and mean, "mal écrire, c'est toujours et partout mal penser." If the converse of this be in any sense true, M. Bourget must have learned to think much since his first volume of essays was published. His style has gained in amplitude as well as in vigor. There is no more promising writer in France.

M. Ferdinand Brunetière has collected some of his latest contributions to the *Revue des Deux Mondes*, and made of them the second volume of a series which he may extend indefinitely, under the title 'Histoire et Littérature' (Paris: Calmann Lévy; Boston: Schoenhof). Literature occupies by far the greater part of the volume, which contains reviews of some of the most important works lately published in France. As in his previous writings, M. Brunetière speaks with the authority of a man fully impressed with the value of his opinion, and he has a decided opinion upon many things, an opinion often at variance with generally received views. He is fond of emitting ideas which at first seem somewhat paradoxical, but which are rather the rehabilitating of old forgotten truths, as when he clears away some of the popular misconceptions about casuistry in 'Une apologie de la Casuistique.' He is also fond of showing his learning, and he has learning to show, and can meet specialists on their own ground, as he proves in his article headed "Trois Moliéristes," in which he handles rather severely Paul Lacroix, Édouard Fournier, and Auguste Vitu. The predominant trait in his criticism is its severity against those whom he dislikes, and he is not in sympathy with many tendencies of the new schools of prose and poetry in France, as is very apparent in all he says of Flaubert, of the Parnassians, and of the Naturalists.

The first serious, discriminating appreciation of M. Brunetière's work as a critic is to be found in M. Jules Lemaitre's 'Les Contemporains' (Paris: Lecène & Oudin; Boston: Schoenhof). These "Études et Portraits" were first published in the *Revue Bleue*, where they attracted much attention. The author was comparatively unknown, and in less than three years he has won for himself a high place among the most promising of the younger generation of French men of letters. Like Sarcey and many others, he gave up his position of *professeur* to devote himself exclusively to writing, and in this, his first important publication, we feel, perhaps too much, that the young writer has just thrown off certain uncomfortable shackles of his previous career. He cannot let an occasion slip by to talk of Corneille, Racine, Bossuet, especially of Bossuet, in a manner diametrically opposed to that which it is the proper thing to assume when treating these *classiques* in the official professorial tone. What he loves above all, what "thrills him with pleasure to the very marrow," is the literature of the second half of the nineteenth century, "si inquiète, si folle, si morose, si détraquée, si subtile." In this he is the very reverse of M. Brunetière, whose admirations are mostly lavished upon the seventeenth century, and especially upon Bossuet. But M. Lemaitre does not extend his benevolent admiration to all his contemporaries. To several he is not sparing of his disapproval, notably to M. Huysmans and to M. Ohnet. He begins by excusing himself to his readers for speaking to them at all of the latter, as he usually treats only of literary matters, whereas the novels of M. Georges Ohnet are only merchandise that sells well. He has charming chapters on Théodore de Banville, Sully-Prudhomme, Coppée, and Renan.

There exists no good general history of modern literature in French. The ambition of the very clever critic and novelist, Marc-Monnier, in the latter years of his life, was directed toward supplying this want. His first volume, 'La Renaissance, de Dante à Luther' (1884) was followed by a second, of which the last sheets were in the press when the author died, in April, 1885. This second volume bears the title, 'La Réforme, de Luther à Shakespeare' (Paris: Firmin-Didot; New York: Christern). It was to have been followed by a third, 'La Révolution.' In 'La Réforme' there is a good study of Calvin and the French and Swiss reformers. The author's treatment is broad, but not very deep. He has nothing new to say of Rabelais, the Pléïade, Montaigne. His chapters on Tasso, Giordano Bruno, Camoens, Cervantes, seem to be merely the lectures which he delivered in Geneva. His too rapid sketch of the Elizabethan age would be found very unsatisfactory by a student of English literature. Yet the two volumes are pleasant reading throughout, full of information, somewhat elementary, usually reliable, and rather abounding in quotations from the authors under consideration. In this respect the didactic character of the work is apparent, as it also is in the writer's great care to explain every statement, and not to write vaguely about the great authors as if he addressed readers who knew all about them. Marc-Monnier leans wherever he can on Vinet; hence we notice in him an aim more expressedly moral than is to be found in French critics generally. This, together with a certain rigidity of manner, is what characterizes the Swiss school of criticism to which Vinet gave the highest expression. Marc-Monnier, far more versatile than his master, though less earnest and deep, is in his manner true to the country of his adoption. The book is not properly a literary history, much less a critical essay upon the literary history of the sixteenth century. It is an easy running comment upon the lives and works of the principal writers and thinkers of the period.

'Crime d'Amour' (Paris: Lemerre) is the embodiment by M. Paul Bourget of his essay on Alexandre Dumas, in his new volume of 'Psychologie contemporaine,' but it is much more than that. The essay, written some time ago, leads only to conclusions of the most hopeless and faithless despair in humanity; the novel, completed in the *Nouvelle Revue* only last month, is filled with a passionate sadness and pity for a humanity which has in it capabilities of regeneration the existence of which the school of pessimistic writers, and M. Bourget as long as he remained among them, seems never to have suspected. Throughout the book, but especially in the fourth and concluding part, the most original and powerful portion of the story, the influence of Tolstoi upon the author is evident. M. Bourget has not risen to the grandeur and purity of the great Russian, but he has felt his revivifying influence. If this tendency towards purer and loftier ideals should continue and develop in the work of M. Bourget, it may possibly overcome the great and serious sins against propriety and good taste which now make him, in spite of his great ability and power, a writer to whom unconditional praise cannot be given.

The new novel by M. Octave Feuillet, 'La Morte' (Paris: Calmann Lévy; New York: Christern), has met with a success rivalling that which the productions of M. Georges Ohnet are accustomed to provoke. Before it had been published a week thirty-five editions had been sold, and this was after all Paris had read it as it appeared in numbers in the *Revue des Deux Mondes*. M. Octave Feuillet is a writer who respects himself and his readers, which probably contributes as much to his great popularity as his unquestionable literary excellences, or even his tendencies in the direction of conventional political and religious opinions. Beside the young writers of the present day he seems to belong to another age rather than merely to another generation, and he pleases by his unlikeness to their pessimism and ultra-realism, as he does by his simplicity and repose of style in contrast to the elaboration and violence of manner prevailing among so many of them. In his latest work M. Octave Feuillet retains all the qualities of the author who wrote so many years ago the 'Roman d'un jeune homme pauvre' and the 'Histoire de Sibylle.'

'Wassili Samarin,' by M. Philippe Daryl (Paris: Hetzel; New York: Christern), is another novel which certainly is not realistic. Like M. Alphonse Daudet in 'Tartarin sur les Alpes,' the writer has taken the now conventional young Russian woman absorbed in revolutionary plots, and placed her in Switzerland; but M. Daryl has not the great talent of Daudet, and he has written only a moderately interesting and inoffensive story.

The Fight for Missouri from the election of Lincoln to the death of Lyon. By Thomas L. Snead, A. D. C. of the Governor, etc. Charles Scribner's Sons. Pp. viii, 322, 12mo.

THIS is a lively narrative of the efforts made by the Secessionists of Missouri to carry that State into the Southern Confederacy, and of the bold and successful efforts made to resist it by the Union men under the leadership of Frank P. Blair and General Lyon. It bears evidence of the sincerity with which it is written on every page. The writer, who both saw and took an active part in all that he relates, has tried to tell the story with as complete impartiality as is possible to one whose feelings and interests were deeply involved in the struggle. He says he has written the book because it was his duty to do so,

and we assent to his judgment as to his duty and thank him for its performance.

Everything that throws light upon the action of the border States in the spring and summer of 1861 is valuable, and we feel that history has acquired new capital when honest participants and eye-witnesses tell us what occurred in any of those States at the outbreak of the war. The position of Missouri was peculiarly critical. Herself in the Union by the celebrated compromise of 1820, the repudiation of which was perhaps the most powerful of the incidents that led directly to the appeal to arms, surrounded on three sides by free States, conscious of the impossibility of being part of a Southern slave-Confederation which would thus thrust a wedge among what would be foreign free States, every interest and every argument urged Missouri to remain loyal. By a majority of eighty thousand her people determined to do so. Yet Governor Claiborne Jackson determined to carry her out of the Union. He organized the militia with the intent to use them for this purpose. He sought to prevent the organization of Union men or the enlisting of volunteers for the service of the United States. He called his militia into camp with a purpose of capturing the United States Arsenal. He entered into a treasonable correspondence with Jefferson Davis, and procured from the Southern Confederacy cannon to be used against the Federal garrison.

Blair and Lyon were far too acute to be deceived as to the purpose, and too bold to hesitate in doing what the hour demanded. The one as the political head of the loyal citizens, the other as the military commandant of the department, was equal to the occasion. Regiments were organized and mustered into the service of the United States. Lyon marched them against the Secessionist camp of "home-guards," and captured these and the cannon which had been seized by the Confederacy at Baton Rouge and smuggled into St. Louis to be used against the Government that owned them. The author frankly admits all these facts, and that Blair and Lyon properly interpreted them and wisely acted upon them. He speaks of the military movement as "Blair's rebellion against the State," but he narrates the facts so frankly that we may treat this as "a sop to Cerberus," since he shows that it must have been Governor Jackson who was plotting the insurrection against Missouri, after her 80,000 majority had determined to remain in the Union, and the Convention called by the Legislature had acted in that sense.

The leading characters of the book are Lyon, Blair, and Sterling Price. Despite some natural prejudice of the author, he has done much to give Lyon his proper place in history as a clear-headed, determined soldier, with a good deal of Chinese Gordon's energy of will and hot impatience of being crossed in what he thinks is right. In the light of this information from behind the scenes we can see that every step Lyon took was exactly what was needed. His fortification of the arsenal was necessary to prevent its being carried by a *coup de main*. His organization and drill of the St. Louis regiments was not a moment too soon. His march upon Camp Jackson proved at once his sagacity and his fitness for command. His march upon the State capital was necessary to make the Secessionist Governor show his true colors, and to prove that it was Davis and the Confederacy and not Missouri that Claiborne Jackson represented. His campaign of Springfield and Wilson's Creek was a success up to the moment of his death upon the battle-field, and, but for his death, the author admits that it would have ended in victory, and annihilated every vestige of secession power in Missouri. It is safe to say that no other officer in the service had then shown anything approaching his capacity or his prompt energy, and we cannot doubt that a great career would have been open to him had he lived.

Blair's energy was, in its sphere, equal to Lyon's. He was a public man with a much broader grasp than has commonly been believed, and this history of his activity and of his audacity shows that it was a rare combination of civil and military capacity when he and Lyon joined hands to save Missouri to the Union. The things his enemies then denounced as rash mischief-making, are now admitted to have been the proper and the successful counter-stroke to Secessionist plottings. Yet the outcry of the disunionists was not without its effect, and it would seem that Blair suffered in public estimation from the very things that should be his glory. He pierced the secrets of his opponents, and had the courage to strike without reference to their protestation (which is part of the regular programme of all insurrectionists) that they had as yet done nothing hostile to the Government. He was content to be judged by the event whether he was not right; and, by the honest statement of one who was in the inner counsels of the Secessionists, it is plain that he made no mistake. They lament, or did lament, the defeat of their purposes, but they give us the evidence that this man understood them, and won the results he was striving for.

Sterling Price is evidently the author's hero, and the picture presents him as an estimable and able man. A Union man by conviction, a member of the Convention and of the majority which refused to go out of the Union, his Southern prejudices and sympathies were such that, when war became inevitable, he went with the friends of his heart and the people of his class, against the Government to which he acknowledged his duty, and against the cause which he recognized as that of the interest of his State. This narrative stops with the battle of Wilson's Creek, but enough is told to make it easy to understand why General Price had the confidence of his neighbors and the devotion of his soldiers. A curious part of the history is the story of Gen. Ben McCullough's hesitation and delay in marching against Lyon, of Price's clear perception of the military policy, and of the self-abnegation with which he consented to serve under his junior if that junior would pursue the vigorous strategy which the occasion demanded. No so vivid an account of that important battle has been written. Certainly none has come from a more competent writer, and, like the rest of the book, it bears every mark of sincere truthfulness. Its statements may be corrected, but its spirit could hardly be improved. As a whole, the volume is among the most interesting of the minor contributions to the great war history, and is equally valuable whether we view it from the political or the military side.

Sylvan Winter. By Francis George Heath. With seventy illustrations by Frederick Golden Short, engraved by James D. Cooper. London: Kegan Paul & Co.; New York: Scribner & Welford.

THIS work comes to us just as the winter is over, to make us feel how much we might have enjoyed the season under right instruction, though, indeed, the book is English, and its "wintry outlooks" and "wintry wood-lore" apply to this country only with a difference. The author takes leave to praise the illustrations, and well he may, for they are genuine woodcuts from sketches "instinct with a true feeling for Nature and full of delicate appreciativeness for quiet English country life"; indeed, are uncommonly good. One may suspect that the best part of the 350 pages of letterpress—namely, the chapters on Leafless Woods, Tree-ferns, and Spray-characteristics—were written for bringing out the illustrations. Throughout, the author has drawn freely upon Gilpin's 'Forest Scenery,' which he has recently edited; and so has made an attractive book, if not always critically accurate, yet mostly reliable, until, when treating of sylvan giants and the like, he takes up with English travellers' stories, and even personally endorses a very loose one. That is, he quotes from Mr. Marshall's "interesting book, 'Through America,'" the statement that in the Calaveras grove of big trees, "my friend [a travelling companion] counted in one tree as many as 2,000 rings," and Mr. Heath adds, "We can personally vouch for the accuracy of Mr. Marshall's statement as to the tree he and his friend examined, for he is a note-taker of unusual excellence." He might as well vouch "that a tree has been found in the Mariposa grove with 6,000 rings in it," which Mr. Marshall appends as a report. Now it is quite probable that some of the California big trees are 2,000 years old; but the felled one in the Calaveras grove—the only one of which the rings on the stump can be counted throughout—was less than 1,300 years old, as Mr. Heath records; and the only other available trunk of that grove is of no greater size, is too much damaged for the rings to be counted throughout, and, as well as can be ascertained, does not justify Mr. Marshall's friend's statement.

There is similar uncritical matter in the chapter on the uses of wood. For instance, the common application of the name sycamore to the great maple of Europe misleads the author into the statement that this tree furnished the sycamore wood of Egyptian mummy cases. We wonder if Mr. Heath originated or only adopted the notion that the horse-chestnut tree got its English name from the fanciful resemblance of its leaf-scars on the twigs to a horseshoe with its row of nails or nail holes. He might know that this qualifying prefix is a common one to denote coarseness—*e. g.*, horseradish, horsemint, horse-parsley, and even horse-sense. Let us not fail to mention the concluding chapter, in which the author is more at home than with plant lore, that on sylvan nomenclature. Here is a list of over 600 English towns, villages, or other places, which derive their names from the names of trees, forests, or other sylvan sources. Alas, that he should have included in the list, as one of the derivatives of *bois*, the name of *Boston!*

Discussions on Climate and Cosmology. By James Croll, LL.D. Edinburgh: Adam & Charles Black. 1885. 8vo, pp. 327.

THE body of facts with which physical science has to deal has become so great that it cannot be compassed by any one man. Alexander von Humboldt was the last of the learned who effectively essayed the task of grasping knowledge in a large way, and even he achieved it imperfectly. Hereafter we can hardly hope to have naturalists in the wider sense of the word, at least until a new intellectual variety of man is formed for the work. Even German diligence can in a very long life win no more than two hundred thousand hours for study, and such a term would probably not more than suffice for a mere review of the noteworthy labors of other men. Students who would advance learning feel that they must limit themselves to some narrow field, consoled by the sense that nature is a unit, and that they may find the spirit of the whole in their own small part of the universe.

The most unfortunate result of this partition of scientific labor arises from the fact that explorers cannot avail themselves of the methods and results of those who are employed in adjacent fields. It thus comes about that between

many of our sciences there are areas which remain unexplored, for the reason that to prosecute research in them requires a good working knowledge of at least two sciences. In this way we are in danger of losing that unity of knowledge which is its highest good. The only way in which this evil can be met is through the labors of men who are broad-minded enough fairly to overcome the difficulties of adjacent sciences, at least as far as they pertain to their neutral or border grounds. Such men are now extremely necessary, but unfortunately their task demands a peculiar genius.

It has been the good fortune of geological science, which more than any other needs union with the other physical sciences, to secure in Dr. James Croll a man able to clear away some of the most formidable difficulties which beset it. A score of years ago, when Dr. Croll began his admirable work, the whole matter concerning the history of climatal changes, the very key to our understanding of the earth's history, was in darkness. Geologists saw the evidence of great changes in the records of several glacial periods at different stages of the past, but the efforts to explain the facts were futile. This question of climate could only be dealt with by one who could command a knowledge of the laws of the atmosphere as well as of astronomical conditions, and who at the same time could master the facts which geologists had gathered. Dr. Croll, in a succession of luminous memoirs which afterwards were assembled in his 'Climate and Time in Their Geological Relations,' has given us a clear and well-defined hypothesis going far to explain the changes of climate which, in swift succession, at one time brought a semi-tropical vegetation to within twelve degrees of the North Pole, and at another sent the glacial sheet to the shore at the mouth of the Hudson River. Dr. Croll's theory attributes these changes of climate to the varying excentricity of the earth's orbit, combined with the precession of the equinoxes and the rotation of the apsides, together with certain influences arising from the shape of the Atlantic coast line. These problems are too complicated for brief presentation, but in the masterly elucidations of the author they are made plain to the least informed reader. While the present writer, in common with many of his brother geologists, cannot yet accept Dr. Croll's theory as finally and without qualification demonstrated, or as sufficient to account for all great changes of climate of which we have evidence from the geological records, he has been driven to acknowledge that it is perhaps the most helpful aid which geologists have ever received from another department of science.

In his last volume on 'Climate and Cosmology' Dr. Croll is in the main engaged in disposing of the objections to his theory of climate which have been suggested by many critics, and in adding various minor considerations developed by the recent advances of science. His review of his reviewers is an admirable piece of literary work, gentle and gracious in its tone, and at the same time extremely effective as controversy. In the thirteenth chapter the author passes to new grounds. His consideration of the conditions of continental ice, in this and the following chapters, is the most extended and philosophical study which has ever been given to these difficult questions.

The last fifty pages of the book are devoted to the problems connected with the temperature of space, the origin and age of the sun's heat, and the origin of nebulæ. Astronomers and physicists, considering the sun's heat to be due to the action of gravity alone, have computed that not much more than 20,000,000 years could have elapsed since the solar mass was expanded to the limits of the earth's orbit. Dr. Croll's admirable researches into the duration of geologic time have shown that this term of years is entirely insufficient to account for known changes in the earth's crust. He has, therefore, been compelled to suggest a modification of the nebular theory, which in its way is as daring as the original hypothesis. His suggestion is, that the nebulæ, including that whence our solar system arose, have originated by the collision of dark masses moving with high velocities through space. When they come together these masses would convert the whole or a large part of their momentum into heat: their masses would fly into nebulous matter, which would begin its condensation into a solar system with a high temperature, and not, as the aforementioned computers have reckoned, with no temperature at all. We cannot undertake to set forth the details of this brilliant hypothesis, which the reader should follow in the text. In this essay, as in all his other work, the author seems, like the soul described by Virgil, able—

". . . ire per omnes
Terrasque tractusque maris cœlumque profundum."

The general reader, as well as the geologist, will find nothing more fascinating in the literature of physical science than is afforded him in Dr. Croll's works.

Poetry as a Representative Art. By George Lansing Raymond, L. H. D. G. P. Putnam's Sons. 1886.

THIS volume is pretentious, and yet one hesitates to call it so, because it embodies a large amount of faithful and painstaking thought and of close analysis in obscure subjects, and is animated by the purely intellectual spirit. The author, however, is the possessor of a "system," evidently of huge dimensions, for this large book is only one chapter of "the work" which he outlines in his preface, and which will need as many volumes, one thinks, as Spencer's Philosophy. One of the great ideas of science has been seized by his mind—the conception, namely, that mental life is predominantly a rearrangement of the elements of nature, which, being interpreted in the province of æsthetics, means that art is a representation of nature; and this comprehensive generalization he proposes to reduce to its minute particulars. The end of such a task is determined only by a man's capacity for work; and if the volume on poetry is a sign, Professor Raymond has enough of that to make him brave the task of an æsthetic cyclopædist. He begins, having a special interest in elocution, with a long examination of the problems involved in the origin of language and those obscure associations of emotion with vowel and consonant sounds, iambic or trochaic stress, rhythmical intervals, etc., or, in general, of how language, considered merely as sound, is expressive; and, secondly, he investigates the same quality of words in their function as idea-equivalents. Both sound and idea are involved in the poetic work of which language is the instrument, and therefore these analyses are necessary parts of a complete account of poetry.

They are, however, preliminary. The substance of his book is that poetry represents nature always by images, either primarily by the object itself, or secondarily by an illustrative object; all other elements in poetry, *i. e.*, all in which there is no appeal to the faculty of immediate perception, he regards as "alloy." Thus when Homer's warrior withdraws behind the ranks, there is a visible image; but when it is added that his retirement was due to shame, that motive, not being perceptible to the sense, is not re-presentable, and, as a mere inference of the reason, is an "alloy." We are *told* he was ashamed instead of being made to *see* it. This is the argument of Professor Raymond. It is neither complex, subtle, nor novel; but by subdivision and amplification of details, and especially by an excessive amount of quotation of examples, the book itself is swelled out until it imposes on the reader by its mere bulk. The careful schematization, too, aids the impression that this is a scientific work of real originality and consequence; in fact, it is nothing of the kind, but only a tedious elaboration of simple principles. It sometimes happens that an investigator mistakes the classification of a subject in his own mind, originally wrought out, as a discovery of great consequence, when after all it is old truth. This seems to have occurred in this case; for, though Professor Raymond's labor and spirit make us desire to show him respect for the personal element in his book, its scientific and critical element has been anticipated. If he had compressed his words into fifty pages, he would have written a useful essay, but in over three hundred it is quite another matter.

The Life and Speeches of Joseph Cowen, M.P. London: Sampson Low & Co.

THERE is a certain posthumous sound about such a title as this which at first caused us to fear that the eminent member for Newcastle might have been taken from this world without our knowledge; but we hasten to assure our readers that Mr. Cowen yet lives and yet speaketh. For all that we can see, it will be necessary to publish his life and speeches from time to time for some years to come, for we discover no evidence of decrease of vitality in him, and the power of speech-making once acquired is not likely to fall into disuse. The enthusiastic compiler of this volume says that he found some difficulty in persuading Mr. Cowen to accede to his wishes, on the ground that the few friends who thought his harangues tolerable at the time of their delivery would never be at the trouble of reading them when the occasion that lent them a temporary interest had passed. This is a properly modest understatement; it is not true, we venture to say, of Mr. Cowen's personal friends, but it is quite true of the general public. Old speeches are like old newspapers: there must be something extraordinary about them to make people read them out of date. These are very good speeches of Mr. Cowen's; they are very well expressed, and we are informed that they were very well delivered; they show a vast amount of common sense, a most commendable independence of judgment, and, to our mind, a very respectable order of statesmanship. But they are not in themselves of such distinguished literary excellence, nor are they connected with such momentous occasions, as to be of permanent value to any one but the historical student. Nevertheless, since Mr. Cowen (who is both an M.P. and proprietor of a great newspaper, the Newcastle *Chronicle*) was a hearty friend of the North during the civil war, and manfully lifted up his voice in protest against English sympathy with a slaveholding power, his biography is entitled to respectful consideration at our hands. His life has been in many respects a typical one. Born to a great and honorably distinguished manufacturing business, he has generously advocated education, coöperation, and all reforms by which the condition of working people might be improved. His ruling passion has evidently been that of love for liberty, and it has been steadily manifested in favor of every people that has struggled for self-government. He was intimate with Kossuth and the other Hungarian leaders, with the Polish revolutionists, with Herzen and Bakunin, with Ledru Rollin and Louis Blanc, with Mazzini, Garibaldi, and the rest of the Italian patriots. So active was he in support of the plans of these agitators that at one time nearly the whole continent of Europe was closed to him by the despotic govern-

ments then prevailing, which maintained spies at Newcastle to watch his movements, while he exposed himself to persecution at home by enlisting volunteers to serve under Garibaldi.

That Mr. Cowen's devotion to liberty is genuine is proved by his own course in Parliament. Upon a number of occasions he has opposed the Liberal party because he believed that their policy was not in harmony with Liberal principles. He condemned the interference in Egypt and has consistently opposed the coercion of Ireland. He has long called for home rule for that country, and we judge from his speeches that he foresaw the events which are now taking place, and declared that they were inevitable. In this respect at least he may probably claim to have been in advance of his country and of his party. This may yet prove true of his advocacy of female suffrage. The enlightened character of his Liberalism appears clearly, again, in his protests against the centralization of government, against the *clôture* in Parliament, against the dictation of party, and especially against the introduction of the "caucus system" into English politics. Mr. Cowen is a representative Englishman, and especially a representative of that fine type of English Liberalism that is now unfortunately a little old-fashioned. The present Life is a mere sketch; we could spare some of the speeches if we could be told more of the details of Mr. Cowen's relations with the agitators of Europe. When the time comes we judge that a biography of genuine historical value might be written; but we trust that that time may be long postponed, and so, we doubt not, do the citizens of Newcastle.

BOOKS OF THE WEEK.

Sedgwick-Walt. Treatise on Trial of Title to Land. 2d ed. Baker, Voorhis & Co.
Seely, H. A Ranchman's Stories. Dodd, Mead & Co. $1.
Shaw, Flora L. Colonel Cheswick's Campaign. Boston: Roberts Bros. $1.25.
Sinclair, Ellery. Christie's Choice. T. R. Knox & Co.
Stephen, Leslie. Dictionary of National Biography. Vol. VI. Macmillan & Co. $3.25.
Stephen, Sir J. F. Digest of the Law of Evidence, with Notes by John Wilder May. Boston: Little, Brown & Co.
Stickney, J. H. Hans Andersen's Fairy Tales. First Series. Edited for School and Home Use. Boston: Ginn & Co. 45 cents.
Stockton, Frank R. The Late Mrs. Null. Charles Scribner's Sons. $1.50.
Story, J. Commentaries on Equity Jurisprudence. Edited by M. M. Bigelow. 13th ed. 2 vols. Boston: Little, Brown & Co.
Tales from Many Sources. Vols. V. and VI. Dodd, Mead & Co. 75 cents each.
The Blessed Easter-Tide. A. D. F. Randolph & Co.
The Life of a Prig. By One. Henry Holt & Co. $1.
The Order of Creation. A Controversy between Hon. W. E. Gladstone, Prof. Max Müller, Prof. T. H. Huxley, and Others. The Truth Seeker Co. 15 cents.
Thompson, E. F. Abridgment of Kent's Commentaries on American Law. Houghton, Mifflin & Co. $2.50.
Three Martyrs of the Nineteenth Century: Studies from the Lives of Livingstone, Gordon, and Patteson. By the Author of the Schönberg-Cotta Family. Dodd, Mead & Co. $1.
Tolstoi, Count L. N. Anna Karénina. Translated by N. H. Dole. Thomas Y. Crowell & Co. $1.75.
Tolstoi, Comte Léon. Les Cossaques: Souvenirs de Sébastopol. Boston: Schoenhof.
Tower, G. B. N. Useful Things to Know about Steam Boilers. American Steam Boiler Insurance Co.
Tredwell, D. M. A Sketch of the Life of Apollonius of Tyana. Frederic Tredwell.
Tulloch, John. Movements of Religious Thought in Britain During the Nineteenth Century. Harper & Bros. 25 cents.
Underhill, A. F. Etchings in Verse. Brentano Bros.
Upton, G. P. Women in Music. 2d ed. Chicago: A. C. McClurg & Co.
Vos, G. The Mosaic Origin of the Pentateuchal Codes. A. C. Armstrong & Co. $1.50.
Walford, L. B. The History of a Week: A Novel. Henry Holt & Co. $1.
Walker, W. F. The Azores: or Western Islands. London: Trübner & Co.
Walworth, Mrs. J. H. Old Fulkerson's Clerk. Cassell & Co. 25 cents.
Weeks, J. D. Labor Differences and Their Settlement: A Plea for Arbitration and Conciliation. Society of Political Education. 25 cents.

Fine Arts.

EXHIBITION OF THE "PLEIN-AIRISTES."

THE exhibition at the American Art Galleries is a fuller demonstration of the aims and daring of a certain revolutionary set than has ever been made in Europe, not excepting the collection there made of the works of Manet himself. The pictures are brought to us by M. Durand-Ruel, himself an interesting and apostolic figure, a friend of the new painters, who has impoverished himself to keep their art alive, and who has paid for his sympathies at the expense of a considerable fortune. He is pointed out in Paris as a curious unworldly type, a dealer with a religion, whose estate has constantly been hypothecated to maintain the necessary advances to his protégés, and whose means have been greatly wasted in the interest of his propaganda. He is one who should be peculiarly sympathetic to the American people, since he has always been forward with practical recognition of American talent, and has made a flourishing market, for instance, for the fine Indian studies of our compatriot, Mr. Weeks, one or more of which are always to be seen in the brilliant windows of the establishment on the Rue Royale. As M. Durand-Ruel arranges, however, his ample exhibition for the eyes of the New Yorkers, it may occur to us to doubt whether he has the full courage of his convictions; he has made of the principal room a sort of choice showing of elected pictures, somewhat like the Square Salon of the Louvre or the Tribune of the Uffizi; and in this sifted company there are not to be found the specimens which most plainly show the ardors of the school; it is not there that we find the great "Bathing" (170) of Seurat—a picture which really seems composed in quite arbitrary camaïeu colors; nor the "Bather" (220) of Renoir, whose shadowless white flesh is a mere enlargement of some Eve out of an old missal. In this room of the elect, on the contrary, where the visitor gets his first impression, the pictures are comprehensible by anybody. And a rare lot of masterpieces they are; they are so good, and show so much sanity, that it is hard to suppose that their owner quite believes in them.

It is there, for instance, that we find the "Study" of Roll, the nude sunshiny girl leading a young black bull down toward her bathing-place. This painting was certainly recognized by artists as the most marvellous piece of technic in the last Salon; the flash and glare of noon-light on naked flesh, relieved with flushed shadows scarcely less luminous, was acknowledged to be masterly. The want of sympathy, though, with flesh as flesh, as a live tissue fed by circulation, was at the same time pointed out. "It is a glorious trick," said a competent artist, "but I feel as if the painter believed he was painting something dead—like sunshine on a patch of dried grass." In this room, too, is the "Marceau" of Laurens, a picture not at all in harmony with the school, a grand piece of sculptural repose in the midst of things whose business it is to flicker and flutter. Near it is the impressive Manet, "Faure as *Hamlet*," where the actor's neck, illumined by the footlights, is frankly made the high-light of the picture, rather than the face. Manet's "Still Life" (23), again, is one of the *natures-mortes* in which he was confessedly incomparable, and is one of his best and most easily understood; it contains a specimen of his capitally scaly fish, and a cut lemon, surely the most cruelly sour lemon ever painted. The same artist's "Rochefort" shows mysteriously, as did the "Zola," how a likeness can be hit without the possession of a single vestige of drawing. The individual is there, yet not one of the forms is right. The young "Fifer of the Guard," another Manet, though more unconventional in treatment, a mere flash of red breeches in the air, awakens interest in the Philistine because it is gallant and youthful. In this room, too, is the most reasonable of the studies of Degas, the artist who wholly forsakes civilization to live in the other-worldliness of the theatre; it is the ballet in "Robert," with a foreground of correct spectators relieved against the white orgy of the wicked nuns. Again, in this saloon we perceive the Dumaresqs and John Lewis Browns which are the commonplaces of the picture market; and here is the large Lerolle, "The Organ"—a fair singer alone in the giddy space of the upper gallery, which somehow hangs visibly in the air in the emptiness and starkness of its proper elevation above a (supposed) crowded floor; and which is a canvas sufficiently evident and explicable to the world of plain folk; and alongside is the "Grand Toulon Road" of Montenard, whose white expanse, done in palette-knife work, successfully blinds the mere gallery-haunter's eye, and whose admirable painting may recall to American spectators the sunny beauty of Mr. Picknell's "Route de Concarneau."

These popular attractions, concentrated in the room first entered, are not the revolutionary explosions on which M. Durand-Ruel has staked his faith. It is up stairs that the courageous visitor will find, in unprecedented profusion, the magnificent insanities of which, in their general manifestation, Gérôme said latterly: "Ah, mon ami, nous nageons à plein dans la cochonnerie!"

Henry Holt & Co.,

The Nation

VOL. XLII.—NO. 1086. THURSDAY, APRIL 22, 1886. PRICE 10 CENTS.

Macmillan & Co.'s
NEW BOOKS.

Two New Novels by American Authors.

Mr. Henry James's New Novel,

THE BOSTONIANS.

A Novel. By Henry James, author of 'The Portrait of a Lady,' 'The American,' &c., &c. 12mo. $2.

"He is easily the greatest of our modern American society novelists."—*Boston Beacon.*

"'The Bostonians' seems to us by far the most important novel Mr. James has written. In it he has studied, with all his marvellous ability, a condition of life which is distinctly modern, and while in this special form local, in its essentials general and important. . . . That the style of the book is beautifully finished, that the volume abounds in terse and pregnant epigrams, that it is lighted by keen flashes of satire and frequent gleams of humor, would in any case go without saying of a book by Mr. James. . . . Unquestionably 'The Bostonians' is not only the most brilliant and remarkable of Mr. James's novels, but it is one of the most important of recent contributions to literature, and one of which the reputation must rather increase than diminish as time goes on."—*Boston Courier.*

"The comedy of human life in some of its special phases has been cleverly set forth by Mr. Henry James in 'The Bostonians.' The woman question forms the basis of the novel, and under cover of the movement of the so-called emancipation of the fairer half of the community, he admirably illustrates the interdependence of the sexes. . . . Mr. James's novel is brilliant, full of points, and eminently readable."—*London Academy.*

"Condensed into one volume 'The Bostonians' would be as good as anything Mr. James has written."—*Athenæum.*

"It is hardly possible to speak with too much admiration of this powerful sketch of a refined, passionate, reserved woman loathing the vulgar side of publicity and yet so eager for what she thinks the great reform of the age that she is launched into the vulgarities of the trading Yankee philanthropist against her will and in spite of the most lively sensations of horror and reluctance . . . Are painted with a force and originality such as even Mr. James has never before exhibited in an equal degree. . . . On the whole . . . we can truly say that we have never read any work of Mr. Henry James which had in it so much that was new and original."—*London Spectator.*

"As might be expected, there is fine writing, keen satire, and elegant portraiture in the volume."—*Chicago Inter-Ocean.*

"Contains some of his brightest writing. . . . Very superior to the pretentious 'Portrait of a Lady.'"—*St. Paul Pioneer Press.*

A New Novel by Mr. F. Marion Crawford.

A TALE OF A LONELY PARISH.

By F. Marion Crawford, author of 'Mr. Isaacs,' 'Dr. Claudius,' 'Zoroaster,' etc. 12mo. $1 50.

"In ceasing to be sensational, eccentric, melodramatic, Disraelish, he has learned to write a very good novel. His new book is a capital piece of work. The story is well conceived and well constructed, the narrative is always animated, and the sketches of character, although they touch only surface indications, are clear and true. . . . Mr. Crawford's management of this stock personage is highly effective; all the situations in which he figures are dramatic; the difficult scene of the first meeting with the wife is admirably done, and the closing chapter is one of the strongest and at the same time one of the most natural pieces of writing that any author has given us."—*New York Tribune.*

"Will be devoured by all novel readers, will be talked about by everybody, and will be the popular book of the season. . . . 'A Tale of a Lonely Parish' is the best story Mr. Crawford ever published, and one of the best told stories in recent literature."—*Boston Beacon.*

"There could scarcely be found a place and characters which of themselves seemed less suggestive of an exciting romance, and yet, with the hand of genius, the first outlines begin the development of pictures of artistic finish and beauty. It is tragic and sensational."—*Chicago Interocean.*

"'A Tale of a Lonely Parish' is a most astonishing advance beyond all his previous works."—*Boston Courier.*

"It will be one of the most popular books of the season among the lovers of good novels."—*Boston Budget.*

"Mr. Crawford even in a 'Lonely Parish' finds material as thrilling as many a detective story. . . . It is a pleasure to have anything so perfect of its kind as this brief but vivid story. . . . It is doubly a success, being full of human sympathy as well as thoroughly artistic in its nice balancing of the unusual with the commonplace, the clever juxtaposition of innocence and guilt, comedy and tragedy, simplicity and intrigue."—*Critic.*

MACMILLAN & CO.,
New York, 112 Fourth Avenue.

A. C. McClurg & Co.'s
NEW BOOKS.

Specimens of English Prose Style.

From Malory to Macaulay. Selected and annotated, with an introductory essay, by George Saintsbury. Crown 8vo, price $2.00.

"Mr. Saintsbury does so much that it is a wonder he should so often do so well. . . . In this volume of 'Specimens of English Prose Style' he is seen at his best. The selection is comprehensive and well made; the annotations are always intelligent, and are sometimes as good as such things can be; the introduction, and essay on the nature and development of English prose style, is in the author's happiest vein."—*London Athenæum.*

"Mr. Saintsbury may be congratulated on the general success with which he has executed his design. . . . Nor can more be done than to commend very especially the original and brilliant essay on prose style in England which he has prefixed to the specimens chosen by him."—*Saturday Review, London.*

Four Centuries of Silence.

Or from Malachi to Christ. By the Rev. [illegible] Redford, M.A., LL.B. Crown 8vo, [illegible] price $1.50.

"Every chapter is full of most interesting information and discussion, suggesting matter for comment. . . . It would be difficult to speak too highly of the wide reading, the careful and discriminating thought, and the wise and cautious judgments by which throughout the work is characterized. It fills a gap in the history of religious thought—especially for those who have not the means of exploring the wide field of recent criticism of which this volume is the condensed thought."—*British Quarterly Review.*

Woman in Music.

By George P. Upton. 16mo, price $1.00.

"'Woman in Music,' by the author of 'Standard Operas' and other valuable contributions to musical literature, is novel and full of interest. Its facts and illustrations, drawn from unusually wide reading, are very fresh and curious, and the charming little brochure may justly be said to contain the romance of musical biography.

The Standard Operas.

Their Plots, their Music, and their Composers. By George P. Upton. 12mo. *Second Edition.* Yellow edges, price $1.50; gilt edges, price $2.00.

"His work is one simply invaluable to the general reading public. Technicalities are avoided, the aim being to give to musically uneducated lovers of the opera a clear understanding of the works they hear. It is description, not criticism, and calculated to greatly increase the intelligent enjoyment of music. The little volume is charmingly gotten up."—*Boston Traveler.*

*** Sold by all booksellers, or will be sent by mail, prepaid, on receipt of price by the publishers,*

35 *cents; $4.00 a year.*

HAMLET'S NOTE-BOOK.

By W. D. O'CONNOR. Crown 8vo, $1.00.

An important contribution to the Bacon-Shakespeare controversy. It comprises a thorough-going and brilliant defence of Mrs. Pott's 'Promus' against the attacks of Richard Grant White. Incidentally it has an entirely new and striking theory of the authorship and purpose of the Sonnets, and closes with a powerful parallel between the lives of Bacon and Shakespeare.

*** For sale by all Booksellers. Sent by mail, post-paid, on receipt of price by the Publishers,*

"An inexhaustible Mine of Knowledge."

VOLUME VI. OF THE

"VARIORUM EDITION"

OF

Shakespeare's Works.

OTHELLO.

Edited by Horace Howard Furness.

Royal 8vo. Superfine Toned Paper, Extra cloth, gilt top. $4.00.

"The text is that of the first folio of 1623, with the varied readings of all the early editions, noted line by line. The notes are a marvellous contribution to an understanding of the play. They are the cream of all the commentaries, while to one who cares at all for his Shakespeare they are an inexhaustible mine of knowledge. The whole volume is a noble addition to a work that has already made its author famous, and that, even if he should carry it no further, would secure a place in the honor and the affection of all reading people for this true Shakespearean scholar."—*Philadelphia Times.*

"Mr. Furness, in fact, has omitted nothing which has seemed likely to his scholarly judgment to throw light on his subject, or to make the real meaning of the Poet more understandable. A particularly interesting and valuable feature of this volume is the 'Notes,' which, at the request of the Editor, Mr. Edwin Booth wrote out in an interleaved copy of the tragedy."—*Evening Telegraph, Philadelphia.*

Preparation for the Fall Entrance at Harvard or Oxford.

Dr. E. R. Humphreys, having one vacancy, wishes to fill it with an earnest student, of classical tastes, fairly grounded in Mathematical and English studies, and desirous of qualifying himself to enter HARVARD or OXFORD next fall with "CREDITS" in GREEK and LATIN COMPOSITION and AUTHORS. Address

E. R. HUMPHREYS, LL. D.,
April 13, 1886. 129 W. Chester Park, Boston.

COMPLETE INDEX TO LITTELL'S Living Age. Number 8 (Plus IX.—Russell, Lord John) now ready and mailed for examination to any address. Prof. ROTH, Philadelphia.

GENERAL HISTORY.

By Mary D. Sheldon, formerly Professor of History in Wellesley College, and Teacher of History in Oswego Normal School. Price by mail, $1.60.

Student's Edition.

The summary method of studying history has hitherto been available only to special students working in colleges, with access to great libraries. This book has been prepared in order that the general student may share in the advantages of this best approved mode of instruction. It is a collection of historical material, interspersed with problems whose answers the student must work out for himself from original historical data. In this way he is trained to deal with the original historical data of his own time. In short, it may be termed *an exercise-book in history and politics.*

Teacher's Manual.

This work contains the continuous statement of the results which should be gained from the "Studies." It embodies, in general, the teacher's part of the work, and is made up of summaries, explanations, and suggestions for essays and examinations. *Ready in May.*

"Is history to be a story, or is it to be a problem? You know how I answer these questions. It gives me much satisfaction to find that you answer them in the same way. You have taken the decisive step. I hope you will persuade many of your fellow-teachers to follow you. Till this step is taken both in historical writing and historical teaching, I cannot imagine that history can be anything more than a delightful amusement. I am much pleased to find that we agree in general very thoroughly about the plan by which the great difficulty of teaching history is to be overcome.

"J. R. SEELEY,
"*Regius Professor of History, Cambridge University, England.*"

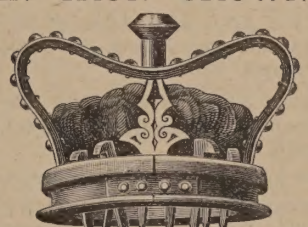
AN IRON CROWN.



A Decided Success! A Second Edition Already Called For.

WHAT ARE THE ESSENTIALS OF A GREAT NOVEL? Nobility of conception, strength and delicacy of imagination, skill in execution, fidelity to nature, graphic vigor of style, sympathy to stir the heart.

'An Iron Crown' has all of these. It is distinctively an American novel, and it is an unequaled exposé of the prevalent political, corporate, and commercial dishonesty of the day.

"Whether the great American novel has been written remains to be decided after this book shall have been widely read."—*Chicago Evening Journal.*

"A highly entertaining and powerfully written book."—*Magazine of American History, N. Y.*

"In a well-told tale deals with some of the questions which are to-day stirring the great American Republic from centre to border."—*Toronto Globe.*

"The plot is well conceived and admirably conducted. The characters are happily drawn."—*Globe-Democrat, St. Louis.*

"The question will be asked, who is the man with the power, skill, and inclination to write such a masterly arraignment? It is in every respect a work likely to create a sensation."—*Pittsburg Commercial Gazette.*

Events Now Occurring Cause Parts of This Remarkable Book to Read Like a Prophecy.

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

NEW BOOKS.

American Diplomacy;

and the Furtherance of Commerce. By Hon. Eugene Schuyler, author of 'Peter the Great,' etc., etc. 1 vol., 8vo, $2.50.

"A very interesting and an unusually valuable book, . . . which should be in the hands of every intelligent student of our Government."—*New York Times.*

Triumphant Democracy;

or, Fifty Years' March of the Republic. By Andrew Carnegie. 1 vol., 8vo, $2.00.

'Triumphant Democracy' is one of the most important books on America ever published, and will undoubtedly excite a wide-spread interest both in this country and in Europe. It is an earnest discussion by an earnest man of the relative merits of the monarchical and the republican systems of government, as exemplified in Great Britain and the United States, with a most remarkable and decisive conclusion in favor of the latter. So vigorous and enthusiastic an endorsement of American institutions by a foreigner has not been heard before.

The Mark of Cain.

By Andrew Lang. 1 vol., paper, 25 cents; cloth, 75 cents.

Labor, Land, and Law.

A Search for the Missing Wealth of the Working Poor. By W. A. Phillips, Member of Committee on Public Lands, Forty-third Congress, and on Banking and Currency, Forty-fifth Congress. 1 vol., 12mo, $2.50.

Col. Phillips discusses in an extremely interesting way the timely questions involving the general rights of labor and the various forms of land-holding, and the origin and growth of those individual and family rights which have left their marks on our social system. He writes with great force and vigor, and this volume commends itself to all thoughtful readers and students of the questions of the day.

LETTERS TO DEAD AUTHORS. By Andrew Lang. 1 vol., Elzevir 16mo, gilt top, $1.00.

"Wit, tenderness, delicacy, and discerning criticism are combined in an unusual degree; and the letters, taken as a group, constitute one of the freshest and most pleasing series of literary essays printed for many a day." – *Boston Journal.*

THE FIGHT FOR MISSOURI IN 1861. From the Inauguration of Jackson to the Death of Lyon. By Col. Thomas L. Snead. 1 vol., 12mo, cloth, $1.50.

"The author writes with candor as well as intelligence. . . . This book is a very valuable contribution to the history of the civil war in one of its least-known phases." —*Providence Journal.*

THE MEXICAN GUIDE. By T. A. Janvier. 1 vol., 12mo, with Maps and Plans, $2 net.

The best and only accurate Guide to Mexico; convenient in form, complete and reliable, picturesque and graphic.

"Nothing comparable to it for its particular purpose has appeared. . . . With its maps and its countless facts, the Guide must be part of the outfit of every one going to Mexico."—*Philadelphia Bulletin.*

OCEANA; or, England and Her Colonies. By Anthony Froude, M.A. Illustrated by the author and Lord Elphinstone. 1 vol., crown 8vo, $2.50.

HOW TO BE HAPPY THOUGH MARried. Being a handbook to marriage. By a Graduate in the University of Matrimony. 1 vol., 12mo, $1.25.

STRANGE CASE OF DR. JEKYLL AND Mr. Hyde. By Robert Louis Stevenson, author of 'The New Arabian Nights,' 'Treasure Island,' etc. Library edition, gilt top, $1; paper, 25 cents.

*** *For sale by all booksellers; or sent, post-paid, on receipt of price, by*

Charles Scribner's Sons,

743–745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, APRIL 22, 1886.

The Week.

THE Missouri-Pacific boycott is now at an end. There may be a short season of brigandage, but that too will come to an end. The boycotters adhere to the opinion that trains cannot run on the Missouri Pacific Railroad without their services, and when they see them running they think that there is something wrong in the moral constitution of the universe. They say that they will "hold out" all summer and all winter if necessary Holding out means that they will subsist firmly on contributions collected in all parts of the country from people as poor as themselves. There is no objection to this, but it is an arrangement which obviously cannot last long. As Mr. Arthur, the chief of the Locomotive Brotherhood, said in the beginning, "Strike means assessment, and assessment means death." The longer the taxes are levied to support the Martin Irons boycotters, the more dissatisfied will taxpayers become. Disintegration will set in at both ends of the line as soon as the burden becomes onerous. The assessments are not equal to full wages, and therefore the men who have families and responsibilities on their hands will hunger for steady employment, and will apply to Mr. Hoxie for it. Some of the Knights have already done so. The residuum will either drift away, or "take to the road," or become a burden on public charity. The man who is entitled to the credit of bringing this great conspiracy to confusion is H. M. Hoxie. What Mrs. Gray has done on a small scale he has done on a large one, in the midst of infinite difficulties and in the presence of personal danger Although not an officer of the law, he has vindicated its majesty to better purpose than any Governor on his line. He has set a notable example to all railroad managers and to his countrymen generally, the moral significance of which is that the way to deal with a boycott is not to yield to it an inch, and not to appear to yield.

The most wholesome and reassuring sign of the times is the formation of Law and Order Leagues in the Southwest to try conclusions with the Knights of Labor. Such a league has been formed at Sedalia, Mo., a perfect hot-bed of the Martin Irons type of knight-errantry. The Sedalia League has sent word to Mr. Hoxie that he need give himself no further pains to insure the protection of life and property there—that they will be responsible for such protection hereafter. Similar leagues are forming in Texas, where they are very much needed. There is room for one at East St. Louis and for another at Kansas City. In short, there are very few places not strictly agricultural where they will not be wanted sooner or later. New York ought to have the largest one in the country, and steps should be taken to form a nucleus now. The time is approaching when civilization must fight for existence. The right of every man to do the best he can for himself and for those dependent on him, subject to laws which all have an equal voice in making, must be defended in this country, and will be. It must be defended, too, by those who believe in it and not by hirelings. It must be defended on the plan adopted at Portland, Oregon, when that city was threatened recently by an anti-Chinese mob, and by the plan which was put in execution a few days earlier at Seattle, Washington Territory. When the lawless elements found themselves face to face with an organization pledged to lay down the lives of its members in defence of the law, they vanished like witches before holy water. The Portland example was the most patriotic uprising we have seen since the firing on Sumter. The Sedalia example, so far as we have any account of it, appears to be akin to it.

We are glad to see that the authorities are at last taking measures to punish one of the worst criminals now at large in the United States—Martin Irons. This man, as the head of the local assembly of the Knights of Labor which has its headquarters in St. Louis, is not only immediately responsible for starting the strike on the Missouri-Pacific and for continuing it after Mr. Powderly ordered it stopped, but he is also to blame for the outrages upon men who were anxious to work which culminated in the fatal collision at Fort Worth, Texas. When the strike was ordered off by Mr. Powderly, and the Knights at Fort Worth telegraphed Irons about it, he telegraphed: "Hold the fort." When the trouble grew and affairs became desperate, he telegraphed: "Hold the fort at all hazards." This was equivalent to an order to resort to any extreme of violence in the attempt to prevent men from taking the places of the strikers, and the shooting of officers of the law which soon followed was in obedient compliance with this order. The Grand Jury at Fort Worth is investigating the affair, and there ought to be no question about the prompt indictment and conviction of this inciter of murder. Martin Irons in the penitentiary would for the first time be rendering a great service to the public.

Mr. Powderly, in his last communication to Jay Gould, has put himself out of the pale of intelligent discussion and into the company of wind-bags and common scolds, where Martin Irons has hitherto held the platform. Mr. Powderly's former communications had entitled him to respectful consideration, because they were based upon principles and had a certain logical sequence. They accordingly enlisted the sympathy of fair-minded men, who thought they perceived in Mr. Powderly a man, holding a position of great responsibility and great difficulty, trying to minimize the consequences of a very serious blunder committed by misguided men belonging to the order of which he is the head. For a few days Mr. Powderly held a unique position before the country, as one who could get a hearing from both sides in a controversy of national import, and could use the language of reason to both. How he has forfeited this strong position the merest glance at his letter to Gould will show. It did not need Gould's crushing reply to expose him as a blatherskite, and an untruthful witness to the facts preceding the present correspondence between them.

As it is impossible to make an analysis of mere rant, it will suffice to state what kind of rant Mr. Powderly deals in. He first tells what kind of arbitration he understood that Gould had agreed to at their meeting in New York. It is noticeable that all the negotiators of the Knights of Labor, from Mr. Powderly down to the smallest boycotters and "sandwich men," have a lot of understandings over and above what is reduced to writing, from which they can argue indefinitely, and that the other side commonly has no defence against these unrecorded agreements. But it happens in this case that Gould has an instrument of writing which proves that Powderly's memory is disgracefully bad. Powderly says:

"I did not hear either you or Mr. Hopkins say that the present trouble out along your road would not be arbitrated with the men who were not at work. It was my firm belief when I left you that night, that you meant to have the entire affair submitted to arbitration at the first possible moment. That belief is shared in by Mr. McDowell, who was present during the entire interview."

Gould replies by quoting a telegram sent by Powderly's secretary during the meeting, or immediately after it, in these words:

"NEW YORK, March 30, 1886.

"*Martin Irons, St. Louis:*

"Have been in conference all day, with the result that Vice-President Hoxie agrees to the following: Willing to meet a committee of our employees, without discrimination, *who are actually at work in the service of the company at the time such committee is appointed*, to adjudicate with them any grievance that they may have. Have your Executive Committee order the men to return to work, and also select a special committee from the employees of the Missouri-Pacific to wait on Mr. Hoxie to adjust any difference. Do this as quickly as possible. Board will leave for St. Louis to-morrow.

"FREDERICK TURNER, Secretary."

The significance of this is, that Powderly was excessively anxious to cover up the blunder of the strikers and get them out of their scrape, realizing that they were exciting against themselves and against the entire order the active hostility of public opinion, and bringing upon themselves the heavy hand of the law. But it was necessary, for appearance' sake and to soothe the pride of the strikers, and to maintain his own influence over them, that he should get something that they could call a concession from Hoxie. This something was Arbitration. Arbitration with whom? "Not with men who are not in our employ," said Hoxie, to whom Gould referred the matter by telegraph, "but we will arbitrate with all who are in our employ, whether Knights or other." To this kind of arbitration Powderly agreed, as the Turner telegram shows.

The remainder of Mr. Powderly's communication is a challenge to Gould to meet him in court, or rather an announcement of his determination to force him into court. No legal issue is mentioned upon which the court is to pass judgment. A vague suggestion is

made that the issue to be tried is that of "the people against monopoly." Rant of this description fills half a column in the newspapers, and ends with a demand that Gould shall "restore every man to *his place* except those who have been engaged in the destruction of property or who have broken the laws." There we have again the central idea of Mr. Powderly's organization, viz.: that every Knight has a right to select his own employer, to fix his own rate of wages, to go on a shindy as often as he likes, and to hold his place for life.

The antics of the *Tribune* in reference to the labor disturbances, its frequent flops and its generally unaccountable behavior, need some explanation. The *Tribune* itself is under a boycott, and has been so for more than a year, and some of the leading mercantile firms in this city have been boycotted for advertising in its columns. There is every reason, both public and private, why the *Tribune* should fight boycotting wherever it shows its ugly mug, and fight hard. But its course has been pusillanimous in a high degree. It has apologized for street riots in New York, and has censured the officers of the law in East St. Louis, and its reports and special telegrams have read as though they had been revised by a Venerable Sage of the Knights of Labor. This, however, is not the fact. They have simply been revised by an editor who thinks that the votes of the Knights can be secured for Mr. Blaine, as a candidate for the Presidency, a couple of years from now, if they are "spoken fair" at this crisis. A most profound delusion. The Knights are not the wisest people in the world, but they know one thing for certain, and that is that the Republican party is not their party. They know also that the *Tribune* is not and never can be friendly to them, and that under all of its bowing and smirking there is a spirit of hostility to their lawless proceedings which differs in no wise from, say, that of the *Evening Post* except in the frankness and frequency of its utterance.

It would be a mistake to consider such an affair as the present strike on the Third Avenue Railroad as a struggle between employer and employed or capital and labor. It is really a struggle to determine whether this city, and for that matter the whole country, shall or shall not be ruled by "walking delegates." The Walking Delegate, who is the executive officer of the trades unions, is generally a man of precisely the same type as the ward politician—that is, he is but a poor workman in any regular calling, but has considerable facility of speech and capacity for organization and "management." The unions have now clothed him with enormous power, which naturally turns his head. To be able to enter great factories at any hour, with the air of a master, bully the proprietor, order the men about, and by a mere sign to suspend the work and put the concern in danger of bankruptcy, and to stop great public lines of communication, is, of course, well calculated, particularly as it brings him a comfortable income, to make drunk with pride and self-conceit a trumpery fellow to whom nobody would pay $3 a day in any regular industry. Moreover, just as the ward politician delights in frequent elections, and the military monarch delights in frequent wars, the Walking Delegate revels in strikes and "tie ups." They give him occupation, exalt his office in the eyes of his dupes, and enable him to display his power on a great scale before the multitude, and get his name into all the papers. Consequently his aim is to magnify all differences, inflame all disputes, and cultivate envy, hatred, and rancor in his union toward all other classes of the community, so as to keep his followers in a striking temper, and leave as little as possible to persuasion, or discussion, or public opinion.

A strike on a street railroad in New York has no chance of success, whatever be the ostensible or the real reasons for it, if the owners of the property and the applicants for the vacant places are protected against violence. It does not require any great skill or any long training to drive a pair of horses or to collect fares on the cars. Experienced men are preferred of course, but as all the present drivers and conductors were once inexperienced, so other raw hands can soon acquire the necessary experience. There are unemployed men in New York, or men in less desirable employments, sufficient to run all the street cars on all the lines. Situations as drivers and conductors are always in demand. Therefore, the success or non success of a strike depends very much but not wholly upon enforcement of the law. Public opinion does and always will require that men in the employ of corporations holding franchises in the nature of monopolies shall be fairly treated. What is fair treatment cannot be defined in all cases, but directors of street railroads and directors of all railroads know very well what they can and what they cannot do. The Third Avenue Company might lawfully dismiss all their employees because they belong to a trade union, but they would not do such a thing because public opinion would not sustain them. The atmosphere in which they live would be unwholesome. The right to join a union without forfeiting one's chance to earn a living is so much a part of the common environment that it needs no other enforcement than that of public opinion. The right of a man to labor for his bread without joining a union is equally sacred, and is, up to this time, as fully supported by bulwarks of public opinion. The demand of the Third Avenue strikers that the company shall discharge all employees who do not belong to the "Empire Protective Association" is so glaring an invasion of private rights that it would have excited universal surprise and abhorrence a few years ago. It excites little surprise now, because it is so common an occurrence, but it excites as much abhorrence as ever.

Justice Duffy, who has been fining Mrs. Gray's boycotters, and at the same time giving them good advice, has besides his courage one excellent qualification for dealing with this class of cases, and that is a strong sense of humor. He sees the absurd or comic side of it. His observation that not the boycotters only, but all of us, himself included, want our wages raised, goes to the root of the matter. There is no desire so prevalent among men of all trades and callings as the desire for more pay. The readiness to strike for it, if striking will produce the desired effect, is very widespread. There is no calling in which striking for a rise of wages is not common except the clerical calling. Doctors, lawyers, teachers, editors, engineers, as well as mechanics and laborers, strike whenever they feel confident that striking will increase their income—that is, they insist on working for those who will pay them best, and for no one else. But they do not follow the man who refuses to give them their price, around the streets, with libelling placards on their backs, or hang around his door trying to frighten away the butcher and grocer, or take the nuts off his wagon, or poison his dog. It is not striking that is shameful, but these savage and silly attacks on property and peace.

No speech has been made in the United States Senate for a long while which reflected more credit upon the man who made it than that delivered by Joseph R. Hawley, of Connecticut, in the recent debate on the Army Bill. Since these labor troubles began, there has been found hardly a single politician in the land who did not truckle to the mob spirit, and the cheapest sort of demagogism was retailed on the floor of the Senate Chamber by such men as Teller, of Colorado, and Van Wyck, of Nebraska. These Senators greedily seized the occasion of General Logan's proposition to increase the army from 25,000 to 30,000 men, as an opportunity for "making themselves solid" with the Knights of Labor and the professional labor agitators, and insinuated that Senators who favored an addition to the army wanted to use the soldiers to "put down the people," and to sustain Jay Gould and his confederates, as the army used to be employed to sustain the slaveholders. General Hawley rose to the occasion, and denounced this introduction of cheap demagogism with the warmth that such contemptible tactics merited. He pointed out that a strong military force in reserve is necessary to the maintenance of civil authority, and, while defending the right of men dissatisfied with their employment to strike, asserted the right and necessity of using the military to put down disorder if the strikers resort to violence, concluding with these manly words:

"There are times when I would be with the laboring man for a strike and I would strike to the end of the contest. I would not work sixteen hours a day for any man, with half an hour for my dinner. I would strike; I would organize; I would work for a better day; but I would not permit the thieves of the city of New York to rush out when I was striking, to destroy the property of the company from which I expected to get my living; and if the Sheriff could not do anything with them, if they were too strong for him and too strong for the police, I would have the Sheriff do what I saw done in New York once myself, call out the old Seventh Regiment and shoot the defiant wrong-doers down if they could not be made to yield in any other way. I would do that for the sake of the laborers themselves, and I would tell the laborers to-day just as I am telling it to you. You cannot deceive them by any other kind of talk. There is no use in the Senators tempting them, and I warn them against the worst enemies they have on the footstool, the men who indulge in the sort of conversation we have had here to-day from the Senator from Nebraska."

The Cincinnati *Commercial Gazette*, a quondam free-trade newspaper, argues, in a long and rather perfunctory article, that instead of repealing the duties on wool,

Congress ought to restore the tariff of 1867. "The manufacturers," it says, "who selfishly oppose the policy that has so enormously increased the home production of wool are short-sighted." On the other hand, the manufacturers contend that the wool-growers who favor the policy that has so enormously increased the importation of woollen cloth, and correspondingly depressed the production of the same in the United States, are themselves short-sighted. The truth appears to be that there has been so great a decline in the price of foreign wool in recent years that English manufacturers, who get it duty free, while American manufacturers are taxed as high as 113 per cent. on some varieties, are sending wool to this country in the form of cloth and ready-made clothing to an unprecedented extent. Thus the demand for American wool is falling off in the face of a rapidly increasing demand for woollen goods, and the price of wool is consequently not remunerative to growers in this country, except in the Western Territories and on the Pacific Coast, where land is very cheap. The complaint of the Ohio wool-growers is, that they cannot produce wool at a profit on land worth $50 to $100 per acre, as against wool produced in Texas, Montana, California, South Africa, and other parts of the world where land is worth next to nothing, and where the cost of production is merely that of herding sheep. Instead of using their land for more remunerative purposes—as they will be obliged to do soon, tariff or no tariff—they rush to Congress and ask that the duties be raised. They do not see that it is the importation of cloth and not the importation of wool that ails them.

The ultimate destination of wool is to be spun and woven. Any policy which induces the American consumer to buy a foreign-made coat prevents the selling of as much American wool as would go to the production of a coat. This is something that the Ohio wool-growers will not see. They are slowly strangling their only customers, the American manufacturers. The latter are not entitled to much sympathy from the free-traders' point of view, since they have assented to the wool tariff in order to secure protection for themselves. But the condition of both industries is deplorable if it be true, as Mr. Charles A. Beech, a veteran manufacturer, of Connecticut, says, that "the woollen factories of the United States would not sell for 25 per cent. of their original cost," and, as the Cincinnati *Commercial Gazette* says, that wool-growing in Ohio does not now yield any profit. We see no chance of any improvement in either branch of industry until both are well-nigh extinguished. The profits of woollen manufacturing in the United States are not equal to the depreciation of the machinery in use. The manufacturers see ruin impending, yet they are deterred by an ancient superstition from demanding from Congress the only thing that can possibly save them, viz.: free wool. The wool-growers, if the Cincinnati *Commercial Gazette* speaks truly, are almost as badly off. We are rapidly nearing the condition so ardently desired by John Randolph, who said that he so loathed manufactures that he would walk a mile to kick a sheep.

Since the prohibitory amendment to the Constitution was adopted in Rhode Island a fortnight ago, the curious fact has been brought out that there is a prohibitory law on the statute book and has been ever since 1852, as well as another law, passed later, known as the nuisance act, for the purpose of reënforcing and strengthening the stringent provisions of the original prohibitory law. Since these laws were enacted, another law has been passed which allowed municipalities to license the sale of liquors by a majority vote, and under this latter law a few cities and towns have voted to grant licenses, the effect of which was to suspend the operation of the prohibitory law in those places for the time being in respect to the dealers who thus obtained licenses. The only effect of the constitutional amendment, therefore, is to render the license law null and void, prevent the Legislature from enacting another, and give the old prohibitory statutes unlimited sway. But the few cities and towns which have been voting in favor of license include a large majority of the people of the State, and their votes year after year in favor of license show that public sentiment among a large majority of the people will not sustain prohibition. The fact that barely three-fifths, not of all the people of Rhode Island, but of those who enjoy the right under a property qualification to vote, and who took the trouble to vote a fortnight ago, declared in a pet for prohibition, does not change the public sentiment of the people in the cities and large towns—and a form of words amounts to nothing when public sentiment does not infuse life into them.

We are shocked to learn from the *Herald* that there is, after all, some doubt whether President Cleveland is engaged to be married to a Buffalo lady now travelling in Europe. After all the excitement stirred up last week on this subject, the President clearly owes it to the newspapers to get himself engaged. He need not necessarily be engaged to the Buffalo lady whose biography has been published and whose photograph has been printed, but he is bound to do something to satisfy the press. Secretary Lamar, too, is under obligations to the reporters. His banns were published last week simultaneously with Mr. Cleveland's, and now comes a report from Macon, Ga., where the lady resides, that there is no such engagement. This is an attack upon the liberty of the press. It is calculated also to wound the finer feelings of human nature. What can be more harrowing to the feelings of a modest woman than to have her wedding indefinitely postponed through the fault of a bridegroom elected for her by universal suffrage? Surely these are cases for arbitration. We commend them to the Congressional committee on that subject.

The last session of the present Mexican Congress was opened by President Diaz on April 1. The President's message takes occasion to assert, pending a thorough investigation which has been ordered, that the late conflict between American and Mexican troops was due entirely to a mistake on the part of the latter. The only other point of interest referred to in the department of foreign affairs is the fact that the Mexican Minister to the United States has been instructed to negotiate with the Chinese Minister resident in Washington a treaty of friendship, commerce, and navigation between the Mexican Republic and the Celestial Empire. General Diaz enumerates a great number of minor reforms and improvements which have been undertaken by his administration, dwelling chiefly, however, on the efforts that have been made to solve the financial problems which confront the nation. He reports a slight advance in the revenues of the Government. According to him, the creditors of the republic have cheerfully acquiesced in the funding laws of last June, and are exchanging their old bonds for the new ones of the "Consolidated Debt." He thinks that if the interest can be met promptly for a year or two, the credit of the nation will be in large measure restored.

Mr. Gladstone has introduced the Irish Land Bill, which is to form a sort of rider to the Home-Rule Bill. Its main feature is that landlords wishing to sell out are to be permitted to sell to the State, at a price equal as a rule to twenty years of the present rentals, and to receive payment in a 3 per cent. Government bond. The Government is then to sell or rent to the tenants as the case may be, and the rent or interest will be a first charge on the Irish revenues, and will of course be collected by the Irish Government. The position of this bill is very peculiar. The Irish care nothing about it, because it is avowedly a bill for the relief of the landlords. The English Radicals, too, care little about it, except as a help to Mr. Gladstone in carrying through his home-rule scheme. Many of them object to it strongly, as increasing the national debt, and possibly increasing taxation in England, for the benefit of an undeserving class. To both these objections Mr. Gladstone replies, as we replied the other day to our correspondent Mr. Linton, that the landlords were the English garrison in Ireland; that England either backed up or overlooked their misdeeds, and for long years deliberately refused to consider the Irish complaints against them, and is therefore morally responsible for their existence and the security of their property. In fact, the strongest support of the bill must come from the Tories, who are already hoarse with denunciations of the companion measure—the Home-Rule Bill.

The debate was chiefly remarkable for Mr. Chamberlain's unmistakable display of the white flag. He has plainly discovered that Mr. Gladstone is stronger with the country than he thought he was, and that the defections have not greatly damaged the Ministry. So he gives out that he is not so very much opposed to Mr. Gladstone after all, and hopes some day to act with him again. The malicious say that Mr. Chamberlain has been helped into this attitude by poor Lord Hartington's having killed himself as a party leader through going over neck and crop to the Tories, and figuring on the same platform with Lord Salisbury as a critic of Mr. Gladstone. Having thus successfully disposed of his chief rival, the Birmingham statesman is, they say, quite ready to consider the Premier's plans indulgently, and come back to him by and by.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, April 14, to TUESDAY, April 20, 1886, inclusive.]

DOMESTIC.

IN the House of Representatives on Wednesday, by a vote of 106 Democrats against 168, of whom 49 were Democrats, the proposition to seat Mr. Hurd (Dem., Ohio) in place of Romeis (Rep.), the sitting member, was rejected.

The House Committee on Ways and Means on Thursday decided by a vote of 9 to 1 to report favorably the resolution recommending the abrogation of the Hawaiian treaty.

The report of the Committee on the Electoral Count upon the Hoar bill was presented to the House on Thursday. In that part of section 4 which prohibits the rejection of the vote of any State from which only one return has been received "except by the affirmative vote of both houses," the Committee has struck out the exception. A material amendment has been made in the latter part of the same section relating to two sets of returns from one State, so as to provide that those votes only shall be counted which are cast by electors whose appointment shall have been duly certified under the seal of the State and the executive thereof, in accordance with the laws of the State, unless the two houses, acting separately, shall concurrently decide such votes not to be the lawful votes of the legally appointed electors.

In the House Labor Committee on Friday a motion to report the Blair bill favorably was made by Mr. James, of New York, and was defeated by a vote of 4 yeas to 6 nays. Mr. James then moved to report the bill without any recommendation. This was also defeated. An adjournment was forced, pending a somewhat complicated parliamentary wrangle. The result of the action and non-action seems to indicate clearly that the bill will not be reported favorably, and that it may be reported either without recommendation or with a substitute. The House Committee on Education also considered on Friday the Blair bill on the same subject, which had been postponed before. The Committee at first voted to postpone it indefinitely, and did so by a vote very hostile to the bill. It was suggested, however, that such action was not courteous to the minority, whereupon it was reconsidered, and the Committee proceeded to consider the bill, section by section. The Committee had not concluded the consideration of the first section at the time of adjournment.

The House Committee on Foreign Affairs on Tuesday adopted the bill of Mr. Belmont (Dem., N. Y.) for indemnity to the Chinese for about $147,000 on account of the Rock Springs outrage.

Mr. Logan addressed the Senate on Thursday, vigorously advocating open executive sessions.

The Committee on Commerce of the United States Senate reported favorably on Friday a bill making the depositing of dirt, sand, or other like matter in the tidal waters of New York harbor a misdemeanor, punishable by fine, imprisonment, and, in the case of masters or engineers of vessels, by the revocation or suspension of their licenses. It also provides for the appointment by the President of a Board of Harbor Commissioners, to consist of three officers of the army and two civilians, one of the latter to be nominated by the Chamber of Commerce of New York and the other by the Governor of New Jersey. It appropriates $30,000 to carry out its provisions.

Governor Bate, of Tennessee, has just appointed Washington Curran Whitthorne to succeed Howell E. Jackson as United States Senator. Mr. Whitthorne was born in Tennessee in 1825, was educated at the Knoxville University, and became a lawyer. During the rebellion he held the position of Adjutant-General for Tennessee for four years. Congress removed his political disabilities in 1870, and in the following autumn he was elected a Representative. During the twelve years of his service in Congress he made himself conspicuous as a critic of the naval administration of the Government.

Attorney-General Garland testified before the Telephone Investigating Committee on Monday. He said that he had no consultation with any person connected with the Interior Department as to the hearing in the telephone case, and that he never talked with Solicitor-General Goode on that subject, except as to the amount of fees that should be paid to the Government's special counsel. He had never used his official position to promote the interests of the Pan-Electric Company. "In fact," said Mr. Garland, "as a private citizen I could have done much better for the company, and would have done so." His official position, as having any bearing upon the interest of the Pan-Electric, was never discussed between him and his associates. He prepared the original articles of incorporation, which were adopted with a view to incorporation in New Jersey or Tennessee. He thinks that Tennessee was chosen because there was no requirement as to the paying in of certain percentages.

The Secretary of the Treasury on Tuesday issued a call for $10,000,000 3 per cent. bonds. The call will mature June 1.

The President has settled the long quarrel over the Louisville, Ky., Post-office by the reappointment of Mrs. Virginia Thompson, who has been Postmaster there under three Republican administrations. This appointment was opposed by some of the leading Democratic politicians of the State. A Democratic indignation meeting was held in Louisville, on Saturday night to protest against the reappointment. Representative A. S. Willis was vigorously denounced in the resolutions, which said: "We regret that the President of the United States felt called on to yield his own convictions to the demands of a Congressman who misrepresents his constituents, and puts personal considerations above his duty to his party." A meeting in favor of Mrs. Thompson was held on Monday. All parties were represented, but it was not enthusiastic.

The New York Assembly on Friday passed the Broadway Arcade Railroad Bill by 108 to 8.

Governor Hill, of New York, has vetoed the bill raising the salaries of police captains from $2,000 to $2,750, because it is a question which should be settled by local authorities and not by the State.

Governor Hill has vetoed the Capitol Appropriation Bill, objecting to the removal of Commissioner Perry and the substitution of an ex-officio board

The Committee of the Ohio House appointed to investigate the charges of bribery in connection with the election of Henry B. Payne as United States Senator have submitted their report. It makes no direct charge of bribery, but says the election was surrounded with suspicious circumstances.

As a result of a personal inspection relative to the recent allegations of the Philadelphia *Record* charging gross mismanagement in the soldiers' orphans' schools in Pennsylvania, and the abuse and neglect of the scholars, Governor Pattison on Thursday demanded the resignation of the Rev. R. E. Higbee as State Superintendent of Public Instruction, and summarily removed the Rev. J. W. Sayres, male inspector of soldiers' orphans' schools, and Mrs. E. E. Hutter, female assistant inspector.

A militiaman on guard at the Vandalia yards in East St. Louis on Thursday was fired upon by a striker. He returned the fire, but the man escaped.

There were three acts of violence by strikers in East St. Louis on Thursday night. Two Ohio and Mississippi Railroad switchmen were attacked by a crowd and badly beaten. When they escaped and ran for their lives they were fired upon. An hour later a deputy sheriff met the same gang. Several shots were instantly fired at the deputy. None of them hit him. Later still the pickets of Company B, who are guarding the Louisville and Nashville Depot, were fired on from a vacant house.

The Bridge and Tunnel and the Belt Line Companies of St. Louis have at last employed a sufficient number of men to man all their engines and switches, and they now announce their readiness to do all the transferring across the river and between the various railroad yards in East St. Louis which may be required. This removes the last impediment to free railway traffic at St. Louis.

The strike of switchmen in the Lake Shore yards at Chicago has prevented the handling of freight by that road. On Tuesday an attempt was made to run a train, but it was prevented by the strikers, who knocked a brakeman senseless.

The Elmira division of the Order of Railway Conductors, numbering 160 members, on Sunday, adopted a resolution declaring that "believing arbitration to be the only and proper method to pursue in matters of grievances, we condemn strikes, and assert, further, that they are invariably ill-advised, gotten up by agitators, socialists, incendiaries, and demagogues, rather than by the representatives of honest labor."

A letter from T. V. Powderly, Grand Master Workman of the Knights of Labor, was delivered to Jay Gould on Wednesday. In this letter Mr. Powderly gave a summary of his recollection of two discussions that took place between the Executive Board of the Knights of Labor and Mr. Gould, on March 28 and 30. He denied some of the statements that the latter had made respecting what was said by both sides, and explained what he said respecting the character of the strikers. Mr. Gould was urged to settle the strike at once, and told, if he would do so, he was at liberty to deal with the employees as citizens, not as Knights of Labor. Mr. Powderly challenged Mr. Gould to begin suits for damages against the Knights of Labor. In reply Mr. Gould sent a letter in which he quoted previous correspondence to show the reasons for his acts in reference to the strike, and then censured the threatening tone of Mr. Powderly's communication. Mr. Gould declared that the contest of the Knights of Labor was now not with himself, but with the laws of the land.

Four of the men engaged in distributing boycotting circulars against Mrs. Gray's bakery, in this city were arrested on Wednesday, and on Thursday were fined a dollar each for disturbing the peace.

All the lines of the Third Avenue Railway Company, in this city, ceased running cars on Friday, owing to the strike of 800 employees. On Monday the Executive Board of the Empire Protective Association ordered a tie-up of all street car lines in the city, except those on Eighth and Ninth Avenues. The order was obeyed. This was done to force a compromise on the Third Avenue officials.

Late on Monday afternoon the Third Avenue Line attempted to run a car. It was assailed by the strikers, and the driver and conductor badly beaten. The police used their clubs vigorously and soon settled the trouble. They made a number of arrests. Early Tuesday morning the Empire Association ordered the general "tie-up" off, on the ground that there was no proof that the other companies were aiding the Third Avenue. If any outside assistance by other companies is extended, the "tie-up" is to be ordered again.

Tornadoes in Minnesota, Iowa, and Dakota on Wednesday did great damage to property,

besides destroying about fifty lives and seriously injuring 200 people.

By the breaking of a reservoir dam near East Lee, Mass., on Tuesday, the town was terribly devastated and seven people drowned.

Mr. John Bigelow has sent to the Chamber of Commerce an elaborate report of his observations during his visit to the Panama Canal, in which he enumerates the tremendous financial, executive, sanitary, and other difficulties attending the work. He says: "To determine when this canal will be finished, one must know, first, how much work is yet to be done, and, second, how much money the company will be able and disposed to spend annually upon it, and, third, how many laborers or their equivalent in machines it can command. That information has not yet been revealed to man. No one living can even now give anything more than a guess as to the amount of work to be done. All these uncertain elements are rendered more uncertain by the financial situation of the company. It is about entering the market for a new loan of 600,000,000 francs. The price it will have to pay for this money is uncertain, and the price of a future loan, if one should become necessary, is still more uncertain. Till the money is secured, and the cost of getting it ascertained, it would be about as safe to predict the quarter in which the winds will be setting next Christmas Day at St. Petersburg as the time when the canal will be finished or what it will cost. That the canal will now be prosecuted to its completion without any very serious interruption is fairly to be presumed, for too large a proportion of its cost has already been incurred to make a retreat as good policy as an advance. Even if abandoned by the company, the contractors themselves would probably find it for their interest to combine and finish it."

Messrs. Cornelius, William K., Frederick W., and George W. Vanderbilt have given jointly the sum of $250,000 to the College of Physicians and Surgeons, in this city, for the erection and endowment of a building 75 feet by 100 feet, at Tenth Avenue and Sixtieth Street, to be known as the Vanderbilt Clinic. The institution will supplement the work of the Sloane Maternity Hospital and of the College.

John H. Noyes, founder of the Oneida Community, is dead at the age of seventy-five. He was born in Vermont, and in 1834 began to preach "perfectionism." In 1846 he founded the Putney Community, and two years later removed it to Oneida County, N. Y. The system of complex marriages which he preached was abandoned by the community in 1879, and he himself retired into a sort of exile in Canada.

Squire White, aged eighty-eight years, known as a leader of the Rhode Island Dorr war, and famous in his day as a lawyer, died on Thursday at Quinebaug, Conn.

FOREIGN.

Mr. Gladstone propounded his Irish Land Bill to the House of Commons on Friday evening. In substance his statement was as follows: The Land Act was intended to go into effect on the same day on which the Home-Rule Bill would become operative. It would not go on without the operation of the other, which would provide a legislature in Ireland to appoint statutory authority to deal with the landed estates and act between vendor and purchaser. The purchases would be made through the issue of £180,000,000 of 3 per cent. stock issued at par. These new Irish consols might, with the consent of the Treasury, be commuted for stock of a lower denomination. If the stock could not be issued forthwith, scrip of equal value would be issued for the same purpose. The act was to give the landlords the option to sell out under its terms. Its enactments were confined to agricultural holdings, and did not include mansions having demesnes and woods. The state authorities acting between the peasant and land-owner would purchase the land from the land-owner and put the peasant in possession as absolute proprietor, subject to an annual rent charge until the total payments equalled the purchase money. The state would not force the small occupiers to become proprietors. In districts where the population was congested, the state would have the power to decide whether expropriation of the too crowded land should be compulsory. Nobody except the immediate landlords would have the option to sell to the encumbrancer, and then he must sell by foreclosure, and not at an option for himself. Applications to sell would have to be made by all the tenants on an estate, and all these applications and sales would be registered. Applicants would be required to give security for costs in certain cases. The Land Commission would be empowered to refuse applications. The basis of prices would depend upon the rental for a fixed period. The judicial rental of 1845 would be the standard in all cases wherein the rent of the land to be sold was then fixed; in all other cases the Land Commission would have the power to arrive at a price by comparing the other judicial rentals with Griffith's valuation. The Land Commission would also be allowed to examine the state of the books concerning estates for ten years back. Twenty years' rental would be a normal purchase; in exceptional cases twenty-two years' rental would make a purchase. Applications for sale would not be received after March 31, 1890. Ten million pounds of the stock would be issued during 1887, £20,000,000 in 1888, and £20,000,000 in 1889.

Mr. Chamberlain made a speech, in which he said that the land proposals, although they had been modified since he had left the Cabinet, would still impose a great burden on Great Britain without sufficient security for the loans advanced. The bill was calculated not so much to benefit the tenants as a sop for the landlords. Although only £50,000,000 was to be issued, the option to sell was offered to landholders holding land valued at £150,000,000. Supposing that the full number of options to sell should be accepted, how would all the money be provided? He opposed the bill on principle, because it specially protected the landlords. His speech contained the significant statement that he was not an irreconcilable opponent of Mr. Gladstone's policy. If the land proposals should be sufficiently modified, he would be happy to be relieved of the duty of continuing his present attitude of opposition. Permission was given to introduce the bill, and the second reading was fixed for May 13.

A full meeting of opponents of Mr. Gladstone's policy was held at the City Hall, Glasgow, on Wednesday evening. Dr Hanna, leader of the Presbyterians of Belfast, said that he wanted Mr. Gladstone's measure rejected with contempt and scorn. It was the most unworkable, grotesque, and mischievous proposal that had ever emanated from the brain of a statesman, sane or insane. It would hand the peasantry over to the most illiterate priesthood in Christendom.

A mass-meeting of 3,000 opponents of the home-rule scheme was held in London on Wednesday night. Speeches were made by Lord Hartington, Lord Salisbury, and Mr. Goschen. Mr. Gladstone's name was treated with great disrespect, and during his speech, Lord Hartington with great deliberation said: "I hope I may appeal to you not to make the task which I have before me more difficult than it is, by indulging in any manifestations of disrespect to one whom I shall always admire and revere as the leader of a great party; who, in my opinion (I do not expect you all to agree with me), has conferred great advantages on the country; who, at this moment, in my judgment, although I am bound to differ from him, is actuated by feelings as noble and as honest as any that have ever inspired the conduct of an English statesman."

Monday being "Primrose Day" (the anniversary of the death of Lord Beaconsfield), the Conservatives everywhere appeared decorated with his favorite flower. The political crisis was used to emphasize the observance of the fifth anniversary of the Tory leader's demise.

Sir William Harcourt, Chancellor of the Exchequer, introduced the budget in the House of Commons on Thursday evening. He stated that the expenses of 1885–6 were £1,393,327 less and the receipts £1,208,699 less than the estimates made by Mr. Childers a year ago, making an actual deficit of £2,642,943, instead of £2,827,171, as estimated. The diminution in revenue was most marked in the case of alcohol, the receipts derived from which were £971,000 below the estimate and £1,179,000 below the receipts in 1884–5. Within a decade there has been a decrease in revenue from alcohol of £4,500,000. This has been due to changes in the habits of the people, and has been concurrent with an enormous increase in revenue derived from comforts of life. The falling off in receipts from alcohol has been reduced about one-half by increased receipts derived from tea, tobacco, and fruits. For the fiscal year of 1886–7 the expenditures are estimated at £90,428,599, and the revenue at £89-885,000. It is proposed to meet the deficit by taking £800,000 from the £6,750,000 applicable to the reduction of the national debt, which has been reduced £30,000,000 in the past five years.

The Queen's Proctor has decided to intervene in the Dilke case as a private person. Sir Charles will call a great meeting of his supporters to hear his statement.

Sampson Low, the oldest London publisher, died on Friday at the age of eighty-nine.

The Greek Chamber of Deputies has voted all the bills for military preparations. The Government on Saturday sent an unconciliatory reply to the note of the Powers, insisting upon the execution of the Berlin Treaty.

The General commanding the Greek troops on Zarkos Heights, which command the Plain of Larissa, was summoned by the Turkish General on Sunday to withdraw from that stronghold. The Greek General flatly refused to withdraw. The Turkish force, consisting of 7,000 men and several batteries, thereupon advanced to the foot of the heights. Greek troops are being pushed to the frontier as rapidly as possible.

It is rumored that the Greek Consul at Candia, Crete, with the approval of his Government, has been actively engaged in plotting a rebellion among the people, a majority of whom are Greeks, against Turkish authority, and that the Consuls of the other Powers have asked their respective Governments to interfere to prevent the movement from being carried out.

The Porte has been informed by Germany, Russia, and Austria that they are taking fresh steps to compel Greece to disarm.

England has sent a circular to the Powers proposing that if Greece does not disarm, the Powers cease diplomatic relations with her and blockade the Greek ports.

The Russian Ministry have ordered the chief authorities of all the universities in the empire at once to adopt means for the immediate and permanent suppression of all forms of political agitation by young students.

At 10:30 o'clock on Sunday morning, while the Bishop of Madrid was ascending the steps of the Cathedral, he was shot three times and fatally wounded by a priest who had recently been dismissed from the priesthood, and had vainly importuned the Bishop to be reinstated. The assassin was arrested and was followed by an immense crowd, who were only prevented from lynching him by gendarmes. The Bishop died on Monday.

MM. Ducquercy and Roche have been sentenced to fifteen months' imprisonment for fomenting riots in the French mining districts.

A serious flood in Montreal has damaged property to the amount of $1,600,000.

WHO ARE "THE LABORERS"?

THERE are about 11,000 men employed now on the Southwestern railroads who have taken the place of the strikers of their own free will, and the employers are satisfied with them, and the roads are doing a large business in the transportation of freight and passengers Nevertheless, we are hearing still from the Knights of Labor, through their officers, Mr. Powderly, Mr. Turner, Mr. Martin Irons, and others, not only that the strike is not over, but that the railroad companies are still engaged in the perpetration of some sort of wrong against a large body of laborers belonging to their organization, concerning which they are asking not only for arbitration but for some sort of Congressional interference. Now we know what they mean when they say the strike is not over. They mean that the men who struck six weeks ago have not gone back to work, and are not willing to do so until they are asked by the companies to return on their own terms. We see nothing reprehensible in this. No man ought to go back to work for either the Missouri-Pacific or the Texas-Pacific unless the terms offered by these corporations are satisfactory to him, and he thinks he can do no better.

But what wrong are the companies doing to the Knights of Labor, or to "labor" in general, or to the community at large? What is it that the Congressional Committee is going down to inquire into? About what did the Citizens' Committee propose arbitration the other day? What is it exactly that the Master Workman is complaining of? In like manner, what is it that O'Donnell and his Empire Protective Union have against the Third Avenue Street Railroad? The members of the Union have refused to work for the road because they do not like the terms of the service. This is their right. No one has any business to quarrel with their decision except their creditors or persons dependent on them for support. The company has accepted their decision and is employing other men, who are presenting themselves in great numbers, to take their places. What, then, are O'Donnell and his Union complaining of? What wrong is the company doing them? Why are they hanging about the road, and why has an immense body of police to be employed to keep the track clear, and prevent attacks on those men who are driving and conducting the cars?

These questions go to the bottom of the labor problem as now presented to the American public, and they cannot be considered too carefully or answered too clearly and distinctly. We believe that in its manner of answering them the American people will furnish almost as valuable a test both of their own temper and capacity, and of the strength of democratic institutions, as was furnished by their answer to the Southern challenge to take the field in defence of free labor. What they are now asked to do is to permit a few hundred thousand laborers, of foreign birth mainly, to set up a government to take the place of that already in existence in the State and nation, and enforce submission to it not by means of open warfare, but by a vast number of riots, assaults, and isolated acts of violence and disorder directed against persons and property, and other more petty annoyances, in the hope that the public may be worried into acquiescence.

What Powderly and Turner and Irons are trying to do in the West, and what O'Donnell and his men are trying to do here, is not to secure employment for labor, on terms satisfactory to the laborers—for a vast army of laborers stand ready to do and are doing the work which the strikers refuse—but to establish the rule that nobody has any right to be considered a laborer, or be employed as such, except members of their respective organizations. They want us to admit that the 11,000 men now employed by the Southwestern roads are not real laborers or entitled to sympathy or protection from the militia or the courts, and that the Knights of Labor should be allowed to make war on them with pistols, and knives, and brickbats, and drive them from their work, and rob their families of their support. They want us to admit, also, that members of their respective organizations, by merely becoming members, acquire a vested right to remain in such employment as they may happen to have at the time of joining, no matter what their behavior may be and whether the employer wants them or not, and as long as they please, on their own terms. This would convert every laborer's place into an office for life, on wages and hours of work fixed by himself, or, in other words, an office for which there has been no parallel in the history of mankind, except that of a military despot. It is only military despots who have ever made places for themselves, or determined how long they should hold them, and what their rate of pay should be, without consulting those who paid their salaries.

Does any sane man suppose that the American people are going to organize their business on a basis of this sort, and try to do the work of the nation through agents whom they can neither hire nor dismiss, and whose wages they cannot fix? We think it will be discovered, even by the most ignorant and simple-minded of the Knights before long, that the world is not going to be carried on in that way just yet, and that in considering the claims of labor and the interests of labor and the needs of labor, the American people will not overlook the vast army of the poor and unemployed, whose existence is revealed by every strike of the unskilled or slightly skilled. There is no claim to human sympathy and help arising out of poverty and readiness to work for a livelihood, which the men who take the place of strikers do not possess in a higher degree than strikers. It is they who are really "Labor," and it is they who present the true labor problem with which the philanthropist and legislator are called on to deal.

PARLIAMENTARY ANARCHY IN GERMANY.

THE latest debates in the German Reichstag—we refer to those already known to us *in extenso*—show more clearly, perhaps, than any previous discussions in that body how far parliamentary government is still from being a reality in Germany. In a lugubrious tone the aging Chancellor declares, on an occasion apparently least appropriate for political pathos, that he despairs of finding a support for the unity and power of the nation in its Parliament, the majority of which rests, and will undoubtedly continue to rest after many an election, on "fractions hostile to the Empire from necessity and principle." These fractions, which not only support but almost constitute the majority, are the Ultramontane Centre, the Socialists, the Poles, the Alsace-Lorrainers, and other Separatists, with whom the German-Liberals, themselves the warmest friends of German unity, generally coöperate in their opposition to what they consider Prince Bismarck's excessive demands of power or economic vagaries.

Being "convinced" of the untrustworthiness of the Reichstag for the defence of his creation, the Chancellor, as he frankly tells it, the more eagerly looks for firmer support in a well-provided army, and in finances little dependent upon legislative grants and the contributions of the single States. He sees dangers ahead—dangers threatened by socialism within and coalition without—expects soon to be removed from the helm, sees no successor who would continue his labors in his own way, and gently intimates that the constitutional structure might be exposed to serious shocks—after him; for himself, he would surely not lay hands on what he had helped to build. He once more recommends one of his pet financial measures, in these curious words: "I would still beg you to-day, though it might almost appear like irony, to accept the monopoly; by the monopoly you strengthen the Empire, by declining it you hurt the Empire."

This appeal, evidently as seriously meant as pathetic, did not prevent the complete defeat of the Government measure, and a few days later the warfare of fractions—which in the German Reichstag replaces the great party duels of other parliaments—was resumed on another occasion. The Minister of the Interior, Puttkamer, pleaded for the renewal of the Anti-Socialist Law for five years. The Centre party had proposed an amendment limiting the prolongation to two years. The Minister depicted the horrors of anarchic rioting just going on in the mining districts of Belgium, and upbraided the German-Liberals with defending a degree of freedom, of governmental impotence, which the bloody scenes in the neighboring kingdom proved to be fraught with perils of every kind. In the next minute he turned toward the Ultramontane opposition allies of the advanced Liberals, and twitted them with the remark that Belgium was "a thoroughly and truly Catholic country," that "ninety-nine per cent. of the strikers were true sons of their church," which thus proved as "little able to cope with certain agitations" as the Liberal Government. He then implored all parties to stand by their Emperor, who "had given his blood for bringing about this law, and who had expressly commanded the declaration before the nation's assembled council that no keener grief, no bitterer disappointment, could be prepared for him, in this late evening of his life, than to find himself deserted by the representatives of the nation in his attempt to maintain and secure the domestic peace." The leader of the Centre, Windthorst, took up the gauntlet, reproached

the Government with driving, by its exceptional decrees, the Catholic laborers into the ranks of the atheistic Social Democracy, at the same time inveighed against Belgian liberalism as a pernicious freemasonry, and thus wrestled at once, with his wonted volubility, with Conservatives and Liberals, Government and socialism, foe and ally. A Polish representative declared the opposition of his fraction to any prolongation of the law, protesting in the Polish interest against exceptional legislation in general, but also condemning the Socialist doctrines as subversive not only of State and Church, but of the principle of nationality, so dear to Poles.

This provoked the ire of Bebel, the aggressive Socialist chief, who began his harangue against the bill with an attack on the Poles, its most outspoken opponents. Then, assailing its advocates, he alluded, in the course of his invectives, to Stöcker's insinuation of a secret harmony between Socialists and Jews. This gave the famous court-preacher an opportunity to turn the discussion on Social Democracy into the anti-Semitic channel, and accuse a Jewish member of the Socialistic parliamentary group of hypocritically wearing on his back the badge of Social-Democratic principles. The Jew retorted by reminding Stöcker that tribunals before which his anti-Semitic agitation had brought him had branded his forehead with the mark of lying. Hänel, the most incisive German-Liberal opponent of the prolongation bill, characterized Stöcker as "the Bebel of religious intolerance and State Socialism." Bebel spurned his ally's comparison as an insult, Stöcker being a perjurer. A tilt between Socialists and Windthorst, both in opposition, followed, and the irregular skirmishing ended with a victory of the latter at the ballot, the two-year amendment being adopted. Thus the Ultramontanes, holding the balance of power between Conservatives and National-Liberals on one side and the German-Liberals and Social-Democrats on the other, and disposing of the vote of the Separatist fractions, again triumphed over Bismarck, who, however, assured the Reichstag, at the close of the debate, that what the Government failed to obtain now it would surely recover before the lapse of the two years. And, victorious or beaten in debate—such is German constitutionalism—the Government has always its way in fact.

ON LEARNING FOREIGN LANGUAGES.

In the last number of the *Revue Internationale de l'Enseignement* M. Bréal has published a lecture on learning foreign languages, in which he has attacked a practical problem in a practical way, not as a philologian, not as a determined tracker down of etymologies, not as an ingenious restorer of such dilapidated linguistic monuments as the 'Song of the Arval Brethren,' but, to use his own expression, as a *paterfamilias*. Literature, philology he ruthlessly puts aside, and absolutely discards all the cumbrous apparatus of grammar. The object he proposes is the practical acquisition of German, of English, Italian, Spanish. Philological study of these idioms he considers a waste of time for the young. Greek and Latin are the true educational gymnastic. English and German are needed as means of communication, of exchange among the peoples. He denies the familiar assertion that the French have not the bump of languages. The Minister of Public Instruction has recently tried the experiment of sending young Frenchmen abroad to learn English and German, and the experiment has had the happiest results. From Germany, from England the students have brought back not only a good knowledge of German, of English, but enlarged views. They have learned to appreciate different methods of thinking, reasoning, living. Of course the state cannot repeat this experiment on a large scale, but the system of exchanges so common between French-Swiss and German-Swiss families is recommended as an admirable and economical method of training young girls in foreign languages. M. Bréal admits that this is somewhat repugnant to French ways, but France has widened her ways so much in the last thirty years that we may look forward to greater latitude in this direction also. To those who can go abroad he gives the eminently sensible advice not to go abroad in order to pick up the language, but in order to study something definite, to work at something definite, whether banking at Frankfort, bookselling at Leipsic, brewing of beer or Aeginetan sculptures at Munich. You will learn banking, bookselling, beer-brewing, you will make yourself an authority on the origin of Greek art, and you will be a capital German scholar to boot.

The trouble that a philologian has to encounter is that he carries with him the sense of his profession. He is too much bent on being grammatical; and M. Bréal tells an amusing story of the efforts of a young French professor who betook himself to Germany equipped with the orthodox apparatus for the acquisition of the language. Endowed with a good memory and a prodigious power of work, he mastered his grammar, the 248 irregular verbs and all, in the space of a week. Then he put his knowledge to the test by going to a lecture; but he found, to his dismay, that he could not catch even one grammatical form, not even one of those rascally irregular verbs he had acquired with so much pains. His next point of attack was the vocabulary. Grammar is only the skeleton, words the flesh and blood. So he addressed himself to the radicals of the German language first, and finding a book that offered him a complete assortment of German radicals, he devoured it eagerly and digested his 1,000 roots in four days. The result was not a whit better. His next resource was Ollendorff—'German in Ninety Lessons.' Ninety lessons—that means three months. Why not take three lessons a day? In thirty days Ollendorf is his—but not the German language. Jacotot, Robertson, Ploetz follow—all to no purpose. At last he conceived the heroic purpose of committing the dictionary to memory. 30,000 words cannot be considered a trifle. Still, at the rate of 1,000 words a day, a dictionary can be appropriated in a month. The failure was as absolute as before, and, to crown his humiliation, he met certain French artisans who had crossed the border with him and had learned German while working at their trade. The young professor finally succeeded in learning German, and afterwards published his experiences for the benefit of the world.

Still, with all respect for M. Bréal, the time spent on grammar, roots, Ollendorff, and dictionary was not all wasted. The true way to learn a language is to take it in at every pore, and the philological pore is not to be despised. A mature man cannot become a child again, although it is very true that in order to learn a language well one must get into childlike ways of mimicry. People who are plagued with a profound sense of their personal dignity never learn to speak a foreign language well. Of course M. Bréal is too sensible a man not to emphasize the fact that this infantine knowledge of language goes even more rapidly than it comes. A child learns a language perfectly in a year, and forgets it totally in six months; and those who learn languages as children do unlearn them with corresponding facility.

Much that M. Bréal says on the education of the ear, on the mastery of phrases, is excellent. For English as against German he has much to say. English is much nearer akin to the French than is German. It is the French form of the Germanic mind. It is a beautiful language, "all sinew and muscle, a language that seems to have resolved the problem of packing away the maximum of *esprit* in the minimum of matter"; and the short monosyllables which the German poet Platen detested, carry to M. Bréal's mind a sense of plenitude and strength. At the same time, he acknowledges that, owing to a false start, he has never been able himself to do much with it practically, and he unconsciously illustrates the trickiness of our idiom by supposing a child equally at home in English and in French to address his English-speaking mother with the startling phrase, "Let me come on your knees" (*Prends-moi sur tes genoux*)—which is, being interpreted, "Take me on your lap."

TOLSTOI AND MONTAIGNE.

The old and the new are the same: the wisdom of the ancients repeats itself in every age; the thirteenth century instructs the nineteenth, and the men of the sixteenth century are our brothers. In every land and in every generation are born those souls who, hearing the word of God, follow after it and hold commune with it

> "——on their behalf
> Who, on the plain, with dance amain
> Adore the Golden Calf."

Tolstoi to-day in Russia, Garrison yesterday in America—with only the differences of accent and emphasis belonging to each personality and the circumstances of each—utter truths eighteen hundred years old and far older yet, the truths of the Sermon on the Mount. The striking similarities between these two thinkers must have occurred to every one who in this last year has read Mr. Garrison's Life and Count Tolstoi's 'Ma Religion,' for it is conspicuous; and it is extremely interesting.

Not less interesting is a resemblance to be found between Tolstoi and Montaigne. Completely unlike as is the tone of their minds, many of Montaigne's pages might be used as mottoes for Tolstoi's chapters. For us who have not suffered nor struggled as the sensitive and high-hearted Russian has done, who have not known the moral strife he has endured, there may be a fuller sense of kinship and sympathy with Montaigne. Yet if we better understand his position of thought, none the less—all the more, in fact—there is a curious, one may even say a profound, satisfaction in being led from his point of view to the neighboring, though narrower, outlook of our coetanean, and in adjusting our knowledge of life to the discovery and acceptance of all which they see in common.

While the strongest moral conviction of Tolstoi's mind is the belief in non-resistance to evil-doers, his greatest moral struggle, it is evident, has been in delivering himself from all dominion of human authority; and this freedom from social control he must regard, though he does not distinctly say so, as not only the right but the duty of every man. Here, perhaps, a colder and keener intelligence would find one of the weak points of his system; but no heart can deny the force and power of his indictments against the Church (all creeds) as a teacher of evil doctrines, and against the State (all governments) as an inciter to evil deeds, and against Society (all civilization) as a promoter of evil passions. War is

the very embodiment of the things condemned by this man's rectitude. In his eyes, a righteous war there cannot be: a war for religion, a Christian army, are self-contradictory terms, and a war of patriotism is founded on delusion. A soldier's profession, however disguised by genius and by honors, is at bottom simply homicide. All this is summed up in two words by Montaigne: he speaks of war as "cette maladie humaine." A "malady" can be neither Christian, nor patriotic, nor honorable.

In a passage of eloquent emotion Tolstoi contrasts Jesus saying, "Take thy cross, and follow me," with the vilest of gold-laced men, whose business is to kill his fellow-creatures, saying, "Take, not your cross, but your knapsack and rifle, and march to a suffering death." He continues (we translate from the French version):

"Abandoning their families, their wives, their children, tricked out in grotesque habiliments, and placing themselves at the orders of the first comer of higher rank, starved, frozen, exhausted by forced marches, they go, not knowing whither, like a herd of cattle to the slaughter, . . . till the moment comes when they are placed within the range of cannon balls and bullets, and commanded on their side to kill men of whom they know nothing. They kill and are killed. And none of them knows why or wherefore. It needs but for some ambitious leader to brandish his sword and shout to them sounding words, and they precipitate themselves headlong to death."

Break off here in the middle, and turn to Montaigne:

"In our wonted actions, of a thousand there is not one that has regard to ourselves. He whom you see scrambling up the ruins of that wall, furious and beside himself, exposed to so many gunshots: and that other, all scarred, frozen, and pale with hunger, resolved to die rather than open the way to him—think you they are there for themselves? It is for one whom, perchance, they have never seen, and who gives himself no concern about them, but lies sunk the while in sloth and pleasure."

And then he asks: "Who does not readily exchange health, peace, and life for renown and glory, the most useless, vain, and false coin that we pass current?" This is the very keynote of a large part of Tolstoi's book; as the first clause of the just quoted passage is merely a different wording of one of his repeated phrases—"In our wonted actions, of a thousand there is not one that has regard to ourselves."

> "For custom lies upon us with a weight
> Heavy as frost and deep almost as life."

It was custom which imposed upon Tolstoi in his youth the practice of dueling, and other conditions which he refers to and depicts in this striking passage:

"In my life—exceptionally fortunate in a worldly point of view—I can count so many sufferings endured for the doctrine of the world, that they would equal one or another martyrdom for the doctrine of Jesus. All the most painful moments of my life, beginning with the orgies and duels of student days, my army life in war time, the illnesses and abnormal and insupportable conditions I have passed through [one notes and corrects here a self-evident mistranslation in the French], all this was martyrdom endured for the doctrine of the world. Yet I speak of my own life, one, as I say, exceptionally fortunate in a worldly point of view. How many martyrs have endured and are enduring at this moment, for the doctrine of the world, sufferings which it would be difficult to count up!"

"Je vouldrois," says Montaigne, "qu'on me feist raison de ces loix d'honneur qui vont si souvent chocquant et troublant celles de la raison." It is such martyrs who, as life darkens to its end, must question—

> "What was that word which once sufficed alone for all,
> Which now I seek and never can recall?
> I know not; I will do the work the world requires,
> Asking no reason why, but serving its desires;
> Will do for daily bread, for wealth, respect, good name,
> The business of the day."

"Alas!" they ask, "is that our one duty?"

> "And then, as weary of in vain renewing
> This question, thus their mournful thought pursuing,
> 'I know not. I must do as other men are doing.'"

The thought which Lessing expressed in the phrase, "The Christian religion has been tried for eighteen hundred years; the religion of Christ remains to be tried," is the thought which Tolstoi's book but amplifies and insists upon. And here, too, Montaigne has the precedence. "If this ray of divinity," he says—that is, a lively faith in God—"if this ray of divinity at all touched us, it would appear in everything about us; not only our words but our works also would be pervaded by the light and lustre of it; all that went out from us would be seen to be illuminated by this noble enlightenment." But, in truth, he adds, comparing the life of Christians with that of other human societies, "this so divine and celestial order distinguishes Christians only by their language!" We remain behindhand "there, where, on account of the advantage of our religion, we ought to shine in excellence at an extreme and incomparable distance; and men should say, 'How just they are, how charitable, how good; it is because they are Christians.' . . . The peculiar token of our truth of doctrine should be our virtue of life." Just afterward he says: "Some men persuade the world that they believe what they do not believe; others, in greater number, persuade themselves so; not understanding what it is to believe." Tolstoi says, "Our existence finds itself now in such contradiction with the doctrine of Jesus that we have the greatest difficulty in understanding it."

Once more the words of the poet already quoted (Clough) enforces other utterances of the writers we are especially considering. He speaks for many men when he cries:

> "Ah me! this eager rivalry of life,
> This cruel conflict for preëminence,
> This keen supplanting of the dearest kin,
> Quick seizure and fast unrelaxing hold
> Of vantage-place; the stony hard resolve,
> The chase, the competition, and the craft
> Which seems to be the poison of our life,
> And yet is the condition of our life!
> To have done things on which the eye with shame
> Looks back, the closed hand clutching still the prize!
> Alas! what of all these things shall I say?
> Take me away unto thy sleep, O God!"

Such a life may be compatible, as Tolstoi asserts, with the Christian religion—the religion of the Christian churches—but not with the religion of Christ. As a follower of Jesus, he says of himself: "I have understood in what my true good consists; I have *faith* in that. . . . Not only I have faith that I ought thus to live, but I have faith that if I thus live, and only so, my life will have for me all possible meaning, and will be reasonable, joyful, and indestructible by death"—since, as Montaigne says, "there is nothing so easy, so gentle, and so favorable as the divine law."

There is a remarkable passage of Montaigne which at first glance we might seem to have advanced three hundred years away from, but Tolstoi indicates that we should err in so thinking. Montaigne, speaking of the evil qualities in us, declares that they are connected with the fundamental conditions of our life, and continues:

"In the same way, in all civilizations, there are necessary offices not only vile but vicious. . . . Though they become excusable since they are needful, and general necessity effaces their true quality, they must yet be left to those citizens . . . who sacrifice their honor and their conscience as others sacrifice their lives for the good of their country. . . . The public good requires that there should be traitors, and liars, and murderers: let us resign these duties to people more obedient and more supple than we."

"One has but to study the complicated mechanism of our modes of government," says Tolstoi, "to recognize that . . . one set of men make laws, another set apply them, a third harden others . . . to unreflecting and passive obedience; the fourth, these very men so hardened, become the instruments of all kinds of violence." Or, as he has before declared, no judge would execute his own sentences, while no officer of the army, no private soldier, save from the influence of discipline, would even wound one single man, much less kill them by the hundreds and sack their towns. "The distinctive trait of civilized man," he avers, "is that he does through obedience what is considered by the larger number as iniquitous, that is, as opposed to conscience."

We come to a close only for want of space. There remain countless instances of likeness in the thoughts of these two meditative minds. Those who care to pursue the subject may compare what they say concerning the advantages of the simple over the learned, of the poor over the rich; concerning prayer and immortality; about punishments, or even about such minor matters as commentaries. At the last moment we can but beg their readers to remember, in connection with Tolstoi's admirable pages on the difference of our feeling towards our compatriots and towards foreigners, (as with Garrison's generous declaration, "My country is the world, my countrymen are all mankind"), Montaigne's delightful passage: "I look upon all men as my compatriots, and embrace a Pole as cordially as a Frenchman, holding in less high regard the national bond than the universal and common one."

ON THE EVE OF GLADSTONE'S SPEECH.

LONDON, April 8, 1886.

BEFORE three hours are over, Mr. Gladstone's scheme of home rule will be known to the whole world. Americans may, perhaps, read with interest a few notes on the condition of English opinion at a momentous historical crisis. My aim at this moment is simply to state what I believe to be facts; but any readers of the *Nation* who may peruse what I write should bear in mind two considerations: the first is, that though my aim is simply to state the truth, I cannot profess to be without a bias. My conviction is, that any scheme of home rule or federalism is opposed to the interests of England, and this belief is, I know, certain to affect both my observations and the inferences they suggest. The second consideration is, that in a period of revolution—and no one can conceal from himself that England is passing through a revolution, even though it be one accomplished under forms of law—phases of sentiment change from day to day, almost from hour to hour. The opinion of this week is not the opinion of a week ago; it may differ widely from the prevalent opinion of a week hence. Add to this, that I am not "inside politics," and can make no claim whatever to any wide knowledge of the different classes which make up the large world of England. My observations, whatever their worth, are based on knowledge of the sentiment prevalent in what, for want of a better term, I can best describe as the class of lawyers and university men. Subject to these remarks, which I most earnestly request any reader to bear in mind when judging of this or any other letter by me on current politics, I note with some confidence the following features in the condition of public opinion.

First.—The educated classes have as a body withdrawn their confidence from Mr. Gladstone.

This assertion will, I know, be disputed; it is one of those statements which, from their nature, do not admit of absolute proof. For myself I feel no doubt of its correctness, but I am perfectly aware that it would be challenged by Gladstonian Liberals. (The expression, by the way, "Gladstonian Liberal," is singularly characteristic of the time, and suggests many reflections.) The facts on which I rely in support of my contention are (*inter alia*) the changed tone of journals which, like the *Spectator*, the *Guardian*, or the *Scotsman*, used at one time to place unhesi-

tating faith in the Premier, and even more the altered attitude of the vast majority of my own friends, many of whom have always been and still are strong Liberals. In the matter of home rule, moreover, this change of sentiment is, at any rate, perfectly natural. Home rule has never been what I suppose Americans would call a plank of the Liberal platform. Mr. Gladstone's policy may be wise or foolish, but it is undoubtedly a new policy; it is his own; it is not the traditional policy of the Liberal party.

Secondly.—Mr. Gladstone's adherents in and out of the Government are almost wholly guided by two influences: their belief in Mr. Gladstone's statesmanship, and the difficulty which they see in governing Ireland on any plan not approved of by Mr. Parnell. No human being can suppose that the men who will vote for Mr. Gladstone's measure would themselves have proposed a policy of home rule; they have approved Mr. Gladstone's scheme because it is Mr. Gladstone's, and because it promises to get them out of a sort of political *cul de sac*.

Thirdly.—Confidence in the Conservative party does not exist. The way in which the Conservatives came into power; their utter incapacity to make up their own minds on the plain question whether they would support coercion or not; above all, their conduct in respect of Lord Spencer, has deprived them of all moral weight. Lord Randolph Churchill, moreover, is the only Tory statesman whose name is known to the people; and, whatever other feeling that name may inspire, it certainly does not inspire confidence.

Lord Hartington commands public respect. Whether he and his friends can form or guide public opinion, will be known in the course of the next three or four weeks. Neither he nor his associates have yet shown the capacity to lead the English democracy.

Fourthly.—The opinion of the electors is an unknown quantity.

This is really the consideration which ought to govern all speculation as to the probable course of events. Of excitement, either against or in favor of home rule, there has been up to the present moment not a trace; and the most probable, as well as, in my judgment, the most alarming, inference from this popular silence is the existence of widespread popular apathy. The danger of England, to judge from signs which, after all, are very possibly delusive, lies not in the violence but in the political indifference of a democratic electorate. It is possible that the class who predominate in the constituencies do not understand and are not interested by politics.

Fifthly.—The most melancholy, and it may be feared the most indisputable, characteristic of public sentiment is the absolute want of any strong moral enthusiasm either for or against the policy of home rule.

There is certainly some ground for supposing that by far the least popular of Mr. Gladstone's anticipated proposals is the scheme for compensating or buying out Irish landlords. No one can feel more strongly than I do the obvious objections to burdening the English taxpayer with a new load of taxation, but it certainly is not a cheering reflection that the one feature in the policy of home rule which seems to have immediately aroused disapprobation is the attempt to avoid treating one class of Irishmen with gross injustice. Home rule may, it is likely enough, be established, but on one point there must, I regret to say, be no mistake. This last concession to Ireland, if it be made, will be made in the main from no enthusiasm for justice, but from a sentiment of lassitude and despair.

Sixthly.—Till yesterday there certainly prevailed a widespread idea that Mr. Gladstone's proposals were doomed to defeat in the House of Commons. To-day there are some signs that his success in carrying his measures through the Lower House is at any rate not impossible. Mr. Chamberlain apparently seeks for reconciliation with the Prime Minister. Lord Hartington's conduct seems to give signs of hesitation. Mr. Gladstone's oratorical triumph is anticipated and perhaps to a certain extent discounted. But of all this the people of New York will, long before this letter reaches them, know far more than any Englishman can know at the present moment. All that can confidently be asserted is, that England is invited by her chief statesman to enter on a revolutionary policy, and that there is no sign that the invitation has as yet excited among the mass of the people either repugnance or enthusiasm.

A. V. Dicey.

TWO DAYS AFTER.

London, April 10, 1886.

Mr. Gladstone has spoken, and your readers are already in possession of his scheme of home rule. With all deference to the descriptive reporters, the speech was not equal, in point of eloquence, to the greatest of its author's previous efforts. His voice used to be more musical, his gestures more easy, his sentences more accurately rounded off. But the abatement of physical force seems to strengthen rather than diminish the personal influence of the veteran party chief. Will that influence be strong enough to secure a majority for the second reading of his bill? The Government whips speaks of a majority of fifty; others, less confident, will be content with twenty. Nobody supposes for a moment that the bill can become law in this Parliament. In the House of Lords there are, perhaps, not ten men, besides the members of the Government, whose votes can be counted on in support of any measure of home rule. Even in the Commons, it must be noted that all calculations based on the reception given to the home-rule scheme are of necessity partial. Land purchase is still to be faced, and when Mr. Gladstone comes to ask leave to add 120 millions sterling to the national debt, his majority may show a tendency to disperse. Many gentlemen seem to hope that they may be allowed to vote for home rule and against land purchase. But the Government cannot permit this without going back on its pledges. If land purchase is dropped, Lord Spencer will go, and his departure might just turn the scale as between the Liberal leaders who are out and those who are in.

Perhaps the most curious feature of the discussion, up to this point, is the unanimity with which the supporters of the scheme declare that it will not do in its present shape. If the bill is read a second time, it will be by the votes of men who have undertaken to cut it all to pieces in committee. Many English Liberals declare that they regard the scheme with general approval, but at the same time they do not wish the Irish members to be removed from Westminster. But if the Irish members are not removed, what becomes of the Government scheme? It is perfectly certain that Ireland cannot furnish 281 elected members for a Dublin Parliament, in addition to 103 members of the Imperial Parliament. Mr. Parnell, again, is in a mood of general approval, but he objects to the constitution of the proposed Parliament; he objects to the financial part of Mr. Gladstone's scheme; he objects to the part which concerns the constabulary. If all these portions of the scheme are to be left out or seriously modified, what will be the final shape in which the bill will be presented for the consideration of the Lords? It is odd, and rather ominous, that Mr. Parnell and Mr. Healy are so ready to agree to their own exclusion from the British Parliament; odd, because in doing so they drop the weapon of obstruction which they have flourished over our heads during the last ten years; ominous, because it looks as if they were disposed to think that this measure of Mr. Gladstone's may open a way for them to walk out of the British Empire altogether. Nobody can suppose that Mr. Parnell will be permanently satisfied with the position which that measure assigns to his country—the position of a colony, paying a heavy tribute to the Empire, but taking no part in the direction of imperial policy. If Ireland is dissatisfied with her position when she gets home rule, there will be only two courses open to her: she may agitate for complete separation and national independence, or she may enter into some kind of federal agreement with England. The latter course was suggested by Mr. Healy in his speech of last night. But if the alternative—separation or federation—ever has to be placed before the Irish people, who will be our guarantee to insure that they will choose federation?

It is impossible to describe or even to indicate the cross-currents of English opinion at the present moment. I note that some Radicals are beginning to grumble over the loss of the Irish vote, because they have been counting on that vote to assist them in pressing forward English measures in which they are interested. Other Radicals, perhaps better informed, refuse to admit the cogency of this argument. They point out that the Irish vote has never been Radical or Tory or anything else that is consistent. It is usually cast in favor of any project of State Socialism; it is therefore a factor in the development of the new Radicalism with which Mr. Chamberlain has hitherto been identified. But the Irish vote is also emphatically a Catholic vote, hostile to religious equality, hostile also to the policy of the Elementary Education Acts. When it is remembered that Mr. John Morley made his first appearance in practical politics as a strenuous opponent of denominational schools, we need not wonder that he is now doing his best to exclude the representatives of Catholic Ireland from the House of Commons. If he succeeds, of course he must resign himself to making the principle which he condemns all-powerful in Ireland itself. The clergy have not lent their aid to the Nationalist movement for nothing, and we may be sure that a native Parliament will show no unwillingness to honor the drafts of Archbishop Croke. The Protestant churches of Ireland look with dismay to the prospect before them, and the Presbyterians have been especially active in endeavoring to rouse a feeling against home rule among their co-religionists in England and Scotland. They have met with a fair measure of encouragement, especially in Scotland. The Presbyterian ministers there have, up to the present time, been among the most ardent admirers and faithful followers of Mr. Gladstone, but it is already becoming evident that some of them are shaken in their allegiance, and if the cry of "Protestantism in danger" were once boldly raised, it is possible that the response may be loud enough to alarm the Liberal leaders. Among the "guarantees" of Mr. Gladstone's scheme will be the clause prohibiting the establishment or endowment of any church in Ireland. The clause may be sufficient to prevent the Roman Catholic clergy from installing themselves in the position left vacant by the Church Act of 1869. It will not prevent them "exalting a mitred front in Courts and Parliaments" or from working the national schools, and possibly the whole public service, on principles of exclusion and denominational preference.

By far the strongest influence in favor of the proposed change in our Constitution is the feeling that a change has become inevitable. In the

first place, there are not a dozen men in the House of Commons who respond to Lord Hartington's suggestion that the question of Irish government ought to be considered apart from the interests of English parties. We cannot bring ourselves to believe that any party will ever rise superior to the temptation of the Irish vote. Lord Hartington himself is perfectly sincere in making his appeal, and he is also capable of acting on it. But then his independence is based on moderation almost amounting to indifference. He is not eager to be in office; he is not ardently devoted to any particular course of policy and legislation; and, therefore, he has not, for the great mass of electors, the same attraction as Mr. Gladstone or Mr. Chamberlain. On the Conservative side, there is certainly no man capable of taking up the Irish question in an impartial spirit. Lord Randolph Churchill is hampered by past indiscretions, and in any case he is not likely to forego any opportunity of "dishing the Whigs" that may come in his way. As for his associates on the front Opposition bench, their attitude throughout this controversy has been one of collapse and bewilderment. If Disraeli—the Disraeli of 1873—were in the House of Commons to-day, there would be a "Conservative reaction" setting in all over the country. At present there are no signs of any such movement, and the Liberals fight their battles out among themselves in untroubled security.

Again, there is much force in the argument that the alternative before us now is between home rule and coercion. If we refuse to concede a Parliament to Ireland, the government of that country will be a most disgusting business for many years to come. We are so tired of Crimes Acts, and Arms Acts, and Peace Preservation Acts, that a strong impulse has come over us to give up the task, and let Irishmen go away and coerce one another. If the Irish Parliament failed to keep order, there would, of course, be a revival of the old sentiment of ascendency—possibly even a demand for the withdrawal of the Great Charter we are now asked to concede. But until it is granted, Englishmen will be disposed to take a hopeful view of matters, and to assume that, for their own sakes, the emancipated Irish will preserve some tolerable measure of discipline among themselves.

There are still a few, but only a few, Liberals who believe that Ireland might be governed without a Peace Preservation Act, on the lines of the existing Constitution. We have tried many experiments with that unhappy country; we have never tried to govern it just as England and Scotland are governed. Within Great Britain, our statesmen are powerful because they are in contact with the people; in Ireland they never address the people directly at all. Mr. Gladstone has been for the last ten years the rival of Mr. Parnell, and Mr. Parnell has beaten him all along the line. If English statesmen wish to prevail against Irish agitators, why do they never attempt to fight the agitators on their own ground with their own weapons? Our political leaders never address a meeting in Ireland, unless, perhaps, a carefully packed meeting of Protestants at Belfast; they take no pains to see that their acts are fairly placed before the people in the press. They give up the field to speakers like Mr. Biggar and papers like *United Ireland*, and then they are surprised to find that they have no influence on Irish opinion! But these, as I said before, are the views of a small minority—they are not the views of "practical politicians." R.

Correspondence.

POLITICS AND FINANCE.

To the Editor of The Nation:

Sir: While the interest of this country, as well as Great Britain, is centred upon Mr. Gladstone's great speeches upon home rule and land purchase, there has quietly taken place (sandwiched, as it were, between them) a proceeding which, as an example, is quite as important for the United States. On Thursday evening Sir William Harcourt, the Chancellor of the Exchequer, brought in the annual budget. The expenditure was put at £90,428,599, and the revenue at £89,885,000, leaving a deficit of £543,599. It was proposed to take £800,000 from the fund for reducing the national debt, which would leave a surplus of £257,000. The balance is therefore adjusted within little more than one million upon 450, or about one-quarter of one per cent. Of course, when it comes to committee of supply, the details may be varied, and if Parliament starts a new enterprise, the Chancellor of the Exchequer must find the money. Some items of revenue may also vary from the estimate. But, the House having accepted the budget, the basis of finance is settled for the year.

Let us now turn to Congress. A tolerably correct estimate of revenue is probably to be found in the report of the Secretary of the Treasury, but he cannot estimate expenditure because he has nothing to do with it. The appropriations are made without reference to revenue, unless with a full purpose of getting rid of it, and while it was bad enough when they were in the hands of one committee, now that they are at the mercy of six or more, no human being can say whether the next fiscal year will show a surplus or a deficit, or whether, instead of redemption of debt, the Treasury, with all its enormous revenue, may not be in the market to borrow money.

That which makes the management of the British national finances, what it unquestionably is, the first in the world, is not the great wealth of the nation nor any special conservatism or economy, but the simple fact that the whole business, on both sides of the account, is left to one man, the Chancellor of the Exchequer, who manages it as if it were his private purse; Parliament never amending a money bill, but only saying aye or no—in other words, having a veto. But as an offset to this great power, the responsibility is so strict that upon the smallest defeat the Chancellor is bound to resign, as when Mr. Lowe was beaten in a proposal to put a tax on matches.

What the finances of the United States need, more than tariff reform, more than payment of the debt, more than stoppage of silver coinage, more than uniform currency, is—a head. That the Secretary of the Treasury should at least take a part in the public discussion of the subject is so obviously for the public interest that it would have been put in practice long ago, were it not that it is by no means so much for the interest of the private combinations in the lobby, which practically rules both Congress and the finances. G. B.

Boston, April 19, 1886.

PUBLIC OPINION AS EDUCATED BY THE KNIGHTS.

To the Editor of The Nation:

Sir: In pursuing your investigations of the labor question, now so prominently before the country, you might obtain confirmation of the quick change in public opinion where the strikers actually possess the city, by a review of the situation of affairs in Sedalia, Mo., during the month past. From private letters and a stray number of the Sedalia *Democrat* of the 6th instant, it appears that the public sentiment of that town has undergone the change. From sympathy with the strikers the townspeople became so wrought up and dismayed by the overbearing conduct of the striking men in that "be-knighted" place, as to call a citizens' meeting for the purpose of organizing a Law and Order League. When the meeting took place there were present a large number of the strikers, whose noisy demonstrations prevented any business from being transacted, and overawed all save one Captain Stevens (I am not sure of the name's spelling), who arose and made a strong speech in favor of quiet and good order. While the meeting apparently accomplished nothing, yet a week later its results were shown in the city elections. There were already regular nominees of both political parties in the field; but a few days before the election the *Democrat* suggested Captain Stevens as a candidate for Mayor of the city on a "Citizens'" ticket, inviting all good law-loving voters to support him. Meantime the Republican candidate had joined the order of the Knights of Labor, presumably for political effect. Captain Stevens (a Democrat, by the way) was elected by a large majority, receiving something like 700 votes out of a total poll of 1,200, the regular Republican and Democratic candidates dividing the remainder.

And now the people, grown suddenly bold, on knowing their strength, are jubilant, and the Sedalia newspapers are saying things, and printing headlines in large type, about the Knights of Labor that would cause a paper elsewhere to be instantly boycotted.—Yours truly, B.

Pittsburgh, Pa., April 13, 1886.

WHAT THE KNIGHTS WILL ACCOMPLISH.

To the Editor of The Nation:

Sir: As an example of the oppression exercised by the Knights of Labor, not only on the employers but the workmen as well, I give the following recent occurrence at Albany:

Mr. Young, a boss mason, had working for him a number of non-union masons. Going to one of the brick-yards to buy materials for a building he had contracted to erect, he was told that this yard, as well as all others in Albany, had received word from the Knights of Labor that if they sold brick to Mr. Young, they would be boycotted; consequently his order would not be filled. Mr. Young found the other dealers in brick under the spell of the same unmanly fears, and could not buy, in a market containing quantities of it, the material he must have to commence a job he was under contract to finish at a specified time not far distant.

After talking the matter over with his men, they all decided that the only thing for them to do was to join the Knights of Labor as the condition on which they could get work and their employer could fill his contract. Application was therefore made to the proper officers, and the names of the masons presented for membership at the first meeting. The response of the union was, that in order to punish these men for their contumacy in not joining the order sooner, they would have to pay $50 each to be admitted; and if this were not done, they could get work neither in Albany nor elsewhere. With help from their friends and Mr. Young, the men scraped together $25 each, which they handed in as a down payment; the Knights chivalrously allowing the remainder to be made up in weekly instalments. This arranged, the prohibition was withdrawn from the weak-kneed brick-dealers, and Mr. Young was granted permission to buy his materials.

It will be curious to see what Mr. Powderly and his brethren in command will do when it becomes necessary for them to come down from the occupation of ordinary strikes, boycotts, and destruction of property, to the humble task of providing wages for their dupes from the industries they are so busily engaged in crippling. This task will be theirs at no distant day, even should the authorities persist in their suicidal course of sympathy with the violators of the law, and permit conspiracies, arson, and murders to be planned and directed with impunity by men known to them. The workmen, of course, do not look ahead, and fancy that the general yielding to their demands that wages shall be raised, hours of labor (even reasonable ones) lessened, and the general control of business put into their hands, including the use of the employers as a means of forcing non-union men into the ranks of the Knights of Labor—that all this, because it is going on with a rush now, is to last always. They judge that their blind obedience to the commands of their executive committees will always continue to obtain the concessions from employers they exact. Demands which were reasonable and just in their early history are becoming more and more arrogant. Each success seems a stepping stone to more extravagant demands, and a feeling is rapidly growing that every employer is the natural enemy of his workmen, and it is a righteous act to get everything out of him that force or intimidation can gain.

Nothing is more certain, however, than that the time will come, and ere long, when people who have money (and they will not be found among the bone and sinew of the Knights of Labor) will withdraw it from business operations which are at the mercy of a lot of ignorant, irresponsible demagogues. Manufacturers, contractors, and master artisans of all kinds will withdraw their capital from active use so soon as they become convinced, that, in remaining employed, it, with the industries it creates, is at the risk of the vagaries and whims of an Irons or Powderly, to say nothing of the numerous underlings of these arch conspirators. This process of withdrawal is already begun. Factories are closing, and preparing to do so as soon as existing contracts are filled and materials on hand converted; new enterprises are abandoned or arrested in their progress; and capital generally is preparing to retire from operations of which its owners are asked to give the control to those whom it employs. When this withdrawal and hoarding shall have gone on a few months more, and the demands for labor will only yield employment to say 75 per cent. of the working members of the Knights of Labor, what will be the condition of the leaders who have brought their fellows to this condition by blindly obeying their commands?

The heads of the Knights of Labor have taken a course which can only result in anarchy or their own downfall. We may—through the imbecility, or worse, of our politicians and rulers—have a taste of the first, or an approach to it, before we are through; but, were all their influence openly thrown in with the agitators, inexorable natural law, and the underlying, though often deeply hidden, common sense of the people will eventually come to the rescue, and relegate the Powderlys and Ironses to their natural obscurity, unless, indeed, they fall victims to those they have so long robbed and humbugged under pretext of friendship. D. S.

Brooklyn, April 17, 1886.

THE CLEANLINESS OF CHINAMEN.

To the Editor of The Nation:

Sir: I am tempted to a comment upon your editorial of April 1 on the Chinese question. It so happens that I have had to do with quite a number of Chinese laborers on this Pacific Coast, and have come to a fairly intimate knowledge of their habits and worth. The average California Chinaphobist would not admit as truth the testimony of Messrs. Coolidge and Babcock upon the personal cleanliness of the Chinese. And he would have fair show of reason on his side of the argument. The truth is, the Chinaman has but four senses—the fifth, smelling, seems to be practically lacking. We know how flat is his nose. Neither does his eye revolt from nastiness. The fragrance and coloring of a Maréchal Niel rose would be wholly wasted upon any Chinaman I ever saw. Their sense of touch is delicate. Herein lies the key to the Chinaphobist's position as regards the personal habits of the Chinese.

The man who can walk through the "Chinese quarter" of any California city, or even of any mining or railroad camp, and breathe contentedly, hath no nostrils. Yet, so far as their bodies, clothing, and bedding go, the Chinese laborers are infinitely cleaner and sweeter than are the laborers of any other nationality with whom I have had dealings. They do invariably wash their bodies and put on clean clothing after every day's work. But immediately thereafter these same men will step gingerly about from hut to hut on stepping-stones cast into such filth as kitchen slops and sewers produce. Then, again, they use largely of peanut oil in their cooking. The rank odor of this oil, of opium, and of scented tobacco, and of close atmosphere saturating their quarters forms a strange contrast to the clean-looking men. They won't *touch* filth. Neither do they see or smell it.

It is his lack of eye and nostril that leads this frugal, industrious, and satisfactory laborer into such great offending. I have myself so many times and so easily made these Chinamen keep their camps in sanitary trim, that I am satisfied that wherever the "Chinatown" of our California cities becomes a nuisance the fault lies wholly with the municipal authorities. All China believes in and obeys law willingly.—Respectfully, Dana Harmon.

Tucson, Arizona, April 9, 1886.

PROTECTION AGAINST THE POST-OFFICE.

To the Editor of The Nation:

Sir: On page 288, No. 1084, issue of April 8, you accuse Senator Wilson of not knowing what he was doing in introducing the bill to double postage on fourth-class matter. I am inclined to think he did, and that he contemplated a little more revenue in the interest of country merchants. It is well known here that a great quantity of merchandise is bought by "our own inhabitants"—consumers—from dealers in New York, Chicago, St. Louis, and the other commercial centres, to the detriment of the trade of our local merchants. This is not only because our people can buy cheaper, but also because they can, having a greater variety to select from, get more nearly what they want. With the present fourth-class matter mail facilities, four cents will send for and bring, for instance, a considerable variety of dry-goods samples. Some of these will represent prices which cannot be had at home, and the others will be marked enough below home prices to provide for cost of transportation by mail and leave a margin besides. Now an addition of sixteen cents per pound on merchandise would make trading away from home, through the mails, just that much more expensive, and would to that extent "protect" the local merchant. A local paper, in a recent editorial in favor of the Senator's bill, intimated that he had this lamentable state of affairs in view. As Mr. Wilson lives in this vicinity, and does not believe in a "tariff for revenue only," it seems probable that the local paper knew whereof it spoke. W. J. R.

Keokuk, Iowa, April 15, 1886.

THE FOURTH OF MARCH.

To the Editor of The Nation:

Sir: In your issue of March 29 you say, in the editorial on "The Fourth of March," that "the 4th of March . . . is not named in the Constitution." This is an error. The Constitution says that "if the House of Representatives shall not choose a President, whenever the right of choice shall devolve upon them, before the Fourth of March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President." C. W. Lewis.

20 Bowdoin Street, Boston, April 9, 1886.

[It has been said a thousand times that the word "slavery" is not to be found in the Constitution. What would be thought of a person replying to that remark, "That is an error; the word slavery is to be found in the Constitution; the Constitution says, 'Neither slavery nor involuntary servitude shall exist within the United States'"?

The Constitution is an instrument which was framed in the year 1787, by a convention whereof George Washington was the President, and whereby the present Federal Government was established. The words which our correspondent quotes are not in the Constitution, but in the twelfth of the "Articles *in addition to* and amendment of the Constitution." This twelfth of the articles in addition was not adopted till the year 1804, seventeen years after the Constitution was framed, sixteen years after the "first Wednesday in March" was casually chosen by the Continental Congress, four years after the death of Washington, three years after three Presidents had been inaugurated on the 4th of March. Let us hope that our correspondent will now exert himself in writing and circulating a vigorous petition to Congress asking that for this most inconvenient and trouble-making day there be substituted the 30th of April as the day which shall terminate the second session of Congress, and upon which the inauguration of the President shall take place.—Ed. Nation.]

BIRD SLAUGHTER AND FEMALE ADORNMENT.

To the Editor of The Nation:

Sir: The "Appeal to the Women of the Country in Behalf of the Birds," which appeared in *Science* for February 26, has already attracted so much attention that it may seem unnecessary to allude to it again. But it is an appeal which will need to be made often in order to produce any practical effect. Any one who has discussed the subject with women must realize the necessity of repetition. The greatest amount is needed before they will appreciate that it is a matter for which they are directly responsible, and therefore which it is in their power to encourage or condemn. Even then there is a long and weary distance between this appreciation and the determination to act upon it.

The indifference with which intelligent women treat the subject is almost incredible. In the face of all the recent advance in knowledge and culture made and claimed by women, this indifference seems a practical sarcasm. For, I take it, a custom of destroying life in order to ornament one's person comes under the head of bar-

barisms, and certainly the continued gratification of vanity at the expense of public welfare is not consistent with a rational mind.

Still, there is the saving remnant, though in this case the remnant is so small that it may be doubted whether it will survive the "spring openings," notwithstanding the consolation offered in the way of cockades and pompons. And even should it survive, the women who compose it cannot but feel that any action on their part will be ineffectual. Always the question is asked, "What good will it do if I refuse to wear birds? I am only one against thousands." For this reason I suggest that a society be formed, such as the Plumage Section of the Selborne Society of London, for the Protection of Bird Life. The women then who do realize the necessity for such protection, and desire to take their part in it, will not feel that their action is fragmentary and unimportant. It is necessary to concentrate into one public movement the action of all those opposed to the custom of wearing dead birds, in order to produce any effective response to the appeal made in *Science*. Why should not the women of New York, as well as those of London, prove themselves independent of caprice, and capable of acting for public good and humane principles? L. C. R.

WASHINGTON, April 8, 1886.

THE FRENCH SPOLIATION CLAIMS.

TO THE EDITOR OF THE NATION:

SIR: I find in my *Nation* this evening a note from "C. M. M.," correcting a misstatement in my notice of the French Spoliation Claims. I can say nothing in explanation of it except that I really do not see how it happened. Such errors creep in, one can hardly say how. Two things which are easily distinguishable while one is examining them near at hand, sometimes seem to coalesce to the sight as one gets further from them, until, in some unguarded moment, the memory plays one a trick. In such cases, I can only thank quick-sighted readers, like your correspondent, for calling my attention to them. Few men are more indebted to others for kindnesses of the sort than I have been. I have never neglected to acknowledge them by letter when sent directly, and am glad to seize this excuse for repeating the acknowledgment in public.

ALEXANDER JOHNSTON.

PRINCETON, N. J., April 15, 1886.

AMIEL ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: I feel compelled to graft my own criticism upon the otherwise judicious censure of a "Lover of Trustworthy Work," as found in the *Nation* of April 15. "Préau" may have meant "a small meadow" some centuries ago, but, as Littré states, is entirely obsolete in that sense, and is generally understood as the closed courtyard of a prison, a convent, or a school. In fact, Amiel thereby means one of those narrow yards, secluded from and against the outer world (and from the sunshine, too) by high, towering walls, such as may still be found occasionally in what remains of the Geneva of the sixteenth century, with some scanty grass, and, maybe, a rachitic tree or two—as you see, a most Calvinistic, even an ascetic, conception. In such greenish pits, the fellow-citizens (not to say the subjects) of the man with the goat's beard and tight skull-cap used to replenish their parsimonious lungs.

Let me state, also, as to what was said in the number of April 1, that I think the allusion made to F. Brunetière's criticism (in the *Revue des Deux Mondes*) somewhat rash. The unquestioned rank of that eminent writer places him far above such pettish feeling as seems to be ascribed to him in the *Nation's* article. The fact is that Amiel's idiosyncrasy—which may be defined as a kind of hypertrophy of the analytical powers, a morbid tendency which fatally leads to pessimism, as M. Paul Bourget so masterly demonstrates in his 'Essais de Psychologie contemporaine' (Paris: Lemerre, 1885)—this essentially modern form of moral neurosis is the very thing fit to irritate, yea, to exasperate, the nerves of a clear-headed, healthy representative (as M. Brunetière is) of that mainly Latin tradition that life *in itself* is worth living, independently of its transcendental possibilities. M. Brunetière belongs, body and soul, to the classical school; Amiel, willingly or not, was a "décadent." This is the true, the only explanation of M. Brunetière's severity; and I must say, as having myself had frequent and personal intercourse with H. F. Amiel, that the French critic's moral dissection of the "Protestant Buddhist" borders, in places, upon divination. Practically, M. Brunetière is entirely in the right, though he may outrun himself somewhat. No wonder! Amiel's perpetual wail would set on edge the teeth of any living creature who knows, as I do, and as M. Brunetière points out, that life had been a bountiful mother to that man, whose undeniable but only glory has been to follow and to foster, day by day, the progress of his own irremediable impotency. His posthumous success may be summed up in a few words; and any one who has read Paul Bourget's 'Essais' will support this conclusion: Amiel personified, even intensified, a moral disease, the cruel symptoms of which are branded in the very flesh of our generation.

A. DU FOUR.

CHARLOTTE, N. C.

THE NEW YORK ALUMNI OF YALE.

TO THE EDITOR OF THE NATION:

SIR: The New York Alumni of Yale—sometimes spoken of as "The Delmonico Crowd," although their meetings have been held for two years at the University Club; and sometimes called "Young Yale," though the man who first fought under the designation graduated twenty-six years ago—have lately been made responsible by certain "conservative" writers for some things which they probably deprecate as much as anybody.

No one has authorized me to speak for them; but, being one of them, I may have as much right to represent them as any one of their critics has to misrepresent them. The principal general misrepresentations, though not restricted to the letter of your recent correspondent "M.," who wrote on "the test of numbers for colleges," are all contained in it. The first misrepresentation is, that the New York alumni "wish to take the management of internal affairs out of the hands of the Faculty, and put it back into the hands of the Trustees." This your correspondent illustrates by two special misrepresentations contained in the assertion that "already a trustee of the New York party has attempted to instruct the mathematical professors about the functions and arrangement of an astronomical observatory." Now, so far as the scientific "functions and arrangement" of the observatory are concerned, this statement conveys a distorted impression, and it conveys another in the implication that the business recommendation regarding the observatory to which the distorting statement refers, was solely the work of "a trustee of the New York party." It was the recommendation of three trustees, if I remember correctly, certainly of as many as two, one of them a Connecticut man.

I feel safe in saying that, whatever may be the aberrations of individuals, the vast majority of the New York alumni wish to take nothing "out of the hands of the Faculty." Their quarrel is not with the Faculty, but with the Corporation. What they do wish is, first, a change in the Corporation which will make it likely to elect a president of proved administrative capacity, they believing such a president to be Yale's greatest present need. Second, they want a corporation under which it will be possible to carry out the idea of unifying the University. This idea is well elaborated in Prof. Dwight's "Thoughts on the Future of Yale College" (I quote the title from memory). There is now great waste of power and duplication of work from lack of unification, but no president can carry out unification if he is saddled with a Corporation regarded with mistrust, as the present Corporation is, by the most vigorous and progressive department of the University—which department, fortunately, is independent of the present Corporation and intends to remain so. Third, they wish a corporation of men of affairs, who will, presumably, increase the general interest of men of affairs in the College, to its pecuniary benefit, and who will manage its pecuniary affairs and its status before the public as the pecuniary affairs and public status of any great corporation should, in these days of competition, be managed. A university, or even a church, has its business side; and it would be a fatuous man, indeed, who should deny that even the success of a church now depends largely upon good management of its business—so largely that men with business gifts are sought just as eagerly as men with spiritual gifts, for its corporation.

So far as it has been thought out, the belief is very general among the New York alumni of Yale that a college should be governed by two bodies, or rather by one body of two sections, each supreme in its own field, but helping the other to the common end—a Faculty supreme in educational matters, and a Corporation supreme in business matters. They think that for such a body of men as the Yale Faculty to depend for guidance and support in its business interests upon a Corporation of clergymen, is absurd; and some of them think that if the mere statement of that situation fails to carry conviction to any one, argument will be equally powerless.

They think, too, that a business corporation, free from "the theological bias," would recognize that the management of any machinery as vast as the educational machinery of Yale College has now grown to be, demands a kind and degree of ability absolutely inconsistent with the other kind and degree of ability which goes to the making of an eminent clergyman, and that the election of an eminent clergyman to the presidency is, on its face, an absurdity. The conditions of civilization making it an absurdity have been growing with geometrical rapidity with the advent of modern science and modern social conditions. Laudations of the administrations of Dwight and Day and Woolsey do not touch the case. Woolsey's administration covered the beginning of the new order of things. Under him, despite his tremendous character, the College barely held its place. There is not necessarily any discredit to President Porter, whose administration has been *in* the new order of things, in the demonstrated fact that under him the College has been losing its place. Those who want him succeeded by another man eminent in the talents and virtues of the clerical profession, simply invite faster relative loss.

If, against these positions, be cited the fact that Princeton, with an eminent clergyman at its head, has been forging ahead in the race with Yale, it is a sufficient answer, though there are others, that the business affairs of Princeton have been managed in New York. Whatever the

facts may be on paper, there is no question what they have been in practice.

If, in answer to this, it be claimed that New York has not made a success of such share as it has had in the management of Yale, the answers are, first, a question of the correctness of the claim; second, that New York has not had a fair chance; and third, that its share—the share of all the alumni—in the Corporation is so limited that, despite some little scrimmages regarding it, many of the most capable of the alumni have felt absolutely indifferent to it. It is rather to get this share enlarged and to use it for the support of the Faculty, than to interfere with the Faculty, that their best attention is directed. That on the question of elective studies, the Faculty have lately needed support against the power set over them by the Corporation, such as the alumni wish to give them, and have had to force their position for themselves, and that on some other questions they have been beaten, are facts which had better not be blinked in these discussions.

There are those who say that a Corporation not dominated by the survivals of New England Puritanism would probably act or fail to act in about the same way that the present Corporation does. In support of this they draw a *non-sequitur* from a statement lately made by a lay member of the Corporation, at a Commencement dinner, to the effect that there had never been any difference between the clerical and lay members of the Corporation on any question brought up for discussion. The *non-sequitur* is that on no question that ought to be brought up are they apt to disagree; while a true *sequitur* is that, in the present state of education, if a clerical party and a lay party do not disagree, it is because living questions are neglected. The statement of the lay member of the Yale Corporation was not needed to prove that in that body they are.

Probably if any set of men on this planet are in the habit of looking facts square in the face, it is the active men of New York. And probably they are in a better condition to know why they send or conclude not to send their sons to any given college than any other men are to know it for them. Whatever opinions are held by that portion of Yale's graduates who happen to be in New York, presumably fit the facts at least as well as the opinions of her graduates elsewhere. But that the opinions of the New York alumni are restricted to themselves, or even that they are not largely shared by the most capable alumni everywhere, is as silly an intimation as the one generally accompanying it, that the methods which brought Yale College to her relative position of thirty years ago have been effective to keep her there, or can keep her even where she is now, in the future. X.

New York, April 13, 1886.

THE NUMBERS TEST FOR COLLEGES.

To the Editor of The Nation:

Sir: Some of us Western readers of the *Nation* have been highly edified by the "down East" discussion of a question that may be stated about thus: Ought the merits of a high school to be judged largely by the number of its students? When we read that some of the friends of Yale profess to see it declining because it does not keep pace in numbers with Harvard, we recognize the fact that the intellectual atmosphere of New England is impregnated with a something that is very familiar to us. One can find hundreds of people out this way, and they are pretty well informed people, too, who take the same view of our Western colleges. They never ask any question about them except, "How many students have they?" Yet it must be said, to the credit of some of the denizens of such half-civilized municipalities as Chicago, Cincinnati, or St. Louis, that they view this question in a different light, to say nothing of the wild tribes living further inland who do not believe that the efficiency of a troop of an educational establishment depends upon the numbers that compose it.

We find President Gilman's recent words very applicable to our case; and it now seems that they do not refer exclusively to us. He says: "I have heard it said that some men are possessed by a statistical devil. They can only think in figures; they will ask, in respect to a new acquaintance, how much he is worth; of a library, how many volumes; . . . of a college, how many students. I have known the expenses of an institution made a dividend, and the number of scholars the divisor, the quotient representing the cost of each pupil. . . . It is not the number but the quality of students which determines the character of a high school. It is important to count; it is better to weigh."

It is not too much to say that the comparatively large number of eminent men who are alumni of some of our small Western colleges is due in great measure to the determined maintenance of a high standard at the expense of popularity. They have acted on the principle that it is better to produce one Plato than a score or even a hundred like Alkibiades. Perhaps their conservatism has been a trifle excessive, but who will dare say, in the light of events, that if they have erred, it has not been in the direction of least danger? A college president in this State holds that the ideal number of students to a teacher is four, and that when a class contains a larger number his influence can no longer be maintained at its highest point of effectiveness. Among our Western colleges and "universities" those are, generally speaking, the most populous which give the time-honored degrees for almost any studies and in almost any quantity the student may choose. Those who speak and write, or strive in other ways, against these things, may be overborne by the present tide against them, but their zeal is kept alive by the confident hope that time will vindicate the wisdom of their efforts. The number is becoming gradually larger in America who admit that here, as little as in Germany, it is to a young man's detriment to have earned his degree "an einer kleinen Universität."

Ohio, April 16, 1886.

Notes.

A bibliography of Maine is in process of completion by a member of the Maine Historical Society, Mr. Joseph Williamson, of Belfast. The titles already exceed 3,000.

Cupples, Upham & Co. will soon publish 'Fellow Travellers,' a New England story, by Mr. Edward Fuller, of the Boston *Daily Advertiser*; and 'Thoughts,' by Ivan Panin.

D. Appleton & Co. will publish during the present month a translation of Octave Feuillet's 'La Morte,' under the title, 'Aliette.'

The translation of Flaubert's 'Salammbô' just issued by Saxon & Co. is "Englished" (as he puts it) by M. French Sheldon, authorized by the heirs of M. Flaubert, and introduced by a dozen readable pages from the pen of Mr. Edward King. It is painful to find ourselves more fastidious than a man's heirs in behalf of his posthumous fame, but *we* could not willingly have authorized this translation. It is no worse than almost every other similar work of the present day; but it is no better. Example: "Il [Hamilcar] ajouta: 'Sois mon fils et défends ton père!' Narr' Havas eut un grand geste de surprise, puis se jeta sur ses mains, qu'il couvrit de baisers"—"Narr' Havas made a gesture of great surprise, afterwards, *throwing himself before Salammbô*, covered *her* hands with kisses." Mistakes similar to this, and also additions and omissions, abound throughout. M. French Sheldon describes Hamilcar as having a "most erudite and most personal" disdain of death. Flaubert conceived this disdain as "plus savant et plus intime" (more assured and more profound). It would not be amiss if his translator had a "plus savant et plus intime," as well as a "most erudite and most personal," knowledge of language before undertaking to cope with the exquisite subtleties of Flaubert's admirably perfected and marvellous style.

George Meredith's 'The Adventures of Harry Richmond' is the latest volume in the series of uniform reprints of this author's works which Roberts Bros. control for this country.

A new (the fourth) edition of Judge Nathaniel Holmes's 'Authorship of Shakspere' has just been brought out by Houghton, Mifflin & Co. in two volumes. The lapse of more than a decade has failed to shake the author's belief in Bacon's title to the plays; and to his Appendix he now adds a Supplement of 120 pages, for which Mrs. Henry Pott, by the publication of her 'Promus,' is chiefly responsible. He also furnishes a general index, so that in all respects the work is better of its kind than it was before.

The same firm send us the new edition of their 'Satchel Guide for the Vacation Tourist in Europe.' We notice a slight extension of the Addenda, and conclude that other changes have not been material.

Dodd, Mead & Co. send out two more pretty volumes of "Tales from Many Sources," viz., v. and vi. They include Mrs. Ewing's 'Lob Lie-by-the-Fire,' Mrs. Forrester's 'Virginia,' A. Mary F. Robinson's 'Goneril,' Mary Frances Peard's 'Number 7639'; 'Gracie,' by Lady Lindsay of Balcarres, E. C. Grenville Murray's 'Fleur de Lys,' E. C. Pointer's 'Emilia,' Hugh Conway's 'My First Client,' and 'How Quedglington was Sent Down,' by J. Stanley, besides four anonymous tales from *Temple Bar* and one from *Belgravia*.

One can but protest against the abuse of terms when the author of the 'Chronicles of the Schönberg-Cotta Family' styles her "studies from the lives of Livingstone, Gordon, and Patteson" 'Three *Martyrs* of the Nineteenth Century' (Dodd, Mead & Co.). None of these men can be properly designated a martyr, unless in the sense of one who spared not himself in the service to which he was devoted—as Livingstone might be called a martyr to science. Mrs. Charles calls Bishop Patteson's death at the hands of the outraged Melanesians "to them a sacrifice of expiation, to us a willing sacrifice of love"; but the fact that he was slain in retaliation for kidnapping done by others, has no more to do with martyrdom than would his upsetting in the surf at the time he was actually shot. As for Chinese Gordon, we leave Mrs. Charles to discuss his life and death and degree of Christian sanctity with Count Tolstoi.

The new volume, 'On Compromise,' in the uniform edition of John Morley's works (Macmillan), comes to American readers with a natural sound in its very title. Such of us as glance at the introduction will perceive what use Mr. Morley makes of the American example in national character, and particularly in national achievement, when we closed the disgraceful age of compromise with the civil war. These essays are now more than ten years old, but have still a practical value for every-day life.

The increasing host of genealogical investigators is indebted to Mr. Daniel S. Durrie for a third

edition, revised and enlarged, of his 'Alphabetical Index to American Genealogies and Pedigrees Contained in State, County, Town Histories. Printed Genealogies, and Kindred Works' (Albany: Joel Munsell's Sons). Mr. Durrie estimates that he now furnishes 20,000 references. This work, Mr. W. H. Whitmore's 'American Genealogist,' and Savage's 'Genealogical Dictionary' are the necessary outfit of any pedigree hunter.

The first series of 'Hans Andersen's Fairy Tales,' edited for school and home use by Miss J. H. Stickney, has been issued by Ginn & Co. The text has been minutely derived from several extant English versions, and the tales have been graded for progressive reading. The illustrations are the first made sixty years ago.

One of the most interesting and useful of the later practical books for daily living is a group of six lectures on 'School Hygiene,' delivered under the auspices of the Massachusetts Emergency and Hygiene Association to teachers and normal pupils (Boston: Ginn & Co.). There should be no geographical limit to such teaching, no class lines for those taught. It should be as attractive and it is as valuable in Illinois and Tennessee as in New England; and all persons who have reached years of discretion, whether formal teachers or not, will be the better off for what is here laid down in untechnical phrase about ventilation, drainage, the care of the eyes and of the nervous system, and similar topics. It brings the millennium nearer to thus preach the gospel of health to the poor—poor in the knowledge of life.

'The Science of Dress,' by Ada S. Ballin (London: Sampson Low & Co.), primarily written for English women and English ways, is wholesome truth for all civilized people. Happily for them, the uncivilized are rarely trammelled by dress. Miss Ballin writes wisely of the hygiene of infancy, and in the matter of women's dress advocates not revolution, but literal reform. Physiologically and æsthetically her suggestions for clothing, from babyhood to age, are rational and attractive; and sceptics as to possible improvements in female costume without sacrificing the charm of outline, will be agreeably disappointed. There is nothing bold, nothing offensive, and much that is healthful and comfortable, in her designs for the under and outer garments; and this we say advisedly, with the concurrence of a competent jury of experience and taste.

Dr. Coan's 'Ounces of Prevention' belongs to Harper's Handy Series, and is a reprinted conglomerate of odds and ends of sound sense and good physiology. The only exception we are disposed to make is to its estimate of beer as "an ideal drink." Beer is fattening, it is true, and in the essay on leanness it is commended for "the fair thin reader" desiring plumpness. But we will have none of it: our Venus is not born of the foam of the beer cask.

Mr. J. Pickering Putnam's 'Principles of House Drainage' (Boston: Ticknor & Co.) is an intelligent exposition of its subject; but the special praise that it bestows upon various agencies to that end, all bearing the same trade-name, opens the question of interest.

Dr. A. Riant, who had before written a number of practical works on hygiene, has just published a book which will be of interest to all whose duties make it necessary for them to exert the voice, 'Hygiène de l'orateur' (Paris: Baillière; Boston: Schoenhof). The author gives the broadest sense to the word orator, so that his suggestions will be found useful to the lawyer, the lecturer, the preacher, and the teacher. He treats, always from a medical point of view, of the voice, breathing, intonation, attitude, and gesture. He gives excellent advice as to what it is best for the speaker to do before, after, and while speaking, so as to insure the least amount of physical exhaustion. The book is written in a simple, straightforward style, and throughout the writer shows the skill of a specialist who has had personal experience in public speaking.

General Klapka, after Görgey the most eminent Magyar commander in the Hungarian war of 1848–9—we say Magyar in order not to place him above his Polish fellow-commander in the same struggle, General Bem—has added a large volume of 'Recollections' ('Emlékeimböl,' Buda-Pesth, 1886) to his long ago published writings on his military career ('Memoiren,' 1850, which also appeared in an English translation, and 'Der Nationalkrieg in Ungarn und Siebenbürgen,' 2 vols., 1851). The new work, however, covers a wider ground, containing also reminiscences of his earlier life, and devoting half of its space to six years of exile spent in Germany, England, France, Switzerland, and Turkey (1849–55). This exile, which began on the morrow of the capitulation of Comorn—Klapka's sally from which in August, 1849, ranks among the most famous exploits in Hungarian history—terminated with the restoration of the constitutional freedom of Hungary in 1867, when the returned soldier was elected a member of the National Diet. A continuation of the interesting narrative is promised with some reserve, and its translation from Magyar into German is anticipated.

Under the title 'Tagebuch über Martin Luther geführt von Dr. Conrad Cordatus,' Dr. H. Wrampelmeyer has edited for the first time a manuscript containing the earliest and fullest collection of the table talks of Luther. Cordatus, the collector, was a prominent figure in the Reformation, and enjoyed the most friendly relations with the great reformer. The notes were taken by him from Luther's lips, and as far as possible Luther's own words are reported in the 'Tagebuch.' The period covered by the journal is from 1524 to 1537, the larger part apparently relating to the years 1531 to 1533. From Cordatus's testimony it appears that others were engaged at the same time in taking notes of Luther's talks, but he says, "Nunc nemo nos imitatur." The work of only one of the persons thus alluded to by Cordatus, that by Dietrich Veit, is known, and it still remains inedited. Antonius Lauterbach took up the task in 1538, but did not go beyond that year. The extant Latin and German collections, although probably based upon Cordatus, Lauterbach, and Veit, show wide diversions from the original. There are many interpolations and revisions which affect the integrity of the text. In the 'Tagebuch' of Cordatus we have the most authentic and faithful record of Luther's familiar conversations, and a means for an intimate knowledge of the reformer not hitherto accessible in print.

The fifth volume of the 'Sammlung Englischer Denkmäler' has lately been published. It consists of the text of the English version of 'Flor and Blancheflor,' edited by Emil Hausknecht, with a preliminary study of the literary history of the tale, its origin and dissemination through the countries of Europe, and the numerous forms in which it is found in different literatures. The English poem was first produced by Hartshorn in his 'Ancient Metrical Tales,' from the Auchinleck MS.: a revised edition of this text was edited in 1857 by Laing for the Abbotsford Club. The Early English Text Society issued in 1866, under the editorship of J. Rawson Lumsby, two other versions of the poem taken from imperfect manuscripts. In none of these publications does the poem appear in any completeness. The present editor has been able to reproduce a much more complete text from a manuscript in the possession of the Marquis of Sutherland, which was inaccessible to previous editors.

Of the books published during 1885 in Iceland's little capital, the most notable, in more than one respect, is Mr. Eiríkur Magnússon's edition of Shakspere's "Tempest." It is in two daintily printed volumes, the first containing the editor's excellent Icelandic metrical version of the play, under the title of "Stormurinn," to which is prefixed a well-engraved facsimile of Droeshout's portrait and a life of the dramatist. The second volume comprises the English text from the Cambridge edition, followed by very complete historical, critical, and philological notes in Icelandic. Mr. Magnússon has been connected for many years with the University Library, Cambridge, and his annotations, as might be expected, are based upon the newest results of Shaksperian study. Outside, perhaps, of German, we know of no foreign language which possesses either so good an edition or so good a rendering of one of Shakspere's productions. Icelandic translations of "Hamlet," "Macbeth," and "Othello," by Mr. Matthías Jochumsson, and of "King Lear," by Mr. Steingrímur Thorsteinsson, have previously appeared.

We hope the term "Polandism," which in the last few days has repeatedly occurred in the foreign despatches to the daily newspapers, will speedily be dropped and buried in oblivion. It was perhaps an intended correction of the equally incorrect but on its face less absurd Pol*a*nism, which more than once preceded it in the telegrams referring to Bismarck's utterances on the nationality strife between Poles and Germans, and which, in its turn, was an accidental telegraphic corruption of the legitimate word Polonism (Ger. *der Polonismus*, from the mediæval Latin *Polonus*, Pole or Polish), which that statesman now so frequently uses. Pol*a*nism is as incorrect as would be Teut*a*nism, and Polandism as barbarous a formation as would be Spainism or Belgiumism.

— The third volume of the 'Archives of Maryland,' edited and published with such scrupulous care by the Maryland Historical Society, has been for some time on our table. It consists of the Proceedings of the Council from 1636 to 1667, preceded by the charter and other documents illustrative of the first settlement of the colony, derived from foreign sources. This Council was partly what we now understand by the term in its relations to the Governor, and also had legislative functions as an Upper House, both in concurrence with the Assembly and independently; finally, it was the Provincial Court. In the present volume only its executive and administrative acts have been gathered together, and these naturally have more attraction for the historical student than for the antiquarian. There are great numbers of orders, commissions, and oaths, conditions of plantation, forms of submission, denizations, etc. The troubles of this period were not from the negroes but from the Indians, particularly those of the Eastern Shore, whose shooting of cattle and hogs, and not seldom of white men, kept the Council and the military well occupied. The "seuerall vagabonds & Idle persons knowne by the name of Quakers" likewise in their way disturbed the peace, not only by presumptuously standing covered, but by refusing to subscribe the engagement, "alleadging they were to be governed by Gods lawe and the light within them & not by mans lawe"; moreover, "diswading the People from Complying with the Military discipline in this time of Danger [1659] as also from giving testimony or being Jurors in causes depending between party & party or bearing any office in the Province." Nothing could be done with them except (after wearying of the cost of their detention in prison) to banish them, and on their return to whip them out again "from Constable to Constable." Some attention had to be paid, too, to Capt.

Thomas Cornwallis, "a great Agent and factor for the setlinge of a Popish faction in Mary-Land" (1646). But no single person caused anything like the annoyance of the rebellious Capt. William Claiborne, concerning whom there are documents in plenty, and a curious inventory of effects seized "within Palmer's Island," including "1 hominie sifter," "a worme," "a combe-brush," etc.

—There are other social glimpses. The question of Mr. Thomas Gerrard's exact condition on a certain occasion in 1656 was met by Mr. Henry Coursey's oath "that the said Gerrard had drunke somthing extraordinary, but was not so much in drinke but he could gett out of a Carts way, & further saith not." John Dandy, for crimes committed, was, among other penalties, adjudged to be "publique Executioner within this Prouince." but by good behavior was in 1647 released from this unpleasant duty. Tae Commissioners appointed on the erection of Somerset Co. in 1668 were charged, *inter alia*, to inquire "of all manner of fellonies, Whitchcrafts inchantments Sorceryes Magick Arts," etc.; and quite the most picturesque and pathetic scene discernible in these musty records is that of the searching of Mary Lee, "a witch," on the *Charity*, during the voyage from London to Maryland in 1654 (as "the Ship grew daily more Leaky almost to desperation"); the finding of "Some Signall or Marke of a witch upon her" by two seamen who had "apprehended her without order"; its confirmation by "Mr. Chipsham and this Deponent"; the poor creature's being made fast by them "to the Capstall betwixt decks, And in the Morning the Signall was Shrunk into her body for the Most part"; finally, the "laying all their hands in generall to the Execution of her" by hanging—all, save the captain, who shut himself up in his cabin. Lighter matter for the curious is found in the declaration of the agents of the New Netherlands in 1659: "And here is to be noted that they deeply mistake themselues who interprett the Generall name of Manhattans aforesaid, vnto the particular Towne built vpon a little Jland because as it is said it signified the wholl Countrey & province, or at least that particular place in that province as per Example, like it is frequent still to this Day amongst some to Say to goe or Come from the Manhattans when they meane the whole province like vnto Virginia or Maryland for that particular Towne it selfe is never named the Manhattans, but New Amsterdam." Finally, we remark the extraordinary number of spellings in which the name of the Susquehanna tribe was recorded; the most elaborate, perhaps, being Sasquisahanoughes.

—The London correspondent of the *Tribune*, writing in regard to the late Henry Stevens, is puzzled by his title "Citizen of Noviomagus." "After some reflection," he speaks of the strange name as applied both to certain geographical localities and to a club of antiquaries to which Stevens belonged. The members of that club can hardly be called antiquaries, as will be seen by an account of that association derived from Stevens himself. Sixty years ago a few hail fellows well met in London naturally gravitated together. They wished to meet socially and convivially, and yet could not afford, or desired to shun, the heavy charges prevalent in other clubs. For this end they decided to have no club-room, but to meet for a monthly dinner at some inexpensive hotel. They observed that geographers were quite agreed in identifying all old Roman stations about London save one—namely, Noviomagus. This place, set down in the Antonine Itinerary as ten miles out from London, but in an undetermined direction, had been, and was still, a bone of antiquarian contention. Now, though the monthly dinners were gander-parties, the fraternity had resolved on an annual rusticating excursion, enlivened by the presence of their wives and daughters. This outing they decided to call a search for the long-lost Noviomagus. Year by year some new suburban retreat has been discovered and enjoyed, but the site of Noviomagus, after three score years, still lies undetected. One of the last dinners at which Mr. Stevens was able to be present, in November, 1884, was eaten at the Freemasons' Tavern. Among the members were A. H. Bullen, head of the British Museum Library, ex-Lord Mayor Holt, the editor of the *Athenæum*, etc. One member gave an account of a tour in Ireland, and a few impromptu speeches were called for, but the leading feature was free-and-easy talk. The oddest characteristic of the association was a Babel-like confusion of tongues. Each member is bound to say just the opposite of what he means, and to offer an insult when he means a compliment. Each one, too, interpreted like *Petruchio*, who, when *Kate* was mute, commended her volubility, and, when she railed, told her she sang as sweetly as a nightingale. Such a knot of humorists was after Stevens's heart, and he was the soul of their good-fellowship.

— The March number of *Les Lettres et les Arts* (Paris: Boussod, Valadon et Cie.; Boston: Schoenhof) seems at the first glance less brilliant than its predecessors, but upon examination it proves to be not inferior to them. There could not be anything more perfect in simplicity and beauty of arrangement and detail than the "Pêche aux Alouettes" of M. Fernand Calmettes, to which he has added such charming illustrations; nothing more delicately pathetic than "Le Manuscrit d'un Médecin de village" of M. Anatole France; nothing more sparkling and gay than "Le Divan rouge" of M. Francisque Sarcey, a long chapter of personal recollections told in his most delightful manner, and giving promise that more may be expected in the future. M. Adolphe Racot has an interesting seventeenth-century sketch, "Le Duel de Chapelain," of which the principal illustration is a fine full-page reproduction of the "Bretteur" of Meissonier. The expressive portrait, by Toulmouche, of Mme. Rose Caron, the lyric artist, is accompanied by a few pages from the musician, M. Ernest Reyer, the friend of the painter and the impresario of the singer, in which the *Revue* has obtained its usual excellent results from the choice of a peculiarly suitable person who is not a writer by profession. The most beautifully illustrated article in the number is the short one by M. Gerspach, "Note sur les Tapisseries de Baudry," in which the three of this artist's designs which escaped destruction when the Musée of the Gobelins was burned in 1872, are reproduced. On the completion of the first quarterly volume by the publication of this number, the direction of the *Revue* passed from the hands of M. Anatole France into those of M. Frédéric Masson, who contributed to the earlier numbers the interesting articles upon "Le Déisme pendant la Révolution."

—Prof. Alessandro D'Ancona, who has conspicuously maintained that Dante's Beatrice was identical with Beatrice Portinari, has lately been gratified with a letter from Prof. Adolfo Bartoli, who has hitherto doubted the flesh-and-blood reality of the mistress of Alighieri. Bartoli communicates the fact that among the *codici* of the Ashburnham Collection is one which contains a commentary on the 'Divine Comedy,' by Pietro, the son of Dante. The preface expressly declares this authorship and relationship, and the Commentary is evidently by the same hand that composed the Commentary already printed and ascribed to Pietro. The differences in the two texts, however, are such as to imply a complete working over at a date later than that of the printed one (1340)—say from 1343 to 1360. Apart from confirming the authorship of the earlier, which has been disputed, the revised Commentary contains this passage in the second chapter of the "Inferno," upon the first mention of Beatrice:

"Et quomodo hic primo de Beatrice fit mentio, de qua tantus est sermo maxime infra in tertio libro paradisi, premittendum est quod revera quidam domina nomine Beatrix insignis valde moribus et pulcretudine tempore auctoris viguit in civitate florentie, nata de domo quorundam civium florentinorum qui dicuntur portinarii, de qua dantes auctor procus fuit et amator in vita dicte domine, et in ejus laudem multas fecit cantilenas: qua mortua ut euis nomen in famam levaret, in hoc suo poemate sub allegoria et typo theologie eam ut plurimum accipere voluit."

The curious will find Bartoli's creditably magnanimous letter published in the Florence *Nazione* of April 2.

ANOTHER DIARIST.—I.

Remarks and Collections by Thomas Hearne. Edited by C. E. Doble, Master of Worcester College, Oxford: for the Oxford Historical Society. Oxford: Clarendon Press; New York: Macmillan. 1885.

THE never-to-be-glutted appetite of our race for gossip (even for gossip without the spice of scandal) makes sure that whoever has or can get diaries, journals, biographies, autobiographies, correspondence, family records—pretty nearly anything about anybody, or of anybody about anything—into his hands, shall instantly sweep the horizon with his two eyes till he sees a publisher of good promise, and shall go to him, and, if need be, from him to another and another, until he can find for his material a way to the world of readers through the press. And beside this general craving for anything whatever that is fresh or seems fresh, there is that wide interest, ever waiting to be satisfied, in large unsettled questions; in historical characters, uncertain or suspected; in sudden turns of affairs never well explained. Then, too, there are those narrower but very many more interests in old neighborhood mysteries and feuds and jealousies and claims. In any case, the writers, or those written about, may have been third or fourth persons, or a little further off, from chief characters, and may have done the deeds, or may have got the credit for them. The writers may have been those who had all chance to know, and often a shrewd wit to understand or guess, what was going on or done around them. Then the number of those who have an antiquarian turn is large and growing, at least in proportion to the rest of us.

To be sure, sometimes, in spite of the general hunger of reading people, conscience or self-interest will come in between, and snatch the expected sheets out of the very press itself, away from the public; but the amount which finds a way through to the world is astonishing. To be sure, too, a great deal of this is but like the very poor and rude pottery, or flimsier than the slight filigree work, or clumsy as the clumsy tools, unearthed, with things of better worth, by tireless Dr. Schliemann's spades, or Prince Torlonia's. The public culls out from these the few things that it cares for, and waits for more. By a general consent, pretty well observed, bad things, out of a dead man's pockets or lockups, sure to hurt his fame and others' hearts; likely to do harm to many and good to none—such things, if they have fallen under honest and pitiful eyes, eyes that are wont to look up themselves for mercy, are thrust speedily back again and buried in a darker depth than that from which they came.

Some of these collections of gossip that, as we may suppose, are coming hereafter, whether

about single men of note or communities, or the society of a certain time, or great warriors, or great transactions, will very likely become, what some have been before, lasting treasuries for many generations following. In which direction to look for the next, one can no more tell than whither to look for the next bubble in shallow standing water. In any direction there may be the eyes and ears busy and the hand taking its chance to write.

In the times of the Stuarts, and the Commonwealth, and the Stuarts again, and William and Mary, an English university, and, of the two universities, especially Oxford, was an object of very close oversight and very frequent interference by the Government of the country. This was because the university exercised an immense direct and indirect influence; it held great privileges, definite and indefinite; handled considerable incomes; and was swayed by men and represented by men, as heads of colleges and halls, who, in troublous times, by the bad habit existing, got and kept their places for political and ecclesiastical partisanship, not for learning, or goodness, or fitness to teach. Here, therefore, men who had every claim that in peaceful times would be strong against all attack, could not at all be sure of holding their own. So an English university, and especially Oxford University, was kept wakeful and astir, with some of its members angry and feeling bitterly aggrieved, with some fearful, and some untiring and ruthless in putting out and putting in, making complaints, following up, pamphlet-writing, and electioneering.

Oxford had been a favorite and trusted and favored place in the time of the unwise and unhappy Charles the First. He had held there negotiations for peace with his revolted subjects; had stayed there more than once and made it his headquarters, and had gathered there so much of the Parliament of the realm as would come to his call. The Commonwealth had harried (figuratively but pretty really) the University and the town. James the Second had cajoled and threatened the authorities and the electors, and done summary injustices, and wreaked sudden vengeances among them, to get rid of the men that he would not have there, and to get in the men that he wanted there. William of Orange had used something pretty much like the same process backwards, from the time that he took James's place. Indeed, the temptation was so strong and the habit had become so settled, that even in the quiet and "good" Queen Anne's time the same way was followed by those who had the power. The connection of the men of the University with churchmen and statesmen and politicians outside, everywhere, was of course very close, and communications were constant. Discussing and expressing of opinion were (and of course, too) incessant. A journal well kept at Oxford by a person of competent ability and opportunities, and not wanting in feeling, during the active supremacy of the Romish religion at court, or the swift revolution that followed, or the reign of the Reformed-Dutch husband of the English wife, or not long before or after, may be expected to furnish to students of history matter worth their reading, if they are great enough or little enough to think it worth their while to glean.

Thomas Hearne, from whose manuscript diaries we have here an opening volume printed, had given such promise in boyhood that a neighbor had taken to himself the cost of the boy's education. He had been entered in 1695 at Edmund Hall, Oxford, of which the eminent Doctor Mill was principal; had proceeded B.A., in 1699, graduating with excellent character and scholarship. He had then put aside much urgency that he should take holy orders, and come over as a missionary to Maryland. The urgency had been weighted (because he was known to be a bookish man) with an offer of "the general supervision of the libraries of that province." He had a strong bent to old books, and old ways, and other things old, and rather took an assistant-keepership, which offered, in the great Bodleian Library. Already he was forecasting an edition of Livy, and other books, and his help was already sought by several learned men in the editing of their own works. So here he planted himself, and here he stayed; a man whose principles, in religion and politics, were not dissembled, but, at the same time, were not flaunted in his neighbors' faces; nor were they flung under other people's feet to trip them up, or to be trampled upon. The editor gives us little account of Hearne, promising his life, by another hand, at the end of the series; but we know that he was an honest "non-juror"—a statement which, to those who understand and remember about the English Revolution of two hundred years ago, sufficiently expresses his faith and practice, as churchman and subject. We cannot think that much is to be told of him.

Here, in the great Oxford library, was a quiet, steadfast man, belonging to a small party, overmastered but not cowed, who was hearing, and seeing, and receiving letters, and who was also writing down. One hundred and eighty years away, our fancy easily figures him (in an allegorical way) a man with a grave face, bearing a light which he shelters or shades with his hand, and over which he peers. The first entry in his diary was in 1705, in the third year of Queen Anne. At that time three were still living of "the seven bishops" who, seventeen years before, with the prayers, and tears, and love, and reverence of all England—people, army, mob—had meekly accepted imprisonment in the Tower and whatever was to follow under threats of relentless vengeance from the stupid bigot and despot who was then doing his best and worst to keep a throne. With all the rest, James had packed judges' benches and jury-boxes, till courts of justice were almost as sure as bludgeons and daggers, and they had maddened him by an effort, more than humble, to save him from dragging down, by reckless breaking of law, his own overhanging fate, and the ruin of their country. And yet, shortly after, when James had run off, with his claim to govern the nation to please himself, and the bulk of the nation was resolved that he should never come back with his claim, five of these bishops, with others of their order, and some hundreds of priests—some of them the choicest of the men who had knelt and bared cheek and back to buffet and scourge, that they might protest against lawless tyranny—refused to take the oaths to a revolutionary government, though better, beyond all comparison. To these non-jurors was clinging a considerable, though not large, body of laymen; among them, of course, our Hearne.

In the space of half a generation, which had now gone by, few had come to this party; some of its members had changed their minds about obedience to the Government after it was well settled, and many had gone forever to a land where there are no revolutions and no questions of governments, in fact or by right. A communion which had been set up separate from the Church of England "as by law established," and identical with it in structure, and doctrine, and worship, was going down, although it had secured a succession of bishops of its own. At the same time, prosecutions and persecutions had gone on, animosities had not yet died out of private life, and, of course, were often bitter; and books, as thick as November meteors, had been gleaming and going out in the air.

The editor and others think that the chief value of these diaries of Hearne will be found in the facts and side-lights which they furnish for the history of the Non-jurors, of whom a good many people in England and some in this country are not yet tired. Certainly there was little coming, or going, or stirring, or doing, or undoing, within reach of his sight or hearing, that he has not noted, so far as it interested or concerned him. Some things, of course, he saw and heard, and meddled not with. Some things, too, outside of his own line, he notes. Thus he mentions a clock referred to in Selden's manuscripts, "the motions of whose wheeles were not to be finished in an C years, no, not in a thousand, nay perpetual; an instrument made by Janollus Turianus Cremonensis and presented to the Emperor Charles the 1st, of which there is made some mention lib. 17, Cardani de subtilitate." From the same manuscripts he gives, in the Latin, a paragraph "De Influentiis Cœlestibus" (quere, electricity? galvanism? magnetism?), in which paragraphs from Selden we find matter enough (pretty nearly) for a claim in advance of these Pan-Electric Telephone people, who, with the Attorney-General of the United States among them, are contesting patent-rights. After saying that it was by help of these (influences), "beyond doubt, that Roger Bacon put speech into the brazen horsehead" (and we have all heard that), the Latin paragraph tells us: "and, as I have heard from certain credible persons, Doctor Godwin, now [1616—1633] Bishop of Hereford, has very excellent skill in that art, and has, many times, made a horse's head talk; they say, too, that he has written a treatise on that subject, as, also, *of the way of sending a message a very long distance in a very short time* (de modo mittendi nuntium per longissimam viam brevissimo tempore). These are all done by influences." If that does not touch Morse's credit, it looks as if, in skilful hands, it might be made to strike the Attorney-General and his associates about as heavily as they can hit Mr. Bell.

SCHERER'S HISTORY OF GERMAN LITERATURE.

Geschichte der deutschen Litteratur. Von Wilhelm Scherer. Dritte Ausgabe. Berlin: Weidmannsche Buchhandlung. 1885.

A History of German Literature. By W. Scherer. Translated from the third German edition by Mrs. F. C. Conybeare. Edited by F. Max Müller. Two volumes. Charles Scribner's Sons. 1886.

It is needless to say that there has been no satisfactory history of German literature. Many of the older works were heavy and pedantic in character, with the bibliographical element the leading feature; others, like the ponderous work of Gervinus, have been confined to the poets, while others have been diffuse treatises like that of Kurz, or confined to the writings of a particular period, like the works of Julian Schmidt. Few men in Germany are equally fitted with Professor Scherer to undertake a history of German literature. Joined to a knowledge which is ample, he is master of a style which for clearness and beauty has been seldom employed in the service of the history of literature, at least in Germany. He has purposed to give one clear, collected view of the whole field of German literature, and has sought to emphasize the significance of the great names which have given an impulse to the spiritual life of the nation. His work, therefore, represents periods and influences, and is not a mere catalogue of writers with a description of their works—a museum in which each specimen has its pin and its card, and is of equal importance. Hence the biographical element is not prominent. The au-

thor does not aim to carry his history beyond the death of Goethe (1832). He necessarily outlines the earlier character of Heine's work and suggests its later direction, but beyond the place of his birth we cannot from this history tell where he lived or what was his profession.

The following is a good example of his aptness in catching the most picturesque views, which stimulate the imagination and impress vital facts upon the memory:

"Choral songs played an important part on all the great occasions of private and public life. Choral songs received the wedded bride, and conducted her to her husband. The praises of the dead were celebrated in a solemn funeral chorus. The march into battle and the sacrificial procession were attended with choral song. The departure for battle was itself a kind of sacred procession, when all who took part in it sang the praises of a saving god, Donar (Thunor), the slayer of monsters. Their loud battle-cry, which they called *barditus*, was supposed to be an imitation of thunder, the 'beard speech' of the god. They also sang the deeds of their ancestors, and drew courage from the example of their forefathers. Little is told us about the sacrifice itself, but remnants of heathen worship lingered on for a long time, and with them some poor fragments of songs. Thus, for example, in Mecklenburg, the reapers leave a few ears of corn uncut; these they tie together, besprinkle them, form a circle round them, and, taking off their hats, call on Wodan—

"'Wode, Wode, now fetch thy horse food, now thistle and thorn,
In a year's time corn.'"

The history abounds in rapid and graphic summaries like the following:

"The migration of nations begins with the Goths, with the Goths heroic song, with the Goths Christianization. The Goths are the most advanced nation of the ancient Germans; they are like a gifted man who consumes his powers in too intense aspiration, who dies young in the midst of a brilliant career. Such tragic forms have seldom lived in vain. Their fantastic greatness, their bold resolution, is an example and a precursor: it teaches through mistakes the better way. . . . Indeed, the problems which were allotted to the Goths occupy the Middle Age and modern times; they return again and again in all of German history: empire, popular religious training, toleration of other nationalities and faiths. While heroic song begins with the East Goths, Christianization begins with the West."

In discussing the 'Nibelungenlied,' the author, as is well known, adopts the views of Lachmann. He holds that but few of the songs could have proceeded from one author, and that the poet is undiscoverable. Even if we accept the hypothesis of a single author, we know that he derived his material from popular songs, and a careful estimate of the inequalities and contradictions in his poems shows that his poetic power was not sufficient to harmonize the discrepancies. "Possibly a final revision of the songs did not take place. Instead of speaking of one poet, we can only speak of him who first committed them to writing." In his view, joined to noble passages are barren wastes, and silly, ridiculous, and tedious passages, making the 'Lied' far inferior to the 'Iliad' in sustained power and beauty. Professor Scherer's power is admirably exhibited in the analysis of the plot and action of the middle High German epics. These are full of graceful interpretative passages, the product of wide reading and skilful generalization.

Of all the historians of German literature, the rugged Gervinus remains a mine of wealth, and the influence of his opinions is manifest in some of the coloring of this volume. In the discussion of Kant and the period of the *Aufklärung*, we think that we can discover traces of Julian Schmidt, as in the whole treatment of the philosophy of the time. We do not mean that Prof. Scherer's views are based upon those of any individual for his judgment is singularly independent and characteristic, even when his opinions accord with those of others. The few pages devoted to Luthe give not only a vivid picture of his personality and an admirable condensed estimate of his writings, but measure the circle of his activity and the forces that he evoked and swayed in the Reformation. Lessing's treatment is not quite satisfactory. His 'Education of the Human Race' and his 'Dialogues on Freemasonry' are barely mentioned. The analysis of 'Nathan the Wise' is inadequate, and so, in general, is the whole presentation of Lessing as a dramatist.

There are literary judgments which vary from the accepted verdict. Thus, in speaking of Wilhelm Schlegel's translation of Shakspere, he says: "Schlegel's Shakspere certainly surpassed Voss's Homer. It did not conceal the wide difference between creative and imitative art, but it showed the close kinship between one perfect work and another, and for this reason it may rank directly by the side of the works which Goethe and Schiller produced in the period of their common labors." The pertinence of this last comparison is doubtful, but it is instructive to cite Gervinus's view: "With the exception of Luther's Bible, there is no translated work in any language or literature that can be compared with Voss's Homer; in our literature there is no work that has revealed such a treasure of language and poetry." Again, while Scherer's investigations in the life and works of Goethe have given him eminence among Goethe scholars, and he writes with enthusiasm and a fulness of detail upon his favorite subject, his criticisms are frank and of a quite different order from those of many of the Goethe cult. Thus, he says of 'Wilhelm Meister's Wanderjahre':

"The whole seems rather a collection of materials for a book than a complete work. Much about which the reader would like to be informed remains obscure. Strange and off-hand assumptions are made without the slightest hesitation; a wealth of practical experience and wisdom drawn from nature and history is spread out before us, but the narrative sometimes comes to a standstill, and the chief charm of the book lies in the episodical novelettes."

Of 'Faust' he says: "The whole plan was not carried out. Important scenes which Goethe had had in view are wanting, and unevennesses were not smoothed away. It is when taken as a whole, and seen, so to speak, from a distance, that the poem discloses the same unity as the Homeric epics or the 'Nibelungenlied' or 'Gudrun'." This is not a very strong assertion, as Professor Scherer claims that these epics are by various authors. He proceeds:

"The period of sixty years over which the work was extended, the frequent interruptions to which it was subjected, and the variety of moods under which it was written, have prevented 'Faust' from attaining any closer unity than this. In most of the first part we admire the sure, bold hand of the young or mature artist; in the second part, along with marvellously effective scenes, we find weaker portions, in which the hand of the now aged master seems to tremble. . . . There is, however, a good deal of spurious symbolism in the second part, which Goethe should not have allowed himself—I refer to utterances which would be appropriate if they came from Goethe's own lips, but which are little consonant with the characters in whose mouths he puts them, and in which he either remains obscure or offends if his meaning is understood."

We cannot forbear to quote Scherer's estimate of Heine's 'Reisebilder,' which, though apparently unstudied, touches much of the weakness of this poet, so fascinating in spite of his caprice:

"In this book the genuine descriptions of scenery, and above all the North Sea pictures, sometimes reveal a real power of observation and expression, at other times a grotesque mythologizing fancy. In the rest of the book, however, and particularly in the much-admired section on Italy, we have not much more than an imitation of Sterne's 'Sentimental Journey.' There is the same cobweb of individualism spun over external objects, the same political gossip of the emptiest nature, along with a poetic conception of the world almost as meagre as Klopstock's, and reiterated till we are tired of it. The real is tricked out with or supplanted by the unreal; lifeless things are represented as animated, living things imagined as dead, while dreams and reality are indistinguishably mingled; the poet and nature reflect each other; a spirit of melancholy pervades all things, and is revealed particularly in black eyes. These flowers have no fragrance for us; they are, as it were, faded after a night of revelry. The filth alone, of which there is enough in the 'Pictures of Travel,' is as filthy as ever it was. What a contrast have we in this book of Heine's with the calm, pure outlook maintained by Goethe as he journeyed through Italy!"

The chapters upon the Romantic School and Science are worthy of especial mention. The concluding paragraph upon German character and the future intellectual growth of the nation is as truthful as it is discerning:

"Goethe's 'Faust' contains a deep moral lesson for the German nation in particular. It expressed a longing for action in an age which was poor in deeds. Many writers of the time echo this spirit; for example, we find the Baron vom Stein continually deploring the predominance in Germany of metaphysics and speculative science. The Germans, he wrote, owing to their exclusion from public affairs, had lost all power of initiative and had taken to idle broodings. And in fact, since the Reformation, the German character had become more and more introspective, and modern German poetry has but seldom glorified the strong, indomitable will which belongs to men of action. . . . If in 1800 the nation was over-intellectual, it now begins to be overmaterial, and threatens to fall under the sway of those tendencies which beset the German world of the fourteenth and fifteenth centuries, to the prejudice both of its culture and character.

"A survey of all the successive epochs of German literary history will alone serve to reveal to us the latent capacities of the nation, in the harmonious development of all of which lies its real perfection. This perfection may be attained if the fatal onesidedness which so easily lays hold of the German character, can be overcome; or if men will restrain their natural inclinations by conscious labor, and so carry over into the present and future the spirit of the age which is expiring. Many Germans of to-day need no spurring in order to take to the life of generally useful activity which Faust only embraces after going often astray; everything now seems in favor of these practical men. Meanwhile those who live after Goethe's example, and look on poetry as a sacred and national task, have to struggle against wind and weather and to work doubly hard. Let them, too, find encouragement in the words which the angels sing as they bear aloft the soul of Faust:

"'Wer immer strebend sich bemüht,
Den können wir erlösen.'"

The volumes are accompanied by an appendix, containing notes and authorities, which must be a guide of high value to the student of German literature. In addition to a full and very satisfactory index there is a chronological table of German literary history. We note as omissions in the chronology, under the year 1803, the deaths of Herder, Gleim, and Heinse. Of the English edition it should be said that Prof. Max Müller's name is connected with it in a way likely to mislead as to his responsibility for it. Properly speaking he has none, and one will look in vain for any traces of his "editing." We believe his relations to Mrs. Conybeare and to the Clarendon Press were purely advisory and intermediary.

Remarks on the Administrative Forest Staff of Prussia, and the Training of its Officers. By D. Brandis, late Inspector-General of Indian Forests. Reprinted from the *Indian Forester*.

It is Dr. Brandis who organized and put into good working order the great Indian Forest Service, remaining at its head long enough to satisfy himself of its entire success in immensely increased forest revenues for the state and in the permanence of the Indian forests. The Indian Forest Service is, on the whole, in view of the natural difficulties which had to be overcome in its establishment, the vastness and variety of the

territory to be operated in, and the shortness of the time which has elapsed since the movement for the preservation of the Indian forests began, one of the most successful pieces of scientific administrative work we can recall. Dr. Brandis, who has now left India and the Indian service, describes, for the benefit of his old Indian associates, in the pamphlet the title of which is given above, the Prussian system of training foresters.

Americans, accustomed to dealing with large figures, will be struck with the small extent of the Prussian State forests upon which so much care and attention has been bestowed. These cover but 6,597,000 acres—an area so small that we think nothing of cutting down or burning up nearly three times as much forest every year. These Prussian forests, however, although less profitable than those of France, produce annually an average of 5,374,000 loads of 50 cubic feet of timber and small wood, and net to the Government annually nearly five million dollars, or about one dollar and thirty-five cents per acre every year. When it is remembered that most of the forest lands which belonged to the United States were sold in fee for a dollar an acre, to say nothing of the tens of millions of acres which have been given away without an adequate return, or otherwise squandered, it will perhaps be apparent that scientific forest management is a good business operation for a nation to undertake. And even now, could the forests remaining on the public domain be made to pay an annual income equal to one-half or even one-quarter of that produced by the Prussian forests, the result would be simply astounding.

The subordinate staff of the Prussian State forests chiefly employed in their protection—that is, foresters and forest guards—numbers 3,783 persons, in addition to which there is an administrative staff of 807 persons, consisting of 8 high executive officers, with headquarters at Berlin, 122 forest inspectors, and 677 executive officers in charge of forest districts or ranges. This staff, besides the management of the State forests, has the general control of more than three million acres of other public forests, the property of various towns and villages, schools, hospitals, and different public associations. There are in Prussia, besides these public forests, nearly eleven million acres of private forests, the management of which is entirely free and unrestricted, except in certain exceptional cases where public welfare demands special treatment.

The first step for a candidate wishing to secure a position in the Administrative Forest Staff (in which about twenty-eight vacancies occur every year) is to obtain permission to serve a practical apprenticeship of one year in one of the State forest districts. The papers which the candidate must submit in order to obtain this permission include a medical certificate and the certificate of graduation from a large public school (gymnasium), from which he must have graduated with credit in mathematics. The candidate is expected during his apprenticeship to make himself familiar with his forest district and the details of forest working. He is employed in handling timber, in planting and sowing, and in other cultural details. He assists the executive and protective officers in the forest and in the office; he is taught the use of instruments, and takes part in surveying, levelling, and road-making. He is allowed to hunt and shoot, and so gradually becomes familiar with the woods. If he makes satisfactory progress during his first year, he is given a certificate which permits him to attend during two years more the lectures and practical exercises in one of the German Forest Schools.

There are eight of these schools in Germany. Two are in Prussia, one at Neustadt-Eberswalde, near Berlin, the other at Münden near Göttingen. Candidates for the Prussian service, however, are allowed to prosecute their studies in any of the great German schools. The courses in the Forest Schools embrace general forest economy, sylviculture, the systems of working plans, valuation of forests, forest literature, the art of hunting and shooting, the utilization of forest produce, forest protection, forest administration, the history of forestry, the measurement of timber, the subdivision of forests, road-making, and the peculiarities of forest trees. Frequent excursions, conducted by the officers of the school, are made into the great forests connected with all European Forest Schools. At the completion of the two years in the Forest School, another year must be devoted to hearing lectures on jurisprudence, political economy, and finance. Allowance must also be made for a year of military service, so that altogether five years are spent before a candidate is allowed to present himself for his first examination. This examination, for which a high standard is fixed, includes all branches of forestry, surveying, pure mathematics, statics and mechanics, selected branches of jurisprudence, botany, zoölogy, mineralogy, physics, and chemistry. Plans of a plot of land not less than 200 acres surveyed by the candidate, besides a forest map covering some 1,200 acres made by him, must also be submitted.

This examination being successfully passed, the candidate's next step is to pass two years in practical work in several forest districts. At the end of this period he comes up for his second examination, which is intended to test the fitness of the candidate for the management of forests and for forest administration generally. A man who has successfully passed this second examination is at last eligible for appointment in the State forest service. All the successful candidates do not, however, find State employment. A year ago no less than 147 of these passed candidates or Forest Assessors had failed to obtain permanent Government employment. The fact that young men are willing to work for years with only an uncertain prospect of Government employ at the end, more than anything else shows the esteem in which the German forest service is held, and the value of the education which it affords.

Dr. Brandis concludes this most interesting and instructive paper with a brief account of the organization of the Prussian Forest Administration, a description of the training of administrative forest officers in Bavaria, and a statement of the pay and allowances of German administrative forest officers. The length to which this notice has already extended prevents more than the mention of this fact. We in America are a long way from a system of forest management, either private or public, based upon a solid and comprehensive education like that possessed by the German foresters; and Dr. Brandis's remark that "forest work in India has been more of an administrative than of a professional character" will be equally true in the United States long after we can boast of anything like real forest work, if that time ever comes.

Letters to Dead Authors. By Andrew Lang. Charles Scribner's Sons. 1886.

THIS book is one of the luxuries of the literary taste. It is meant for the exquisite palate, and is prepared by one of the "knowing" kind. It is a surprise to find that these little essays were journalistic squibs; but half-a-dozen of the more refined of the entire twenty-two did not suffer the vulgarization of first seeing the light in the *St. James's Gazette*, and these six are as a group the best. Writing in this vein is a rare faculty, and most of the success depends upon the touch, light, deft, and changeable, of the subtly practised hand. It is an astonishing little volume, not so much for the dispersion of the immortals selected for correspondence, in country and age, as for the range of the subjects which are considered to be matters of interest to them. The cleverness lies in the modern turn of the letters, however ancient the address. Of course the chief and obvious topic of the literary celebrities of time past is their own precious selves and the fortune of their books and reputation; this is only human in them, and in this particular class of mortals it is human in a superlative degree. It is easy, therefore, for Mr. Lang to secure their attention—there never was a more honeyed flatterer of the literary *amour propre*—so long as he tells them how large the last editions are, and how much they ought to be thought of, if, in fact, his conscience compels him to suggest that there are still cavillers at them; and the skill and smiling pleasure with which he hastens to bedew their enemies' books with vitriol—such pestilent fellows, for example, as M. Fleury, M. Scherer, and Swinburne—would make any ghost of an author jump with exuberant joy.

But Mr. Lang has to keep an eye open on the peeping Tom of a public on whose curiosity he is really trading, and when the reputation of these dead worthies is of too ancient an odor he must put his brains to work. A curious questioner among the dead might have his suspicions aroused, as sometimes occurs among the living whose letters are "given to the press" before they are mailed, that he was being made a jack of. That expedition of the English into Nile Valley after Gordon was no doubt very entertaining to Sir John Mandeville, and the laugh at the Coquecigrues of the Salvation Army must have amused Rabelais, and so on; but Eusebius of Cæsarea at least must have guessed he was a literary convenience whereby his amiable young epistolary friend was airing his views before a whole academy of mythologists. None, however, has so much to complain of as Chapelain, who might justly consider such irony impertinent even in a private communication, let alone an open epistle; but Mr. Lang ought to be popular with most of the recipients when he steps on the other side. One fancies how the satirical dent in Poe's lip will dimple round the corner as he extends his hand and says, "True, sir; I was a gentleman among *canaille*"; and will take him off under his arm from the quiet group of Irving, Cooper, Hawthorne, Longfellow, and Emerson, and play him a new song on that instrument which he "fashioned from a woman's breast-bone," as Mr. Lang has elsewhere said. But from such company he will have the good sense to escape in the next world; and with Horace and Lucian and Ronsard and Molière, whose praises he sings so well in prose, he may forget the Stygian American.

We commend the book (which might well bear for its legend the idle line, "Where the bee sucks, there suck I") to all who prefer the dainty in literature with a tang of Scotch strength to whet the soon cloyed appetite of a Northern epicurean.

The Early Hanoverians. By Edward E. Morris, Professor of English in the University of Melbourne. [Epochs of Modern History.] With maps and plans. Charles Scribner's Sons. 1886.

MR. MORRIS, the original editor of the "Epochs" series, has prepared this volume to fill the gap between his own 'Age of Anne' and Mr. Longman's 'Frederick the Great.' It comprises the reign of George I. and that of George II. down to the Treaty of Aix-la-Chapelle, in 1748. In his preface, Mr. Morris reminds his readers of the cardinal principle of the series, "to make the

division of history horizontal rather than vertical"—a principle which, it must be confessed, has been forgotten by the authors of some of the volumes. Accordingly, he has produced a good account, not merely of such familiar subjects as the Triple and Quadruple Alliance, the administration of Alberoni, the Pragmatic Sanction, and the War of the Austrian Succession—all of which touch English history closely—but of those more remote events, the Turkish wars and the War of the Polish Succession. The history of Peter the Great, which falls in this period, is omitted, having been fully treated in 'The Age of Anne.'

Mean as was the English nation and government during these years, there are many events of even romantic interest, and the reader will be grateful for the full exposition of Law's scheme, the South Sea Bubble, the Porteous riots, and Anson's famous but little known voyages of discovery. The rebellion of 1745 is the subject of a long and interesting chapter. Mr. Morris is strong in the delineation of character, and the comparison he draws between the two Pretenders (p. 147) is one of the best things in this line. "Probably neither," he says, "was deficient in personal courage, but the father lacked resolution, and had, except with reference to his own claims, a vacillating mind as well as a melancholy disposition; whereas the son showed the dashing bravery of a true Highlander, happier in attack than in defence, and had an elastic gayety of spirit, ever brighter when clouds were darkest. . . . If we seek for an explanation of the difference between them, perhaps we may find it in the Sobieski descent of the younger. It is important to notice this strain in him."

An interesting paragraph (p. 142) describes the conduct of the Irish brigade which decided the day at Fontenoy, and ends with the words of George II., "Cursed be the laws which deprive me of such subjects." But, to our surprise, we find no statement of these laws, and no other allusion to the English rule in Ireland during this period. This seems a strange omission. The Battle of the Boyne was a well-won victory, and established a dynasty in Ireland. This was the fortune of war. But the repressive and intolerant legislation which followed had no justification, and is one of the deepest stains upon English history. It was this that George meant when he cursed the laws that gave his enemies the assistance of the Irish brigade, and it ought, it would seem, to have received some notice in this volume.

The history of literature during the period under review is very full and good—that is, the literature of England and France, for no other nation had a literature that need be considered in a book of this size. The victory of Dettingen gives occasion to mention the Dettingen Te Deum; but music is otherwise neglected, although the age of Bach and Handel deserves for this reason, and this alone, to rank as a great creative epoch in art. Like all the volumes of the series, the present contains a number of excellent maps and plans, nine in number; also three genealogical tables.

Protestants from France, in their English Home. By S. W. Kershaw. With illustrations. London: S. Low. 1885. Pp. xii, 170. 8vo.

In this book Mr. Kershaw gathers together the principal historical data in regard to the various Huguenot congregations in Great Britain, and their connection with the Church of England. His position as librarian at Lambeth Palace has given him peculiar facilities for prosecuting his researches in this direction, and the numerous facts and extracts from the correspondence of the bishops and statesmen of the seventeenth century, in some cases from unpublished manuscripts, show that he has gleaned over a wide field. The earliest French congregations in England were those of Canterbury, gathered about 1548, and of London, in 1550. Three years later the English Prayer-Book was translated into French and printed for their use. From this time their numbers increased until, shortly after the Revocation of the Edict of Nantes, there were "thirty or more" foreign churches in London alone. Many of these, however, were very short-lived, and now one or two London churches, the French church still worshipping in the crypt of Canterbury Cathedral, and the French Hospital in London, are almost the sole remaining representatives of the Huguenot "strangers." In a valuable chapter on the "Refugee Documents and Archives," Mr. Kershaw indicates briefly the principal collections of historical material relating to his subject, the chief of which are the registers of the London churches preserved in Somerset House and the private collections of Lord Salisbury and the Marquis of Bath. The closing chapter is upon the present state of French Protestantism, and contains references to the important historical works on the Huguenots recently published in Europe and America. Though Mr. Kershaw has shown little literary skill in the arrangement of his materials, his book will prove a valuable guide to the student of this subject. He is in error, however, when he says of Meric Casaubon "that, while hiding in a cavern from his persecutors, he learned from his father his first Greek lessons." This was true of the latter, the far more famous Isaac Casaubon, who, when a lad of thirteen, was obliged by the massacre of St. Bartholomew to take refuge in the hills of Dauphiny with his father, a Huguenot pastor. Nor did James I. make Isaac a "Prebend of Westminster," but of Canterbury. Mr. Pattison says: "A stall at Westminster was named. This promise was not fulfilled."

Grammaire Latine. A l'usage des classes supérieures et des candidats à la licence ès lettres et aux agrégations. Par Salomon Reinach. Paris: Delagrave. 1886.

M. Reinach's 'Grammaire Latine,' like the 'Manuel de Philologie Classique' with which the stripling scholar astonished the world a few years since, is a bold attempt to meet at once the needs of the beginner and the demands of the advanced student. Aware of the serious disadvantage of shifting text-books, he has comprised in one volume the elementary outline and the abstruse problem, and the same guide teaches us to inflect *rosa* and to observe the concord of adjective and substantive that brings us face to face with the grave questions of agglutination and of sentence accent.

For the beginner there is a condensed view of accidence and syntax, in which the lead of Lhomond has been followed rather than that of Burnouf. Which of the two is in itself the better approach to Latin for Frenchmen, Frenchmen must decide; and it seems they have decided for Lhomond. Of this part of the grammar, then, there is little to be said, except that M. Reinach has departed from the French rule of appending translations to the illustrative examples, and has appealed to German authority for this innovation. German authority is not wholly on his side, and the departure does not seem to be a wise one. The examples ought to be selected as far as possible with reference to charm of style as well as to value of contents, and the translations ought to be made with the greatest care, so as to give the student models for his own renderings; and if M. Reinach's practical experience as a teacher were at all proportioned to his marvellous powers of search and appropriation, he would have modified this feature of his book. Nor will he, we hope, take it amiss when we suggest that if the mnemonic verses of Zumpt are as valuable as he thinks, it would have been better to translate them into French, and not to leave them in their native German to serve as an exercise in both languages. At least, no American grammarian would have dared to make the transfer so easy to himself. But while even the elementary portions of the book are enriched by notes that give evidence of the use of the best authorities, the chief value of the grammar for this side of the water will be found to lie in those sections that are intended for the advanced scholar. Here the student will find a bibliography that has absorbed Hübner's admirable work and complemented it by ransacking catalogues and transactions and journals. The book teems with the latest results, is alive with the latest speculations, and the special student of Latin grammar will find himself stimulated to research in every direction. To those who are in quest of subjects for theses, for dissertations, M. Reinach's grammar will be a godsend.

One interesting feature in this book is the emphatic assertion of the rights of French scholars, who have been doing excellent work in classical philology of late years, and, as American scholars are mostly, either at first-hand or at second-hand, of German training, and hence, being more German than the Germans themselves, are apt to look askance at French work, it is well that they should be made aware of what they may be losing. One of the foremost representatives of classical philology in France said a few years since to the writer of this notice, "We are officers without an army"; but they are officers worthy to lead the armies of any land. Large portions of M. Reinach's book are taken, always, of course, with due acknowledgment, from German authorities; but his debt to Thurot's lectures, to Weil's classical treatise on the order of words, to Bréal's linguistic researches, to Riemann, and to Havet is made especially conspicuous.

A work that bristles with so many details as a Latin grammar, and such a Latin grammar as M. Reinach's, can only be criticised duly in an educational or philological journal, and even there the ragged regiment of sins that can be paraded by any fairly equipped censor is apt to become wearisome. Here we must be content to give thanks for the unwearied industry, the keen scent, the quick vision to which we owe the collection of so much valuable material, so many luminous facts, so many pregnant hints. Of course M. Reinach will expect to irritate as many veterans as he will stimulate candidates. He despatches many favorite theories with a magisterial wave of the hand, and those whose hearts are set on a reform of spelling will be annoyed at his long-tailed j's and his *poco-curante* attitude toward this vital subject. To be sure, there are eminent sinners, such as Cobet, who still dares to write 'adolescens' and 'negligo' and 'quum,' but the too seductive Cobet, like Plato's heterodox poet, must be sent out of the country with every demonstration of affection and respect. It is dangerous to be lax about anything, and we have in mind a distinguished scholar who began his downward career by abolishing Greek accents as meaningless symbols, then became criminally indifferent as to his breathings, and was finally lost in a slough of bad etymology.

M. Reinach would have been untrue to the nation whose philology he represents if he had not enlivened his subject with epigrammatic *mots* of his own as well as of others; and in the closing chapter, "On the Decadence of the Latin Language," the only section in which he has an opportunity for a long sweep, he develops a rare charm of style. Still, as a necessary offset to all the good that has been said and intimated above, it must be added, in all candor, that M. Reinach's work, valuable as it is, does not produce on a

grammarian the effect of the work of a grammarian so much as that of a philologian who accepts grammar as a necessary part of his profession; and one misses the fresh breath that comes from his archæological writings. In spite of sharp self-assertion here and there, he is dominated by his material rather than dominates it, and his work lacks occasionally consistency of view and firmness of touch. It would, for example, be impossible for a grammarian in grain to tell us, on page 183, that in the notorious passage (Cic. ad Att. II. 1, 12), *Paetus omnes libros, quos pater suus reliquisset, mihi donavit,* the change to *reliquerat* would have required a change of *suus* to *ejus,* and yet, on page 215, to retain *suus* with the indicative form.

The English Catholic Nonjurors of 1715: being a Summary of the Register of their Estates, with Genealogical and other Notes, and an Appendix of unpublished documents in the Public Record Office. Edited by the late Very Rev. Edgar E. Estcourt and John Orlebar Payne. London: Burns & Oates; New York: Catholic Publication Society.

THESE lists were prepared in accordance with an Act (1 Geo. 1 cap. 55) obliging Papists to register their names and real estates—a measure intended, no doubt, as a menace to the friends of the Pretender. That it was complied with by so many is evidence of a much greater number who evaded the law, and, as a measure of precaution, it cannot be deemed harsh for that period. It is indeed difficult to understand the object of the present publication, as the genealogical information obtainable is scanty and of no especial value. But there seems to be a fashion in England to glorify the Catholic families of the last century, for no particular reason, just as the current here is running in favor of the Huguenots, as we pointed out in our review of Dr. Baird's history.

A Study of Dante. By Susan E. Blow. With an introduction by William T. Harris, LL.D. G. P. Putnam's Sons. 1886. 8vo, xi and 102 pp.

THERE grows in the campagna of Rome a plant of the Jack-in-the-pulpit family which attains such perfection of development that its odor, to an unaccustomed nostril, becomes extraordinarily offensive, and a new-comer can only obtain specimens of the flower by sudden rushes at it, followed by immediate retreat from the infected neighborhood—always in danger of being overcome by the sick drowsiness it causes. Do not let us speak of an estimable author or authoress as a Jack-in-the-pulpit; do not let us refer to the sick drowsiness caused by the perfection of their development: let us only exhibit specimens of the flower obtained by sudden rushes at it, followed by immediate retreat. We gather from Dr. Harris the belief that Dante—like the other three "world poets," Homer, Shakspere, and Goethe—"used his vehicles of expression to reveal to all individual men their substantial manhood as embodied in the institutions of civilization." We believe we quote correctly, but the fatal drowsiness is upon us; and could that sentence read that "he never used his expressive vehicles to convey to men collectively the institutions of civilization as embodied in their substantial manhood"? Another rush, before we succumb—this time to the authoress. "It is evident"—to her, but, alas! at this moment nothing seems evident to us, except our own haste to get away—"it is evident that we may grasp the universe as an including totality, and yet apprehend very faintly its nature and end." In the present wild whirling of our brains, this sentence, the whole book, is to us as the universe. We grasp it as an including totality, we apprehend very faintly its nature and end.

BOOKS OF THE WEEK.

Acta et Decreta Concilii Plenarii Baltimoriensis Tertii, 1884. Baltimore: John Murphy & Sons.

A Rare Book for Sportsmen.

HUNTING TRIPS OF A RANCHMAN.

Sketches of Sport in the Northern Cattle Plains, together with Personal Experiences of Life on a Cattle Ranch. By Theodore Roosevelt, author of 'The Naval War of 1812.' Popular edition. With thirty-five illustrations engraved on wood, from designs made for this work, by Frost, Gifford, Beard, and Sandham. Octavo, cloth..... $3 50

". . . He must be a hopeless reader who does not rise from this book with a new and vivid sense of the 'fascination of the vastness, loneliness, and monotony of the prairies,' and of 'the sad and everlasting unrest of the wilderness' of the Big Horn Mountains, in addition to pleasant familiarity with their flora and fauna. . . . As already said, the charm about this ranchman as author is that he is every inch a gentleman-sportsman. Again, he is a careful observer of the characters and individualities of animals, and he is a pleasant and graphic describer of them. . . . We believe the author may safely reckon on a wide and permanent popularity with English readers, even those of them who, like the writer, have long laid aside rod and gun, and learned Wordsworth's grand lesson."—*London Spectator.*

"One of those distinctively American books which ought to be welcomed as contributing distinctly to raise the literary prestige of the country all over the world. . . . Many of Mr. Roosevelt's narratives are enriched by bits of realism which linger in the memory like snatches of poetry."—*N. Y. Tribune.*

"Mr. Roosevelt has given a peculiar charm to his book from his intense love of nature and his capacity to communicate to others his own impressions. A great debt is due him for having preserved in such a charming manner one of the most important chapters in the long history of the conquest of the American Wilderness."—*Atlantic Monthly.*

"One of the rare books which sportsmen will be glad to add to their libraries. Nothing so good of the sort has appeared for years. . . . What we like about the author is the certainty that he is thoroughly trustworthy, and we feel that we may receive his sporting experiences for gospel."—*Saturday Review.*

"Mr. Roosevelt's volume is as readable as it is handsome. . . . The author is an eager sportsman and a good writer. His pen is as eloquent as his rifle is effective. . . ."—*London Athenæum.*

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with Physicians who treat mental or nervous disorders. Not a secret. Formula on every label.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion; refreshes weakened vital powers in old or young. A Vital Phosphite, not a Laboratory Phosphate.

It is used by the Emperor Dom Pedro, Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

POETRY AS AN ART.

I. POETRY AS A REPRESENTATIVE Art. By GEORGE L. RAYMOND, Professor of Rhetoric and Æsthetic Criticism in the College of New Jersey. 8vo, cloth extra, $1.75.

The book is submitted as an attempt to determine scientifically the laws of poetic composition and criticism by deriving and distinguishing the methods and meanings of the various factors of poetic form and thought, from those of the elocution and rhetoric of ordinary discourse, of which poetry is an artistic development. The essay is amply illustrated with quotations from the best authors.

"The scope of this work embraces every relation of poetry to language and to sentiment. It is in reality an essay on poetry, its quality, force, manner of expression, and correct use, with critical examinations of many illustrative passages and poems. . . . The author's plan is an exhaustive one: his manner of working it out shows a thorough study of his subject, and an astonishing familiarity with the whole range of English poetry . . . critically examined. The student of literature will find the book worthy of exhaustive study."—*Philadelphia Inquirer.*

"His book is an interesting and important one. . . . Its most valuable office is in pointing out with unusual clearness the relation between poetry and elocution, . . . the propriety and even the absolute necessity of teaching literature and elocution together in such a way that each may illustrate the other."—*Advertiser, Boston.*

II. SUMMER HAVEN SONGS. By JAMES HERBERT MORSE. 13mo, cloth, extra, $1.25.

"Simple, honest, manly song. . . . One poem reminds us of the best lyrics of Heine, whose grace it has caught, and whose cynicism it has happily missed."—*Mail-Express, N. Y.*

*** Putnam's new lists sent on application.

G. P. Putnam's Sons,

27 and 29 W. 23d St., New York.

Ministers, Sunday-School Teachers, Parents, and all Students of the Bible, should examine

SCRIPTURES FOR YOUNG READERS.

Arranged and edited by Rev. EDWARD T. BARTLETT, A. M., Dean of the Protestant Episcopal Divinity School in Philadelphia, and Prof. JOHN P. PETERS, Ph.D., Professor of the Old Testament Languages and Literature in the P. E. Divinity School in Philadelphia. To be complete in three volumes, of which two volumes will be given to the Old and one to the New Testament.

NOW READY:

Volume I., comprising the Hebrew Story from the Creation to the Exile.

Part I.—Hebrew Story from the Beginning to the time of Saul. Part II.—The Kingdom of all Israel. Part III.—Samaria, the Northern Kingdom. Part IV.—Judah, from Rehoboam to the Exile.

Printed in a handsome 12mo volume of over 500 pages, in clear, readable type. Cloth extra.....$1 50

"The plan commends itself to me in many ways as an excellent one. I shall be glad to see it carried to completion."—*Rt. Rev. Hy. C. Potter, Asst Bishop of New York.*

"Should prove a valuable adjunct of Biblical instruction."—*Rt. Rev. W. E. Stevens, Bishop of Pennsylvania.*

"I feel great confidence in the real value of the method proposed."—*Rt. Rev. W. C. Doane, Bishop of Albany.*

G. P. Putnam's Sons,

NEW YORK AND LONDON,
AND ALL BOOKSELLERS.

GERMAN SIMPLIFIED. Eminently practical. 12 Numbers, 10 cents each. Prospectus mailed free. Prof. A. Knoflach, 140 Nassau St., New York.

Economic and Political Science.

I. ESSAYS IN FINANCE. By ROBERT GIFFEN.

Contents: Trade Depression—Gold Supply, the Rate of Discount and Prices—The Effects on Trade of the Supply of Coinage—Bank Reserves—Foreign Trade of the United States—The Use of Import and Export Statistics—Foreign Manufactures and English Trade—The Utility of Common Statistics—General Uses of Statistical Knowledge—Progress of the Working Classes in the Last Half Century.

(Limited letter-press edition.) Large octavo, cloth extra, $3.50.

"A more than usually interesting work of the kind. . . . The book is one which the student of finance will find abounding in facts and valuable suggestions. The author seems to have no hobbies, and writes clearly and sensibly from the facts as they appear."—*Inter-Ocean, Chicago.*

II. THE HISTORY OF THE ENGLISH CONSTITUTION. By RUDOLPH GNEIST, Professor of Law in the University of Berlin. Translated by Philip A. Ashworth. 2 vols., octavo, cloth, gilt top, $8.00.

"Professor Gneist is not only one of the most distinguished jurists in Germany, but also for thirty or forty years he has written the best books on the English Constitution. . . . At length he has embodied all his results in one work on the Constitutional History of England. It contains the whole period embraced by Stubbs, Hallam, and May, is as learned as either of them and far more readable. In fact, I have been greatly impressed by it."—*President C. K. Adams, Cornell University.*

III. PRACTICAL ECONOMICS. A collection of Essays respecting certain of the Economic Experiences of the United States. By DAVID A. WELLS. 8vo, cloth, $1.50.

Chief Contents: A modern Financial Utopia, The True Story of the Leaden Images, The Taxation of Distilled Spirits, Recent Phases of the Tariff Question, Tariff Revision, The Pauper Labor Argument, The Silver Question, Measures of Values, The Production and Distribution of Wealth.

"In my clear opinion, it is the most comprehensive, conclusive, and powerful statement of the truth respecting freedom of exchange, as to theory and as to practice, that exists in any language or literature."—*Manton Marble.*

IV. RAILROAD TRANSPORTATION: Its History and Its Laws. By ARTHUR T. HADLEY, Commissioner of Labor Statistics of the State of Connecticut, and Instructor of Political Science in Yale College. 8vo, cloth, $1.50.

"A most important contribution to the public knowledge of a subject of exceptional complications. . . . In a concise form, Mr. Hadley's volume gives a comprehensive view of the railroad questions in their different aspects, and his chapters will undoubtedly, in many directions, pave the way to a larger acquaintance with a subject which is so necessary for voters and legislators. . . ."—*Bradstreet's.*

V. UNWISE LAWS. A Comprehensive View of the Operation of the Protective Tariff upon Industrial and Commercial Affairs. By LEWIS H. BLAIR. 8vo, cloth. Questions of the Day, No. 35. $1.00.

*** Lists of their own Economic Publications sent on application. Classified list of the more important English and American works in this Department sent on receipt of stamp.

RECORD:
American.—Foreign.—Literary.—Scientific.—Art and Archæology.

ANALYTICAL INDEX OF VOL. I.

The continued success of the Review encourages the publishers in adding, at increased expense, new features which add materially to its permanent value: First, the "RECORD," which aims to give an accurate review of events and important movements going on in the world with some respect to the relative importance of subjects. Second, a VERY FULL INDEX, with CLASSIFICATIONS which are specially adapted to the purpose of the Review. This we believe to be the most practical system of indexing yet devised.

The May number completes the first volume of the Review. For the convenience of subscribers, COVERS of appropriate design will be furnished at 50c. each, prepaid, on receipt of price.

BOUND Copies of Volume I., $2.50. Sent charges prepaid. Single numbers, 50c.; $3 a year.

NEW BOOKS NOW READY:

LAST DAYS OF THE CONSULATE. From the French of M. Fauriel, Member of the Institute of France. Cloth, gilt top, $1.50.

Boston Saturday Evening Gazette: "'The Last Days of the Consulate' will be read with deep interest by those who have been attracted by the recently published memoirs of Mme. de Remusat, of Metternich, and of others who have let in the light upon the true character of Napoleon. In this book new incontrovertible evidence is given of the malice, the heartlessness, the coarseness, and the treachery that were uppermost in the nature of Napoleon. His lack of principle, his willingness to stoop to any crime that might serve his purpose, his cynical disbelief in any abiding principle of virtue in humanity, are here set forth with a calmness and a detail of circumstance that are convincing beyond all question. The author had every opportunity for a full and minute acquaintance with the facts with which he deals, and his work is a most valuable contribution to the history of the time in which it was written."

London Saturday Review: "A curious and happy chance has thrown a flood of light on the conduct of Bonaparte. As the author of this work was Secretary of *Fouché, the Minister of Police*, from 1799 to 1802, he speaks with authority on much that has hitherto been doubtful. These papers form the gravest indictment against Bonaparte and his creatures that has yet appeared."

THEISM AND EVOLUTION. By Rev. J. S. Van Dyke, D.D. With an Introduction by Rev. A. A. Hodge, D.D. Crown 8vo, cloth, $1.50.

A thorough, scholarly, impartial discussion of evolution, as related to theistic conceptions. It is the result of extensive reading, mature reflection, and careful preparation. The speculations of *Darwin, Haeckel, Spencer, Bain, Huxley*, and others, are carefully examined in their bearings upon theological tenets. While no attempt is made to refute the theory of evolution, when restricted to its proper limits, there is a masterly array of facts evidencing its inability to explain the origin of matter, of force, of mentality, of conscience, and of will power. The evolutionist will discover much to commend. The theist will be strengthened in his conviction that the foundations of Christian doctrine remain unshaken. *Each of its 480 pages evinces learning, acuteness, impartiality, and devotion to truth.*

MRS. LEICESTER'S SCHOOL and other Writings in Prose and Verse. By Charles Lamb, with introduction and notes by Alfred Ainger. Crown 8vo, cloth, gilt top, $1.50.

Copies sent postpaid on receipt of price by

A. C. ARMSTRONG & SON,

714 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, APRIL 29, 1886.

The Week.

THE investigation of the "labor troubles" in the Southwest by the House Committee, which has just opened, promises to prove a curious sort of a performance. Nothing practical can come of the hearings (which the Chairman of the Committee says are likely to continue for two months), except in one way, and that is distinctly mischievous. The followers of Martin Irons hailed the proposition for a Congressional investigation as likely in some way to help them to a "victory" over the railroads, and the Knights of Labor took fresh courage for their hopeless fight as soon as they heard about it. The course which the inquiry is taking seems likely to strengthen this unfounded impression that Congress can help them out. Take, for instance, these passages from the examination of Powderly:

"Mr. Burnes, a member of the Committee—I would suggest, further, that it may be well to consider what, in your judgment, can be constitutionally done, and what might be done and ought to be done by amendments to the Constitution.

"Mr. Powderly—I shall do so, and I thank you for the suggestion.

"Mr. Buchanan, another member of the Committee—You promised to furnish the Committee with some views as to the legislative remedy for troubles of the kind now existing. Will you also, in considering that question, take into view the complex nature of this Government, and the divided responsibility between Federal and State legislation, so as to make your suggestions such as the national legislature can duly act upon?

"Mr. Powderly—I will do so."

As a bit of opéra bouffe in public affairs, this suggestion that Mr. Powderly shall institute changes in the Constitution under which this nation has existed for a century, is diverting enough, certainly. But when one reflects that this proposed Constitution-maker is a man who has been inciting to riot as truly as Martin Irons, if in more guarded terms, and that such an invitation to such a man from a member of a Congressional committee must strengthen the impression of ignorant strikers that this inciter of riot is a personage fit to be trusted with changes in the fundamental law of the United States, and even capable of making them, the matter loses its humorous aspect, and appears in its true light as a very serious encouragement by Congress of wrong notions in the conception of American liberty.

The address of Mr. P. M. Arthur at the meeting of the Locomotive Brotherhood is the mature judgment, not of a single individual, but of a great labor organization, which has been through the riot period of its existence and come out wiser and better men. The locomotive engineers have learned that the laws of the land and of all civilized lands are based upon the sum of human experience, which tells us that every attempt to curtail men's rights to earn their bread how and as they please (not infringing upon the equal rights of others) is an act of base and short-lived tyranny. This is the true gospel of labor as proclaimed by Mr. Arthur, but it is perhaps too much to hope that the society of which Mr. Powderly is the head will ever learn it except by their own experience and their own suffering. The tendency of modern industry, of the sober and humane and orderly kind which Mr. Arthur advocates, is everywhere giving to labor a larger and to capital a smaller share of the joint product of capital and labor. This is denied by philosophers of the Henry George school and by some of our college professors, who choose to ignore the number of laborers at different periods of the world's history, and take only the rate of wages per capita into their calculations. The truth is, that the rate of wages per capita is increasing as well as the proportion which labor gets as a whole, while the rate of profits is steadily diminishing in all countries, and nowhere is this course of events more marked and decided than in this country. Boycotts and causeless strikes and eight-hour movements and protective tariffs are the only present obstacles to this wholesome progress and tendency.

The movement to make eight hours a day's labor is just now very active—indeed, there has been talk of concerted action among the Knights of Labor for its enforcement on the first of May. There is an idea among some of the men—very few, we suspect—that as much work would be done in eight hours as in ten. What animates the bulk of the eight-hour advocates is the belief that while less work would be done in eight hours than in ten, the pay would remain the same, and employment would be furnished to large numbers who now have nothing to do. We see no objection in the world to the experiment being tried, if it be tried on the American basis of individual liberty—that is, if individual choice be allowed to determine in every case whether a man shall work eight hours or ten, and the employer be allowed to choose between the eight-hour men and the ten-hour men. To make it work satisfactorily, however, each man ought to be paid by the hour, and then both classes could work in the same factory or shop. But the important question for the public is *how* the experiment is to be tried. If it is to be carried out on the compulsory principle—that is, if the eight-hour men are all to provide themselves, like savages, with stones, bricks, clubs, and knives with which to kill or maim the ten-hour men, and if people who employ ten-hour men are to be boycotted, and their premises infested by hooting, howling mobs, and their machinery damaged, and their butchers and bakers warned off—then the American people will make short work of it somehow.

Mr. Edward Atkinson shows, in the last number of *Bradstreet's*, that in each 1,000 workers in the United States, only 100 are engaged in occupations upon whom an eight-hour law could be enforced, and that consequently the passage of such a law would simply operate to depress the trades upon which it could be enforced, relatively to all other trades. In the first place, agricultural labor, cattle and sheep growing, horticulture and fishing, could not be subjected to an eight-hour law, and if they could be it would ruin them. Blast furnaces, gas works, bakeries, restaurants, and all other employments requiring continuous heat could not be subjected to the eight-hour rule without instant destruction. Paper mills require continuous operation. So also do railroads. Then there are the great multitude of employments that the officers of the law can never reach, or know anything about, the people who work at home, such as seamstresses, washerwomen, carpenters, blacksmiths—in short, everybody who is his own employer. The only trades that could be reached are those in which large numbers of workers are collected together for the purpose of attending machinery, such as cotton and woollen mills, rolling mills, boot and shoe factories, and the like. These number not more than one in ten of the people of the United States who work with their hands. As to these Mr. Atkinson says, with his usual penetration:

"If the advocates of an eight-hour law should get it passed, the first efforts of the same men who had promoted it would be to find out how to work overtime to the best advantage in order to gain a better subsistence. The logical result of all such acts by which the free conduct of adults is restricted in certain specific cases is to limit the full use and benefit of labor-saving machinery, and thus to lengthen the necessary hours of work of the great mass of the people."

It is said that a majority of the Committee who have been investigating the telephone scandal will report in favor of exonerating all the Government officials from any improper connection with the Pan-Electric Telephone Company. It is also stated that the Republican members of the Committee will find that the Attorney-General was entirely honest in his relations to the matter, but allowed himself to be used by persons who were seeking to obtain the right to use the name of the Government for their own purposes. If the Republican members do find like this, they will be putting the worst construction possible upon the matter. There has been nothing in the testimony taken by the Committee to justify the assertion that the Attorney-General allowed himself to be "used." He refused to have anything to do with the proposal for a suit against the Bell people, and he has sworn that the consent to bring that suit which was subsequently granted, first by the Solicitor-General, and afterward by Secretary Lamar, was given without his knowledge, advice, or approval. If he had not been a holder of Pan-Electric stock, there would never have been any ground for impeaching his conduct in the case, and if he had rid himself of that at the outset, there would never have been any scandal.

A more unblushing argument in favor of the log-rolling system of legislation, as exemplified in the river and harbor steal, was never made than has just been submitted to the House by the Judiciary Committee in its adverse report upon the proposition for a constitutional amendment, giving the President power to veto separate items in an appropriation bill while

approving the remainder. The theory upon which the river and harbor steal is based is, that A will vote for B's appropriation on condition that B will vote for A's, and so on through the list. The theory of the Constitution, on the other hand, is, that Congress will consider every appropriation upon its merits; give A what he asks if he ought to have it without regard to B, or refuse what both A and B ask if neither ought to have it. Indeed, the theory of the Constitution would present every question of appropriation upon its merits, and it is only for the sake of convenience that the aggregation of a number in a single bill can be justified. To give the President the power of vetoing a separate item in a bill, without defeating all the others, simply restores the system of law-making to a constitutional basis, since, if time permitted, every item would be submitted to him in a separate bill. To talk about any danger of aggrandizing the Executive in such a restoration of the theory of the Constitution—and of common sense—is absurd in itself, and becomes ridiculous when one reflects that a similar power was conferred years ago upon the Governors of States like New York and Pennsylvania, which have a larger population than the whole Union had when Washington was inaugurated, and has been exercised by Governors of both parties in those States greatly to the public advantage. The river and harbor jobbers may be able to delay the application of the same system to the Federal Government, but it is a reform which is bound to come sooner or later.

There are a number of rich nobodies in the State of Vermont whose aspirations toward the Senate of the United States have been frustrated and brought to naught these many years by Senator Edmunds, who is somebody. Not that Senator Edmunds has ever taken any pains or made any exertions to get himself elected instead of them. On the contrary, he is almost the only member of either party now in the Senate who preserves the tradition that scheming and "electioneering" for that high office are unbecoming, and it may be set down as certain that he will not now or ever lift his finger or say a word to secure a single vote as against any other candidate in his party. The opposition to Mr. Edmunds is based solely on the ground that he did not actively support Blaine in the last campaign. He had entertained and expressed, privately but frequently, before the Convention met, opinions concerning Mr. Blaine's public record absolutely disabling any self-respecting Senator from afterwards publicly advocating his election to the Presidency. He voted the Republican electoral ticket in his State, which he might do with propriety as deeming the success of the Democratic party the greater of two evils; but when asked to go on the stump and tell a lot of lies he flatly refused. This refusal has greatly encouraged the rich nobodies in their endeavors to supplant him in the Senate, and they are "working it for all it is worth." One of their queer charges is that the Edmunds resolution calling for the papers regarding removals from office is a sign of purely spasmodic activity, intended to divert public attention from his "treachery" in 1884. An impartial observer, or careful student, like the man from the moon, would say that anything calculated to divert attention from the campaign of 1884 ought to be welcomed by the Republican party without distinction of color or previous condition of servitude, and that Senator Edmunds's diversion of public attention from Republican blunders to Democratic ones was the greatest possible party service.

Mr. Edward Cary is perhaps inspired by something else than the pleasures of memory to write an article in the current number of the *Forum*, under the interrogative title, "Would We Do It Again?" The question is whether the Independents would support Cleveland as against Blaine for President of the United States, with our present experience, if a new election were to take place now. Mr. Cary answers it for nobody but himself, but gives with his customary clearness and frankness the reasons why he would do so. These are, that the tone of governing circles has been improved since Mr. Cleveland came into office, and this notwithstanding the fact that the tone of the Republican party rank and file is normally higher than that of the Democratic party. What sort of change would have followed if Mr. Blaine had been the successor of President Arthur, can only be inferred from what we know of Mr. Blaine's career as Speaker of the House, from his personal eagerness to make money, from the wild South American adventures that he set on foot during his brief term as Secretary of State, and from his systematic fanning of the flame of Irish hostility to England. The policy of President Cleveland has been the reverse of everything that made Blaine a dangerous candidate. He has had no meddlesome foreign policy to exploit. He has cultivated peace with all the world. He has honestly sought to reform abuses in administration, and if he has not succeeded in all respects, or to the extent that might be desired, he has set a good example, and has driven a stake for civil-service reform that cannot be pulled up. The Treasury Department has made "a splendid record" under Mr. Manning, and a revolution has been effected, so silent that it has hardly been noticed, in "the disappearance of the Southern question as a controlling issue in national politics." For these reasons Mr. Cary thinks that "we would do it again," and would do it with even more relish and spirit than before. The unexpressed thought in the article is that we may have to do it again. The "Blaine crowd" are determined to "run" their man in 1888.

The introduction by a Republican Senator of a bill to repeal that section of the Revised Statutes which debars ex-Confederates from holding commissions in the Federal army, may be regarded as the burial of the bloody shirt. Mr. Riddleberger's proposition is sure to receive the support of his fellow-Republican from Virginia, Mahone; and two other Republicans, Cameron of Pennsylvania and Jones of Nevada, voted for a similar measure a fortnight ago. These four Republican votes, with those of the Democrats, insure its passage through the upper branch of Congress, and the lower branch will of course concur. Riddleberger and Mahone have done the country small service, but if they succeed in thus disposing of the bloody shirt, their career in the Senate will not have been altogether profitless.

The Blair bill may now be considered dead. The measure which passed the Senate about two months ago has since lain on the shelf in the Education Committee of the House, which considered the scheme so vicious that it felt justified in thus smothering it in committee. The Labor Committee, which Representative Willis a month ago picked out as certain to make a favorable report without delay upon a bill identical with the original measure, no sooner began to investigate the matter than it also decided the project to be utterly unjustifiable, and on Monday, after four weeks' consideration, only three out of thirteen members were found to favor its passage. In order to get rid of the subject, a majority voted to report back a substitute which proposes to devote the income from the sale of public lands to school purposes during the next ten years, but neither the Committee nor anybody else expects to see this scheme pass the House, to say nothing of the Senate and the President. Now that the scheme is dead, it only remains to bury it, and representative men in the South are lending a hand. A letter from the venerable John B. Minor, the distinguished Professor of Law in the University of Virginia, says:

> "I take much interest in the Blair bill, *very earnestly desiring its defeat:* first, because I think it a very dangerous infraction of the Constitution; and second, because communities, like individuals, are always enfeebled by having done for them what they can, and ought to, do for themselves. I can only bestow upon this scheme my heartiest malediction, and indulge the anxious hope that it will never again present itself in either house of Congress."

The resignation by Mr. H. T. Sperry, editor of the Hartford (Conn.) *Evening Post*, of the office of Insurance Commissioner in his State has been brought about by the pressure of public opinion, in view of his use of his official position to secure advertisements from insurance companies for a publication in which he is interested. Mr. Sperry's course as a civil servant of the State is interesting because his newspaper has long and constantly sneered at all the attempts that have been made to reform the civil service of the country. In his view, competitive examinations are a snare and a delusion, whose only effect is to embarrass political managers, and victories at the polls mean opportunities to get official salaries. It is well to call Mr. Sperry's attention to the fact that one thing which a reformed civil service is expected to secure is the impossibility of giving offices to men like him, who have already been found wanting in such positions, and whose only claim to them is their political services. Under President Arthur this Mr. Sperry was appointed Inspector of Stamped Envelopes for the Hartford district, at a salary of $2,500. He naturally looked on the position as a sinecure, and the result some months later was a report to the Post-office Department that Mr. Sperry "had either failed to comprehend his instructions and the object of

his appointment, or had wilfully disregarded them." Mr. Sperry will do well to withdraw from office-seeking for a time, and devote himself to instructing his readers on the subject of government reform.

Some light is thrown upon the wool tariff in the report of the Massachusetts Labor Bureau for the present year. This report contains a valuable chapter on "Profit Sharing," embracing a brief narrative of each experiment made in the United States on any considerable scale to enable workingmen to participate in the profits of manufacturing industry. One of the most methodical of these experiments is that of the Peace Dale Manufacturing Company of Rhode Island. The Peace Dale Company is one of the oldest in New England, the works having been begun in the year 1804, and having been continuously in operation since that time, under the direction of the Hazard family. The longevity of the company is itself ample proof of the skill and business capacity of the management. Very few manufacturing houses in this country can trace their lineage backward through the vicissitudes of eighty-one years. The company employs 450 operatives, two-thirds of them being of foreign birth. In the year 1878 Mr. Rowland G. Hazard decided to offer the employees a share in the profits of the company as an inducement to greater economy and efficiency of service, on certain terms which need not be now set forth. The basis was satisfactory to the employees, but the pecuniary results have been disappointing. Dividends have been made during but four of the eight years that the system has been in operation, the largest sum divided among the employees in any year being $5,999 65. No dividend was declared in 1884 or 1885.

The Peace Dale works are noted for the carefulness of the management, while the system of profit sharing has introduced and enforced very painstaking and economical habits among the employees. Yet, with all these conditions in favor of successful industry, the Peace Dale Company is barely able to keep its looms in motion, and we know from the frequent and extremely cogent essays published from time to time by Mr. Hazard, that the reason why his branch of trade is throttled and manacled, and why his laborers are prevented from gaining any perceptible advantage from the participation in profits voluntarily offered to them, is that a tax is levied upon their raw material (wool) ranging from 65 to 113 per cent. Is it not time for woollen operatives in this country to have something to say about a tariff which yields such disastrous results? A protest against the wool tariff was recently filed with the Committee of Ways and Means by a delegation of workingmen from Philadelphia. The suffering which has been endured by operatives in this branch of industry, resulting entirely from the mediæval tax on wool, is deepening every year. It will not be endured much longer. So far as repealing this particular duty is concerned, the Free-Trade League might close their rooms, draw down their curtains, and turn their work over to the manufacturers and their operatives to carry on the fight.

Every day casts fresh light upon the tyranny which would be established in this country if secret, oath-bound organizations like the Knights of Labor were permitted to have their way. It appears that they have already reached the point where they assume to dictate what newspaper a person shall read, and threaten to ruin his business if he does not comply with their dictation. Mrs. Vonderbrake is a widow who lives in New Haven and has a modest shop—a quiet and peaceable person of excellent character. For a number of years she has taken the *Journal and Courier* as the daily paper which she preferred. The *Journal and Courier* was recently put under a boycott because it would not employ Union printers, the boycotters threatening to destroy the property unless the owners would yield. The way in which they are trying to carry out this threat is shown by the following letter:

"New Haven, April 19, 1886.

"*Mrs. Vonderbrake:*

"Madam: It will be for your interest to stop your subscription to the *Journal and Courier* immediately, as that paper has been boycotted. Your customers will not patronize you while you take that paper.

"From Committee of Your Customers."

We are glad to say that Mrs. Vonderbrake contemptuously refuses to obey this order.

The arrest of thirty boycotters on Tuesday, in accordance with indictments by the Grand Jury, is likely to have a quieting effect upon all that class of law-breakers. There is good reason for believing that other indictments are to follow these, including some for the members of the Empire Protective Association who ordered the recent tie-up. The trial and conviction of a few of these professional meddlers and boycotters would do more to break up the boycotting business than almost anything else. It would show its advocates that this is, after all, a country of law and order—a truth which many of them have not yet been able to grasp. There is a great deal of nonsense talked about the boycott being a foreign importation, while the truth is that in no well-governed foreign country would it be allowed for a single day. It originated in Ireland, and to a certain extent is still practised there, but Ireland is not a country of law and order.

There were five very brutal assaults committed on employees of the Third Avenue Railroad Company. The Union says, of course, that they were committed by wicked outsiders, and it sent out "pickets" to see if they could catch any of the offenders. Singularly enough, they found none. But as a proof of their horror of violence, the strikers offered to police the avenue themselves, but, strange to say, their offer was not accepted. Their state of mind seems on the whole to grow more childish every day. Their last plan for defeating the company is to run a line of opposition stages to Harlem, which seems to please some of them very much. They apparently spend such time as is not passed in "picket" duty in a hall drinking beer, singing songs, and making boastful speeches, and living on the money of other people. This is a very odd phenomenon when one considers that it is all due to the belief of some thousands of poor men that the driving or conducting of a street car is a life office, or what the lawyers call an incorporeal hereditament, which it is not only robbery to take away from a man without his consent, but even to fill with some one else when he refuses to perform the duties, and the wages of which he and some of his friends are entitled to fix. Of course this sounds like very funny doctrine, but consider how much the loose talk of politicians and philanthropists has done to fix it in the ignorant man's mind as a sort of axiom. The sugar laborers who have been rioting over in Brooklyn all think they have a right to be hired by Havemeyer as long as they are able to work, on their own terms, and no wonder, when we consider how much vague rhetoric they hear about the "greed" and "tyranny" of capital—terms which no wise man should ever use now without strictly defining them, in view of the ignorance and passion of the audiences which catch them up.

The Louisville *Courier-Journal* alleges that the *Nation* "abuses roundly the striking laborers of certain railroads of New York, because they not only choose to quit work, but also presume to air their grievances too publicly." It is things of this kind which have often made us doubt whether any man should take up the profession of "journalism" before he was thirty-five years of age, and had his character thoroughly formed, and the habit of truth-telling firmly fixed. The man who wrote the above of course knew he was lying when he wrote it, but he probably writes so many such lies every week that his conscience takes no note of them, and he is just as happy and comfortable as if his occupation were that of a city missionary or a teacher of the blind.

The communication which the Superintendent of Prisons, Mr. Baker, has sent to the Assembly is a very unpleasant document for the temporizing statesmen who make up the majority of the Legislature to contemplate. Mr. Baker tells them that the $800,000 already appropriated for labor in the prisons will not be sufficient to keep the State-account system in operation till the end of the fiscal year, September 30, 1886; that $300,000 more is necessary in the two prisons where this system is in use; that after that date there will be no funds whatever for continuing the work; that in Auburn prison 500 convicts have been idle for months; that after November 30 there will be 130 idle men in Sing Sing, and that after February 28 next this number of idle men in the same prison will be increased to 900 through the expiration of existing contracts. In other words, the taxpayers of the State are now supporting part of the convicts in idleness, after September 30 they will be called upon to support a still larger number, and by the first of March next they will have the whole number thrown upon them—and this because the Legislature, in obedience to the clamor of professional labor agitators, has abolished the contract system of labor, which was not only more than self-supporting, but was beneficial to prison morality and discipline; and has refused, in obedience to the same clamor, to authorize the use of any other system in its place. The Legislature shrinks from voting the heavy appropriation which will be necessary for the support of the convicts, but vote it must.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, April 21, to TUESDAY, April 27, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Thursday sent to Congress a message on the labor troubles, in which he said: "In my opinion the proper theory upon which to proceed is that of voluntary arbitration as the means of settling these difficulties. But I suggest that instead of arbitrators chosen in the heat of conflicting claims, and after each dispute shall arise, there be created a Commission of Labor, consisting of three members, who shall be regular officers of the Government, charged among other duties with the consideration and settlement, when possible, of all controversies between labor and capital. A commission thus organized would have the advantage of being an able body, and its members, as they gained experience, would constantly improve in their ability to deal intelligently and usefully with the questions which might be submitted to them. If arbitrators are chosen for temporary service as each case of dispute arises, experience and familiarity with much that is involved in the question will be lacking, extreme partisanship and bias will be the qualifications sought on either side, and frequent complaints of unfairness and partiality will be inevitable. The imposition upon a Federal court of a duty foreign to the judicial function, as the selection of an arbitrator in such cases, is at least of doubtful propriety. The establishment by Federal authority of such a bureau would be a just and sensible recognition of the value of labor, and of its right to be represented in the departments of the Government. If such a commission were fairly organized, the risk of a loss of popular support and sympathy resulting from a refusal to submit to so peaceful an instrumentality would constrain both parties to such disputes to invoke its interference and abide by its decisions. There would also be good reason to hope that the very existence of such an agency would invite application to it for advice and counsel, frequently resulting in the avoidance of contention and misunderstanding. The commission which I suggest could easily be engrafted upon the labor bureau already organized, by the addition of two more commissioners, and by supplementing the duties now imposed upon it, by such other powers and functions as would permit the Commissioners to act as arbitrators when necessary between labor and capital, under such limitations and upon such occasions as should be deemed proper and useful. Power should also be distinctly conferred upon this bureau to investigate the causes of all disputes as they occur, whether submitted for arbitration or not, so that information may always be at hand to aid legislation on the subject when necesssary and desirable."

The message was on Friday referred by the House of Representatives to the Committee on Labor, with instructions to report upon it on or before May 15. A bill in accordance with its recommendations was introduced in the House on Monday.

The House Committee on Labor, of which Mr. O'Neill is Chairman, held a session on Friday. Representative Reagan, of Texas, made an eloquent address on the Education Bill. He opposed it because it was unconstitutional and inexpedient. Its effect would be to make the States mendicants, to come with craving hands to the Treasury of the United States, and to bow obsequiously before the Secretary of the Interior and the Superintendent of Education for instructions as to how they should manage their common schools. The State of Texas did not want the bill.

The Blair bill may now be considered dead for this session. The measure introduced by Representative Willis a month ago, which is identical with the original measure, was defeated in the Labor Committee on Monday evening, by a vote of 3 to 1. At the adjourned meeting at five o'clock the bill introduced recently by Mr. Crain, of Texas, was amended and adopted as a substitute for the other bill by a vote of 10 to 3. The Crain bill, as amended, provides for the appropriation of the proceeds of the sales of public lands not to exceed $7,500,000 annually for ten years in aid of education in the States. Industrial and manual-labor training schools are to be entitled to a part of the benefits of the donation which the bill practically makes to the States, as the fund is to be applied wholly under the direction of State authority. The distribution of the money among the States is to be made upon the basis of school population. The Committee on Education also held a meeting on Monday, and agreed to report the original Blair bill to the House without recommendation; but before adjournment that vote was reconsidered and the matter went over.

An adverse report was presented by the House Judiciary Committee on Thursday on a joint resolution proposing a constitutional amendment giving the President power to veto specific items in appropriation bills.

The Senate Finance Committee has backed down from the position it took in opposition to the confirmation of Colonel D. W. Bradley, nominated to be Collector of Internal Revenue for the district of South Carolina, and has submitted a favorable report thereon. Colonel Bradley's nomination has been pending before the Committee for several months, and many charges against him were made by his Republican predecessor and the latter's friends. This was one of the noted "test cases," the Secretary of the Treasury having refused to furnish the papers in the case. On Wednesday the Senate, in spite of the strenuous opposition of Mr. Edmunds, confirmed Mr. Bradley. Only fourteen Senators voted nay.

The Senate Committee on Public Lands has unanimously voted to report adversely upon the nomination of R. S. Dement to be Surveyor-General of Utah.

A decision was rendered in Salt Lake City on Wednesday in the noted Territorial office cases, which Governor Murray and the Utah Legislature split upon, the former declaring invalid the Territorial law which puts agents of the Church in the offices of Auditor and Treasurer, and the latter refusing to yield the incumbency, thus ignoring the Governor's nominations and his appeal to the organic act. Judge Zane sustains the Governor in every point, maintaining the supremacy of the national statutes and ousting the old incumbents.

The United States District Court at Key West, Fla., has declared the steamer *City of Mexico* forfeited to the United States, because of the filibustering enterprise on which it sailed.

The greatest excitement prevailed in Fort Pierre, Dakota, on Sunday, over the following order, which was served on all the residents of the village: "In accordance with the instructions of the honorable Commissioner of Indian Affairs, dated April 8,1886, you are directed to at once close your trading establishments on the reservation, and upon date of receipt of this you are allowed thirty days to leave the said reservation." Fort Pierre has a population of over 800 people, who have resided on that tract of land for the past ten years. Substantial business houses and dwellings have been erected, and to enforce this order would entail a loss of over $500,000. The settlers have decided not to move unless at the point of the bayonet.

Mr. Powderly told the Congressional Committee on Wednesday that the Knights of Labor number only 500,000, not several millions. He also said that he had not worked at his trade since March, 1877.

There was a meeting in St. Louis on Wednesday of prominent men who determined to boycott the boycott. This is but another branch of the order known as the Law and Order League, which has sprung into existence lately throughout the Southwest. Its principal objects are to assist the authorities in maintaining the law, and to support all persons who have been boycotted by the Knights of Labor or kindred organizations. If a person threatened with a boycott shows the white feather, the Law and Order League will have no dealings with him, but it will do all in its power to assist those who refuse to follow the instructions of the Knights of Labor or trades unionists against their own sense of right.

All the striking switchmen in the Lake Shore yards at Chicago went back to work on Friday afternoon, an agreement having been reached with the railroad company. It is alleged that the only concession made by the latter was that the eight non-union men who were the cause of the strike should in time be employed elsewhere. This is denied by the company.

The Third Avenue Horse-Car Company in this city still holds out against the strikers, and is gradually filling up with new men. More than seventy cars are running.

The boycott against Mrs. Gray, the baker of this city, has completely failed. She now has a larger business than ever before.

Mrs. Landgraf, the Bohemian baker, who has also been boycotted, is now doing a large business, and has received more than $500 from sympathizers. She will prosecute the boycotters.

There was rioting among the strikers of sugar works at Greenpoint, L. I., on Thursday. The police interfered. About thirty shots were exchanged and a number of people were injured.

Thirty-four men were arrested in this city on Tuesday, charged with conspiracy and coercion in carrying on the boycott against the tailoring firm of Cavanagh, Sanford & Co.

The New York Assembly on Wednesday passed the bills to repeal the Broadway Railroad charter and wind up its affairs.

Janeway & Co., of New Brunswick, N. J., have been awarded $179,000 damages in their suit against the Pennsylvania Railroad in the Federal Court at Trenton, N. J. The suit was a result of the collision at New Brunswick on the morning of February 7, 1885, of an oil and a freight train. The oil took fire, and a blazing stream swept down the neighboring streets. In its course it set fire to Janeway's extensive wall-paper factory, which was burned to the ground.

Solomon L. Withey, U. S. Judge for the Western District of Michigan, is dead.

Father A. J. Ryan, known as the poet-priest of the South, died in Louisville on Thursday night. He was forty-six years of age. During the war he was with the Confederate army as chaplain, and has since written much about the "lost cause." A volume of his poetry has had a large sale in the South.

FOREIGN.

An ultimatum was despatched to Greece on Wednesday night, intimating that the Powers were in perfect accord in fixing a limit to the time within which Greece must disarm, and that otherwise serious steps would be taken to enforce their demands. The Greek Prime Minister denies that the Greek Consul has been fomenting a rebellion in Crete.

A despatch from Athens on Thursday said: "On Tuesday night the Turkish advanced posts attempted to surprise the Greeks who had been engaged on the previous day in erecting earthworks within what is alleged to be the neutral line. Their effort, however, was not successful, they being smartly repulsed by the Greeks, who pursued the Turks and captured two of their guns. The Greeks then occupied three positions within Turkish territory, which the Greek Government has ordered them to evacuate."

France refused to join the Powers in coercing Greece, but sent her Government a letter advising peace. On Monday it was announced that Greece had yielded to this advice and would disarm at once.

Notwithstanding the report of peace, it became known late on Monday that Greece's reply to the Powers was regarded as unsatisfactory. A conference of the foreign Ministers was held at the Italian Embassy in Athens for the purpose of drawing up and signing an ultimatum, holding Greece answerable for the consequences unless she deferred without reserve to the wishes of Europe. This ultimatum was immediately presented to Greece. As a result it was announced from Athens on Tuesday that a royal decree had been issued disbanding the reserve forces.

The Irish Land-Purchase Bill, which the House of Commons on April 16 gave Mr. Gladstone permission to introduce, was issued on Thursday. It covers twenty-six pages. The bill is divided into five parts. There are fifty-three clauses and four schedules. The bill provides that a landlord who desires to sell his property shall apply to the State authority, who shall refer the application to a Land Commission, which, after making an inquiry, shall fix a price at which the property shall be sold, unless the landlord and the State authority have previously come to an agreement. If the landlord objects to the price fixed by the Commission, he may withdraw his application on paying the costs. When a sale of property has been effected, the Commission shall pay the creditors before making any other distribution of the purchase money. Certain rent charges may be bought outright by the State authority, or payment may be continued from the tenants' repayments. In cases of property whereon there is reasonable cause to suppose that valuable minerals exist, the Commission shall add to the purchase money a fair sum therefor, and the minerals realized from said property shall be vested in the State authority, or such local body as the Irish Legislature may provide. The Irish Receiver-General and deputies, who are to execute the financial part of the act, shall be appointed to hold office as permanent civil servants, subject to the authority of the Treasury.

The measure empowers the Treasury to create three classes of permanent annuities, bearing interest respectively at 3, 2¾, and 2½ per cent., which shall be charged to the Imperial Consolidated Fund. Strict rules are provided by the bill which forbid the subdividing or subletting of a holding so long as it is subject to any State charge; but the State authority is empowered to relax these rules where he may think it advisable. The other points of the bill were fully covered by Mr. Gladstone's speech.

A great Liberal meeting was held at Newcastle, England, on Wednesday night, attended by 4,000 people. Speeches were made by Earl Spencer and John Morley, and resolutions were enthusiastically adopted supporting Mr. Gladstone's policy. Mr. Labouchere, in a speech at Chiswick on Wednesday, maintained that the mass of the Liberal party supported the views of Mr. Gladstone. He said that he confessed that he should like to see taxation and representation go together, and undoubtedly amendments to Mr. Gladstone's plans in this direction would be made in committee.

A great mass meeting of Liberals and Radicals was held in London on Thursday night, and addresses were made by Mr. Labouchere and others. A resolution congratulating Mr. Gladstone on his endeavor to secure the permanent union of England and Ireland, and expressing the hope that the Home-Rule Bill would become a law after being so modified as to harmonize with the desires of the Radicals, was unanimously adopted.

Lord Selborne, Liberal, formerly Lord Chancellor and one of Gladstone's strongest supporters, in a letter to the London *Times* attacks certain features of Mr. Gladstone's Home-Rule Bill. He pronounces the measure hopelessly faulty from the fact that not one of the restrictions provided excepts from the powers of the proposed Irish Legislature any matter relating to the lives, liberties, and properties of the Queen's Irish subjects. "The magistrates, the judges, and the police in Ireland," says Lord Selborne, "will be the servants of the Dublin Government." Referring to the fact that Mr. Gladstone's measure excludes from the powers of the Irish Legislature all matters relating to the army and navy, Lord Selborne says there is still no reason why a volunteer Irish army cannot be raised without passing a bill. Lord Selborne also strongly attacks the Land Purchase Bill. He asks, upon the ground that £150,000,000 will be required to buy out the Irish landlords, how the shares in the first £50,000,000 provided are to be selected?

Lord Hartington, in a speech before his constituents in Lancashire on Monday evening, said that no alterations would remove the objections to the Irish scheme. He did not wish to coalesce with the Tories, but hoped, with the assistance of Mr. Chamberlain, Mr. Trevelyan, Mr. Goschen, Sir Henry James, Mr. Bright, Earl Selborne, Earl Derby, and the Duke of Argyll, to create an independent party, or to induce the withdrawal of the measure. His address was frequently interrupted. Mr. John Bright sent a letter in which he said: "It would be a calamity for the country if measures of the transcendent magnitude of Mr. Gladstone's should be accepted on the authority of any leader, however eminent. The present sad division in the Liberal party has arisen through the introduction of the Irish measures before the public mind was properly prepared for them." The meeting passed resolutions merely thanking Lord Hartington for his address, and wishing that any legislation adopted might be for the peace and prosperity of Ireland.

Mr. Gladstone has written a letter to the London *Chronicle* in which he says: "It is not my custom to comment on statements made by hostile newspapers, but, having sincere respect for the *Chronicle*, I would call attention to an allegation made by it in a leader, that I have heretofore taught that home rule in Ireland would be a source of imperial danger. I will not challenge proof of the assertion, which was doubtless made in good faith, but it is entirely an error. I have always asked for an explanation of the meaning of home rule, in order to make clear the question whether or not it would be a source of danger. We have now learned the demand of Ireland from five-sixths of her chosen representatives. Such home rule is, in the language of my address of September last, a source not of danger, but of strength. The danger, if any, lies in refusing it."

The London *World* says that Parnell and his friends have already begun to constitute the Irish Ministry. Parnell will be President of the Irish Council, and the distribution of other offices is surmised as follows: Chancellor of the Exchequer, Mr. A. O'Connor; Minister of the Interior, Mr. Sexton; Minister of Agriculture, Mr. Biggar; Minister of Education, Mr. J. M'Carthy; Minister of Public Works, Mr. T. P. O'Connor; Minister of Justice, Mr. Chance; Attorney-General, Mr. Healy; Solicitor-General, Mr. D. Sullivan; Minister of Commerce, Mr. Harrington. It is also intended to appoint a minister who shall have charge of the relations of Ireland with the Irish in America, and it is probable that Patrick Egan will be taken to England to fill that position. Mr. John Dillon is to be Speaker of the new Irish Parliament.

A collision between Orange and Catholic ruffians occurred after the holding of a Loyalist meeting at Glasgow on Friday. Four arrests were made. At a later hour an Orange mob attacked a Catholic chapel, which was crowded with worshippers, and smashed all the windows. The few police who were present were powerless to prevent the mob's work of destruction. The priest conducting the services in the chapel ordered the doors to be locked, and thus prevented the mob from doing further mischief.

Advices from Mandalay, Burmah, say that a British expedition sent against the Kachyen tribe has been compelled to retreat. The rebels in overwhelming force made a desperate attack on the British, charging into a battery of guns, and driving the expedition back. The rebels have captured the Mezgandet Police Station. They bound the garrison with cords and massacred twenty-three persons. The Viceroy of India attaches little importance to these reports. He says that only two British soldiers have been wounded so far, and none killed.

The Queen's Proctor, after testing the evidence in the divorce case of Crawford vs. Crawford and Dilke, has intervened, and the case will be reopened.

The judgment of the court in the *Oregon* inquiry at Liverpool was delivered on Thursday. The decision was in favor of the owners and officers of the steamer on all the questions submitted to the court. The court found, however, that the first officer was somewhat remiss in his duties, but not to a sufficient extent to warrant it in inflicting punishment upon him.

Lionel Tennyson, the poet-laureate's son, died recently on board a steamer on the way from Calcutta to London. He was born in 1854, educated at Cambridge, married a daughter of Frederick Locker, the poet, and was connected with the Indian Office. He leaves a widow and three children.

Baron Alfred Frederic Ameil, a distinguished General of the French Army, is dead, aged seventy-five years. He was captured with his troops at Sedan.

The death is announced of Louis Xavier Ollier, a well-known French surgeon, the author of a number of works on surgery, and an officer of the Legion of Honor. He was sixty-one years of age.

M. de Brazza has been gazetted as Governor of the Congo and Gaboon colonies.

The strike of the watchmakers of Grammont, in East Flanders, is becoming serious. Reinforcements of gendarmes have been summoned. The strikers barricaded the bridges over the Dender River, and made an attack with stones upon the gendarmes. A fight ensued, resulting in the rout of the rioters and the arrest of a large number of them.

The Spanish Senatorial elections have resulted in the return of 128 Ministerialists, 28 Conservatives, 6 Independents, 4 Republicans, and 2 members of the Dynastic Left.

An explosive was placed inside one of the large hollow candles on the altar of the Church of San Luis, in Madrid, on Friday. The explosion took place before the congregation had arrived, badly damaging the building and seriously burning two sextons. It is supposed that the criminal hoped to rob the church of valuable plate during the panic.

The condition of affairs at Stry, Galicia, among the people who lost their homes by the great fire is most pitiable. Most of the victims are without food or means, and are rendered desperate by the thought of starvation. The farmers in the vicinity have been visited by mobs of men who first demanded food and then, if refused, stole it. It is estimated that 123 lives were lost. It will cost $1,200,000 to rebuild the town.

Three-fourths of the town of Lisko, Galicia, has been burned.

It has become known that custom-house officials at Odessa have been defrauding the Government for years. The amount embezzled is placed at several million rubles.

The report is confirmed that the Emir of Harrar, in Eastern Africa, has massacred all the Europeans in his capital, including the members of the Italian scientific expedition under Count Porro.

It is reported at Ottawa that an American vessel has been seized off Cape Breton for a breach of the fishery laws. She was within the three-mile limit.

PRESIDENT CLEVELAND ON ARBITRATION.

THE special message sent to Congress by President Cleveland, recommending the establishment by law of a national commission to arbitrate labor disputes, would have been regarded twenty years ago as a very long stride toward centralization, and one quite incompatible with any just conception of the principles and traditions of the Democratic party. But State rights, regarded as a code of political principles, have long since disappeared. The small number of such rights that are written in black and white in the Federal Constitution are still in force, because so written, but even these are being whittled away by constructions which would have appalled Thomas Jefferson alive, and might even now cause agitation in his revered remains. What would the sage of Monticello have said if he had read a message from one of his successors proposing to send Federal peacemakers into the States, under that clause of the Constitution which guarantees to each State protection against domestic violence? "The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and on application of the Legislature or of the Executive (when the Legislature cannot be convened), against domestic violence." The plain signification of this clause is that the only concern of the Federal authority in the premises is to suppress public disorder in the States when, in the judgment of its constituted authorities, it shall have become too formidable to be dealt with by themselves. This is not merely the text and spirit of the Constitution, but it is an eminently wise provision, in this, that while it reserves the right it also imposes upon the local subdivisions of the nation the duty of regulating their own affairs, including the preservation of order up to the measure of their ability. It will be a serious mistake if this clause of the Constitution is to be construed in such fashion as to lower the sense of local responsibility by casting upon the general Government all the disagreeable duties of State Government, even supposing that the former were capable of performing them.

There is another clause of the Constitution, which says that the President shall from time to time give Congress information of the state of the Union, and recommend to it such measures as he shall judge necessary and expedient. Under this clause President Cleveland has sent in his message in favor of a bureau of arbitration. The information which he gives, if it can be considered "information of the state of the Union," is extremely vague. It is all embraced in the following paragraph, the remainder of the message being in the nature of argument upon the state of facts disclosed:

> "The present condition of the relations between labor and capital is far from satisfactory. The discontent of the employed is due in a large degree to the grasping and heedless exactions of employers and the alleged discrimination in favor of capital as an object of governmental attention. It must also be conceded that the laboring men are not always careful to avoid causeless and unjustifiable disturbance. Though the importance of a better accord between these interests is apparent, it must be borne in mind that any effort in that direction by the Federal Government must be greatly limited by constitutional restrictions. There are many grievances which legislation by Congress cannot redress, and many conditions which cannot by such means be reformed."

It would have been much more satisfactory if the President had given the exact facts which he thought called for a special message. It would have been helpful if he had stated his own opinion whether the relations of labor and capital had lately taken on any new phase, and whether they are more disturbed now than at any former time. It was incumbent upon him, if he wished to impress thoughtful men, to define labor, and tell whether we are to include in that term the 10,598 contented laborers on the Missouri-Pacific Railway, or only the 3,717 who struck without assigning any reason for striking. In default of any precise information, we are driven to other sources of knowledge. The last collection of the statistics of strikes published by *Bradstreet's* showed the number of men out of employment by their own choice in the whole country to be about 39,000—not a very alarming percentage in a population of about sixty millions. Mr. Powderly, who is supposed to represent the only organization that is making much disturbance, testified before the House Committee that the Knights of Labor numbered 500,000, the number having been "raised" by as much as 200,000 since the date of Mr. Powderly's circular published last month.

The most serious defect in the President's message, however, is that what he proposes is not arbitration, although he gives it that name. We are all in favor of arbitration—Jay Gould more than anybody else—and there is a pretty general agreement as to what it means. Mr. Weeks, in his recent excellent treatise on the subject, assumes that everybody knows what arbitration is. He defines it incidentally on page 39 as "the system of dealing with labor differences by boards or committees made up of both employers and employed." This is the principle which governs both legal and voluntary arbitration in all the countries and places where arbitration has ever been employed. It is the very soul of arbitration that the parties whose claims are to be passed upon shall be represented by persons of their own choosing. It is needless to say that this is the only kind of arbitration that will ever accomplish any good.

But the arbitration proposed by the President is of quite another sort. He recommends that a commission of three men be appointed at Washington to arbitrate everywhere and on everything, "under such limitations and upon such occasions as should be deemed proper and useful." The chief limitation upon such a commission is that it would have no moral support because it would not represent either party. The President does not propose giving it any authority to enforce its decisions, but he holds that it would gain an authority akin to that which has been gained by some of the State Railroad Commissions. These Commissions were appointed to compel certain corporations holding public franchises in the nature of monopolies to perform their duties to the public as common carriers. They have nothing in common with the duties sought to be conferred on the proposed Commission, which has to deal with the purely private concerns of employers and employees. The kind of arbitration which the President suggests might suit Mr. Martin Irons and others who insist upon arbitration between each individual employer and the whole body of Knights of Labor—that is, between each employer and the employees of all other employers—but it will not suit any system of industry that has any chance of becoming permanent, or of yielding any useful results.

STRIKES, LEGAL AND ILLEGAL.

WE find in the last number of the *American*, a protectionist weekly newspaper published by Mr. Wharton Barker in Philadelphia, several assertions concerning English and American law on the question of strikes and boycotts which are really curiosities of inaccuracy. Referring to the provisions of our Penal Code on the subject of conspiracy, the *American* says:

> "This section is derived from the old English law of 'conspiracy in restraint of trade'—built up by judicial rulings—the whole of which Parliament repealed in 1864. In English law and practice, now, that is lawful for an association which is lawful for an individual, and the law takes cognizance of no 'conspiracy' which does not seek its ends by unlawful means. The same is the law in Pennsylvania and in Michigan, but the old English views still linger in the legislation of most of the States."

The only statement in that paragraph which is not false is the one that the language of our code is derived from old English law. All the rest of it is pure fiction. The old English law of "conspiracy in restraint of trade" was not "built up by judicial rulings," but by a long series of Parliamentary enactments, beginning with the Statutes of Laborers, passed in 1349–50, and ending with the "Conspiracies and Protection of Property Act" of 1875, the "whole of which" were not repealed by Parliament in 1864 or at any other time. The course of English law upon this question is so interesting and instructive that we will give a brief outline of it, in the hope that it will prove valuable to other persons as well as to the muddled legal expounder of the *American*.

Prior to 1825, the English Statutes of Laborers so elaborately provided for every species of offence by a workman against his employer that there was no need of invoking common-law doctrines in his behalf, and, with the exception of one case of doubtful authority, there is no case reported in the books of an earlier date than 1825 which was not decided under one or more of these statutes. In 1825 there was passed an act which, after specifically providing for the punishment of particular offences calculated unduly to restrain and interfere with trade, provided that it should not be unlawful for persons to meet together for the sole purpose of consulting upon and determining the rate of wages or prices which they might demand for their work, or to enter into an agreement among themselves for the purpose of fixing the wages or prices or the hours during which they would work. Shortly after the passage of this act the leaders of a trade union in London, who had no immediate personal interest in the matter, insisted that an employer should pay his men a certain rate of wages, and, in order

to compel him so to do, prevailed on his men to leave his employ until he did so, and prevailed on others not to enter his employment. This was held to be an indictable conspiracy at common law, Mr. Justice Earle holding that workmen might, if they thought proper, combine together for their own protection and to obtain such wages as they chose to agree to demand, but "a combination for the purpose of injuring another is a combination of a different nature, directed personally against the party to be injured; and the law allowing them to combine for the purpose of obtaining a lawful benefit for themselves gives no sanction to combinations which have for their immediate purpose the hurt of another." This decision was followed in a number of cases, all based upon the principle that combinations which tended to impede and interfere with the free course of trade and commerce were indictable at common law. The same principle was established in New York independently of these ralings and as long before them as 1810.

In 1859 Parliament again interfered, and defined by statute precisely what offences of this nature should be punishable and what should not; and a series of enactments ensued, as cases arose which were not satisfactorily provided for in the original statute. Finally, in 1875, Parliament passed the statute which is at present in force, known as "The Conspiracy and Protection of Property Act, 1875." By this act it was provided that: "An agreement or combination by two or more persons to do, or procure to be done, any act in contemplation or furtherance of a trade dispute between employers and workmen shall not be indictable as a conspiracy if such act committed by one person would not be punishable as a crime." The statute then proceeds to define what acts committed by one person shall be punishable as a crime, in language which contains no comfort for boycotters or their sympathizers. It provides:

"Section 5. Where any person wilfully and maliciously breaks a contract of service or of hiring, knowing or having reason to believe that the probable consequence of his so doing, either alone or in combination with others, will be to endanger human life, or to cause serious bodily injury, or to expose valuable property, real or personal, to destruction or serious injury, he shall on conviction thereof . . . be liable to a penalty not exceeding £20, or be imprisoned for a term not exceeding three months, with or without hard labor.

"Section 7. Every person who, with a view to compel any other person to abstain from so doing or to do any act which such other person has a legal right to do or abstain from doing, wrongfully and without legal authority,

"1. Uses violence or intimidates such other person, or his wife, or children, or injures his property; or

"2. Persistently follows such other person about from place to place; or

"3. Hides any tools, clothes, or other property owned or used by such other person, or deprives him of or hinders him in the use thereof; or

"4. Watches or besets the house or other place where such other person resides or works or carries on business or happens to be, or the approach to such house or place; or

"5. Follows such other person with two or more other persons in a disorderly manner in or through any street or road, shall on conviction be punished as provided in Section 5."

The legal expounder of the *American* will find the substance of these provisions, and often the very language of them, embodied in our Penal Code, sections 673 and 653. Of course, an agreement or combination by two or more persons to do or procure to be done any of the acts described in section 7, in contemplation or furtherance of a trade dispute between employers and workmen, is indictable as a conspiracy. Such is the plain intent of section 5, and so eminent an expounder of the criminal law as Sir James F. Stephen, in reviewing these enactments, refers to the part played by the judges between 1825 and 1859, "in defining, and, indeed, in a sense creating, the offence of conspiracy." "They defined it," he says, "I think too widely; but that their definition was substantially right is proved by the fact that the act of 1875 has made provision for punishing practically 'all the acts which they declared to be offences at common law.'" It is very evident that this high authority had not heard that the "old English law of conspiracy in restraint of trade" had been "repealed by Parliament in 1864."

The *American's* assertions about the law in Pennsylvania and Michigan are equally inaccurate. In the former State the existing statute is the act of June 14, 1872, Penn. Laws, 1875, which declares:

"It shall be lawful for any laborer or laborers, workingman or workingmen, journeyman or journeymen, acting either as individuals or as the members of any club, society, or association, to refuse to work or labor for any person or persons, whenever in his, her, or their opinion the wages paid are insufficient, or the treatment of such laborer or laborers, etc., by his, her, or their employer is brutal or offensive, or the continued labor by such laborer, etc., would be contrary to the rules, regulations, or by-laws of any club, society, or association to which he, she, or they may belong, without subjecting any person or persons so refusing to work or labor to prosecution or indictment for conspiracy under the laws of this commonwealth.

"Provided, That this act shall not be held to apply to the member or members of any club, society, or association, the constitution, by-laws, rules, and regulations of which are not in strict conformity to the Constitution of the State of Pennsylvania, and to the Constitution of the United States.

"Provided, *That nothing herein contained shall prevent the prosecution and punishment under existing laws of any person or persons who shall in any way hinder persons who desire to labor for their employers from so doing, or other persons from being employed as laborers.*"

The Supreme Court of Pennsylvania has recently decided that the offence of conspiracy is still punishable at common law in that State, except as restricted by statute, and as the statute merely authorizes workmen, alone or in combination with others, to *refuse to work*, any combinations designed to coerce employers or other workmen by the various expedients known as "boycotting" are, of course, still unlawful. The law in Michigan is apparently in an equally satisfactory condition. The act of February 14, 1877, provides:

"Section 2. If two or more persons shall wilfully and maliciously combine or conspire together to obstruct and impede by any act, or by means of intimidation, the regular operation and conduct of the business of any railroad company, or any other corporation, firm, or individual in this State, or to impede, hinder, or obstruct, except by due process of law, the regular running of any locomotive engine, freight, or passenger train on any railroad, or the labor and business of any such corporation, firm, or individual, such persons shall on conviction thereof be punished by imprisonment in the county jail not more than three months, or in the State prison for a period not exceeding one year.

"Section 3. This act shall not be construed to apply to cases of persons voluntarily quitting the employment of any railroad company or such other corporation, firm or individual, whether by concert of action or otherwise."

In other words, in England, Pennsylvania, and Michigan, as well as in New York, Illinois, and Missouri, it is entirely lawful for workmen singly or in concert to refuse to labor for a particular employer, or beyond a certain number of hours, or for less than a fixed rate, or except upon such conditions as they may choose to demand; but it is also the right of the employer to refuse such terms, and to employ anybody who is willing to work for him upon his terms; and any combination or agreement between the dissatisfied workmen for the purpose of coercing the employer or fellow-workmen to agree to their terms is unlawful, provided some act be done to effect the object thereof by one or more of the parties to the agreement.

But the *American* does not stop with the slight exploit of overturning English and American law. It goes further, and rebukes an American judge for decreeing that the law must be obeyed. In the same issue of the paper from which we have quoted above occurs this passage:

"Much in the same spirit as the New York Code is the decision of Judge Pardee in the United States District Court in Texas, in the case of the strikers on the Texas Pacific Railroad. The road is in the hands of a receiver appointed by the court, and this was used to bring them within the court's jurisdiction for 'contempt.' With the merits of the case, so far as it concerned violence offered to persons or property, we are not here concerned. But we observe that Judge Pardee ruled that 'the employees of the receivers, . . . where they combine and conspire to quit, with or without notice, with the object or intent of crippling the property or its operation, commit a contempt, and all those who combine or conspire with employees thus to quit, or as officials of pretended labor organizations issue pretended orders to quit or to strike, with an intent to embarrass the Court in administering the property, render themselves liable for contempt of court.'

"It is law like this from American benches which has earned for the United States the contempt of English jurists as that of a country apparently incapable of legal progress. But such decisions have a much worse effect than to make us a laughing-stock of the British bar. They sow the seed of class bitterness. They help to carry the idea to the working classes that courts and law are on the side of the rich, and that the employee need expect no such consideration as is given to his employer. The receivers of the Texas-Pacific may 'conspire' to dismiss every man in the service of the road, with or without notice, and thus embarrass each and all of them in the management of their finances. But if they conspire to dismiss the road they commit a misdemeanor. The use of the words 'combine and conspire' shows where Judge Pardee got his law from. It is the old notion of 'conspiracy in restraint of trade,' introduced into the case law of the United States courts from English case law. The United States never enacted any such restraint upon individual action, and England has repealed it. The United States courts profess to hold themselves free of the traditions of English common law which prevail in our State courts. Whence comes this doctrine of 'contempt of court,' which allows a judge to subject to an unlimited penalty, from which there is no appeal, any person who is guilty of even constructive disobedience of the judge's order? Here is a point for Congress to consider."

A vital point for "Congress to consider" would be the propriety of legislating that no incurable ignoramus should be permitted to edit a newspaper. Judge Pardee's decision, in the light of the summary which we have given of the English law, is the only one which he could have given without winning the contempt not only of English but of all other jurists. The principles laid down by him are precisely those which have always been maintained by the English courts. A very interesting case bearing upon this point

is cited in Sir James F. Stephen's 'History of the Criminal Law of England,' vol. iii, p. 225. We quote it for the benefit of all friends of boycotts and "tie-ups":

"In 1872 certain gas-stokers struck, the result of which was that a great part of London was for a time involved at night in complete darkness. They were indicted for a conspiracy to coerce or molest their employers in carrying on their business, and it was held that this was on two grounds an indictable conspiracy, though no offence was committed under the statute. The first ground was that it was an indictable conspiracy to force the company to carry on their business contrary to their own will by an improper threat or molestation. *It seems to have been considered that the great public inconvenience which such a strike would cause, and the nature of the employers' known engagements, might cause a threat to strike suddenly to be an improper molestation.* Also, a threat of a simultaneous breach of contract was regarded, and was pointed out to the jury, as a conspiracy to prevent the employer from carrying on his business. Upon this second charge the defendants were convicted and sentenced to eight months' imprisonment. This case substantially decided that although a strike could no longer be punished as a conspiracy in restraint of trade, it might, under such circumstances, be of such a nature as to amount *to a conspiracy at common law to molest, injure, or impoverish an individual, or to prevent him from carrying on his business.*"

It is precisely this principle, which the English judges invoked in 1872, and which, except as modified by the act of 1875, is in force in England to-day, that Judge Pardee applied to the Texas strikers. The property affected being in the hands of the court, the acts done to cripple its operation, which would have been conspiracy had the property been in the hands of individuals, became contempt and were punishable as such. The absurd comments of the *American* upon the Judge's action do not call for this elaborate refutation, except as they are typical of much of the current newspaper comment upon the law relating to labor disturbances. The notion that the laborer is in some way raised above the law has penetrated a great many newspaper offices, and from them has been communicated to the laborers, where it has worked infinite mischief. Such observations as the *American's* about the "courts and law being on the side of the rich" would be simply silly, were it not for the harm they do when they get into undisciplined minds. The courts and the law are on the side of both the poor and the rich so long as they obey the laws; and the daily and hourly duty of every decent newspaper is to preach that neither the rich nor the poor can violate the law without suffering the consequences.

THE PROPOSED IRISH PARLIAMENT.

THE full text of Mr. Gladstone's "Government of Ireland Bill" has now reached us, and an accurate account of its provisions is at last possible. The restrictions on the jurisdiction of the proposed Irish Legislature cover much the same ground as the restrictions on the power of State legislatures in this country. That is to say, it is forbidden to legislate on ny of the following matters:

1. The status or dignity of the Crown, or the succession to the Crown, or a Regency;
2. The making of peace or war;
3. The army, navy, militia, volunteers, or other military or naval forces, or the defence of the realm;
4. Treaties and other relations with foreign states, or the relations between the various parts of her Majesty's dominions;
5. Dignities or titles of honor;
6. Prize or booty of war;
7. Offences against the law of nations; or offences committed in violation of any treaty made, or hereafter to be made, between her Majesty and any foreign state; or offences committed on the high seas;
8. Treason, alienage, or naturalization;
9. Trade, navigation, or quarantine;
10. The postal and telegraph service, except as hereafter in this Act mentioned with respect to the transmission of letters and telegrams in Ireland;
11. Beacons, lighthouses, or sea marks;
12. The coinage; the value of foreign money; legal tender; or weights and measures; or
13. Copyright, patent rights, or other exclusive rights to the use or profits of any works or inventions.

It is also placed under the prohibition imposed by the American Constitution on Congress touching the establishment of religion and the free exercise thereof, and is also forbidden to impose any disability or confer any privilege on account of religious belief, or to interfere with the right to establish any denominational schools, or to impair the rights, property, or privileges of any existing corporation. Each Parliament is to sit for five years unless sooner dissolved.

The powers of the Parliament are in fact traced very much on American lines, but the division of it is decidedly original. It is to be composed of two "Orders," which are, however, to sit together, and vote together unless the majority of either Order should call for a separate vote. They are then to vote as separate legislative bodies, and if they do not agree the question is decided in the negative—that is, either body can tie up the other. The first Order is to consist of 103 members, almost the number of the present Irish representation in the House of Commons. Of these, twenty-eight are to be the Irish peers now sitting in the House of Lords, and the remaining seventy-five are to be elected, and each must be the owner of property bringing him $1,000 a year, and can only be voted for by electors owning or occupying land or tenement worth at least $125 a year. One-half of the elective members are to retire every fifth year, and their term of office is to be ten years. The peers of the first Order are to hold office for thirty years, and their places to be filled as at present—that is, by election by the whole body of the peers.

The second Order is to be chosen by the existing constituencies, and is to start off with the present Irish members of the House of Commons, and contain altogether 204 members. The Royal University may be empowered to send two members in addition. No qualification is required for the members of this body. The weak point in this part of the scheme is undoubtedly the constitution of the first Order. The existing Irish peers have now but little weight or popularity in Ireland, and there would be nothing particularly imposing about seventy-five men with $1,000 a year each from accumulated property. So that the source from which an upper house made up in this way is to draw its strength or power of resistance, does not clearly appear.

The financial part of the scheme is, of course, a very important one. The Imperial Government reserves to itself the right to levy customs and excise duties in Ireland in order to raise the sum of $23,010,000 annually to pay the Irish share of the interest on the national debt, of the contribution to the sinking fund, of the cost of the army and navy, of the cost of the imperial civil expenditure; and to pay for the constabulary and Dublin police, which are to remain for the present in imperial control. In fixing the amounts of the Irish contributions to the National Exchequer, the Irish proportion is put down at one-fifteenth of the whole, or thereabouts. Outside the above amounts the whole field of taxation is open to the Irish Legislature, but it is not to have power to make any appropriation or levy any tax, except in pursuance of a recommendation of the executive made through the Lord Lieutenant. This is probably intended to protect landlords and Protestants and other minorities, about whom the English public is alarmed, from being taxed out of existence.

The Lord Lieutenant, who is to be appointed and paid by the Crown, is to be the supreme executive officer, and the Irish Parliament is to have no power to legislate regarding his office or functions. There is probably nothing in all the English discussion of the Irish question which has been found so puzzling as the provision of a substitute for our Supreme Court to pass on the validity of acts of the Irish Legislature, or, in other words, to decide whether in any given case it has gone beyond the powers conferred on it by the organic law. The Supreme Court does this work here indirectly by decisions in suits between individuals. Mr. Gladstone proposes that in the case of Ireland it shall be done directly by the Judicial Committee of the Privy Council, which is already the final court of appeal in all Colonial and admiralty cases. Whenever the question of the constitutionality of an Irish act is raised, it is to be referred to this tribunal by the Lord Lieutenant, but for the purpose of passing on it there are to be added to the Committee as many Irish judges as the Queen may deem advisable. The final appeal in ordinary law cases is still to lie to the English House of Lords.

Finally, the organic law is to be altered and modified in only two ways. The first is an act of the Imperial Parliament assented to by the Irish Parliament in an address to the Queen. The second is an act of the Imperial Parliament, for the passing of which twenty-eight Irish peers shall have been summoned to the English House of Lords, and one member from each Irish constituency (or two from constituencies having four members) summoned to the House of Commons—such members to be selected, however, by the Irish Parliament.

We have no space now to criticise the plan in detail. But we may say, in general terms, that the only portion of it which seems, in the light of experience, and on principles of human nature, to be likely to prove unworkable, is the division of the Legislature into orders, and the composition of the first Order. A careful examination of the arguments directed against it by Mr. Gladstone's English opponents shows clearly that they all resolve themselves, in the last analysis, into the

thesis that the Irish are a peculiar people and unfit for self-government, and that, therefore, no scheme of which they are to have the management will succeed. In other words, the great and fundamental defect of the bill is that it is a concession to Irishmen. But the force of this argument is, of course, weakened by the fact that all concessions of this kind made by the Imperial Parliament to men of any race or class have been opposed on similar grounds. It was used against the Americans, against the Colonies, against the Catholics, against the Dissenters, and against the English constituencies created in 1832, in 1867, and in 1885. It is, therefore, not an argument likely to stand many hard knocks.

THE PRINCES OF CONDÉ.

PARIS, April 8, 1886.

VOLUMES iii. and iv. of the 'Histoire des Princes de Condé,' by the Duc d'Aumale, have appeared this season, and have attracted much attention. It was well known that the author had employed all his leisure hours for fifteen years in collecting and studying the original documents concerning the Great Condé and his father. Some chapters on the first campaigns of Condé had been read in the French Academy and had appeared in the *Revue des Deux Mondes*. I have been told that, when the Duc d'Aumale read to his colleagues of the Academy the account of the battle of Rocroi, won by Condé over the Spaniards, he read with so much warmth and effect that one of the Academicians was heard to say to his neighbor, "He too would have gained it." It has been my privilege to hear many chapters read in Paris or at Chantilly, before a few friends and members of the Orléans family, and I did not doubt that the work would have as much success with the general public as it had in this small circle. There was something impressive and almost poetical in these private readings. I can see now the Duke sitting at his table, with his notes before him; I hear his fine, commanding, military voice; I see the great library, with its walls glittering with old bindings, the escutcheons of the companions in arms of the Great Condé painted on the ceilings of the fine hall, on the chimney an old terra-cotta bust of young Condé, with his wild countenance, his eagle nose, his thin and hard features —so dark with age that the bust looks like one of the old bronzes of the Renaissance; and round the great table, all listening and giving their attention, the nephews, the nieces, the grandnephews, the grandnieces of the royal author. I wondered at the time what thoughts came across the minds of these girls and boys when they heard all these names which to them are so familiar. For centuries, the history of their house has been the history of France. It was certainly interesting to see these children of France receiving such lessons and in such a way.

The third and fourth volumes of the 'History of the Princes of Condé' are devoted to only two of these Princes. The first, Henri de Bourbon, who was the third Prince of Condé, was the father of the "grand Condé"; he fills the greater part of volume iii. The end of this volume and the whole of volume iv. show us the early part, only, of the life of the famous warrior, who will ever be remembered not only by his great victories, but also by the magnificent oration pronounced at his tomb by Bossuet. In every picture gallery there are portraits which are treated somewhat differently, with more or less minuteness. The figure which has chiefly attracted the attention of the Duc d'Aumale has been the figure of the Great Condé; he has not dwelt with so much particularity on the figure of his father. It was, indeed, a somewhat ungrateful task to tell the life of the third Condé; he had none of the qualities of his predecessors or of his successors, or he had them in a much smaller degree, and combined with defects which make him one of the least attractive personages of his time. He was unlucky: he lived in one of the darkest hours of French history; under Henri IV. he appears only in a painful situation, as his wife had inspired a passion in the King, and he could only protect his honor and the reputation of his wife by flight. He escaped to Flanders, and we see him in communication with the enemies of France. He appears again after the murder of Henri IV., coming back, full of anger, and we see him at once chiefly occupied with his own private interests. Malherbe writes of him: "We shall be quit with him on the augmentation of his pensions." He reunited himself with his wife, but the reconciliation was merely formal. He was not long in quarrelling with the Queen Regent, and in taking his place among the discontented of the new régime.

It would be tedious and difficult to speak in detail of the revolts of the Princes, of the treaties of peace made with the Crown, which were never anything but short truces. Each lord was looking for his own interests, each wanted governments and pensions. The excuse of the revolts was the audacity of the new favorites, of the Italian Concini and his wife, afterwards of Luynes; there was nobody who could take the place afterwards taken by Richelieu and by Mazarin, who could or would govern for the real interests of the State. Condé had not character enough, he had no large views, he inspired more fear than respect; he was fond of intrigue, restless, discontented, jealous, unsafe. He had been at first the hope of the Protestant churches, and the Huguenots thought that they should find in him a great leader, that he would accept the whole inheritance of his glorious ancestors. But they were soon disappointed; and, after having tried to use them and having given them some hope, he finally became their most bitter enemy.

The Duc d'Aumale does not think himself obliged, like many biographers, to admire everything in his heroes; he confesses that Monsieur le Prince was laughed at at the Court of Marie de Médicis for his "bourgeois tastes, his parsimony, his debauchery, his vices, real or supposed." He liked the company of the scholars of the University, of the young lawyers; he preferred "la robe" to "l'épée." He had the reputation of drinking, and he did not drink with men of quality. He did not care for the society of ladies, and had nothing of Henri IV., "le vert galant." He was accused of being "bon seulement aux traits de plume et non aux coups d'épée." At the peace of Loudun, Condé received immense advantages for himself. He saw, at the end of the conference, D'Aubigné, who looked sullen and discontented, and who was leaving "this fair of private perfidies and of general cowardice." "Adieu, D'Aubigné," said Condé; "go to Dognon" (the château of the famous author of the 'Tragiques'). "And you," said D'Aubigné, "go to the Bastille." He was a true prophet; the triumph of Condé had been too great. Some time afterwards he was arrested at the Louvre, on September 1, 1616. "What! would you arrest me?" said he to Thémine, who had received the orders of the young King Louis XIII.; "are you captain of the guards?" "No, but I am a gentleman, and obliged to obey the commands of the King, your master and mine."

Condé remained in prison no less than three years. His wife asked and obtained permission to share his captivity. After a while he was transferred from the Bastille to Vincennes. He was only released in October, 1619. His attitude was completely changed from that time; his long detention had broken his unruly character; he abandoned the part of a great leader, he became docile, and at times almost servile; he threw himself passionately on the side of the royal authority and of the Catholic supremacy. How much fear and how much conviction had to do with this transformation, it would be difficult to say exactly. It is natural that the Duc d'Aumale should as much as possible represent him as matured and fortified by misfortune, and as a sincere partisan of the state.

Condé was among those who constantly incited Louis XIII. to the destruction of the Huguenots. He was employed in the last wars fought by the Protestants, but always played a secondary part. His military talents were not equal to his ardor, and Richelieu had no desire to give him too prominent a place in the country. He always kept him more or less at a distance, in fear of disgrace, uneasy, anxious, far from the King and from the Court. The Condé campaign in Franche-Comté added nothing to his reputation; after that we see him living chiefly in his governments, always busy with his estates, his lawsuits, surrounded with lawyers and scribes, entering into the most minute details, visiting his domains, the smallest towns of his governments, in Bresse, in Burgundy, in Berry, in Bourbonnais. Sometimes he was obliged to assist at the great ceremonies of state; but he disliked pomp, and he was very simple in his dress. The Duc d'Aumale cites a letter in which Perrault writes to the Prince: "M. de Bourdeaux forgot himself so much this morning as to say to your Highness that the Cardinal (Richelieu) told him to say to you that when you go to the King you must wear a clean and honest garment, have yourself shaved, put on clean boots—in short, appear as he does himself, and to do that for the love of him and constrain yourself; and that, the first time he sees you, he will thank you for it."

The chief residences of the Prince were, at Moulins, the old château; at Bourges, the hôtel which was called the *logis du Roi;* at Dijon, the magnificent palace of the old Dukes. The government of Burgundy was the most important of all those which were given to him. The Great Condé, however, was not born at Dijon, but at Paris, on September 8, 1621, at a time when his father was in Berry. The Prince did not wish the child to remain in Paris, and, breaking with old traditions, he established him in the château of Montrond, at the confluence of the Cher and the Marmande, isolated on the top of a hill with an immense horizon. The child was left under the care of a few women of modest condition.

The Prince of Condé gave an excellent education to his son (but we will return to this subject when we speak of the fourth volume of the 'History of the Princes of Condé'), and prepared him for a great destiny. As for himself, he spent the latter part of his life in a somewhat inglorious position, always in fear of Richelieu, anxious to be employed by him in the great enterprises which the Cardinal conducted against the enemies of France, but incapable of playing the great part which he claimed in virtue of his name and of his rank. Richelieu had tried him in the operations in Franche-Comté; he tried him again in the operations in Spain. The Prince was again unsuccessful, and the command was definitively taken away from him when the King went in person to the frontier of Spain in 1641.

"Henri II. of Condé," says the Duc d'Aumale, "always felt the great want in his education which we have pointed out—a want which in his time was very essential: he was not trained to arms. Those who have accused him of cowardice have calumniated him: he gave proofs of courage. Before Montpellier, Bassompierre was

struck by his coolness; at the siege of Dôle he remained calm in his hut under a shower of bullets; he was often in danger during the campaign in Languedoc, as well as at Fontarabia. He had no *élan;* he neglected the combat; he administered war. His soldiers did not see him often; he kept far from his troops. This habitual distance gave rise to unpleasant comments: he generally appeared too late. He never acquired the authority which is given by assiduity, by personal and constant action. He was not a safe man. Persevering in his hatreds; supple towards whoever had anything to do with the depositories of power; absolutely attached to his creatures, often unjust and brutal to all others; disposed to disavow at the first accident those who were not his complaisant tools; incapable of using men of any value, who cannot always be used easily, he could neither impose obedience nor make it easy, and he found himself, in short, ill-obeyed and badly served. With much application, a right sense, the desire to do well, a neat mind, a rapid conception, he could not bring any military enterprise to a good end. He was too fond of his ease; and when people reproached him with his fondness for the table, he answered rather meanly, 'They say that I have not left the cabaret since I left Paris; I have only been there twice!' It must be admitted that his health was failing, that he was often tormented with the gravel. In short, if he has been too severely judged, it is certain that, as a soldier, he was out of the traditions of his race: it is not by his military conduct that he can attract the attention of posterity."

He deserves more attention as a father, as an educator. The education of the Great Condé has been described, with the most minute details, by the Duc d'Aumale; and as the general and current opinion was that Condé was an *enfant de génie*, who had learned nothing and who understood everything, it will not be without interest to show how in his case genius was helped by culture.

Correspondence.

SUUM CUIQUE!

To the Editor of The Nation:

Sir: The very able criticism of Mr. Waldstein's 'Essays on the Art of Phidias,' published in the *Nation* of April 1, credits Mr. Waldstein with "the identification of a head, which had lain undistinguished in the Louvre, as that of a Lapith in one of the metopes of the British Museum." This is a statement which would go to prove that if Mr. Waldstein is very well acquainted with Greek classical art, the authorities of the Louvre Museum are quite deficient in archæological acuteness. Now, the truth is that the head in question, which is sadly mutilated, was purchased by the authorities of the Louvre *because* it was recognized to belong to the metopes of the Parthenon. Mr. Waldstein came independently to the same conclusion, and had the right of publishing the discovery as his own in the *Century* and in the *Journal of Hellenic Studies*. Bnt M. de Villefosse, keeper of the Greek and Roman antiquities in the Louvre, communicated to the Société des Antiquaires, at the end of the year 1882, the *procès-verbal* of the Committee's sitting at which the Lapith's head had been purchased, proving that before Mr. Waldstein's publication the head in question had been perfectly valued by the French archæologists. As the note read by M. de Villefosse was printed at the beginning of 1883, it is very surprising that Mr. Waldstein did not think proper to mention it in his book published two years afterwards. He thus leaves the public under the impression—which could not possibly be his own at the time he wrote—that no one in the Louvre understands anything about Attic art.

Personally disinterested in the debate, I may be allowed to find fault with this *peccatum per omissionem*, as I regret, on the other hand, that, after having triumphantly announced the discovery of original terracottas from Phidias's hand, Mr. Waldstein states *in a note* the facts which your critic has put in the light, which prove beyond a doubt that the terracottas in question are forgeries. Having examined with care the fragment in the Louvre, purchased with the Campana collection, I have come to quite the same conclusion.—Truly yours,

Salomon Reinach.

Paris, April 13, 1886.

JUST MISSED.

To the Editor of The Nation:

Sir: When the small boy disports himself in fishing, with his legs hanging over the end of a wharf, a great part of his enjoyment, if the water is clear enough, consists in seeing the fish smell of the bait, play round it, dart off to a distance, and then come floating slowly back.

On Thursday, the 15th inst., Mr. Logan delivered in the Senate a manly and, for his political reputation, a very judicious speech in favor of removing the seal of secrecy from the executive sessions of the Senate. At one point, after saying, "This mysterious thing of doing in secret what you will not do openly is not manly: it gives the chance for men to vote in secret one way and talk in open Senate another," he was interrupted by Senator Hoar in words which I will venture to quote:

"May I ask the Senator whether his reasoning would not require that all committees of the Senate also should have their meetings openly and in public so far as conveniently may be done? . . . I suppose there is nothing which takes place in secret session so interesting and important to the people of this country as the proceedings of the Ways and Means Committee of the House and the Finance Committee of the Senate, and especially the proceedings of the committee of conference from those two bodies, when revenue questions are up. I wish to inquire of the Senator, if it does not divert him from his argument, whether he thinks that also should be made open and public."

This was a side attack for which Senator Logan was evidently not prepared, but at all events he did not lose his presence of mind:

"I have always recognized the astuteness of the Senator from Massachusetts. Whenever a proposition is made that is not exactly in accord with his notion, if he can draw you off the track on to something else he is always anxious to do it. We are not discussing the question of committees, but we are discussing the question of executive sessions of the Senate of the United States, and committees have nothing whatever to do with this proposition."

May I set down, after the fashion of *Hamlet* to the players, "a speech of some dozen or sixteen lines," in the hope that Senator Logan may consider it for a future occasion?—

"The Senator from Massachusetts tries to frighten me from one conclusion by showing that it involves another. I am not to be so frightened. To the Senator's question I answer distinctly, Yes. The greatest evil under this Government is, that its most important affairs, including the national finances, are manipulated by secret and irresponsible bodies of whose motives and actions the people know nothing. The work of the Finance Committee should not only be public, but it should be conducted on the open floor of this House. That is not possible at present, because the multiplicity of business blocks the way. Of the 7,000 bills and resolutions introduced in a session no one has a right of precedence over any other. The result is a scramble and a struggle for footing which prevents all intelligent action, and leaves but too much room for those who are skilled in secret intrigue. If, as was recommended by the Senate report of February 4, 1881, signed by eight Senators of both parties, the members of the Cabinet were given seats on the floor of the Senate, the important branches of Government affairs would receive their proper share of attention. Public discussion of them would bring out in strong light the motives and character of individuals, and would result in some organized system in place of the present hopeless confusion. We propose at present to make public the executive sessions of the Senate, but the Senator from Massachusetts can rest assured that the Finance and all the other committees will have their turn ere long."

G. B.

Boston, April 24, 1886.

THE RESPONSIBILITY FOR MOBS.

To the Editor of The Nation:

Sir: I notice that you do not hesitate to place the responsibility for the recent loss of life and destruction of property in East St. Louis upon Governor R. J. Oglesby. I presume you do not wish to be unjust in making such an accusation against him, and I hope to be able to point out to you an object more deserving your severest condemnation than either of the Governors of Illinois and Texas.

The law as it now stands, in cases of a breach of the peace, requires the municipal authorities to exert their powers to quell the disturbance. When that fails, the sheriff is called upon, and he must swear in a force of deputies, when, if this is inadequate, the Governor of the State may call out the militia.

It is true in this case that the sheriff called for the military force before it was sent there, but the Governor could hardly have justified his compliance with that request under a strict construction of the law. The fact is, the sheriff had not fairly attempted to exercise his power as the law contemplates and directs, and had the troops been called out at that time, and no bloodshed occurred, the Governor's action would have received still greater condemnation from the taxpayer. I believe his action was right, and in strict compliance with the letter and intent of the law, and I hope that such a compliance with the law, on the part of all governors under like circumstances, will in time open the eyes of the people of this country to the folly of our methods of dealing with mobs, so wasteful as they are of blood and treasure. It is only another sacrifice of blood, offered up to that political sentiment known as "State rights."

When a mob of frenzied men meets and overpowers a force which the law opposes to it, its spirit and courage become exalted; and when the sheriff and his posse comitatus have been met and overpowered, as they almost invariably are, a mob is in right good working order to deal with militia. In the meantime blood has flowed, and when the militia has been worsted, the next step in the bloody tragedy consists in calling upon the President for the regular army, when, with perhaps still further loss of life, that peace which could easily have been maintained by a few regular soldiers is restored. This is the history of most of the serious riots which have occurred in our country. Suppose it was known that the moment the municipal authorities were unable to preserve the peace, it would be given over to those who make war and its dangers a profession; would the mob be as ready to open the ball? The history of the Pittsburgh riots of 1877 will answer the question.

The soldiers and officers of the regular army are always ready, know just what to do, will keep cool; and mobs understand this well, together with the foolish manner in which the hands of the State authorities are tied by the existing laws. While the few regular soldiers in St. Louis, paid and fed by the Government, could easily have maintained peace, their use was impossible, owing to our wise laws, and we must therefore take men and boys from their peaceful avocations, which they really do not want to leave, and face a danger they cannot avert or settle half as easily as the regulars could do it, and with no additional expense. And why is this impossible? Because it is said by many wise

men that the liberties of 60,000,000 people would be endangered if the regular army was used for such purposes. Whether the 60,000,000 citizens who *could* be enslaved by even a regular army of 100,000 men would not then be occupying the position for which they were best fitted, is a question for serious consideration. Therefore, Mr. Editor, blame our foolish laws, based upon that State-right nonsense, and do not blame the man who simply executes them.

S. J. Bumstead.

Decatur, Ill., April 22, 1886.

ARE STRIKES RIGHT?

To the Editor of The Nation:

Sir: Under the ample mantle of a generality often lurks a host of fallacies which are completely disguised from the cursory survey of the average intellect. Even mental microscopes of a very high power ofttimes fail to detect them, and the germ of the concealed danger only makes itself known by its after ravages in the intellectual system, which has swallowed the seemingly pure draught. The proposition that *the individual has the right to work or not to work at will*, seems so obviously true that, with most people, it is accepted without challenge. Like one who, wearing the uniform of our own army, is permitted to pass through the lines without examination, or even so much as being asked the password, it enters the camp on the terms of a brother-in-arms. But may not its colors be a mere ruse? At any rate an inquiry into its loyalty will do no harm, if it be true, and if it be false, we shall know how to deal with an enemy.

Physically the individual can or cannot work at will, as long as he will or as short a time as he will. The question is, however, Has the individual not merely the physical power but the moral right to work or not to work at will? It may be replied that in a very loose sense the proposition is sound. Generally speaking it is within the option of any man to labor or not. If I am in the employ of a capitalist at a rate of wages which I regard as an inadequate compensation for my labor, I have the right to quit. Even if I consider the compensation adequate, still am I privileged to withdraw from his service. But does this hold true without exception? Will this same hold good in all circumstances and under all considerations? Let us take an instance which is not only quite possible, but highly probable. We will suppose that a railroad has in its employ, in a remote and very sparsely inhabited district, a man whose duties are those of telegraph operator and signal man combined. This employee tires of his position. It is too lonely and dull, and, becoming dissatisfied, he determines to resign his post. He telegraphs to headquarters that he is going to quit work. Would he have the right to leave his post before the company has had time to substitute a man in his place? Assuredly not. The safety of many lives and the security of a vast amount of property depend upon his faithfully remaining. Here it is very evident that he is morally bound to wait until his successor has arrived to fulfil the necessary duties which he is about to leave. This is a case so patent that the common sense of every one instantly declares that it is his *duty* to remain. But suppose the railroad company telegraphs in reply to our signal man that it is utterly impossible for them to fill his position with a competent man short of a fortnight. Is he morally obligated to remain at his post during the interval? In this latter instance his obligation may seem not so clear, for it may be argued that the failure of the company to supply the vacancy is not his fault, and, as it is the company's place to care for the lives and property in its trust, their safety or danger is entirely beyond the question of his leaving. While it is undoubtedly true that it is the company's place to see the post competently filled, and equally true that the company is liable for any injury to life or property in its charge, it is also undoubtedly false that the company's responsibilities relieve the signal man from his obligation of remaining for the fortnight required to fill his place. The reason is not far to seek; for, as a matter of fact, the safety or danger of the life and property on the road is not beyond the question of the signal man's leaving. His obligations here take a wider range than mere duty to the company, for on his stay or his departure depend the safety of many lives and the security of valuable property, and these relations, which morally bind him, absolutely forbid the desertion of his post. Outside of his duty toward the company, the broader and higher duty to his fellow-man and the rights of property obligates him. This instance, therefore, *the right to work or not to work at will does not cover*, and there are innumerable other instances to show that a general proposition does not always apply.

So much for individual cases. But how does this conclusion fit into the larger question of strikes, when organized labor throws down the pick and refuses to lift a finger in the cause of industry until its grievances, real or imaginary, have been adjusted? Under certain circumstances it is evident that the individual cannot quit at will, even with just cause. Does the same hold true with regard to organized labor, when it acts as a corporate body? Let us here take as an example not only a probable case, but one which more than once has occurred—the preconcerted cessation of labor on a vast system of railways, such as is commonly known as a strike. And it must be noted that a strike means to a labor organization not only that its members shall leave off work, but that no work shall be done at all; otherwise, striking would be futile, and forfeit the very object it endeavors to accomplish. The grievance on account of which the strike has been ordered we will suppose legitimate, and in justice demands rectification. Wages have been reduced ten per cent., and the men refuse to continue work unless the old rates are reestablished. At once several thousand men quit, leaving the roads inactive. Now, a large section of country is dependent upon these roads as the highways of its traffic and its commerce. Through these channels its industries are fed and its prosperity nourished. Agricultural products are conveyed to their markets over these railroad lines, and in turn the cities send forth their manufactured products and provision stuffs to the rural districts and towns. What results from this choking off of the arteries of commerce? In the first place the capital invested in the property of the roads themselves stands idle and immediately becomes unproductive, yielding neither earnings to the investors nor wages to labor. Business at once stagnates and industry languishes. Factories, mills, and foundries shut down for lack of supplies; their capital, like that of the railroads, lies non-productive, and the labor dependent upon it is thrown out of employment. Prices at once ascend the scale, owing to a dearth of supplies, which increases as long as the strike continues. Provisions and fuel become dearer, and labor itself suffers even to starvation and utter misery. For how will labor live under the distress which it has brought upon itself? This hardly looks like coöperation—labor starving labor to right its wrongs. Surely this is a picture of a house divided against itself; the cutting off one's right hand to avenge the left. Moreover, to aggravate its hardships, labor taxes labor to support itself through the trying ordeal; for labor must live, and since it refuses to accept the wages capital proffers, it can only live upon itself, and this means self-consumption—in the end, suicide. Besides, capital suffers in being paralyzed, and the crippling of capital is but another blow at labor; for it is out of the enterprise of capital that labor is paid, and capital that earns nothing can pay nothing. In short, the entire community suffers—the manufacturer, the merchant, the mechanic, the hod-carrier, all alike. Capital and labor both feel the disorder, the latter of course more keenly. The endless injurious consequences of this stagnation of all commercial activity ramify in a thousand and one directions, causing distress and harm incalculable. Pitiless retaliation! it is labor itself which is forced to bear the brunt of the war. It is as if one-half of an army turned upon the other half, and, levelling their muskets at the breasts of their fellow-soldiers, delivered a merciless volley, in the deluded belief that somehow or other their missiles of destruction would reach the enemy.

Balancing, therefore, in the scales the end aimed at as the ultimate good of the strike, and the widespread disorder actually resulting from the refusal of labor to perform its duties in the great workshop of industry, which side morally outweighs the other? Is the advance of wages ten per cent. sufficient compensation for all the harm inflicted by the methods employed? In point of dollars there is no question of the disproportion, for the loss to capital and also to labor in this respect is incomparably greater than the gain of ten per cent. Certainly industry and capital have gained nothing, but suffered much. Outside of its loss in money has labor gained anything worthy of its tremendous sacrifice, blind though it has been? This can only be determined by taking into consideration the end in view and the means employed to reach that end. The supposition is that the end is good, namely, the obtaining of just wages. The means have plainly been hurtful to all concerned, causing a huge waste of the substantial things of life by crippling industry, prostrating commerce, and paralyzing the uses of capital. In consequence labor itself has suffered, poverty and misery of all kinds following inevitably upon the track of this forced inactivity of all branches of livelihood; contracts have been violated by the thousand; disease and crime have battened upon this unnatural condition of things, and the moral tone of the community lowered in proportion to these disastrous results.

Associated, therefore, with the means have been inevitable consequences, which, if we reflect, are seen to be in reality a part of the means; for the object of labor in striking has been to force these results upon capital, in order to injure it, and by so doing compel it to resume operations upon terms dictated by the frightful necessity of the emergency, or, in other words, upon the terms dictated by labor. That this is true becomes evident when it is seen that labor strikes only become effective by bringing about a demoralized condition of the community. The mere cessation of labor is not all the means, but this with its necessary consequences. It is clear, therefore, that the means are in themselves bad. Can it be said that the end justifies them, in the sense that they are the last resort of a desperate population in self-defence? There is some truth in this view of the matter. If labor be so ground down by the tyranny of capital that its only method of self-preservation is a final resort to the pernicious means of a strike, then are such methods justifiable. But this is a state of affairs which, in view of the nature of the country's institutions, is likely always to remain hypothetical. Capital, generally speaking, can never afford to strangle the true interests of labor, for its dependence upon labor is manifest, although in many isolated cases we have witnessed the cruel pressure brought to bear upon the laboring

classes by greedy monopolists. If capital were universally to resort to a system of extortion from the wages of its employees, it would simply be making the rope to go around its own neck. There may be here and there a capitalist so blinded by greed as not to see this. But the intelligence of capital in general, it is to be trusted, is never likely to permit itself to stumble into such a pitfall. If the glitter of gain should ever blind it to the frightful consequences, the retribution which awaits it is certain.

The only compensation which can be argued in favor of a strike is its moral effect in clearly demonstrating to capital the latter's dependence upon labor, and the necessity of dealing fairly with it. The first point needs no demonstration, for capital cannot help but see that an absolute condition of its use is the employment of labor. On the other hand, it may be said that a strike equally demonstrates the necessary dependence of labor upon capital, for labor starves unless paid by capital. There is, however, a moral point gained in practically showing capital that it must be just in its dealings with labor, and this is the sole good that can ever flow from a strike. Does this gain warrant the means? Comparing the immense evils concomitant with the use of the means, it cannot be doubted that the sin, the misery, the crime, the disorder, and the general demoralized condition of the community largely outweigh the good attained.

The means being bad in themselves are immoral, and only on the supposition that they are a last resort in a desperate necessity are they tolerable, and then only on the grounds of self-defence and the principle that of two evils the choice of the lesser is allowable. The question therefore resolves itself into this: Are strikes (using the word in its fullest sense as a means of preventing the uses of capital) the only means labor has in its power to obtain redress for its grievances? Most assuredly not under our form of government, where the laboring classes have an equal share with capital in making the laws and in building up the institutions of the country. Through legislation, arbitration, public opinion (and labor makes up a large part of public opinion), the end can be gained without violence or lawlessness, and until these have failed, redress by means of strikes is both unwise and immoral.

If strikes were merely a discontinuance of labor, with neither positive nor negative interference with the enterprises of capital, then, indeed, there would be no question of right or wrong. But in its very nature a strike cannot be this. It must interfere with capital in order to gain its ends. It goes without saying that positive interference is wrong. What about a negative interference, that is to say, when labor is so well organized and combined that its simple withdrawal effects all the results which a positive interference under other circumstances alone could bring about? Still would it be wrong, for whatever the method the same results obtain. Disorder reigns, and the community suffers in the thousand various ways which have been already shown.

In addition to the evils which we see resulting from a strike, there is another phase of such movements which amounts to an assumption of tyrannical authority. Congress itself has not the power to suspend the traffic of the country. Yet such is the very nature of a strike, and that with direct intent. Strikes are nothing more nor less than a declaration that all traffic must cease, and that commerce must wait upon the adjustment of labor's grievances. To be effective, strikes must attain this end. It cannot be too often repeated that this is the intended result of strikes, and that it is a mere quibbling to argue that the suspension of traffic is only an indirect and accidental result. The object is to attain a redress of grievances, and the mere cessation of labor without interference will never gain this end. Positive or negative interference must be brought to bear, and either is wrong except as a means of self-preservation when all other means fail.

To work or not to work at will is not, therefore, a proposition applicable under all circumstances. Besides the employee's duty to his employer, in many cases there is the larger and more binding obligation to the community; and to obtain redress of private wrongs at the costly price of violating all those duties which man owes to his fellow-man and to society is a wrong which will in time bring its own revenge. The individual, therefore, who abets and allies himself with organized lawlessness, whose purpose is to sacrifice the public good to gain its own ends, commits a public crime, and such movements as strikes are nothing more than organized immoralities. To do a *little* good, a *great* wrong may not be done. CONDÉ B. POLLEN.

A GOVERNMENTAL BOYCOTT.

TO THE EDITOR OF THE NATION:

SIR: A paragraph is going the rounds of the Virginia papers to the effect that "the Indemnifying Board of the State, consisting of the Governor, two Auditors, Treasurer, and Attorney-General, are about to have published [posted?] a list of names of the taxpayers who tender coupons in payment of their taxes. In this way it is expected that the cold shoulder will be shown to merchants and others who"—take advantage of the constitutional law of the United States!

Is not this a shameless proceeding? and has Governor Lee the right thus to hold up to public contempt the names and characters of those who are fully as honest as himself, and whose only crime is that they prefer one sort of lawful money to another? VIRGINIA.

GRIMM ON ROMAN VANDALISM.

TO THE EDITOR OF THE NATION:

SIR: In your note in the current number, page 320, first column, you do inadvertent injustice to Prof. Herman Grimm in the statement that the outcry of the clerical press of Rome against the destruction of monuments "has been incautiously caught up in Germany" by him. His article in the March *Rundschau* ("Die Vernichtung Roms") has the form of a letter from Rome, and claims to be based upon personal observation of the alleged vandalism.—Respectfully yours,

MELVILLE B. ANDERSON.

KNOX COLLEGE, GALESBURG, ILL., April 17, 1886.

STYLE.

TO THE EDITOR OF THE NATION:

SIR: Gossip about the secrets of style is never untimely nor out of place, and a little touch of it enlivens the pages of that melancholy book, Amiel's 'Journal.' The advice that he bestows on himself as an author brings to mind much that other authors have said about the art of writing, and thereby becomes the more interesting and suggestive.

Speaking of the use of synonyms, M. Amiel says (in other language) that it is well one's team of words should be adapted to the subject and occasion; a writer should sometimes drive at full speed with a single epithet; sometimes with four, magnificently; sometimes, *à la Russe*, with three; sometimes even with a tandem; perhaps more safely with the usual two. Or, in Amiel's own phrase: "The use of the single word gives force, the doubled word gives clearness by stating the two extremities of the series [rather, one might feel, by each word indicating and emphasizing the shade of meaning to be attached to the other], the tripled word gives completion by furnishing the beginning, middle, and end of the idea [?], the quadrupled word gives richness by enumeration." He points out that a multiplicity of phrases which are so many corrections and successive approximations, indicates a "gropingness" of intelligence (*le tâtonnement*), and he counsels (himself specially) to practise the use of the single word—"the off-hand stroke"—no "repentir" (known to painters as a "pentimento"). He adds: "There is a sort of courage about singleness of phrase which implies self-confidence and clearsightedness."

All this may connect itself, indirectly, with what Rivarol said of Dante's verse, not with perfect truth, however, that "il se tient debout par la seule force du substantif et du verbe sans le concours d'une seule épithète." And it suggests the style for which Montaigne animatedly avowed his liking—a style "simple et naïf, . . . succulent et nerveux, court et serré, . . . véhément et brusque"; where, in his untranslatable phrase, "chasque loppin y face son corps," every bit is a whole.

But the most interesting, perhaps, of Amiel's remarks is this: "I certainly feel that at bottom there is but one right expression"; and his English editor has done well to bring to recollection in a note the insistance on the same conviction by La Bruyère, who says: "Among all the different expressions which may render a single one of our thoughts, there is but one which is fitting: we do not always come across it in speaking or writing: it is certain, nevertheless, that it exists, and that anything which is not it is feeble, and does not satisfy a thoughtful man who desires to make himself understood."

Flaubert believed not that we "come across" this fitting expression easily always, but that always we may discover it: "By force of seeking I find the right expression, which was the only one, and which is at the same time the one harmonious in sound. The word never fails when you have the idea." And this takes us back to Montaigne, again, where he says: "Horace does not content himself with a superficial expression—it would play him false; his wit picks the lock of and rummages in (*crochette et furette*) the whole magazine of words and figures to clothe itself."

M. Amiel, in another connection than the passages already quoted, declares that Renan—and he does not count it to his shame—is more heartily a writer than a man of science. "If need were, he would sacrifice exactness to fine phrases [*le dire exact au bien dire*]." "Son but, c'est le style." "A beautiful page is ten times more precious to him than the discovery of a fact or the rectification of a date. And on this point I am of the same mind, for a beautiful page is beautiful by virtue of a kind of truth truer than the record of authentic facts. Rousseau was also of this opinion. A chronicler may find inaccuracies in Tacitus, but Tacitus survives all the chroniclers. . . . If I desired anything, it would be to be a writer, a great writer."

How glad one would be if there were a few more *crochetteurs et furetteurs* in our day than there are; not, like our modern euphuists, draping their puny thoughts in unfitting garments of elaborate splendor, but stalwart wooers of the word, like Flaubert, who strictly meditate the muse, and who feel with Montaigne that the mastery of admirable expression, "je ne dis pas que c'est Bien dire, je dis que c'est Bien penser." Yet, after all, in the deepest sense, no one by taking thought can add a cubit to his style, any more than to his stature. As Amiel says:

> "Quiconque est loup agisse en loup,
> C'est le plus certain de beaucoup."

A PICKER AND STEALER.

IMPERFECT TRANSLATIONS.

To the Editor of The Nation:

Sir: In a leisure moment it occurred to me to compare Carlyle's translation of Goethe's 'Wilhelm Meister' with the original. I found my work profitable and interesting. Opening the original at random, and beginning with book 4, chapter 16, of the "Lebrjahre," I found the following imperfections in the first paragraph: Carlyle confounds "abmerken" with "aufmerken," and translates it 'to note down,' instead of 'to catch, divine, discern, detect, or apprehend.' Thus, "Sie merkte Wilhelmen seine Grundsätze ab," is rendered 'She noted down the principles of Wilhelm.' It should be: 'She caught Wilhelm's principles.' Again, "Sie befliss sich des Singens ihm zu gefallen," is translated 'She took pains in singing for his pleasure.' It should have been: 'To please him she sang diligently,' in the sense of to practise and study singing. The conclusion of this latter sentence is wholly changed in the translation and made a mere commonplace, while the original is an observation that excites thought. Other objections that could be made to the same paragraph might be considered hypercritical, and yet the whole is not the best conceivable reproduction of the original. On the other hand, it is difficult to believe that, taking the entire work, another than Carlyle would have done as well.

Surely, the ability to translate correctly is a rare gift. It requires not only a thorough knowledge of both languages, but also the ability to fully comprehend the author and accurately reproduce his thoughts, coupled with unflinching devotion to one's task, surrender and subordination of self, and last, but not least, time, ample time. A "photograph," as suggested by "A Lover of Trustworthy Work" in his despair, is hardly possible. Every translation seems of necessity an interpretation. Now let some one of our critics try his hand! Oscar Reuter.

Denver, April 20, 1886.

Notes.

The place of the late Sampson Low, as agent for nearly forty years of Harper & Bros., in London, is to be filled by Mr. James R. Osgood.

The same publishers have nearly ready 'George Eliot and her Heroines,' by Mrs. Abba Goold Woolson; and 'Joseph the Prime Minister,' by the Rev. W. M. Taylor, D.D.

'Socialism and Christianity,' by A. J. F. Behrends, D.D., will be published in May by Baker & Taylor.

Apropos of the announcement that the London Browning Society has authorized Mr. Arthur Symons, of Nuneaton, to publish a history of "Sordello," we can state there has been a call for a reprint of an article on that poem, by Mrs. Caroline H. Dall, written more than thirty years ago, and published very incorrectly in 1872. Two hundred copies of this pamphlet of thirty-six pages are offered to the public through Roberts Bros., Boston, at thirty cents each. A second edition of Mrs. Dall's recent summary Life of Shakspere is in the binder's hands.

The second part of Count Leo Tolstoi's stupendous novel, 'War and Peace,' has now been issued in Harper's Franklin Square Library. It pictures the invasion of Russia in 1807-1812. The translation is still Clara Bell's, "revised and corrected" for the latitude of the Copyright Office: but the genius of the author shines through all the defects which were pointed out in these columns in the previous instalment, and which examination or casual reading will surely discover in the present.

Under the title "Macmillan's Summer Reading Series," Macmillan & Co. propose to issue during the next few months a cheap, fifty-cent series, in paper covers, of popular novels and other works suitable for holiday reading. New stories by Mrs. Oliphant, W. E. Norris, and others, and new editions of Mr. Crawford's, Mr. Shorthouse's, Charles Kingsley's, and Miss Yonge's well-known tales, will compose the series, in which 'Mr. Isaacs' leads off. The same firm will shortly have ready, in their "Globe Readings from Standard Authors," a fifty-cent edition of Palgrave's 'Golden Treasury of English Songs and Lyrics.'

Appleton's 'Annual Cyclopædia for 1885' closes a ten-year series, and includes an index to the ten volumes. It would have been worth while to recapitulate here alphabetically, under "Obituaries," the several names recorded during the decade; and we must again call the editor's attention to the defect in the regular Obituary Department, by which no notice is given of longer biographies of deceased persons arranged under the general alphabet, *e. g.*: McClellan, Grant, McCloskey, etc. General Grant's military career, by the way, is reviewed in twelve pages by Gen. Horace Porter. Under Canada we find a convenient narrative of the Riel rebellion. Under Knights of Labor one may read their Declaration of Principles; but, on the whole, the account of the organization is meagre—perhaps inevitably so. Typographically, the full-face letter employed in this volume is too condensed for ready legibility. The portrait and other illustrations are numerous. A good map or two would have been welcome.

As the persons who stand in need of 'Don't' (D. Appleton & Co.) would naturally desire to carry it about them, the vest-pocket form just given it by the publishers approves itself. Its red borders, rounded corners, and full-gold cloth binding make it very pretty.

The 'Life and Adventures of Baron Trenck' have come round again in "Cassell's National Library." Goldsmith's "She Stoops to Conquer" and "The Good-Natured Man" make another volume of the little series edited by Prof. Morley; the 'Voyages and Adventures of Sir John Maundeville' a third.

Somewhat larger in size and of equal cheapness is "Routledge's World Library," which is begun by John Anster's version of Goethe's 'Faust,' also, by the way, printed in Harper's Handy Series.

Mr. Appleton Morgan has undertaken to carry forward the Shakesperian bibliography which is one of the great features of Allibone's 'Dictionary of Authors.' His 'Digest Shakespeareanæ'—we must remark once more on the solecism of this feminine genitive singular—has begun to be published in the Papers of the New York Shakspere Society. Part 1 includes titles A–F, topically arranged, no authors' names appearing in the alphabet.

We have already commented on several of the papers of which abstracts are published in the Proceedings of the American Historical Association at Saratoga last September, just issued by G. P. Putnam's Sons. In this pamphlet we have also glimpses of the debates or conversation which ensued upon the reading of the papers.

From John Murphy & Co., Baltimore, we receive the pamphlet Report of the Organization of the American Economic Association, of which Dr. Richard T. Ely is secretary. This organization took place at Saratoga at the time of the sittings of the American Historical Association. Its "statement of principles" implies a leaning toward state socialism, but a foot-note expressly reserves liberty of opinion to members.

Nos. 2-3 and 4 in the fourth series of Johns Hopkins University Studies in Historical and Political Science deal with Town Government in Rhode Island (William E. Foster), the Narragansett Planters (Edward Channing), and Pennsylvania Boroughs (W. P. Holcomb).

We have also received two numbers in the new Philosophical Papers published by the University of Michigan—the first, on University Education, by Prof. G. S. Morris; the second, on Goethe and the Conduct of Life, by Prof. Calvin Thomas.

Our readers have been kept abreast of the *Century* from month to month, and there is little need to speak of the bound volume (ix. of the new series, November, 1885–April, 1886) now before us. The war papers; Mr. Cable's Creole songs and dances; the Italian tour of Mr. and Mrs. Pennell; the illustrations of Barye's works, and the series of dog types, are among the most notable features. Mr. James's 'Bostonians' was brought to a close in this volume.

In the March *Macmillan's* much sense and humor distinguishes an unsigned article on "A Century of Books"—or the lists of the hundred best to be recommended which the *Pall Mall Gazette* extracted from Ruskin, Swinburne, and others, on a hint given by Sir John Lubbock in a lecture at the Working Men's College. "If a reader vaguely wishes to 'improve his mind,' how," the writer asks, "can any list be made? The thing is absurd, unless you know what little there is to be known about the intellect in question. . . . Of all feeble folk the feeblest are those who meander about asking to be educated." "The literature is good for us which we find to be good in our progress through books and among men—not the literature which is highly recommended to us."

The article "Shelley and Vegetarianism" in the April *Booklore* (New York: D. G. Francis) presents the poet in a phase little known to the public at large, and gives a facsimile of the title-page of his excessively rare 'Vindication of Natural Diet' (1813). His poetry may be said to be its best vindication. Seldom can one obituary review in *Booklore* cover three such eminent names as those of Edward Edwards, formerly of the British Museum, afterwards librarian of the Manchester Public Library, and a voluminous author and editor; Henry Bradshaw, of the Cambridge University Library; and Henry Stevens.

The *Manchester Quarterly* for April opens with a paper on "Thomas Rowlandson and His Works," by Harry Thornber, who has drawn freely from Grego's life of the great caricaturist, and has been permitted by Mr. Grego to copy some of Rowlandson's designs in his possession. Eight in all are reproduced in facsimile from this and other sources.

A writer in the *Auk* for April (New York: L. S. Foster) is impatient over the multiplication of monographs on the bird which furnishes a name to the magazine. Mr. Symington Grieve, in his great quarto published last year, goes into an elaborate discussion of the number of skins of the Great Auk preserved in the museums, and from his enumeration as corrected by his reviewer it would appear that there are 78 or 79.

At a time when the shade of Beaconsfield is being invoked by the despair party in English politics, Cassell's *Magazine of Art* for May secures Mr. Saintsbury's pen for letter-press which is, after all, but an excuse for a number of portraits of the Jingo statesman. Not conclusive, certainly, as argument, but highly amusing, is the page of grouped caricatures of Dizzy redrawn from *Punch* (1844-1882), from Doyle to Linley Sambourne, by way of Charles Keen, Leech, John Tenniel, and Harry Furniss. We notice in this number of the magazine some very successful applications of "process" to photographs, especially from statuary.

The *Portfolio* for April is unusually attractive, in text and illustrations. The Laocoon group is discussed with the aid of copies of the original

and of a seal in the possession of Lord Arundell of Wardour, from which latter (if its antiquity be guaranteed) we may surmise the true action of the restored limbs. Mr. Hamerton's chapters on Imagination in Landscape Painting are accompanied by a fine mezzotint after Salvator Rosa's "Mercury and the Woodman." Another mezzotint is interesting as an attempt to reproduce the effect of water-color by novel devices in the etching, which we need not specify. The editor regards it as successful, and so it seems to us. We mention finally Helen Zimmern's sketch, with numerous facsimile reproductions, of the life of Daniel Chodowiecki, the great book illustrator of the last century, the publication of whose illustrated diary is one of the pleasures in store for us.

In Nos. 522–525 of *L'Art* (Macmillan) there is one preëminent engraving, an etching after Franz Hals's portrait of his son Harman, in which subject and treatment alike call for admiration. We must not omit, either, a forcible etching after Delacroix's Dante and Virgil in their Styx voyage. Some exquisite vases are depicted in the articles on the Stein collection. The only literary paper is a short one, by Arthur Heulhard, on Charles Carmoy, an artist who was the contemporary, friend, and neighbor of Rabelais; the writer being of the mind that while Rabelais's alleged artistic ability cannot be established, he can be shown to have been in friendly relations with many French and foreign artists.

With its twelfth annual series of autotype views, the Society for Photographing Relics of Old London brings its most intelligent and laudable labors to a close. The prospectus of the twelve photographs deliverable during the coming month is before us. They embrace St. John's Gate, Clerkenwell; old houses in the Strand; Great St. Helen's; Tennis Court, James Street, Haymarket; Lady Dacre's Almshouses; Queen Anne's Gate; Court-room, New River Company; three doorways, and as many chimney-pieces; and a sheet of bric-à-brac, so to say—minor architectural features. A few mounted copies of each of the twelve sets (1875—1886) are still procurable at a cost of ten guineas; these, when exhausted, will not be replaced. Single sets may also be procured for a short time. Early notification should be sent to the Honorary Secretary, Mr. Alfred Marks, 155 Adelaide Road, London, N. W.

Mr. Christern sends us the illustrated catalogue of the current International Exposition in Black and White and Pastels and Aquarelles at Paris. The list comprises 1,414 entries, of which just 100 have been reproduced by "process." Some of these are book illustrations; not a few are "after" Holbein, Raphael, Phidias, Ziem, the Dresden "Chocolate Girl," etc., and imply very useful and instructive renderings. Those which will perhaps make the catalogue most prized intrinsically are the dozen or more portraits of painters sketched by themselves, such as Jules Breton's, or Henner's—in which latter the artist's dislike of a firm outline is as marked as in his brush work.

Again the essay is made to establish a *Public Opinion* weekly newspaper in this country—this time at Washington, where, so far as we know, the experiment is novel. The publishers seem to think that city "the best point of observation," though what the exchange table and the scissors have to do with the point of observation is not clear. The first number has some good features.

'The Nineteenth Century Almanac' (Philadelphia: Allen, Lane & Scott), is a convenient collection of calendars, 1800-1900, with a passable collection of anniversary and (from 1876) of centennial dates.

The most significant passage in the eighth annual report of the Providence Public Library is that which relates to an understanding with the Athenæum and the Brown University Library in regard to the purchase of a certain class of books. A single copy may serve the purposes of the entire city, and according as it should more fitly be accessible in one or other of these collections, its purchase is ordered or avoided by the others. This economy might well be practised in other cities.

South America is the sole topic of No. 121 of the Journal of the Berlin Geographical Society. H. Polakowsky begins a contribution to the history of the discovery and conquest of Chile, and there are two papers on the expedition so successfully planned and executed in October of last year by Gen. Benjamin Victorica, the Argentine War Minister, to the Gran Chaco. A map shows how he pushed the military frontier back to the line of the River Bermejo, thus cutting off the access of the wild Indians of the central Chaco to those of the southern, and guaranteeing security to the settlers who, it is now expected, will be attracted in great numbers to the fertile tableland lying to the south and west of the Bermejo.

The Dominion Government last year ordered a report on the agricultural colleges and experimental stations of the United States, and this has just been published at Ottawa from the pen of Prof. William Saunders. We presume that nowhere else can such a summary view be had of these institutions, their constitution, scope, and practical influence.

An important monograph on 'Insects Affecting the Orange,' by H. G. Hubbard, illustrated with numerous cuts and colored plates, has just been issued by the United States Department of Agriculture.

In Matvei Ivanovitch Muravieff-Apostol, who died in Moscow early in March, at the age of ninety-four, Russia probably lost the last of the notable Dekabrists, or December-men, as are called in her history the actors in the military insurrection of December, 1825, which aimed at preventing Nicholas from ascending the throne made vacant by the death of his brother Alexander I., and at the substitution of a liberal constitutionalism for Czarist autocracy. His brother Sergei was one of the most active and prominent leaders of the conspiracy, and, after a fight in which their brother Ippolit fell and he himself was wounded and captured, was executed on the gallows in St. Petersburg. Matvei was sent to Siberia, and there he remained to near the close of his long life. On his coronation in Moscow, Czar Alexander III. restored to him with his own hand the cross of St. George, which he had forfeited in 1825. The Muravieff-Apostols are a branch of the ancient boyar family of the Muravieffs, a family largely and variously represented in the modern history of Russia.

—"A Lover of Trustworthy Work" sends us, apropos of the discussion over *préau* in the sense of meadow, the following illustration of this sense being ("inusité," perhaps, as Littré asserts, but) not "entirely obsolete." The extract is from page 54 of the second volume of Turgeneff's 'Mémoires d'un Seigneur russe,' translated by Ernest Charrière (1885):

"J'ai un voisin qui est . . . chasseur. . . . Je me rendis chez lui à cheval et lui proposai d'aller chasser à la caille. Il y consentit. . . . Nous partîmes. . . . Arrivés à l'exploitation, nous entrâmes dans des taillis. 'Attendez-moi ici sur le *préau*,' dit mon voisin. . . . Nous regagnâmes le *préau*."

—The first number has appeared of the *Political Science Quarterly*, edited by the Faculty of Political Science of Columbia College. Each member of the Faculty contributes an article. The introduction is by Prof. Munroe Smith, in the form of a short paper on the "Domain of Political Science," his object being to make clear the relations and the distinction between the science of the State and the other sciences that treat of men in their social relations. Prof. Burgess discusses "The American Commonwealth: Changes in its relation to the Nation." Prof. Goodnow writes on the "Collection of Duties," comparing the provisions of our customs law for the prevention of undervaluation with the safeguards adopted in other countries. Prof. R. M. Smith examines "American Labor Statistics," with a result that can hardly be called flattering te our statisticians. Of the sixteen bureaus of industrial statistics maintained in this country, five have as yet published no reports, and ten others have pursued such defective methods in the collection of data, or have collected on so meagre a scale, as to have substantially nothing to offer that is worth considering. The Massachusetts bureau alone, under the able management of Commissioner Carroll D. Wright, has succeeded in producing work that can be regarded as possessing statistical value. Even in the Massachusetts reports Prof. Smith finds that many of the averages are made on a faulty principle. His article merits careful attention on the part of our collectors of labor statistics. Prof. Whitridge treats of "Legislative Inquests," and concludes, from a review of their use in this country, that the powers of inquest and of committal for contempt have been greatly abused and ought to be restricted. Prof. De Leon contributes a lengthy paper on the Berlin Conference on the West African question. He goes very fully into the history of negotiations between the countries of Europe in reference to the Congo question, making the German intervention of 1884 the objective point of his treatment. The motives and consequences of that intervention he describes with clearness and vigor. He is justly severe on the conduct of the American representatives at the Conference, Messrs. Kasson and Sanford. In addition to these leading articles, the *Quarterly* contains a number of short notices of books in political science. Altogether, the first number gives promise that the new publication will fill a useful place among our periodicals. The typography and general appearance are inviting. The style of the articles, if not brilliant, is at least clear and effective. There is perceptible here and there a slightly socialistic flavor in the way of regarding the state that may prove harmful if it should be allowed to grow stronger. But there is little danger of that, we apprehend.

—Critical readers of the first number of the *Quarterly* will be likely to find more from which to dissent in Prof. Burgess's article than in any other. His whole point of view is not likely to commend itself to Americans who value their institutions. It is a Frenchman's view of Federal Government, a doctrinaire view, rather than the practical view of an Anglo-Saxon. Prof. Burgess's main thesis is a virtual denial of the possibility of Federal government as a permanent arrangement. The doctrine that our Constitution rests on a basis of "immutable and indestructible States" he rejects as nonsense. He regards the States as merely convenient districts for "jural and police" purposes. Of sovereignty they have no part. As colonies they were subject to the English Crown and Parliament. At the Revolution the sovereignty wrested from the English King passed by devolution to the Continental Congress. The new-born States, as matter of law and right, held the same relation to the Congress as they had previously held to the English Crown. The assumption of any greater powers or freedom in the early State constitutions Prof. Burgess sets down as usurpation. This usurpation, he admits, was ratified by

the Articles of Confederation; but the Constitution placed the usurping States back again in their proper position of subjection. The course of things since 1789, he holds, has lowered still further the position and powers of the individual State. Its present position between the two "natural elements" of our system, the nation and the municipality, he regards as precarious and in the long run untenable. In proof of this he compares recent State constitutions with those of the early days, and finds that the powers of the State Legislatures and Governors have been greatly abridged. The fallacy of this reasoning consists in the assumption that the powers taken away from the State Legislatures have been lost to the States. The fact is, that the restrictions imposed on the State governments are in the main wholesome restrictions suggested by experience. Many of them would probably have been imposed on Congress also if the process had been as easy and simple as it is in the case of the State Legislatures. Further, if the people of any State have imposed limitations on the powers of their representative bodies, they are free to remove the limitations at any time. Such restrictions surely imply no loss of power or dignity on the part of the State itself. As well might one argue that the limitations and restrictions placed on the action of Congress lessen by so much the sovereignty of the United States.

—The widow of Wendell Phillips died in Boston on Saturday evening, at the age of seventy-three. This event will cause only gladness in those who have known the forlorn condition in which the wife of the great orator and philanthropist was left, when he was taken away from her who had no other solace and support. Long years of invalidism had made her nearly bed-ridden, and, between her real sufferings and her apprehensions, her life for the past two years has been pitiable in the extreme. Mrs. Phillips, whose maiden name was Ann T. Greene, was related to the Chapman family, of which the late Mrs. Maria Weston Chapman was a member by marriage, and at the house of Mr. Henry Chapman she was married some fifty years ago to the young lawyer whose life-work she was largely to determine and to support. The Chapmans were already deeply involved in the anti-slavery movement, and after the Boston mob of October, 1835, Mr. Phillips was ripe for the dedication of his genius to the same cause. The result was a social isolation which Mrs. Phillips's feeble health only emphasized, but her sick chamber became a well-spring of cheer and inspiration to her husband's anti-slavery zeal and activity, to which he bore many touching testimonies in public and private. Her benevolence in other ways ran parallel with his own, and no memorial to him would be complete which denied her an equal share of human sympathy, self-denial, and even courage. That she should outlive him seemed not only contrary to nature, but to the perfect union which subsisted between them.

—Persons whose attention has not been specially directed to the philosophy of the subject, after supposing consumption to be inherited and ague to depend on swamps, group diseases generally under two heads: those that are "caught," like measles and scarlet fever, and those that "happen," like apoplexy and heart disease. Beyond that is mystery. Such will find 'The Pedigree of Disease,' a course of six lectures on temperament, idosyncrasy, and diathesis, delivered before the Royal College of Surgeons by Mr. Jonathan Hutchinson, and beautifully reprinted by Wm. Wood & Co., attractive and instructive. Although addressed to a professional audience and presupposing a professional acquaintance with certain fundamental facts, the style is clear and easy, and the general reader will probably be led by its fluency to think he understands it all, while really absorbing a part of it by mere intellectual contact. Such observations as these any one would be interested in: "The comparative immunity of those who use the fish oils as articles of food, and the prophylactic virtues of cod-liver oil among ourselves, are, I believe, established facts, and their lesson is of considerable importance in reference to the dietetic causes of scrofula" (p. 64). "Just as a man who has yielded to intemperance is in danger of becoming a drunkard, so it is with the tissues. The oftener they yield to any special process of inflammation, the more prone are they to yield again" (p. 81). "The occurrence of great difference in color between the eyes and the hair, the eyes being much lighter than the hair—as, for instance, black hair with blue eyes—is probably an indication of delicacy" (p. 14). "The rufous complexion is due not merely to deficiency but to peculiarity in quality, and is probably usually the result of a mixture of dissimilars" (p. 14). These are heteregeneous sentences casually selected.

—Dr. Julius Göbel, who has recently concluded a course of twelve lectures upon German literature at Johns Hopkins University, has contributed to the *Deutsche Schriftsteller Zeitung*, Stuttgart, for March 1, a letter upon "Amerikanisches Piratentum," which may be recommended to German readers in the United States for thoughtful perusal. The writer, who gave evidence of his earnest desire for the best future welfare of his kinsmen in this country in a series of letters addressed to Prof. Karl Biedermann, and published in 1883, under the title, "Ueber die Zukunft unseres Volkes in America," contends, in this article, that the answer to the question so often propounded in Germany, Why is there no original German-American literature developed in this country? must be sought for in the absence of honest relations between the authors of Germany and the piratical publishers of this country. The present "robber system," as he calls it, is denounced as a shame which should be suppressed as quickly as possible. The flooding of the country with dishonestly obtained and consequently cheap reprints, against which the native-born German authors cannot successfully compete, renders it impossible for the latter to earn a livelihood by literary work; and this suppression of home authorship tends to check the healthy growth of the German language in this country:

"Because," Mr. Göbel thinks, "whoever is clear-sighted will probably admit that it is not sufficient for the preservation of the German language in this country to simply import enough German books. Our American-Germans rightfully demand that their own world here, with its joys and sorrows—which is a very different world from that of our fatherland writers—should, sometimes at least, be presented to them in the mirror of art. Especially is this required by our native youth, who will only in this way understand German speech and manners and learn to love them, whereas now they turn mostly to works in the English language, because they do not understand the authors of Germany, and our own fail to satisfy this need."

—A convention for the protection of literary property, therefore, not only would be advantageous to the authors of Germany, but would benefit the German people in the United States. In the meantime, so long as no convention exists, Dr. Göbel suggests that the prominent publishers of Germany enter into negotiations with the more respectable American booksellers either to send over to the latter stereotype plates, or, through a common agent, arrange for the publication of a simultaneous authorized edition. This method would undoubtedly give the authorized American publisher the advantage incident to being first in the field, but Dr. Göbel is in error in believing that such an edition could obtain under our copyright law such protection as would enable the authorized American publisher to pursue and enjoin piratical reprints. He has been misled by supposing that the claim of "copyright" made upon the pirated editions published by George Munro, whose case he cites in illustration of the financial feasibility of his plan, secures to the publisher any rights which would be protected by our courts. Our copyright law does permit the publisher of pirated books to mark his own name upon the stolen wares, but does *not* protect books so marked as the rightful property of the thief. The case related of the fraudulent action of the publisher of a projected journal whereby the editor and designer was dispossessed of his literary property, demonstrates the need in this country of what the Germans call "Verlagsrecht," that is to say, a more clearly defined law of contracts governing agreements of all kinds between authors and editors upon the one side and printers and publishers upon the other.

ANOTHER DIARIST.—II.

Remarks and Collections by Thomas Hearne. Edited by C. E. Doble, Master of Worcester College, Oxford: for the Oxford Historical Society. Oxford: Clarendon Press; New York: Macmillan. 1885.

For books, printed and written, Hearne's eyes and ears are, we may be sure, very sharp, for his own sake, for the sake of letters, and for the Bodleian Library's sake. Sometimes he gives us a glimpse into rare volumes at what has caught his own eye. Thus he has seen a folio volume "in French, fairly written and curiously illuminated, containing the History and Deposition of Richard the Second. What I value it most upon," he says, "is the several Habits of that Age, which are to be known from it. Amongst the rest there is an Irish King, without Stockings, and in a very odd Bonnet upon his Head. 'Tis there said that his Horse cost him 400 Cows. Remember to ask Mr. Cherry for a Sight of this Book." No one, we think, with the least tincture of the antiquarian in him, can keep himself from sharing the wish to see it, and perhaps some of us may be so happy as to find it in the 'Chronicque de la Traison et Mort de Richart deux Roy dangleterre,' of the British Museum, or in some translated shape, illustrations and all. Hearne's was a well-guided eye. Among "the several Habits of that Age," what chiefly struck him was the head-gear of the royal barefoot, which was "very odd"; while we, who have seen a thousand times as many Irishmen as Hearne ever saw (very many of them descendants and heirs of kings), wonder first at "the Habit of that Age" of giving 400 cows for a charger, for in our day three or four pretty good cows ought to be worth a pretty good horse. We see that this kingly steed is as far out of proportion as the horse made by the dole-full Danaäns, which frightened Laocoön, and Capys, and many another Trojan man of sense. To bring the proportion right, one might have inclined to propose the shrinking of the kine into those other milch cattle, strong of head and strongly smelling, which follow the fortune of transplanted Irishmen in the outer streets of our large cities. For the queer-looking bonnet, one might at once have offered a bold guess that it was made of what remained of the stockings so conspicuously wanting to the King's feet. Hearne's staid enthusiasm lays a timely check upon any hasty critical suggestions.

It is curious to find ourselves abreast of "the IId. Edition of Psalmanazar the Formosan's Book giving an Account of his Country," and it is comfortable to find our Hearne (apparently) gratified that he was "still counted a Cheat in London." At the same time, so great and so ready were

Psalmanazar's abilities and learning, that it was no shame to be taken in by him, as many clever and learned men were. It is interesting, too, to stumble upon a critical correction of the text of Shakspere, before the days of "folios," and "quartos," and Colliers, made in a very purpose-like way. In an account 'De Nomine & Familia Barnes,' we find that one eminent member of the family "in Tragoedia *Macbeth* per errorem dictus est Steward, pro Siward." Whoever now looks at the list of characters of that play will find the name written rightly.

Mentions of books are endless, and glimpses into them abundant. Of those of that day which made a stir, Hearne's own party friends wrote their share. Leslie, known to many still as author of 'Short and Easy Methods' (with the Deists, with the Presbyterians, etc.), was busy in political as well as ecclesiastical writing. He was at Oxford at one time as Mr. Smith. Dodwell, a layman, learned as Hearne was, but engaged, as Hearne was not, in the burning discussions of the time, comes up here incessantly: he had been an early friend and had been a teacher of our diarist. One book of his was 'Epistolary Discourse, showing, from Scripture and the first Fathers, that the Soul is a Principle naturally mortal, but immortalized actually by the Pleasure of God, to Punishment or Reward, by its Union with the divine, baptismal Spirit; wherein is proved that none have the Power of giving this divine, immortalizing Spirit, since the Apostles, but only the Bishops.' This was attacked fast enough and sharply enough to keep its author warm with work. He believed "the Air the Receptacle of all souls, good and bad; these, till the Day of Judgment, being under the Power of the Devil, the Prince of the Power of the Air," who "can inflict on the souls of really good Men only some Disquietudes and Molestations, wherein they may be relieved by the Prayers of the Living."

The ticklish temper of the times in which so many pillars of the state were shaky, and none knew which were not, and in which the great body of the clergy were dissatisfied and apprehensive, is curiously shown in the case of a single pamphlet which figures in these pages almost as a living being, raising commotions, now in one place, now in another a great way off. This was '*The Memorial of the Church of England;* wherein divers Intrigues of a great Minister of State are discovered, and the Designs of the Whigs for destroying the Church are manifested.' "The Messenger of the Press is ordered, if possible, to discover the Author, Printer, and Publisher of *The Memorial of the Church of England*, there being several things in it that give great offence at Court, whilst those of the other side are wink'd at, as *The History of the Court of Poland, etc.*" Here a man was suspected of having written it; there another was taken up on that charge. Now it was "said that some great Men have given Bayle upon Mr. Stevens the Printer's appearing Evidence against them"; now several were under arrest. The Duke of Buckingham is at one time said to have written to the Lord Treasurer Godolphin to search no further, as he himself acknowledges the authorship, and is prepared to defend every statement; at another Mr. Lesley (Leslie) is said to have been required to give bail in one thousand pounds to answer for it. There was a 'Vindication of The Memorial,' and it was answered "paragraph by paragraph." The Memorial was presented by the Grand Jury, and burned by the hangman at sundry places. A Sir William Pittett, or Mr. Pettass (qu. Petty?), is "discharged from custody" for a pamphlet in connection with the burning of it. At length the Memorial goes out of the way of living men, like those once famous, evermore forgotten books of Don Quixote's library. Before that time our Hearne had comforted himself with Leslie's discovery that "the Author of *The Memorial of the Church of England* is for the independent State of Nature, & all Government to have its Original from the People, . . . an evident token that 'twas writ by . . . the Whiggish Party, and fathered upon the Honest men, on purpose to bring an odium upon them; just as Mr. Stevens (that notorious Whigg & Fanatick) his Letter . . . was layd upon High Church Men," but "was written by De-Foe, who was pillor'd for it, & glories in it, to this day."

But Hearne's sharpness of eye and ear in matters of Church, and University, and affairs of state may be judged of by his expressions in every direction. It may be granted that his party was pure, as persecuted parties are proverbially said to be. Bishops, priests, and people in it had suffered deprivation. Of the busy writers, Leslie had lost high preferments in the Church; Dodwell, a professorship at Oxford; and so with the rest. Hearne's pen puts things (about non-jurors and their opponents) strongly, and we must make some allowance for him, but cannot allow everything. Bishop Burnett, of course, comes in for suspicion and censure: in one case they are outrageous. Others, too, we may believe, get sometimes more than they deserve of praise or blame. Few English, Irish, Welsh, or Scottish people ever came under his eye without their party color, and certainly party spirit ran high and party lines were strictly drawn. It was such a time that "The Archbishop of Canterbury, 'tis said, will suspend the Prolocutor [Speaker of the Lower House of Convocation (or Synod)] next Convocation, if they continue obstinate, as the last"; and "when the Lower House . . . were ordered by the Bishops to assent to the Address to her Majesty, of their drawing-up, or else give their reasons, the Lower House, instead of giving Reasons for their Dissent, drew up Reasons why they should give none." They were standing for their rights to act and speak freely, if they acted and spoke at all. Convocation (the representative body of the Church) was near the edge of that arbitrary suspension by the state which kept the Church of England, for one hundred and fifty years, without corporate action, or deliberation, or voice—the most enslaved church whose slavery was ever called "establishment."

In one funnily-grave case (which was thoroughly worth an illustration by Hogarth), Hearne seems to be trying to administer a prosaic justice without regard to his non-juror instinct at least, if not without partisan feeling for his own university. Three Oxford dons, the Master of University, the President of Magdalen, and the Provost of Queens, had had a mighty cloud of evil speaking raised about them. They ("and perhaps some others"), says our author, in answer to Dr. T. Smith, an Oxford man in the country, "had stay'd till 9 of the clock, one evening, at the Warden's of New College," but, as to any story of their having been lighted home with nothing but silver tankards taken by mistake for lanterns, and not having found this out till it was found out for them, an ill-savored story of this sort is not to be accepted. "'Tis highly scandalous to say that they drunk to excess; the Warden of New College not being in a very good state of Health, & neither of the others noted for being hard drinkers. However, 'tis true that [the Master of University]'s boy . . . instead of carrying the Lantern, took away a Silver Tankard, which was not perceived till they came home; because the President of Magd. & Provost of Queen's accompany'd him & their men had Lantern's at the same time." Whether this judgment of our author in favor of the three Oxford great men is as satisfying or as fair as Robie Burns's in his own case,

> "We are na fou: we're no that fou,
> But just a drappie in our e'e,"

the reader shall determine after taking in one more fact from Hearne: "THE BOY . . . (who has been guilty of other such crimes) *is since turn'd off*." Did any reader ever know the guilt clapped on the wrong shoulders?—especially a master's upon a servant's? At any rate, we shall all agree, perhaps, that Hogarth could have made as good a thing of this as of any doing of his "rakes" and revellers.

Coming volumes will be fuller.

RECENT FICTION.

A Girton Girl. By Mrs. Annie Edwards. Harper's Franklin Square Library.

Two College Girls. By Helen Dawes Brown. Boston: Ticknor & Co.

Markof. By Henry Gréville. Philadelphia: T. B. Peterson & Brothers.

Roses of Shadow. By T. R. Sullivan. Charles Scribner's Sons.

Stories from Provençe. From the French of Alphonse Daudet, by S. L. Lee. Harper's Handy Series.

A Country Gentleman.—A House Divided Against Itself. By Mrs. Oliphant. Harper's Franklin Square Library.

A Cardinal Sin. By Hugh Conway. Henry Holt & Co. (Leisure Hour Series.)

Lester's Secret. By Mary Cecil Hay. Harper's Handy Series.

'A Girton Girl' and 'Two College Girls' would seem at first sight to furnish the means of comparing the English and American students, but the first title is a misnomer. 'A Would-be Girton Girl,' or 'Why Marjorie Bartrand did not go to Girton,' would have been more exact, for she gets no nearer to it than a Cambridge lodging-house. Nevertheless, we have a pleasant story of the idling life of English people in the picturesque setting of a Channel Island. Tutor and pupil present almost too obvious a combination in the first chapter, but their fortunes are so closely and cleverly interwoven with those of another pair, an artist and the beautiful wife to whose charms he is absurdly blind, that the reader has the chance for a good deal of speculation before the happy ending. The work is not so fine, so well proportioned, as Mrs. Oliphant's. The difference is most marked in the attempt at bad characters. Not that the adjective here means anything more than the universal distinction between good and bad: vanity and selfishness are the worst traits with which Mrs. Edwards has to deal; but the minor vices are the most difficult to set forth naturally. Neither the artist nor the lady who tempts him away from his wife is strongly done. She is not attractive enough to justify his inclination for her, and his conduct to his wife in that regard, as contrasted with what we are told of their former life, is nothing less than cowardly. In point of style, and still more of incident, the book is bright and attractive; far surpassing, in that last respect, American books of its class. Ours seem in contrast, to use one figure, thin, or, in another, patched with bright bits, but with long spaces of dull hue between.

In certain important respects 'Two College Girls' offers a pleasing contrast to some previous novels of the same general purpose. The author has hardly a style of her own, but she tells simply and entertainingly the story of four years of life in a college which she does not name, but which the reader will need no help from the reviewer to identify. Her heroines are chosen on the old plan of foils, and are true to the old conventional types in such stories. The unsophisticated country girl of brains and ambitions, with

sturdy New England principle at bottom, of course finds in her roommate a radiant blonde from Chicago, as scatterbrained and shallow as can be made consistent with cleverness and generosity later on. The life is one of frolics and gayeties, toned down by rare glimpses of recitation-room and chapel, and by one sad episode, plainly after "Arthur" in 'Tom Brown at Rugby.' The hero is duly provided at the outset, and the little romance is worked in and out to a fit climax over the heroine's roses in the glory of Commencement Day. Neither in scene nor in incident is there anything novel. No figure is drawn strongly enough to waken any warm personal interest, and it is possible that the author's design was to picture the general life of the place rather than individuals. The story is made superior to all its predecessors by its perfect good taste, and by a tone which pervades it throughout, and which we only imperfectly describe by calling it moral high-mindedness.

When thus much has been said, we believe we have done the book full justice. What it lacks brings us to graver questions. There is nothing in it, from the first page to the last, that is beyond or above the level of a good boarding-school. There is nothing of growing and deepening maturity, nothing of the sense of the heights and depths of learning—in short, nothing of the intellectual life. The incidents are "candy-pulls," parties, theatricals, picnics, over and again. From such a book, why should it not be thought that the life is, as one girl says her friends believe it to be, "one series of junketings"? It is not because these things are in it that we find the book so gravely at fault, but because there is nothing else. We do not forget how much of festivity there was in the life of the Oxford Tom Brown. Or, by way of extreme illustration, the extravaganza of 'Verdant Green' might be taken. Certainly that hero knew little enough of the intellectual life, but the book gave the sense that he was living in the midst of it. All the fun was intensely heightened by the contrast. Neither in that nor in Hughes's story is it possible for a moment to forget the intellectual atmosphere of the university. The question is serious. Was the author herself unable to see or to portray the real life of the students, or has she, as a faithful witness, betrayed the grievous trouble about her college? Under the last supposition, it would be a pity that the book was much heralded and has been commented on as vivid and truthful. Whether a book has something more or less in it, is a minor matter. What is the actual condition of the colleges (now no longer new) for women, is of much concern. Sensible people saw at the outset that in some things they must differ from colleges for men, but in essentials they must be one. There can be no difference in spirit if the college is the foster-mother, the home of learning, the place where the things of boyhood and girlhood are put by and the serious life of man and woman begun. (That boys and girls are often still boys and girls in college, is not to our point. It is of the spirit that must rule the place to make it worthy the name, that we are speaking.) In Miss Brown's college, lights must be out at ten o'clock. The teacher can be proud "of a fine bit of detective work." There is no moment in which dress is not of paramount importance. There are no books and no talk of books except text-books and novels, and only rarely of either. "To be uninteresting is, to the college girl's mind, the most hopeless of misfortunes." To be a senior is "a perfect social position." Perhaps this is enough for our purpose, which is to induce those who have an intelligent interest in the college education of women to read, to ponder, and to inquire. Has there not been a tendency to the comfortable conclusion that it was all-sufficient to found the colleges? It should not be forgotten that, as yet, life provides no such tests of their excellence and their effectiveness as for the old establishments for men. To make anything like what is known and valued as intellectual life out of purely feminine elements is certainly a heavy task, for at best it takes a constant guard to keep feminine life from growing trivial. All the more it is the all-important, the most imperative duty. As one step in the work, a satisfactory proof that 'Two College Girls' is not a faithful picture would be welcome.

There is nothing in 'Markof' to alter the judgment of Mme. Gréville's work recently expressed in these columns. It has been brought forward as a musical novel, but it bears no comparison with the well-known examples of the type, which more than one language has long since supplied to fiction. Sin, not less sinful because it is not actual crime, is presented as a mere incident of brilliant worldliness—no harm, no dishonor to any one. Besides the moral perversion, the story is spiritually false, for no man over whom the whirlwind has swept was ever left unscathed. That Markof should turn to the little idyl with Hélène, the instant the tempest of passion has passed, is as impossible as that one represented so noble and gentle as he should have publicly insulted her, "because it was the vengeance he had at hand" upon another woman.

Some unfavorable comment can obviously be made upon 'Roses of Shadow,' beginning with the fanciful ambiguity of the title, and going on to the broken and often interrupted plot; for the author, with the lavish hand of inexperience, starts off with three heroes, two heroines, and several side figures of consequence enough to play leading rôles for themselves. He has brought forward again the governess *rediviva*, slightly disguised as a sort of lady-help, but he is not able to justify to the mind of the reader the power she exerts over the three men. Charlotte Brontë could show it in Jane Eyre, or Becky Sharpe would be a better illustration, for Miss Gérard is a cold-blooded little fortune-hunter. Thackeray could give, so that the reader could see it, the charm that made men the worthless woman's slaves. The book as a whole is not equal to its parts, and the parts are worked out so unevenly as to fulness of detail as to make it at times a kind of Chinese perspective. Granting all these defects, the book is still very entertaining, and does not in the end leave the impression of sadness threatened by the Niagara episode. The style is at once easy and refined, conveying most happily that atmosphere of good breeding and polite society which is indispensable to the novel of manners, but which so many of them lamentably fail of. The descriptions have the pleasant quality of not too much, except perhaps the scenes at Niagara, and those are fine in themselves, only they over-weight the story. The bits of Boston are picturesque and original, and this last means the more that they come after both Mr. James and Mr. Howells. Of characters we find far more interesting than any of the leading personages an Italian artist and his New England wife, of an incongruity and a sympathy each equally delightful. The book unquestionably promises a future.

Under the title of 'Stories from Provençe,' the Harpers have published a translation of Daudet's 'Lettres de mon Moulin.' To readers of French (beyond novels) they need no commendation, and they will find only new admirers in their present shape. Though of Daudet's earlier work, they are of a style and fashion upon which he has never since improved. They are unrivalled in grace, humor, and pathos, while now and then a light, swift gleam of satire crosses the page. The visit to the poet Mistral is the most important contribution to literature in the book, but there is enough to satisfy the most different tastes, from a pair of exquisite miniatures in "An Old Couple" to the brilliant dramatic effects in the streets of the Algerine Milianah. The English version is far above the average. Probably the translator would be the first to say that the innermost charm, the delicate perfection, is as impossible of reproduction as the fresh scent of the lavender out of which the curlews called around the old mill.

The two stories by Mrs. Oliphant which oddly ran parallel in the magazines last year—oddly because one is the sequel of the other—seem her least successful work, though she still surpasses all others of to-day in her own line. The difficulties of a marriage between persons of unequal rank, aggravated by innate peculiarities of temper, was not at the outset, so to speak, a happy subject. Mrs. Oliphant is at home only when she comes to the daughters of the house. The dutiful girl, loyal to her lonely father and yet yearning for the mother whom she cannot remember, makes the sort of portraiture in which Mrs. Oliphant is at her best.

'A Cardinal Sin' and 'Lester's Secret' are put together for the sake of a common quality, not because the central idea of each is the same. Each has a lost heir, and in each he or she comes to his own, by marriage, more or less unwitting, with the possible supplanter. Both are crowded with incidents of the usual sort—forgery, kidnapping, burglary, murder; and the thread of the plot is so cunningly and provokingly entangled that no one of the class to whom such stories are addressed will drop it unfinished. It is a class in intelligence and taste far above the readers of dime-novels, and yet almost as far below the class who demand in fiction the permanent elements of literature. The books of both writers have been enormously read. They are standards in their grade. This makes very important the trait for which we have brought them forward. They are very remarkable for their entire purity. This, of course, does not place them any higher in the literary scale, but it is a strong argument against the dangerous theory that novels cannot be made interesting and exciting enough for common people without the stimulants of appeal to passion. Hugh Conway has imagined, near the close of his book, a new situation which is so powerfully worked out as to be quite out of place in the stock scenes and incidents of the rest of the book. An old man, brought up in the faith that confession means forgiveness in this world and the next, deliberately determines to sacrifice his own soul for his son, exactly as he would have laid down his mortal life for his sake. Mr. Conway puts it strongly enough to silence for the moment doubts of probability, and it may be reckoned as a strong imaginative contribution to one side of the discussion of the old question: When is confession not a duty?

RECENT HANDBOOKS OF PHILOLOGY.

THE revolution in the methods of linguistic research which has characterized German science since the year 1876, has thus far found expression almost exclusively in scattered monographs, and in such special investigations of detail as offer little attraction to the unmitiated. The seeker even for mere outlines of information could until recently be referred only to the various important discussions which are to be found scattered through the pages of Kuhn's *Zeitschrift*, Osthoff and Brugmann's *Morphologische Untersuchungen*, Paul and Braune's *Beiträge*, the *Sitzungsberichte* of different learned bodies, and in the special works of men like Leskien, Osthoff, Brugmann, Schmidt, De Saussure, Hübschmann, Sievers, Paul, Kluge, and Bartholomae. The old

standard handbooks are hopelessly obsolete. Papillon's 'Manual of Comparative Philology,' which has been much used in this country and England, never possessed any independent value, and is now worse than useless. Leo Meyer's 'Vergleichende Grammatik der griechischen und lateinischen Sprache' even in its second edition (1882) is, in point of method, a generation behind the times. Fick's 'Vergleichendes Wörterbuch der indogermanischen Sprachen' (3d edit. 1874-76) can be used only with extreme prudence, and the same must now be said even of the carefully prepared fifth edition of Curtius's Greek Etymology (1879). Vaniček's dictionaries are valuable solely for their bibliographical completeness. Corssen's 'Aussprache, Vocalismus, Betonung der lateinischen Sprache' (2d edit. 1868-70), by virtue of its admirable collections of material, will always remain a valuable compendium, but is confessedly unreliable in its explanations of the phenomena with which it deals.

It is with gratification, accordingly, that we notice of late a tendency to produce books of a summarizing character, which shall present in systematic form the results of the most recent investigations. The pioneer book of this sort was the well-known Greek grammar of Gustav Meyer (1880), which is to appear within the next few weeks in a second edition. Kluge's 'Etymologisches Wörterbuch der deutschen Sprache' (1st ed., 1883, price 10½ marks), of which the fourth edition is already in preparation, is abreast of the times and the best existing etymological dictionary of any language. In May of 1885 appeared the admirably succinct Greek Grammar of Brugmann (Freiburg in Baden) and Latin Grammar of Stolz (Innsbruck), both contained in the first volume of Iwan Müller's 'Handbuch der classischen Altertums-Wissenschaft' (price per volume, 11 marks). Next followed in October, 1885, from the pen of the Strassburg professor, Hübschmann, 'Das indogermanische Vocalsystem' (price 4½ marks), a book which, essentially based upon the results of the labors of Osthoff and Brugmann, presents in clear, well-ordered form the phenomena of the Indo-European ablaut as they are understood to-day. The entire material of word-form involved is cleverly arranged in six series (*ă-, ĕ-, ŏ-, ā-, ē-, ō- Reihen*), each of which admits of the four vowel-grades (*Stufen*); *e. g.*, *dhō-* in Gothic *dōms*, 'judgment,' *dhē-* in τί-θη-μι, *dhə-* in θε-τός, *dh-* in Sanskrit *da-dh-másí*. The book presupposes no especial acquaintance with the subject, and with its fulness of illustrative material forms a most admirable handbook.

For the Germanic dialects the press of Niemeyer in Halle has been furnishing an excellent series of concise grammars from the pens of recognized authorities like Sievers, Paul, and Noreen. Now follows a supplementary series, the first volume of which, by Friedrich Kluge (Jena), 'Nominale Stammbildungslehre der altgermanischen Dialekte' (108 pp.), displays the same complete mastery of his material, the same judicious caution in pushing back among prehistoric formations, and the same marvellous compactness of statement, which characterize his etymological dictionary. A similar work for the Greek is much needed. An historical review of German syntax by Professor Behaghel (Basel) is to follow directly, and a 'Mittelenglische Grammatik,' by Kluge, is also in preparation, both to be published by Niemeyer.

Since general attention has been called to the great value of the inscriptions for an exact knowledge of the Greek dialects, a great variety of monographs upon the single dialects has appeared, all finding their point of departure in Ahrens's great work, 'De Graecae Linguae Dialectis,' now being reëdited by Richard Meister of Leipzig. For the Attic dialect as set forth in the inscriptions various valuable collections of material have been made by Wecklein, 'Curae Epigraphicae' (1869), Cauer in Curtius's 'Studien,' vol. viii, and Van Herwerden, 'Lapidum de Dialecto Attica Testimonia' (1880); but since the appearance of the 'Corpus Inscriptionum Atticarum' (Kirchhoff, Koehler, Dittenberger, 1873-83), no attempt has been made to summarize the entire material involved. We now have, however, in neat and compact form, a 'Grammatik der attischen Inschriften,' by Karl Meisterhans (Weidmannsche Buchhandlung, 1885; price 4 marks). The author, hitherto unknown to science, is now professor in the gymnasium at Solothurn (Soleure) in Switzerland, and the basis of his work was, as we understand, a doctor's thesis of the University of Zurich. This work, which covers syntax as well as word-form, will be of the highest value not alone to the linguist, but to the text-critic and classical philologian in general. Important will prove, among many other things, the fixing of doubtful points in orthography—*e. g.*, ὀβολός (not ὀβελός), but in derivatives ὀβελίσκος, διωβελία; πεῖ, χεῖ (names of letters), not πῖ, χῖ; Ἐρχομενός, but Ὀρχομενός only after 271 B. C.; ἐμπόριον, not ἐμπορεῖον; ποεῖν, ποήσω, πόησις, but before an *o*-sound ποιῶν, ἱεροποιοί, etc.; ἕνεκα, not ἕνεκεν. A few more or less important additions are suggested by Otto Reimann in the *Revue de Philologie*, ix. 169 ff.

So much we have. For that we are thankful. Meantime Brugmann is bringing to completion a 'Compendium der vergleichenden Sprachwissenschaft,' which will appear simultaneously in German and in English translation, and Osthoff is busied with the preparation of a much-needed Latin Etymological Dictionary. This unmistakable turn of the tide in the direction of completed works and systematic compendia will be welcomed by many a bewildered student and bookbuyer.

Physical Expression. Its Modes and Principles. By Francis Warner, M. D. D. Appleton & Co. 1886.

THE title of this book is somewhat vague, and so frequently is its style. The author either naturally lacks the art of literary grouping, or else he had not sufficiently reasoned out his subject to enable him to express his thoughts in clear, unmistakable language. Evidently he felt this himself, for he has appended to several of the chapters special summaries which are almost as long as the chapters themselves. Dr. Warner believes that motion, which has been so carefully and satisfactorily studied by the physical experimentalist, has not been sufficiently studied by the physiologist: "I think that movement in living beings is capable and worthy of detailed study. Following on these lines of thought, this work has been written, showing how largely the expression of vital functions may be described in terms of movement—and movement is capable of physical investigation." Expression, then, refers to the outward manifestation of any hidden force. What these vital and mental forces are the author does not attempt to investigate; and to remove all occasion for doubt he coins the special word "mentation," meaning "that physical action of the brain which is associated with the phenomena of mind." Why not the term "cerebration," commonly used in the same sense?

A distinction is made between direct and "empirical" expression. Thus, a pink flower on a geranium expresses the fact that the plant has a feeble constitution, not directly, because there is no direct causal relation between pink flowers and weak plants, but, empirically, because experience has shown us that pink-colored geraniums are found on plants whose leaves are highly colored and deficient in the chlorophyll which is essential to the plant's proper nutrition. The numerous illustrations and analogies drawn from plant life constitute one of the novel features of Dr. Warner's book, as compared with previous works on expression. And he constantly endeavors to give a practical turn to his conclusions. A useful lesson, for instance, is drawn from the analogy which children present to sensitive plants. Experiments described on page 114 show that the poorer the soil in which these plants are grown, the less robust but the more sensitive are they to the touch. Extreme sensitiveness in a child, therefore, expresses insufficient nutrition, and thus becomes a sign of value to the educator and doctor. Doctors, indeed, will be more likely than any other class of readers to reap profit from a perusal of Dr. Warner's book. The remarks made in several of the chapters are valuable as new and accurate descriptions of certain pathological states, especially epilepsy and chorea; and the remarks on and illustrations of the "nervous," the "feeble," and the "convulsive" hand, etc., in chapter ix, are a useful contribution to the study of postures. The curious fact is pointed out that the posture of the hands of the Venus de Médicis is exactly similar to the posture so often seen in nervous children.

Other matters of artistic interest are discussed in the last three chapters. In his analysis of the emotion of beauty, Dr. Warner falls into an old mistake of the Scotch school of philosophy. "A well-dissected anatomical preparation," he says, "may excite in one man the expression of the sense of beauty, but in another it may excite the expression of pain." The feeling excited by such a preparation is an *intellectual*, not an æsthetic emotion; and it is by not distinguishing these that so much confusion has been created by writers on "taste." On the other hand, in the chapter on expression in the eye, it is pointed out that the varying size of the pupil is a mode of expression, thus correcting the erroneous view, held by Magnus and others, that the eyeball itself is void of expression, the muscles surrounding it being alone responsible for the signs of emotion in that part of the countenance. The problem as to the relations between beauty and intellect is repeatedly alluded to, but no new light is thrown on it. Dr. Langdon Down's remark, concerning idiots, that "the prognosis is, contrary to what is so often thought, inversely as the child is comely, fair to look upon, and winsome," may find its explanation in the fact that such a child is apt to be more delicately organized and less robust than one of the opposite qualities.

That the common notion that a man who has just suffered some great disappointment makes "a long face" is not a mere figment of the imagination, is clearly shown on page 202. Dr. Warner has ascertained by accurate measurement that one side of a paralyzed face may be three-quarters of an inch longer than the other. "A relaxed condition of the facial muscles, allowing the face to fall and lengthen, is the outcome of feeble nerve-currents coming down from its nerve-centres. A long face may, then, indicate a weakened brain-force, and this often accompanies the mental condition following from a sudden disappointment. Another factor in producing a long face as a temporary condition is the falling of the lower jaw."

Studies of Family Life: A contribution to Social Science. By C. S. Devas. Catholic Publication Society. 1886.

THIS is a tract by a follower, one judges, of M. Le-Play, in the interest of the rehabilitation of the family for philanthropic and religious ends. It falls, however, into two tolerably distinct parts: one learned and scholarly, in which the constitution of the family in Pagan civilization is broadly described, and the other expository of Catholic

dogma and Protestant mischief, in which the Christian family is similarly treated. With the former, one is concerned only to observe that it is a capital summary of the legal or religious family rights and customs in China, in Roman law, in ancient Egypt, etc., and secondly that the author turns aside from his main purpose to offer several considerations in opposition to the theory that monogamy is developed out of communal marriage. To this point he argues with acumen and force, mainly by insisting that the phenomena thought to bear traces of communal marriage have been so massed as to give them an unjustifiable prominence and weight relatively to the whole body of the phenomena; and he further attempts to turn the flank of his opponents by suggesting eight or ten hypotheses other than that of an original community of wives, to explain the facts brought in evidence.

This elaborate study is made to bring out in its true relief the great boon to civilization of Christian, and especially Catholic, marriage, which is lucidly explained on the theological side; and as it was necessary for the author's purpose to show that later departures from Christian marriage, and that of Rome in particular, were instances of degeneration, both moral and social, the Mohammedan and Protestant family are finally considered. In this part Americans will find interest and entertainment, for the capital example of degeneration—next, perhaps, to that involved in the "civil" marriage of the irreligious French peasantry—is the home of the "north-eastern Americans," by which generally speaking is meant New England. For the descendants of the Puritans to see themselves as Mr. Devas sees them will not be a cause of pride. The worst of it is, that he has built up his idea of Massachusetts and Connecticut homes, to no inconsiderable degree, out of the mouths of those persons among us, mainly clergymen and scholars, who, in their vehement cry for reform in certain features of our life, have denounced with thoughtless generality and conscienceless rhetoric some of our institutions, notably the public schools. But even the most hardened reformer will stand aghast at a description of our public schools which presents them as a nursery of filial ingratitude and precocious vice—an intellectual and moral pest-breeder. That Mr. Devas, who appears to be a scholarly and rational man, though with a pronounced *Tendenz*, should be able to support, and superficially to ground, his characterization of a Massachusetts school on quotations and reports from native observers, should be a lesson in truthfulness and the moral responsibility of speech to some of our agitating reformers. How far he is from the facts, however, is illustrated by his speaking of Chicago as "morally in the Northeast, though physically in the West," and then lumping that city with Boston and referring to the awful turpitude of "young America" along the whole parallel. This Pompeian debauchery of our most cherished institution, however, is only one of the charges against our "after-Christian" civilization. The practice of divorce and the infertility of American women of the old stock, of course, complete the case, which has as a clincher the tendency of the law to view the wife as independent of, and in some respects hostile in interest to, the husband.

It is beside our purpose to argue against this view of the decadence of family life in "the Northeast." To some of the features insisted on by Mr. Devas we have continuously drawn attention, and we invite notice to his book now because, notwithstanding its painful or ludicrous exaggeration and fabrications, it is a serious discussion of serious matters. It is but fair to add, however, that the most universal and active cause of the loosening of family attachments here, namely, the settling of a vast extent of country in a brief time by a general migration of individuals, is not alluded to by the author; and in this cause there is no social or moral unsoundness. Upon this branch of the subject a whole chapter might be written. The conception of marriage as a civil instead of a religious union has much less to do with the matter than this, and in comparison sinks out of sight. Mr. Devas fails here because he has not taken into account the national conditions under which our institutions are working. In the other parts of his work he has better success and is worth attention.

Berlin som tysk Rigshovedstad. Erindringer fra et femaarigt Ophold. Med mange större og mindre Afbildninger. Af Dr. Georg Brandes. Copenhagen: P. G. Philipsens Forlag.

Doctor Georg Brandes is at present engaged upon a thorough revision of his great work, which appeared simultaneously in Danish and German, and of which the German title is 'Hauptströmungen der Literatur des neunzehnten Jahrhunderts.' This work, in five large octavo volumes, of which the last was published in 1882, describes the currents and forces predominating in the literature of England, France, and Germany from the beginning of the century down to the year 1848. It is not only remarkably comprehensive and exhaustive, but is at the same time enlivened by a style which has secured the author the enviable title of the Taine of the North, though the work differs widely in plan and scope from Taine's 'History of English Literature.' In 1877, Doctor Brandes, failing to secure the much-coveted prize of a professorship in the Danish University, and feeling keenly the force of the old saying that a prophet is not without honor save in his own country, retired into voluntary exile, and became domiciled in Berlin, where he remained five years. Here he continued his literary labors, and, being a perfect master of the German language, he also succeeded in finding abundant employment and appreciation of his rare talents as a public lecturer. Leading German magazines vied with each other in securing essays from his pen, and these were in due time gathered and published in book form. We are not writing a history of Brandes's literary life, but may note the fact as evidence of his remarkable industry and fertility that, although he is but forty-four years of age, his published works already number *twenty-one* volumes. Only one of these ('Benjamin Disraeli,' published by the Harpers in the Franklin Square Library) has, we believe, appeared in English, and it seems strange that no English or American publisher has been found for so conspicuous a contribution to the world's literature as his 'Hauptströmungen,' especially since the fourth volume treats exclusively of English literature in the first half of the present century, with Byron as the central figure in the group therein portrayed.

In the spring of 1883, Brandes's Danish friends invited him to return to his native city. The invitation was coupled with an offer of 4,000 *kroner* (about $1,000) a year for ten years, the money being raised by voluntary subscriptions, on condition that he should reside in Copenhagen and deliver a course of lectures on literature every autumn. The terms were accepted by Doctor Brandes, and each year when his lectures are delivered the rush to hear him is so great that standing room is not to be had, and although the same lecture is given two evenings in succession, still many fail to secure admittance.

The last work by Brandes reviewed in our columns was his 'Moderne Geister,' a series of sketches of eminent literary men of this century, among whom were John Stuart Mill, Paul Heyse, Ernest Renan, etc. Dr. Brandes had personally known the most of the characters portrayed, and his description of his intercourse with them is not the least fascinating element in that book. Since its publication in German, 'Moderne Geister' has appeared in a Danish dress, styled 'Mennesker og Værker i nyere europæisk Literatur' (Men and Works in Modern European Literature), though some of the persons sketched in the German have been omitted, and others added, in the Danish edition. Then followed a volume, 'Det moderne Gjennembruds Mænd' (The Representations of the Modern Revival in Scandinavian Literature). It contains pen portraits of Björnstjerne Björnson, Henrik Ibsen, I. P. Jacobsen, Holger Drachmann, Eduard Brandes (a younger brother of the author), Sophus Schandorph, and Erik Skram. These seven writers represent the new realistic tendency or school in modern Scandinavian letters, and in a spiritual sense they may all be called sons of Georg Brandes. Some of them are much older in years than Brandes, but it was he who first hoisted the realistic banner and founded in the north the so-called European school.

The founder of the Danish drama and of modern Danish literature is the Norwegian Ludvig Holberg, who was born in Bergen, Norway, December 3, 1684. The anniversary of the second centennial was celebrated throughout Scandinavia, but particularly in Bergen and in Copenhagen, with great enthusiasm. In connection with this event, Dr. Brandes published his 'Ludvig Holberg,' a handsome octavo volume of over 300 pages, which will always rank with his ablest productions. It gives us a most charming description of Holberg's youth, of his contemporaries, of his travels, of his character, of the sources of his literature, and of his struggles for existence. It is a model biography, showing a profound knowledge of the age in which Holberg lived and a thorough acquaintance with all his works. Holberg is frequently represented as having simply adapted Molière to the Danish stage; but Brandes meets this charge, and shows most skilfully and conclusively, from contemporaneous history and biography, that the characters represented in the comedies actually existed in Holberg's time in Denmark. Brandes also succeeds in demonstrating that Holberg was, contrary to what has generally been asserted, a friend of womankind. He produces passages from Holberg's works showing that he was far in advance of his time in regard to the question of woman's rights, and that he advocated her emancipation in a manner that would have delighted the heart of John Stuart Mill. The whole work abounds in new views and new suggestions, and expresses the old facts in a fresh and fascinating manner.

'Berlin som tysk Rigshovedstad' (Berlin as a German Metropolis) is a volume of 566 octavo pages, profusely illustrated, and contains the author's reminiscences of his five-years' residence in that city. About forty portraits of distinguished persons, and as many other pictures, adorn the work, which is written in the form of letters, the first dated July, 1868, when the author received his first impression of the city, and the last October 30, 1882, when he bade good-by to his Berlin friends and returned to Denmark. Brandes is a sort of "looker-on in Venice," and presents a bird's-eye view of life in the metropolis, discussing all manner of subjects—politics, art, religion, the markets, theatres, literature, science, museums, elections, society, Christmas festivities, music, and so on *ad infinitum*. In one letter he discusses the Socialists and the Socialist Law, in another the Emperor, in another types of German women; then we have epistles on Bismarck, on the Jews in Germany (Brandes is himself a Jew), on a ball at court, on the would-be assassin No-

biling, on Russian atmospbere in Berlin, etc. Brandes looks upon the city, not with the eyes of a tourist, but rather with those of an adopted citizen. In other words, the book is more a discussion of the physiognomy and life of the city than an external description of its galleries, theatres, halls, churches, and dens. He has not visited Berlin for the purpose of describing it, but he has unconsciously become naturalized, and thus he writes his letters almost with the sympathy of a native. The intrinsic value of this work may not be very great. It is, as we have indicated, rambling and disjointed, but Brandes never fails to be interesting. He never fails to get at the vital point, and his fascinating style never forsakes him. For leisure-hour reading 'Berlin' is an admirable book.

Books and Bookmen. By Andrew Lang. George J. Coombes. 1886.

THESE agreeable essays—on Literary Forgeries, Curiosities of Parish Registers, The Bookmen at Rome, Bibliomania in France, etc., etc.—are mostly informal *précis* of books. Reviews they cannot be called, though many of them have appeared in reviews. They are the clever surface play of a mind stored with abundant and varied reading, and in them Mr. Lang's characteristic humor is mingled with and sometimes heightened by unexpected applications of his classical scholarship in particular. Collected and printed without his supervision or correction, their ephemeral quality has not been lessened, or their careless origin disguised, as when, in the chapter on Bibliomania in France, we are twice told in the course of four pages that Bossuet detested Molière. Nor will posterity, without a commentary, comprehend Mr. Lang's sly allusions to passing events like that in the story of the future Pope Innocent X.'s pilfering: "'What a shame that such a man should have such a book,' said Pamphilio to himself, and proceeded to make his frontier more scientific by slipping the history under his *soutane*." However, posterity has not yet arrived on the scene, and there is certainly a present charm in Mr. Lang's "unmethodic *causerie*," as he calls it, and irrelevant chat as we must sometimes pronounce it when it wanders so far from the immediate title and pretext as it does in the paper on Bookbindings. And quite enjoyable are the ballades "of the Real and the Ideal" and "of the Unattainable," which usher in and close the collection of essays.

The publisher has striven to make a pretty book, and has succeeded fairly well with the aid of the Riverside Press and by dint of numerous illustrations—two bindings reproduced in color; title-pages and printers' emblems in the chapter on Elzevirs; and specimen ghosts in the discourse on Japanese Bogie-books. The initials, head and tailpieces, etc., however, being "process" copies of pen-work, are out of key with the excellent typography, as is usually the case.

Curiosities of the Old Lottery. No. 1 of the Olden Time Series: Gleanings chiefly from old newspapers of Boston and Salem, Mass. By Henry M. Brooks. Boston: Ticknor & Co.

AN hour or less may be spent very pleasantly over this little volume, in which we should criticise chiefly a certain disorder, or rather avoidance of natural arrangement and juxtaposition, in the selections. Thus, the paragraph at the head of page 29 should have occupied the same place on page 26, and that at the head of page 31 should rather have concluded page 41—the topics in both cases being identical. Mr. Brooks makes 1826 the approximate date at which lotteries began to be prohibited in Massachusetts by law; but long before that, as he shows, the public conscience was uneasy on the subject. A genuine "Friend to Religion" inquired through the *Columbian Centinel*, in 1791, whether the General Court of Massachusetts might not "grant a Lottery for the purpose of supplying every person in the eastern part of the Commonwealth with a Bible, who is unable to purchase one, and for the pay of a missionary." This was hardly satirical, considering how often the advancement of religion and of education was adduced as a motive for investing in lotteries, as well as for passing the acts which established them. Churches, schools, and colleges resorted to this means of raising the wind. The laudable "disposition of Government to foster our infant manufactures" was likewise manifested in 1791, but lotteries became a clumsy instrumentality after the protective system had been forced upon New England and the country by the South in 1824, and they disappeared almost simultaneously, as we have noticed above. It is painful to infer in 1760–62 an "unfriendliness" in the public mind towards gold. The managers went as far as they dared to the rescue of the debtor class in announcing that "Gold as well as Silver will be received for Tickets, and the Prizes paid off accordingly." Their considerateness was further shown in devices for turning blanks into prizes. Dartmouth College in 1796 offered, among others, four prizes of $500 each, one to be "placed to the first drawn blank, and the other three to the three last drawn blanks." Harvard improved on this in 1811, and distributed from $20,000 to $50,000 to the "adventurers" who drew blanks. Failure to call for one's prize was taken to argue a large-hearted benevolence, and the money was swept into the net earnings. Due publicity was given to the good fortune of servant girls, apprentices, and Africans, sometimes with the simple comment that "it has excited a smile in the cheek of poverty, nor diminished the pleasure of those in easy circumstances"; but sometimes with a devout poem, like that on the "Castalian Fount," inspired by the prize of $1,500 being drawn by the poor widows of Marblehead, and "written there" in 1790.

Mr. Brooks has added much to the intrinsic quaintness of his text by reproducing the old advertising cuts, tail-pieces, bands, etc.

Geschichte der Jüdischen Literatur. Von Gustav Karpeles. Berlin. 1886. New York: Westermann.

THIS book fills a gap in general literature, and does it very creditably. It is comprehensive, yet free from all bibliographic pedantry; popularly attractive by its form and diction, and yet abounding in information and reflections valuable to the learned. In six sections, it offers a grand view of all Jewish literature—Biblical, Hellenistic, Talmudical, Arabo-Iberian, Rabbinical, and modern. The historical background and environments are clearly, and often strikingly, illumined at every period in special introductory chapters. The poetical portions of the literature are reflected in ably though freely translated fragments. The grouping of facts and observations is very skilfully carried out, and nothing is neglected that is calculated to cast a pleasant light upon the vast, complicated, and to most readers little known subject. But in this very rich anthological illustration and bright illumination lies also the weakness of the work. The author sins by an excess of enthusiasm for his subject, which he evidently feels, and by excessive efforts to communicate it to his readers. He has composed a glowing epopee of the Jewish mind, viewed in its original national creations, its varied adaptations and endless struggles. The shadowy sides of its development and its aberrations are but gently touched upon, or apologetically extenuated. Its thorny path across the long centuries of persecution and darkness appears strewn with roses. Severe criticism is exercised only where—as in the case of the scandalous forgeries practised by Jewish writers of Alexandria under the Ptolemies—no decent excuse can be found in hostile external pressure. In Biblical matters preference is generally given to critical views not characterized by radical destructiveness. The author indulges freely in extracts from other writers, duly furnished with quotation marks, but without the mention of a name or a title. The book is entirely without references or notes, and offers throughout a smooth and handsome appearance. To readers unfamiliar with works like those of Zunz, Jost, Sachs, Geiger, Graetz, or Derembourg, it will be a mine of curious information. To anti-Semites it will be shocking.

North Borneo: Explorations and Adventures on the Equator. By the late Frank Hatton. With biographical sketch and notes by Joseph Hatton. Illustrated. London: S. Low. 1885. Pp. xiv, 342, 8vo.

THE story of Frank Hatton's short life is quickly told. Born in 1861, he very early showed evidence of fondness for scientific studies, which his father, the well-known author, wisely encouraged by sending him to the Royal School of Mines in London. Here his ability was so marked that the British North Borneo Company sent him, though but a lad of twenty, as its mineral explorer to Borneo. He entered upon his duties with enthusiasm, and during the next fifteen months made various journeys along the coast and into the interior, searching—with but indifferent success, it must be said—for evidences of the mineral wealth which the country was supposed to contain. In these expeditions, which led him into regions previously unvisited by Europeans, and inhabited by tribes of inveterate head-hunters, he showed great courage and tact in dealing with the natives, and gave promise of making a name as an explorer. Unfortunately, he accidentally shot himself while returning from one of these expeditions, and died March 1, 1883. Among his effects were found diaries and memoranda of his various explorations, which he had intended to use in writing an account of the country. These form the second part of this volume, the first being a biographical sketch by his father.

As Frank Hatton was a good observer and had some literary skill, these fragmentary records have much in them of interest. They do not give a very favorable impression of England's new possessions, although they are doubtless valuable from a strategical point of view, being on the high road, as it were, between China and Australia. Its mineral wealth is apparently small, and the country is so thinly inhabited that it will probably be long before any large gains can be made from the agricultural products. In fact, one of the chief difficulties with which a traveller in the interior has to contend is a scarcity of food. The superstitions of the natives also proved at times insurmountable obstacles. The Dusuns attribute "anything, whether good or bad, lucky or unlucky, that happens to them, to something novel which has arrived in their country. For instance, my living in Kinoram has caused the intensely hot weather we have experienced of late." A chief objected to his passing through his country because "I took heat; and Gensalong did not want either heat or me." Several times he was made a "blood-brother" of the natives, in each case with different rites, though the killing of a cock was common to them all except the Bendowen Dusuns. Their peculiar ceremonial began with the assembling of the whole tribe in the jungle,

which was cleared for about twenty yards, and, a hole being dug a foot deep, a large water jar was placed in it.

"The clay taken out to make the hole was thrown into the jar, and now the 'old men' commenced declaiming, 'Oh, Kinarringan, hear us!' —a loud shout to the Kinarringan. The sound echoed away down the valleys, and as it died a stone was placed near the jar. Then for half an hour the old man declared by fire (which was represented by a burning stick), by water (which was brought in a bamboo and poured into the jar), and by earth, that they would be true to all white men. A sumpitan [blow-gun] was then fetched, and an arrow shot into the air to summon the Kinarringan. We now placed our four guns on the mouth of the jar, and each put a hand in and took a little clay out, and put it away. Finally several volleys were shot over the place, and the ceremony terminated."

A curious method of cultivating rice is by sowing the seed on rafts which are covered with earth and anchored in a river, "where they are kept moist. Very quickly the rafts become green floating islands. Then the women transplant the grain" into ground which has been prepared for it. The custom of head-hunting seems to be gradually dying out, though still practised to some extent in the interior. Mr. Hatton seems to have been as unsuccessful as previous travellers in discovering the secret method by which the natives forge their finely-tempered sword blades, which are often beautifully inlaid with brass.

The illustrations add much to the interest of this work, and an admirable map shows Mr. Hatton's journeys very clearly, and is also an evidence of how much has been accomplished in the exploration of the country belonging to the British North Borneo Company.

BOOKS OF THE WEEK.

Anderson, J. Scotland in Pagan Times. Edinburgh: David Douglas.
Bancroft, H. H. History of the Pacific States of North America. California, Vol. IV. San Francisco: A. L. Bancroft & Co.
Blind, M. Madame Roland. Boston: Roberts Brothers. $1.
Bosboom-Toussaint, A. L. G. Major Frank. Harper & Brothers. 20 cents.
Brooks, H. M. Days of the Spinning Wheel in New England. Boston: Ticknor & Co. 50 cents.
Burnham, Clara L. Next Door. Boston: Ticknor & Co.

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Triumphant Democracy,

OR

Fifty Years' March of the Republic.

BY

ANDREW CARNEGIE.

1 Vol., 8vo, $2.00.

"The most eulogistic glorification of the United States ever written."—*New York Herald.*

Every American who reads this eulogy of his country and of her institutions, will be the better for it. Mr. Carnegie, though foreign born, exhibits an enthusiastic love for the land of his adoption which the native citizen, born to political rights and privileges, finds it difficult to understand. In his graphic style he has described the wonderful growth of the country during the past half century, a growth unequalled in history, ancient or modern, which has made the Republic the richest and most prosperous nation in the world. A vast array of facts and valuable statistics are given, not in dry tables but "sugar-coated," as the author says, interspersed with anecdotes and illustrations, rendering it one of the most entertaining works ever published. "It will be read with zest," says the *Herald*, "on both sides of the Atlantic."

"We recall no work in which the material progress, the rate of development, and the boundless variety of resources of the United States are displayed more completely, none in which the comparison with other countries is drawn more effectively, and none in which a more brilliant use is made of figures."—*New York Tribune.*

Charles Scribner's Sons,

743-745 Broadway, New York.

The Nation

VOL. XLII.—NO. 1088. THURSDAY, MAY 6, 1886. PRICE 10 CENTS.

NOVELS FOR SUMMER READING.

The Cream of German Fiction.

MRS. WISTER'S TRANSLATIONS.

Now Ready.

VIOLETTA.

Public Library 1887-88

A ROMA[illegible]

After the German of Ursula Zoge von Mant[illegible]. 12mo. Cloth. $1.25.

"It is a fair presumption that anything translated by Mrs. Wister is worthy of attention, for she has never yet deceived the public, and she has a singular facility for ascertaining and appreciating what the American reader wants. Her translations of Marlitt, Streckfuss, and others have met with deserved popularity, growing more and more extensive with each issue, until her latest work, 'The Lady with the Rubies,' stamped her as a literary discoverer and caterer with broad tastes and cosmopolitan impressions. 'Violetta' is not a whit less worthy than any of the previous Wister translations. In brief, this novel is thoroughly charming, and should receive a wide and growing circle of readers."—*St. Louis Republican.*

"This is a charming story, and, although romantic in tone, preserves the natural to an eminent degree. It is a story of German high life, and of course cannot be prosaic. In giving this book to the public, Mrs. Wister has made an excellent selection from German light literature. It is a book that everybody can read with pleasure and profit."—*Charleston News and Courier.*

THE LADY WITH THE RUBIES	$1 25	*VAIN FOREBODINGS*	$1 25
A PENNILESS GIRL	1 25	*QUICKSANDS*	1 50
BANNED AND BLESSED	1 50	*A NOBLE NAME*	1 50

He is competent to execute technical writings in chemistry and the mechanical arts. He is a good reader, with correct accent in several languages; of reliable, steady habits and painstaking. References given; terms moderate; permanent engagement preferred. Address CHARLES GUILLOU, M. D., 160 Second Avenue and 10th Street.

BOYS.—A HARVARD GRADUATE would pass the summer with a small party of boys of *good character* at Parmachenee Lake, near the headwaters of the Magalloway River, Maine. For particulars address "PARMACHENEE," Care of the *Nation*.

MISS A. C. MORGAN, PRINCIPAL of Young Ladies' School, Portsmouth, N. H., announces her European Trip for Ladies, for the Summer of 1886.
Please send for itinerary.

THE MISSES K. E. FARRAND, L. E. Harris, and F. M. Lyon, of Detroit, Michigan, will accompany a limited class of young ladies to Annisquam, Massachusetts, for the summer.
An opportunity for studying seaside plants and animals will be offered. Mr. H. H. Ballard, Principal of Lenox Academy and President of the St. Nicholas Agassiz Association, will be one of the party and will aid in the instruction.
For further particulars address
Miss FLORENCE MAY LYON,
No. 22 Charlotte Avenue, Detroit, Mich.
REFERENCES BY PERMISSION:
Dr. J. B. Angell, President of Michigan University.
Dr. C. K. Adams, President of Cornell University.
Prof. Mark W. Harrington, Michigan University.
Mr. S. A. Farrand, Principal Newark Academy.

*WANTED.—'COST OF TRANSPOR*tation to the Seaboard,' by Fink. Quote price to W. B. CLARKE & CARRUTH,
340 Washington Street,
Boston.

HARVARD UNIVERSITY.

Four Morgan Fellowships of the annual value of $500 each are to be assigned for the year 1886-87 to persons undertaking advanced studies in the departments in which the degrees of Doctor of Philosophy and Doctor of Science are given. Applications should be addressed by May 15 to the Secretary of the Academic Council, Cambridge, Mass.

UNIVERSITY OF VIRGINIA.

SUMMER LAW LECTURES (nine weekly) begin 8th July, 1886, and end 8th September. For circular apply (P. O. University of Va.) to JOHN B. MINOR, Prof. Com. and Stat. Law.

Summer Course in Botany,

AT THE BOTANIC GARDEN OF HARVARD UNIVERSITY,

CAMBRIDGE, MASS.

The Course will begin Thursday, July 1, *and end Saturday, July* 31, 1886.

Instruction will be given in the Principles of Morphology, Outlines of Descriptive Botany, and the Elements of Vegetable Physiology, by Professor Goodale.

Mr. F. L. Sargent will give instruction in Methods for identifying Flowering Plants and the more common Cryptogamic Genera.

The course is designed especially for teachers.

For the course, $25.00. For further information, address Mr. F. L. SARGENT, 417 Broadway, Cambridge, Mass.

AMERICAN LIQUEURS AND CORDIALS.

"A careful analysis shows them to be made from the best of American ripe fruits, berries, cane sugar, &c."—*American Analyst*.

For sale in great variety of flavors by fancy grocers. Manufactured by
RHEINSTROM BROS.,
New York and Cincinnati.

Unmounted Photographs

OF ANCIENT AND MODERN WORKS OF ART,

Embracing reproductions of famous original paintings, sculpture, architecture, etc. Price, cabinet size, $1.50 per dozen. Send 10-cent stamp for catalogue and supplement of over 7,000 subjects.

SOULE PHOTOGRAPH CO.,
Publishers, 338 Washington Street, Boston, Mass.
Please mention the *Nation*.

BROWN, BROTHERS & CO.,
59 WALL STREET,
ISSUE COMMERCIAL AND TRAVELLERS' CREDITS

Summer School of Languages

At AMHERST COLLEGE, Amherst, Mass.

Tenth Session, July 5th to August 6th.

Twenty-one Teachers. Instruction given in *Nine Languages*, also in *Early English, The Philosophy of Syntax, Chemistry, Mathematics, Art*, and *Music*. Location one of the most beautiful and healthful in New England.

For circular and programme address PROF. W. L. MONTAGUE, Amherst, Mass.

SUMMER COLLEGE OF LANGUAGES.

BURLINGTON, Vermont (University). July 12th to August 20th.

For Rooms and Board address W. A. DEERING, Secretary U. V. M., Burlington, Vt. For Programmes address the President, L. A. STAGER, 304 Garrison Ave., St. Louis, Mo.

The Sauveur College of Languages,

REMOVED FROM

AMHERST and BURLINGTON to OSWEGO, N. Y.,

July 12 to August 20.

The Programme of the *ELEVENTH SESSION* of the College may be found at F. W. Christern's, 37 W. 23d St., New York, and Carl Schoenhof, 144 Tremont St., Boston, Mass., and will be sent to applicants by DR. L. SAUVEUR, Green Street, Germantown, Pa.

For Rooms, Board, and Railroad Fares address Hon. A. C. MATTOON, Oswego, N. Y.

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with Physicians who treat mental or nervous disorders. Not a secret. Formula on every label.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion; refreshes weakened vital powers in old or young. A Vital Phosphite, not a Laboratory Phosphate.

It is used by the Emperor Dom Pedro, Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

For convenience of subscribers wishing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,

in regular book form, ready for use by any bookbinder, who will put in the numbers for a small charge. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, postpaid.

These covers will fit all volumes from XXXIII. to XL., *i. e.*, since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering state the volume-number wanted.

Address Publisher of the *Nation*, Box 794, New York.

A General Index to the Nation.

Vol. I.—From July, 1865, to September, 1880. $2.50.
Vol. II.—From October, 1880, to October, 1885. $1.25.

No trade or other discounts. Purchasers will please remit with order. Address Publisher of the *Nation*, Box 794 New York or Q. P. INDEX Bangor, Maine.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes, Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840

*GERMAN SIMPLIFIED. Eminently prac*tical. 12 Numbers, 10 cents each. Prospectus mailed free. Prof. A. Knoflach, 140 Nassau St., New York.

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

Memoirs of General W. T. Sherman.

New edition, revised, and with Additions. With numerous Maps and Portraits. Two vols., 8vo, cloth. Price, $5.

This edition of General Sherman's memoirs has been thoroughly revised, and contains two new chapters and important appendices. Fifteen maps and several portraits, not given in the first edition, enrich the present issue. The portraits consist of engravings on steel of Generals Sherman, Thomas, Schofield, and McPherson, and a phototype group of corps commanders. The new chapter at the end of the work, entitled "After the War," throws light on recent controversies in regard to President Johnson's purpose in wishing to send General Grant to Mexico. The appendices contain numerous letters from army commanders bearing upon events of the war. Although considerably enlarged, its price has been reduced.

II.

Teacher's Hand-Book of Psychology:

On the Basis of the "Outlines of Psychology." By James Sully, M.A. 12mo, cloth. Price $1.50.

"The present work is based on the writer's larger work, 'The Outlines of Psychology.' By considerably reducing and simplifying the statement of scientific principles there presented, and expanding the practical applications to the art of education, he hopes he may have succeeded in satisfying an increasing felt want among teachers."—*From the Preface.*

III.

Aliette (La Morte).

A NOVEL. From the French of OCTAVE FEUILLET, author of 'The Romance of a Poor Young Man,' etc., etc. 12mo, paper cover, 50 cents; half bound 75 cents.

'La Morte,' which we publish under the name of 'Aliette,' has been the great success of the season in France, fifty thousand copies having been sold within a few weeks of publication. It is a novel bearing upon certain vital questions of the hour, especially as regards the radical results of the differences between religious and agnostic training.

"M. Feuillet has made a very strong hit in 'La Morte.'"—*London Saturday Review.*

"Merit of a most unusual kind."—*London Athenæum.*

IV.

Songs and Ballads of the Southern People, 1861-'65.

Collected and edited by FRANK MOORE. 18mo, cloth. Price, $1.

"This collection has been made with the view of preserving in permanent form the opinions and sentiments of the Southern people, as embodied in their 'Songs and Ballads of 1861-1865': which, better than any other medium, exhibit the temper of the times and popular feeling. The historical value of the productions is admitted. Age will not impair it."—*Note to Readers.*

*** *For sale by all Booksellers, or will be sent by mail, post-paid, on receipt of the price.*

D. APPLETON & CO., Publishers,

1, 3, & 5 Bond Street, New York.

MACMILLAN & CO.'S NEW BOOKS.

A NEW NOVEL.

DAGONET THE JESTER.

12mo, $1.25.

"One of the most excellently conceived tales we are acquainted with. The story is very simple; just a love tale of a poor jester who has been expelled from his lord's castle, a blacksmith's son who becomes a scholar, and two simple good English maidens."—*Academy.*

"Altogether the book is rich with reading, and will doubtless attract considerable attention. If the author be a new writer, he is to be congratulated in his maiden effort, if he be a practised hand, disguising himself for the nonce under the cloud of anonymity, he can be none other than Mr. Shorthouse."—*Oxford Review.*

MR. D. CHRISTIE MURRAY'S NEW STORY.

AUNT RACHEL.

A Rustic Sentimental Comedy. By D. Christie Murray. 12mo, $1.00.

"'Aunt Rachel' is an excellent piece of work, in some respects the best he has done."—*Athenæum.*

"The most artistic achievement we have yet had from his pen."—*Academy.*

A New Novel by Mrs. Oliphant.

A COUNTRY GENTLEMAN AND HIS FAMILY.

By MRS. OLIPHANT,

Author of 'The Wizard's Son,' &c. 12mo. $1.

"Mrs. Oliphant's new book will reward the student of character who will peruse it in a leisurely fashion."—*Athenæum.*

A New Story by C. M. Yonge.

CHANTRY HOUSE.

By CHARLOTTE M. YONGE,

Author of 'The Heir of Redclyffe,' &c., &c. 12mo. $1 50.

Mr. James's New Story.

THE BOSTONIANS.

A NOVEL. By HENRY JAMES,

Author of 'The Portrait of a Lady,' &c., &c. 12mo, $2.

"He is easily the greatest of our modern American society novelists."—*Boston Beacon.*

"'The Bostonians' seems to us by far the most important novel Mr. James has written."—*Boston Courier.*

"Mr. James's novel is brilliant, full of points, and eminently readable."—*London Academy.*

"Condensed into one volume, 'The Bostonians' would be as good as anything Mr. James has ever written."—*Athenæum.*

"On the whole . . . we can truly say that we have never read any work of Mr. Henry James which had in it so much that was true and original."—*London Spectator.*

"Contains some of his brightest writing. . . . Very superior to the pretentious 'Portrait of a Lady.'"—*St. Paul Pioneer Press.*

Mr. F. Marion Crawford's New Novel.

A TALE OF A LONELY PARISH.

By F. MARION CRAWFORD,

Author of 'Mr. Isaacs,' 'Dr. Claudius,' &c. 12mo, $1.50.

"A very good novel. His book is a capital piece of work. . . . The closing chapter is one of the strongest and at the same time one of the most natural pieces of writing that any author has given us."—*New York Tribune.*

"Is the best story Mr. Crawford ever published, and one of the best told stories in recent literature."—*Boston Beacon.*

"With the hand of genius, the first outlines begin the development of pictures of artistic finish and beauty."—*Chicago Inter-Ocean.*

"Is a most astonishing advance beyond all his previous works."—*Boston Courier.*

"It will be one of the most popular books of the season among the lovers of good novels."—*Boston Budget.*

"Mr. Crawford even in a 'Lonely Parish' finds material as thrilling as many a detective story. . . . It is a pleasure to have anything so perfect of its kind as this brief but vivid story."—*Critic.*

The Nation.

NEW YORK, THURSDAY, MAY 6, 1886.

The Week.

THE great Southwestern boycott has been declared "off," in spite of the struggles of Martin Irons and his "Joint Executive Board, 101, 93, and 17." The eight-hour movement, in so far as it was grounded upon the belief that independent laborers and employers could be driven by force and terror to join in it or to yield to it, has failed. In some places and trades where the business could be sustained and yield some profit on eight hours of daily labor, the movement has been successful, and in such cases there is no room for complaint. Whatever is agreed to on both sides is a fair bargain, which no third person has a right to object to. It has been objected to only in one place so far. Mr. McCormick, at Chicago, agreed to adopt the eight-hour system without any reduction of wages. His works and his workmen were immediately set upon by a mob of eight-hour strikers and anarchists, who raided the establishment, beat several of the men as they were coming out at the stroke of the clock at the end of the eighth hour, and had a fight with a squad of policemen, one of whom they attempted to hang on a lamp-post while he was conducting a wounded man to his home. This was a notable exploit on the part of "organized labor."

The recent boycott on the Missouri Pacific Railway and its southwestern connections was not the most disastrous revolt against law and order in the name of labor that has been witnessed by the present generation, nor is the present eight-hour movement the most formidable. The struggle for "eight hours" has been going on for more than a quarter of a century, and it may go on for another quarter of a century. One of the phases of the movement most popular among its advocates a few years ago was the demand for an eight-hour law. It was held by the labor agitators that if a law were passed making eight hours a legal day's work, under appropriate penalties, the desired end would be reached. When the attempt was made to carry this idea into the form of a statute it was found to be impracticable. No machinery could be devised to prevent farm hands, for example, from working from sunrise to sunset. Nor could any means be found to subject "piece work" to the operation of the eight-hour system. So many difficulties were encountered that the framers of the proposed law were constrained to content themselves with a bill fixing eight hours as the maximum of labor on Government works. After the law was passed, the officers in charge of Government works reduced the pay to correspond with the hours, and then there was another outcry from the agitators. But it led to nothing. The idea of setting up a privileged class of laborers in Government employ, who were to have their wages raised 20 per cent. at the expense of all other laborers, did not prove to be excessively popular. In fact, we hear very little now about eight-hour laws. The movement has passed into another stage.

The question now is, whether the industrial conditions of the country are such as to warrant the belief that people in general can support themselves on the proceeds of eight hours' work. It is proposed by a relatively small number of workingmen to test this question by experiment. We say a relatively small number, because Mr. Edward Atkinson has proved by an examination of the statistics of industry that not more than one in ten of those who work with their hands can possibly be subjected to an eight-hour rule, whether that rule be put into the form of a statute, or whether it is sought to enforce it by the agency of the Walking Delegate. Thus the question narrows itself to this: Are there certain special branches of industry so favorably situated, and having such advantages over other trades, that they can sustain themselves on 20 per cent. less labor than is now applied to them? We are not prepared to say that there are no such trades. Whether they exist or not can only be learned by experiment. The experiment is now to be made. If it should be learned that there are such trades, the movement will succeed as to them. Eight hours will become the established day's work among them, at all events until capital and labor are attracted to them to such an extent as to reduce their exceptional advantages to the average of all other trades. There will be a struggle between employers and employees in these special branches of industry, but it will not be of long duration. The question being one of fact, it will be settled, as the Southwestern strike has been settled, when it is made clear what the facts are. Mr. Martin Irons said that the Missouri Pacific Railway could not be operated without the Knights of Labor. Mr. Hoxie said that it could be. Nothing but an experiment could settle that dispute. It was made, and it proved that Mr. Hoxie was right. In the same way and not otherwise can it be proved to general acceptance whether any particular trade can be carried on with the proceeds of eight hours' work. There is no occasion for panic while the experiment is going on. Nine-tenths of the daily work of the nation will go on as before. Indeed, if the statistics could be got at, it would be found that only a moiety of the trades susceptible of being reached by an eight-hour rule are now menaced by the movement.

In a report of what was done at Chicago on Monday last is a characteristic indication of the unreason of the eight-hour strikers. The Illinois Central Railway is really a State railway, since the company is, under its charter, required to pay 7 per cent. of its gross (not its net) earnings annually to the State. Whatever reduces or impairs the volume of the business of that company is a direct injury to the State, and to every taxpayer therein. The Governor of the State is by law one of the directors of the company. On Monday the workingmen who handle freight in the company's yard at Chicago demanded eight hours a day and ten hours' pay. Mr. Jeffery, the General Manager, met the workingmen, and said to them that during the last three months and three weeks the earnings of the company had decreased $375,642, as compared with the earnings of the same period last year. By the end of April the decrease will reach $400,000, and in all probability before the end of the year, through labor disruptions and disorganized trade, the decrease will amount to $800,000. Nearly every other road had experienced a decrease of from 10 to 20 per cent. in its earnings. The laboring classes, therefore, in view of these considerations, had struck at the wrong time. The only outcome of this movement was that they would remain out, lose money, injure their families, and return to their old places at the same rate. The men listened quietly to Mr. Jeffery's remarks, though they saw at once what the reply of the company was. When he had finished, all the men, to the number of 150, quit work, marched over to the headquarters of the Freight-Handlers' Union, and joined that organization.

The Illinois Central Company has had honest and efficient management. Its capital stock has never been "watered"; it has never been depleted by "construction companies," and there are no side-companies, either "Blue Lines," or "White Lines," or "Star Lines," by which the earnings are diverted from the pockets of the owners of the Illinois Central. By economy and good management the company has until recently continued to pay its stockholders 8 per cent. Civil-service promotion has long been the rule in the company. Mr. Jeffery, the General Manager, began in the company's service a poor boy, relatively in the condition of the workingmen whom he addressed. He frankly told the men the condition of the company's gross earnings, and frankly suggested to them that with increased earnings would come increased wages; but the men quit work and thereby increased the burdens of every taxpayer in the State, including themselves.

The House Committee on Invalid Pensions has instructed Representative Matson to call up the Arrears of Pension Bill as soon as the Committee is called by the Speaker, which, it is expected, will be the latter part of this week or the early part of next week. This is the most dangerous scheme likely to be brought before Congress at this session, and public sentiment ought to pronounce against it in such tones as will deter the demagogues from supporting the bill. A careful estimate indicates that the measure would be likely to take out of the Treasury about $300,000,000, and there is absolutely no sound argument in favor of it. Senator Sherman, in opposing a similar proposition two years ago, when Commissioner Dudley had estimated that it would call for $246,000,000 at least, thus summed up the reasons against it:

"I deny in toto that there in any obligation in law or in morals or in good faith to our soldiers to remove the restrictions of existing law. It is

not right for the soldier to apply for arrears. He knew the existence of the law, and why should he be allowed now to come in and make a demand for $4,000, $5,000 or $6,000 for the twenty years last past, thus throwing upon the Government an enormous demand which he refused for twenty years even to present? I believe the assertion of this enormous claim at this time against the Government of the United States will be embarrassing even to the people of the United States. It would break down all restrictions upon claims hereafter. Executive officers of the Government can estimate and provide ample revenues to meet existing laws, but no sagacity would enable Congress to provide for claims not presented when payable, and asserted only at a period of hardship to the amount of $246,000,000. There is no equity in it."

It seems incredible that such a gigantic grab can stand any chance of success, but that there is real danger appears clearly enough from the fact that the man who thus showed the injustice of the proposition only two years ago, has announced his purpose to support it now.

The Southern members of Congress have it in their power to render the country a great service in this matter. If the South will only be "solid" against this steal, we think that enough Northern members will be found possessed of sufficient independence to stand with them and secure its defeat. The New Orleans *Times-Democrat* published an editorial article upon this subject the other day, which concluded with this excellent advice to Southern Congressmen:

"The Southern Congressmen can do much good here if they would. They have hitherto generally voted in favor of these pension bills because they believed Northern sentiment favored these measures. If they will look outside of Congress they will find that it does not; that the North feels that the country has done enough already for its soldiery, and would call a halt in pensions. Let the Southern Representatives aid in relieving the country from any increased burden, simply to advance the interests and aid the Presidential aspirations of a lot of demagogues who are trying to buy votes for themselves by passing additional pension bills."

Every word of this is true, and we hope that the Southern press will be unanimous in urging such views.

The Senate Committee on Privileges and Elections has made a favorable report upon the proposition to change the date for the inauguration of the President and the opening of a Congressional term from the 4th of March to the 30th of April, beginning with 1889. There are strong arguments in favor of the proposed change. It would extend the length of the short session of every Congress to reasonable limits; it would place inauguration day at the most agreeable season of the whole year in Washington, instead of the most inclement; it would very likely save some future President from being killed by exposure to the peculiarly severe weather which so often attends the inaugural ceremonies, and which has slain so many chilled spectators of the display, as notably when Grant began his second term; and it would be a peculiarly appropriate way of celebrating the hundredth anniversary of the day when Washington became President. No valid reason against the change has been adduced by anybody. The Senate is expected to follow the lead of its committee in endorsing the proposition, and the House ought to concur. If the amendment gets through Congress, there can be no question of its ratification by the States.

"The official burial of the Confederacy," as somebody has happily styled the ceremonies attending the laying of the corner-stone of a soldiers' monument at Montgomery, Alabama, last week, has been accompanied by high-flown funeral eulogies of the deceased, based naturally upon the maxim *nil de mortuis nisi bonum*. But everybody knows that the Southern people have become convinced that it was best for them, as well as for the rest of us, that the lost cause was lost, and that their applause of the chief of the Confederate States from 1861 to 1865 implies no disloyalty to the United States in 1886. Indeed, there is little to complain of in the attitude of Jeff Davis himself when he can end his funeral oration over the grave of the Confederacy with such words as these:

"In conclusion, permit me to say, though the memory of our glorious past must ever be dear to us, duty points to the present and the future. Alabama having resumed her place in the Union, be it yours to fulfil all the obligations devolving upon all good citizens, seeking to restore the general Government to its pristine purity, and, as best you may, to promote the welfare and happiness of your common country."

It was quite natural that John Sherman should have welcomed the Jeff Davis incident as a piece of good fortune for Republican politicians lacking an "issue" for the fall campaign, since the Ohio Senator has always clung hard to the bloody shirt. Mr. Sherman broke forth the other day in the familiar old strain, as follows:

"Davis is a monumental fool, a vain and disappointed old man, posing as a martyr, grieving over his failures, and appealing for sympathy. What he says is of no particular consequence. Everybody knows that he has felt just as he talks all the while, but the significant part of it all lies in the manner in which his words are received by the people, the demonstrations of approval, the enthusiasm they create. That is what will affect the loyal element of the country, and make the blood of those who fought to save the Union boil with indignation."

But, unfortunately for the Ohio Republican, there came the very next day this unanswerable explanation of what the demonstration really means from that representative Southern Republican, General Longstreet, of Georgia:

"This occasion is a revival of a harmless but beautiful sentiment. The old soldiers wanted to get together again, and this was perhaps the best occasion for a meeting. It means no disrespect to any other section of the country, nor is there an evidence of disloyalty in the display. We all recognize that the war is over, and that all the questions then submitted for decision to the sword are forever settled. Mr. Davis growing old, the people were anxious to see him once again, and this was the best time to do it. Probably it is his last appearance among us. That is all this demonstration means, and the right to this celebration by both the young and the old will everywhere be acknowledged. It means nothing more than a reunion of old comrades and the revival of never-fading memories."

It was pointed out some time ago that it was only a step for the Knights of Labor from dictating whom an employer shall hire and how long he shall keep his establishment open, to demanding absolute control of his business, and that this step was sure to be taken if the first interference were not resisted. The prophecy is already fulfilled in eastern Massachusetts, where the sway of this new despotism has gone longest unchallenged. A few weeks ago the Knights decided that the stores in Lynn must be closed at a certain hour, and the proprietors actually obeyed the insolent demand—or, rather, all of them except one man named Tarbox, who thinks this a free country, and is bringing his fellows to a sense of shame. Encouraged by their success in forcing stores to close at a certain hour, the Knights of Labor in the same region have now, very naturally, concluded to fix the rate of profits which storekeepers shall be allowed to make. The Boston *Transcript* of Friday evening publishes in its editorial columns the statement that demands have been made of certain shopkeepers in the suburbs of that city, that they furnish to a committee of Knights of Labor their invoices and price-lists, in order that the Committee may regulate the profits. After the pusillanimous surrender by all but one of the Lynn storekeepers of all control over the question when they should close their shops, we should not have been surprised to hear that this demand for a surrender of all control over their business had been entertained; but the Tarbox incident appears to have had its effect outside of Lynn, and the *Transcript* says that the suburban shop-keepers "have had the good sense and spirit to treat the demands with the contempt they merit."

The utterly illogical nature of many of the strikes during the present epidemic is curiously illustrated by a case just reported from Newark. In that city there are two morning papers, printed in the German language, which appear to have been paying their compositors liberal wages. On Sunday the men struck for an advance. The proprietor of one paper yielded. The manager of the other showed his books to the men, and demonstrated that it would be impossible to pay higher rates for composition. He offered to give the entire income of the paper to the printers—they to handle and control the paper and do all the business for three months, he to receive nothing. This offer was refused, the men demanding the increase or nothing. The manager thereupon secured the services of three printers to get out a small sheet the next day, to be the last number published. It will be seen that the strikers have won a great success; they demanded "a raise or nothing," and their demand has been acceded to.

The members of the Central Labor Union had an animated discussion on Sunday over the expediency of having a bill introduced at Albany for the repeal of the section of the Penal Code on "conspiracy." It was concluded, however, that such a step would be futile, since the members of the Legislature were but the tools of cowardly capitalists, and it would be beneath the dignity of laborers to appeal to them for help. It occurred to some of them that such a bill would be a confession that boycotting was conspiracy within the meaning of the law, and that it would not be wise to make that while so many cases were pending trial. It was finally concluded to engage the services of Gen. Roger A. Pryor to defend the indicted boycotters, with a request that he insist upon a jury made up entirely of workingmen. The childlike simplicity of all these utterances ought to be sufficient to convince every blatant "friend of the workingmen" of the crime

which he commits in deceiving them with false doctrines.

The extreme uncertainty of temper and judgment that marks the support which our esteemed contemporary the *Times* gives even the best of causes, was curiously illustrated in its comments on the recent presentment of the Grand Jury about boycotting. The Grand Jury has been dealing during the last thirty days with a new and alarming form of crime, which is already affecting the industry of the whole country most seriously, and filling the lives of great numbers of humble people with terror, and nevertheless has the cowardly connivance or support of a large part of the daily press. In denouncing it in vigorous language, thus reassuring good citizens and reminding the officers of the law of their duty, the Grand Jury rendered a service to the community almost as great as the indictment of the offenders—a service all the more praiseworthy because most grand juries speak with bated breath and in uncertain tones. The *Times*, however, even at this crisis, found little to say about the presentment, except that the rhetoric was bad, and one or two of the images rather violent, and gravely announces that these errors have brought the Grand Jury "into ridicule and contempt." It could hardly render better service to the rioters and boycotters, and do more to discourage future grand juries in dealing with them.

The fact that boycotting is illegal has been grasped in Connecticut, where the law upon the subject is found to be similar to that of New York and other States. A "Walking Delegate" has been arrested in New Haven for attempting to intimidate a business firm who were advertising in the *Journal and Courier*, which is under a boycott for not employing union printers. The law under which the arrest is made is almost identical with section 653 of our Penal Code, entitled "Coercion," and is as follows:

"Every person who shall threaten or use any means to intimidate any person, to compel such person against his will to do or abstain from doing any act which such person has a legal right to do, or shall persistently follow such person in a disorderly manner, or injure or threaten to injure his property with intent to intimidate him, shall, upon conviction, be liable to a fine not exceeding $100, or imprisonment in the county jail six months."

The judge overruled a demurrer interposed in behalf of the "Walking Delegate," and in giving his decision declared that it was the plain intent of the statute "to punish the use of threats or any means of intimidation to compel any person against his will to do or abstain from doing any legal act"; that the threat to boycott "is, in the opinion of the Court a threat to do an illegal act well calculated to intimidate, and, further, that all confederacies whatsoever to the prejudice of a third party are highly criminal under the common law."

The French Penal Code, Art. 414, deals thus with boycotting and other intimidation:

"Is punishable with not less than six days' or more than three years' imprisonment, and a fine of not less than 16 francs or more than 3,000, whoever by means of violence, assaults, threats, or fraudulent pretences, shall set on foot or maintain, or try to maintain, a concerted cessation of labor, with the design of compelling an increase or diminution of wages, or interfering with the free exercise of industry or labor."

Mr. Gladstone's manifesto to the Midlothian electors is in reality an appeal to the English people for support against the class opposition which he is encountering in the Liberal ranks, and strikes the democratic note more distinctly than any other speech or document he has ever put forth. Nothing he has produced, too, has ever surpassed it in that happy union of fire and force for which he has long been famous. The strongest points he makes against the seceders are their total failure to agree on any substitute for his scheme, combined with their concession that some substitute there must be. This absence of any rival policy was made painfully apparent in the debates, and, coupled with the admission that something in the way of local self-government was absolutely needed, seems likely to cover up most of the defects in the Gladstone bill, and give the battle to his hands. In this manifesto he has made the most of this weakness of his opponents, and has been almost equally effective in pointing out the probability that what is refused to the Irish now, in a time of calm and conciliation, will, as on so many other occasions before, have to be granted in a time of danger and stress and under compulsion. The fury which the document has excited in the Tory ranks is the best measure of its destructiveness. Some of the judgments passed on it are very amusing specimens of "journalism." One paper makes it the "wail of an unresting spirit tortured with gloomy forebodings." Another treats it as "an appeal to man's basest and most sordid passions," and maintains that "its flagrant immorality will unseal the eyes of his most infatuated supporters." In the early days of the newspaper press, when the London *Times* was called "the Thunderer," this sort of writing used to be effective, but it is now generally amusing.

The reference of the manifesto to the Land Purchase Bill makes it seem probable that Mr. Gladstone will throw that overboard if hard pressed, and lay the blame on the Irish landlords themselves, for not rallying more vigorously, or indeed rallying at all, to its support. But although it may be true that the English are fairly responsible to the Irish landlords for the security of their estates, owing to their having so long enabled them to maintain their peculiar tenures in defiance of Irish opinion, nevertheless, it is almost impossible to defend both the Home-Rule Bill and the Land-Purchase Bill at the same time. One of the arguments in support of the Home-Rule Bill is that the Irish may be safely trusted with the protection in Ireland of all rights of property or person. But the chief argument in support of the Land-Purchase Bill is that the landlords' property would not be safe in the power of an Irish Parliament. Either of these positions may be true; both cannot be. In other words, if what is said in favor of the Home-Rule Bill be sound, the Land-Purchase Bill is unnecessary; but if the Land-Purchase Bill be necessary, then the Home-Rule Bill is a dangerous measure.

The *Herald* distinctly declares that "neither the Commons nor the Lords can settle the Irish question." This is likely to prove very embarrassing in practice, and may work serious delay, because no other instrumentality for the settlement as yet exists. But the readiness of our contemporary to interfere in these foreign disputes makes us all the more curious to know why it refused to settle the Third Avenue Railroad trouble.

The Marquis of Lorne deemed himself qualified the other day to interpret the public sentiment of the United States and Canada on the question of Irish home rule. So he wrote a letter to the newspapers saying that all parties in America found it necessary to cultivate the Irish vote, and that the resolutions of sympathy with Mr. Gladstone and Mr. Parnell, passed by public meetings and by State legislatures, were to be taken merely as the bids of politicians for the next election. The unvarnished truth is, that the resolution and the telegram adopted at the meeting in Washington City on Wednesday week, presided over by ex-Speaker Randall, which extended cordial good wishes to Gladstone and Parnell, "in their peaceful efforts to secure local government to the people of Ireland," do represent the feelings of all except the merest handful of the American people. There are well-considered objections to the official expression of opinion by one country upon the internal affairs of another and friendly country. Hence we should regret any introduction of this subject into Congress. But there can be no objection to unofficial and temperate expression of a sympathy which everybody feels. The Washington meeting was in good taste and had nothing in it of a partisan character. Indeed, it would be impossible for any political party to gain an advantage when all parties and persons feel the same emotions and think the same thoughts.

The appearance of Mr. Goldwin Smith on the scene in England to denounce home rule and Gladstone, on behalf both of the Canadians and "the bulk of the Americans," is likely to add fresh horrors to the scene of strife. It is not often that the scholar in politics occupies a position of such fearful responsibility as Mr. Goldwin Smith has taken on himself. We regret to say we think he is abusing his trust. The real sentiments of "the bulk of the Americans" on the Irish question must have been communicated to him in confidence, with instructions to tell no one, because their open professions are all the other way. To go and blurt it all out this way, both to the English and Irish, is an indiscretion from which Mr. Goldwin Smith will not readily recover. The Americans will never trust him again. The only way he can atone for it is to die on the field in conquering the Irish, in the same rank with Mr. Froude and the Duke of Westminster. There will be, when the fight comes, a sickening scene of carnage where these warriors stand.

SUMMARY OF THE WEEK'S NEWS.

WEDNESDAY, April 28, to TUESDAY, May 4, 1886, inclusive.]

DOMESTIC.

THE President on Friday nominated Joseph C. Hendrix for Postmaster at Brooklyn, N. Y. He is a graduate of Cornell, Secretary of the Brooklyn Bridge Company, and was a candidate for Mayor of Brooklyn against Mr. Low.

Baltimore was surprised on Friday by the resignation of I. P. Veazey, the new Postmaster. He gives as his reason the demands of his private business, but it is said he is tired of having to supply places to the Gorman crowd. His successor is Frank Brown, a young lawyer in good practice, who has been President of the Maryland Agricultural and Mechanical Association for several years, and has always been conspicuous in agricultural affairs.

The Senate has confirmed the nomination of Mr. Burnett as Mr. Duskin's successor in the office of District Attorney for Alabama, thus wholly setting aside the Edmunds resolutions.

The Senate Committee on Commerce on Thursday voted to make a favorable report on a new Atlantic and Pacific Ship Railway Bill as a substitute for the original Ship Bill, providing as follows: Eads and such others as may be associated with him are created a body corporate with the title of the Atlantic and Pacific Ship Railway Company, with power to issue capital stock and bonds not to exceed in the aggregate one hundred millions. The United States obligates itself to pay said company, for a period of five years after the ship railway shall have been completed and tested, any sums of money required to make two-thirds of the net revenues of said company amount annually to the sum of $3,500,000, provided that the total liability of the Government shall in no case exceed the sum of $7,500,000. The obligation of the United States shall not attach until the railway shall have transported, in the presence of a board of engineers appointed by the President of the United States, a loaded vessel weighing with her load not less than 6,000 tons, at an average speed of not less than six miles an hour, and place her in the harbor at the other side of the isthmus without injury to the vessel.

In the House on Thursday Mr. Lanham (Dem., Tex.), from the Committee on Coinage, Weights, and Measures, reported a bill for the retirement and recoinage of trade dollars. It provides that for six months after its passage trade dollars shall be received at their face value in payment of all dues to the United States, and shall not be again paid out or issued in any other manner. Holders of trade dollars, on presentation of the same, may receive in exchange therefor an equal amount of standard silver dollars. The trade dollars so received by the United States Treasury officials shall be transmitted to the coinage mints and recoined into standard silver dollars.

The reduction in the public debt during April was $10,965,387 95.

The great strike on the Gould railroad lines in the Southwest has finally ended in the acknowledged failure of the Knights of Labor. The General Executive Board of the Knights of Labor issued, on Monday, a circular to the District Assemblies, in which they said that they had received a letter from the Congressional Committee investigating the strike, saying: "'The testimony taken by the Congressional Investigating Committee shows conclusively that very serious losses to the commercial interests of the entire country have resulted from this trouble, and that a large number of persons not connected therewith have been thrown out of employment.' Therefore, they 'do respectfully but earnestly ask you to discontinue the strike, and leave the justice of your cause to the decision that public opinion may form when we make our report.' The document was fully considered and the following conclusion arrived at: 'That the matter be left in the hands of the General Executive Board, they to set a time and declare the strike at an end.' We have therefore selected Tuesday, May 4, 1886, as the time when this strike shall end. You will make application to your former employers for employment on the above date, Tuesday morning, May 4." Accordingly, on Tuesday many of the strikers applied for work and were generally received, though those who committed depredations were refused employment.

John Givens, a striker in St. Louis, was shot dead on Wednesday night by W. E. Withers, an employee of the Bridge and Tunnel Company, whom Givens assaulted after advising him to quit work and leave town.

The managers of all the railroads centring in Chicago held a meeting on Monday at the Burlington general office to consider the strike of the freight-handlers. An informal interchange of ideas relative to the situation finally culminated in the adoption of a resolution, that the present condition of business did not warrant any advance in the wages now paid to employees; that the roads pledge themselves to act as a unit in the matter, and resist all demands for shorter hours or advance in wages, agreeing not to treat individually or make concessions not approved of by all.

The movement for eight hours as a day's labor was actively carried out in many cities on May 1st. It was strongest in Chicago. It is estimated that 30,000 workmen were idle in that city on Saturday. All trades were affected, especially at lumber yards, railway depots, and furniture factories.

On Monday the streets of Chicago were filled with idle men, who were, however, orderly and quiet during the morning. Several of the roads whose freight-handlers had struck resumed working with new men. Lumbermen, metal-workers, and furniture men were mostly idle. About 40,000 men were out. The Wabash Railway officials sought the protection of the United States authorities to enable them to move freight. Several manufactories, including the McCormick reaper works, yielded to the demands of the men. In other cities the movement was not so extended. In Washington 3,000 men were idle. In New York city the demand has been made by many employees, but there are few strikes and no disorders. A number of firms have consented to eight hours' work and eight hours' pay.

There was a riot in Chicago on Monday afternoon. A crowd of some 7,000 or 8,000 Anarchists, workmen, and tramps assailed the McCormick Reaper Works because it was supposed that the men there would work ten hours. In fact, however, eight hours had been agreed to. The mob attacked the workmen with stones, and threw stones through the windows of the works. When a platoon of police arrived the mob attacked them, first with stones and then with revolvers. The police held their ground and returned the fire. Several of the rioters were hurt, and finally the police charged and scattered them. A dozen arrests were made. One striker was fatally injured.

At Chicago on Tuesday morning comparative quiet prevailed, though the police dispersed several mobs of idlers and made a number of arrests. The McCormick works opened as usual in the morning, fully one-half of their men resuming work under police protection. It was announced on Tuesday that a number of pork-packing houses had yielded to the demands of the men.

On Tuesday afternoon a handbill in Chicago, printed in German and English, called upon "workingmen" to meet at Desplaines and Randolph Streets in the evening. "Good speakers," it was promised, "will be present to denounce the latest atrocious act of the police—the shooting of our fellow-workmen yesterday afternoon." Some 1,400 persons gathered there, but the speeches were dull, and half the crowd had left when Sam Fielding, an Anarchist leader, took the stand and shouted out the most incendiary utterances. He finally became so violent that word was sent to the station, and Inspector Bonfield, at the head of 125 men, marched to the place. Bonfield called upon the crowd to disperse, and Fielding shouted out from the wagon: "To arms!" The officer once more called on them to disperse, when suddenly from behind the wagon, which was not fifteen feet from the front rank of the police, one dynamite bomb (or more) was thrown in between the second and third ranks of the officers. The effect was terrible. Thirty-three policemen were cut down, about half-a-dozen fatally wounded. Immediately after the explosion the officers who were left standing drew their revolvers and fired round after round into the mob. Probably fifty of the mob fell, and as they dropped were immediately carried to the rear and into the many dark alleyways by their friends. In the afternoon a mob attacked a paint-shop in Centre Avenue, and was only dispersed by a vigorous charge by the police.

At Milwaukee on Monday afternoon a similar collision occurred between a mob of Poles and the police. Nobody was killed. The uneasiness continued on Tuesday. More than 7,000 idle workmen had gathered at Bay View, threatening the rolling mills. Governor Rusk of Wisconsin ordered out a number of militia companies. A mob was dispersed during the day by a volley fired over their heads.

The Grand Jury in this city on Thursday indicted five members of the Executive Committee of the Empire Protective Association for conspiracy and coercion in causing the strike on the Third Avenue Road by ordering the discharge of the five drivers and two conductors who were not members of the Union, and for interfering with the running of other horse railroads in the city by ordering the general tie-up on Monday, the 19th ult. Chairman Joseph P. O'Donnell is one of those indicted.

The Oregon Republicans have nominated T. R. Cornelius for Governor.

The enthusiastic reception of Jefferson Davis in the South has been made the text for "bloody-shirt" speeches and articles in the North. A close examination of the Southern papers shows that their sentiments are eminently loyal. Where the demonstration is approved it is as a personal compliment to Mr. Davis, and in memory of the Confederate dead. Commenting on the Montgomery celebration, the Vicksburg *Commercial Herald*, the leading Democratic morning paper of Mississippi, says: "Mr. Jefferson Davis is not of the new South. He is of the old South. He said things at Montgomery that would have been better unsaid, and did not say things he, of all men, ought to have said."

Mr. Davis delivered his address at the laying of the corner stone of the Confederate monument in Montgomery, Ala., on Thursday amid great enthusiasm. "I have come to join you," he said, "in the performance of a sacred task, to lay the foundation of a monument at the cradle of the Confederate Government, which shall commemorate the gallant sons of Alabama who died for their country, who gave their lives a free-will offering in defence of the rights of their sires won in the war of the Revolution, and the State sovereignty, freedom, and independence which was left as an inheritance to their posterity forever. These rights the compact of union was formed not to destroy, but the better to preserve and perpetuate. Who denies this cannot have attentively read the Articles of Confederation or the Constitution of the United States." In closing he said: "Permit me to say, though the memory of our glorious past must ever be dear to us, duty points to the present and future. Alabama having resumed her place in the Union, be it yours to fulfil all the obligations devolving upon all good citizens seeking to restore the general Government to its pristine

purity, and as best you may to promote the welfare and happiness of your common country."

Henry Hobson Richardson, the eminent architect, died near Boston on Wednesday, aged about forty-eight. He was graduated at Harvard, and received his art education at the École des Beaux Arts, in Paris. Many costly and monumental public buildings of great merit, of which Trinity Church, Boston, is a conspicuous example, entitled him to rank as the head of his profession.

FOREIGN.

Michael Davitt, in a speech at Birmingham on Wednesday night, said that Mr. Chamberlain had tried to justify his attitude toward the Irish bills by a most inconsistent argument, and he quoted a passage from a speech made by Mr. Chamberlain at Sheffield, in which the latter favored Mr. Butt's scheme and the removal of the Irish representatives from Westminster.

In a speech at Glasgow on Friday night, Mr. John Morley said in regard to the difficulty about Irish representation at Westminster: "The difficulty can be met by some such suggestion as I ventured to make in the House of Commons. What I ventured to suggest has since been supported by a man of greater authority and experience in the House than I. It was, for two or three years to let Ireland get the benefit of all the faculty and all the capacity of Ireland to set this new machinery a-going. If at the end of these two or three or five years there is then a desire felt or expressed on the part of the Irish people to revert once more to their old position, whether in reduced numbers or otherwise, at Westminster, I think it would be an arrangement which all Englishmen and Scotchmen might most gladly fall in with, and against which no Irishman would have very much to say." This is a hint that the Government is ready to modify the scheme on this important point.

Lord Iddesleigh (Sir Stafford Northcote) in an address at Plymouth asked the Conservatives, in consideration of the fact that a large part of the Liberal party was unable to agree with the Ministry, to refrain from abusing Mr. Gladstone.

A two-column manifesto from Mr. Gladstone to his Midlothian constituents was published on Monday morning. He explains that his great age has prevented his taking part in the speeches of the Easter recess, and has obliged him to reserve his limited powers for the House of Commons, and for that reason he uses his pen instead of his voice. He gives a long history of the attempts to conciliate and coerce Ireland, and, referring to the present conflict, says: "On the side adverse to the Government are found, as I sorrowfully admit, in profuse abundance, station, title, wealth, social influence, and the professions, or the large majority of them—in a word, the spirit and power of class. These are the main body of the opposing host." Explaining his aim he says: "It is to restore your Parliament to efficacy by dividing and by removing obstacles to its work; to treat the Irish question with a due regard to its specialties, but with the same thoroughness of method by which we have solved colonial problems that fifty years back were hardly, if at all, less formidable."

"Now, however," he adds, "a new terror is brought upon the stage—the terror of home rule for Scotland, and some add for Wales. This suggestion does not alarm me. Only give us a little time to look at this question in its order of merit. I am not sorry that Scotland and Wales have been named, because all serious naming of them serves to help our movement on behalf of Ireland. I can draw no vital distinction of right between the case of Ireland and the other cases, but there are many distinctions of circumstance. For many years I have hoped it might be found practicable to apply decentralizing processes, even, perhaps, to portions of different conditions. Each case, which will naturally require differences of treatment, will remain subject to the primary imperial obligations. I believe that the standard and measure of good government in Scotland and Wales will be eventually determined by public opinion in Scotland and Wales. But this formidable army which opposes the Government is in bulk and constituent parts the same, though now enriched at our cost with a valuable contingent of recruits that has fought in every political battle of the last sixty years and been defeated. We have before this had great controversies on free trade, free navigation, public education, religious equality, and the extension of the franchise. On these and other great issues this class fought uniformly on the wrong side, and was uniformly beaten by a power more difficult to marshal, but resistless when marshalled—by the upright sense of the nation. The power of gross and wholesale insult emboldens some, but only some, and not, I rejoice to think, the nations of Scotland or England. Lord Hartington reminded us, and I cordially agree with him, that this question, which may be turned over a thousand ways and placed in a thousand partial lights, can only be settled by the nation. From the first I stated, and I think I may speak for the Government at large, that here is my main and capital reliance. I rely upon my colleagues, upon an upright and enlightened House of Commons, upon the effect of free discussion; but the heart, the root, the beginning and the ending of my trust is in the wise and generous justice of the nation."

The following paragraphs of the manifesto are significant of Mr. Gladstone's attitude toward the Land-Purchase Bill, and his probable willingness to amend the Home-Rule Bill: "I speak now of the Home-Rule Bill, and leave the Land-Purchase Bill to stand on the declaration already made, adding only an expression of regret to find that, while the sands are running from the hour-glass, the Irish landlords have given no indication of a desire to accept the proposal framed in a spirit of the utmost allowable regard for their apprehensions and interest. . . . We are not now debating the amount of the Irish contributions to the empire, or the composition of the legislative body, or the maintenance of a representative connection with Westminster. On these and many more questions we may and may not be at odds. But what we are debating is the larger question which includes, I think absorbs, them all—the question whether you will or will not have regard to the prayer of Ireland for the management of affairs specifically and exclusively her own. This and no other is the matter which the House of Commons has to decide."

Many of Mr. Gladstone's stanchest supporters openly express the conviction that the Land-Purchase Bill will be dropped. The manifesto is taken to indicate that large concessions will be made to Mr. Chamberlain in return for the support of wavering Liberals, in order to carry the Home-Rule Bill through its second reading. The Conservatives believe that the manifesto will increase the opposition to the measure.

Statistics show that during the last three months 698 families, comprising 3,477 persons, were evicted from holdings in Ireland. During the same period 256 outrages were committed.

The death is announced of the Earl of Redesdale, Chairman of Committees and Deputy Speaker of the House of Lords since 1851. The Earl of Redesdale was born in Ireland in 1805. His father was once Lord Chancellor of Ireland. He succeeded his father as Baron Redesdale in 1830, and was made an earl in 1876. The late earl was an inveterate pamphleteer. He was strongly opposed to the disestablishment of the Irish Church. He was a Tory of the old school, and came into prominence in this country by his remarkable speeches on the *Alabama* claims question. His personal appearance was notably eccentric.

Queen Victoria formally opened the Colonial Exhibition in London on Tuesday. She was greeted with enthusiasm. A prominent feature of the opening ceremonies was the Ode composed for the occasion by Lord Tennyson. This was magnificently rendered by a vast choir of carefully selected voices. The Ode was sung just previous to the Queen's formal declaration that the exhibition was open. The music was by Sir Arthur Sullivan. One stanza was sung in Sanskrit, in deference to the Imperial idea.

The Greek Minister of War resigned on Thursday because he did not coincide with the action taken by his colleagues during his absence at the front. The Powers have approved the action of their representatives in Athens in presenting the ultimatum to the Greek Government.

Greece, in her reply delivered on Thursday to the ultimatum of the Powers ordering her to disarm within eight days, points to the fact that she had notified the Powers prior to the receipt of their ultimatum that she had accepted the counsel of France, thus giving formal assurance that, yielding to the desire of the Powers, she would not disturb the peace. Consequently she will maintain her armaments, but will gradually reduce them. Greece trusts, the answer adds, that the ultimatum of the Powers will be now regarded as having no further object. The foreign Ministers in Athens, on receiving the reply of Greece, referred it to their respective Governments, from whom they awaited instructions before answering it.

The Greek Government decided on Monday that its reply already made to the ultimatum of the Powers was sufficient, and that the promises contained therein were all it could make. The ministers of the Powers prepared to embark on the allied fleet, but were instructed on Tuesday to remain at their posts.

It is believed that the Powers will accept a guarantee from France that she will secure the disarmament of Greece, and that they will not fix an actual period for its accomplishment.

There is serious dissension in the Spanish Cabinet. The friction is due to the refusal of the other Ministers to yield to the demands of Señor Camacho, the Minister of Finance, for economy in the budget, which he insists is necessary.

The Prussian Government, fearing that strikes are impending, has issued a decree ordering the police to interfere in case strikers intimidate workmen. Socialist meetings and publications will be put under energetic surveillance.

The French have suppressed the revolt of natives in Senegal.

Another attempt to burn Mandalay, Burmah, was made on Thursday. The damage is considerable.

A pastoral letter was received in Montreal on Wednesday from Cardinal Taschereau, condemning the Knights of Labor as a secret organization inimical to the interests of religion and good morals. Great efforts had been made by the local officers of the order to influence the Cardinal and prevent the issuing of this pastoral. The Cardinal, it is understood, before issuing it conferred with all the provincial bishops, who all agree with his decision.

The Grand Vicar Marshal of the Bishop's Palace in Montreal is authority for the statement that at the Consistory in June next, to be held in Rome, the Pope will issue a bull absolutely condemning and excommunicating all the Knights of Labor.

The report that an American fishing vessel had been seized at Baddeck, Cape Breton, for infringement of the fishing laws, was incorrect. The Dominion Collector of Customs says that an American schooner in the Bras d'Or Lake was examined on suspicion of irregularity in her papers, but, the cargo and clearances being found to agree, she was allowed to proceed on her voyage.

DEMOCRATS AND MUGWUMPS.

A LETTER from Washington in the Springfield *Republican*, probably written by Mr. Samuel Bowles, discussing the President's attitude toward the leaders of the Democratic party on the one hand and toward civil-service reform on the other, has attracted the lively interest of the Republican newspapers, and has led the Philadelphia *Press* to remark that "the result of one year of a reform Democratic Mugwump Administration is profound discontent among the Democrats, and dissatisfaction among the Mugwumps. The result," it continues, "is exactly what was predicted when it was claimed that, however sincere Cleveland might be himself, he would be unable to stand up against the bad tendencies of his own party."

Mr. Bowles's letter is for the most part a narrative of facts that came under his observation in Washington, with here and there an opinion of his own as to what might better have been done. The line between his facts and his opinions is not in all cases so clearly drawn as would be desirable, but there is a clear division of the subject treated into two parts, viz.: the discontent of the Democratic leaders with so much of civil-service reform as the President has insisted upon, and the discontent of the Independents with the infractions, or supposed infractions, of principle which have been committed by the President, or by his subordinates with his consent. As to the former of these two difficulties, Mr. Bowles says in substance that there is a great deal of complaint among Democrats that the President has not formulated a policy, or rather a lot of policies, and put them through as a party chief should do; that he has housed himself in the Executive Mansion, and allowed things to take their own course, and that consequently the party is drifting like a ship without rudder or compass. This is the complaint made in Washington wherever two or three Democratic Congressmen are gathered together. It signifies simply that Congressmen are not allowed to have the offices they want or as many as they want. To whatever extent this discontent exists, civil-service reform has got in their way and has blocked their game.

The dissatisfied Democrats, as well as other people, know that our form of government does not contemplate that the President shall formulate the policy of his party, or provide machinery for his doing so, in any other way than by making recommendations to Congress in writing from time to time. They know, and all know, that having a policy and "putting it through" means, so far as the President is concerned, using the offices as bribes to secure the votes of some and as whips to punish the obstinacy of others. There is no other significance to the phrase in this country of ours. This view is abundantly sustained by political history. The only Presidents during this generation who have had policies to "put through" were Andrew Johnson and General Grant. Both made lamentable failures, and both failed to put through the policies which they had at heart. Both Johnson and Grant used the patronage of the Government for all that it would bring—the one to carry out his ideas of Southern Reconstruction, and the other to secure the annexation of San Domingo. They demoralized the public service to an unheard-of degree, produced incurable dissensions in their party, and in the end failed. Now what would have happened if Mr. Cleveland had gone to Washington with the purpose to "put through" a repeal of the Silver Bill, or a revision of the tariff, or to carry out any policy which required votes in Congress? After recommending to Congress the measures he desired to have adopted, as he has done, there would be no recourse but to say to reluctant members: "Here are so many offices at your disposal if you vote for my measures. If you do not so vote, they will be given to your rivals and enemies in your own districts, and if you have any friends in office now, they will be put out." This is the lowest form of public debauchery. It would have ruined Mr. Cleveland as it ruined his party predecessors, Pierce and Buchanan, and it would have failed utterly, as it did in their cases, to accomplish the end sought to be gained.

Now, what have the Mugwumps to say? They perceive, in the first place, that, to whatever extent Democratic discontent exists, it exists because civil-service reform has found a lodgment in the White House. There is no complaint that Mr. Cleveland has violated any principle held dear by the Democratic party. It is not alleged that he has gone counter to the Democratic platform or to the pledges made before his election. The only complaint from that quarter is that he has not cut up and served out the public patronage fast enough. This is not a complaint that grieves any Mugwump. On the other hand, there is a complaint that the President has come short in some rather glaring cases of the terms of the letter which he voluntarily addressed to Mr. Curtis on Christmas day, 1884. This is a subject which we have discussed from time to time, and which we shall reserve for separate treatment. There is also a complaint that the Civil-Service Reform Law has been violated in some places, notably in Baltimore and Indianapolis. These appear to be two very rotten spots. Now, the violation of a statute of the United States is a much graver matter than differences of opinion concerning a voluntary pledge, as to which there may be much latitude of interpretation. Such violation cannot be tolerated here and there by those who have civil-service reform at heart any more than counterfeiting can be tolerated here and there by banks. We believe that it will not be tolerated by the President if the facts shall show that an infraction of law has been committed, or that its spirit has been violated by any person who holds his commission. At all events, the Republican press may rest assured that no pains will be spared by the Mugwumps to find out the facts, and that there will be no hesitancy on their part in proclaiming them.

THE LESSONS OF THE STRIKES.

THE railroad strikes may now be considered for all practical purposes at an end. They have caused a great deal of pecuniary loss to the corporations, to the workingmen, and to the business community. But they have been of inestimable value as a means of securing for the labor problem an amount and kind of discussion from all classes such as it never received before. Never before have the labor associations attracted so much attention to their aims and methods from others besides large employers. Never before has the public been brought to a thorough comprehension of the theory which underlies nearly all the strikes that take place in this country—the theory that the striking laborer has a moral right to be employed on his own terms in the place he has left. It is this theory that causes the resort to violence to which nearly every large strike of unskilled, or only slightly skilled, labor owes the smallest success. Not one of the recent railroad strikes would have delayed traffic for over a day or two but for the forcible resistance of the strikers to the conduct of the business by anybody but themselves. This forcible resistance is due almost wholly to the belief that when the member of a union gets a place in anybody's employment, he acquires a vested interest in it of which the employer has no right to deprive him. It is this which makes the members of all the unions sympathize either secretly or openly with the assaults and other acts of violence which accompany all the large strikes. They look on them as not wholly illegitimate attempts to defend a species of property. This theory has never before been as thoroughly examined by the public at large as it has been during the late troubles. In fact, there has been for a great many years a sort of ignorant or indifferent acquiescence in it. But this is at an end. It has been examined, and its absurdity made manifest, and a manifest absurdity does not live long in this country.

But there is another lesson, almost equally important, which we trust the strikes may bring home to railroad managers, both East and West. No matter how mischievous or how badly managed trade organizations may be, or how absurd the pretensions they make, their continuance and growth is certain. The individual laborer in any calling is, in these days of great accumulations of capital, very weak and helpless in his relations with the employer. He knows that combination with his fellows will give him strength in making his bargains and defending his rights, and therefore combine he will. But the very fact that these combinations are intended to make the weak strong, makes them also to a certain degree hostile to all excellence. They nearly all oppose bitterly any display of individual superiority. They nearly all see to it that unusual ingenuity, or skill, or diligence, or ambition, or industry shall not profit a man. They nearly all try to keep all the members down to the level of the most stupid, or slow, or indolent, or contented. In so far they are hostile to civilization itself, and are drags on the wheels of both moral and material progress. They cultivate deliberately, in spite of the professions of their documents, a rather low mental and moral type of man. But this makes it all the more important that the corporations and other great employers of labor who suffer from them, and who refuse to "recognize" them, should in their dealings with their own em-

ployees open up a more excellent way. If there be any one inference from the late labor troubles more palpable than another, it is that the great corporations should do more to raise the character of their own service, to infuse into their dealings with their employees something better than the spirit of contract or patronage merely. In other words, they should do something to make their men feel that the Union is not a necessity to them; that the employer will not take advantage of their weakness, and that the corps in which they work serves all the purposes of a trade-union, and does secure them kindly and considerate treatment, the best wages the market allows, and protection from arbitrary or hasty dismissal.

There is not a railroad in this country which might not by a little effort make its own service a sort of *corps d'élite*, which would attract the most capable and ambitious men, and in which there would be free play for talent and capacity. Some of them have done this, or made a very near approach to it already, but in a large number the managers care very little how the employees feel, as long as they do not strike, and do very little to make the service attractive to picked men. We believe that a change of policy in this respect would soon give us large bodies of laborers in all fields, who would be just as much ashamed to abandon their work, without knowing why, on seeing two fingers held up, or to pummel people who took their places, or picket or boycott their employer's premises, as clergymen, or lawyers, or doctors would be. Large numbers now live in slavery to the O'Donnells and Ironses simply because they cannot do better. Large numbers are doing poor work and keeping their best faculties dormant, under Union compulsion, simply because outside of the Union there is no sympathy or support or consideration for them to be found—nobody on whom they can count for help or counsel on dark and rainy days, and they fear to face the world absolutely alone with wives and children dependent on them.

A NEW WAY TO GET RID OF LABOR.

The limitation of the time during which human beings shall be allowed to work to eight hours a day has been regarded hitherto as a somewhat visionary scheme. Economic progress in one sense has consisted in the attainment of given results with a diminished expenditure of labor; natural forces have been brought in to do the work of man. But the increase of wealth has been due to the fact that the labor thus set free has been reëmployed, so that our progress would be more correctly described as consisting in the attainment of greater results with a given expenditure of labor. Every one would be glad if progress could be maintained with less labor than at present, but most persons are apprehensive that if the day's work should be reduced to eight hours, a serious check would be given to our prosperity.

It is highly gratifying, therefore, to come upon a demonstration that the industrial prosperity of the country, as well as the moral and social well-being of the laboring classes, will be promoted by this reduction of hours. Such a demonstration is furnished by a writer in the April number of the *Forum*, Mr. George Gunton. He estimates the number of "exclusively wage laborers" at 9,472,159—a number which we regret to see he arrives at by the exclusion of 1,075,655 domestic servants. It is notorious that the hours of this class of laborers are the longest of all, and that they are generally prevented from devoting themselves to moral and æsthetic culture by the exactions of their employers. The time that might be spent in attending lectures or concerts, or in visiting art galleries, is too often consumed in the wearisome occupation of washing dishes after the protracted orgies of capitalists have been concluded. But we pass on to Mr. Gunton's demonstration:

"Taking eleven hours to be the average length of the working-day, if an eight-hour system were adopted there would be a uniform reduction of three hours' labor a day, the effect of which upon the industrial and business interests of the community must be obvious. The first and immediate effect of such a measure would be to reduce the average daily production over one-fourth. In other words, the product of 28,416,477 hours' labor a day would be withdrawn from the market without discharging a single laborer. The commercial vacuum thus produced would, in its effect upon labor and business, be equal to increasing the present demand over one-fourth; that is to say, without increasing our home or foreign market, but simply to supply the present nominal consumption, it would create employment for 3,500,000 laborers. To meet this demand, about one-sixth more factories and workshops would be needed, besides setting our present machinery in operation; and a further demand for labor would be created in the mines, forges, furnaces, ironworks, and the various industries that contribute to the building and equipment of the requisite new factories and workshops. . . . Nor is this all. The new demand for labor thus created would necessarily increase the number of consumers, and thereby still further enlarge the demand for commodities; and, according to the popular doctrine of supply and demand, the increased demand for labor, by reducing competition among laborers, must tend to increase wages."

To the objection that if no more wealth is produced no more can be distributed, and that if more laborers are required to produce a given result, they will get lower wages, the reply is as follows: The extent of the market determines business prosperity. The extent of the market is governed by the consumption of wealth by the masses, and this by the standard of living, which in turn is the effect of the habits and customs or character of the people. Therefore whatever tends to increase the wants, improve the habits, and raise the standard of living of the masses, must necessarily tend permanently to increase the consumption and production of wealth.

"And this is precisely what, from the natural operation of economic forces, must result from the adoption of an eight-hour system. . . . The mass of laborers throughout the country, having three hours a day extra time for leisure and opportunity, and being less exhausted, mentally and physically, will be forced into more varied social relations—a new environment, the unconscious influence of which will naturally awaken and develop new desires and tastes that will slowly and surely crystallize into urgent wants and fixed habits, making a higher standard of living inevitable. . . . This increased consumption necessarily implies a corresponding increase in production, and consequently an increased demand for labor and higher wages. . . . It is therefore manifest that the general and permanent economic effect of an eight-hour system would be to naturally increase the aggregate consumption and production of wealth."

It is the mark of genius to discern great world-truths in the most commonplace events. Nothing is more common than to see men who are unemployed half the time, and the shallow philanthropy of the day deplores their condition. The folly of this is made apparent by this writer. These half-employed men have really "extra time for leisure and opportunity"; they are less exhausted mentally and physically, and they are forced into more varied social relations. The crystallization of their desires and tastes into urgent wants and fixed habits does not always, perhaps, make a higher standard of living inevitable. A desire for what one has not money to buy sometimes forces one into social relations with the officers of the law that are more varied than pleasant, and leads to a standard of living that is certainly "inevitable" without necessarily being higher. But this does not affect the fundamental truth, brought out so clearly by this philosopher, that the way to improve your condition is to increase your wants. It is important not to misunderstand this principle. Nothing is easier than to suppose that when a man feels his wants increasing he will work harder in order to obtain the means of gratifying them. But this is precisely the fallacy that the new doctrine is designed to explode. The true theory is, that if a man works less, his wants will tend to increase, and we believe that when attention has once been generally drawn to this principle it will be admitted as self-evident. Exactly how new wants are to be gratified merely because they come into existence, is, we are sorry to say, not made perfectly clear by Mr. Gunton, and this is a practical difficulty which has perplexed a great many people. But it is unreasonable to reject a novel theory merely because it does not satisfy every objector when it is first propounded. It is said that Hegel used to tell his students that in order to understand his philosophy they must stand on their heads. Something the same must be true of this new theory of the production of wealth, and doubtless after we have become accustomed to the aspect of things from this unusual position, many difficulties will resolve themselves.

It is seldom the case that the discoverer of a great principle foresees all its applications. No intelligent person, however, regards this circumstance as lessening the glory of discovery. The fame of Columbus is not diminished by the fact that he was in search, not of a new continent, but of a new way to an old one. He discovered America, and the critic would be indeed captious that should complain that the far-reaching consequences of this event were not at once perceived. We shall, therefore, not hesitate to point out some extensions of this new principle of wealth that may not have presented themselves to the mind of its discoverer.

Let us suppose that, instead of taking eight hours as the length of a day's labor, four hours be fixed upon. In that case the product, not of some 28,000,000 hours' labor a day, but of over 60,000,000 hours would be withdrawn from the market without discharging a single laborer. The commercial vacuum thus produced would, in its effect on business, be equal to increasing the present demand over one-half. It would create employment for over 7,000,000 laborers. To meet this demand, much more than one-sixth more factories and workshops would be needed, and a very active demand for labor

would be created in the mines, forges, etc.; while this new demand for labor would necessarily enlarge the number of consumers and the demand for commodities. This increased demand for labor would obviously extinguish competition among laborers, and wages would therefore bound upwards. It is equally obvious that the wants of the masses would tend to increase even more if they worked only four hours instead of eight, and that the production and consumption of wealth would still more increase. If the mass of laborers had not three hours, but seven hours, a day "extra time for leisure and opportunity," they would be exhausted hardly at all, and the variety of social relations into which they would be forced would be almost inconceivable. So much "opportunity" would infallibly result in a gigantic crystallization of desires into urgent wants, and we are sure that a higher standard of living would become very soon inevitable. If it were postponed, the consequences might be such as we should not like to answer for.

We do not like either to carry a theory to extremes, or to seem to rob its propounder of the credit due to its complete development. It is sufficient, therefore, to suggest that the principle that we have considered may eventually lead to the entire extinction of the primeval curse of labor. We know of no reason why, if the reduction of the hours of labor—which, it is important to observe, means with Mr. Gunton a corresponding reduction of the amount of work performed—infallibly leads to an increased production of wealth, the condition of the race should not be infinitely improved by the general cessation of tiresome exertion. A standard of living would thus be brought about that would be almost inconceivably higher than the present one; a standard of living so high, indeed, that it is now supposed to be attainable only by angels, and in the attainment of which the wants of most men would become so urgent as to cause them to exchange the human for the angelic state of existence.

"READING NOTICES."

Our contemporary, the *Times*, has got into a position of some embarrassment from its practice of printing what are known in the trade as "reading notices"—that is, matter of one sort or another which is really an advertisement, and is paid for as such, but is so disguised as to make it seem, to the general public, an editorial utterance of the newspaper in which it appears. A large number of advertisers are constantly in quest of this sort of "notice" of their wares, and are willing to pay very highly for it; and the more complete the disguise is, either through the nature of the article, or its position in the paper, or its typographical arrangement, the more highly they are willing to pay. As a general rule the real character of these "reading notices" is perceptible at a glance in all newspaper offices, but they undoubtedly to a greater or less extent impose on the general public. In fact, if they did not do so, they would not be valued by the advertisers, and could only be sold at ordinary advertising rates. The one which the *Times* printed of the Bell Telephone Company was, to the professional eye, plainly enough an advertisement, but to the public it undoubtedly wore the appearance of an editorial examination of the history and prospects of the Bell Telephone Company, and it was because it wore this appearance that the company was willing to pay $1,200 for it. It was probably worth that money as an editorial view; as a mere advertisement it would have had no value whatever.

All this amounts to saying, we confess, that a "reading notice" is an attempt more or less successful to deceive the purchasing public. As such it is no worse than many things which are done in other reputable callings than journalism. But it has always seemed to us that newspapers were absolutely cut off from all these doubtful modes of making money by their position as preachers and censors. A minister who started a church, and let out the basement for a faro bank or drinking saloon, and inserted ingenious puffs of business enterprises of any kind in his sermons, might possibly be a sincere moralist, and an implacable hater of wrong-doing, but if his ways ever became known, he would find great difficulty in getting people to believe it. The journalistic business ought, in fact, to be on all its sides the most purely conducted of human callings, owing to its pulpit attachment. As a professional exposer of every species of hypocrisy and deception, a newspaper is bound to avoid the smallest sign of humbug in any of its dealings with the public.

Nobody who knows the *Times* really believes that its sale of a "reading notice" to the Bell Telephone Company in fact affected, or was meant to affect, its independence in dealing with that company, but there was certainly enough impropriety about it to make very puzzling its conduct in giving the public to understand, one month later, that there was to be shortly a great exposure of "a Bell Telephone scandal involving certain newspaper editors in New York," compared to which "the Pan-Electric scandal, involving certain public men in Washington, was a small matter," and "assuring the public that the corrupt and criminal league of an insolent corporation with venal newspapers would not avail." The object of this, if it had any object, was clearly to make people believe that the Bell Telephone had bought the support of certain New York newspapers, although there was nothing in the condition or prospects of the company, as set forth in the "reading notice," to make any such purchase seem necessary or probable. If it was for any reason desirable to say this, however, it was certainly most imprudent and unfortunate for the publisher of the "reading notice" to say it. A newspaper which publishes reading notices is not necessarily corrupt in the ordinary sense of that term, but it certainly takes up its abode in a glass house, and should abstain from every form of stone-throwing.

It is but just to the *Times* to say that it is by no means the greatest offender in this respect. Others do much worse things in that line than the *Times* has ever done. The worst thing a newspaper can do is to sell the columns usually reserved for what are called editorial articles, and speak through them on public questions for cash down. This among leading journals is, we believe, very rare indeed. But in the second-class venality which consists in selling columns for the gratification of private greed or malice, we have never known anything quite equal to the *Tribune's* sale of a whole page for a verbatim report of the torture of a poor man who had offended Mr. Loubat in his Union Club row, by a minute examination of his private affairs in supplementary proceedings. Moreover, the *Tribune* called attention to the disgraceful report in a brief editorial article. Any one who takes pay for this sort of thing does what, in any other intellectual calling, would cover him with indelible shame. That it can be done without shame in a newspaper, shows what the public opinion of journalism is.

THE TROUBLES IN GALICIA.

At the moment when Bismarck finds it needful for the strengthening of Germany to begin a Germanizing crusade in the Polish provinces of Prussia, and Russia, encouraged by the example, sharpens and extends her own measures of denationalization in the "Vistula Land," still graver trouble is reported to be brewing in Austria's share of ancient Poland, Galicia. The ignorant peasantry of that province are said to be driven to a pitch of frenzy by the fear of a massacre prepared for them by the nobles, in retaliation for the butcheries committed by peasant bands in 1846. Those butcheries form one of the saddest pages in the annals of Poland. A vast conspiracy for a general rising in all parts of the divided country had been organized, under the lead of the democratic portion of the Polish emigration, and the complete enfranchisement of the peasantry was the most salient feature of the revolutionary programme. The vigilance of Prussia and terroristic measures in Russia frustrated the attempts in Posen and the neighborhood of Warsaw. In the then existing semi-independent republic of Cracow the insurrection was successful for a short while. In Galicia the incipient rising was stifled in the blood of thousands of nobles—men and women—shed by brutalized victims of ancient feudal oppression. Metternich's official minions were accused of having secretly kindled and openly fomented the blind fury which put the murderous scythe, the flail, and the torch in the hands of the peasants.

If the reports which reach us are not grossly exaggerated, and another *Jacquerie* is not groundlessly apprehended by the Polish nobility of Galicia, whatever machinations may have so violently reinflamed the old class hatred so long after the enfranchisement of the peasantry by the semi-revolutionary legislation of 1848, have surely not emanated from the agency of Austrian official organs. The political aspect of affairs in that division of the Empire of the Hapsburgs is completely changed. Since the liberal reconstruction of that empire on the dual basis of 1867, the Poles of Galicia have been reckoned among the most faithful supporters of the Austrian throne, and, especially since the accession to power of the Taaffe Cabinet, under which the Slavic elements have obtained decided predominance in Cisleithania, have been

deemed the pet subjects of the Crown. The Czechs of Bohemia and Moravia, in their constantly increasing demands for national autonomy, threaten the basis of the permanent integrity of the empire, while the separatistic aspirations of Galicia, for reasons both geographical and historical, can be viewed with equanimity by the statesmen of Vienna. Should Galicia become detached from Cisleithan Austria, to form a part of a restored Poland, the new State would be the strongest outer bulwark of defence against Russia, with whom Austria-Hungary will have, sooner or later, to wrestle for existence. Even now, weak and exposed as the province is, it is considered a useful rampart, owing to the intense anti-Russian sentiment and martial valor of its Polish inhabitants.

Unfortunately, however, both for the cause of Poland and the dual empire ruled by the Hapsburgs, the Poles form only one-half of the Slavic population of Galicia. The other half, occupying the eastern portions of the province, consists of Ruthenes, a branch of the Slavic race holding a middle ground, nationally and denominationally, between Poles and Russians. The nearest of kin to the neighboring Little-Russians in the Empire of the Czar, they belong to that division of the Eastern Church which (under the name of Uniates, or United Greeks) acknowledges the religious supremacy of the Pope. The nobility of the country is almost completely Polish and Catholic; hence a double natural antagonism between Poles and Ruthenes. Dormant in former times, it has become active and dangerous in the last half-century. It was one of the means—in his system of dividing and ruling—which Metternich employed against Polish discontent. Since his fall and the transformation of Austria, Russia has found in it a convenient lever for counteracting the regeneration of the Polish nationality on her borders, under the auspices of the Hapsburgs. The strife between Ruthenes and Poles has, in late years, become envenomed. Panslavist plotters, Socialists, and Nihilists unceasingly incite the Ruthene peasantry against nobles, "Jesuits," and Jews. The ground is undermined. But the Austrian Government well knows the situation and the peril, and, should an outbreak occur, will undoubtedly act with prompt energy and unsparing rigor.

THE ACHARNIANS.

GREEK play has followed Greek play ever since the Oxford "Agamemnon" prompted the Harvard "Œdipus," and, not satisfied with Æschylus and Sophocles, enterprising Hellenists have proceeded to revive Aristophanes; and the English success of the "Birds" is to be followed by the American experiment of the "Acharnians," which is to be performed in Philadelphia on May 14 and 15. We have spoken of the English success of the "Birds," but, in default of actual vision, it may be permitted to doubt whether success of the highest kind is possible for such a play. According to the published accounts, nothing could have been more grotesque than the performance, and if hilarity is success, then the success was unquestionable. And yet a lover of Aristophanes may be excused for distrusting an attempt to fix the dissolving views of Cloud-cuckootown, to cage the trilling melodies of the "Birds," just as for the lover of Shakspere "Midsummer's Night's Dream" can only be acted in the chambers of the brain. But the "Acharnians" is far more substantial, far more of the earth earthy. The first scene of the "Birds" introduces us to a region which is as unreal and mystical as the opening of the "Inferno." In the "Acharnians" we are at once on familiar ground, and instead of two mysterious beings on their way to Birddom, we encounter a flesh-and-blood Attic countryman who has taken up his abode in Athens in order to avoid the incursions of the Doric army. Instead of the flapping, fluttering, piping, quavering bird-chorus we have a tramping, pounding, banging chorus of Acharnians, hard-fisted charcoal-burners, who understand no poetic nonsense and utter none. There is comparatively little variety in the choral rhythms of the "Acharnians," and any moderately well-trained ear can catch the ever-recurring Cretic stamp, whereas the music of the "Birds" runs through almost the whole repertory of antique rhythms, and tries the most tripping modern utterance.

Not every one, however familiar he may be with Greek, can fly with the "Birds." Every one, no matter how prosaic his gait, can keep step with the "Acharnians." The movement of the piece, too, is simple but effective—so effective that if our civil war had left us much heart for joking while it was going on, we, too, might have had our "Acharnians," in which some Federal or Confederate borderer might have made a separate peace with the enemy and have regaled himself with tobacco or coffee, while his languishing countrymen had to put up with cabbage leaves or rye. Indeed, much of the fun of the "Acharnians" is on the surface, much of it lies in the situation; and to those who do not know the original well enough to take the finer points, an outline of the plot—if plot it may be called—will leave merriment enough to make the comedy amusing. Comedy—not farce, as some have been inclined to call it, for the art of the "Acharnians" is not to be depressed beneath its proper rank. It is intensely literary, and of itself suffices to explode any attempt to distribute the comedies of Aristophanes into literary and political, for it is both; and though the plot is hardly sufficiently well articulated to deserve the name, still it is not a mere succession of loose scenes strung on the thread of a common theme. The play does not split in half as the "Frogs" does, or seems to do. There is a regular progress from trial to triumph; the simple *motif* of contrast between peace and war is relieved by an admirable variety of figures, now representative men from abroad, now applications from home, while two figures, the hero of arms, Lamachus, and the apostle of peace, Dicæopolis, brace the play from opposing sides. The ludicrous scene of the returning ambassadors and the foreign envoys is not otiose. It gives justification of the secessionist proceeding of Dicæopolis. And the only part of the piece that seems to disturb the organism is the exquisite fooling of the appeal to Euripides, when Dicæopolis, about to plead for his life before the embittered Acharnians, applies to the poet for a tragic outfit in which to move his angry judges to pity. Yet this scene grows so naturally out of the situation, makes the plea of Dicæopolis so irresistibly comic, and retards the action so aptly, that it is a beauty and not a blemish even from the point of view of the plot.

But we have been betrayed into writing of the "Acharnians" as if the plot were as familiar to the English reader as that of any of the Sullivan-Gilbert extravaganzas; and surely it is the English reader's own fault if it is not, for the "Acharnians" has been fortunate in its translators from Frere to Tyrrell. Perhaps, in view of the approaching performance, both those who know the piece and those who do not may find a summary timely.

Dicæopolis is discovered in solitary meditation. The scene, the Pnyx. He is brooding over the troubles of this life, and comes to a conclusion, reached long before him by certain of his own prophets, that life has more pains than pleasures—and his life in particular—four grains of pleasure to a Sahara of annoyances. It was a joy to see Cleon disgorge, but what an anguish to set one's mouth for Æschylus and get Theognis. It was a delight to hear one musician perform, worse than pressing to death to be tortured by another. But the worst of all is to stay here and wait for the assembling of the people, and see the hustling of the belated crowds, and after all to hear no word for peace. Dicæopolis is always the first on the ground, sighing, yawning, stretching, making notes, going over his accounts, finishing his toilet, and oh! gazing out toward his farm, yearning for peace, longing for his own dear village, that never cried, like hateful Athens, "Buy coals," "Buy vinegar," "Buy oil"—"Sweet Buy and Buy," in sooth. By this time Dicæopolis is wrought up to the pitch of howling down every speaker who does not plead for peace, and so poses at once in the character which he is to maintain throughout.

It is midday. The crowd comes thronging into their seats. The herald calls for speakers, and one Amphitheus rises and proclaims his divine lineage in true Euripidean fashion, and declares that he is empowered by the gods to make peace with Sparta; but, like so many modern men with a mission, he has to confess that the funds are not forthcoming, and he is unceremoniously led out by the police, while Dicæopolis, who pleads his cause, is ordered to be silent. Remonstrance is in vain, for just then the embassy that has been at the court of the Shah is announced, and the chief of the mission gives a report of the arduous services of himself and his colleagues, all for the beggarly pay of two drachmæ a day. Of course each particular is duly commented on by Dicæopolis—the misery of being conveyed in a cushioned carriage, the woe of drinking sweet wine without a drop of water out of goblets of crystal and gold, the anguish of keeping up the reputation of the Athenians among the barbarians by heavy eating and hard drinking, the long waiting on the Shah's movements, the desperate struggle with oxen piping hot from the oven and the mammoth mockbird with which the Shah entertained them. But now their troubles are over, and they have brought with them the Eye of the Shah, Envoy Extraordinary and Minister Plenipotentiary of the Lord of the Golden Plane-tree, Sham-Ibrahim by name. Sham-Ibrahim's gibberish is confidently translated to mean that the Shah promises to send gold; but when the Eye is requested to emphasize the word gold, the envoy announces in sufficiently intelligible Greek that gold they are to have none.

But Dicæopolis is the only one whose ear is purged to understand the purport of the answer, and his protest goes for naught. The Eye is taken off solemnly to a state banquet, and the only comfort Dicæopolis finds is the reappearance of Amphitheus, whom he intrusts with a commission to buy him a special peace for himself, his children, and his good woman. In the sweet assurance that his own future is secure, Dicæopolis listens with greater coolness at first to the lying representations of another embassy, this time from Thrace, who bring with them a ragged regiment of foreign ruffians; but after a while indignation gets the better of him, and he protests again. At this point the assembly is dissolved and Dicæopolis is left alone, but not long, for Amphitheus rushes on the stage in hot haste, closely pursued by the Acharnians, whose fair vineyards had been ruthlessly laid waste by

the Peloponnesians, and who breathe nothing but revenge against the enemy and against all compromisers—original Union men or Copperheads. Amphitheus has only time to show three samples of the wine of peace—the quinquennial, the decennial, and the thirty years' vintage; and as soon as Dicæopolis decides that the thirty years' peace is the best, that it smells of ambrosia and nectar, that it says, "No three-days' cooked rations" as distinctly as anything, and "Go where thou wilt," "Ha! that is the peace for him and a fig for the Acharnians"—as soon as Dicæopolis, then, gives his hearty and unqualified and ingurgitating approval of the long term, the mediator vanishes and the Acharnians come tramping in.

We have no space for the discussion of the way in which the twenty-four stalwart Acharnians deliver what is set down for them; but whether singly or together, they make the air resonant with their clamor. Amphitheus has escaped. The charcoal-burners are not in their first youth, and the nimble runner who sped from Athens to Sparta and back, in utter defiance of the unities, has been too quick for them. But, thank heaven, they are not too old for throwing stones, of which they make ample provision. Just then Dicæopolis enters, prepared to offer sacrifice to Dionysus; his wife, daughter, and slaves in his train. The chorus, hearing his call for religious silence, secrete themselves, while Dicæopolis offers his prayer to Dionysus, marshals his little procession, and sings a hymn to one of the boon companions of Bacchus—a notable sample of a Phallic song. Scarcely has he uttered the words, "The shield shall in the smokehouse hang aloft," when the Acharnians, who have a professional interest in all that pertains to smoke, rush forth with the cry: "Here's the villain, here's the villain. Pelt him, pelt him, pelt him, pelt him! Hit him, hit the renegado; pelt away, pelt away!" Dicæopolis receives them with dignity, and, in response to their hasty, choking objurgation, answers as a hero of Euripides might have answered in like stress. The chorus are resolved that he must die, but quiet down enough to engage in a debate with the culprit, in which each party hurls tetrameters at the other until the discussion is cut short by the announcement of the chorus that they will hear him no further: the traitor who has made peace with the enemy is doomed.

But Dicæopolis has been watching his opportunity, and as they are about to execute sentence, produces a hostage that he has seized—none other than Coal Creel—and threatens to slaughter the dear Being on the spot. This brings the Acharnians to terms at once, in their fear for their beloved basket. They throw down the stones that they had gathered, Dicæopolis the sword that he had drawn; and the accused offers to vindicate his cause with his head on the block. But before Dicæopolis begins his speech he desires one favor. He is in festal array, and the proper thing for the defendant in such a case is to equip himself with mean attire in order to move the jury to compassion. "Might he not ask permission to get himself up in regulation costume?" The chorus is cynically sceptical about the efficacy of any toggery he might select, even if it were the cloak of darkness; but Dicæopolis takes his fate in his hands, and goes to Euripides—who lives conveniently near—the "beggar-poet," the "rag-picker." The interview with Euripides lasts a long time. It is the first of the many showers that the Zeus of comedy discharges at the great poet. Of Socrates, Aristophanes soon wearies; of Euripides, never. Here, apart from the parodies, the main point is the lowering of the dignity of the tragic stage by the introduction of heroes in extreme destitution, the Euripidean realism from which Sophocles did not disdain to learn. And so Dicæopolis borrows of Euripides article after article of his tragic "property." The rags and tatters of Euripides' different heroes are carefully inspected, and the wardrobe of hero after hero is rejected as too good, until the scarecrow suit of Euripides' chiefest tatterdemalion, Telephus, is discovered lying between the mammocked apparel of Thyestes and the draggle-tail costume of Ino. Next he claims a Mysian cap, and, thus equipped, begins to feel the afflatus of Euripidean phrases; but he needs still more, and secures, one after another, a beggar's staff, a basket with a hole burnt in it, a noggin with its lip knocked off, a damaged pipkin with a sponge for a plug. By this time Euripides declares that Dicæopolis has carried off his entire tragedy, and when the importunate beggar asks for a few greens to put in his basket, the allusion to his mother's calling as an herb-seller is too much for the poet's patience, and the servant is bidden, in tragic tones, "Lower the portcullis," or, if you choose, "Close the fortalice."

In the defence which Dicæopolis now makes, the orator begins his *captatio benevolentiæ* by professing his hatred of the Lacedæmonians, and yet finds that they are not wholly to blame for the hostilities. It is the rascally politicians that are the cause of the trouble. Some little extradition difficulties between Megara and Athens, in which Aspasia had a special interest, roused the wrath of Pericles, the Olympian who "lightened and thundered and churned Greece to storm." The Megarians appealed to Sparta. Sparta begged the Athenians to modify their exclusion of Megara. They flatly refused. Hence the war. Now, suppose the boot had been on the other leg; what then? Would not the Athenians have mobilized their fleet as vigorously as the Spartans their army? The fact is, in the words of the prophet, "Athens doth not know; my people doth not consider."

The application of this familiar text divides the chorus into two parties, and in the midst of the altercation Lamachus appears, the very Hotspur to whose memory Aristophanes is to do honor in after years. His coming had been invoked by the war party, and Lamachus and Dicæopolis engage in a duel of words in which all the fine language is on the side of Lamachus, the fun on the side of Dicæopolis, who laughs at his military rig, sneers at his heroism at so much per diem, rakes up the army record of the general with one hand and his debts with the other. Exeunt Lamachus and Dicæopolis—Lamachus with proclamation of vigorous war by sea and by land; Dicæopolis with announcement of open market to all the Peloponnesians, to Megarians west and Bœotians north.

The chorus is now and henceforth entirely on the side of Dicæopolis, and in the first line of the *parabasis*, which now follows, announces that he has won his case. The *parabasis*, that part of the ancient comedy in which the poet takes the public into his confidence—that part on which the highest art and the most telling eloquence are expended—withdraws itself from the appreciation of those who are interested in the comic situation only. Without the rhythm, without the music, without the politics, the *parabasis* seems an impertinent interlude; and yet this opening of the window in the heart of Momus enables us to see the piece in its true light. In the *parabasis* of the "Acharnians," Aristophanes vindicates his political course, and glorifies his services to the state as a wise and prudent counsellor—one whom the tributaries are eager to see, one whom the Shah honors, whom the enemy is eager to appropriate. No wonder the Lacedæmonians demand Ægina from the Athenians, for with Ægina goes Aristophanes. But the poet is not to be given up; he must continue to administer wise advice to the state, and Cleon may rage and imagine vain things to the end. And to show how worthy he is of their esteem, he reads them a lecture on the shameful manner in which young speakers bully the old men in the assembly of the people.

The *parabasis* over (it is to be feared the uninitiated would call some of it "gag"), we are ready for the merriment of the feast day. The free market proclaimed by Dicæopolis is open to every one except Lamachus, informers, and like cattle; and the hero, after surveying the ground, goes off to bring the pillar on which the terms are recorded. Meantime a Megarian and his two daughters appear and talk in dialect, to the great delight of scholars. The Megarians were of a coarse and hard type, and, being borderers, were thoroughly detested by the Athenians, who raided their poverty-stricken canton with unfailing regularity at the due season of the year. The Megarian has nothing to sell, and concerts with his daughters a Megaric trick: rigs them out in pettitoes and pigs' snouts and put them into a bag, intending to sell them as swine to Dicæopolis, who returns just as the arrangements are completed. Of course the Megaric trick does not impose on Dicæopolis, and the whole scene that ensues is a series of coarse but clever double meanings. The Megarian is made happy by a bundle of garlic for one pig and a measure of salt for the other, and after times are made richer by two familiar phrases, though coarse men who refuse "to buy a pig in a poke," and old women who talk about girls as "having taken their pigs to a bad market," little suspect the origin and the force of the words they are using, and it is well.

The Megarian has not left the stage, and is in the act of wishing that he could dispose of his entire family on as good terms, when an informer appears and tries to confiscate the bag, but he is speedily taken in charge by three strapping fellows who constitute the market police, and Dicæopolis and the Megarian part the best of friends. This auspicious opening of business is celebrated by a song from the chorus glorifying the hero of peace and predicting his triumph over all his enemies.

The news has spread, and a Bœotian comes in, he and his man heavily laden with the products of his rich canton. Athens had little to offer for the hamper of game, for the glorious eel, queen of the nymphs of Copais. Sardines and pottery, the main things that Attica has to offer, are cheap enough in Bœotia, but one thing the Bœotians lack—they have no informers, no "sycophants"; and the prince of sycophants, coming in at the instant, is allowed to develop his capacities for formulating charges of high treason, and then, having shown himself to be the genuine article, is packed up and delivered to the Bœotians as a vessel of honor, a peachblow vase. Lamachus, who had been formally excluded from the market, now sends a servant to buy a drachma worth of thrushes and three drachmæ worth of eel; but Dicæopolis is inflexible, and enters his house with a halo of feathered game about his head.

Another song, in which the wisdom of Dicæopolis, the horror of war, the charms of those twin spirits of peace, Aphrodite and Eros, are vividly set forth, and Dicæopolis returns for the final manifestation of his genius. A herald proclaims the Feast of the Flagons, and preparations are made for a great banquet. Dicæopolis, as a true artist to whom nothing culinary is alien, watches over the rites of the open-air kitchen with loving care. Throughout the scene his tones and his actions are sober to suit the grave matters of roasting and basting which are going forward. The occupation is too absorbing for more than snatches of talk with the applicants for help, who come

this time from home. A peasant who has lost a yoke of oxen is dismissed without a drop of the precious elixir of peace; the best man of a bridegroom, who brings a portion from the wedding feast and sues for a gill of peace for his friend, has the present rejected and himself sent empty away; but Dicæopolis has not the heart to refuse a similar petition made by a bridesmaid on behalf of the bride, and sends her a prophylactic against the conscription of her husband.

No sooner has the bridesmaid disappeared than a herald enters and summons Lamachus to the field, and every verse that Lamachus utters while making his preparations for the march is echoed by a joyous parody from Dicæopolis, who is making his preparations for the banquet. This *stichomythia* over, the chorus sings a mocking song to the dispraise of one of the poet's rivals, and the piece closes with another contrasted tableau of Lamachus and Dicæopolis; for Lamachus returns grievously hurt by an inglorious stake, and his moans and groans meet with merry response from Dicæopolis, who, having won the prize of a wineskin as the most redoubtable drinker, lustily chants in his own honor the Greek "See, the conquering hero comes." And all the chorus replies, "See, the conquering hero comes."

By this rough sketch of the play, what was said in the beginning is sufficiently proved. The balance is too mechanical, and the situations are broad, but the literary workmanship redeems the breadth—and the breeziness of the piece, its perpetual bustle, bring it nearer to the un-Greek public than most of the possible plays of Aristophanes. To be sure, if the object of the performance be to bring the Greeks nearer to us as Greeks and not as men, much might be said for some other selection; but, as the true reproduction of the antique must be left to the brain of the student and not to the eyes of the spectator, we must be content if any work of antiquity can be lifted out of the mummy-case and be made to live and move again, so that the Greeks may appear, if not wholly Greek, yet as something more than the dead stock-in-trade of grammarians and antiquarians.

MR. GLADSTONE'S OFFER TO IRELAND.

DUBLIN, April 19, 1886.

THERE is something almost bewildering in the events of the past ten days—especially to those who all their lives have hoped for some form of autonomy for Ireland, and to whom age, while it did not weaken their desires, was bringing that numbed hopelessness which comes, as life advances, to most people engaged in struggles against heavy odds. The end cannot be said to have come yet. It is, however, impossible to believe that what has been said can ever be entirely gone back upon. The utterances of Mr. Gladstone, Mr. Morley, Sir William Harcourt, and other leading British statesmen accept and embody the arguments in favor of Irish self-government urged from the times of Grattan and the volunteers to the present, and, even if now overborne, would remain an armory which would furnish materials to us for an indefinite prolongation of the struggle. And the mind naturally dwells upon the central figures in the drama. We do not know whether to wonder more at Mr. Gladstone or Mr. Parnell: at the aged British statesman (with "his intellect like the arch of heaven," as was remarked by one of his bitterest Irish opponents in the darkest coercion days) showing such a capacity for recognizing the necessities of the occasion, and bending himself to them, in apparent inconsistency with all his previous utterances and the traditions of his order; or at the young Irishman who, commencing with nothing but himself and a policy, has in a few years raised Ireland from a condition of the most hopeless prostration to one of highest hope and greatest confidence in her own powers. "Will no one stop that madman Grattan?" was Burke's exclamation some hundred years ago; "Will no one wring the neck of that nuisance Parnell?" was the general attitude of polite society towards the Irish leader until within a comparatively short period.

None but those intimately acquainted with Irish affairs can realize what Mr. Parnell has effected, or how he is regarded by the Irish people. Eight years ago matters were at their lowest. Some of those now passed away, and who have given their names to Irish history as strenuous patriots, privately acknowledged that there would be "no home rule," and that the only hope for Ireland lay in subsidiary reforms. Others retired from the struggle, retaining their own opinions, but believing that the old hopes had, so far as effective agitation went, died out in the hearts of the Irish people. It was in the face of this feeling that Mr. Parnell, more correctly gauging the situation, took the matter in hand. "You are a dangerous man to speak to: I come to you to know the worst," he urged in effect to a despondent friend who had been engaged in the struggle long before his own attention had been turned to it; "but I mean to try what I can do." Measuring human action by the standard of the Sermon on the Mount, it is impossible to justify many things that have been said and done in this, as in all other, national uprisings—all the methods by which this wonderful revolution has been effected in British thought. Again and again, within the past eight years, have some of those who believed they best loved Ireland had to hide their faces in anguish at what has been said or done or implied or left unsaid. The best that can be said is this—that it was better than war or civil war; and there are few now who do not acknowledge that had the mass of the Irish people had the power and the chance of success, they would long ago have been justified in resorting to armed force to cut the meshes of the system in which they were enveloped. There is nothing, in the opinion of the present writer, inconsistent in Mr. Gladstone's and the Earl of Spencer's change of front on the Irish question—one moment plunging into tentative reforms and attempting to govern Ireland through a stern coercive policy; again adopting the measures to which they have now given their names. Having, with the best intentions, as we Irish are now generally prepared to admit, with all the forces of the British empire at their back, made full trial of the one policy, and found it ineffective, they have had the manliness to acknowledge their mistake and enter upon another course. And in doing this they are giving one other most striking exhibition of that power of accommodating themselves to facts and altered circumstances which has enabled the governing classes of Great Britain to maintain their position.

Still, no matter what the power and the genius and the influence of Mr. Gladstone and his home-rule Cabinet, we can but dimly estimate the conviction and the prejudice that will yet be aroused and marshalled against the measure. There are stormy times before us, however much we may believe that a large measure of local self-government is certain to be the outcome. The scheme propounded by Mr. Gladstone, in its main features, appears to meet the approval of Mr. Parnell and his colleagues. Nothing was more striking in this regard than Mr. O'Brien's "Every man of us," in reply to the taunt of an English member that even the Irish party had not accepted it; and Mr. Parnell in the House, and *United Ireland*, the accredited organ of the party, exhibit the same spirit. Having said so much, I must now express the opinion, in which most Protestant Nationalists with whom I have spoken are in accord, that the measure, as it stands, has in it none of the elements of finality. It is impossible to believe that the non-representation of Ireland in imperial affairs could be permanently satisfactory. The bill, if passed unaltered, would place us in a position beneath that of the great colonies, and even that of the Channel Islands: we should be very much in the position of the Isle of Man. We should have no influence over the Crown, which could interpose its veto on any one of our acts; we should have no control over the army and navy which garrisoned our forts and swept our bays. We should be shut out from the family of nations. Abroad, we should be represented only by courtesy. As often as we returned home, the gleam of an Irish lighthouse would come as a token of our subjection, for even it would be under the control of a Power foreign to ourselves. Complete separation would be a definite and comprehensible policy. It is not the policy of the party to which the writer of these communications belongs. Our ideal has been a settlement on the basis of your Union, or the North German Confederation. There would be something definite and honorable in such a settlement, but not in this. Perhaps we would accept it, as better than the present status, but we could not accept it with any belief in its finality. To suppose that a nation of five millions would permanently settle down in such a subsidiary position would appear to us an impossibility. We have no desire to interfere in English or Scotch local affairs, but we claim, with the English and Scotch, equal rights in the settlement of matters of common interest; and, while few of us can regard with equanimity the means by which the empire has been got together, we feel that it would not be good for us, nor should we have any right, now to wash our hands of responsibility in the government and the future of that empire.

It is ominous for the hopes of speedy settlement that the Irish leaders do not appear to participate in these feelings. Public and private utterances lead to the opinion forcibly expressed in *United Ireland* of the 17th inst.:

"The most surprising feature of English [the editor puts out of view Irish] criticism of the Home Rule Bill, is the repugnance to the exclusion of the Irish members from the Westminster Parliament. . . . This we regard as an unmitigated misfortune for the two countries. If the home-rule experiment is to succeed, it can only be by having all the attention of the Irish people fixed upon home legislation, and all the energies of the Irish representatives concentrated in Ireland. A representation at Westminster would mean the continued drain of the best parliamentary intellect of the country, which, for years to come, would find superabundant employment at home. The disaster, however, would be less to the dignity and efficiency of the Irish Parliament than it would be to the good relations between the countries. . . . All questions between the two countries would remain open and sore. . . . The object and desire of the Irish leaders, no less than of the English, is to make an honest end of the international quarrel," etc.

We cannot think so poorly of the depth of Irish administrative capacity as to believe it would not furnish sufficient for due attention to imperial as well as full attention to home matters. It is impossible to believe that the good relations between the countries would not be subject to more strain under such an arrangement than under one in which we had a voice in the regulations which would press upon us in our relations to the central Government. I have heard it suggested that contentment with the proposed arrangement probably arises from the small extent to which Catholics can feel real interest in the affairs of a Protestant empire. But Mr. Parnell is not a Catholic, nor is he a man who naturally looks at things from a Catholic point of view,

And one would think a Catholic nation like Ireland would be slow to sacrifice any influence it possesses in the empire on the side of its co-religionists, under the same flag and in foreign countries where British influence and diplomacy are not without their weight. The one factor which makes us slow to condemn the present proposal is the acceptance it has met with from Mr. Parnell. He has all through shown perspicacity and foresight. Upon the success or failure of the proposed experiment will rest his claim to rank among the first of statesmen or the greatest of disturbers in history. He cannot be unmindful of such considerations; yet, even with this in view, and without entirely holding in abeyance our reason, a definite party in Ireland cannot share the feelings of those to whom we should desire unhesitatingly to trust a settlement. So long as the difficulty of separating local and imperial interests in Parliament was urged by British statesmen as a reason against home rule, we perhaps accorded it too little weight. Now that it is urged by statesmen who are willing to grant us a form of home rule, we may well feel its reality. Nevertheless, considerable delay and the most thorough discussion of the question are desirable, in the hope that some better settlement may be evolved than that proposed—some settlement which, if necessitating a more entire reconstruction of the fabric of the British legislative system, will at least prove to be permanent and satisfactory without being humiliating to either nation. D. B.

THE PRINCES OF CONDÉ.—II.

PARIS, April 20, 1886.

WE have said that the father of the "Grand Condé" sent his son, during his early years, to the castle of Montrond, in Berry. The young Prince took in 1626 the name of Duke of Anguien (the name was thus spelt in the sixteenth and seventeenth centuries; it was spelt afterwards Enghien; the Duc d'Aumale has returned to the old style). He made his first entry into Bourges, where his father was governor, at the age of five, on the occasion of his baptism, and he was able to say the *Credo* himself in Latin. He returned immediately to Montrond, and received the first lessons of military art from an engineer named Sarrazin, who was reconstructing the walls of the fortress. His father, returning one day from Languedoc, was surprised to find a young captain, seven years old, who was drilling and commanding the boys of the place, and conducting them against an imaginary foe. The real education of the Prince began when his father placed him in the Jesuits' college at Bourges. The colleges of this order were very flourishing at that time. Their system, their *ratio studiorum*, fixed by Father-General Acquaviva, had transformed the education of youth. In vain had the universities and the local *parlements* tried to stop their progress. The movement was irresistible. In 1627 the Company had in its twelve colleges of the province of Paris no less than 13,180 pupils. Condé had long been the hope of the Protestants, but after he reconciled himself with the court he had become their ardent enemy: he showed himself very unmerciful in his war against the Huguenots in the south of France. He was in constant fear of Richelieu, and when he confided his son to the Jesuits, he did a thing which he knew would be agreeable to the Cardinal. He seems to have been sincere in his great devotion to the Jesuits, whom he constantly employed in all his affairs, and whom he protected everywhere.

Condé was fortunate in the choice of the preceptor, Father Pelletier, who was adroit, assiduous, vigilant, with much sense and knowledge. He gave as governor to his son a gentleman, M. La Buffetière, who had for his special mission all that concerned physical exercise; and a doctor, M. de Montreuil. For six years Louis of Bourbon went every day to the Collège Sainte-Marie, living in an old hôtel which was not far distant. In the classroom he was separated from the other pupils by a gilded balustrade; but this was the only distinction maintained, and his father particularly insisted on his going through all the compositions and examinations. He himself saw the notes of the child, his *devoirs*, and he wrote regularly to him. His notes, his instructions on the subject of the education of his son, were incessant.

There is, at the present moment, an active movement against classical studies. I need hardly say that it cannot be serious. The Latin language especially is the fountain of a French education. Young Condé was made familiar with it: he read the Latin authors, especially the historians, Florus, Livy, Tacitus, Cæsar. The Jesuits have always shown much predilection for the poets, and Virgil, Horace, Ovid, were certainly placed in his hands. "One of the manuscripts," says the Duc d'Aumale, "preserved at Chantilly contains a collection of Latin poems in the most varied rhythms, offered and dedicated to the Prince of Condé by Louis de Bourbon, in his early years: 'ætatulam meam, quæso, intuere, quæ, ut tenera est ac primi vixdum tirocinii capax, etc. . . .'" The young Prince wrote regularly to his father in Latin; he entered the class in rhetoric at twelve; at thirteen he spoke Latin as fluently as French. He devoted the two following years to philosophy and to the sciences. At the end of each term he defended publicly a series of propositions in the form of theses, which were printed and dedicated, some to the King, some to Cardinal Richelieu. They were distributed, by the care of his father, to the ministers, to the principal members of the *Parlement*, to the Bishops, in Paris, in the provinces, and even in Rome. Then came a course of law, which was quite a novelty, but Monsieur le Prince was constantly engaged in lawsuits, and judged that some technical knowledge would not be unnecessary to his son. The professor chosen by him was a M. Mérille, who occupied at Bourges the chair of Cujas, and had a great reputation. This M. Mérille was not devoid of vanity, and called himself *doctorum princeps et doctor principis*. The Institutes of Justinian were explained to the young Prince, who himself wrote a treatise on entails.

The vacations were spent at Montrond, and were given to equitation and hunting. At the age of fifteen the young Prince was presented to the King at Paris. He went to Saint-Maur to make a visit to his mother, whom he had not often had occasion to see, and made a journey to Burgundy, where he remained while his father conducted a campaign in Franche-Comté. In 1637 he entered the "Royal Academy for Young Noblemen" in Paris, a military school which had been opened recently, and which Louis XIII. had taken under his protection. The young men who were destined to the profession of arms learned there geography, mathematics, geometry, the art of fortification, fencing, and equitation, and were militarily drilled. The Prince was very apprehensive of the influence which the Princess might have on her son: he feared the frivolity and the pleasures of her salon. The Princess was the queen of the "précieuses." Young Condé was allowed, however, at times to see her and her little court, Mlle. de Scudéry, Mme. de Sablé, the Marchioness of Rambouillet, Voiture, Balzac, Chapelain. He became acquainted with the young friends of his sister, with the most intimate of all, Julie d'Angennes, with the young Montmorency, with the charming Marthe du Vigean, with whom he afterwards fell in love, with the daughters of the Duke of Mantua, Marie and Anne de Gonzague.

After one year spent at the military academy, the education of Condé was thought complete. In speaking of this education, the Duc d'Aumale says: "The Prince acted wisely in living habitually away from his son. At a distance, his good sense, his perseverance, his firmness, were alone felt; a continual cohabitation would have rendered his tyranny insupportable. The moral direction was not absent; but while he imposed respect on his son, Henri de Bourbon neglected to develop delicate sentiments in this young soul, to touch certain chords which never vibrated in the great heart of Condé." At this moment, the Duc d'Anguien was chosen by the King for the government of Burgundy during the absence of his father, who had received the command of the army of Guienne. He sat for the first time in this quality in the *Parlement* of Dijon in March, 1638. His father had prudently placed near him trusty advisers. While he was at Dijon, he made the acquaintance of some generals, and, among others, of Marchin, who was born at Liége, and who had learned the art of war under the best masters. He neglected no opportunity for study. He worked every day at mathematics; he himself made plans of the eleven fortified towns of Burgundy, accompanying each plan with notes and legends. He followed habitually the exercises of the troops. No regiment crossed Burgundy without being reviewed by him. He had his own troops, bearing his name of Condé, as was then the privilege and the duty of the Princes of the royal blood. He gave equal attention to the general affairs of the province, and liked to meet the members of the legal profession.

Bossuet's great "oraison funèbre" has contributed to spread the idea that everything in Condé's career was owing to genius, and not much to work. Bossuet did not enter into details; he shows us the conqueror of Rocroy without speaking of his antecedents: the young hero, in his admirable oration, jumps, as it were, *in medias res*. The Duc d'Aumale has almost astonished us by showing what a care education had been in the formation and development of this young hero. The minute particulars which he gives on this point have been found of great interest. It is probable that if the education of young Bonaparte at Brienne and after Brienne could be analyzed with as much care, it would be found that here, also, nature was powerfully helped by art and by education. It is also curious to see to what extent paternal authority was maintained in the seventeenth century. Here we have a Prince of the blood already governor of a large province, trusted with the most important functions and duties, while in his private life he is far from emancipated. His father not only gave him a council for political affairs, he maintained the powers of La Buffetière, he gave him a Jesuit confessor, Father Mugnier, who read with him and "saw to his deportment." The Jesuit regulates the expenses of the young Prince, he orders his clothes at times, he prevents him from hunting.

The Duc d'Anguien received the King at Dijon in September, 1639, accompanied him to the frontier of his Government, and showed him all the plans of his fortresses. Louis XIII. and the ministers were favorably impressed by the young Governor. Richelieu writes to his father: "I will begin this letter with the good qualities of M. le Duc d'Anguien, which are such that you must be pleased with them. He has much intelligence, discretion, and judgment. He has grown by two fingers and will grow more, as far as can be judged. His respect for you shows itself in all his actions. I think that it will be prudent to choose for him this winter a veteran

much experienced in the art of war; and as for the next campaign, I believe that you will not let it pass without his seeing it with the oldest marshal of France, so that he may be instructed as behooves a Prince of his quality."

Henri II. of Condé, who had never known his own father, had very absolute notions on the subject of paternal authority. He had determined to marry his son, and to marry him in the family of Richelieu; no consideration could modify his decision. He chose Mlle. de Maillé-Brézé, who was the niece of Richelieu. She was poor, and her rank did not seem to mark her for such an alliance; but the protection of Richelieu was attached to it. In 1640 the Duc d'Anguien was presented to Mlle. de Maillé and engaged to her (she was then only twelve years old). He left her almost immediately and made his first campaign as volunteer in the north of France, under the Marshal de la Meilleraie. He witnessed the siege of Arras, and showed much application; he was every day among the troops and in the trenches. He also took part in the sieges of several other places. When he returned to Paris, between two sieges, he felt that he had now two masters instead of one, Richelieu as well as his father. He bore this new tyranny in the hope of receiving soon from the Cardinal the command of a great army. His father hardly allowed him to see the Princess, being jealous of her influence and of the influence of the young men called the "petits-maîtres," who formed the brilliant court of the Princess and of Mme. de Rambouillet. Richelieu saw the danger among the handsome friends of young Condé's sister, Isabelle de Montmorency, Marthe du Vigean.

The Duc d'Anguien was summoned to Richelieu in April, 1642. The Cardinal was at Narbonne, defending his life and his power against Cinq-Mars, and struggling against an incurable malady. The young Duke remained some time with the Cardinal, and was faithful to him in the great drama which ended in the arrest of the young favorite, but he felt sometimes himself a desire to revolt: "The Cardinal is a tyrant; he has exasperated the Queen, the Queen Mother, Monsieur, the Count of Soissons, and many others." The Cardinal forced him to treat the Princes of the Church in a way he did not like. At a moment when his pride was deeply wounded, when he had become almost rebellious in his heart, he learned that the Cardinal was dead. He ran at once to Paris. His father had lost no time, he had seen Mazarin; a great command was assured to the Duc d'Anguien. Louis XIII. respected the choices made by the dying Cardinal for a new campaign, and Condé received his commission for the command of the army of Picardy.

Correspondence.

DR. BALL'S 'STORY OF THE HEAVENS.'

To the Editor of The Nation:

Sir: Will you kindly afford me the opportunity of making some remarks relatively to a review of my book, the 'Story of the Heavens,' which recently appeared in your paper? Your reviewer thinks that I have unduly appropriated two passages from Prof. Newcomb's 'Popular Astronomy,' and as the extracts he has given justify the charge, it seems incumbent on me to explain.

I first refer to the longer of the two passages, of which the subject has a somewhat curious connection. In 1877 I published a book on 'Elementary Astronomy,' of which an American edition appeared shortly afterward, edited by Prof. Newcomb. One of the two changes he made was the substitution of Sirius and his companion for a double star which I had used, and some letters passed between us in which I expressed my approval of the change. About the same time the 'Popular Astronomy' appeared. It is evident that I transcribed from it the passage relating to the subject of our correspondence, and, after the lapse of six or seven years, I carelessly seem to have regarded the language as my own. Had I been asked before I read your review where I first obtained the Sirius anecdote, I could not have readily replied. It was, of course, long familiar to me when in 1884 I paid a delightful visit to the Alvan Clarks at Cambridgeport, and heard it once again from the discoverers themselves.

The short passage about Tycho Brahe I extracted from the 'Popular Astronomy' a few years ago. Of course, I ought to have preserved the inverted commas, but by some mistake I did not, and consequently overlooked its source.

And now, having admitted my errors, I think I am entitled to complain at the prominence you have given them. Is it fair that more than half the review should be devoted to strictures upon less than one-five-hundredth part of my work? Such a mode of criticism is not likely to convey a just impression. 'The Story of the Heavens' is at least an honest book. It is the result of years of thought and of study, of years of experience as a professor and a lecturer, and of years of practical work in the observatory.—I remain, yours truly, Robert S. Ball.

Observatory, Co. Dublin, April 16, 1886.

[We will not be more implacable than Profs. Newcomb and Young, who in the last number of *Science* (April 30) freely exonerate Dr. Ball. —Ed. Nation.]

HARVARD FACSIMILES: A SUGGESTION.

To the Editor of The Nation:

Sir: For reasons which will appear in the course of this communication, I do not think there can be a better time than the present to put forth a suggestion which I have long been intending to make, and I will give it all the prominence I can by confining my letter to this one point.

It is most desirable that facsimiles, in the best style, should be executed of the Harvard documents at Cambridge, and of the most important of the Harvard entries in the Parish Register of St. Saviour's, Southwark, permission for which, I feel sure, would be readily granted. Not only the exact color of the ink, but the very texture of the paper of the original, can now be made to appear, as you will see in the facsimile of a letter of Sir Philip Sidney, which I have asked may be sent to you. I would reproduce the entire page of the signatures of the Emmanuel B.A.s in 1631 and the M.A.s in 1635, and the full page of the *Recepta* in which John Harvard is mentioned; and to these there should be added so much of a contemporary map or semi-pictorial representation of the city as will show the site of the Harvard House in the High Street of Southwark. The whole would be comprised in the moderate compass of about four sides of foolscap.

I gladly take this occasion to state that, having had its attention drawn to the interest of the two Harvard entries in its records, one of which was printed and the other referred to by me in the *Nation* of the 8th inst., the Clothworkers' Company immediately caused facsimiles of both to be executed, and copies for presentation will soon reach your side of the Atlantic, borne by the hand of a well-known member of the Court of the Company, who is about to visit the United States.

The publication of this letter in its columns will be a sign that my suggestion is approved by the *Nation*, which will be a guarantee of the successful completion, by some means or other, of a series of Harvard facsimiles which has been so well begun. Z.

Cambridge, Eng., April 22, 1886.

MANHOOD AGAINST STRIKERS.

To the Editor of The Nation:

Sir: You are doubtless correct in giving Mr. Hoxie great credit for the victory—if we may call it victory while the battle is still on—over the gigantic conspiracy that has recently laid its lawless hand on the commerce and business of the Southwest. But no general wins a victory without the aid of many brave soldiers whose less conspicuous deeds go unrecorded in history. Permit me, in commending one deed of heroism, to do at least partial justice to many brave deeds that deserve perhaps equal honor.

This case comes to my knowledge through the father of the hero, whom I know to be perfectly trustworthy.

The son, whom, to avoid giving him a notoriety that might put him in further peril, we will call simply G., was employed as a brakeman on the Missouri-Pacific Railroad at the time of the strike, and was one of many who quit work, not because they wished to do so, but for other reasons which they considered convincing if not satisfactory.

After the conference of the strikers with the Governors of Missouri and Kansas had shown that the strikers had no real grievances, G. resolved to return to work. Having been threatened, he armed himself. As he came in from his first run and started for home, he was pursued by a mob of one hundred or two hundred men and boys, *led by one whom he knew to be a Knight of Labor and striker.* The conductor, also armed, was with G. These two faced and conquered the valiant Knights, and made their way to the office where it was their duty to report. The crowd pursued at a respectful distance, and, getting reinforcements, threatened to force an entrance and wreak their vengeance. G. took his place at a window overlooking the mob (the office was up stairs) and significantly took from his pocket a supply of cartridges and laid them on the window sill. By this time a cry of "Police!" arose, and the siege was raised. The two brave men were afterwards escorted home by armed police. They are at work yet, and do not intend to quit.

Another man, who was with them on the train, but took a different direction on getting off, was not so fortunate. He was assaulted by part of the same mob, and badly beaten. His wife went to his rescue with one of her female friends, and in their efforts to protect him one of the women was struck by the brave Knights.

These outrages were never reported in the newspapers. Many others perpetrated by the strikers are suppressed by the reporters, and the accounts given are colored to favor the strikers. Perhaps there is good reason for this, and the reporters are not so much to blame. Being known to the strikers, if they told the naked truth, they would receive forcible hints that their labors were not appreciated by those valiant men, and their occupation as reporters would be gone. H.

St. Louis, Mo., April 24, 1886.

NATIONAL AID TO SCHOOL TAXATION.

To the Editor of The Nation:

Sir: Is it not possible that the money which the Blair bill now before the national House of Representatives proposes to distribute on a basis of illiteracy, to assist in educating the masses, might be so used as to avoid putting a premium on mendicancy? It is the unanimous testimony of students of popular education that schools, to

be valuable, must be supported by those who use them. It is plain that in Kentucky, at least, our public schools will never accomplish their work until the wealthy and intelligent cease to send their children at the age of twelve to boarding-school. When the better classes begin to keep their children in the public schools until a good course of study is finished, they will also begin to take an interest in these schools, to exercise care in the selection of trustees, and demand that competent teachers be chosen, comfortable houses built, and suitable furniture and apparatus supplied. This has long since proved true in Louisville and the larger towns, but in the country districts trusteeships are accepted with a feeling of condescension, as a sort of doubtful honor next in degree below a country magistracy, and the teachers' places are treated as the patronage of the trustees, to be given to daughters of relatives or neighbors. Almost never is a local tax laid to support the school, and the money coming from the State Treasury is treated as a donation to the neighborhood.

We have in this an excellent exemplification of that promotion of mendicancy which you fear. Unfortunately, our Constitution will not allow us to change this by legislative enactment. It does not follow, however, that moneys which may be voted from the national Treasury must be used in the same harmful way. It has been proposed that such moneys be set aside as a fund to foster local taxation. Whenever a district not heretofore taxing itself for schools shall levy a tax for general school purposes, or to build a school-house, it is proposed to add an equal amount from this fund; in like manner, a district increasing its local taxation for school purposes is to be aided to the extent of the increase.

That Kentucky and the South generally need better schools, that the need is much more pressing than in the North, and that it will be many years before it can be met from within, is undoubted. That the general Government, which, however unwillingly, has impoverished the South by war, and has distributed the public revenue lavishly to its soldiers, may do a gracious thing in helping educate the negro voters it has thrust upon us, and the white masses it has plunged in ignorance, is clear. The one cry of teachers, county superintentents, and all interested in our schools, is "More money!" Money—itself a mere blind force, incapable of self-direction—unwisely used, however, will undoubtedly do great harm, as you anticipate. We promise to try to use it carefully and wisely.

The other question is, Can the national Government afford it? Who will tell us?

C. H. Greathouse.

Louisville, April 23, 1886.

MISTRANSLATION AGAIN.

To the Editor of The Nation:

Sir: The truly laughable English version which you cite of some lines from Froebel's "Charcoal Burner" is simply another example of carelessness in translating. The original reads:

"Und ist er auch schwarz in seinem Gesicht,
So schadet dies seinem Herzen doch nicht,"

which might be rendered:

"And even if sometimes black in his face,
Such blackness his heart can never disgrace."

But there are some people who can never learn to make a distinction between *kindlich* and *kindisch*.—Respectfully, Theodore Baker.

Dresden, Germany, April 16, 1886.

WANTED—A NEW GRAMMAR.

To the Editor of The Nation:

Sir: In the April number of "Modern Language Notes," I find an article, over the signature of Mr. Samuel Garner, which was so welcome and so strong a support to ideas which I entertain, that I would call further attention to its subject. Mr. Garner protests against the "illogical, misleading, not to say senseless proceeding, so common in our grammars and elementary books for teaching foreign languages, of translating the subjunctives in the paradigms by *may* and *might*, as though these words were the usual English equivalents." Further on: "The primary source of the erroneous practice is to be sought in the English grammars themselves, whose authors have been content to remain in the old ruts, repeating the inaccuracies of the first grammar makers, who had no scientific knowledge of the language."

I should like to see an English grammar which, among other things, discards the potential mood; gives a full and proper treatment of the infinitive and its uses; insists upon a dative and a vocative case; calls "articles" and "possessive pronouns" by their right name, "adjectives"; and through it all urges the student to use his common sense as much as his memory. Although Prof. March in his Anglo-Saxon grammar gives in paradigms the "potential" mood, and grammars of all lesser grades do the same—or worse—until Prof. Welsh even blots the subjunctive from his books, and leaves the potential to be the sole subordinate mode, yet we must confess that there was never, nor is now, a potential mood in the English language. It is a fiction of "the first grammar makers." Few grammars, so far as my limited observation goes, hint that the infinitive may have a subject; most of them expressly deny it; and in those which partially admit it, a wrong explanation is given. For instance, in Prof. Whitney's work ('Essentials'), superior to any other of its grade as it is, the statement is made (sec. 449) that "the root infinitive is used after a verb and its object, as a kind of adjunct to the latter, signifying an action in which it is concerned. . . . The construction has been *carried much beyond* its natural limits, as the object of the verb has come to *seem* a kind of subject to the infinitive." Would it not be better for the author to simply affirm, consistently with the usages of the English language from the beginning of its recorded history to the present, that in sentences like "They saw her depart," "her" *is* the subject of the infinitive "depart"? Unless grammarians do admit this—nay, insist upon it—many expressions in English cannot be parsed.

Again, few grammars mention a dative case, and when they do, disguise it as indirect objective. The indirect object (they say), like the direct, is put in the objective case, but the objective in this use is to be called the dative-objective, since it answers to the dative case of other languages. This, in the face of the fact that the English itself has always had a real dative case—not an objective "answering to the dative of other languages." The use and meaning of the case remain the same as when there was a distinctive termination to prove its existence.

On these and other points—notably the substitution of the name "possessive adjective" for "possessive pronoun"—I think the grammars of to-day can be improved. I well know there are many who have a horror of introducing into English grammar any terms or rules from the Latin; and, having always associated the terms "dative," "subject of infinitive," etc., with the Latin, they reject them from the English, forgetting that the English grammar taught in most of our schools is based upon the works of those "who had no scientific knowledge of the language," and who in consequence, when they wrote English grammar, "made up" a mass of unscientific rules, and as many, or more, exceptions, founded upon the language as it was in their day, and quite inadequate to satisfy the inquiries of any intelligent boy. Many advantages are to be claimed for this "new" grammar, chief among which are (1) the introduction it will give to the study of the grammar of foreign tongues (ancient and modern), and the consequent lessening of their difficulty; and especially (2) the development of the mind by an appeal to the reason and intelligence of the student—a training now sought in the study of the classics, and hence lacking when such study is wanting.

H. C. Penn.

Central Collegiate Institute, Altus, Ark.

Notes.

Cassell & Co. publish immediately the second volume of 'Actors and Actresses of Great Britain and the United States,' edited by Brander Matthews and Laurence Hutton. It includes some of the most eminent names of the English stage.

G. P. Putnam's Sons have nearly ready 'A History of France under Mazarin, with a sketch of the Administration of Richelieu,' by John Breck Perkins, in two volumes, 8vo.

Mr. Thomas Whittaker will speedily issue for summer reading a fifty-cent edition of Frederick Saunders's 'Pastime Papers.'

A new sensational novel, 'Haschisch,' is announced by Jansen, McClurg & Co.

The English Shelley Society has well in hand a 'Concordance to the Poetry of Shelley,' which it is hoped to finish in the course of two or three years.

The plates of Mrs. Dall's handy 'What We Really Know about Shakspere' (Boston: Roberts Bros.) have been carefully corrected for the second edition, now before us. It is a readable guide and book of reference to the Shaksperian sources.

A revised and enlarged edition of Dr. Edward Robinson's 'Harmony of the Four Gospels in English,' edited by Prof. M. B. Riddle, has been handsomely brought out by Houghton, Mifflin & Co. Footnotes have been added from the Revised Version, with a special bearing on the purpose of the Harmony.

In connection with the foregoing may be mentioned 'How We Got Our Bible' (London: Bagster; New York: John Wiley & Sons), a popular account, somewhat rhetorical and pedagogic, of the manuscripts and the versions, by J. Paterson Smyth.

Our notice, some months ago, of the two hundred and fiftieth anniversary of the Boston Public Latin School has apparently brought to our table a second edition of the 'History of the School of the Collegiate Reformed Dutch Church in the City of New York, from 1633 to 1883' (R. Brinkerhoff, 34 Vesey St.). This school purports to be the oldest in the United States, preceding the Boston Latin School by two years. The claim is somewhat shadowy, but no doubt the institution is a very interesting one if only for its long persistence. Being denominational, and at most only a grammar school, it had and has no such significance for New York as the Latin School for Boston. At the present time, we are glad to say, it admits other denominations besides the Dutch Reformed. The volume before us is pleasantly illustrated with maps, cuts, and portraits, and has lists of pupils for more than a century.

The 'Handbook of Plant Dissection,' composed by J. C. Arthur, Charles N. Barnes, and John M. Coulter, editors of the *Botanical Gazette* (Henry Holt & Co.), may—for shortness of reference to the authors, as well as for substance of doctrine—be called the A B C of vegetable anatomy for the laboratory work which is now much in vogue,

It is one of the many adaptations of the Huxley and Martin sort of laboratory manual for elementary biology, on a system which is by this time pretty well threshed out. This one seems to have been carefully and thoughtfully prepared. Accordingly, "it is hoped that the work will be found suitable, not only for classes pursuing a regular course of lectures, but also for those who have never before studied botany, and for home use away from the assistance of a teacher." We should advise such to begin their botany in a very different and much easier way, and to defer the minute anatomy, with its *phloem* and *xylem*, to a later stage.

The 'Code of Nomenclature and Check-List of North American Birds,' adopted by the American Ornithologists' Union, and now published in a handsome volume from the University Press at Cambridge (New York: L. S. Foster, 35 Pine St.), is a thorough-going and most scholarly attempt to fix and give stability to names in this branch of zoölogy and to determine the principles of future naming. It contains the latest and most enlightened exposition of the trinomial nomenclature imposed on scientists by the rise of the development theory, and in this particular can be commended to a much wider circle than ornithologists. There are three parts: an introduction; a formal laying down of principles, canons, and recommendations; and the check-list in three sections, of which the second is called "Hypothetical," since the birds enumerated are doubtfully North American, and the third is of fossil birds. In the check-list the classification and habitat of each bird are indicated; and, in order to diminish as much as possible the inconvenience which every change of nomenclature causes, a reference in each case is given to the corresponding entry in the four earlier standard check-lists of Baird, Coues, and Ridgway.

S. E. Cassino & Co., Boston, publish Dr. Chas. O. Whitman's 'Methods of Research in Microscopical Anatomy and Embryology,' which is the latest treatise on that form of zoölogical investigation. It is the result of studies at home and abroad, is illustrated and filled with practical directions, and is probably the best volume we have that will instruct the beginner and also assist the advanced scholar.

The literature of climatology, especially with reference to health, receives an addition in a reprint of Dr. Chas. Denison's essay on 'Moisture and Dryness' (Chicago: Jansen, McClurg & Co.), wherein the author takes the ground that dryness and elevation are the most important elements in the climatic treatment of phthisis, repudiating the idea that equability of temperature is of any special benefit. Dr. Denison insists that an equable climate is essentially a damp climate, and a damp climate is a purgatory leading the consumptive to lower depths. The pamphlet is well supplied with weather maps and statistics, and is worthy of study by pulmonary invalids and those in charge of them.

The secondary title of Dr. J. Leonard Corning's 'Brain Rest,' namely, "A Disquisition on the Curative Properties of Prolonged Sleep" (Putnams), and the fact that ten lines of the title-page are occupied with his credentials, pretty fairly indicate the literary style of this essay. Besides an involved discussion on the theory of sleep, which may be referred to the medical faculty without our comment, the central idea is the regulation of the cerebral circulation by certain mechanical devices. It is too distinctly a professional book for analysis here, or for laymen to read with profit.

The '*Harvard Advocate* Catalogue—1866–1886' consists of a well-written sketch of college journalism at Harvard, with especial reference to the rise and fortunes of the *Harvard Advocate*, now twenty years old. This has been composed, almost without the aid of records, and hence very laboriously, by Mr. T. T. Baldwin, of the present editorial staff. An appendix contains a register of all the editors from the commencement, with their occupation, address, etc., and their "publications." From this last particular it appears that out of 143 graduate editors more than a third have become authors of books, or writers for the periodical press. Even the "business editor" is occasionally found in this category. The college library has in past years been benefited to the extent of $500 by the profits of the *Advocate*.

The *Southern Bivouac* for May has a final paper on the Resolutions of 1798-99, and a sketch of the life of John Breckinridge. In this paper Mr. Durrett discloses the interesting accident by which the copy of the Resolutions and the letter of Jefferson came into his hands. They had, it seems, been among the papers of James D. Breckinridge, a nephew of John, and had been sold after his death without discovery of their valuable character. The Resolutions Mr. Durrett compared not only with the printed acts and journals of the Kentucky Legislature, and with a contemporaneous publication in the *Palladium* and the *Kentucky Gazette*, but with the official copy sent to the Massachusetts Legislature. This completes the authentication by the method we formerly spoke of as the satisfactory one, and which our correspondent President Welling first informed us had been followed. The way is now open for the other interesting question, How can we account for the incorrect copy in 'Elliott's Debates on the Constitution'?

The opening article in the *Antiquary* for April is by Mr. Frederick Hodgetts on the "Scandinavian Elements in the English Race"—a point of view which is too much overlooked in the study of English institutions. This article, descriptive of Scandinavian life, does not throw so much direct light upon English life as we had hoped; but it is to be continued. "London Rogues and Relief of Distress Three Centuries Ago," by Dr. Charles Gross (an American writer), is a valuable contribution to the history of charities, consisting of a city ordinance of 1579, which contains many regulations observed at the present day; *e. g.*, the last article calls upon "Citizens, Artificers, and other, and also all farmers and other for husbandry, and gentlemen and other for their kitchins, and other services, to take servants and children both out of Bridewell and Christ's Hospitall, etc." Most of the other articles are continued from former numbers, and are of considerable interest.

The leading and in fact the only general article in *Le Livre* for April is an account of Dickens's second visit to Paris in 1855, by R. Du Pontavice; just as the only illustration is an etching after "Phiz's" full-length seated sketch of "Boz."

'Assyria; its Princes, Priests, and People' is the title of a new popular volume by Professor Sayce, published by the Religious Tract Society of London, in the collection marked "By-Paths of Bible Knowledge," of which it forms the seventh number. Like several other of the author's frequent productions in the same field, it contains, side by side with information alike instructive and new to most readers, some that has been often repeated with little variation by the same pen. It repeats, however, little of what was given, under the title 'Assyrian Life and History,' in M. E. Harkness's contribution to the same collection (No. ii.). What is strange, and slightly unfair toward the purchasers of the whole series, is that the eight illustrations after the monuments, attached to Mr. Sayce's book —Monolith of Shalmaneser II., Assurbani-pal and his Queen, etc.—are identical with eight out of the nine contained in the earlier Assyrian volume of the "By-Paths."

The anonymous author of 'Bismarck nach dem Kriege,' 'Bismarck—12 Jahre deutscher Politik,' 'Bismarck in Frankfurt,' and 'Bismarck in Petersburg—Paris—Berlin,' has added another volume to his cycle of sketches of the German Chancellor. The new book is entitled 'Bismarck in Versailles.' It is divided into twelve sections, whose titles—"The League of Neutrals, down to the Blockade of Paris," "The Provisioning of Paris," "Trochu's Preparations," etc.—make one suspect that the writer uses the name which he places at the head of his publication only as a convenient and taking sign for a medley of loosely connected chapters on the great Franco-German war, without having much to say about the diplomatic hero of it during his stay in the French city which witnessed the proclamation of the new German Empire. The perusal of some scores of pages will convince the reader that the biographical element in this fifth 'Bismarck' of the prolific anonymous—who marks his identity by three asterisks—is infinitesimal, and that his history, too, is only a readable rehash of oft-repeated narratives, with hardly the addition of a new fact, anecdote, or view.

Of the various historico-political year-books in English, German, French, etc., which serve as retrospective summaries of events and partial supplements to encyclopædias, André Daniel's 'L'Année Politique,' now in its twelfth year, is one of the least comprehensive, but also one of the most readable. It gives only fugitive glimpses of affairs in the minor states, and incomparably more space to France alone than to the rest of the world; and is thus, to readers outside of the French Republic, chiefly valuable as an addition to such publications as W. Müller's yearly 'Politische Geschichte der Gegenwart,' the 'Annual Register,' or Appletons' 'Annual Cyclopædia.' Within its narrower sphere, however, it is full, pleasantly discursive, and bright. The "Introduction" to the year 1885 exhibits the author in a gloomy, patriotic mood. He sees the republic passing through a dangerous crisis, for the severity of which all parties—Opportunists, Radicals, reactionaries—are almost equally to blame: "Ni à droite ni à gauche il n'y a de mœurs politiques. . . . L'affaissement général des caractères a fait d'effrayant progrès; la France entière semble épuisée; . . . partout l'épicurisme intellectuel ou matériel et l'égoisme d'individu ou de classe."

—In the *Century* for May Mr. Julian Hawthorne gives us a second study of the philosophy of his father's works, but it is of less interest than his analysis of the morality of the 'Scarlet Letter.' In it he deals almost wholly with the short stories and allegories, and is occupied rather with disengaging the elements of Hawthorne's personality in his earlier literary life, and with unfolding the moral purpose and insight as one of these. He thinks that the secluded years which Hawthorne spent in meditation and laborious experiment with his genius were made more tolerable by a very proud ambition, and the half-satirical expectation that his fame would some day burst forth and the world suddenly awake to the knowledge that a man had been among them who was a prophet. Incidentally the writer also shows how thoroughly Hawthorne rejected the modern world. He was not a reformer, we all know, but in his retirement there was more than mere social separation, more than simple natural reserve; his disapproval of the order about him was a rational and moral dissent, of which the indirect expression may be easily noticed. He had the iconoclastic spirit of 1835, though he broke no images. The religious article of the number is an attempt to show that evolution is a doctrine which may be Christianized, and, when it has been sufficiently humbled by the process, be ac-

cepted into the scientific faith of the church. It is, perhaps, too metaphysical to be convincing to any but a theological thinker; it appeals to the religion of the study, not to that of the people. Articles on "Country Dwellings," "The Flour Mills of Minneapolis," the "Lick Observatory," and "Fancy Pigeons," furnish the illustrations. A sonnet to Mrs. Jackson, by Col. Higginson, is an unusual feature.

—*Lippincott's* reminds us that Thoreau was a poet, and prints once more the exquisitely classical lines on "Smoke." These are sufficient to justify the article, but the other selections show at most only unworked ore. Thoreau wrote some good verses with Emerson's hand, of whom he was at times the direct inspiration; but the lines he himself penned are of little value, except to emphasize the fact that the charm by virtue of which he exceeds other literary naturalists springs from his poetic temperament. He saw things in an atmosphere of thought, and shining with the beauty which is felt only in their suggestions. In his formal poetry the lack of art is fatal to enjoyment. The difference between poetic prose and prosaic poetry is that in the case of the former one looks up, and with the latter one looks down: he is on a different level of expectation. The iridescence struck by a sudden glint of light is pleasant to see, but it is not the rainbow. Let it be enough for Thoreau to stand first among our rustic lovers of nature, and to have made our fields and woods more friendly to us; he showed us where the laurel grows, but he never plucked it. The second and last couplets of the lines on "Smoke" so different a man as Landor might have written. Austin Dobson contributes a poem, and Andrew Lang and Julian Hawthorne curious stories. The Society for Psychical Research seems to be affecting literature, to judge from these and other examples. The ghosts of Mrs. Radcliffe and Monk Lewis have become scientific, but they are the same old ghosts broke loose from the literary graveyard of the last century.

—The work, in two volumes, entitled 'Johnson's New General Encyclopædia and Copper-Plate Hand-Atlas of the World' (A. J. Johnson & Co.), and which is an abridgment of 'Johnson's Universal Cyclopædia' with additions and corrections to date, frankly assumes to share the merits of the parent work. To those who know the latter this is an advertisement that its defects —its unevenness and its want not of editors, but of editing—are retained in the abridgment: the stream cannot, in such a case, without the greatest labor and at corresponding cost, rise higher than its source. The latest date that we have observed in the body of this encyclopædia is January 27, 1885, that of the death of General Gordon at Khartum: but the Appendix was apparently closed some time in March. The use, therefore, of the present tense and the perfect definite in the notices of Emerson and Phillips, who died in 1882 and 1884 respectively, is evidence of careless revision; the failure to note the date of the death of James Watson Webb in 1884 is an oversight which should have been avoided. The French troubles in Anam, Tonquin, and Madagascar were flagrant in 1883, but Tonquin has no article to itself, and in neither of the other two is there any allusion to hostilities with the French; and yet the Congo Free State, down to November, 1884, is duly recognized in the Appendix. In regard to biographies it is true of the abridgment as of the original that it is very rich in obscure or hardly-made names, that "have but a temporary notoriety, and in future years may disappear," but meantime are conveniently embalmed here. Nevertheless, the fresh editing takes no account of as prominent men of the time as Joseph Chamberlain and Henry Fawcett in politics, or of Edgar Fawcett, Henry George, Joel C. Harris, Helen Hunt Jackson, Henry James (save for one line under the notice of his late father), in literature, or of E. S. Holden in science. We might extend this list, but we have instanced only names to which articles are allowed in Dr. Thomas's 'Biographical Dictionary,' which went to press at the same time with the 'Encyclopædia.' Robert G. Ingersoll is twice set down as Robert *J.*—in a cross-reference and in the Appendix. In short, not to multiply fault-finding, this work, like so many of its class, must be taken for what it brings, and its accuracy must be tested by other authorities. Much that is curious and helpful here would hardly be sought in its place, *e. g.*, "Great Circle Sailing," and "Centre of U. S. Population," or (as singular a freak as any we have observed) "Labienus, Les Propos de," the title of a political satire under the Second Empire, which one would not have expected to find in a list from which the 'Odyssey' is excluded.

—It was in 1837 that Heine wrote concerning Liszt: "I need not refer to his talent, for his fame extends over Europe. He is unquestionably the artist who has in Paris the most enthusiastic admirers, but also the most rabid opponents." Half a century has not greatly altered the situation. The extraordinary enthusiasm with which Liszt has been lately received in Paris and London, after an absence of many years, is perhaps without a parallel in the history of music. On the other hand, he still has opponents—no longer, however, as a pianist, as in the days of Thalberg, but as a composer. As Liszt's music is but little known in Paris and London, the ovation tendered him in those cities had reference to the great pianist and musical educator rather than the creator; but the numerous Liszt concerts attending the festivities may have cleared away many of the prejudices against his music fostered by ignorant scribblers. The well-known historian, Dr. Langhans, was in London when the first Liszt concert was given, and writes to the Berlin *Boersen-Courier* that on no other occasion within his memory did Liszt's personality produce so great an impression as here. "At the public rehearsal already the 2,100 seats in the hall were all sold; the applause which arose when the aged composer made his appearance lasted several minutes, and when, in the course of the rehearsal, he had taken his place in front of the orchestra, in order to express his intentions by an occasional word or gesture, the public was more eye than ear. But what extraordinary internal and external harmony is required by a person who is the object of such universal attention, in order not to 'lose his balance'! Who could avoid 'posing' in some manner on feeling that thousands of eyes were fixed on him? Liszt is this magician, for not a movement, not a look shows that he is in the least embarrassed. This absolute naturalness, this antique beauty and geniality, is doubtless the real cause of the magic spell he exercises over others." The performance of Liszt's "St. Elizabeth" gave Langhans an opportunity to note the two points in which musical England excels—soloists and chorus. The former excellence may be traced to the long supremacy of Italian music, the latter to the cultivation of the oratorio. "The tonal beauty, the energy and fire of the chorus showed distinctly that one was in a country which, since the days of Handel, has been the special home of the oratorio. Overwhelming, too, was the effect of the chorus of angels, in the second part, sung by a chorus of boys in an elevated gallery." Liszt protests that his pupils, Rubinstein, Bülow, and Saint-Saëns, play better now than he does; nevertheless he was prevailed upon to play some Hungarian and Chopin compositions. As contrasted with his former heaven-storming style, one critic remarks that now "Liszt is the mildest of the mild. His touch, even at seventy-five years, is still exquisite. His fingers seem to be hardly in contact with the keyboard. He appears to caress the keys, in order to produce a tone at once incomparable and indescribable." Another critic says:

"The production of tone is most extraordinary. He makes the piano sigh and sing. You do not hear notes struck with the fingers and sounding *piano* or *forte*, but lovely and enchanting sounds floating as it were in the air, and with infinite gradations of tone from soft to loud. The pianissimos are not soft-pedal pianissimos; the fortissimos are not hard or noisy; the means between these extremes are not cold or colorless. The tone is always pure and beautiful. With his magic touch he works wonders, and you feel rather than hear the music. The exquisitely finished style adds, too, to the charm of the performance; and some of his greatest effects are produced by making everything sound not as a studied piece, but as an inspired improvisation. How well this suits the national Hungarian music need scarcely be said."

—To the credit of the London press be it said that there were few ignorant denunciations of Liszt's music. Liszt has been quite as badly misrepresented by the press as Wagner, and has often indulged in fits of pessimism. In a letter to Herbeck, dated 1875, and printed for the first time in the current number of the *Neue Zeitschrift für Musik*, he declares that "an artist reckons without his host if he honestly trusts himself to the public. People hear and judge only by reading the newspapers. Why produce music for people who only wish to read the papers?" And in another letter he urges Herbeck to give his "Prometheus" in Vienna: "This Herculean task is specially adapted for you. Mighty eagles, lacerating the Titan's liver, there are none, it is true—but in their place a whole host of ravens and vermin."

—The April number of *Les Lettres et les Arts* (Boston: Schoenhof) opens near the middle at two charming pages in the most delicate green tints of spring time: Kaemerer's youthful female figure in an April garden, and, opposite, a maze of blossoming boughs and nests and birds surrounding the perfect little poem of Pierre de Nolhac, 'Le Chanson de printemps.' A sonnet by Armand Silvestre illustrates the fine etching by Henner, "La Nymphe," which forms the frontispiece. M. Léo Delibes gives six pages of music to accompany the wild poem "Gai! Tsigane!" which François Coppée has adapted from the Hungarian Petöfi, and which Clairin has accompanied by two expressive and characteristic illustrations. M. Henry Cazalis writes with enthusiasm of the sixty aquarelles illustrating the fables of La Fontaine, which M. Gustave Moreau has devoted four years to producing for a wealthy amateur of Paris. Judging from the praises of M. Cazalis and from the reproductions of several of the water-colors themselves here given, the artist has certainly not succeeded in making his illustrations illustrate La Fontaine. There is no trace of the gayety and lightness of touch of the poet in the sombre and overwhelming creations of the aquarellist, which suggest the artistic possession that Zola expresses in his last terrible book, 'L'Œuvre.' The present number of the *Revue* seems to represent very fully in its illustrations the spirit of his *plein-airistes*, and it is this, perhaps, which gives it, more than anything else, the charm of unexpectedness and unlikeness to its predecessors that characterizes *Les Lettres et les Arts*. The most satisfying thing in the number is the short paper by M. Jacques Saugé, 'La Ronde de nuit,' with its brilliant reproduction of M. Waltner's rendering of Rembrandt's famous picture, and the etching by Rajon of Gérôme's "Rembrandt dans son atelier," and two exquisite small heads. From a

literary point of view the most valuable and suggestive article is "La Renaissance en Allemagne avant la Réforme," by M. Jules Zeller.

—It has a rather ominous look for the authenticity of the 'Königinhof Manuscript' and 'Grünberg Manuscript'—those Ossianic treasures of the Bohemian nation—that a new and thorough investigation of it is advocated by a first-class Czech antiquary and philologist, Prof. G bauer, of Prague, and that in the *Athenæum*, a periodical issued under the auspices of the Czech University of that city. Attacks on the 'Königinhof Manuscript' have but rarely and faintly come from national Bohemian quarters, though 'The Judgment of Libusha,' so mysteriously discovered shortly after Hanka's alleged great "find" in a lumber corner of the church steeple at Königinhof, September 16, 1817, was violently denounced as a fraud by the patriarch of Bohemian Slavists, the Abbé Dobrovsky, and many of his disciples, and has always been half-heartedly defended. The 'Love Song of King Wenceslas,' 'Libusha's Prophecy,' and other minor fragments of ancient Bohemian poetry have been given up by the most obstinate Czech scholars, and Hanka's and his helper Svoboda's complicity in those mystifications are, though very reluctantly, admitted by many. But the epics and lyrics of Königinhof, the very late attacks on which—in the last three decades—by Feifallik, Max Büdinger, and others, were met with as much zeal as learning by the veteran historian Palacky and the Jireceks, possess a kind of religious sanctity in the eyes of Bohemian nationalists. Those poems, which were to prove that there was a grand Homeric school of popular bards in Bohemia, more than a century, and possibly many centuries, before John Huss preached in Prague, have done more than any other production by a Czech to resuscitate and regenerate the Bohemian language, and rouse the national sentiment, in our century. Whether Hanka honestly or dishonestly brought to light the 'Králodvorsky Rukopis'—whether, if it was a forgery, he did his part for the sake of notoriety or, as Kopitar says, "cœco patriæ amore abreptus"—the fact stands that he has made history. The Czechs were right in nationally celebrating, in September, 1867, the semicentenary anniversary of the appearance of the parchment strips of Königinhof, even though the 'Rukopis' may only have been *ben trovato*. "If this banknote be forged," a stanch Bohemian is reported lately to have said, "well, we have bought too much for it—our national regeneration, our poetic literature." The literature on the subject is immense; a full, though nationally partial, historical and bibliographical exposé is contained in Vlach and Helfert's 'Die Cecho-Slaven' (1883).

EARLY ARABIAN KINSHIP AND MARRIAGE.

Kinship and Marriage in Early Arabia. By W. Robertson Smith, Lord Almoner's Professor of Arabic in the University of Cambridge. Cambridge: At the University Press. 1885. Pp. xiv, 322.

Professor Smith states that in his discussion he has followed the line of investigation laid down by the late Mr. J. F. McLennan in his works on primitive marriage, kinship, and the patriarchate. The problem being to determine what was the development of customs of kinship and marriage, Mr. McLennan undertakes to establish the following positions: the most ancient system of blood kinship was through women only, and this by reason of the uncertainty of fatherhood; the primitive promiscuity accompanied by female infanticide was followed by capture of wives and exogamy, these by polyandry of various sorts through which the advance was made to male kinship; the primitive groups were, or were assumed to be, homogeneous; the rule of female kinship tended to make exogamous groups heterogeneous; next arose kinship through both females and males, then kinship through males alone, dependent on the development of the idea of fatherhood; this kinship tended to produce homogeneous groups, whence, from difficulty of intermarriage in such a group, there again came into play marriage by capture and the evolution of capture; under the condition of exogamy and female kinship there arose heterogeneity, with marriage within the tribe; such a tribe easily grew into a caste; and such a group, having come to feel its unity, would naturally feign a common ancestor. These are the conditions which Professor Smith seeks to find in the old Arabic life. He has conducted his investigation with such wealth of learning and carefulness of discrimination as fairly entitle his book to the name of an independent work. He has gone for the most part to original sources, and shows the same acuteness of observation and felicity of illustration that have appeared in his former works. He brings out a multitude of curious details in connection with the ancient Arabian society, and with old Semitic life in general, including the Old Testament.

It is well known that the surviving Arabic literature of the pagan period is of very small extent, and what we have has been in part worked over by later Moslem editors and traces of paganism obliterated. It is to be expected, therefore, that the history of the earlier times should be found not so much in direct statement as in the remains of customs and institutions; these are to be interrogated, and their testimony to the most ancient condition of things carefully sifted. What, now, may we hold to be the established results of such an inquiry?

Professor Smith makes it probable that the earliest bond of kinship in Arabia was through women only. This is the most natural explanation of the occurrence of female eponyms. Nöldeke's suggestion that these names simply arise from the fact that Arabic collective nouns are feminine, hardly accounts for the phenomena. That the tribe should represent its ancestor as a woman points to a time when relationship was reckoned through women. The number of such eponyms in the Arabian tribes is not small, and in the Jewish tradition we have such names as Sarah, Rebecca, Leah, and Rachel. If from the earliest period kinship had been reckoned through males, it would be very difficult to account for the occurrence of such traditions. There is, further, the heathen Arabic rule of bars to marriage which were only on the female side. In other primitive societies we find such a rule of prohibited degrees always connected with female kinship, and there seems no reason to suppose another explanation here.

Prof. Smith finds no direct proof that the ancient Arabs had a practice of exogamy—that is, a custom forbidding marriage within the tribe. In historical times they were certainly not endogamous—that is, marriage without the tribe was not forbidden; for there are mentioned numerous cases of intermarriages between different tribes. But when we compare the general progress of society in Arabia and in other primitive communities, we find in the former conditions which are commonly associated in the latter with exogamy.

When Mohammed established his legislation, the patriarchal and patronymic organization was already fully in existence. The husband was the head of the family; the children took the father's name, and were reckoned to his tribe; the husband had almost complete authority over both wife and children. But there was then also in existence another sort of marriage, called by the Arabians *mota*, which Mohammed endeavored to abolish. This was a contract entered into between husband and wife for a definite period, the parties being of equal authority—that is to say, the wife enjoying an independence which did not belong to her under the later condition of things. There are, moreover, traces of still another form of marriage, freer and more primitive than the *mota*, in which the woman was the principal party. Living in her own tribe and in her own house, the woman seems to have been permitted to receive at will husbands from other tribes, to have entertained them at her pleasure, and to have been entirely independent of them in her movements. Her children were then reckoned to her tribe. McLennan has designated by the term *beena* those temporary marriages in which the husband went to live with his wife; Mr. Smith includes marriages of the *mota* and *beena* types under the name *sadic*, as a designation of all those marriages where the wife is not under the husband's authority, but meets him on equal terms. A number of examples in illustration of this custom might be cited from the ancient history. Thus, the famous Hatim was chosen as husband by Mawiya, was received by her in her own tent, and was dismissed by her at her own pleasure, because she found his generosity intolerable. In the *Aghani*, xvi. 106, it is said: "Women in the Time of Ignorance, or some of them, had the right to dismiss their husbands, and the form of dismissal was this: If they lived in a tent, they turned it round, so that if the door had faced east it now faced west; and when the man saw this he knew that he was dismissed, and did not enter." And so the tent belonged to the woman, and the husband was received by her at her own will. It is this custom that seems to be referred to in the Hebrew expression "to go in unto," as a synonym of marriage—that is, to go into the wife's tent (compare 2 Sam., xvi, 22).

Back of such marriage arrangements, however, there seems to have existed in Arabia a custom of polyandry. For Yemen Prof. Smith cites the direct testimony of Strabo, 16, 4. Indirect testimony he finds in the story given in Bokhari, 6, 114, where a man goes halves in wives with his adopted brother, a procedure that would never have occurred to one but from a preceding custom of polyandry. The same thing might be inferred from the signification of the word *kanna*, which means both spouse and daughter-in-law, and thus points to the time when a woman might occupy a position of wife to a group of men, and her children be reckoned to the group and not to any particular man. McLennan makes two types of polyandry, which he calls the Nair and the Tibetan; in the former, the more primitive, the woman is the wife of a group of men not related to one another; in the latter she is the wife of all the brothers of a family. Of the early existence of this Tibetan polyandry among the Semites, there is indirect evidence: for example, among the Hebrews the custom of levirate marriage, the brother marrying the widow of his deceased brother, the first son of the new marriage being reckoned to the deceased husband. See Matthew xxii, 25-26, a condition which represents accurately the remains of a custom of Tibetan polyandry.

Beyond this point the data of early Semitic life do not reach. In certain other early societies we find that such polyandry was preceded by promiscuity (not, apparently, by communal marriage). Prof. Smith very properly limits himself to the discussion of the facts of Arabic life actually known, and does not attempt conjectures as to the earliest possible period.

Another class of facts which McLennan has brought into prominence and which Smith here

discusses is embraced under the name totemism. A totem is an animal from which the tribe takes its name, of whose blood it believes itself to be, and which it reveres as a deity. Now in Arabia and in the old Israelitish territory a considerable number of tribe-names (for example, the Calebites or Dogs) derived from animals is found. Often a large tribe contains a number of subtribes, all claiming the animal name, having each its own separate name in addition. There are some facts which might lead us to believe that these animals were old deities, and were held by the tribes to be of their own blood, such as the stories common in the 'Thousand and One Nights' of the transformation of men into beasts, the refusal by Mohammed to eat certain animals because of their apparent relationship to man, and especially the old custom of prohibited foods. This seems to be the most natural explanation of the Hebrew laws relating to animals classed as "unclean," that is, not as physically impure or hurtful, but as sacred and prohibited. The probability is that the unclean animals mentioned in Deut. xiv., Lev. xi., are deities of heathen worship. Professor Smith points out that the term "abomination" is applied in the Old Testament only to the prohibited foods and to heathen gods. There are a few traces among the ancient Arabs of the worship of animals; naturally such traces would easily disappear in Moslem times.

Professor Smith's book is welcome as an introductory investigation in a very interesting and important field. He has been able, as he says, to give only a brief sketch of the material, and more accurate results must follow from wider investigations. The literatures of the other Semitic peoples should be worked up, and Arabic literature itself needs a more thorough study. But it may be said that Mr. Smith has made it probable that the earliest Arabic society of which we have distinct traces is polyandrous; that there was thence an advance to a form of marriage in which the woman was independent; that this was succeeded by the marriage of Mohammed's time called by Smith *baal*, in which the wife was virtually the property of the husband; that kinship was originally through the mother alone; that there then came a time of conflict during which groups formed by female kinship were gathered together and became homogeneous; and, finally, that when the family came into existence, under the form first of Tibetan polyandry and then of monandry, the system of male kinship was introduced. Professor Smith seems to have had in mind not only the English, but also the Continental literature of his subject.

TOLSTOI AND TURGENEFF.

Anna Karénina. By Count Lyof N. Tolstoï. In eight parts. Translated by Nathan Haskell Dole. Thomas Y. Crowell & Co.

AMONG the last letters which Turgeneff wrote was one from his deathbed to Count Lyof Tolstoi. "I write to you with my own hand," he said, "to tell you that I am glad to have been your contemporary, and to express to you a last, sincere request. My friend, the great writer of the Russian land, grant my prayer: return to literature." He had already, in 1880, sent to Tolstoi an extract from a letter to himself, in which Gustave Flaubert expressed his thanks for having been made to read the French translation of 'War and Peace'—"unfortunately very inferior," adds Turgeneff. "It is of the highest order," said Flaubert. "What a painter! what a psychologist! The first two volumes are *sublime;* but the third deteriorates frightfully. He repeats himself! and he philosophizes! At last one sees the gentleman, the author, and the Russian, while up to that point one had seen only Nature and Humanity. It seems to me that there are at times things truly Shaksperian in it! I uttered cries of admiration during my perusal of it; and it is long! Yes, it is powerful! very powerful!"

Turgeneff, as we know from his letters, wrote with great effort. It required much urging from his friends and his own conscience before he could be induced to put pen to paper. This indifference he attributed to his long residence abroad, which, whatever effect it may have had in that direction, certainly tinged his view of Russia and his countrymen, and developed an epigrammatic terseness of style which does not characterize his 'Annals of a Sportsman.' But with all our admiration for the exquisite finish of his workmanship, it is hard to imagine that he could ever have written in that fervid condition of heart and brain which does not permit of deliberate pauses to weigh the effect of every word and to calculate the turn of every phrase. How Count Tolstoi writes we are not informed, but any one who reads him in the original soon becomes breathless at the earnestness and rapidity with which chapter after chapter seems to have been dashed off and never afterwards revised—an earnestness so concentrated and glowing that the reader seems to feel at once the heart-beats of the characters as they are introduced, and, above them all, the passionate throb of the author's own heart, with an almost personal sense of his very presence. This dash results in an apparent indifference to some of the commonest rules of writing and of novel-manufacture, in which far inferior performers excel. It is not uncommon for him to repeat himself on the same page, to begin several consecutive sentences with the same name in the most awkward manner, to contradict his own statements. Thus Várenka, in 'Anna Karenina,' is made to wear a yellow dress and a white one in the same breath (both are omitted from the translation), and Vronsky's wealth in Italy is not accounted for after the description of his embarrassed circumstances in St. Petersburg. But this habitual disregard for nice points does not detract from the effect, and it serves to accentuate still more strongly the contrast between Tolstoi's ardent temperament and Turgeneff's phlegmatic nature. The latter would never have permitted such technically imperfect work to leave his hands, but, with all his art, he appears cold beside his brother writer. It may be argued, and with some justice, that the removal of these blemishes by a translator is an improvement; but it interferes with the proper psychological study of the author, whose personality is as interesting as any of his characters, in the same degree that the mistakes foisted upon Turgeneff, by the same means, prevent a proper appreciation of him.

The methods of the two writers are as different as their styles. Turgeneff viewed all Russian subjects and people from a double standpoint—that of an impartial foreigner, who regarded Russians as new and curious animals to be studied, and that of a native, who understands thoroughly the manners and customs of his country. An epigrammatic and critical treatment is the natural result of this. Tolstoi's method is the exact reverse. He never consciously treats his characters as Russians, nor does he criticise them. He simply becomes, for the time being, an integral part of the mind and of the very essence of the character whom he is depicting. Nevertheless, no one can deny that his characters are as genuinely Russian as any of Turgeneff's creations. But they are something more—they are universal types. The situations in 'Smoke' and 'Anna Karenina' are sufficiently similar to render a comparison interesting. Vronsky deserts Kitty for Anna, as Litvinoff deserts Tania for Irene. After showing us the fashionable Russians at Baden-Baden, with their airy French, superlatively fresh clothes, and elaborate grace of manner, picnicking in the morning and mesmerizing their crab in the utter inanity of their evening, Turgeneff exhibits another set behaving like lunatics at Gubareff's rooms, and then confides the task of summing up Russia as a whole to Potugin. Like Pigasoff in 'Rudin,' Potugin does little but utter pithy criticisms, which, though highly amusing, are as unpalatable to the victims as are certain Anglo-American sketches to people in this country. After giving the impression that high class Russians are frivolous, narrow-minded, and overburdened with foreign affectations, and that Russia is utterly devoid of originality, the story proceeds. But there is very little analysis of character, or of the motives and feelings which inspire any course of conduct. The people and events are simply photographed under a brilliant light, and the reader is left to supply the rest, as he is in the dramas which go on about him in real life. Irene is frail, shallow, heartless—eminently Russian, if we are to believe the author. No one will ever pause to inquire Anna Karenina's nationality; she will be accepted unquestioningly, in her weakness and remorse, as a world type by any one who has once followed the vivid history of her mental processes.

Varvara, in 'A Nobleman's Nest,' is another example of the same eminently national delineation. Tania hardly appears on the scene, any more than Natalia in 'Rudin,' and much less than Lisa in 'A Nobleman's Nest.' All three lose their lovers through the interference of a married woman. That they are all strong characters is evident enough; but Turgeneff is very reserved in his portraits of young girls, and the reader never feels that he has been very thoroughly introduced to them. They are simply the ideal young girl of romance. Irene at first forms an exception. But Tolstoi's young girls are among the most wonderful of his creations. Had Kitty been dropped after the description of her feelings at Vronsky's desertion, as Turgeneff's girls are, she would still have lived in the hearts and memories of all readers. As Levin's wife she reigns equally as the typical young married woman. Natasha, in 'War and Peace,' is an example, quite as perfectly drawn, of another type—the fickle, forward, capricious girl, who eventually settles down with the last and most unexpected of her many admirers, and develops into the most domestic of matrons, without a care for her appearance or an idea beyond her much-governed husband and children. That Levin is an autobiographical sketch is generally accepted, and there are portions of Pierre Besukhof's story which seem to come under the same head. Yet he is not a whit more true to nature than any other character in the author's two great novels. Lavretzky, in 'A Nobleman's Nest,' is somewhat similar to Aleksei Karenina, but the contrast is as marked in this case as in the others. Like Litvinof, he forms the subject of a psycho'ogical study within the narrow limits to which Turgeneff restricted himself, or was restricted by his lack of sympathy. One curious result of the latter's attempts at analysis is, that the people to whom he devotes the most of his attention in that line turn out the weakest characters, and eventually fade out of the story in a nerveless way, which speedily banishes them also from the reader's mind, leaving behind, in vivid colors, only the portraits of the brave young girls who suffer unanalyzed in silence. "All is smoke," says Litvinoff. "Words, words, that is all," echoes Rudin; if Lavretzky does not utter the sentiment, he feels it. The married women are too shallow to dissect. The young girls do not yield their secret hearts to his touch.

In short, Turgeneff's art is always apparent, and never more so than when he is contrasted with Tolstoi, whose utter absence of that quality (consciously and deliberately, at least) results in something as much above any deliberate artistic product as a rose or a tree is beyond the utmost effort of a painter or a flower maker. But, although Tolstoi appeals more directly to the heart than Turgeneff, the latter never appears so well as when read directly after one of the former's great works. They complement each other in a marked manner and to a singular degree, and, united, they reveal Russian life in a way that is fairly startling in its vividness.

Of 'Anna Karenina' it is unnecessary to speak in detail. The general remarks which were made in these columns a short time ago with regard to the translation of the 'War and Peace' apply with equal force to this. It was made directly from the French, not from the Russian, and the proofs begin in chapter two. The French version is very much cut, not as a concession to a more delicate taste (one passage is omitted for that reason), but in order to shorten the book. Occasionally, the American translator restores a paragraph to make the sense clearer. Sometimes he omits something essential, as on page 567. The inference is, as it now stands, that Levin was actuated by jealousy when he sent the coachman back instead of allowing Vasenka to go. He is merely anxious that his Don Cossack horse should not be injured by Vasenka's weight, which is about 240 pounds. The parenthesis which explains this is retained in the French, though the chapter is much cut in both versions. The omission of many details connected with Levin's life and experiments on his estate is especially to be regretted. They would have supplied in abundance that "local color" which the translator has depended upon untranslated words to reproduce. The latter merely baffle and disconcert the reader. Housekeepers will be interested to learn that the Princess's new way of cooking raspberries was the method commonly employed in this country—without water. Levin did not indulge in acrobatic exercises beside his brother's death-bed by "trying to stand on tiptoe." He "tried to leave the room on tiptoe." The French also is wrong here. But while the American translator follows the French so closely (as a rule) that he even writes *non*, where the Russian *no* is used, he sometimes departs from it without gaining much. *Peignoir* was a perfectly adequate rendering for *koftochka*, which Mr. Dole gives as a *jersey* (jerseys were not invented at that time). The *tensely-drawn* brow of Levin's skeleton-like brother on his death-bed reads *bald* in the French, and *yellow* in the English. It is not worth while to cite more examples. The translator has fallen to the ground between two stools. The Russian was undoubtedly at hand and referred to, as the preface states, but with the result of confusion rather than improvement in most cases, and a translation from the French, not in a "few passages," but as a whole. It is a disappointment. To quote the words of a Russian who is accomplished both in that language and in English: "It makes the heart bleed to see the havoc that is made with beautiful things." Turgeneff and Tolstoi deserve better treatment than they have received; and though they are great enough to rise superior to misrepresentation, only those who can make their acquaintance in their own magnificent language will ever be able fully to appreciate them.

Lebenserinnerungen. Von Levin Schücking. Breslau und Leipzig: S. Schottlaender. 1886. 2 Bde.

We have in these memoirs of the recently deceased Westphalian poet and novelist, Levin Schücking, two very engaging volumes. As autobiography they show the touch of a literary artist, and disclose at the same time a character that commands admiration. The author had won for himself a distinct and honorable place in the imaginative literature of his country, and the story of his life was thus well worth telling for its own sake alone. Added to this, however, is the fact that through his experience as a journalist he had had exceptional opportunities for becoming acquainted with a large number of the men of letters who were most prominently before the eyes of the German people during the decade that immediately preceded the revolutionary outbreaks of 1848. Students of these men and of the epoch in which they lived and worked will find Schücking's memoirs a valuable source of information. The volumes are interesting from beginning to end.

Levin Schücking was born in Westphalia in 1814. His native province is not famed as a producer of poets or as a nourisher of the poetic temperament, but Schücking himself attaches no little importance to his having been born a Westphalian. With evident feeling and with fine literary skill he describes the home of his boyhood, not far from Münster: the fantastic old castle in which his father, a judicial magistrate, had taken up his official residence; the forest of pines that surrounded the castle, and the dreams and fancies which this sombre environment bred in his own boyish mind. He tells us, too, of his early attempts at poetic creation, and of his fondness for the Waverley novels, which it was his agreeable office to read aloud to the family over and over again, only now and then exchanging Scott for some freshly arrived book of Irving or of Cooper. "Walter Scott," he observes, "has exercised great influence upon my whole way of thinking," and he digresses into a short essay upon the philosophy of Toryism. "There was always a good bit of the Tory in me," so the digression concludes, "and I hate and attack only that aristocracy which is the caricature of what it should be, namely, that genuine aristocracy of mind without which the world does not get ahead."

In his boyhood Schücking often accompanied his father upon the latter's official expeditions, thus becoming minutely acquainted with that land of the "red soil," its steady-going people and its elegiac scenery, for which he always continued to feel a strong affection, and from which he professed to have drawn in after years the inspiration for his best and most characteristic work. His earliest considerable literary enterprise was to furnish the text for an illustrated work upon 'Romantic and Picturesque Westphalia.' He had taken the course of study necessary to fit him for the practice of the law, but upon returning from the University in 1838, he found no career open to him. His home had now become Prussian, and the bureaucrats of Friedrich Wilhelm III. looked upon him as a foreigner. So it came about that, having himself in reality but little fancy for the law, he made but one and that a half-hearted attempt to secure an official position, and then abandoned Themis for the Muses, as Goethe, Heine, Uhland, and many others had done before him. In 1843 he had become sufficiently known through divers short stories so that he was made an associate editor of the *Allgemeine Zeitung* at Augsburg. Two years later he accepted a similar position upon the *Kölnische Zeitung*, where he remained until 1852.

In his work upon these journals he kept, in the main, aloof from politics, his bent being rather for imaginative literature, more specifically for the historical romance. Of this, his life-long mental habit, and of its effects upon his intellectual existence, he speaks in these words: "I have never had to struggle with doubts or to fight my way painfully through to freedom, as has been the lot of many whose natural endowment was perhaps deeper than my own. From the historical bent that ruled me freedom came as a natural consequence, and I would say even now to all hampered souls (*gebundenen Seelen*), History will make you free." The account of these journalistic years teems with interesting matter from and concerning noted literary personages. Numerous letters of Gutzkow and of Freiligrath are printed, and two visits to Heine in Paris are described at some length. A curious half-insane letter of Lenau is given, perhaps the very last the unfortunate poet ever penned before the attack which sent him to end his days in a madhouse. Besides the men just named, Schücking stood on terms of intimate friendship with numerous other literary personages of hardly less note. Among these is to be mentioned the gifted poetess Annette von Droste, whose biography he wrote and to whom he was warmly attached from boyhood.

Not the least entertaining portion of his editorial reminiscences is that which has to do with the press censorship, that stupidest of all the stupid tyrannies under which German intelligence was condemned to struggle half a century ago. Readers of Heine will recall the stanza at the end of chapter xii in the "Wintermährchen":

> "Das war die Rede die ich hielt,
> Ganz ohne Vorbereitung;
> Verstümmelt hat Kolb sie abgedruckt
> In der *Allgemeinen Zeitung*."

Of this Kolb and of his efforts to conduct a great journal under exceedingly untoward circumstances, Schücking gives an interesting account. The most amusing thing in the memoirs is the statement, given apparently as sober fact, that a certain censor at Cologne forbade an advertisement of the 'Divine Comedy,' on the ground that people should not be making comedy of divine things. Of the same individual it is related that, having once received an official reprimand for allowing the publication of some correspondence dated "from the Murg," he thereafter systematically forbade everything purporting to come from the vicinity of a small German river: "der Henker soll die Schreibereien von dem kleinen Bachzeug holen," was the inflexible decree.

In 1847 Schücking was sent to Rome as correspondent of the *Kölnische Zeitung*. Here he witnessed that flood-tide of liberal enthusiasm which marked the earliest phase in the pontificate of Pius IX. He himself, in spite of his Northern blood and a certain very obvious indifference to matters of church dogma, seems to have caught, in mild form at least, the delirious infection of the hour. Along with the rest he indulged in his brief dream of a new, united, and purified church to be created by the liberal policy of the new Pope; a church that was to draw to itself the conservative elements of disintegrated and decaying Protestantism, and so move on to the undisputed religious sovereignty of the West. All this sounds strangely enough now, as does indeed the whole of our author's vivid and masterly description of that wild ebullition of ecclesiastical patriotism in 1848. With this description and this year, unfortunately, the memoirs end. The author had reached that point in his story when he was called away by death. A brief epilogue is added by an unnamed friend of the author.

Of Schücking as an imaginative writer, of his gifts and of his limitations as a story-teller, there is no occasion to speak in this short notice of his memoirs. The beginning of his fame was made by the romance 'Die Ritterbürtigen' in 1843. In 1846 he published a volume of poems, and in the succeeding years several dramas, one or two of which met with good success as acting plays. But his proper line of work was always, as he

himself thought, the historical romance; in this line his later years were prolific enough. In lieu of any enumeration or characterization of these works, let it suffice to quote a single sentence, in which he has given the world a summary statement of his literary purposes: "The fundamental idea of all my writings," he says, "is the emancipation of mankind in general, and of women in particular, from the bondage of those views and of those conventionalities which impede the individual in the exercise of his right of self-determination, and hinder his development to genuine humanity."

On Speech Formation as the Basis for True Spelling. By Henry Freeman. London: Trübner & Co. 1886. Small 8vo, pp. 88.

THAT the orthography of the English language is sadly in need of reformation is a proposition the truth of which has long been admitted by all educated persons, except a small minority of whom the late Mr. Richard Grant White may be regarded as the chief exemplar. If among that small minority there are any who have kept run of the writings of German scholars upon the subject of orthography during the last quarter of a century, they must have been astonished at the amount of discussion to which the comparatively few orthographical anomalies of the German language have given rise. Had the scholars of England and America devoted a proportional amount of time and labor to the discussion of the anomalies of English orthography, they would hardly have been able to make even an excursion into any other field of study. We have, however, had discussion enough, but the trouble with it all has been that while the conservatives have mostly confined themselves to the recommendation of an obstinate adherence to the existing system, or rather to the existing confusion, the reformers have been prodigal of schemes generally impracticable, often absurd, sometimes ludicrous. The natural result of all this has been that many, perhaps most, of those who have a lively sense of the incongruities of English spelling, despair of any practicable method of reformation, and reject at once and without examination any new scheme that may be brought forward.

To one acquainted with the orthographical systems of any considerable number of other nations, English spelling appears like a gigantic puzzle, constructed expressly for the torment of children, without any of that pleasurable suspense, seasoned with the hope of ultimate success, which renders the solution of puzzles one of the most delightful recreations of boys and girls. At the same time mistakes in spelling are regarded much in the light of unpardonable sins. A scrawling, half-illegible handwriting will be passed over as a personal peculiarity; an awkward or ungrammatical sentence will be attributed to haste or carelessness; but a mispelled word becomes at once a source of shame on the part of the writer and of contempt on the part of the reader. It is regarded as the badge of lack of culture, and by some curious mental process it often happens that those are most unsparing in their ridicule who did not dare to jeer until they had themselves consulted the dictionary. It will thus be seen that there are social as well as other reasons for trying to lessen the difficulties of learning to spell.

Mr. Freeman professes to have this end in view. His little book is very handsome. The paper is white, the margins are wide, the print is clear, the binding is neat, and it bears the imprint of one of the most respectable and widely-known publishing houses of London. How so many fortunate circumstances can have concurred in assisting at the birth of so much absurdity is a mystery which we do not pretend to solve. In most cases a reviewer would simply toss such a book as this into the ever-growing heap of those which deserve only to be passed over in silence. But to any one who believes in the possibility and practicability of some reform in English spelling, it seems a kind of duty, if possible, to "squelch" a book which can only assist in rendering all attempts at reform ridiculous. In reading certain pages the idea suggested itself that perhaps the author was not to be taken seriously, and that we had to deal with a parody or a satire on the many absurd books, treating the same subject, which have hitherto appeared. But such an idea was immediately negatived by the general tone of the work. A parody should have somewhat of humor, a satire somewhat of wit. This book has neither; it is throughout insufferably dull. It must then be taken for what it purports to be, an exposition of a new system of English spelling, and a system, too, which the author hopes and expects to see adopted in practice.

Mr. Freeman regards his present system of spelling as only transitional. At some future time it is to be superseded by a system in which some new characters are to be introduced, to represent elementary sounds which he is now compelled to indicate by combinations of the letters at present in use; and he has stated briefly the principles upon which some of them should be constructed. But we are quite sure that his notions in regard to the nature and mode of production of the elementary sounds are so completely erroneous that his last system would be worse than his first. He is also obliged to mix Roman and Italic letters in the same words, a process which renders the page so unsightly that it would probably of itself prevent the general adoption of his system, but which is perhaps excusable on the ground that it is the only method of bringing his system within the capabilities of the fonts of type in an ordinary printing-office. The fifth and last chapter of Mr. Freeman's book, occupying pages 86 and 87, treats of the quality of sounds, and is printed in the new orthography. The first two sentences printed in the ordinary manner read as follows:

"A good deal is vaguely set down to quality, insomuch that the term has become reduced in meaning to a considerable degree of indefiniteness. Used, however, in reason and in its right place, it is a convenient term."

In the author's new spelling these sentences stand thus:

"U GUD del iz *veigli* set *daun* tu kwholiti, in*soumutsh* that thu *turum* haz bikum ridi*ust* in menin *tu* u khnsidurubl digre uv indefinitnis. Yiuzd, hauevu, in rezn an in its rait plheis, it iz u khnveniunt *turum*."

A Commonplace Book of the Fifteenth Century. Printed from the original manuscript at Brome Hall, Suffolk, by Lady Caroline Kerrison. Edited with Notes by Lucy Toulmin Smith. London: Trübner & Co. 1886.

THIS book is the first complete reproduction in print of the manuscript volume named in the title. About one-half of it consists of poems written in a hand of the latter half of the fifteenth century; the rest is made up of documents partly of a public and partly of a private nature. These latter will have their special interest to men engaged in the investigation of local customs and the variations of price at different periods; but to the purely literary student the chief value of the volume will be the Old English poems which are contained in the first half. Several of these are of some length and importance. They are variant versions of what is to be found elsewhere, but the variations are in many cases so great that the whole poem approaches the character of a unique original. The piece entitled "Adrian and Epotys" will perhaps be of most interest to the average student, and a very brief account of it will give the reader a satisfactory idea of the volume as a whole. Adrian and Epotys is not a story, but a dialogue between the Emperor Adrian and a child who presents himself before him, styling himself Epotys, but who turns out at the end to be Christ. The Emperor asks the child a series of questions, and the replies made furnish an illustration of the beliefs then held and the things then taught about philosophy and religion. Some of the answers give little more than the information contained in the Bible narrative. Others are interesting because they show that then, as now, men made up by assertion in matters of education for what they lacked in certainty or evidence. The questions asked were frequently about things—such as the constitution of the angelic hierarchy—which nobody can possibly know; the answers, therefore, were such as no one could deny. As good an illustration and, to men of our day, as entertaining a one as can be selected of this method of instruction, are the thirteen reasons furnished the Emperor by the child why men should fast on Friday rather than on any other day. The first is, God created man on Friday; the second, that on Friday Adam and Eve lost Paradise; the third, that on Friday Cain killed Abel; the fourth, that on Friday the annunciation was made to the Virgin Mary by the angel Gabriel; the fifth, that on Friday Christ was born; the sixth, that on Friday he was circumcised; the seventh, that on Friday Stephen, the proto-martyr, was stoned to death; the eighth, that on Friday John the Baptist was beheaded; the ninth, that on Friday Christ was crucified; the tenth, that on Friday the Virgin Mary died; the eleventh, that on Friday Saint Andrew was crucified; the twelfth, that on Friday Saint Helen succeeded in finding at Calvary the true cross; and the thirteenth, that on Friday God shall come to judge the world.

Besides "Adrian and Epotys" the volume contains the version of a play on the subject of Abraham's sacrifice of Isaac, varying in many respects from the others that exist. Space does not permit us, however, to treat these separate pieces in detail, but the whole work is an interesting contribution to the ever-increasing series of publications which set out to furnish us original documents by which we can study the language, the beliefs, and the lives of our fathers. From the editor of this book we have learned to expect careful and thorough work, nor are we disappointed in this instance. To each article is prefixed a notice which gives sufficient information as to the subject of the piece, and, in the case of the longer poems, of the various versions which exist of it. No glossary has been supplied, but it was probably felt not to be needed. The work is designed for special students, and, except for an occasional wantonness of orthography, the text is not of a character to present any special difficulty.

BOOKS OF THE WEEK.

Adams, O. F. April. Boston: D. Lothrop & Co. 75 cents.

Autographs; sole agent for Et. Charavay, archiviste-paleographe of Paris. A choice selection is always kept in hand. JOHN DELAY, 23 Union Square, N. Y.

Sheldon's General History.

From J. R. SEELEY, *Regius Professor of History, Cambridge University, England.*

"Is History to keep its old form of a narrative, flowing uniformly, sonorous, and stately; or is it to be broken up into the scientific form of classifications and catalogues? Is it to be a story, or is it to be a problem? You know how I answer these questions: and it gives me much satisfaction to find that you answer them in the same way. You have taken the decisive step, and I hope you will persuade many of your countrymen to follow you. Till this step is taken, both in historical writing and historical teaching, I cannot imagine that history can be anything more than a delightful amusement. But I think that those teachers who use your book will get from it the much higher delight of feeling that you have given them a real guide, a new science."

FIGARO-SALON FOR 1886.

WILLIAM R. JENKINS,

Publisher and Importer of French Books,

850 Sixth Avenue, New York,

will receive subscriptions for this magnificent work, which will be issued during the months of May, June, and July, in five parts, at 70 cents each part. Last year (the first of its issue) won it an immediate success, and the publishers are sparing no pains to make it even more attractive this year. The first part will be ready about May 10, and subscriptions will be received for one part or the whole series.
The size is a large quarto, and the pictures are process reproductions from the originals of the most prominent paintings in the Salon.

An English Opinion of Mrs. Barr's New Novel.

"A DAUGHTER OF FIFE."

(12mo, $1.00.)

"A wonderfully true and close delineation of life and character. The heroine is a splendid study. The 'Daughter of Fife' is the daughter of the people. She has generous womanly instincts and a deft hand. Impulsive, she is apt to lose control of her feelings, and now and again we have her in a magnificent rage. The book abounds in touching episodes, and holds the interest of the reader unbroken."—*Leeds Mercury.*

Scribner & Welford's

NEW BOOKS.

A Chronicle History of the Life and Work of

WILLIAM SHAKESPEARE

PLAYER, POET AND PLAYMAKER. By FREDERICK GARD FLEAY, author of the 'Shakespeare Manual.' With two etched illustrations. Fine paper, medium 8vo, half leather, gilt top, $4.50.

NOTE.—The theatrical side of the career of Shakespeare has never yet received any adequate consideration, his connection with the theatres and acting companies in his earlier years not having been traced or even investigated. His relations with other dramatists, especially with Jonson, have also been grossly misrepresented. While every idle story of mythical gossip has been carefully collected, and the pettiest details of his commercial dealings have been garnered, little attention has hitherto been given to his dealings with the plays by other men with whom he was fellow-worker, and a large group of evidences bearing on the chronology of his work, derived from the early production of English plays in Germany, has been cast aside as valueless. In this work an attempt is made to collect this neglected material, to throw new light on the Sonnets, and to determine the dates of the production of all his works. A complete list of all plays published with due authority anterior of 1640 by any dramatic writer is given from the Stationers' Registers. Many unfounded hypotheses of Collier, Halliwell, and others are for the first time exploded, and the work of ten years' investigation is condensed in a single volume. In many instances one paragraph represents months of labor, and it is hoped that a permanent addition of value is thus made to Shakespearian literature. The arrangement of the book is made so as to appeal not merely to the specialist, but to every one who feels an interest in the greatest writer of any literature, and the crowning glory of our own.

Through the Kalahari Desert:

A Narrative of a Journey with Gun, Camera, and Note-Book to Lake N'Gami and Back.

BY G. A. FARINI.

With Map and 44 Illustrations. Demy 8vo, cloth, $5 00.

Sculpture: Renaissance and Modern.

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Charles Scribner's Sons'

NEW BOOKS:

A TIMELY BOOK.

Labor, Land, and Law.

A search for the Missing Wealth of the Working Poor. By W. A. Phillips, Member of Committee on Public Lands, Forty-third Congress, and on Banking and Currency, Forty-fifth Congress. 1 vol., 12mo, $2.50.

"Human earnestness pervades the book throughout. Much earnest study of the world's accumulated facts and theories bearing on the subject has been wrought into this volume."—*Philadelphia Times.*

"Just now that we are confronted with a terrible struggle between the wage-workers and the corporations, its pages may be read with pleasure and profit by all classes of people."—*Boston Gazette.*

Triumphant Democracy;

Or, Fifty Years' March of the Republic. By Andrew Carnegie. 1 vol., 8vo, $2.

"Mr. Carnegie takes the dry summaries of the census, and with a few striking illustrations turns them into wonder-tales."—*N. Y. Tribune.*

The Late Mrs. Null.

By Frank R. Stockton, Author of 'Rudder Grange,' 'The Lady, or the Tiger?' etc. 1 vol., 12mo, $1.50.

"The only unfavorable criticism we ever heard pronounced upon the short stories of Mr. Frank R. Stockton was that they were short. It is a pleasure to take up for the first time a book in which he treats the reader fairly in respect to quantity. 'The Late Mrs. Null' lasts long enough to allow you to make the lady's acquaintance, and to pursue it through many pages with the comfortable feeling that the end is still a good way off. So delightful is the quality of Mr. Stockton's humor, and so varying are the surprises which his remarkable imagination prepares at every turn, that few readers will be willing to leave Mrs. Null until Mrs. Null herself is ready to become the late Mrs. Null."—*New York Sun.*

The Mark of Cain.

By Andrew Lang. Cloth, 75 cents; paper, 25 cents.

"The book has mystery and adventure enough in it to suit a taste that has been well cultivated by works of the fiction of late years. But it is well told and there is nothing to offend the most critical reader."—*Troy Press.*

A Desperate Chance.

By Lieut. J. D. J. Kelly, U. S. N. 1 vol., 12mo, $1.

"An eminently readable book, . . . by a graceful writer, a forcible delineator of character and a faithful photographer of the localities he touches upon. The author's description of a storm and shipwreck is worthy of the pen of the great nautical novelist, W. Clark Russell."—*New York Herald.*

Valentino.

By William Waldorf Astor. New and cheaper edition, $1.

"Mr. Astor has surmounted the difficulty always most trying for writers of historical fiction . . . his personages are real men and women, with human passions and motives, and not merely lay figures built up from the pages of history and a book of costumes."—*Scotsman, Edinburgh.*

Strange Case of Dr. Jekyll and Mr. Hyde.

By Robert Louis Stevenson. 19th Thousand. Paper, 25 cents; cloth, $1.

**** These books for sale by all booksellers, or sent postpaid, on receipt of price, by*

Charles Scribner's Sons,

743-745 Broadway, New York.

Any of the following books sent by mail, postage prepaid, to any part of the United States or Canada, on receipt of the price. HARPER'S NEW CATALOGUE *sent on receipt of Ten Cents.*

Just Published.

THREE TIMELY NEW BOOKS.

I.

THE RAILWAYS AND THE REPUBLIC. By J. F. Hudson. Pp. iv., 490. 8vo, cloth, $2.00.

"A very timely work on the aspect of the controversy between some of the railway kings and the general public. . . . All interested in the inland carrying trade should read it if they would understand the principles upon which legislation affecting the railroads is demanded."—*N. Y. Journal of Commerce.*

"It is seldom the public is given a work at once so timely, so brave, and so able. . . . Mr. Hudson writes with the most exhaustive knowledge of his subject, and with an unusual ability in setting forth his ideas so that they are easily and clearly understood. There is hardly a more vigorous chapter in modern literature than that in which he discusses the rise and growth of the Standard Company. . . . The book is everywhere marked by unusual ability, accuracy, and fearlessness, which make it one of the most important contributions of the day to a subject which of necessity engages more and more attention every day. The political principles of the writer are thoroughly sound and practical."—*Courier*, Boston.

II.

MASSACRES OF THE MOUNTAINS. A History of the Indian Wars of the Far West. By J. P. Dunn, Jr., M.S., LL.B. With a Map and Profuse Illustrations. Pp. x., 784. 8vo, illuminated cloth, $3.75.

"The most authentic and complete narrative we possess of the Indian wars. . . . As a history for the general reader, and as a reference volume for the student of the Indian questions now before the country, and to make converts to liberal Indian measures, the work carries great weight, and proves the exceptional competency of its author for its composition."—*Boston Globe.*

"A book of great value to the student of American history, and of permanent interest to the general reader."—*San Francisco Chronicle.*

"This book, which is historical as to emigrations and expeditions, and vividly descriptive of topography, reservations, and tribal distinctions, is an invaluable aid to the study of the situation."—*Philadelphia Ledger and Transcript.*

III.

MANUAL TRAINING. The Solution of Social and Industrial Problems. By Charles H. Ham. Illustrated. Pp. xxii, 404. 12mo, cloth, $1.50.

"Great value the book assuredly has. It marks an epoch in the history of education, and especially of American education. . . . We should bespeak for it a cordial welcome and a careful consideration."—*N. Y. World.*

"Mr. Ham writes in a spirit of enthusiastic devotion to his subject, and his pages exhibit a wide range of information respecting education and the social problem."—*N. Y. Sun.*

"Mr. Ham's plea is well-nigh irresistible, and certainly irrefutable. It is earnestly commended to the attention of teachers, parents, statesmen, and philosophers."—*The Beacon*, Boston.

OTHER NEW BOOKS.

I.

GEORGE ELIOT AND HER HEROINES. A Study. By Abba Goold Woolson. With Portrait. Pp. x, 178. Crown 8vo, cloth, $1.25.

BOOKS OF THE WEEK 411

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.

Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27.

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography. (Subject to approval.) Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 9,100 copies. The Subscription List is always open to inspection.

For sale by druggists, or mail, $1.

What T. DeWITT TALMAGE and OTHERS say of Geo. Thos. Dowling's New Novel.

THE WRECKERS.

A SOCIAL STUDY.

Fourth Edition Now Ready.

12mo. Cloth. $1.25.

"The immediate success of 'The Wreckers,' by Geo. Thos. Dowling, does not surprise me, for I have watched him all along on his way to the front. Now he puts into the press a book, brilliant, life-like, unique, timely, and useful. It is certain that, as an author, he will fully equal his great power as a preacher."—T. DEWITT TALMAGE.

"It is full of life and movement, and we fully expect to see it dramatized."—*Philadelphia Inquirer.*

"'The Wreckers' is a social study, dealing with humble types of life, with a thoroughly fascinating plot, and one elaborated with skill and ingenuity."—*Boston Evening Traveller.*

"The story becomes intensely dramatic. The demand for it in this city has taken on the character of a rush."—*Cleveland Plaindealer.*

"It is an excellent story, abounding in good lessons. In its romantic characters, fine descriptions, sarcasms without bitterness, with its friendly interwoven argument, the author proves himself no novice, even if it is a first effort in fiction."—*Chicago Inter-Ocean.*

"A book like 'The Wreckers' will help better to a comprehension of our duties to each other, and a proper understanding of the rights and needs of labor, than would volume upon volume of essays on political and social economy."—*Philadelphia Record.*

*** *For sale by all booksellers; or sent, postage prepaid, on receipt of price, by the Publishers.*

As You Like it, 35c.	Coriolanus, 40c.
Julius Cæsar, 40c.	Henry the Fifth, 40c.
Richard the Third, 40c.	Twelfth Night, 35c.
King Lear, 35c.	

King John, 35c. [Just published.]

"This edition is simply without a rival. None even comes second to it."—Westminster Review.

MILTON.—POEMS. By R. C. Browne, M. A. 2 vols. Fifth Edition, $1 75.
Separately, Vol. I, $1; Vol. II, 75c.

MILTON—AREOPAGITICA. With Notes, &c. By J. W. Hales, M.A. Second Edition, 75c.

MILTON—SAMSON AGONISTES. With Notes, &c. By J. Churton Collins. Stiff covers, 25 cents.

POPE. By Mark Pattison, B.D.

I. Essay on Man. Sixth Edition. 40 cents.

II. Satires and Epistles. Third Edition. 50 cents.

JOHNSON—RASSELAS; Lives of Pope and Dryden. By Alfred Milnes, B.A. $1 10.

STEELE—Selections from the *Tatler*, *Spectator*, and *Guardian*. By Austin Dobson. $1 25.

"The editorial execution of the work deserves the highest praise."—*Saturday Review.*

BYRON'S CHILDE HAROLD. By H. F. Tozer, M.A. 90 cents.

BURKE.—SELECT WORKS. With Notes, etc., by E. J. Payne, M. A. Second Edition.

Vol. I. Thoughts on the Present Discontents; the Two Speeches on America. $1 10.

Vol. II. Reflections on the Revolution in France. $1 25.

Vol. III. Four Letters on the Proposal for Peace with the Regicide Directory of France. $1 25.

MODERN LANGUAGES.

Translated by G. W. KITCHIN, D.D.

BRACHET'S ETYMOLOGICAL DICTIONARY of the FRENCH LANGUAGE, with a Preface on the Principles of French Etymology. Third Edition, crown 8vo, $1 75.

BRACHET'S HISTORICAL GRAMMAR of the FRENCH LANGUAGE. Fourth Edition, extra fcp., 8vo, 90 cents.

By G. SAINTSBURY, M. A.
Extra fcp. 8vo.

A PRIMER OF FRENCH LITERATURE. Second Edition. 40 cents.

A SHORT HISTORY OF FRENCH LITERATURE. Crown 8vo, $2 25.

SPECIMENS OF FRENCH LITERATURE. Selected and Arranged. Crown 8vo, $2 25.

SUBJECT FOR CAMBRIDGE LOCAL EXAMINATIONS.

CORNEILLE'S HORACE. With Notes, &c. Price 50 cents.

VOLTAIRE'S MEROPE. With Notes, &c., 50 cents.

SAINTE-BEUVE. Causeries du Lundi. Selected. 50 cents.

SUBJECT FOR OXFORD LOCAL EXAMINATIONS.

QUINET. Lettres à sa Mère. Selected. 50 cents.

By GUSTAVE MASSON, B.A.
Extra fcp. 8vo.

MOLIERE.—LES FEMMES SAVANTES. With Introduction and Notes. 16mo, 50 cents.

CORNEILLE.—CINNA. With Introduction and Notes. 16mo, 50 cents.

RACINE'S ANDROMAQUE AND CORNEILLE'S LE MENTEUR. With Louis Racine's Life of his father. 60 cents.

MOLIERE'S LES FOURBERIES DE SCAPIN. With Voltaire's Life of Moliere. 40 cents.

MOLIERE'S LES FOURBERIES DE SCAPIN and RACINE'S ATHALIE. With Voltaire's Life of Moliere. 60 cents.

SELECTIONS from the CORRESPONDENCE of Mme. DE SEVIGNE and her chief CONTEMPORARIES. Intended more especially for Girls' Schools. 75 cents.

VOYAGE AUTEUR DE MA CHAMBRE. By Xavier de Maistre; Ourika, by Mme de Duras; La Dot de Suzette, by Fievee; Les Jumeaux de l'Hotel Corneille, by Edmond About; Mesaventures d'un Ecolier, by Rodolphe Topffer. 60 cents.

REGNARD'S LE JOUEUR and BRUEY'S and PALAPRAT'S LE GRONDEUR. 60 cents.

LOUIS XIV. and his CONTEMPORARIES: as described in extracts from the best memoirs of the Seventeenth Century. 60 cents.

MOLIERE'S LES PRECIEUSES RIDICULES. Edited by A. Lang, M. A. 40 cents.

BEAUMARCHAIS'S LE BARBIER DE SEVILLE. Edited by Austin Dobson. 60 cents.

MUSSET'S ON NE BADINE PAS AVEC L'AMOUR AND FANTASIO. Edited by W. H. Pollock. 50 cents.

LANGE'S GERMAN COURSE.

By HERMANN LANGE, Teacher of Modern Languages, Manchester.
8vo, cloth.

THE GERMANS AT HOME: a Practical Introduction to German Conversation, with an Appendix containing the essentials of German Grammar. Second Edition. 60 cents.

THE GERMAN MANUAL: A German Grammar, a Reading Book, and a Handbook of German Conversation. $2.

A GRAMMAR OF THE GERMAN LANGUAGE. Price 90 cents.

GERMAN COMPOSITION: a Theoretical and Practical Guide to the Art of Translating English Prose into German. $1 10.

LESSING'S LAOKOON. With introduction. English Notes, &c. By A. Hamann, Phil. Doc., M. A. Extra fcp. 8vo. $1 10.

GERMAN CLASSICS.

With Biographical, Historical, and Critical Introductions, Arguments (to the Dramas) and complete Commentaries.
Edited by C. A. BUCHHEIM, Phil. Doc., Professor in King's College, London.
Extra fcp. 8vo, cloth.

SUBJECT FOR CAMBRIDGE LOCAL EXAMINATIONS.

LESSING'S MINNA von BARNHELM; a Comedy, 90 cents.

LESSING'S NATHAN der WEISE; a Dramatic Poem, $1 10.

GOETHE'S EGMONT; a Tragedy. 75 cents.

GOETHE'S IPHIGENIE auf TAURIS; a Drama, 75 cents.

SCHILLER'S WILHELM TELL; a Drama. Price, 75 cents.

SCHILLER'S WILHELM TELL. School Edition, with a Map, 50 cents.

SUBJECT FOR OXFORD LOCAL EXAMINATIONS.

SCHILLER'S HISTORICHE SKIZZEN; Egmont's Leben und Tod and Belagerung von Antwerpen. Third and New Edition, carefully Revised and Enlarged, with New Map of the Siege of Antwerp. 60 cents.

HEINE'S PROSA; being Selections from his Prose Writings. $1 10.

MODERN GERMAN READER; a Graduated Collection of Prose Extracts from Modern German Writers:

Part I—With English Notes, a Grammatical Appendix, and a complete Vocabulary. Third Edition. 60 cents.

Part II—A Graduated Collection of Extracts in Prose and Poetry from Modern German Writers. With English Notes and an Index. 60 cents.

CLASSICS.

WORDSWORTH'S GREEK GRAMMAR. $1.

WORDSWORTH'S GREEK PRIMER, for the use of beginners in that language. Seventh Edition. 40 cents.

THE ELEMENTS of GREEK ACCENTUATION. (For Schools.) Abridged by H. W. Chandler, M. A. 60 cents.

GRADUATED GREEK READERS.

FIRST. By W. G. Rushbrooke, M. L. Second Edition, 60 cents.

SECOND. By A. M. Bell, M. A. 90 cents.

FIFTH. Part 1. Selections from Greek Epic and Dramatic Poetry. With Notes, etc. By E. Abbott, M. A. $1 10.

ÆSCHYLUS—PROMETHEUS BOUND. (For schools.) With Notes, etc. By A. O. Prickard, M. A. Second Edition, 50 cents.

By W. W. MERRY, M. A.

HERODOTUS.—SELECTIONS from. With Notes and a Map. 60 cents.

FOURTH GREEK READER: Specimens of Greek Dialects. With Notes, etc. $1 10.

HOMER.—ODYSSEY. (For Schools.) Books I.—XII. Twenty-seventh thousand, 85 cents.

Books XIII.—XXIV. Second edition, 90 cents.

Book II. separately, 40 cents.

HOMER—ILIAD. (For Schools.) Books I.—XII. With an Introduction, a brief Homeric Grammar, and Notes. By D. B. MONRO, M.A., LL.D. 6s. Book I. separately, 50 cents.

XENOPHON. EASY SELECTIONS. (For Junior Classes.) With a Vocabulary. Notes and Map. By J. S. PHILLPOTTS, B.C.L., and C. S. JERRAM, M.A. Third Edition. 90 cents.

XENOPHON.—SELECTIONS. (For Schools.) With Notes and Maps. By J. S. PHILLPOTTS, B.C.L. Fourth Edition, 90 cents.

XENOPHON.—ANABASIS. Book I. With Notes and Map. By J. MARSHALL, M. A., Rector of the High School, Edinburgh. 60 cents.

XENOPHON.—CYROPÆDIA. Books IV., V. With Introduction and Notes by C. BIGG, D. D. 60 cents.

By C. S. JERRAM, M. A.

XENOPHON.—ANABASIS. Book II. With Map, 50 cents.

CEBES.—TABULA. With Notes, &c. 60 cents.

EURIPIDES.—IPHIGENIA. (For Schools.) 3s. HELENA. Notes, &c. For Upper and Middle Forms. 75 cents. ALCESTIS. (For Schools). 60 cents.

LUCIAN.—VERA HISTORIA. (For Schools.) Second Edition. 40 cents.

AN ELEMENTARY LATIN GRAMMAR. By J. B. Allen, M. A. Third Edition. 60 cents.

A FIRST LATIN EXERCISE BOOK. By the same. Fourth Edition. 60 cents.

A SECOND LATIN EXERCISE-BOOK. By the same. 90 cents.

RUDIMENTA LATINA. By the same. 50 cents.

REDDENDA MINORA; or, Easy Passages, Latin and Greek, for Unseen Translation. For the Use of Lower Forms. By C. S. Jerram, M. A. 40 cents.

ANGLICE REDDENDA; or, Easy Extracts, Latin and Greek, for unseen Translation. By the same. Fourth Edition. 60 cents.

PASSAGES for TRANSLATION into LATIN. For the use of Passmen and others. Selected by J. Y. SARGENT, M. A. Sixth Edition. 60 cents.

FIRST LATIN READER. By T. J. NUNNS, M. A. Third Edition. 50 cents.

EXERCISES IN LATIN PROSE COMPOSITION. With Introduction, Notes, and Passages of Graduated Difficulty for Translation into Latin. By G. G. RAMSAY, M. A., LL.D., Professor of Humanity, Glasgow. Second Edition. $1 10.

CÆSAR.—THE COMMENTARIES. (For Schools.) With Notes and Maps. By C. E. MOBERLY, M. A.

Part I. Gallic War. $1 10.

Part II. The Civil War. 90 cents.

The Civil War. Book I. Second Edition. 50 cents.

CICERO.—Interesting and Descriptive passages. With Notes. By H. WALFORD, M. A. In Three Parts. Third Edition. Separately, each 40 cents.

CICERO.—SELECTED LETTERS. (For Schools). With Notes. By the late C. E. PRICHARD, M. A., and E. R. BERNARD, M. A. Second Edition. 60 cents.

CICERO.—SELECT ORATIONS. (For Schools.) With Notes, &c. By J. R. KING, M. A. Second Edition. 60 cents.

CICERO.—PRO CLUENTIO. With notes, &c. By W. Ramsay, M. A. Edited by G. G. Ramsay, M. A. Second edition. 90 cents.

CORNELIUS NEPOS. With Notes. By Oscar Browning, M.A. Second edition. 60 cents,

LIVY. Selections. (For Schools). With Notes and Maps. By H. Lee-Warner, M.A. In three parts, limp, each 40 cents.

LIVY. BOOKS V.-VII. With Notes, etc. By A. R. Cluer, B.A. 90 cents.

SUBJECT FOR LONDON MATRICULATION.

LIVY. BOOKS XXI.-XXIII. With Introduction and Notes by M. T. Tatham, M.A., Balliol College, Oxford, Assistant Master at Westminster School. Price $1 10. Just published.

SUBJECT FOR THE LONDON MATRICULATION.

OVID'S TRISTIA. Book I. With Notes, &c. By S. G. Owen, B. A., Classical Lecturer at the Owens College, Manchester; formerly Open Exhibitioner of Balliol College, Oxford. 90 cents.

SALLUST.—BELLUM CATILINARIUM and JUGURTHINUM. With Notes, &c. By W. W. Capes, M. A. $1 10.

VIRGIL. With Notes, &c. By T. L. Papillon, M. A. 2 vols., crown 8vo, $2 75.
The Text may be had separately, cloth, $1 10.

MACMILLAN & CO., 112 FOURTH AVENUE, NEW YORK.

The Nation.

NEW YORK, THURSDAY, MAY 13, 1886.

The Week.

THE President's action in vetoing two private pension bills which recently passed Congress is likely to call a halt on the recklessness of pension legislation. The lecture which he reads the members upon the gross carelessness with which such bills are rushed through by wholesale is severe, but it is well deserved. Mr. Cleveland's course about these minor measures furnishes ample evidence that the raids upon the Treasury threatened in the arrears scheme and other vast jobs will meet effective opposition in the White House, if the demagogues succeed in rushing them through Congress.

The new rule reported by Mr. Morrison, providing that all bills increasing pensions or creating new pensions shall be open to amendments imposing new taxes to furnish the money to pay them, does not go far enough. Every such bill ought to be sent to the Committee of Ways and Means, and this committee ought to be required to report the taxes believed to be necessary to meet the expenditure. Then the two propositions would be voted on together. It is said that the Republicans in the House do not relish the proposed rule. They want to have plenty of pensions without any increase of taxes. Well, there is one way to accomplish this, and we hope to see some brave man, like Mr. Hiscock or Mr. Reed, propose it. Let him introduce a bill to stop payments on the public debt in order to pay more pensions. A better way still would be to suspend the silver coinage. This would make room for $24,000,000 of new pensions. One thing is certain. If there is to be any considerable increase in pensions, there must be taxes to correspond or a heavy reduction of disbursements elsewhere.

The House of Representatives has done its share toward making a raid upon the national Treasury by passing a River and Harbor Bill of most extravagant proportions. This great log-rolling scheme calls for over $15,000,000, which is at the very least twice as large an amount as could justifiably be called for. Mr. Holman, of Indiana, tried hard to have the bill sent back to the committee with instructions to cut it down to $8,000,000, but only 85 members voted for this proposition, against 157 for the measure as it stood. Upon the final vote 143 Representatives supported the grab, and 102 opposed it. As there is little doubt about its success in the Senate, we may count upon the legislative department of the Government doing its best to rifle the Treasury. But, fortunately for the taxpayers of the country, another branch of the Government must give its approval before the money can be got at, and we much mistake the character of President Cleveland if he does not interpose a decided objection, which, as Thursday's vote in the House showed, would prove fatal to the steal. Not the least among the advantages flowing from Mr. Blaine's defeat is the fact that the people have now a representative in the executive chair who can be relied upon to protect them from the reckless demagogues, whose $15,000,000 river and harbor log-rolls and $300,000,000 pension-arrears scheme threaten the financial integrity of the nation.

The seizure of the American fishing schooner *David J. Adams* by the Dominion authorities for violation of the Treaty of 1818 gives New England Congressmen a chance to "show off" as defenders of the national honor, but it will hardly lead to war, or even to a rupture of commercial relations with Great Britain. The facts in the case are very simple. The Treaty of 1818 provides that American fishermen may enter the bays or harbors of her Majesty's dominions in America to seek shelter, repair damages, purchase wood and obtain water, but "for no other purpose whatever." The offending schooner entered for the purchase of bait, which is clearly in violation of the last clause, although it is claimed that the universally recognized principle of commercial freedom involves the right to enter for such purchase. But a United States statute provides that any vessel intending to touch at a foreign port and purchase goods there shall obtain a permit from the Collector of Customs of the port whence she sails, setting forth her intention, while the schooner in question had no such permit, and her master had fastened canvas over her stern to prevent identification, apparently because he knew that he had not complied with the law. The investigation which will be made by our authorities will undoubtedly lead to an amicable settlement of the pending controversy, and an arrangement which will prevent similar disputes in the future, without the necessity of enacting any retaliatory legislation, although not of course without "letting the eagle scream."

The utter collapse of the Jefferson Davis sensation is a striking evidence that the country has finally emerged from the sectional epoch in politics. Nothing could have happened which would show what the sentimental reception of the old man really meant, better than the fact that the most gushing participant in the demonstrations was that representative Southern Republican, General Longstreet, of Georgia, who brought out his Confederate uniform for the occasion. As though this were not enough to close the mouths of Northern Bourbons, who hoped that something was to be made out of the tour for the benefit of the Republican party, the two most prominent Republican papers in the South, the Wheeling (W. Va.) *Intelligencer* and the Louisville (Ky.) *Commercial*, were prompt to ridicule the idea of attaching any importance to the incident.

The riots in Cleveland, Chicago, and Milwaukee are producing a rapid change of opinion about the partition of Poland. It has hitherto been considered by the bulk of the American people a monstrous crime on the part of the three Powers which took part in it. But the events of the last few weeks are leading many to condemn the Powers for not having gone further and partitioned the individual Poles as well as Poland. One hears everywhere very severe comments on their action, from this point of view. But this is unjust. The Poland which was partitioned was the Poland of the nobles; the Poles who are bomb-throwing and roving around with red flags in the West are drawn from the ranks of a very ignorant and degraded peasantry, for whose barbarism the present owners of Poland are responsible.

Unlike Illinois, Wisconsin has a Governor to be proud of. As we have more than once pointed out, the chief responsibility for the long continuance of the disturbances growing out of the strikes in the former State rests upon the Executive, Richard J. Oglesby, whose course from the very first has been pusillanimous and promotive of disorder. With a man of the Oglesby type in the Executive chair of Wisconsin, the metropolis of that State would be to-day at the mercy of a blood-thirsty mob. But Jeremiah M. Rusk is a man of a different sort. A stage-driver and a frontier tavern-keeper in early life, he soon won the respect of the pioneers in his vicinity, and his good sense commended him to the people of the whole State as he became more widely known through service in the Legislature. A brave soldier in the Union army, he knows what war is, and understands that the only way to deal with a band of rioters is by the use of cold lead. When trouble was threatened in Milwaukee a few days ago, he went at once to the city, summoned a sufficient force of militia to suppress disorder if it should break forth, and, when the mob sallied forth in the morning bent on rapine and slaughter, he ordered that the troops should fire to kill. A single volley at long range showed the mob that the troops "meant business," and broke the backbone of the insurrection against authority. When a Polish Alderman went to the Governor and remonstrated with him, he told his visitor to go back and tell his countrymen that he would stop these riotous demonstrations if he had to call every able-bodied man in the State into military service to do it; and when the Alderman went away and began threatening on the streets that the militia should suffer for their action, the authorities notified him that he would be arrested on the charge of inciting a riot if he did not stop.

Some friends of "Labor," among whom we are surprised to see the name of Mr. Henry George, are trying to persuade themselves that it is possible in labor troubles to make a distinction between a little intimidation and a great deal—that is, between boycotting and bomb-throwing. But the point is too fine for popular apprehension. There is no difference except one of degree between concerted illegal attempts to injure any citizen in his person, property, or reputation. If we allow any committee or combination, for any

purpose whatever, to engage openly in the work of destroying a man's business or extorting ransom from him to prevent its destruction, or to fill his life with terror by threats or denunciations, we cannot in practice put any limits to its power. Outside the law and the Constitution there are no metes or bounds to the exercise of power, and no possibility of tracing them. The Constitution says that no man shall be deprived of life, liberty, or property except by due process of law, and that even when convicted of an offence by due process of law, cruel or unusual punishment shall not be inflicted, nor excessive fines be imposed on him. It is these provisions which make the United States a free country, and a more attractive residence than Russia or Turkey. They do not say that a man may occasionally have his property taken away from him, or have excessive fines inflicted on him now and then, or that he may be kicked and cuffed on such conditions as trades unions may from time to time prescribe. They say that nothing of the kind shall ever take place, on any pretext whatsoever. Nor do they allow even judges or juries to inflict what penalties they please, or inflict any penalty without proof of legal guilt. Everybody who is charged by the law with the duty of doing anything unpleasant to any citizen, has the extent of his power and the conditions under which it may be exercised strictly defined. There is no discretion left in the matter to anybody.

When we get outside the law, and begin to allow ever so little intimidation or coercion to be practised by either individuals or organizations for purposes of their own, we begin a descent at the bottom of which is anarchy—that is, arson, pillage, and murder, revolvers, rifles, and bombs. Grant that intimidation may be practised in order to compel a man to do something which he does not wish to do, by his rivals, or enemies, or employees, and the amount and kind of intimidation become at once dependent on the resistance he may offer, or the greed or unscrupulousness of his persecutors. If distributing abusive handbills about him will not suffice, he must have his customers frightened into leaving him, and his provisions stopped. If this will not do, he must be cudgelled, and his furniture and machinery smashed, and his factory burnt. If the police enable him to disregard all these things, the police must be shot or blown up. We see illustrations of all these stages of descent in the strikes of the past few weeks. Intimidation in the hands of the more intelligent strikers consists in attempts to destroy the business of those who refuse to employ them on their own terms, by trying to divert custom from them, or, in other words, by simple "boycott." In the next grade it takes the form of assault and battery and the smashing of machinery and furniture; in the next state, it consists in riotous and armed assemblages declaring war against the whole social organization. It is mere folly to suppose that we can in this country have a little lawlessness, or have lawlessness for special occasions and no others. It is something from which communities must abstain altogether if they do not mean to drink deep of it.

Alabama has had no trouble with boycotting yet, but if this crime is attempted in that State there will be no question about its receiving proper punishment. The last Legislature passed the following "act to encourage industry in the State of Alabama":

"Any person who shall, by force or threats of violence to person or property, prevent or seek to prevent any person, firm, or corporation engaged in any lawful business, or who shall in like manner disturb, interfere with, or prevent the peaceful exercise of any lawful industry, business, or calling, by any other person within the State of Alabama, shall be guilty of a misdemeanor, and on conviction must be fined not less than $10 nor more than $500, and may also be imprisoned in the county jail or sentenced to hard labor for the county for not more than twelve months."

No State has yet been heard of which has not upon its statute-book provisions which fully cover the crime of boycotting.

Bradstreet's collection of statistics of the eight-hour movement shows that the total number of workmen engaged in it in all parts of the country is 325,000. The demand for shorter hours has been conceded to 150,000 without a strike and to 35,000 after striking, leaving 140,000 still on strike or defeated. The trades in which the movement has been most successful are those connected with house building, agricultural-implement makers, furniture making, and machinery building. These are trades not subject to foreign competition. In those which are subject to such competition, either in the way of exportation of the domestic product or of importation of the foreign, the movement has met with little success. In some cases the employers have yielded in consequence of contracts on hand which must be filled, but have notified the men that they shall return to ten hours when the contracts are completed, or close the works. The whole movement is in fact experimental. In those branches of industry which yield sufficient profit to warrant an increase of wages—for that is what shorter time most commonly signifies—the increase will be granted. In others it will not be granted, or, if granted temporarily, it will be withdrawn hereafter. While a great deal of loss always attends such experiments, there is nothing to be urged against them so long as the rights of neither party are invaded and the law is not violated. The principal part of the loss proceeds from the stoppage of machinery. A deduction of 20 per cent. from the producing power of the Pullman Car Works, for example, means much more to the community than a reduction of one-fifth of the laboring force. But this is no valid argument to be addressed to a man who prefers not to work more than eight hours out of twenty-four.

When Master-Workman Powderly is sensible, he is very sensible; but when he is foolish, he can be as foolish as any fool in the country. His motto seems to be to throw energy into everything—good, bad, or indifferent. In the early part of the Southwestern strike, he talked like a philosopher; but when he found the strikers would not obey him, and that they had to be humored, he showed that he could be as silly and inaccurate as any of them. When that affair blew over, however, he at once recovered his wits, and the "secret circular" which was printed on Monday is really full of "horse sense." To be sure, there is nothing in it which would not be mere platitude in the mouth of any man but a Knight of Labor; but, coming from a Knight, after all that has happened and the exhibitions the Knights have been making of themselves, it has an air of almost superhuman wisdom. That it should be necessary, however, to give the Knights such simple, homely advice, sounding so like the address of the Superintendent of a Sunday-school to troublesome boys, shows what a huge job of education Mr. Powderly has undertaken. We wish him all success in it, but must strenuously oppose the suggestion of one of the Curtin Committee that he should be allowed to revise the Constitution of the United States. The pretensions of the Knights have been sadly lowered since then.

The events of the past fortnight have damaged other champions of labor besides Mr. Powderly. Martin Irons has vanished from the proud position he held for a few weeks. He evidently dislikes manual labor as much as anybody, however, and does not mean, glorious though it be, to do any more of it than he can help. He says he is now going to devote himself to "lecturing and organization." He received very large sums of money during the strike, of which no account was probably rendered to anybody, and he will perhaps work out the amount in denunciations of capital. Another great fall is that of O'Donnell. He appeared on the surface as a street rioter only six weeks ago, and then had a short period of great power and glory, in which he threatened to suspend all means of conveyance in this city, and hurled defiance at the Grand Jury and in fact the whole American people, and repeated poetry about the state of his heart, and carried a sheaf of greenbacks under his arm. Now he is deposed as a traitor, and has been deprived of all his honors. He is probably comfortably provided for, but if he had to rely on regular industry of any kind, the best thing he could get would probably be the drivership of a bobtail car. There is nothing the cause of labor needs so much as distrust of the gift of the gab; and now that the funds of labor organizations are growing, there will be terrible competition for the handling of them among the restless, windy demagogues who hate honest toil, in all the shops in the country.

The "private understandings" between the Knights of Labor and their employers generally fill so large a space in the "grievances" of the day, and lead to so much confusion and loss of time, that it would seem as though a rule should be promulgated by Mr. Powderly or some other competent authority, that in cases of negotiation, arbitration, and settlement everything should be reduced to writing, and that the committees appointed to consider labor troubles of any kind whatsoever should refuse to consider anything not recorded in black and white. When Mr. Powderly found that the Knights at St. Louis would not obey his orders after his conference with Jay Gould, he

remembered that his understanding with Gould was, that Hoxie should arbitrate with persons not in the employ of the Missouri-Pacific Company, although Gould had in his possession a telegram from Powderly's secretary to Martin Irons affirming the contrary. So also it appears that one of the moving causes of the rejection of the Third Avenue settlement by the Empire Protective Association, according to the *Herald's* report, was that "Mr. Lauterbach had promised on the part of the company many things that had not been put in the agreement, but which Downing said that he and his colleagues believed would be carried out. The men admitted that if the company could be trusted the agreement was all right, but the men, they said, had been so frequently deceived by the Third Avenue Company that they would not trust them for anything except it was put in writing. It was this omission that the men complained of, and they were very much surprised that O'Donnell should have accepted verbal promises when he knew whom he was dealing with." If the Knights of Labor are seriously in favor of arbitration as a means of settling labor troubles, they must begin by casting out "private understandings." Arbitration is a quasi-judicial proceeding. No court would allow one of the parties to a controversy to bring in new matter after the case was closed; least of all, recollections of things not remembered by the other party.

The Third Avenue Knights have refused to ratify the agreement made by their Committee. They have given as their reason for refusing that the agreement "compromises the individual reputation of our members and is degrading to the manhood of our noble order." This is a point upon which they are the sole judges. If any man or collection of men deem their honor compromised by any project offered for their acceptance, it is both their right and their duty to reject it. Nobody else is entitled to express any opinions upon such a subject, and accordingly we shall express none. Their sense of honor would be more highly appreciated by the community if it were not prefaced by a protest against the practice of arming the drivers and conductors of street-cars with pistols, as tending to create riots and bloodshed. This unwholesome proceeding on the part of the Third Avenue Company is looked upon as threatening the public peace, and is denounced vigorously. There is a very simple recipe for this evil, and that is for all persons to avoid pulling armed drivers and conductors off their cars and to refrain from attacking them. Let the strikers remain at home or in their own committee rooms and cherish their honor, leaving the new drivers and conductors the equal privilege of cherishing theirs. In this way the average manhood of the community will be raised and all breaches of the peace will be avoided. If reading matter is wanted by men who refuse to work for $2 per day, we commend to all such the touching narrative sent to Congress by the weavers of Philadelphia, who are thankful to get employment at 80 cents per day, and who complain that many of their number cannot find work even at that rate.

What is alarming Europe in the determination of the Greeks to go to war is their apparent complete indifference to the advice, or remonstrance, or even coercion of the Powers. Their ports are now blockaded, but the war fever seems to grow stronger all the while, showing, it is supposed, either that they are satisfied that the coercion will go no further than the blockade, or that there is somebody behind Greece far mightier than she is, who has promised if she fights to see her through. The general impression is, of course, that this somebody is Russia; that she is going to do for the Greeks what she did for the Servians—that is, wait till they begin to be worsted and then step in to put an end to the Mussulman atrocities, and this time put an end also to the Ottoman Empire in Europe. Last time she came very near doing it. The minarets of St. Sophia were in sight from the Russian camp when the treaty of San Stefano was signed. Another march would have carried the Russian headquarters to Stambul. That he allowed himself to be stayed by Beaconsfield's threats was something which the late Emperor was said always to have deeply regretted. It was a mistake which his successor would undoubtedly not commit under similar circumstances.

Irish home rule seems from the last advices to be in a more perilous condition than ever, owing, apparently, to Mr. Gladstone's failure to make any formal offer of a compromise to the Chamberlain Radicals. That he is willing to make modifications in the bill there appears to be no doubt, but he is unwilling to produce them until it gets into the Committee of the Whole, where it will be thoroughly overhauled. But Mr. Chamberlain and his followers are not willing to wait. They want to know before the second reading what is to be the full measure of the concessions to be made to them, leaving only the details for discussion in the Committee. Mr. Gladstone's refusal to gratify them has bitterly disappointed them, and has apparently turned many waverers against the scheme altogether. This, at all events, appears to be true of political men in London.

Whether it is true of the voters in the provinces—that is, whether they are not perfectly willing still to confide in Gladstone's discretion—remains to be seen. Until now, in spite of the great uproar made by the metropolitan critics of the plan, there has been no sign of any weakening of Mr. Gladstone's hold on the Liberal constituencies. Mr. Chamberlain was beaten on the question of supporting the Premier in his own Birmingham caucus, and more signally beaten still at the great Liberal Convention, formed of delegates from all the caucuses, plus the Liberal members of Parliament, held in London last week. He there had to submit to the mortification of hearing the epithet "traitor," levelled at him by one speaker, received with deafening applause. It consequently would be hasty to assume that Gladstone is really checked, or that one of those wonderful reactions which have so often plucked him from the jaws of failure, may not set in before the vote on the second reading and bear down all opposition. The debate will probably last a fortnight or three weeks, and the number of speakers on both sides will be very large, and it is quite fair to assume that the Ministry will be much helped by the oratory of the Opposition. In other words, the more the opponents of home rule talk, the worse they fare. They consist of two classes of orators and writers, one of which confines itself to simple abuse of the Irish *en masse*, like Mr. Bear, who, in the last number of the *Fortnightly Review*, declares that the Irish who favor the change—that is, the great majority of the people who returned 85 out of 103 members to the present Parliament—are a "crowd of Fenians, and priests, and rogues, and paupers." This is the favorite argument in the clubs, but it exasperates the working-class Radicals, who dislike seeing a whole people indicted. The other class, which concedes that there is something good in the Irish, and that home rule ought to be granted, is so barren in suggestion that the more it talks the more apparent the poverty of its resources becomes, and the more wonderful Gladstone's constructive genius seems.

The main—in fact, one might say the only—question on which those who favor home rule at all, differ among themselves, is that of Irish representation at Westminster. The Chamberlainites say that what they seek is federation, while what Mr. Gladstone proposes is separation. They want to have a certain number, at least, of Irish members remain in the imperial Parliament to deliberate and vote on imperial concerns, in which Ireland must, willy nilly, continue to be deeply interested. There is a great deal of force in this view, and it probably commands the support of the great bulk of the English and Scotch Liberals, and will finally be accepted by Mr. Gladstone himself. The Irish, however, object to anything of the kind, at least for the present, on grounds which are undoubtedly very reasonable. They say that, for well-known reasons, the bulk of the educated class in Ireland are not enlisted in the Nationalist movement, and would not at first lend much aid in making it a success. This would, in spite of the fact that Ireland now provides more than her share of the talent and capacity which are to be found in the British service, leave the new Irish government very slenderly equipped, for a while at least, with legislative ability. There would be about enough, and none too much, the Parnellites say, for the Parliament in Dublin, which would have to deal at once with many perplexing domestic problems. Where they would find fit representatives to send to Westminster they say they do not know, and fear that if they now try to man two Parliaments, the Irish cause will be discredited in one or the other. They therefore propose that the arrangements for Federal representation should be postponed until the home government is in working order. All this is very fair, and a satisfactory solution would doubtless be easily reached if the Irish were approached, by either English party, in a conciliatory spirit and on a footing of equality.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 5, to TUESDAY, May 11, 1886, inclusive.]

DOMESTIC.

IN vetoing a special pension bill on Saturday President Cleveland said: "The policy of frequently reversing, by special enactment, the decisions of the bureau invested by law with the examination of pension claims, fully equipped for such examination, and which ought not to be suspected of any lack of liberality to our veteran soldiers, is exceedingly questionable." He added: "There have lately been presented to me on the same day for approval nearly 240 special bills, granting and increasing pensions, and restoring to the pension list the names of parties which for cause have been dropped. To aid Executive duty they were referred to the Pension Bureau for examination and report. After a delay absolutely necessary they have been returned to me within a few hours of the limit constitutionally provided for the Executive action. Two hundred and thirty-two of these bills are thus classified: Eighty-one cover cases in which favorable action by the Pension Bureau was denied by reason of the insufficiency of the testimony filed to prove the facts alleged. These bills I have approved on the assumption that the claims were meritorious, and that on the passage of the bills the Government has waived full proof of the facts. Twenty-six of the bills cover claims rejected by the Pension Bureau because the evidence produced tended to prove that the alleged disability existed before the claimants' enlistment. Twenty-one cover claims which have been denied by such bureau because the evidence tended to show that the disability, though contracted in the service, was not incurred in the line of duty. Thirty-three cover claims which have been denied because the evidence tended to show that the disability originated after the soldiers' discharge from the army. Forty-seven cover claims which have been denied because the general pension laws contain no provision under which they could be allowed, and twenty-four claims have never been presented to the Pension Bureau. I estimate the expenditure involved in the bills at more than $35,000 annually. Though my conception of public duty leads me to the conclusion, upon the slight examination which I have been able to give to such of these bills as are not embraced in the first class above mentioned, that many of them should be disapproved, I am utterly unable to submit within the time allowed me for that purpose any objections to the same. They will therefore become operative without my approval."

The Senate on Wednesday amended the fourth section of the Inter-State Commerce Bill, which made it unlawful for any common carrier to charge more for a shorter than a longer haul over the same line, in the same direction, from the same original point of departure, by striking out the words "from the same original point of departure."

The House of Representatives on Thursday, by a vote of 143 to 102, passed the River and Harbor Bill, appropriating over $15,000,000.

The House Committee on Education has made one more effort to act upon the Educational Bill, but without success.

The indications now are that the attempt to secure the passage of the bill to construct a new navy will be abandoned for this session. It is said without much hesitation by the Democratic leaders that it will be necessary to prevent any more legislation which takes any considerable sum out of the Treasury.

The protectionists claim that an agreement has been reached between the Morrison and the Randall factions that the Tariff Bill shall not be brought up at this session.

The Gloucester, Mass., fishing schooner *David J. Adams* was seized at Digby, N. S., on Friday by the Canadian steamer *Lansdowne*. She is charged with purchasing bait within the forbidden limits. The U. S. Government will have the seizure investigated.

The New England Representatives in Congress were very busy on Monday introducing resolutions relating to the fisheries. No attempt was made to secure action upon any of the propositions submitted. They all asked for investigations. The Secretary of State has anticipated all of these suggestions by ordering an investigation to be made through the consular offices. It appears that the seized vessel, the *David J. Adams*, had not the permit to trade which Senator Frye considered quite important.

In Milwaukee on Wednesday two bands of rioters were fired upon by the militia. Three men were killed and a number injured.

Milwaukee remained orderly on Thursday. Troops continued to guard the threatened establishments. Several Socialist leaders were arrested. The firm stand taken by Gov. Rusk contributed greatly to the early settlement of the riotous disturbances.

In Chicago quiet was preserved throughout Wednesday. Spies, Fielden, and Schwab, three of the Anarchist leaders, were arrested. The Board of Trade raised $12,000 for the benefit of the families of policemen injured or killed in the riot of the previous night. Other contributions increased it to about $40,000.

The Chicago police discovered more dynamite machines on Friday. More Anarchists were arrested. Two of the rioters were fined $100 each. The Socialist organ, the *Arbeiter Zeitung*, reappeared on Friday in a reduced form. The keynote of its leading article was: "Forward! and unhesitatingly forward, in spite of the chicanery of the ruling classes."

More than 100 metal workers and other large manufacturers, employing over 12,000 hands, met in Chicago on Saturday, and decided to open their shops on Monday on the basis of ten hours' work for ten hours' pay. All men who desire to resume work can do so. If they fail to come back within a week, the shops will close, and the men out will be put on the black list, which will bar them from employment at other factories. This system of self-defence by employers is growing popular.

Quiet was also maintained in Chicago on Thursday and continues. An incendiary fire was started in a lumber yard, but discovered in time to prevent serious damage. An Anarchist saloon was raided during the day, and a dozen stands of rifles seized. The Knights of Labor issued a circular protesting against all acts of violence.

The striking freight-handlers at Chicago on Sunday made an unconditional surrender to the railroads. This action was brought about by the refusal of the switchmen to join the strike. On Monday all the railways in the city resumed operations, and accepted and carried all freight offered.

The Trades Assembly of Chicago held a meeting on Monday night. While no final action was taken, the general sentiment of the meeting seemed to be that a complete backdown on the eight-hour question was advisable. Men are resuming work in all classes of trades, and it is believed that the backbone of the strike is broken.

The city of Cleveland was flooded with Socialist circulars on Wednesday night.

The Cincinnati Police Commissioners have discovered that Socialists, to the number of 600, are organized, armed with effective rifles; that they control there the manufacture of dynamite bombs; that the one used in Chicago was made there, and they have now on hand for use a supply of these infernal machines. These discoveries alarmed the authorities, and militia and policemen were kept under arms night and day to suppress an outbreak. No trouble has, however, occurred.

A long secret circular from Grand Master Powderly to all the Knights of Labor was published on Monday. In it he deprecates all boycotting except that on drink. He says: "Let me direct your attention to a few little abuses: I find that wherever a strike occurs, appeals for aid are scattered broadcast among the assemblies. Do not pay one cent for such purposes in future unless the appeal comes from your own District Assembly or the General Assembly. If boycott notices are sent to you burn them. I have in my possession 400 boycott notices which were sent to assemblies with a request that they be acted upon. In fact, our order has been used as a tail for a hundred different kites, and in future it must soar aloft free from all of them. I hate the word boycott. If the men who possess money enough to buy guns and dynamite would invest it in the purchase of some well-selected work on labor, they would put the money to good use. They will never need the guns or dynamite in this country. It is my opinion that the man who does not study the politics of the nation and the wants of the people would make but little use of a rifle. The man who cannot vote intelligently and who will not watch the man he votes for after he is elected, cannot be depended on to use either gun or dynamite. If the head, the brain of man cannot work out the problem now confronting us, his hand alone will never solve it."

In the case of Wo Lee, appellant, against the Sheriff of San Francisco, decided by the United States Supreme Court on Monday, the plaintiff had been convicted under an ordinance of San Francisco prohibiting the carrying on of a laundry in a frame building, and sent to prison. The Supreme Court holds the ordinance to be a discrimination against the Chinese, and therefore illegal and a violation of the Fourteenth Amendment to the Constitution.

The annual meeting of the New York Civil-Service Reform Association was held on Thursday night. Mr. George William Curtis delivered an address, in which he discussed the question how the Association might best help the President. He suggested that, as a practical measure, the Association could do all in its power to effect the repeal of the four years' law. The President would be relieved of much pressure from those continually asking change of office. In another way the Association should support the bill making it almost a penal offence for Senators to solicit nominations to offices. The President had told him that a judgeship had been delayed a year because he refused to name a man in whom the Senator from that State was interested. "Men will see the day," said Mr. Curtis in conclusion, "when non-political offices will be filled by merit." The following officers were chosen for the coming year: President, George William Curtis: Vice-Presidents, Carl Schurz, Charles S. Fairchild, Roswell D. Hitchcock, John Jay, William E. Dodge, Oswald Ottendorfer, Horace E. Deming, and Orlando B. Potter.

The Protestant Episcopal Convention in Philadelphia on Thursday, on the ninth ballot, elected the Rev. Phillips Brooks, D.D., of Boston, Assistant Bishop of the diocese, with the right of succession to Bishop Stevens.

The cost of investigating the Broadway Railroad scandal has been as follows: Counsel fees of Roscoe Conkling and Clarence A. Seward, $40,000; stenographer, $2,800; personal expenses of members of the Senate Railroad Committee, $600; rooms in New York Hotel for sessions, board of stenographer, and clerk, $700; assistant sergeant-at-arms, $800; assistant sergeant-at-arms and experts (detectives), $800; book expert, $700; printing, $2,400; total, $48,800.

The subscribers to the Prize Fund Exhibition this year were twenty-four in number, the New Yorkers including H. G. Marquand, John Taylor Johnston, W. E. Connor, Sidney Dillon, and Jay Gould. From these twenty-four have been chosen the judges, the prizes offered being $2,000 each. The awards made are to C. F. Ulrich, "Glassblowers of Murano"; F. D. Millet, "At the Inn"; C. P. Grayson, "Mid-

day Dreams;" and Edward E. Simmons, "Mother and Child."

A fearful storm of wind, rain, and hail visited Kansas City on Thursday, destroying many buildings in the north end of the city. Twenty people were killed and many more injured. Leavenworth, Kan., and other towns in that State and Missouri suffered serious damage by the storm.

FOREIGN.

The reply of the Greek Prime Minister to the Powers was delivered on Thursday night, and was considered by them inadequate. On Friday the Ministers of the Powers left Athens. Greek troops were hurried to the front where Turkish troops were massing. The Greek Government announced its intention of defending Greek territory against any and all advances by foreign soldiers.

On Saturday Germany, Austria, England, Russia, and Italy notified Greece that a blockade of her ports had been ordered. The Turkish cavalry had advanced to the Greek border. Turkey is supposed to have 120,000 troops on the frontier, Greece about half that number.

The foreign fleet on Sunday blockaded the Greek coast. The Government warned all vessels that if they left port it would be at their own risk. The commercial world is excited. Premier Delyannis tendered his resignation on Sunday, but it was not accepted. Turkey and Greece are hurrying troops to the front. It is rumored that Russia is secretly supporting Greece. On Monday the Greek Ministers insisted on resigning, and at noon the King accepted the resignations. He immediately commissioned M. Rikakis to form a new Ministry. Turkey sent a note to Greece explaining that the withdrawal of the Turkish Minister from Athens was a step taken simply to act in concert with the Powers, and was not intended to indicate a rupture of the relations between the Porte and Greece.

The Porte on Tuesday notified the Powers that a body of Greek irregulars was advancing toward the frontier, and that Turkish troops had been ordered to repel it.

The meeting of the Council of the National Liberal Federation of Great Britain in London on Wednesday was crowded by delegates from the different local caucuses and party members of the House of Commons. When it became evident that the party was falling well into line on Mr. Gladstone's policy, the enthusiasm became uproarious. The principal resolution offered declared that a permanent settlement of the Irish question should be attempted on the basis of giving the Irish people control of their domestic affairs, and recognized the Government bill at present before Parliament as a foundation for such a settlement. The resolution also expressed confidence in Mr. Gladstone, but requested him to accept such amendments to his bill as would enable the Liberals to agree to the measure. The amendments suggested embraced provisions retaining the Irish members at Westminster, insuring the authority of the Imperial Parliament, and the principle that taxation and representation go together. This was evidently a feeler to find out Chamberlain's strength in the meeting, and it received only twenty-five votes. The announcement was received with cheers. An amendment was next offered declaring that the time had arrived for a permanent settlement of the Irish question, thanking Mr. Gladstone for the introduction of his bill as a basis of settlement, and expressing unabated confidence in the Government. This was carried as a substitute for the original resolution without opposition and amid wild enthusiasm. It is believed in London that a complete reunion of the Liberal party is now being arranged.

In reply to a letter asking him if he would support the Home-Rule Bill on its second reading, provided it be considered a simple affirmation of the principle of home rule, Mr. Chamberlain writes to Mr. Bolton, M. P.: "If Mr. Gladstone will maintain the Imperial Parliament as the supreme representative authority in the kingdom, I will gratefully accept the concession and vote for the second reading of the bill. But I am unable to find in Mr. Gladstone's manifesto any such assurance. He asks us to grant Ireland the right to manage her own affairs. But if geographical considerations must yield to national sentiment, then the prayer of Protestant Ulster for separate consideration deserves equal attention to that given the demands of the population which Mr. Parnell represents. The fate of Ulster lies in its own hands. I have maintained my position against the bill as proceeding on lines of separation or colonial independence, instead of federation. I have considered the full representation of Ireland in the Imperial Parliament too important a detail to leave for the committee. The question must be settled on the threshold of the discussion. The extension of home rule to Scotland and Wales depends on the maintenance of a united representation of the three countries in one supreme Parliament, leading to a future federation of the great dependencies of the Crown and the welding of them into a mighty and harmonious empire. Mr. Gladstone's alternative has rendered necessary anomalies and restrictions which no true Liberal will approve. He has produced a halting measure which offers no reasonable prospect of a final settlement, and which is certain to be a fulcrum for future agitation. He has brought us within a measurable distance of civil war, threatening the ultimate creation of a foreign hostile nation, whose reconquest is actually contemplated as a possible eventuality by the promoters of the measure. So long as uncertainty prevails in matters of such paramount interest, it is impossible for those who value the unity of the empire to affirm the principle of the bill. But if, as you anticipate, the Prime Minister should find himself in a position to make the concession which has been pressed upon him by so many of his most earnest local supporters, I share your hope that the present imminent danger of a fatal breach in the ranks of the Liberal party will be happily averted." The concession alluded to is, of course, the retention of the Irish members at Westminster.

Michael Davitt has written a letter declaring in favor of Mr. Gladstone's proposals and against Mr. Chamberlain's. In the House of Commons on Thursday night Mr. Chamberlain gave notice that he would move the rejection of the Land-Purchase Bill.

Lord Tennyson has joined the Loyal Irish Patriotic Union, the object of which is to resist the granting of home rule to Ireland.

Mr. Gladstone, in moving the second reading of the Home-Rule Bill in the House of Commons on Monday night, made the following reference to the modifications he was willing to concede: The bill provides that Ireland shall not be excluded from imperial affairs. Clause 29 provides for a recall of the representatives in both houses of the Irish Parliament before the Parliament can proceed to the alteration of a statute upon which the two countries do not agree. Another clause provides that on certain conditions the Irish Assembly may vote sums of money for purposes excluded from its ordinary cognizance. He trusted that should Great Britain be involved in a great war, when Ireland would be exposed to the common danger, the Irish Assembly would respond to a message from the Crown by voting money to prosecute the war. Though abiding in the principle that the Irish members should not sit in the Imperial Parliament, the Government was willing to meet the difficulty by providing that when it was proposed to alter the taxation of Ireland relating to the customs and excise duties, Irish members would be enabled to appear in Parliament and share in the debate. The Government was also willing to appoint a joint commission from the English and Irish Parliaments, which would meet from time to time to consider some questions of imperial or common interest. No great question, such as succession to the Crown, ought to fall under the discussion of this secondary authority, but many questions, such as treaties of commerce, might require direct communication between both Parliaments. He would, therefore, propose, on behalf of the Government, some plan of this kind. He proceeded to explain that the Government remained undecided as to the conditions under which Irish members or an Irish commission should appear in the Imperial Parliament. The Government did not consider this to be a vital point. In his opinion, if the Irish members came back in any numbers, it would be necessary to devise a new system of election. He should certainly have no jealousy of the Irish members. If they should reappear in their force, he would rather have them amply than scantily and jealously treated. In conclusion Mr. Gladstone declared that the main object of the bill was to abolish, root and branch, the discontent prevailing in Ireland, and to restore social order by the removal not merely of the symptoms, but of the causes of that discontent.

Mr. Gladstone's reference to the crucial question of the retention of the Irish members at Westminster was heard in dead silence. When it was realized that he had laboriously left things much where they were before, only adding that the Government would be open to consider any suggestions made in a subsequent committee on the bill, immense disappointment was shown in the House. Mr. Chamberlain had prepared to speak, accepting the terms. One of his supporters had arranged to follow him. Everything was upset by Mr. Gladstone's speech. Mr. Labouchere, who had acted as the go-between for the Government and the various sections of its opponents, came out into the lobby, complaining that he had been made a fool of. For some time the excitement ran high. It is believed that without a change on the part of Mr. Chamberlain's followers the bill is dead.

Queen Victoria opened in person the Liverpool International Exhibition on Tuesday. She was enthusiastically welcomed.

Shelley's tragedy "The Cenci" was performed at Islington on Friday night, before a brilliant audience, including Mr. Browning and Mr. Lowell. Miss Alma Murray as *Beatrice* and Mr. Vezin as the *Count* aroused great enthusiasm. The acting of the tragedy occupied four hours.

Dr. Oliver Wendell Holmes arrived at Liverpool on Sunday. A distinguished party met him on a special boat. The *Standard* on Monday, referring to his arrival, said: "The *Cephalonia* has landed a guest as honored as any who has crossed the Atlantic within the memory of the present generation."

The new French loan was issued on Monday morning. By 2 P. M. the subscriptions aggregated thirty times the amount of the loan.

The Belgian Premier has announced that a loan of $8,600,000 would be issued to provide work for unemployed artisans and laborers.

The Spanish Cortes was reopened in Madrid on Monday. Señor Sagasta read the speech from the throne. The Government, it states, is studying the Socialist question in view of the importance which that question is assuming abroad. A measure will be submitted prolonging all treaties of commerce. The financial policy of the Government has been arranged to avoid an increase of taxation. It is stated that the treaty with America has not yet been signed, and that the negotiations continue.

The news from Burmah on Wednesday was very sensational, and showed that the natives, with the assistance of the Dacoits, had, temporarily at least, got the better of the British army of occupation. One despatch stated that the insurgents had got possession of Mandalay and had burned 4,000 houses. The officers commanding the British forces telegraphed to Lord Dufferin, the Viceroy, for aid.

THE ROOT OF THE TROUBLE.

THE striking switchmen in Chicago have been denouncing the action of the mob in that city as "an irredeemable injustice to the organizations and working people of Chicago," and "an insufferable insult to the liberties of all." The District Assembly No. 24 of the Knights of Labor have also issued a circular denouncing the mob, and declaring that they have "neither sympathy nor affiliation with any class of men who set law and order at defiance," and that they have "consistently and persistently deprecated a resort to violence." The Buffalo strikers have passed resolutions of the same sort. This is all very proper, and we have no doubt that the great bulk of the Knights of Labor are sorry for and shocked by what has happened in Chicago, and are sensible of the injury it will do to what is called "the cause of labor."

But it is due to the cause of order, which contains not only the cause of labor but many other good causes, to say that deprecatory resolutions about violence will do no good, no matter how many District Assemblies may pass them, as long as the Knights of Labor keep alive, as the working hypothesis of their organization, the notion that a man has a right to be hired on his own terms by another man, whether the other man wants him or not; that, in short, a laborer's or mechanic's place is a piece of property which he is entitled to hold as long as he pleases, and which the employer has no right to take away unless he goes out of business. In domestic service and in small shops this right is not asserted; but it is in all or nearly all the great establishments and enterprises in the country in which many men are employed. As a rule, whenever any large body of hired men make demands on their employers about hours, or wages, or processes, with which the employer refuses to comply and they strike, the strike is not, as it ought to be, a simple failure of business men to agree on a bargain. It is, in the eyes of the men, a declaration to the world that they are the victims of some kind of wrong; that the employer has taken from them something which rightfully belongs to them, and which, if the law were what it ought to be, he would be compelled to restore. They therefore fill the air with denunciations of him, and with appeals to the public and to the Legislature and the Railroad Commissioners and the press for sympathy and support in compelling him to come to terms or disgorge, and to carry on his business in the manner which the strikers think best. They hang round his premises, or post "pickets" round them to watch what he is doing, precisely as if he had a lot of stolen goods which he would dispose of secretly if not watched. They accuse him, in the newspapers and in speeches, of all sorts of offences—such as cruelty, injustice, breach of promise, falsehood, treachery—and urge his customers to punish his infamy by not purchasing his goods. Now there is, we venture to assert, not a Knight of Labor in the country, from Grand Master Workman Powderly down to the humblest Outside Esquire, who does not hold, or sanction, or in some manner countenance this view of the rights of "labor." No strike ever occurs in which they do not bolster up, by subscriptions or denunciations, the theory that the strikers have a right on their own terms to the places they have left, and that it is a fraud or grievous wrong of some kind for the employer to fill them with other people, and that the Legislature, or Congress, or the Railroad Commissioners, or Eternal Justice, or somebody ought to step in and prevent it.

We say unhesitatingly that as long as this doctrine is held and acted on by the labor organizations, strikes will continue to be what they are now, incipient or inchoate riots; and strikers, in a vast majority of cases, rioters waiting for a chance to commit violence. It is this doctrine which puts a large force of police on duty wherever a strike occurs, and which inflicts on us the shameful spectacle of public vehicles travelling with armed guards in the streets of a great city, like the diligences in old times in the mountains of Spain and Sicily.

Nor is there anything surprising about this. A very large proportion of the strikers in all trades are ignorant men. They are all poor men. To fill their minds with the idea that they have a right to be hired by another man, whether he wants them or not, and to stay in his service until they themselves choose to leave, and when they do leave to have the places kept vacant for them until they signify their readiness to come back—to fill their minds with this idea, and then expect them to look calmly on while the employer does what he pleases with their property, is expecting too much of human nature. Their state of mind under such circumstances is naturally and inevitably one of readiness for violence or proneness to violence. Every brickbat and loose paving-stone they see is a temptation to violence. The mere sight of the police enrages them, as representing force in the service of fraud. Until the trades-unions somehow or other get rid of this absurd and anti-social theory; until they extirpate it from their heads, books, papers, and documents, and take their stand simply as organizations of American business men with a commodity for sale, there will be little use in their protesting so much against the bombists. As long as they hold it they will wail in vain over the conduct of the wicked outsiders, who get up riots for the discredit of the strikers, while the strikers are in their halls studying political economy and thinking out the labor problem.

BOYCOTTING OF CHINAMEN ILLEGAL.

IT has been demonstrated upon the Atlantic Coast during the past few weeks that boycotting is a crime, to be punished by the laws of the land, like any other crime. While public attention in this part of the country has been engrossed by the boycotting of white citizens, the people of the Pacific Coast have been informed by high judicial authority that the boycotting of yellow aliens is also in violation of law. This decision has thus far, we believe, received no notice in the East, but the full text of the Judge's opinion shows that it merits the attention of the whole country.

Thomas Baldwin was brought upon a writ of habeas corpus before the United States Circuit Court for the Ninth Judicial Circuit, over which Lorenzo Sawyer presides, in the California District, District Judge Sabin sitting with the Circuit Judge. Baldwin had been arrested under a warrant issued by a United States Commissioner, upon the charge of conspiring with a number of other persons to deprive certain Chinese, who resided in the town of Nicolaus, Cal., but were not citizens of the United States, of their right to reside and pursue their lawful vocations in that town, and of actually depriving them of such right by forcibly expelling them from their homes and from the town, in pursuance of such conspiracy, thereby depriving them of their rights and privileges under the laws, and of the equal protection of the laws, guaranteed to them under our treaty with China. The charge was founded upon section 5519 of the Revised Statutes of the United States (commonly known as the Kuklux Act), which reads as follows, the portion applicable to this case being printed in italics:

> "*If two or more persons in any State or Territory conspire*, or go in disguise on the highway or on the premises of another, *for the purpose of depriving, either directly or indirectly, any person or class of persons of the equal protection of the laws, or of equal privileges and immunities under the laws;* or for the purpose of preventing or hindering the constituted authorities of any State or Territory from giving or securing to all persons within such State or Territory the equal protection of the laws; *each of such persons shall be punished by a fine of not less than* $500 *nor more than* $5,000, *or by imprisonment, with or without hard labor, not less than six months nor more than six years, or by both such fine and imprisonment.*"

Judge Sawyer declared that there could be no doubt that the acts charged were within the provisions of this section, and that, if the provisions, so far as they embrace Chinese aliens, were constitutional and valid, these acts constituted very grave offences against the United States. He therefore addressed himself to a careful and candid inquiry as to this question of constitutionality. The Supreme Court of the United States decided a few years ago that this section was unconstitutional and void so far as it applies to citizens of the United States within a State, in a case (brought under the Fourteenth Amendment) known as the Harris case; the Court holding that this Amendment was aimed only at *State* action, and did not apply to unlawful combinations of individual citizens against other citizens, acting wholly without color of law or authority of the State. The section was declared unconstitutional solely on this ground; the provisions of the Amendment authorizing appropriate legislation to enforce it being considered to extend no further than to protect the rights expressly provided for in the Amendment.

The California case stood upon an entirely different basis. The persons against whom the conspiracy was aimed were Chinese aliens, who did not rely upon the Fourteenth Amendment alone, or indeed at all, except so far as the right to enjoy all the privileges and immunities of citizens and the equal protection of the laws is implied from its provisions recognizing the rights, by protecting them from hostile State legislation. The Chinamen relied mainly upon other express provisions of the Constitution, especially that found in article 6, which says that "all treaties made or which shall be made under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the Constitution or laws

of any State to the contrary notwithstanding"; and the provision in section 8 of article 1, that Congress "shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, *and all other powers* vested by this Constitution in the Government of the United States, or in any department or officer thereof."

It is thus obvious that whenever a treaty is ratified between the United States and any foreign nation it becomes the supreme law of the land, and that not only State laws, but even State constitutions, are subordinated to it. The Supreme Court has held that "rights and immunities created by or dependent upon the Constitution of the United States can be protected by Congress," and the rights and immunities guaranteed by the treaty with China are of course "dependent upon" the Constitutional provision regarding treaties quoted above, and consequently "can be protected by Congress." Baldwin's counsel had suggested that Chinese aliens on this principle would be better off than American citizens, but the Judge disposed of this claim very summarily. In the first place, he said, "it is presumed that the State will protect its own citizens, while long experience shows that it will not always protect foreigners against the prejudices and hatred of citizens"; but, in the second place, "whether the suggestion of counsel be true or not cannot affect the question, for the State has surrendered its power over the intercourse of its citizens with foreign nations to the national Government." The power to make treaties, and to grant rights within the States to aliens under treaties, involves necessarily the power to protect those rights, when granted, against the acts either of the States or of the citizens of the States. "There can be no doubt," said Judge Sawyer, "that making the violation of any rights so secured by the Constitution and treaties 'made under the authority of the United States' by a combination of individuals a criminal offence against the nation, and punishable as such, as is provided by section 5519, is a proper mode of protection."

By article 5 of the Burlingame treaty, "the United States and the Emperor [of China] cordially recognize the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and subjects respectively, from the one country to the other, for the purposes of curiosity, of trade, or as permanent residents." Article 6 of the same treaty secures to Chinese residents "all privileges, immunities, and exemptions enjoyed by the citizens and subjects of the most favored nation." The amended treaty of 1880 adds the still more comprehensive word "rights" to the words "privileges, immunities, and exemptions," and expressly provides that "Chinese laborers who are now in the United States shall be allowed to go and come of their own free will and accord." Article 3 of the latter treaty is as follows:

"If Chinese laborers, or Chinese of any other class, now either permanently or temporarily residing in the territory of the United States, meet with ill-treatment *at the hands of any other persons*, the Government of the United States will exert all its power to devise measures for their protection, and to secure to them the same rights, privileges, immunities, and exemptions as may be enjoyed by the citizens or subjects of the most favored nation, and to which they are entitled by treaty."

What some of the rights thus secured by treaty to the Chinese are, will appear from an examination of the existing treaty with Great Britain, which provides that:

"The inhabitants of the two countries respectively shall have liberty freely and securely to come with their ships and cargoes to all such places, ports, and rivers in the territories aforesaid [of the United States and Great Britain] to which other foreigners are permitted to come, to enter into the same, and *to remain and reside in any parts of the said territories respectively.*"

Judge Sawyer proceeded to apply these principles to the case in hand, as follows:

"Thus the United States Government has, by these treaties, made in pursuance of the Constitution and under the authority of the United States, imposed upon itself the express obligation 'to exert all its power to devise means for their [Chinese residents'] protection,' and to secure them 'the *rights*, privileges, immunities, and exemptions' to which they are entitled where such Chinese residents 'meet with ill treatment *at the hands of any other persons*,' as well as in consequence of unfriendly legislation by the States. This right is not limited to State action, as the Fourteenth Amendment was held to be limited, but it is expressly extended to individual acts. Among those rights is the right to select a place for *temporary or permanent residence*, and to reside and pursue their lawful vocations at the places so selected. Proper means for protecting these rights certainly include the enacting of criminal laws for enforcing, protecting, and securing the rights guaranteed by the treaties made in pursuance of the provisions of the Constitution. These Chinese residents of Nicolaus therefore had rights arising under and dependent upon the Constitution of the United States and the treaties made in pursuance thereof between the United States and the Emperor of China, which were violated by the acts charged upon which the arrest was made, and rights which it was competent for Congress to protect by legislation in a proper form, under the clause cited, which authorizes it 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers vested by this Constitution in the Government of the United States or in any department thereof.' And it was its imperative duty to protect such rights."

Judge Sawyer held that the case of these Chinese alien residents of Nicolaus was clearly distinguishable from that of United States citizens arising under the Fourteenth Amendment, which was considered in the Harris case, and rested upon other and further provisions of the national Constitution. Very properly, however, he considered the questions "of too vast consequence to be finally determined by a subordinate court," and he therefore allowed a writ of error to the Supreme Court of the United States, releasing the prisoner on his own recognizance until such decision should be rendered, and expressing the hope that the question might be promptly decided.

MUST WE HAVE ANOTHER INDIAN WAR?

HARDLY have the Chiricahui-Apaches disappeared from our Southern frontier, where, for the second time in one year, they have outwitted over-confiding and over-confident General Crook, when a new speck of war is visible in the same quarter. The most powerful tribe in the Territories adjoining Mexico, the numerous, well-armed, and comparatively "wealthy" Navajos, are said to be encroaching on the poor settlers of the San Juan country, and ready to support their encroachments with all the terrors of Indian warfare. The newly confirmed executive head of the Territory of New Mexico is placing full faith and credence in these alarming reports. There are rumors of militia movements, of local mobilization. The possibility of an outbreak is not to be denied; but its likelihood depends on the action, not of the Indian, but of the whites and of the Territorial authorities. It might become a very serious, even a very disastrous affair, for the Navajos cannot be easily trifled with. They are too numerous, too well supplied with Winchesters and with fleet stock, and, should they go to war, they are too closely connected with the Apaches.

The Navajos or Din-ne are the main stock of that Athapascan branch of Indians, speaking dialects of the Tin-ne language, which has spread to the southward as far as northern Mexico, and has, ever since the memory of man, been the scourge of this region under the name of Apaches and of Navajos proper. They first appear as Querechos in 1584, being thus called by Antonio de Espejo. Again, in 1598, Juan de Oñate includes them, with their congeners, the Jicarillas, as Apaches of the Mountains. In 1630, Fray Alonzo de Benavides calls them Apaches of *Navajo*, defining this latter word to signify "extensive cultivated fields." The word "Apache," as Mr. Cushing has satisfactorily ascertained, is of Zuñi origin, and designates in the idiom of that tribe the Navajos as well as their Southern cousins. "Apachu" means an enemy of the roving kind, or less stable at least than the Pueblos.

The hereditary enmity of these Tin-ne tribes was, for the Pueblos, a source of constant dread, often of utter ruin. It was not so much direct attack, onslaught in force, as constant harassing, which worried the village Indian, and drove him finally from place to place. The Apaches were too shiftless for congregating into large bodies, the Navajos too busy at home. But small war parties of the latter vexed the Pueblos constantly, destroyed their crops, or hung around their fields in such a manner as to impede cultivation, and finally to compel removal. If the Pueblos went out into the Navajo country as invaders, it was an easy matter for their enemies to waylay and overpower them by superior numbers. Thus they almost completely exterminated the tribe of Jemez in the beginning of the seventeenth century.

Notwithstanding their persistent hostility towards the more sedentary Indians, the Navajos stood, when the Spaniards first became acquainted with them, on a higher level of culture than the Apaches proper. They were great land tillers, they lived in dwellings underground, and had sheds for their crops and stores besides. They also were much more numerous. Had they broken out and scattered like the Apaches, they would easily have wiped out the feeble sedentary tribes. But, even in the seventeenth century, the Navajos had too much at stake to become essentially shiftless and constantly aggressive. Before the arrival of the Spaniards they already raised crops; after the whites settled in their neighborhood they acquired flocks. The first step in that direction was made about 1627, through the Church. Once acquainted with the utility of sheep, horses, and cattle, the Navajos eagerly sought to increase their number. "Raising" was not fast enough for them; it was easier to prey upon their old enemies the Pueblos. The Spaniards defended the latter, as they were in

duty bound, and the result was, that the enmity of the Navajos became as bitter towards the whites as towards the village Indians proper. After the Spaniards had been driven out of New Mexico, the Navajos turned against the Pueblos alone.

The reconquest in 1692-94 inaugurated a system of Indian campaigns in defence of Pueblos and Spanish settlements. They achieved no reduction of the Navajos. On the contrary, as the colony, owing to the general weakening of Spain, grew more and more powerless, they became the aggressors and tormented it continuously, with few intervals of peace, even after the American annexation. The removal of the tribe from its original mountain-home to the hot and level district of the Bosque Redondo in 1865, threatened to check their agricultural tendencies. Since they were reinstated in their old domain in 1868, the present Navajo Reservation, they have always been peaceable as a tribe, and have in appearance made rapid progress. The fact is, that they merely returned to their original status of land-tilling aborigines, with the addition of more numerous herds of cattle, droves of sheep, and of better and finer horses. They irrigate to-day as they did formerly, they weave woollen blankets, and while some of them dwell in adobe houses, the majority still occupy the log-cabin, half dug-out, well known under the name of *ho-gan*. The Navajos, in addition, have money; they are the wealthiest tribe of the Southwest. At peace with their surroundings, the Navajos are yet prepared for war. Excellent fire-arms are plentiful among them, and so is ammunition. Unruly boys, criminals, have sometimes taken an active part in the depredations of their cousins the Apaches, but the tribe at large has never countenanced such excesses. Well prepared for the defensive, the offensive is distasteful to them because it would be ruinous to their interests and prosperity.

The reservation occupies a part of northwestern New Mexico and of northeastern Arizona, covering an area of about 2,100 square miles in each Territory. It is a cold mountain region, profusely covered with snow until late in the spring; its fertile valleys are adapted to agriculture. The northeastern corner, watered by the Rio San Juan, contains arable and irrigable tracts, and it is there that the trouble has arisen which, it is muttered, might culminate in a Navajo war. The truth of the matter is, that there are difficulties brewing between the Indians and whites in the San Juan country. But the latter, not the Navajos, have been and still are the aggressors. For some time past, American squatters have recklessly crossed the borders of the reservations, and "entered" and preëmpted lands. This is a clear and ruthless violation of the rights of the Navajos. There are instances where whites have squatted on ground actually used and cultivated by the Indians, seized their irrigating ditches, and appropriated the water therein to the detriment of the owners. These legitimate owners, the Navajos, have protested, civilly and kindly, but without avail. The American intruders have simply stuck, deaf to all remonstrances, to all entreaties. It is simply another instance of that outrageous and brutal process of crowding out, so famous and often so successful (with weaker and less permanently located tribes) in our intercourse with aboriginal populations.

It is said that the Governor of New Mexico sympathizes with the white trespassers to the extent of inclining toward affording them the aid of the Territorial militia, for the purpose of dispossessing the Navajos forcibly. This would be a most ill-advised move. The Indians are clearly in the right, and as yet stand on the defensive. Should they be attacked, they can bring to bear upon their assailants, in case of need, about five thousand warriors, able-bodied men, inured to hardships of every kind, and thoroughly up to every expedient of Indian strategy and tactics. Such a body of men, fighting for their homes, are more than a match for the bulk of Territorial militia. The Navajos are desirous of avoiding war. They have suffered and still suffer, rather than expose themselves to the effects of a collision. But the situation is gradually becoming unbearable to them, and they may at last resort to violence against the intruders, as they have a perfect right to do. A Navajo war would be the direst calamity which could befall New Mexico as well as Arizona. Should the whole tribe rise, then the Apaches are likely to follow suit, and then—? If Gerónimo, with his band of not over fifty, could create such a disturbance, how much damage will seven to eight thousand of the same kind create? In the end they would be conquered, but at what a fearful cost of life and property! Instead of upholding the claims of trespassing and law-breaking whites (so far as settlement on Navajo lands is concerned), the proper thing to do is to restrain these intruders, compel them to respect the rights of their Indian neighbors, and to let the Navajos severely alone.

THE "CHATTERBOX" TRADE-MARK CASES.

DURING the recent hearing before the Senate Committee on Patents upon the copyright bills, Mr. Dana Estes, of the Boston firm of Estes & Lauriat, made the statement that he was the publisher of the "only foreign book that ever had the benefit of the protection of American law." "By a series of accidents, perhaps, and perhaps some skill," he continued, "I have the right under American law—not statute law, but common law—of publishing the book I hold in my hand in this country." No doubt some of Mr. Estes's hearers received the impression from the above statement that the privilege he boasted of enjoying was due to a common-law right of literary property, and he failed to explain, as he might have done, that his protection was due to the law of trade-marks, and, therefore, in reality it was not his book which was secured to him at all, but only a trade-mark property in its title. The history of the publication in this country of the book referred to, the well-known *Chatterbox*, is not without interest, and, as related by Mr. Estes when before the Committee, may be summarized as follows:

The volume was first published in England as far back as 1868, the intention being by a careful and judicious selection of wholesome reading matter, made more interesting by well-executed illustrations, to furnish a substitute for the vicious cheap literature so freely circulated in England, corresponding to the wretched dime-novel of this country. The book became popular and began to be imported into this country, selling, at wholesale, for from seventy-five to ninety cents. Mr. Estes imported a number of copies in 1878, and, having disposed of them, found himself unable to obtain any more from the publisher, upon which he manufactured and issued an edition of 20,000 copies. He called the publisher's attention to this transaction, and proposed to him that if he would send over his stereotyped plates and authorize the American edition, the publisher of the latter would allow him threepence a copy for all sold in this country. This proposition was not immediately acceded to, and in 1879 a second American edition was published; but in 1880, Mr. James Johnston, the English publisher, according to Mr. Estes, assigned to the latter "all his rights and title in America to not only the book, but, as I required him, to the trade-mark of the word 'Chatterbox.'" This assignment, we learn from another source, was for a term of ten years from January 1, 1880. From that date Estes & Lauriat have yearly issued an authorized American edition of this popular book, which, according to the publishers' statement, has numbered from 50,000 to 100,000 copies, requiring an average use of 100 tons of American paper annually; and, although the wholesale prices have been reduced to from forty to sixty cents, and the English copyright and trade-mark proprietor has been paid out of the profits a royalty of from $3,000 to $5,000 per annum, a "good, handsome residue" has remained for the American publisher. The fact, according to this statement, that the only foreign book which has been protected from infringement by our courts has, since such protection, been sold for about two-thirds of the price obtained previously when it was subject to competition with other reprinted editions, should go far to assure those who have had fears that an international-copyright law would, of necessity, increase the price of foreign books.

But the example originally set by Mr. Estes of reprinting the work without authorization was followed by others whom he facetiously calls the "ubiquitous pirates," though he took pains especially to disclaim this appellation for himself. These reprints were also, no doubt, profitable; at any rate the publishers of them do not seem to have been willing peaceably to discontinue publication, whereupon suits were brought against them in the Federal courts. The first of these which we find reported—Estes and others vs. Williams and others (21 Federal Reporter, 189-190)—was decided in the Circuit Court for the Southern District of New York, July 31, 1884. The claim made by the defendants in this case was that, there being no American copyright to prevent, the defendants might print and publish the book in this country, and that if they had not the right to do so, at least the plaintiffs had no right to prevent them. Justice Wheeler held that

"There is no question but that the defendants have the right to reprint the compositions and illustrations contained in these books, including the titles of the several pieces and pictures. . . . That does not settle the question as to the right claimed here. There is work in these publications aside from the ideas and conceptions. Johnston was not the writer of the articles nor the designer of the pictures composing the books, but he brought them out in this form. The name indicates this work. The defendants, by putting this name to their work in bringing out the same style of book, indicate that their work is his. This renders his work less remunerative, and, while continued, is a continuing injury which it is the peculiar province of a court of equity to prevent. . . . Johnston had the exclusive right to put his own work, as his own, upon the markets of the world. No one else had the right to represent that other work was his; not the right to prevent the copying of his, and putting the work upon the markets, but the right to be free from untrue representations that this other work was his when put upon the markets. This gives him nothing but the fair enjoyment of the just reputation of his own work, which fully be-

longs to him. It deprives others of nothing that belongs to them."

Considering next the question of the transfer of Johnston's right to the plaintiffs, the Court held that as he had the right to put his work upon the market as his, there was no apparent reason why he could not give the plaintiffs the right to put his work upon the market as his. To the objection made that the plaintiffs also trespassed upon Johnston's rights before they acquired them, the Judge answered, that if true they might be liable for the damages, but that such a trespass would not prevent them from acquiring a lawful right in a lawful manner. A decree for an injunction and an account was rendered.

A second case—Estes and others *vs.* Worthington—was decided in the Circuit Court for the Southern District of New York, January 5, 1885, and reported in 22 Federal Reporter, 822-823. Judge Wallace held that the validity of the complainant's title to a trade-mark in the word "Chatterbox" was established by the decision referred to above and was not open to controversy. But this suit was brought upon a motion for a preliminary injunction and was controverted upon the ground of laches, and this defence was sustained by the opinion of the Court:

"The only doubt as to the complainants' right to a preliminary injunction is suggested by the fact that the various publishers of such books since 1876 have been permitted without prosecution to apply the word to their publication of juvenile books in this country, and have used it as a trade-mark in hostility to the real proprietors; and among them were the complainants themselves, who did so for two or three years before they purchased the right of Johnston. Laches in prosecuting infringers has always been recognized as a sufficient reason for denying a preliminary injunction. . . . Where, as in this instance, the extensive use of the trade-mark by others with the implied acquiescence of the owner has contributed to give a reputation and create a demand for the article to which it has been applied which it would not otherwise have acquired, equity should not by any stringent intervention assist the owner to secure these fruits. The complainants do not occupy a position that commends them to a court of equity, because they seem to have refused to recognize the rights of Johnston, the original proprietor of the trade-mark, until they thought it would be more profitable to purchase his rights in this country and obtain a monopoly here in the use of the trade-mark."

The motion for a preliminary injunction was denied. A third suit, against Frank Leslie, the American News Company, and Patrick Farrelly, was decided by Judge Wheeler (United States Circuit Court for the Southern District of New York), April 8, 1886. The defence of laches was attempted in this suit also, but Judge Wheeler held that Johnston, the original proprietor, had vindicated his right as often as it was invaded to his knowledge up to 1880, when he transferred it to the plaintiffs, Estes & Lauriat, who since then have continually asserted it in one way or another. In this case the book defended seems to have been an independent American compilation of selections and illustrations, but imitating in form, style, and binding the original work, the most important difference being that instead of the simple title *Chatterbox* it was called *Frank Leslie's Chatterbox*, which, however, the Judge held, appeared to be done, "for the purpose of adding the reputation of Frank Leslie and of that publishing house to that of the *Chatterbox* rather than for that of building up a new reputation under that name. If nothing had been wanted of the popularity which had been acquired under it, and which it stood for, it could have been left and another name taken to build up."

A decree was rendered for an injunction and an account, with costs. A similar decree was granted by Judge Shipman, April 19, in a suit brought in the same court, against Belford, Clarke & Co., of Chicago.

HOME RULE.—OUTLOOK FOR THE SECOND READING.

London, May 1.

The "so called holidays" are drawing to a close, and the party managers are counting up their losses and gains, with a view to the approaching struggle over the Irish Government Bill. Forty-one Liberal members of the House of Commons have declared against the bill; twenty or thirty more are understood to be hostile. These members represent a serious defection; but the eighty-six Irish votes will make up for all deficiencies, and the Government whips count on obtaining a majority of not less than ten for the second reading. It is quite impossible to say what may happen when the bill gets into committee. Mr. Morley anxiously assures his Liberal critics that the bill is not made of cast-iron; all reasonable amendments will be carefully considered. But the worst of it is, that the chief amendments already suggested are dangerous to the measure whether they are accepted or refused. If, for example, the Irish members are retained at Westminster, we lose the one argument for the bill which has most effect on the opinion of the British working classes, the argument on which Mr. Morley himself has consistently relied. If, on the other hand, the Government insists on the clauses which exclude the Irish members, they will almost be driven to admit that the bill is an instalment of separation. Mr. Justice Stephen, whose judicial dignity has not prevented him from taking an active part in this controversy, notes with malign satisfaction that the arguments for and against exclusion are equally conclusive and equally fatal to Mr. Gladstone's schemes. Again, it is tolerably plain that when the financial clauses of the bill are under discussion, Mr. Parnell will be compelled by Irish opinion to ask for better terms. If this demand is refused, it will be vain to pretend that the Irish have accepted the bill as a final settlement. But, on the other hand, it is not easy to make any further concession to Ireland without doing manifest injustice to the British taxpayer.

In spite of the activity displayed on both sides, the debate of the vacation has been characterized by a certain air of unreality. Nobody defends the two Irish bills as they stand; nobody expects them to pass. They are treated as a mere draft or sketch, subject to indefinite alteration; and Mr. Morley has gone so far as to contend that there is nothing to prevent Mr. Chamberlain from voting for the second reading of the Government bill. On the other side, the opponents of the two bills are almost equally vague. Mr. Chamberlain is "not irreconcilable." Even Lord Hartington has made one or two movements which lead people to think that he is beginning to swing round slowly with the tide. Among the Conservatives there is also a good deal of "fencing and skirmishing." Lord Iddesleigh and Sir Michael Hicks-Beach are put forward to make regulation speeches in defence of the Union, but Lord Randolph Churchill is unusually silent. The time may come when a Conservative leader will be wanted who can deal with home rule and land purchase on lines of his own. In Ireland itself things have been kept very quiet. Mr. Parnell and his friends are playing a somewhat delicate game, and a few imprudent speeches might do much to imperil the success which they have achieved. They must not show themselves too eager to accept Mr. Gladstone's offer; if they did so, they would come into collision with Mr. Davitt and other leaders of Irish opinion who regard this bill as a mere instalment of their rights. But the Parnellites must not be too free in pointing out the deficiencies of the bill; if they took this line, they would play into the hands of those British politicians who contest Mr. Gladstone's statement that his measure possesses the advantage of finality. Mr. Parnell occupies his usual position: he accepts all that Parliament will give, and reserves his right to ask for more.

If the Prime Minister can succeed in piloting his Irish Government Bill through the Commons, it will be amusing to watch its reception in the Upper House. Beyond the members of the Government there are probably not six Lords of Parliament who will vote for any measure of home rule. Lord Spencer's support has been immensely useful to Mr. Gladstone in the way of conciliating moderate Liberals generally, but even Lord Spencer will produce but little effect on the closed ranks of his own order. The ex-Ministers among the Liberal peers are the most intractable opponents of the Government. We look forward to one of those full-dress debates in which the Lords put forth all their powers, but the debating will be almost all on one side. Lord Granville will stand aside, in a politely sarcastic attitude, while his noble friends behind him—Argyll, and Selborne, and Derby, and Sherbrooke, and Grey—march up and down over the ruins of the bill. How will this demonstration affect the position of the House of Lords? That depends on the event of the next general election; and that again depends on forces which we are not yet in a position to estimate. If the Government went to the country to-morrow, I think it probable that their majority would be seriously reduced. There is no active enthusiasm about home rule, unless in the North of England, and even there the personal influence of Mr. Gladstone counts for more than the merits of his scheme. There is a very active dislike of home rule, and this feeling will be strong enough to deprive the Liberals of many good workers, and to turn the balance against them in many doubtful constituencies. At the last election the choice of candidates led to domestic difficulties in many places; at the next election the same difficulties will recur on a wider scale and in a more aggravated form. The Gladstonian section of the party will of course endeavor to get rid of every candidate who will not pledge himself to home rule; the Unionists will retaliate by refusing to work for any candidate who is not pledged against it.

We have already had a foretaste of these difficulties in the amusing quarrel which has taken place at Burnley. That stronghold of Lancashire Liberalism has been most faithful in its support of Mr. Peter Rylands, an unimpeachable Radical of the economical school. But Mr. Rylands will not hear of tampering with the Union; nor will he consent to lend either 50 or 150 millions sterling to any Irish Government whatever. Therefore he is, for the moment, under a cloud, and 3,000 of his supporters have been to Hawarden, to picnic under the trees and to demonstrate in favor of Mr. Gladstone. The Burnley Conservatives are delighted, and swear they will vote for Mr. Rylands to a man; but whether they will help him by doing so remains to be seen. Another comedy of the same kind has been presented in Edinburgh. The present Home Secretary, Mr. Childers, was returned for the southern division of the city by the Moderate Liberal vote, in spite of a strong Radical protest. Now the Whigs are dismayed to find themselves represented by a member of this home-rule Government, while the Radicals are coming round and would like Mr. Childers to give them an address on the beauties of Mr. Gladstone's Irish policy.

Our immediate prospects, then, are far from cheering. Until this question is disposed of, no other political work can be put in hand; and it

can be disposed of only in two ways: either we must have a measure of home rule strong enough to pacify Irish opinion and relieve the pressure of Irish affairs on Parliament, or we must have a British party strong enough to be completely independent of the Parnellite vote. There is no chance at present of the Conservatives obtaining a majority over Liberals and Parnellites combined. There is no chance of the Liberals obtaining a majority over Conservatives and Parnellites combined, unless they can make up their minds to a definite programme and unite all the sections of Liberalism in support of it. But how is this union to be attained? Organization has been tried, on models borrowed, or supposed to be borrowed, from America. But the caucus has never worked quite successfully in England. The decisive vote in our elections is the vote of the people who object to be identified with associations and committees; and a single imprudent turn of the screw will send a great body of wavering opinion in some unexpected direction. Perhaps, then, if we wish to see our great parties united on definite principles, we must listen to the advice of Mr. Matthew Arnold, and begin to educate the mind of the British Philistine.

This will no doubt be a slow process, as Mr. Arnold's own fate seems to show. For the last quarter of a century he has been mildly reproaching us with our ignorance, and we have received his reproaches with stolid calm. And now he is writing in the *Nineteenth Century* to assure us that, whatever our Irish policy may be, we are doomed to failure; that Mr. Gladstone is no statesman, and that we never should have taken him for a statesman if it had not been for our total want of culture. It may be feared that this protest will fall as flat as the protest of Professor Huxley. Mr. Arnold's oracle will be accepted by the cultured persons who need no repentance. But then they do not need to be told that Mr. Gladstone is no statesman; they all think so already. The uncultured elector will believe in his leaders much as before; and the oracle is perhaps not so precise as we could wish in showing how this state of things can be altered for the better. R.

ITALY.—THE GENERAL ELECTIONS.

BOLOGNA, April 28, 1886.

AT last Signor Depretis has decided "on obtaining permission from the King to dissolve the Chambers and appeal to the country," or, to speak correctly, he has been compelled to do so by the House, the country, and the King. For the last four months anarchy has reigned supreme in the Chamber of Deputies, where from the commencement of the present Legislature there has never been a clear line of demarcation between the Ministerial party and the Opposition. In the famous programme of Stradella, Depretis, an "old parliamentary hand," and at one time prominent among the members of the Liberal party in Piedmont, promised the country a perfect Eldorado of progress if they would send up deputies to support his policy. In 1861, that is to say before Venice was freed from the Austrians, or Rome capital of Italy, in a population of twenty-one millions and a-half there were less than half a million of electors. At the last census, in 1880, the population amounted to twenty-eight and a-half millions, and the electors to 621,000. In 1882, after the extension of the suffrage, the electors amounted to 2,000,000, but of these only 1,223,000 went to the polls. These, however, gave Depretis his desired majority, whereupon he immediately turned his back on the radical Liberals and attempted "to transform the parties," and, on the principle of the eclectics, "pick and choose certain deputies and groups of deputies out of the old Moderate and the Moderate Liberal factions." Now, as the Moderates had ruled the country exclusively between the years 1860 and 1876, and were beaten along all the line in the latter year by the Party of Progress, as they styled themselves, and as, after the death of Rattazzi, Depretis was chosen head of that party, this proceeding was regarded as most unfair and out of order. Naturally, the Moderates, who saw no chance of seizing the reins afresh, were enchanted, but as Signor Bonghi, a pillar of the Moderate party, explains in a very clever article in the *Nuova Antologia* for April, entitled, "The Situation of the Country and the Elections," the man was not adapted to the work, and many of his colleagues in the Ministry were entirely opposed to it; hence we have had a series of what are called partial crises, Ministerial stews—the Premier trying to conciliate now this fraction, now that, and ending by discontenting all of them.

He had promised a thorough social reform throughout the country. Nowhere is such reform so much needed. There is, for instance, a popular demand that the charitable institutions in Italy be reformed; that sixty-five per cent. of the annual income shall not be squandered in administration; that the accounts shall be made public; that the municipal councillors shall be the administrators; that the funds shall be spent for the poor and not for the rich. Depretis, like all his successors, has done nothing in this direction. So with the law on strikes, on preliminary imprisonment, the law that was to render masters responsible for accidents in manufactories, mines, etc. A very mild law to secure this responsibility passed in the House, but was wrecked in the Senate. Hence you have the entire class of workingmen and peasants in arms against the Government. There was likewise to be a reform in the communal and provincial laws. The representative of the Government, the prefect, is the head of the provincial council; all the municipal authorities depend upon him; his approval is necessary for their budgets. For instance, a town council votes a sum for a monument to Victor Emanuel, approved; for Garibaldi, for Mazzini, cancelled, if the prefect happens to be a *codino*. Nothing has been done. The penal code was to be reformed; no reform effected. In short, if we except the abolition of the forced paper circulation and of the grist-tax, counterbalanced by new taxes too numerous to mention, together with the equalization of the land tax, which has disgusted southern Italy and given very slight satisfaction in the north, no single act during the last three years has produced or promised any amelioration in the country.

Then, personally, Depretis has offended everybody, on the one hand by his arrogance, summed up in his favorite expression: *Piace a me e basta* (It is my pleasure, and that is enough); on the other, by his innate and ever-increasing hesitation of character—pledging himself to a line of policy to-day, thinking over it to-morrow, and acting in a precisely contrary direction. Curiously enough, in his famous programme of Stradella, in passing sentence on the Moderate party he dictated his own:

"The Moderate party," he said, "has become impotent to solve any great national questions; hence it discourages and discredits parliamentary institutions. The Ministers themselves see that their aim is not the aim of the nation, that they therefore cannot reach it by a straight path, are obliged to live haphazard, to occupy and tire out the House with petty laws and petty questions, to temporize, to live by makeshifts, by dint of partial changes in the Ministry, of frequent vacations, of interpellations got up by mutual consent, etc., etc. These petty tactics, by means of which the Moderates have dragged along their weary life for many years, will never be those adopted by myself or my colleagues. No, I proclaim it aloud, we mean to live well and die an honored death. Never will we allow the sentence, fatal above all to a ministry, to be applied to us: *propter vitam vivendi perdere causas*, which, freely translated, runs: 'Lower your flag, but save your skin.'"

This is precisely what the country accuses Depretis of doing. If only a year ago he had definitely resigned, declaring, as he now does, that he cannot secure a working majority, his Ministry might have died an honored death and he might have reappeared at the head of another ministry in some future Parliament. At present, his chances seem very slight indeed. In the south of Italy the ministerial phalanx has disappeared like snow-wreaths in thaw; the old constitutional associations, even the Monarchical Union of Naples, siding openly with the Opposition. The Minister of Justice, Tajani, was openly hissed at Lecce and Brindisi. There is a general impression abroad that the Italian finances are in a very bad state, that the pretended equilibrium between income and expenditure is a mere hoax, and that Signor Magliani's successor, when once the accounts are examined, will be very hard to find.

To fill up the measure of ministerial iniquity, the press and the public accuse the Government as the real culprit and author of the massacre of the Italian scientific expedition under Count Porro, which left Zeila on March 27. It is reported that all the members have been treacherously murdered by the Emir of Harrar in the Somali country. Up to the present moment nothing further is known since the receipt of a telegram from the Italian consul at Aden (April 25), which reported that the Emir of Harrar, after ordering that all the Europeans in his capital be put to death, attacked near Gildezza with 200 soldiers Count Porro's expedition and massacred the whole party; that he then proceeded to Gildezza, and captured the town, taking prisoners the Anglo-Egyptian garrison, which consisted of about a hundred men. When the fearful news reached Milan, Stanley, who was being lionized there, exclaimed: "It is only too possible!" The excitement is tremendous, as this fresh massacre follows on that of Giulietti, Bianchi, Diana, Monari.

The common feeling is, that the interests of scientific explorations have been sacrificed by the shilly-shallying foreign policy of the Italian Ministry, who got up their African expedition to call off public attention from the picking and stealing contract of the railway conventions. In December, 1885, the radical newspaper of Milan, the *Secolo*, sounded a note of alarm: "The new Minister for Foreign Affairs, Robilant, is bent upon a new African expedition, and is now trying to induce the Society for Commercial Exploration resident in Milan to pick the chestnuts out of the fire." In fact, an agent of the Government, Commendatore Colacci, came to Milan and confided to the Society that the Government intended to occupy Zeila, and that England was inclined to cede it; hence it was their intention to send out an expedition so as to prepare the way for a second, for the occupation of Harrar! Count Porro, who is about forty years of age, son of the famous Milanese patriot and conspirator of 1821, went to Rome and received from the Government muskets, ammunition, and a sum of money, Count Robilant, however, saying: "I neither do nor do not advise an expedition to Zeila and Harrar, but should Italian interests be furthered by such an expedition, the Government will intervene to protect them." Count Porro returned to Milan full of hope. Himself a military man, he induced several officers to accompany him. It was remarked at the time that he embarked at Naples on the same day, the 26th of January, and in the same steamer, *Domenico Balduino*, as did the fated Bianchi the year before. On arriving at Aden the English Consul

said to Count Porro: "Do you call this a commercial expedition? You have too many military men, too many arms; you will never pass. What is it you mean to do in Africa?" "To facilitate our commerce and find for it new and shorter paths." "With soldiers, with muskets, and chests of ammunition?" asked the Consul, and, dwelling upon the increasing agitation in Harrar, he advised Porro to return to Massowah. Fifteen days later Porro returned and agreed to confine the expedition to a very few persons, the Consul offering to escort them up to Gildezza, but no further. Porro, with Count Coccastelli, Dr. Gottardi, Prof. Licata, Bianchi, Romagnoli, Zanini, and two servants, started; the rest of the expedition returned to Italy. Italian correspondents at Aden continued to comment upon the extreme risks, and on the hatred, amounting to fanaticism, of the Emir, and Porro himself wrote: "The Emir of Harrar is a greater fanatic than his predecessors. He insists upon all the population of Galla becoming Mohammedans. He has 300 Remington muskets and two mountain pieces (Krupp), which the English left him when they caused the Egyptian garrison to evacuate. When he goes out for a *chase*, he takes about two-thirds of his armed men, chiefly Somali, leaving the remainder to guard the capital." Porro was exceedingly annoyed because the English Consul would reduce the numbers of the expedition, but Mr. Hunter was firm, and to him it is now really owing that the men, if all are massacred, are 9 only, instead of 168.

Every one is, of course, clamoring for the Government "to do something," and the report is that the Government is waiting to know what England will allow Italy to do. Stanley, on being asked what could be done, made answer: "Does your Government mean to send out an armed expedition? This will take a large sum of money and a quantity of soldiers; and, first of all, you must have England's permission, even if you occupy Harrar. England is still mistress of the port, which is Zeila." On being told that, though the expedition had been assisted by the Government, it was not an official expedition, "Then," he replied, "if you don't mean to go to war, register this catastrophe as a page of experience, and learn that Africa is not the country in which to commit imprudences." Most sensible advice assuredly, and, after the conduct of the English Consul, Count Porro must be reckoned among the "imprudent"; but this does not exempt the Italian Government from an immense responsibility. Correspondence.

EXCOMMUNICATION IN THE METHODIST CHURCH.

To the Editor of The Nation:

Sir: In *Nation*, No. 1084, a question is asked about the published threat of Rev. S. Dimmick, that his members "will have to leave the church if they sign a petition for license," and its relation to Roman Catholic excommunication. If the question should not be sufficiently answered before this letter reaches you, I would like to reply that a marked difference between the cases exists in this, that, in the Roman Catholic Church, excommunication does sometimes occur and is effective, while in the Methodist Episcopal Church, to which Mr. Dimmick professes to belong, the sort of expulsion which he threatens, in a certain contingency, to visit upon the members of his church, is altogether impossible.

If the author of this notion should ever proceed against any of his members to expel them, he would find that they enjoy all the essential rights of trial by jury. The fault in question is classified, in the law of the Methodist Episcopal Church, under "Imprudent and Unchristian Conduct," for which specific procedure is laid down. For the first offence of which notice is taken, the preacher may administer private reproof. On a second offence, he may take one or two discreet members of the church to witness the remonstrance. "On a third offence let him be brought to trial."

So it is not for the pastor to say, before the trial, who "will have to leave the church"; but then, prohibitionists must be indiscreet.

W. C. Sawyer.

Dresden, Saxony, April 23, 1886.

PARTIAL VETOING OF APPROPRIATION BILLS.

To the Editor of The Nation:

Sir: In relation to your editorial article in the last number upon separate vetoes of appropriation bills, the case is even stronger than you state it. There are no less than fifteen States which have incorporated this principle in their Constitutions, viz., New York, New Jersey, Pennsylvania, Minnesota, Nebraska, West Virginia, Missouri, Arkansas, Texas, California, South Carolina, Georgia, Alabama, Florida, and Louisiana. See sec. 310 of my work on 'American Statute Law.'—Faithfully yours,

F. J. Stimson.

31 W. 17th St., May 4, 1886.

THE FRENCH CODE ON BOYCOTTING.

To the Editor of The Nation:

Sir: Perhaps it may be of some interest to your readers (as an addition to your quotation from the French "Code Pénal") to look into the following decisions of the "Cour de Cassation," which give a definitive and binding interpretation of articles 414 and 415 of said Code.

(*a.*) Law, though recognizing the right of coalition, punishes any interference with the free exercise of industry or labor, which manifests itself by threats of interdiction, uttered either against a proscribed workman or employer, or against the workmen who choose to remain in the same workshop.

Is to be considered as an accomplice any person who, in execution of a plan contrived beforehand, watches the doings of the proscribed workman, and gives information in order to insure the success of such measures of interdiction.

There is an implied threat in any written order, given in the name of the association or its members, to leave the workshop where the interdicted workman is employed. (Cass.—April 5, 1867.)

(*b.*) The Central Committee, acting and taking resolutions in the name of the striking workmen, whenever its members refuse to such as wish to withdraw (from the strike) permission to work, is guilty of unlawful interference with the free exercise of labor. (Cass.—Feb. 23, 1886.)

(*c.*) The fact that workmen demand from their employer, by threatening to desert his workshop if he refuses, the dismissal of another workman, is rightly considered as unlawful interference with the free exercise of industry and labor, when it is the outcome of a plan contrived beforehand to deprive of access to the workshop such workmen as refuse to enter the union, and accept labor from firms boycotted by said union (*mises par elle en interdit*). (Cass.—August 28, 1873.)

Please remark that the last decision was pronounced under a Republican administration. I must add, though, that in the present labor troubles at Decazeville the Government's attitude has lately been stamped with lamentable uncertainty, and that its alternative *coups de force* and hesitations have demonstrated, *a contrario*, how much immediate and decisive, but *consistent*, action is desirable in such emergencies. The manacles on Roche's and Duc-Quercy's wrists were, it seems, a useless and therefore dangerous display, but the meek submission to Basly's impudence is suicidal indeed!

Such reflections and examples are perhaps not out of season, at a time when true friends of the United States have to deplore the fact that Hyndman, the noted English Socialist, praises President Cleveland's message as "admirable." Ought not this eulogy, coming from such a quarter, to remind the eminent Chief of the Executive of old Laocoön's cautious motto: "Timeo Danaos et dona ferentes"? A. Du Four.

Charlotte, N. C., May 8, 1886.

THE CONSTITUTION OF THE KNIGHTS.

To the Editor of The Nation:

Sir: A pamphlet of 78 pp., called the 'Constitution of the General Assembly, District Assemblies, and Local Assemblies of the Order of the Knights of Labor of America'—first adopted at Reading, Pa., January 1-4, 1878, revised at various places, and finally at Philadelphia, September 1-10, 1884—throws rather more light on the aims and methods of the organization than has been elicited by the Congressional Investigating Committee from Mr. Powderly and his fellow-witnesses.

The preamble of three pages gives, as the reason for forming the order, "the alarming development and aggressiveness of great capitalists and corporations, which, unless checked, will inevitably lead to the pauperization and hopeless degradation of the toiling masses," and says "it is imperative, if we desire to enjoy the full blessings of life, that a check be placed upon unjust accumulation and the power for evil of aggregated wealth."

The order of Knights of Labor is formed, 1st, "To make industrial and moral worth, not wealth, the true standard of individual and national greatness"; 2d, "To secure to the workers the full enjoyment of the wealth they create, sufficient leisure in which to develop their intellectual, moral, and social faculties; all of the benefits, recreation, and pleasures of association—in a word, to enable them to share the gains and honors of advancing civilization."

In order to secure these results, the Knights "demand of the State" thirteen different things, among which are: "the recognition, by incorporation, of trades-unions, orders, and such other associations as may be organized by the working masses to improve their condition and protect their rights"; "the abolition of the contract system on national, State, and municipal works"; "the enaction of laws providing for arbitration between employers and employed, and to enforce the decision of the arbitrators"; "to prohibit the hiring out of convict labor"; "that a graduated income tax should be levied."

These are followed by five "demands on Congress," which provide for the abolition of all existing banking systems, and "that all money shall be issued in necessary quantity direct to the people" by the Government; "that no interest-bearing bonds, bills of credit, or notes shall ever be issued by the Government, but that in case of need the emergency shall be met by issue of legal-tender, non-interest-bearing money." It is also "demanded" that the Government shall "organize financial exchanges, safe deposits, and facilities for the deposit of the people in small sums"; also, that the "Government shall obtain possession by purchase, under the right of eminent domain, of all telegraphs, telephones, and railroads, and that hereafter no charter or license be issued to any corporation for construction or operation of any means of transporting *intelligence, passengers, or freight.*"

All of these, with some minor "demands," one might think, would constitute changes in the existing order of things radical enough to justify less peremptoriness in dealing with the general and State Governments, but the arrogant tone of the organization has been uniform in its relations to its own members, the vast number of workingmen outside, the employers, and the state.

The remainder of the "Preamble" is as follows:

"And while making the foregoing demands on the State and National Government, we will endeavor to associate our own labors—

"XIX. To establish coöperative institutions such as will tend to supersede the wage system by the introduction of a coöperative industrial system.

"XX. To secure for both sexes equal pay for equal work.

"XXI. To shorten the hours of labor by a general refusal to work for more than eight hours.

"XXII. To persuade employers to agree to arbitrate all differences which may arise between them and their employees, in order that the bonds of sympathy between them may be strengthened, and that strikes may be rendered unnecessary."

The chief mode of "persuasion," except, indeed, that of destroying the property of their employers, and beating, maiming, and killing such of their fellow-workingmen as do not agree with them, is the boycott, and in the cases where employers have been thus "persuaded" it is doubtful if "the bonds of sympathy" have been greatly strengthened. A prisoner in Delaware was asked by a visitor how he came to be confined. He answered, "I was sent here because a man gave me a gold watch." Curiosity led the questioner to ask the reason of such an apparently strange action on the part of the authorities, and he at last worried out of the convict that he was obliged to knock down the owner of the watch and pound him for some time before he would consent to make the present. A process very like this is now being actively carried on by the Knights, in a few recent instances happily terminating like the one above narrated.

The "arbitration of all differences between workingmen and their employers" would be as fatal a blow to the industries of this country as the adoption of any of the vagaries of Mr. Powderly and his friends. It would inevitably lead to a sacrifice of independence of action without which nobody otherwise competent could successfully conduct business operations. No man would be willing to invest his capital in enterprises in which his loss or profit was dependent, not on his own ability, but on the caprice of a board of arbitrators which, even under the most favorable circumstances, could not be expected to be familiar with the details and condition of his affairs. That any such board should have the power to tell a manufacturer that he must pay a certain price for a certain service, irrespective of what he can get it for; or employ ten men on a job which he thinks eight can do; or discharge certain of his workmen because they don't belong to trades-unions aiming at his existence, is a proposition that can only come from men bent on the destruction of accumulated wealth, and be supported by those ignorant of the first principles of business administration, or political demagogues willing to lend themselves to any action which may bring them votes. We might better have such of the amendments to the Constitution of the United States as Mr. Powderly kindly offers to furnish, if they should be adopted.

It will be seen by sec. 21 that there is an agreement among the Knights of Labor to "shorten the hours of labor by a general refusal to work more than eight hours." Mr. Powderly keeps on saying that it is not time yet for any eight-hour movement, and that he disapproves of it. Why, then, does this pledge, to which all of his dupes bind themselves, still remain in the "Constitution"? He is the head of the "General Assembly." "This General Assembly has full and final jurisdiction, and is the highest tribunal of the order of the Knights of Labor. It alone possesses the power and authority to make, amend, or repeal the fundamental and general laws and regulations of the order." "It can also tax the members of the order for its maintenance." If Mr. Powderly has the substance of the power given him by the Constitution of the Knights of Labor, he could have saved the country millions of dollars, and the laboring classes untold misery, by exercising it in accordance with the majority of his utterances. If he has no real authority, and the head of his organization (for it must have one somewhere) is not on his shoulders, he is, instead of a designing and crafty scoundrel, a figurehead to divert suspicion from the hidden machinations of abler villains until their ends are obtained. He is probably the Gammon of the concern—working for the same purposes as the others. Should a general uprising take place against the tyranny and outrages of the Knights, and destruction threaten them, then Mr. Powderly will step forward to arrest the blow by referring to his own moderation and conservatism as expressed on every possible recent occasion, forgetting his early utterances, when his prospects were fairer, and he spoke of boycotting as a weapon to be used very gingerly, or his letter to Mr. Gould wherein for once he loses his temper and betrays his real animus, after the manner of an enraged virago. Now, it is safe to say, he abhors boycotts and deprecates strikes. On the other hand, should the spirit of liberty and patriotism be so degraded and deadened as to be unable to cast from us this incubus, and the American people be finally brought to the condition of servitude contemplated by the Knights of Labor, then Mr. Powderly will rise up at the grand division of spoils and claim the lion's share as his reward.

To return to the "Constitution." The duties and powers of the General Assembly and of its officers are very fully set forth in forty-five pages of the pamphlet. Then follows the Constitution for District Assemblies, which are each composed of duly accredited delegates from at least five local Assemblies. The officers of a District Assembly consist of a master workman, worthy foreman, recording secretary, financial secretary, treasurer, and statistician, inside esquire, outside esquire, and venerable sage. The local Assemblies have, in addition to this list, an almoner, insurance solicitor, and an "Unknown Knight." There are many allusions to the "secret work," pass-words, signs, etc., of the organization, and the money contributions are most thoroughly provided for. Travelling cards and the annual travelling pass-word are given to such of the members as desire to travel. To get these they must be in good standing and have all dues paid up. Some of these cards were found on the captured rioting Third Avenue horse-car strikers of late. There are several provisions as to eligibility for membership: "No person who either sells or makes a living or any part of it by the sale of intoxicating drink, either as a manufacturer, dealer, or agent, or through any member of the family, can be admitted to membership in this order"*; and "no lawyer, banker, professional gambler, or stock broker can be admitted." These are the only limitations mentioned, except that "three-quarters in number of any local Assembly must be wage-workers or farmers, and this proportion must be maintained for all time," and nobody under sixteen years of age can be a member. Each local Assembly fixes the charge for initiation, but in no case can it be less than $1 for men and 50 cents for women. More can also be charged for a skilled mechanic than a laborer. Under the head of "Discussions" it is provided that each local Assembly shall devote not less than ten minutes or "more than an hour of each regular session thereof to the discussion of subjects bearing upon the labor question, such as 'Convict labor,' 'Eight hours,' 'Child labor,' 'How can the toiler receive a just share of the wealth he creates?' etc."

While there is an element of good in the pamphlet, the purpose of its designers is but thinly veiled, and is to foment and encourage among the laboring classes a feeling of discontent and antipathy toward all who have succeeded better in the race of life than they, which feeling can be utilized, through the power of a compact and manageable oath-bound organization, to destroy existing social institutions and give us a taste of the scenes of the French Revolution. The time is past for business men to affect an esteem for Mr. Powderly or the Knights of Labor. Either they, in anything like their existing form, or else the principles of American liberty, must go to the wall, and it will be, in the end, a mercy to the rank and file of the order to make their abandonment of it a condition of employment. It is no more than a wise precaution on the part of employers to decline the services of men sworn to obey without question any command that may be given them by an order which has shown itself hostile to every organized industry, and whose leaders flourish only in times of business and industrial distress. D. S.

Brooklyn, May 4, 1886.

* This provision is evaded in the case of brewers, bartenders, etc., by taking their money and giving them cards and the substance of membership without the name.

THE KENTUCKY RESOLUTIONS OF '98.

To the Editor of The Nation:

Sir: It having been satisfactorily ascertained that the genuine text of the first resolution in the Kentucky "Resolutions of '98" contains the clause, "its co-States forming, as to itself, the other party," which has dropped out in editions of 'Elliot's Debates' published since 1832, the way is now open, as you justly remark, for critical inquiry into the origin and probable motive of that omission, if it was not accidental. The Resolution in its integrity reads as follows:

"Resolved, That the several States composing the United States of America are not united on the principle of unlimited submission to their General Government; but that, by compact under the style and title of a Constitution for the United States and of amendments thereto, they constituted a General Government for special purposes, delegated to that Government certain definite powers, reserving, each State to itself, the residuary mass of right to their own self-government; and that whensoever the General Government assumes undelegated powers, its acts are unauthoritative, void, and of no force: That to this compact each State acceded as a State, and is an integral party, its co-States forming, as to itself, the other party: That the Government created by this compact was not made the exclusive or final judge of the extent of the powers delegated to itself; since that would have made its discretion, and not the Constitution, the measure of its powers; but that as in all other cases of compact among parties having no common judge, each party has an equal right to judge for itself, as well of infractions as of the mode and measure of redress."

As preliminary to this inquiry I beg leave to state that the genuine text was correctly reproduced by Elliot in his first compilation of these Resolutions, as printed in the Appendix to what was originally known as volume 4 of the 'Debates.' This volume was published in 1830—its "Prefatory Note" bears the date of May 26 in

that year—and therefore was issued immediately in the wake of the great "Nullification Debate" signalized in the Senate of the United States by the memorable speeches of Hayne and Webster, in which the "Resolutions of '98" were passed under review.

A new and powerful impulse was given to nullification polemics two years afterward by the discovery, early in March, 1832, of a series of resolutions, preserved among Mr. Jefferson's papers and drawn up in his handwriting, against the constitutionality of the Alien and Sedition laws. It was seen at once, on a comparison of this Jefferson draft with the text of the Kentucky series, that the former was the textual basis of the latter, with a few very important modifications. Immediately in the wake of this discovery Elliot published, in May, 1832, a sensational pamphlet entitled 'The Virginia and Kentucky Resolutions of 1798 and '99; with Jefferson's original draught thereof. Also, Madison's Report, Calhoun's Address, Resolutions of the Several States in Relation to State Rights, with Other Documents in Support of the Jeffersonian Doctrines of '98.' In this publication the editor exhausts the art of typography in giving, by the prodigal display of italics and capitals, a strong nullification emphasis to his whole collection of documents.

It is interesting to observe that in this political pamphlet "the original draft" of Jefferson is found to contain the clause in question, but the clause has vanished from the text of the Resolutions as they purport to have been passed by the Legislature of Kentucky in 1798. This is the earliest omission of the clause which, after a diligent search, I have been able to find, and from this time forth the corruption appears to have imperceptibly stolen into successive editions of 'Elliot's Debates,' as subsequently "published under the sanction of Congress" with the supervision of the same editor.

It would be premature to speculate on the probable motive of this omission, for some of your readers may refer me to an earlier source of the corruption, and it may have been purely accidental. In view, however, of the fact that a correct copy of the Resolutions was given by Elliot in 1830 and an incorrect one in 1832 and afterward, it would not seem easy to absolve him from the charge of careless proof-reading, unless it can be shown that he reproduced his mutilated copy from an earlier copy having every appearance of genuineness.

The clause was of critical significance under the stress and pinch of the Nullification controversy in 1830-32. With this clause arrayed in the forefront of the Kentucky series, it was not easy, in the name of that declaration, to vindicate the constitutional right of each individual State to nullify, without opposition from its sister States, an act of Congress held by it to be unconstitutional: for if, in ratifying the Constitution, each State had to wait for the coöperation of a sufficient number of "co-States" to give validity to its own adoption of that instrument, and if, "as to itself," the "co-States" so ratifying the Constitution were "the other party" to the "compact," then it followed by parity of reasoning, on the strictest principles of the State-Rights logic, that each State, in declaring an act of Congress null and void, had to wait for the coöperation of a sufficient number of its co-States ("the other party") in order to give validity to the new definition or allocation of Federal powers involved in its nullification manifesto. But this doctrine was fatal to the pretension of the South Carolina Nullifiers in 1830-32.

JAMES C. WELLING.

WASHINGTON, May 8, 1886.

THE ELECTIVE SYSTEM AT THE UNIVERSITY OF MICHIGAN.

TO THE EDITOR OF THE NATION:

SIR: The reports recently presented to the Board of Overseers of Harvard College by a committee charged with the consideration of proposed changes in the requirements for admission to college, of the practical working of the elective system, and of the plan of voluntary attendance now in operation at Harvard, are models in their way, and are valuable contributions to the discussion of the subjects they treat. They are well worth the attention of persons engaged in college management anywhere, whether interested in all the details or not. For us at the University of Michigan they have a peculiar interest, dealing as they do with problems on which our academic faculty has been engaged for several years, and we have been much gratified to see how closely, sometimes even in minute particulars, the conclusions of the Harvard committee are in accord with the practice that our experience has led us to think the best. The organization of the University at Ann Arbor differs in many respects from that at Cambridge, and it would hardly be right to emphasize very strongly any points of resemblance or points of contrast in matters relating solely to details of internal administration; yet, broadly speaking, both institutions have the same end in view, and have adopted in the main similar methods. A short account of what has been accomplished here in certain directions I hope may be acceptable to your readers, especially those that have seen the Harvard reports.

The question whether a knowledge of Greek should be required of all students was settled as long ago as the year 1851 for the University of Michigan by a legislative enactment which directed that "the Regents shall provide . . . for the admission of . . . students without previous examination as to their attainments" in ancient languages; and the problem for the Faculty has been, while requiring Greek for the course leading to the degree of bachelor of arts, to get from the schools an equivalent preparation in science, modern languages, or English branches, for those students who enter the University as candidates for degrees in science, in philosophy, or in letters. The aim has been to make the different degrees conferred, as far as practicable with courses so widely different in character, represent equivalent amounts of work, so that they may be regarded by students and by the community as equally honorable.

For thirty-five years the high schools of Michigan and other feeders of the University have been encouraged to direct the preliminary training of pupils fitting for college in the way that seemed best in each particular case. In some of the larger schools a creditable supply of apparatus for laboratory instruction in science is provided, but this is by no means yet the rule, though a marked advance in this respect has been observable in the past few years. The result in Michigan goes far toward showing that, for the present at least, if any substitute for Greek is to be accepted at Harvard, a very few schools only will be in condition to give training in science at all equivalent to that now secured by the study of Greek. The weight of testimony here is strongly in favor of the plan recommended in Mr. Smith's minority report. It may be added that the youthful Agassiz or Faraday will find himself badly hampered if ignorant of the modern languages, and it will be well for him to acquire a knowledge of them early in life.

The elective system became a prominent feature at the University of Michigan some ten or twelve years ago, though even at an earlier date a considerable range of choice was allowed the upper classes. After a long and careful discussion, the Academic Faculty in the year 1879 made a radical change and adopted a modified or limited elective system, to whose advantages all grades of collegiate students were admitted. Briefly summarized, the principal features of that plan were as follows: (1) the instruction offered to undergraduates was arranged in half-year courses, some being given once a week, some twice, others three, four, or five times; (2) each student was allowed to choose, from all the courses offered in any half-year, such as he could take with profit, the Faculty reserving the right to regulate, when necessary, the number of hours a week any student should be engaged in the class-room; (3) the completion of a specified amount of work, whether the time spent were longer or shorter, entitled a student to his degree provided one important condition was satisfied, viz., that at some time during his term of study he should have pursued and passed examinations on a certain set of prescribed studies, the sets varying in kind and in amount, according to the title of the degree to be conferred. About one-half of the total requirement consisted of prescribed studies, except in the engineering department, where the proportion was about four-fifths. A candidate for the degree of bachelor of arts was obliged to take in the University both Greek and Latin equivalent to a daily exercise in each language for something more than a year and a half; for the degree of bachelor of philosophy a corresponding amount of Latin, French, and German was prescribed; for the degrees in science and in letters the prescribed studies included a relatively larger proportion of physics, chemistry, history, or English; all the sets included mathematics and, except for students in engineering, the elements of psychology.

A trial of a year or two in the administration of this system disclosed two serious defects: the incoming freshmen found it difficult to choose wisely, and the older students were tempted to undertake too much work, for the sake of shortening their college course by six months or a year. Recognizing these defects, the Faculty did not hesitate to retrace its steps. The liberty of choice accorded to freshmen was very much restricted, so that, at the present time, the work of a student in his first year is practically, though not absolutely nor in all cases, confined to a limited portion of the studies prescribed for graduation. The second difficulty was met by setting a limit to the number of hours a week a student could take, a limit which could not be exceeded without special permission. All requests for extra hours are referred to a standing committee of the Faculty. They are granted or denied according to the committee's view of what would be best for the student. A position on this committee is no sinecure. Under this arrangement the normal length of the college course is four years, though not a few in each class complete all requirements in three years and a half, or so nearly complete them that time is gained in the fourth year for advanced work in special topics or for entrance on the study of a profession. Incidentally, too, the lines of demarcation between freshmen, sophomores, juniors, and seniors are to some extent obliterated.

The character of the prescribed work has been modified from time to time, and its amount has been reduced as rapidly as experience has shown a reduction could be made to advantage. Pains are taken to advise students of the proper sequence of studies. The annual calendars and announcements contain recommendations and suggestions as to the proper coördination of studies, which are intended expressly to aid persons who wish to acquire more than ordinary proficiency in some one line of work—philosophy, for exam-

ple, or chemistry, physics, astronomy, geology, or biology.

In the ways above indicated, the University of Michigan, in its department of literature, science, and the arts (the professional schools, of course, are not here taken into account), has endeavored to secure the acknowledged benefits of a free election, and to guard against its worst dangers. The results so far attained have been highly satisfactory, though the avenues of improvement are not yet closed. In one direction, it is true, an important step in advance has already been taken. I refer to the opportunity that the more ambitious or the more mature students, whose attainments warrant the Faculty in granting them the privilege, have of completing the last year and a half or two years of their college course, on conditions even more favorable to the development of individual taste and talent than the simple elective system in itself contemplates. It would make this letter too long to describe in detail the "university system," as we call it here; it is an interesting outgrowth or extension of the elective system, and one that promises good results in the future, if wisely administered. Neither is there room for any notice of the marking system or of the question of voluntary attendance at recitations. These topics may perhaps be taken up in a future communication.

W. H. PETTEE.

UNIVERSITY OF MICHIGAN, May 1, 1886.

Notes.

THE 'Q. P. Index Annual for 1885' (Boston: Cupples, Upham & Co.) is now ready—forming the fifth in its own series, the nineteenth in the general. Some fifty periodicals are selectively indexed by Mr. Griswold's ingenious system of numbering. The authors are placed in a list by themselves, each with a numerical designation by which ready reference is made from his proper article.

Charles Scribner's Sons will issue in the early autumn the second volume of the 'Cyclopædia of Painters and Paintings,' edited by John Denison Champlin, jr., and Charles C. Perkins. The first volume, now ready, contains 105 outline views of the important pictures of the older masters, 182 portraits, and 212 signatures, besides twelve full-page photogravures (mainly) after works of the modern school. The arrangement of painters and pictures is under a single alphabet. There are to be four volumes in all, quarto, and the limit of copies is 500.

Cassell & Co. publish immediately 'Representative Poems of Living Poets,' the selection involving eighty English and American writers, and nearly three hundred selections made by the poets themselves. Mr. George P. Lathrop furnishes an introduction.

Thomas Whitaker will issue next week 'The Church Revived,' a full account of parochial mission work in England and America, by the Rev. J. W. Bonham.

William S. Gottsberger publishes this week 'The King's Treasure-house: a Romance of Ancient Egypt,' translated from the German of Wilhelm Walloth by Mary J. Safford.

Henry Holt & Co. have nearly ready 'Whom God Hath Joined,' a *Tendenz* novel, by Mrs. Elizabeth Gilbert Martin, which has appeared serially in the pages of the *Catholic World*; and 'Children of the Earth,' yet another novel, by Miss A. R. Macfarlane.

Prof. Arthur Sherburne Hardy's new novel, 'The Wind of Destiny,' is about to be issued by Houghton, Mifflin & Co. They also announce for their Riverside Paper series 'The Cruise of the *Alabama*,' by P. D. Haywood; 'Not in the Prospectus,' by Park Danforth; 'Burglars in Paradise,' by Miss Phelps; and 'The Man Who Was Guilty,' by Flora Haines Longhead. Further, a new volume of poems by Mrs. S. M. B. Piatt, entitled 'In Primrose Time: a New Irish Garland.' (Can the time of Beaconsfield be thus indicated?)

'The Mystery of Pain,' by James Hinton, M.D., is in the press of Cupples, Upham & Co., Boston.

Ginn & Co. publish during the next two months 'The Practical Elements of Rhetoric,' by Prof. J. F. Genung, of Amherst; and 'The Beginner's Latin Book,' by W. C. Collar and M. G. Daniell.

A series of monographs on education, in preparation by D. C. Heath & Co., Boston, will begin with a 'Bibliography of Pedagogical Literature,' compiled by Prof. G. Stanley Hall.

The second volume of the "Olden Time Series" (Boston: Ticknor & Co.) is 'Days of the Spinning Wheel,' but, like its predecessor, its contents are better covered by the general than by the specific title. Under whichever designation, one may be edified by reading the calm contemporary newspaper report of the Boston Massacre; a sumptuary regulation in that city, in 1788, forbidding (shade of Samuel Sewall!) scarfs, gloves, rings, and liquors at funerals; correspondence relating to a fire charity, collected and brought over by Whitefield in 1764; advertisements showing the activity of the slave market before the Revolution, or telling of cows on Boston Common as late as 1788, or proving the existence of mahogany furniture as early as 1759, to the confusion of certain colonial antiquarians who have held this to be a heresy. Here, also, one may be reminded that as far back as 1762 they were making 40,000 pairs of shoes annually in Lynn, Mass.; that in 1775, in Salem, one could listen to a popular scientific lecture on electricity, "every evening in which the air is dry," at a pistareen a lecture; that there was lively celebration of Guy Fawkes's Day in the last century, and that (*teste* the author) even last year, near Marblehead, a bonfire on that date was a genuine survival; finally, that at New Hackensack, Dutchess County, N. Y., in 1789, mysterious rappings and moving of furniture, etc., attended a young girl in a respectable family, and perplexed investigators.

Harper & Bros. take advantage of the interest in the Irish question to republish Miss Edgeworth's 'The Absentee,' in their Handy Series.

Ginn & Co., Boston, have brought out a new edition of the late Keith Johnston's 'School and College Atlas of Ancient Geography,' much improved in every respect, and enlarged by a summary exhibit of ancient geography from the pen of Prof. W. F. Allen, of the University of Wisconsin, whose name is a guarantee of scholarly accuracy. While the maps as such are not remarkable specimens of cartography, they are distinct and free from overcrowding. There is an index, in which the modern name accompanies the ancient, and throughout the pronunciation is carefully indicated. Altogether, the work seems to us second to no other available for English-speaking students.

Rarely does one meet with more beautiful maps than those which compose the first instalment of the second edition of Dr. Richard Andree's popular 'Allgemeiner Hand-Atlas' (Leipzig: Velhagen & Klasing; New York: Westermann). The execution is in admirable taste as to lettering, tint, etc., and is only objectionable on the score of extreme fineness in the more crowded portions. A magnifier would almost be necessary to save the eyes. Many of the plates are quite novel in their selection and division, and will be a substantial addition to maps which subordinate the districts in question. There are to be twelve *Lieferungen* with 120 map-plates (against 96 in the former edition). The wonder is that they can be furnished for two marks each.

'Common Sense in the Nursery' (Chas. Scribner's Sons) belongs to Marion Harland's series of common-sense books, and its name is well given. Babies are necessary in families, and care corresponding to this teaching is necessary for the babies.

During 1883 more than one-quarter of the deaths occurring in Philadelphia were of children under one year of age. In the census year 1880 nearly one-half of the deaths in the United States were of children under five years of age. This mortality and the suffering connected with it, to say nothing of the suffering, physical and otherwise, incidental to illness not mortal of which children are the subjects, are appalling. A certain amount of disease, but a very small amount according to our present light, is necessary; very much of it should be preventable and prevented. Dr. Arthur V. Meigs, in a study of 'Milk Analysis and Infant Feeding' (Philadelphia: Blakiston & Co.), remarks with great truth: "It is melancholy to think how many children die year after year simply because those who are most anxious for them to live do not know what to give them to eat." Dr. Meigs's little book has the advantage of intelligent theory corrected and confirmed by considerable experience.

One might as well expect to find a new treatise to point out the superiority of steam over horse power for locomotive purposes, as to have written at this late day a book to show the influence of vaccination in preventing smallpox. Yet such is the senseless clamor which very noisy and not very intelligent men are making against this most beneficent agency, that some positively require to be reminded of its value. Dr. W. A. Hardaway's 'Essentials of Vaccination' (St. Louis: J. H. Chambers & Co.) points out how and why this life-saving operation should be done. It is not a cyclopædia, it is an epitome of the correct teachings about vaccination.

American publishers of school-books would do well to look at the dainty little volumes just issued from the Clarendon Press, Oxford, containing 'Les Femmes savantes,' by Molière, and 'Cinna,' by Corneille (New York: Thomas Nelson & Sons). The material execution is excellent though simple, and the books open perfectly and remain open just where they are wanted—a rare merit in these days of wire-stitched school-books. The editor, M. Gustave Masson, has given very little of his own in the introductory notices to the plays. His notes are good, though he freely indulges in quotations in them, not hesitating to give half a page of Greek to illustrate a passage of Corneille. This he leaves untranslated as well as his numerous Latin quotations—an indolent process, which will not tend to make the notes easy reading to learners of French, or to some teachers, perhaps. The short glossary at the end of each play is very carefully made.

M. Henry Attwell speaks very modestly of his little book, 'French-English Pseudo-Synonyms' (London: Hachette; Boston: Schoenhof). He says it is merely a list transferred from a schoolmaster's note-book. It is a very interesting short monograph on words which are often the source of great blunders not merely to learners of French, but to the translators of French books. It seems a very elementary remark to say that *large* in French never means 'large,' that *injurier* is not 'to injure,' *monnaie* is not 'money,' *éditeur* is not 'editor,' or to call attention to the fact that *prétendre* generally means something very different from 'to pretend'; yet, in view of some of the current translations of recent French novels, such information seems not to be general among those who translate. The use of M. Attwell's volume might prevent a number of recurring mistakes, especially if the author makes it more complete in a new edition by inserting other words which are stumbling-blocks

from their similarity in form to English words which do not translate them—such as *altération*, *emphase*, *contrée*, *grief*. Some of these and others omitted by Mr. Attwell may be found in a very good little collection of exercises called 'The Bridge,' compiled by Mr. Oliver Straightways (London and Paris: Hachette; Boston: Schoenhof).

In *Shakspeariana* for April Prof. J. D. Butler shows curiously, from an examination of Liddell and Scott, to what an extent Shakspere has been used by these editors to illustrate meanings in their Greek lexicon. No fewer than seventeen Greek authors are explained by quotations from as many of Shakspere's dramas; and "did they all betoken undesigned coincidences with any one single Greek, they would," says Prof. Butler, "demonstrate that he wrote Shakspere more conclusively than anything in 'Promus' indicates the Baconian authorship of any Shaksperian play."

In *Science* for May 7, Alice C. Fletcher discusses some composite portraits of American Indians which are shown on an accompanying plate. She made the very interesting experiment of causing three full-blooded Dakota or Sioux young women to sit for their photographs, from which, following a certain order, a composite was derived in the usual manner. Then, in the same order, the three sitters were taken directly upon one negative, at short exposures in rapid succession. Theoretically the two composites should have agreed. In fact, they were totally different, one face "ruling" in one, another in the other. The causes of this are not apparent, but it seems probable that the larger the number of subjects, the slighter would be the divergence in the types resulting from the two processes.

Mr. Joseph Thacher Clarke's article on a proto-Ionic capital found by him on the summit of Mount Chigri will hold the attention of the reader who begins it, in vol ii., No. 1, of the *American Journal of Archæology*. This "most primitive memorial of the Greek Ionic style yet brought to light," belonging to a ruin twenty-two centuries old, as is estimated, is convincingly cited as a link in the development of the form from the Assyrian construction in wood, which Mr. Clarke traces with his accustomed thoroughness. Rams' horns, snakes, and all other à-priori surmises as to the original models of the volutes, disappear before the palm. The article is unfinished. Prof. Merriam continues his text, translation, and commentary of the law code of the Cretan Gortyna, in which we observe that the condition of the children did not always follow that of the mother, who might have some free and some slave. Exceptional attention will be given to the clear report on the recent archaic sculptural finds of the Acropolis excavations at Athens, by Mr. Walter Miller, of the American School. As usual, the *Journal's* news department is full and varied, and the number is well supplied with plates and cuts.

We have before us the fourteenth annual reports of the two parallel public-spirited associations in Philadelphia—the Zoölogical Society and the Fairmount Park Art Association. The latter contains heliotype views of the Silenus and Infant Bacchus of Praxiteles, and of the Wrestlers of the Royal Gallery in Florence, both reproduced in bronze. Similar views of animals might not unprofitably have adorned the Zoölogical Society's report, from which we learn that we owe to perfidious Albion and her machinations in the Sudan the deficiency not only in our supply of gum arabic, but also in that of the wild animals which are regularly hunted for menageries in the wilds of Central Africa.

A fairly pictorial look is given to Mr. Carroll D. Wright's seventeenth annual report of the Massachusetts Bureau of Statistics of Labor by the frontispiece, a steel portrait of the late Henry K. Oliver, the first head of the Bureau—this by way of memorial; and by a heliotype portrait of the late Henry Wilson, a photo-etching of Mr. Dana Estes, the publisher, and a process engraving of some actress, cantatrice, or "English beauty"—these in order to illustrate the chapter on "Art in Industry." A gushing and extravagant sketch of the life of General Oliver (a musician, also, and composer of the hymns "Federal Street," "Merton," etc.) almost covers up the modest excellence of the man—a kinsman, we remark, of Dr. Holmes and Wendell Phillips.

Dr. Theodore Baker, who, a few years ago, enriched musical science with an original monograph on the music of North American Indians, has made another valuable addition to musical literature by making an excellent translation of Dr. Oscar Paul's 'Manual of Harmony' into English. Dr. Paul is professor at the Leipzig Conservatory, and well known as author of a musical dictionary and a history of the pianoforte, and as translator of Boethius's 'De Musica.' Some years ago he attempted to overthrow the tradition that the first efforts at harmony by Hucbald and others, some eight centuries ago, were the ugly sequences of fourths, fifths, and octaves printed in histories of music; his contention being that these intervals were not sung simultaneously, but successively. The best evidence, however, is against Dr. Paul's emendation. The fact that he was not afraid to attack so venerable a doctrine, shows him particularly qualified to deal with musical theory, in which there is so much that needs sifting and throwing overboard. Dr. Paul is not an original investigator, like Riemann or Helmholtz, but he is a clear writer, and his 'Manual of Harmony' is superior to Richter's, not only in respect of perspicuity, but in being more abreast of the times, by embodying the researches of Hauptmann, and the recently gained knowledge of the harmonic principles of Bach, on which the best modern music is based.

It would be decidedly unjust that the short Easter season should put a limit to the vogue of the very tasteful designs in color published as Easter cards by Raphael Tuck & Sons, of London, and No. 298 Broadway, in this city. Many of these are conscientious studies of famous pictures, reduced with real skill to the proportions of a miniature. The Ecce Homos of Guido and Dolci, never excelled, are among them, better copied than on the porcelains which rich travellers bring home from Dresden; and there are flower studies, azaleas, jonquils, and "Mary's lilies," which would do credit to reputable flower-painters, and deserve to be signed.

The summer course in Entomology and General Invertebrate Zoölogy at Cornell University is announced to begin June 21, and continue for ten weeks. Application should be made before June 10 to Prof. J. H. Comstock, Ithaca, N. Y.

—Mr. Nathan Haskell Dole, the translator of Tolstoi's 'Anna Karenina,' sends us a letter taking exception to our recent review of his version. We extract the passage which controverts our allegation that "it was made directly from the French, not from the Russian, and the proofs begin in chapter two." Mr. Dole says: "Now it happens—and I can bring affidavits of the fact—that I had not seen the French paraphrase until I was far beyond the second chapter. Indeed, had I seen it, I might gladly have chosen the word *peignoir* instead of *jersey* for *koftotchka*. I claim that I made a perfectly justifiable use of the French version as an assistance in doing the work. . . . That my good faith as to what I said in the preface might have confirmation, I made no pretence upon the title-page of having done the work from the Russian." Mr. Dole cites "an unsolicited letter from a Russian living in New York," congratulating him upon his success.

—The *Century* war papers for May begin with a sketch by General McClellan of the opening of the campaign of South Mountain and Antietam in September, 1862. His death prevented the completion of the paper, but in the merely introductory part which he wrote there are two or three important statements of fact which are not to be found in the official records. One is that General Halleck had assured him, both orally and in writing, that the command of the whole army in front of Washington, including Pope's and Burnside's, as well as the Potomac army, should be confided to him. It will be remembered that General Pope has declared that Halleck had expressed the purpose himself to take the field with the united command when McClellan's army should arrive. Another important statement is, that, after the second battle of Bull Run, both President Lincoln and Halleck reiterated the conviction that Washington was lost, and that it was impossible to save the city. Still another, and in some respects the most surprising, is, that his (McClellan's) assignment to command having limited him to the defences of Washington only, excluding any moving column beyond the works, and this not having been altered, though requested by him, his marching at the head of his army against Lee at South Mountain and the Antietam was, in fact, unauthorized, and, by strongest implication, contrary to his orders. It needs no argument to show how these allegations complicate the already tangled history of that period. The story of the battle of South Mountain by the ex-Confederate General D. H. Hill will perhaps first strike those who have been familiar with his reports made during the war, as being in interesting contrast of tone with those highly colored documents. That D. H. Hill can write of the national armies and their officers as he now does, is among the startling proofs how far from the war we are. His paper is a valuable one, pleasantly written, clear and strong in description. He presents the campaign from the Confederate point of view, and strongly emphasizes the opinion that, with the "lost despatches" of Lee in the national commander's hands, a much more vigorous strategy was possible, and that the Confederate army was ruinously compromised had full advantage been taken of the situation. His details of the engagement are necessarily faulty from his lack of personal knowledge of affairs within the Union lines, but he gives much new information of the movements on the other side. Mr. Goss's "Recollections of a Private" contain a general criticism of the campaign, and the amusing experiences of a "high private" under circumstances of confessed "demoralization." In the "Memoranda," Gen. W. F. Smith presents strong documentary evidence tending to show that General Grant's unfavorable criticisms of him were not founded upon his military character or career, but probably upon personal reasons.

—Mr. David A. Wells usually wears a pair of achromatic glasses, and he has been looking at Mexico through them. From the first two of the series of articles which he is publishing in the *Popular Science Monthly*, under the title, "An Economic Study of Mexico," we are led to expect from him the most illuminating discussion of our trade relations with Mexico that has been made public. Thus far his work is mostly preliminary. He sketches broadly but in firm lines Mexico's physical geography, her race inheritance, political history, social condition, and present government. Mr. Wells ought to be warned, however, that his exceedingly matter-of-fact way of looking at things will make him

no friends among the Mexicans. We notice that the New Orleans correspondent of the *Monitor Republicano* refers to his articles with great indignation, as being most insulting to Mexico. "What a way to write the history of a great people," exclaims this correspondent, "to say that they live in adobe houses, that the dress of many of them is only cotton sheeting, that few of them wear shoes, that they use no stoves, plough with a crooked stick, and eat corn as the staple of their diet!" It is, indeed, something of a departure from the method of the traditional writer on Mexico, in whom the practical has been subordinated to the picturesque; but, remembering that the object of Mr. Wells is to arrive at the present and prospective value of Mexican commerce, he cannot be so greatly blamed.

—Some of his statements on minor points are not altogether exact. For example, he says of President Diaz that "he is free from the suspicion that has attached, and probably with justice, to so many of the Mexican Presidents, of using his power, through contracts and expenditures, to enrich himself illegitimately." But it cannot be denied that the bold charges of corruption brought against General Diaz by his political opponents, and the fact that he entered the Presidency in 1876 with no property but his sword and retired from it in 1880 in possession of estates in Oaxaca estimated to be worth a million dollars, are enough to create "suspicion." In fact, one of the grounds of comfort which Mexican business men found in his reëlection was that he had already provided for himself in his former Administration, and now might be expected to give some attention to the needs of the country. Mr. Wells speaks guardedly of the "personal popularity" of Maximilian. This is one of the fictions of the Church press and historians. Domenech, in his character as champion of the Intervention, made much of what he asserted to be the spontaneous public welcome accorded the Archduke on his arrival in Mexico. In response to similar assertions by the Church organ, *La Voz de Mexico*, the Government recently caused to be published copies of some most interesting documents in the Treasury archives, showing the truly spontaneous nature of Maximilian's welcome. They were in the shape of warrants drawn on the national Treasury, in 1865, for sums expended in Vera Cruz, Córdoba, Orizaba, Puebla, and Mexico for fireworks, illuminations, triumphal arches, etc., amounting in all to $115,000. Perhaps Napoleon III., an expert in securing popular demonstrations in his own favor, had instructed the unfortunate Prince in this short and easy way of proving himself the people's choice. We can but repeat that we look forward to the remaining parts of Mr. Wells's work with high anticipations. If anything could justify Congress in delaying to carry out the terms of our reciprocity treaty with Mexico, it would be the desire to wait until the opinions of this trained and careful publicist are before them.

—A special interest attaches to the report of the State Geologist of New Jersey for the past year. Prof. Cook discusses the changes in the eastern coast line with the aid of tradition, history, and the earliest maps, and draws the general conclusion that the Atlantic beach now, as a rule, represents a sand deposit of wind and wave on former marsh land, and that the loss of margin is absolute, while the gain is only relative. Sandy Hook is delineated from various surveys made during the last two centuries, and is shown to have increased its area in length and breadth some four times. The lighthouse built in 1764 near the point is now about a mile south. Five-mile Beach, on the east shore of Cape May, is likewise shown to have doubled its size since 1772, with great changes of outline. In this instance a whole sea-side town has been laid out over the ocean of 1772. The report has also a chapter on forestry, from which we learn that a little less than one-half the total area of the State is wooded, and that from the nature of the soil a large part of this must ever remain so. Cultivation, however, will probably claim half the existing pine area, or about a third of the woodland. The wasteful and unscientific treatment of these forests still yields $5,000,000 a year, and this product might be doubled. On the other hand, forest fires, largely caused by locomotive sparks, destroy annually a million, and only the generosity of nature in this State prevents the account from running steadily behind. One railroad has devised a plan of keeping 100 feet on each side of the track free from combustible vegetation—an end which, by the way, in the case of a Southern railroad some forty years ago, was sought to be attained by scythes attached to the axles: until the expedient naturally resulted in the loss of human life. New Jersey now ranks first of the States in railroad mileage, having one mile to every 3.95 square miles. The thirty-fifth State in size, she is the nineteenth in population, and has during the past thirty years increased at a more rapid rate than adjacent States similarly circumstanced, and at about the national rate. She does not lose by emigration. We notice finally in this valuable report a detailed account of the various maps of New Jersey.

—Volume xx of the 'Encyclopædia Britannica,' ninth edition (New York: Charles Scribner's Sons; Boston: Little, Brown & Co., 1886), embraces titles extending from "Prudentius" to "Rostoff." It will apparently prove to be a twenty-fourth, or, including a supplement, a twenty-fifth part of the whole work. In Webster's Dictionary the titles from "Prudent" to "Roster" form one-sixteenth of the volume. In Appleton's 'American Cyclopædia' four hundred pages—that is, less than one-thirty-second part of the whole—are devoted to "Prudentius—Rostock." It will thus be seen that the 'Britannica' has managed to keep up a tolerably even tenor in its articles, undisturbed by the pressure which generally overtakes editors of cyclopædias when approaching the end. Compared with the earliest volumes, condensation and brevity are, of course, almost everywhere perceptible. The largest contribution to the volume, "Rome" (ancient history by H. F. Pelham, mediæval and recent by Prof. Villari, topography and archæology by J. H. Middleton), though embracing 107 pages, is rather small compared with "France" (181 pp.); and such important subjects as "Pyramid," "Quakers," "Rationalism," "Red Sea," "Roman Catholic Church," "Roman Literature," "Pyrenees," "Rhodes," and the Richards would have received a more extensive treatment if the initials of the titles were not P, Q, or R. But comparatively enough room, it appears to us, is given to "Psychology" (49 pp., by J. Ward), "Railway" (32 pp., by four authors), "Reformation," "Religions" (by Prof. Tiele), "Renaissance" (Symonds), "Reproduction" (Geddes and Vines), "Reptiles" (40 pp., by Drs. Günther and Mivart), "Rimini," "Roads and Streets," "Romance" (28 pp.), "Romance Languages" (Prof. Storm), and the book of "Revelation" (Prof. Harnack). Prof. Robertson Smith's "Psalms" we should like to see longer, on account of the excellence of the work. "Romans" is from an equally good pen, that of Prof. Schürer. Much less satisfactory, because pedantically dry and historically uninstructive, are the rabbinical articles "Rab," "Ramban" (without an explanation of the title), "Rashba," "Rashbam," "Rashi," and "Riph," all by one pen, obviously selected to represent a denomination. Biography is well cared for in the notices of Prynne, Pym, Pythagoras, Rabelais, Racine, Raleigh, Raphael, Rembrandt, Ricardo, Robert Bruce, Robespierre, Robusti, Rossetti, Ptolemy the geographer, etc., but we can hardly excuse the omission of all the Egyptian Ptolemies, for "Egypt" may contain all that is needed concerning their reigns, but not the details of their individual lives; the extensive article "France," *e. g.*, does not render notices of the Lewises superfluous. As specimens of slips we may mention "Hesse-Nassau" (p. 2) as referring to the duchy annexed by Prussia in 1866, and not to the Prussian province, embracing Electoral Hesse and the Duchy of Nassau, formed after the annexation; and the spelling of Polish names with *v*, which does not exist in the language, on pages 218 and 298.

JOEL BARLOW.

Life and Letters of Joel Barlow. By Charles Burr Todd. G. P. Putnam's Sons. 1886.

We have in biographical dictionaries and in magazine articles all of Joel Barlow's story that is furnished in this volume—all and more—for Mr. Todd has omitted some interesting particulars which he possibly thought might damage his hero's reputation. The letters to Mrs. Barlow and to Robert Fulton give us here and there a glimpse of exciting times, but there is nothing in them to throw any new light on Barlow's character or career. This is a disappointment. No part of our short history so abounds in amusing social and political details as the period between 1783 and Madison's administration—exactly Barlow's time. McMaster has worked this vein profitably, but there was still a grand opportunity for the right man.

Mr. Todd expresses surprise that an ungrateful country has hitherto taken so little notice of the "poet, philosopher, patriot, and friend of humanity" he celebrates. The reason is not far to seek. Barlow's poetry is of the kind that neither gods nor men can tolerate long. The "Hartford Wits" were the first to manufacture native American verse, and were honored accordingly, especially in their neighborhood. There was not a spark of genius in the group. The poetry they turned out was an imitation of the English poets in fashion at the time: Butler, Pope, Gray, Goldsmith, etc. It looked like the original, but lacked the flavor. It was "wooden nutmeg poetry"—in that respect, "a genuine product of the Connecticut soil." Trumbull was the cleverest of the party. His "McFingal," an adaptation of Hudibras to the politics of America, was quoted by everybody. Barlow's epic, the "Columbiad," an enlargement or a dilution of the "Vision of Columbus," a youthful work, occupied his life. We may safely say that it was unreadable even to his contemporaries. The only genuine verses Barlow published are to be found in "Hasty Pudding." Homesick in Savoy, and cheered by the sight of a dish of *polenta* that reminded him of Connecticut, he wrote them from his heart. When serving as chaplain in the army, Barlow wrote occasional war-songs to encourage the soldiers. "He was one of the *Minnesängers* of the Revolution," Mr. Todd tells us. After the war Barlow was employed by the General Association of Connecticut to correct and enlarge the psalms of Dr. Watts. The new version provoked the following just criticism from a brother rhymester, Oliver Arnold:

> "You're nothing but a sinful cre'tur;
> You've murdered Watts and spoiled the metre."

It was soon laid aside for another by Dr. Dwight.

Mr. Todd makes no allusion to a stirring lyric composed by Barlow, and sung by him at a festive gathering in the worst days of the French

Revolution—a parody of "God Save the King." One verse ran thus:

"Fame, let thy trumpet sound;
Tell all the world around
How Capet fell.
And when great George's poll
Shall in the basket roll,
Let mercy then control
The Guillotine."

Poor Capet! how changed from "his most gracious Majesty, Louis XVI., King of France and of Navarre," to whom Barlow dedicated the "Vision of Columbus" in 1787: "The great father of the House of Bourbon will be held in the highest veneration till his favorite political system shall be realized among the nations of Europe and extended to all mankind." Thomas Paine, on the other hand, had the courage to risk his own head in the Convention when he tried to save King Louis from death.

If Barlow had passed his life in Hartford, he would have gone to meeting with his old friends, and thought "the name of Democrat synonymous with infamy," as they did. Being in Paris, in 1789, he became, of course, a philosopher, patriot, and friend of humanity, heading deputations, delivering addresses, and writing pamphlets against majesties, earthly and divine—political diatribes that had little of the sound sense and vigorous style of his contemporaries, Paine and Cobbett. As *citoyen français* and member of the Constitution Society, his feelings were warm against the English or Federal party in the United States. When a lull in the French whirlwind gave him leisure, he wrote to his brother-in-law, Senator Baldwin, a violent attack on Washington and Adams. Passages from this letter were used in the prosecution of Matthew Lyon for libel and sedition. Barlow followed this up by two letters addressed "to his fellow-citizens of the United States," full of anti-Federal sentiments. In one of them he advised the confiscation of all debts owing to English merchants by way of retaliating on the English Government—"a cool, temperate, convincing argument," Mr. Todd says of this letter. This particular suggestion in it certainly convinced no honest man of either party.

Colonel Humphries, one of the Hartford wits, when Minister to Portugal, having full faith in Barlow's supposed influence with the French Government, persuaded him to go to Algiers to get some relief from the attacks of the Barbary pirates on our merchantmen. In spite of tribute money and of promises, Barlow accomplished little. This matter was settled later by Eaton, Preble, and Decatur, in the only possible way. At home it was charged against Barlow that in the treaty he made with Tripoli were to be found the words "that the Government of the United States is not in any sense founded on the Christian religion." New England people compared Barlow to the Dutch Agent in Japan, trampling on the cross.

In 1805, after seventeen years of absence, Barlow came home a rich man, built a house in Washington, and was a distinguished ornament of Jefferson's court, and a shining mark for the attacks of the Opposition. Six years later Mr. Madison, who also believed in his influence with France, sent him to Paris to remonstrate with the Emperor against the Berlin and Milan decrees. Barlow urged this matter upon the French Government for a year without success. The Duc de Bassano, Minister for Foreign Affairs, advised him to seek a personal interview with Napoleon at Wilna. Barlow was indiscreet enough to start upon this foolish journey. It was the winter of the retreat from Moscow. Napoleon passed through Wilna without stopping, and Barlow died of cold and exposure near Cracow, on his way back to Paris.

Barlow's principal claim upon our attention is, that he was a successful adventurer in two worlds. His life is full of incident. A chaplain, after six weeks' study of theology, complaining "the Sabbath days came rather too thick" for him, turned himself into a lawyer, unsuccessful because "he was averse to practising the arts of the *shyster* and the pettifogger," and "without making use of these it was almost impossible at that time for a young lawyer to rise in his profession." This seems a cruel reproach from Mr. Todd to the memory of Ellsworth, Lyman Law, David Daggett, and other leading Connecticut lawyers. Then he kept a book-shop, edited a weekly, the *American Mercury*, and became "the progenitor of the modern editorial." Even this distinction did not bring grist to the mill, for in 1788 he was glad to accept the agency in France of the Scioto Land Company, "one of those speculative barks—'rigged with curses dark'—which have from time to time sunk beneath the waves of the political sea, engulfing whole *platoons* of statesmen." This particular speculative bark was, in plain English, a swindling land company. The shares were £50 each. "About twelve hundred barbers, fiddlers, and bakers"—we quote from a contemporary narrative—"were shipped to Alexandria, Virginia, and left there to hunt up their lands. They found woods inhabited by hostile Indians." "Nearly all who did not die of fever and exposure made their way to New Orleans. Those who remained had to buy their lands over again from the Ohio Company." McMaster says that Barlow's part in this business was "infamous." Mr. Todd quotes the passage as unworthy of notice. Nevertheless, the charge seems a grave one. If these lands to which the Scioto Company had no title were not sold on the highly colored misrepresentations of Barlow or of his agent, William Playfair, a Scotchman, why does not Mr. Todd tell us who the guilty parties were, and what became of the money taken from the poor barbers and fiddlers? He might also have explained to us how Barlow, who had not a shilling when he went to France, managed to live there and to prosper—so well, indeed, that he was able to buy the Hôtel de Clermont-Tonnerre as a residence, and to return to America in 1805 with about $150,000—great wealth at that time. Mr. Todd does allude vaguely to business transactions and to speculations in the French funds. Until the Directory there was no great rise in the funds. How did Barlow support himself and his wife in the meantime? He had joined the Girondins when they led the Convention; how did he escape arrest when they were destroyed? Why was he sent with the Abbé Grégoire to revolutionize Savoy? What was the extent of his boasted influence with the Directory? And, finally, why did he, after seventeen years abroad, give up his friends and his hôtel in Paris to build Kalorama in Washington? On these points information would have been interesting.

It is certain that Paine and Barlow were intimate in Paris. When Paine was arrested during the Terror, he stopped at Barlow's house on his way to the Conciergerie and left the second part of the 'Age of Reason' with him for safe keeping. Paine's name is not mentioned in the book before us, and no allusion is made to that notorious adventurer, General Miranda of Caraccas, who was much interested in the Scioto scheme, and was also sent to the Conciergerie and detained there, as Paine was, in daily danger of the guillotine, until the fall of Robespierre.

Mr. Todd thinks that McMaster's remark upon Barlow's connection with the fraudulent land company is only an evidence that the political passions of 1800 have survived to 1885. His own bias in the other direction misleads him; otherwise he could not have written "that the monarchical tendencies of the Federalists made it probable that another revolution would be necessary before the people could secure their rights." This is, indeed, a survival of the campaign rubbish of 1800. Few believed it then; no sane man believes it now.

Our Sensation Novel. Edited by Justin H. McCarthy, M.P. Cassell & Co. Also, Harper's Handy Series.

'THE BOSTONIANS' is a novel which invites elaborate criticism by its own elaboration. It is apparently designed to bring out a number of contrasts—the contrast between the ladies who are filled with the enthusiasm of the woman's-rights movement, and the ladies who are not filled with anything of the kind; between the somewhat antique "chivalrous" young Southern man and the brusque, progressive Northern young woman, with a redundancy of ideas; between Boston and, as logicians would say, all that is not-Boston in the world. These contrasts are pushed far, and bring out remorselessly much that is peculiar to the civilization of the day. Every American reader will find in the book some reflection of his or her mind; and as for the Bostonians, they have already given plain notice to the world that, in their opinion, the volume is libellous—not as being an absolutely false, but as a distorted picture. Everybody has heard the story of the New York wag who approved his tedious friend's determination to lecture in Boston, on the ground that he "always had hated the Bostonians." Something of this feeling is prevalent in many places outside of New England, and while we are not willing to say that Mr. James panders to it, it must be admitted that the reader gets the impression that, were the novelist to permit himself such emotions, he would confess to a dislike of many of the things which, in New York, are thought to be particularly Bostonian. But Mr. James very wisely eschews likes and dislikes. An observer and critic by nature and training, he would spoil his best effects did he permit himself to become identified with the puppets whom he so cleverly exhibits. In 'The Bostonians' he is by no means at his best. The story drags in places, and the conversations betray that want of naturalness into which the author's passion for a sort of dramatic repartee leads him. Nevertheless, the criticism and analysis and observation are so good that we cannot refrain

from admiration even when we do not always enjoy it. We cannot help feeling that we are in the hands of one of the first of American novelists. When our descendants hereafter attempt to reconstruct the society of which we form a part, and imagine what sort of a world ours was, it must be in great measure to James and Howells that they will resort for enlightenment. Each in his different way portrays American society in sketches which must ever remain a constituent portion of American literature.

The reason why people who begin 'Indian Summer' will read it through is that which prompted the citizens of Des Vaches, Indiana, to buy the *Democrat-Republican*—they want "to see what Colville said." Like the Merry Monarch, he never said a foolish thing and never did a wise one. At all events, he had exhausted his capacity for doing wisely before he reached his Indian Summer, before he bade Des Vaches good-bye and betook himself to Florence, the scene of his youthful dalliance with love and architecture. Here he delights and frequently mystifies his friends with the good things which he had been accustomed to furnish to the public through the columns of the *Democrat-Republican*. His friends are quite unworthy of his steel. His alert mind and ready tongue are deplorably wasted on the sentimental Imogene Graham. The trim widow Bowen lets his slowest balls slip through her fingers. Even when he persists in speaking of his old love, Mrs. Milbury, as Mrs. Pillsbury, she is not quick enough to remind him that Mr. Spreadbrow, the hero of Gilbert's "Sweethearts," had indulged in just that fine bit of affectation before him. Mr. Waters, the New England clergyman in exile, is his only entertaining associate. He is an excellent specimen of that intellectual abstraction in the shape of a man which is born and bred in Puritan New England only. But any one familiar with the personality of the female "dyspeptics and consumptives" who were part of his congregation at Haddam East Village, must wonder how and where he made his deep soundings in the nature of the feminine world at large. Though, when he talks about a woman being "old enough to be truly young," he is a trifle obscure, his remarks are generally too astute for his legitimate opportunities. They suggest that the *veglione* at the Pergola theatre was not the first mundane recreation indulged in by the ancient sage with a purpose more carnal than that of forming a rational theory of Savonarola's life and work. One cannot help regretting that his "comfort in having got out of Haddam East Village was perennial." That hardness is, however, less like Mr. Waters than Mr. Howells, who never can permit his readers the luxury of a thoroughly warm feeling for any one. Mr. Howells always chooses to avoid drama and deep feeling; he has a right to select, but the novelist who persistently ignores both or mocks at both, is as false to life in a broad way as the novelist who is always in hysterics. In 'Indian Summer' he has expended his skill on trifles exclusively, yet no one but Mr. Howells of the "Editor's Study" will be hard on him for having written about four hundred pages without any earnest meaning or purpose. Less severe mortals are apt to be grateful for so much admirable fooling.

No novel of this or any season has been more loudly heralded than 'The Late Mrs. Null'; none, after its appearance, has ever had more extravagant and indiscriminate praise. The author is doubtless puzzled to discover wherein he "resembles Rabelais," and why on earth, had he been a contemporary of Swift, the bitter, witty, scurrilous Dean should have "feared" him. Hardly less surprising is the repeated assertion that he is the inventor of an inscrutable kind of humor which flashes and permeates, and altogether discredits Solomon's cynicism about nothing new under the sun. Mr. Stockton's originality consists in arranging a literary puzzle, elaborating it through a series of whimsical situations, finally solving it or not at his pleasure. In short sketches the trick has been preëminently successful, but, applied to a novel, it falls very far short of success. The human mind is so constituted that it wearies of a long sequence of similar ideas and situations; it is most rapidly surfeited with the whimsical and grotesque. Every telling situation in 'The Late Mrs. Null' is either whimsical or grotesque; so is almost every character. The secret of the beginning is soon an open one; then absurdities, very like in kind, follow each other to a farcical conclusion. The improbability, too, of the complication, without which the novel could not have been written, is glaring. Miss Roberta March is represented as a young woman of considerable worldly experience and fashion, though the turn of her sentences does not lend illusion to the representation. Her engagement to Mr. Junius Keswick has been broken off simply because of the unreasonable opposition of one of his relations. This relation, at times a most amusing old person, lives about fifteen miles from the Virginia homestead which, during a portion of each year, shelters Miss March. This relation roams the countryside in a purple sun-shade, brandishing a purple umbrella. She is necessarily an object of interest and talk, and yet Miss March has neither the sense, judgment, nor curiosity which would impel her to get a sight of Mrs. Keswick and thus to decide at first, as she does at last, that the lady is half mad and not worth any sort of consideration. Decidedly the author is weak in constructive power, and no stronger in that of maintaining suspense. His style has not the grace and lightness which make continued trifling or absurdity excusable. Indeed, in description and what may be called "polite conversation" it is conspicuously heavy. The negro characterizations alone save the book from literary failure. They are all good. The description of Aunt Patsy's preparation for a visit of admonition to the "ole Miss," and of her drive in the ox-cart with Uncle Isham, is perfect, and no one would miss a line concerning the wooden Peggy with her gaze fixed on futurity. If the author had only given us the interview in the Post-office, told us what Patsy said to the "ole Miss," and what the "old Miss" said to Patsy, he would have spared most readers a keen disappointment.

The scene of the 'Aliens' is laid in Warchester, on the Erie Canal, early in the present century. The romance is apparently inspired by the author's conviction that the Irish in America labor under a social disability, and suffer what he calls the "curse of social servitude," not because of personal incapacity or viciousness, but on account of their nationality and their condition as aliens. This conviction is probably very firmly planted in the breasts of disorderly and obnoxious Irish-American citizens. The facts of every-day life disprove it, and the facts of Mr. Keenan's narrative do not sustain it. The mother of the Boyne family was not driven to madness and death by hostile Warchester feeling, but by the abuse and desertion of her husband. It is lame to plead that if the Mayor of Warchester had been more persistent in efforts to reward Hugh Boyne for a service, he would not have turned out a drunken brute. The Boyne children were extremely well cared for by Americans, who, instead of obstructing the path of the orphan aliens, gave them every chance to rise above the humble condition in which they had been born. What of failure as what of success they made was due, even as in mortals not Irish or alien, largely to their personal equipment for the struggle of life. Race prejudice had nothing to do with the pretty Norah's disgrace; it was simply the common end of the old tale of the lass who loves unwisely.

In literary form the 'Aliens' is an improvement on 'Trajan.' The plot is much simpler and more coherent, there is less irrelevant lecturing, less exaggeration. But the author's diffuseness and pomposity are still appalling. He has not got rid of the notion that much sound is an equivalent for sense, otherwise he could not have written, "When a day's ride southward from the city of Penn brought the heir of all the ages into a land of legalized helotry, sordid and soulless as the feudalism of Rome." Moreover, he would have known that not all the fine writing that ever was can stamp with reality such people as his Warchesters, with their date of existence and geographical location fully understood. Certainly he must have realized that no polysyllabic *tour de force* could make the arrival of a tow-boat at a wooden pier quite so impressive from a romantic point of view as, let us say, the beaching of the *Argo* on Colchis' strand.

The author of 'Donovan' and what may be called its sequel, 'We Two,' is a pretty fair preacher, but a better novelist. She carries a good story and a religious controversy side by side through two thick volumes with indisputable success. She keeps both well in hand, guiding her people skilfully through strange vicissitudes, and in argument always putting the right thing in the right mouth. The arguments are far from original, so far that they seem to us profitless iteration, but they are also so fair that it is at times possible to forget that the author is the soul of orthodoxy. She means to call in wanderers from the Christian fold, but she neither asserts dogmatically, nor threatens, nor scolds. She provides people of implicit faith, people of little faith, people of no faith, and treats all with impartiality. She displays serious thought, some humor, a good deal of knowledge of life's by-ways, a joy in the good with or without creed, and a wide charity for sinners. The prominence of her serious motive presupposes some prolixity and dulness, but it is easy to get the whole of the story and the gist of the arguments without weariness.

In Mr. Allen's extraordinary production, 'For Mamie's Sake,' the effect of an "Atheist" father's example upon a young girl is a startling contrast to that wrought upon Erica, in 'We Too,' by the moral but wholly irreligious teaching of her father, Luke Raeburn. The drawing of Erica is sincere, pure, intellectual; the drawing of Mamie is the lowest form of mental expression. If the author means anything, he means to ridicule the conception of original innocence, or even decency, in woman; he means to declare that a woman without orthodox religious belief or conventional training is a mere beast that perishes, having in addition human propensity to evil and human power to do ill. But the evidence of the novel is that he only wished to raise a laugh. He has succeeded admirably in exciting disgust and contempt.

'The Vicar's People' come together in a Cornish village, and are well worth reading about. The burden of the tale is borne by a young mining engineer, Trethick, who is delving for his fortune in the worked-out tin mines. The way is made particularly hard for him by Tregenna, a very dark and astute lawyer, who, in advancing his own business and pleasure, manages to do incredible harm to everybody else. Tregenna is too thoroughly a villain for life or art, and Trethick's virtues did not need so violent a contrast for their illumination. Mr. Fenn makes a specialty of parsons, and the academic, not to say priggish, vicar is one of his best. By his strong, unostentatious support of Trethick in the hour of need, he shows that genuine Christianity needed

to redeem men of his office from the irreverent contempt which a narrow and over-refined personality always excites among a vigorous, healthy, and coarse people. Throughout the book there are fresh and vivacious descriptions of scenery, of the fisher folk and miners—altogether enough good things to compensate for the hackneyed complications of the plot.

'Inquirendo Island' is a satire on the forms and ceremonials of the Christian religion, and on its votaries who, eager to force acceptance of individual interpretation of the letter, distort and defy the spirit. The author has appended two letters, called a "Postface," in which he kindly defines his meaning and moral. This is clearly a case where he who fears falling had best not climb at all. It is better never to write a satire than, having written it, to present it with a semi-apologetic explanation. Besides not being complimentary to the author's own literary skill, or to the reader's intelligence, the Postface is obviously superfluous. Excepting to the bigoted or scrupulously reverential, there can be no doubt about the scope of the satire in the tale of the castaway who came unto a land where the arithmetic was the Bible, and where mathematical symbols and terms were substituted for the ceremonies and stereotyped expression of the various Christian creeds. The idea is original, and, by its extremely ingenious working out, forces a realization of the triviality and absurdity of doctrinal disputes and creed slavery. It suffers from over-elaboration. Brevity is as much the soul of telling satire as of wit. When one-half of 'Inquirendo Island' was written, the author should have had some one at his elbow to cry, "Hold, enough!"

Mr. Harland—or Sidney Luska, as he would seem to prefer being called in connection with his novels—still finds his materials among the Jews of New York. It undoubtedly looks as if he had struck a pocket of some depth and richness, too; yet his work is of a character that is not altogether dependent upon the quality of his materials. Like his first novel, 'Mrs. Peixada' is before all a story—one with a distinct beginning, an interest, and an end of its own, and which makes of naturalism merely a vehicle for its progress. It is a very good story, as stories go; thoroughly thought out, well put together, and not painfully melodramatic even in its most striking situations. One cannot overlook the fact that a story made up of telling incidents, strange coincidences, crimes, and casualties, is of but little value; yet much may be forgiven a writer who can throw such an atmosphere of reality over the uncommon happenings he tells about, and whose characters are so distinct and interesting in their personality. Arthur Ripley and his chum, Julian Hetzel, are very pleasant acquaintances. Mrs. Berle, their landlady—whose husband is a commercial traveller and seldom at home—with her host of relatives at their informal gatherings, makes a unique setting for Mrs. Lehmyl. The inevitable cakes and wine that are passed in Mrs. Berle's parlor, the breezy mingling of English and German in the conversation, the music and talk and cigars, are all touches that count. The peerless Mrs. Lehmyl, however, is the one for whom all the rest is spread out as a background. The view of the river from Beekman Place is for her approval; all the music and discussion of Wagner is apropos of her magnificent voice, and leads up to her singing *Lehn' deine Wang*. The chief objection to characters like Mrs. Lehmyl—in whom, long before she becomes Mrs. Arthur Ripley, the habitual novel-reader easily recognizes Mrs. Peixada—is that, as a set-off to some evil-appearing fact of their lives, they must be endowed with so many and such high excellences. They are apt to seem extravagantly painted. It is an inevitable drawback, however, to any novel which has its tragedy at the wrong end, that there must always be a shadow over the lives of some of the actors. We hope that Sidney Luska will use his undoubted faculty for story-telling in a way that will bring his readers closer to humanity, and lead both him and them entirely away from melodrama and sensationalism.

'The Mill Mystery' is a sensational novel with none of the excellences that save Sidney Luska's novel from being worthless. It is as vicious in plot and style as 'The Leavenworth Case,' and less ingenious. It is nonsensically unreal, and, to the class of readers who will like it, mentally demoralizing. One despairs of a public that keeps up so steady a demand for such books.

'Christie's Choice' is hardly up to the average. The characterization is dim and uncertain, and the attempt to awaken a strong interest by recounting the misfortunes which the war brought to the Roystons—an old Virginian family—is very lame. The liberal spirit toward the North is pleasant to notice, but it seems more the spirit of the writer to-day than of the people and time about which he writes.

Mr. Dowling names his novel 'The Wreckers,' and calls it a social study, while in a modest foreword he acknowledges, in Carlyle's words, "It may be poor enough stuff, but it was the best there was in me." He ought, nevertheless, to remember another saying that Carlyle was fond of—one which he got from the great Frederick.

In 'The Prelate' we are once more treated to a glimpse of the life of Americans in Rome, but one is far from being satisfied with the motive of the story or with the execution. The list of American heroines who have innocently violated the strict etiquette of the effete monarchies—to the consternation of their friends, and to the amusement of the American reader safe in the freedom and confidence of his own shores—was already quite long. It is made altogether too long by the addition of Helen Rathborne, whose *faux pas* was taken with open eyes, and who made a very serious matter of the consequences. Her love affair with Altieri—to warn whom of some unexplained peril from the Vatican she challenged the tongue of slander—seems strained and unnatural. The catastrophe is one of those gratuitous tragedies the very unexpectedness of which proves their lack of artistic truth. The book is further weighted down too heavily with the discussion of theology and the Old Catholic movement.

Of course 'Our Sensation Novel' cannot be taken seriously, even though Mr. Justin H. McCarthy regrets that he is not the writer of it. At least he is godfather to the book, and may some day tell how he came by the manuscript. After all, it is only tolerably clever and half-way amusing. The chapters which parody Thackeray remind one of a base-ball player's first game at tennis, while Victor Hugo is as clumsily handled.

HODGKIN'S INVADERS OF ITALY.

Italy and her Invaders. By Thomas Hodgkin, Fellow of University College, London, Hon. D.C.L. of Durham University. Vol. III. The Ostrogothic Invasion. Vol. IV. The Imperial Restoration. Oxford: The Clarendon Press; New York: Macmillan.

EVERY student of that most important and difficult period which intervenes between ancient and modern history will be rejoiced to have a fresh instalment of Mr. Hodgkin's work. The most important fact of this transition period—next, at least, to the Christianization of the world, which was accomplished at this very time—is the slow incorporation of the German nationality into the classical world; and there is perhaps no event in all history which is harder to make real and intelligible to the modern age than just this. This difficulty finds expression, indeed, in the uncertainty and variety of the terms used to describe it. Whether we call them "barbarians" or "German tribes"; whether we call the act of their settlement in the countries of the Empire a "migration," an "invasion," or a "conquest;" our choice of terms depends principally upon the point of view from which we look at the events, and the conception we form of the changes wrought by them. A book, therefore, which, like the one before us, aims—without much theorizing or defining—to tell just what took place and how it took place, is most welcome and helpful. Mr. Hodgkin does not lack the capacity or the taste for general views; but he knows very well that these need to be built upon a thorough knowledge of concrete facts, and that no period of history has suffered more from hasty and one-sided generalizations than the one which he is treating. As an Englishman, he is free from the national bias which is so apt to warp the judgment of French and German historians; and his general remarks, when he presents any, are always weighty, well considered, and forcible.

These new volumes have in themselves much greater unity than the two earlier ones, and are decidedly superior as historical compositions. The first two volumes contained, besides introductory matter, four independent series of events: the history of the Visigoths, the Vandals, and the Huns, and the revolution of Odoacer. Independent, that is, so far as contemporary historical events can be independent of one another, and each of them (except the last) relating quite as much to other countries as to Italy. This feature, indeed, while destroying the unity and continuity of the work, increased its value to the student, for it is, to all intents and purposes, a complete history of the barbarian migrations during the period which it covers. The two new volumes, on the other hand—half as large again as their predecessors—are devoted to the history of a single well-defined series of events, the establishment and overthrow of the Ostrogothic empire. The downfall of the Vandal dominion is related incidentally, and we learn a good deal of the contemporary history of the Franks, Burgundians, Alemannians, and even the Visigoths, so far as these events are directly connected with the history of Italy; but these nations are neglected except where their history bears directly upon the subject of the book.

The greater unity of the subject has made possible greater freedom and effectiveness of treatment. No doubt the subject is itself more noble and picturesque, being the history of three such heroic characters as Theodoric, Belisarius, and Totila. The greater fulness of materials, too, than in the earlier period, is a great help to the historian, and we must not leave out of consideration the increased facility of pen that comes with practice. From all these causes we have a work of great literary merit, placing Mr. Hodgkin high in our list of contemporary historians. We will mention as especially good the account of the defence of Rome by Belisarius, and the whole story of the career of Totila.

The question how to define the movements of the German tribes and their relation to the imperial Government must receive a different answer in different cases. In some cases it was a conquering invasion, in some a simple migration; and the difficulties and controversies of the subject are partly caused, at least, by the different points of view of different writers. Nor, in any one case, is it expedient to be over-logical: the relations of the same tribe varied, and even when relations were unchanged, legal rights and obligations were not always observed. The Ostrogoths, for example, as Mr. Hodgkin is careful to point out, were *fœderati*—that is, allies of the Roman Empire; and it was distinctly in this ca-

pacity, as allies of the Emperor and at his instigation, that they invaded Italy and overthrew Odoacer. And there had been no formal change in the relation, or in the duties growing out of it, when the successor of this Emperor sent his armies against the successor of the Ostrogothic invader, and put an end to the rule of the Ostrogoths, as these had put an end to that of Odoacer (see the discussion, vol. iii, p. 435). Thus, the Ostrogoths conquered Italy, to be sure, but conquered it not from the Empire, but from an alleged usurper. And they themselves, from being subjects, and, so to speak, agents of the Empire, coming to assert for themselves a virtual independence, were in their turn regarded as exercising a usurped power, like their predecessors, and treated as enemies. All the phases in these shifting relations are clearly brought out in the book before us.

We see, too, by concrete examples, exactly what was the relation of *fœderati* sustained by so many of these Germanic nations—a puzzling, anomalous relation at first sight, because they were not independent nations, allied to Rome, as the name would indicate, but were on the soil of the Empire itself, residing in territories assigned to them, or wandering at large over the provinces. The anomaly is partly explained by the fact that the treaty relations were in many cases formed while the tribes were still outside the boundaries of the Empire, and were continued after they had crossed into its territories. But the true explanation is to be found in the tribal organization in which these nations still were; and we in the United States can form to ourselves a clearer notion of the relation from the fact that it is essentially that which has existed between our Government and the Indian tribes. In matters of detail there is a great difference. It is now generally agreed that the elaborate parallelism drawn by M. Guizot between the North American Indians and the Germans of the migration is superficial and deceptive. The Germans were certainly at a higher degree of political development than even the Iroquois, the furthest advanced of the Indians; and, without undervaluing the natural capacity and teachableness of the Indians, it is hard to conceive of Red Jacket and his Senecas as occupying the place of Theodoric and his Ostrogoths. Again, the *fœderati* were intruders, not natives of the soil. But this fact only makes the analogy more striking; it shows that the treaty relation had its origin, in both cases, not in the fact that they were a foreign people, but in the fact that their tribal organization kept them a foreign people, even on the soil of the Empire.

Another interesting point of analogy is in the relation to the land. The *fœdus* which assigned Macedonia to the Ostrogoths (vol. iii, p. 29), established a condition of things not unlike that which fixes the Sioux or Nez-Percés upon a reservation. The title to the land is not the same. The very name *reservation* shows that they, the original owners, kept this part of their land while giving up the rest; while the lands of the Ostrogoths were a *grant*. But the Ostrogoths upon their grant were very much like the Nez-Percés on their reservation. There is, of course, one fundamental point of contrast: the *fœderati* were soldiers of the Empire—that was the very object of the treaty relations; while a very natural policy forbids the employment in our army of those auxiliaries who disgraced the army of Burgoyne. But we can at least conceive of Indian contingents in our army—we believe they have been used to a moderate extent; and we have heard that it was seriously proposed to give a commission to Chief Joseph. Chief Joseph as major-general in our army and Governor of Idaho, would have afforded a pretty exact parallel to Theodoric as *consul ordinarius* and *magister militum*.

We have already referred to one or two points of special excellence in these volumes, and many others might be mentioned. The sketch of the aqueducts is very complete and interesting, and the passage which describes the historical results of their destruction by Witigis is very suggestive. From this time, the author says, the Roman people will be found much changed—"in some respects better people than their ancestors, more devout, less arrogant, perhaps less licentious, but they will not be so well washed a people." A very graphic passage is the description (vol. iv, p. 568) of the desolation of Rome after its capture and abandonment by Totila: "Rome itself, though not ruined, was left without a single inhabitant." The reflections that follow are excellent; and when (p. 614) we are told that Diogenes, the defender of Rome in its third siege, "had some great breadths of land within the walls sown with corn," converting the city into "a little, well-ordered, and prosperous farm," we seem to get near to an explanation of that most puzzling phenomenon, the covering even of the hilltops of Rome many feet deep with earth and rubbish.

We must not pass over without mention the chapters and paragraphs which treat of ecclesiastical history, which are admirably fair and lucid; but, indeed, every page of the work shows the fruits of conscientious industry and literary skill.

Signs and Seasons. By John Burroughs. Boston: Houghton, Mifflin & Co. 1886.

A BOOK by John Burroughs is itself a sign of the season, a kind of warning that it is time to leave our books and see the flowers and the birds come; but it is well to spend a morning over his pages first, and educate our eyes a little. For some reason this new volume has been somewhat disappointing to us. There is the same exactness of observation, the same sense of a greater intimacy with wild life than is open through any other introduction, the same comradery of our guide with nature. We note his giving up faith in the birds' and "beasties'" foreknowledge of hard or open winters, and in general an impression that the life of wild creatures is less securely guarded by instinct than we have come to believe—is tentative, dangerous, and attended by much bad fortune. We follow him to the Maine woods and the seashore, or stay by his home on the Hudson, with equal pleasure, and glance into those parts of his note-book and correspondence which he opens for our profit; and yet, at the end, it does not seem that we had been much out-of-doors. Can it be that the naturalist himself has become somewhat sophisticated? A suspicion of this sort would glide into our minds, and disturbed our enjoyment.

The book has a literariness which is very pronounced, and which interferes sadly with the simplicity of the common sounds and sights of nature which it reports. Mr. Burroughs was not a born writer, and the vice inherent in any adopted style (especially after such a model as Emerson) has grown upon him. He not infrequently aims at a literary effect, usually in the region of landscape sentiment, as one may call it, and, as he is not a poet, the results are displeasing. This is the case in a greater degree because his style—Emerson's style—is selective, and requires unerring justness of taste. The wrong word, the wrong antithesis, become the more awkward, and it is harder to pass over them. What could be more distinctively "literary" than this characterization of Whitman?

"Whitman is essentially of the shore: his bearded, aboriginal quality, something in his words that smite and chafe, a tonic like salt-air, not sweet, but dilating; his irregular flowing, repeating, elliptical lines; his sense of space and constant reference to the earth and the orbs as standards and symbols. His poems are rarely architectural or sculpturesque, either to the eye or mind: no carving and shaping merely for art's sake; but floating, drifting, surging masses of concrete events and images more or less nebular, protoplastic, and preliminary, but always potent and alive, and full of the salt of the earth, holding in solution as no other poet does his times and country."

"Words, words, words," surely, if anything ever was! And on this follows an exclamatory paragraph upon the sea, full of antithesis and rhetorical ambition—"the great canceller, leveller, distributer, neutralizer, and sponge of oblivion," etc. And yet in this passage, which is not conspicuously bad except in its affectation, the ocean is called "the cesspool of the continents," and the waves are spoken of as "creeping up the sands as with the rustle of an infant's drapery"! To all such language we would our author, who charms us with the simplicity of nature, might bid a long farewell; it is not for him to wear the finery of speech.

The Kilima-Njaro Expedition: A record of scientific exploration in Eastern Equatorial Africa, and a general description of the natural history, languages, and commerce of the Kilima-njaro district. By H. H. Johnston. With six maps and over eighty illustrations by the author. London: Kegan Paul, Trench & Co. 1886. Pp. xv, 572, 8vo.

THE terrestrial paradise in Eastern Africa, described in such glowing colors in Thomson's 'Through Masai Land,' loses none of its charms in the present volume. In some respects the later of the two accounts is the more attractive, while it is a record of a much longer stay among the scenes pictured. The object of Mr. Johnston's expedition, sent out under the joint auspices of the Royal Society and the British Association, was simply to investigate the fauna and flora of the mountain district of Kilima-Njaro, in the hope that it might prove to be "a refuge and last abiding-place for low types or peculiar forms," possibly even of man. With this end in view, he made a settlement on the side of the mountain at an elevation of about 5,000 feet, where he lived for nearly six months. During this time, notwithstanding he had no assistant trained to prepare specimens, and was often thwarted by the natives for weeks together, he succeeded in making large collections of plants and animals, many of which were new to science. In addition to this, he collected vocabularies of four different languages spoken by the inhabitants of the district, and made grammatical studies of two. These latter investigations will doubtless throw much light upon the question as to the original language of the negroes inhabiting Africa south of the equator.

More interesting, however, to the general reader than these linguistic discussions, which, with the chapters on the scientific results of the expedition, are put at the end of the volume, will be the lively and entertaining descriptions of the country, the people, and the author's adventures among them. He appears to have shown great tact and patience, as well as resolution, in his dealings with the natives, whose chief characteristic seems to be an insatiable greed. Notwithstanding that the inhabitable country is portioned out among numerous independent tribes who are always at war with one another, and that he was several times attacked, he was able to avoid the use of firearms in self-defence except in a single instance. Once he warded off an assault by the threatening appearance of a theodolite mounted on its tripod stand. At another time an opportune display of fireworks, in which the

"flaming shower and shrieking rush" of a rocket played an important part, put to flight an overwhelming force of hostile natives. The fame of this exploit rapidly spread, and he was naturally regarded as a powerful magician by the whole people of the country. Several attempts to reach the summit of the mountain failed, partly on account of the unfavorable weather, but chiefly through the superstitious fears of the natives, who could not be prevailed upon to accompany him. He was able, however, to reach the snow at an elevation of 16,315 ft., or within nearly 2,000 ft. of the summit.

In the closing chapter Mr. Johnston discusses the "commercial prospects" of this region. There can be no doubt that it offers unusual advantages to the trader or the settler. It is only a fortnight's journey from the coast, and, though but three degrees south of the equator, has in the higher portions a temperate climate. The middle mountain region on the southern slope is easily irrigated and astonishingly fertile. Besides tropical productions, all kinds of European vegetables were grown in the garden of Mr. Johnston's settlement. It is free from the pests which make a residence in other parts of Africa almost unendurable; mosquitoes, for instance, being "entirely absent from most parts of the country." The plains at the foot of the mountain are roamed over by vast herds of game, which will no doubt in time give place to equally vast herds of cattle. The natives are friendly, and ready to welcome traders who deal honestly with them. They are beginning to feel the first desires after the benefits which civilization can confer. It is indeed almost with a shock of incredulity that we read that the now well-known chief Mandara, still to all appearance a mere naked savage, wanted Mr. Johnston "to open a banking account for him at Zanzibar, and he had a distinct though crude idea of drawing cheques." This chief appears to be the only one, according to late German accounts, who has as yet successfully resisted the agents of the East-African Society, which has—on paper at least—recently annexed this whole region. There were rumors of this at the time of Mr. Johnston's visit in 1884, and Mandara was especially uneasy. "His suspicions and fears" of the French and Germans, says the former, "were positively ridiculous, considering that they both ignored his existence, and had never at any time evinced the slightest wish to annex Kilima-Njaro." The savage was better informed than the Englishman, for, not eight months after Johnston left, the annexation was announced, in which an obscure reference to Mandara leads one to conclude that a treaty had not yet been obtained from him. It only remains to say of this very entertaining book that the author's style is simple and well adapted to his subject, his account of a day's occupation, for instance, being a charming piece of descriptive writing. It may be well to mention that Professor Bonney is President of the Geological Society, not of the Geographical Society, as by a mere slip of the pen at page 328 he is termed. Some excellent illustrations and maps add much to the value of this work.

Beaton's Bargain.

A London Society Novel. By Mrs. ALEXANDER (author of 'The Wooing O't,' 'Her Dearest Foe,' etc.). FIFTH THOUSAND NOW SELLING. Leisure Hour and Moment Series, $1 or 25 cts.

The Captain of the Janizaries.

A Novel. By James M. Ludlow. 12mo, $1.50.

"The story is stirring, vivid, and impressive, less as a whole whose plot is ingenious than as a collection of episodes, each brilliantly written and so suggestive as to interest the reader apart from the mere story. The author has a rare command of language, and the book would be worth reading if only for the series of striking pictures it presents. It is a tale of 'local color,' and we have so few really picturesque writers that the book might be welcomed even without its contribution to historical information."—*The Critic.*

A Treatise on the Most Modern Methods of Dressing Artificial Flies for

TROUT AND GRAYLING.

With full illustrated directions and containing ninety hand-colored engravings of the most killing patterns, and accompanied by a few hints to dry-fly fishermen. By FREDERIC M. HALFORD.

A large-paper edition printed on Dutch hand-made paper, limited to 50 for America, vellum, $12.

A Chronicle History of the Life and Work of

WILLIAM SHAKESPEARE

PLAYER, POET, AND PLAYMAKER. By FREDERICK GARD FLEAY, author of the 'Shakespeare Manual.' With two etched illustrations. Fine paper, medium 8vo, half leather, gilt top, $4 50.

The theatrical side of the career of Shakespeare has never yet received any adequate consideration, his connection with the theatres and acting companies in his earlier years not having been traced or even investigated. His relations with other dramatists, especially with Jonson, have also been grossly misrepresented. While every idle story of mythical gossip has been carefully collected, and the pettiest details of his commercial dealings have been garnered, little attention has hitherto been given to his dealings with the plays by other men with whom he was fellow-worker, and a large group of evidences bearing on the chronology of his work, derived from the early production of English plays in Germany, has been cast aside as valueless. In this work an attempt is made to collect this neglected material, to throw new light on the Sonnets, and to determine the dates of the production of all his works. A complete list of all plays published with due authority anterior of 1640 by any dramatic writer is given from the Stationers' Registers. Many unfounded hypotheses of Collier, Halliwell, and others are for the first time exploded, and the work of ten years' investigation is condensed in a single volume. In many instances one paragraph represents months of labor, and it is hoped that a permanent addition of value is thus made to Shakespearian literature. The arrangement of the book is made so as to appeal not merely to the specialist, but to every one who feels an interest in the greatest writer of any literature, and the crowning glory of our own.

Through the Kalahari Desert:

A Narrative of a Journey with Gun, Camera, and Note-Book to Lake N'Gami and Back.

BY G. A. FARINI.

With Map and 44 Illustrations. Demy 8vo, cloth, $5 00.

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Charles Scribner's Sons'

HAVE JUST READY.

The Midge.

By H. C. BUNNER, author of 'Airs from Arcady.' 1 vol., 12mo, $1.00.

Mr. Bunner writes so few books that any announcement of a new volume from his pen is especially welcome. 'The Midge' is a story of one of the most interesting and least known phases of New York life. The French quarter, with its odd characters and its Bohemianism, which Mr. Bunner pictures with such cleverness, offers a particularly effective background to his very charming love story, told with the skill which the author had so often shown in his shorter tales.

Mrs. Burnett's Novels.

Messrs. SCRIBNER take pleasure in announcing that, having become the publishers of all of Mrs. Frances Hodgson Burnett's works, they have begun the preparation of a new, uniform library edition. It is hardly necessary to speak of the immense popularity of Mrs. Burnett's writings, or of the need which has so often been expressed of her books in a form suitable for preservation upon the library shelves.

THE VOLUMES NOW READY ARE:

That Lass o' Lowrie's.

One volume, 12mo, extra cloth, $1.25.

"The best original novel that has appeared in this country for many years."—*Philadelphia Press.*

A Fair Barbarian.

One volume, 12mo, extra cloth, $1.25.

"A particularly sparkling story, the subject being the young heiress of a Pacific silver mine thrown amid the very proper petty aristocracy of an English rural town."—*Springfield Republican.*

The Boat-Sailer's Manual.

By Lieut. EDWARD F. QUALTROUGH, U. S. N., author of 'The Sailor's Handy Book.' 1 vol., 8vo, illustrated. $2 00 net.

A volume of the most absolute value and importance to all interested in boats and sailing. It contains a complete treatise on the management of sailing-boats of all kinds and under all conditions of weather, concise descriptions of the various rigs in general use at home and abroad, directions for handling sailing canoes, and "the rudiments of cutter and sloop sailing," etc., etc.

For sale by all booksellers, or sent postpaid to any address on receipt of price.

BOOKS OF THE WEEK 434

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.

Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

Scale of Agate lines.

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27. — 5

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top. — 10 — 15

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography (subject to approval). Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 9,100 copies. The Subscription List is always open to inspection.

*** Copies of THE NATION may be procured in Paris of J. G. Fotheringham, 8 Rue des Capucines; and in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; H. F. Gillig & Co., 449 Strand; and American News Reading Room, 8 Haymarket.

The Midnight Cry.

A NOVEL.

By JANE MARSH PARKER.

12mo, Cloth, $1.

"*The Millerite delusion has furnished more than one novelist with a theme, but it has furnished the motive for no more intense and touching story than 'The Midnight Cry,' by Jane Marsh Parker. It is difficult, at this distance of time and the religious atmosphere of to-day, to understand the hold which this belief took upon people half a century since, but the reader of the present volume is made to enter into it so fully that he almost feels as if sharing in that awful waiting for the cry of the angel which was to announce the coming of the Lord and the Day of Judgment. The novel is decidedly out of the conventional line, and is written with much vigor and picturesqueness.*"—Boston Courier.

DODD, MEAD & COMPANY,
PUBLISHERS, NEW YORK.

AN IRON CROWN.

A Decided Success! A Second Edition Already Called For.

WHAT ARE THE ESSENTIALS OF A GREAT NOVEL? Nobility of conception, strength and delicacy of imagination, skill in execution, fidelity to nature, graphic vigor of style, sympathy to stir the heart.

'An Iron Crown' has all of these. It is distinctively an American novel, and it is an unequaled exposé of the prevalent political, corporate, and commercial dishonesty of the day.

"Whether the great American novel has been written remains to be decided after this book shall have been widely read."—*Chicago Evening Journal.*

"A highly entertaining and powerfully written book."—*Magazine of American History, N. Y.*

"In a well-told tale deals with some of the questions which are to-day stirring the great American Republic from centre to border."—*Toronto Globe.*

"The plot is well conceived and admirably conducted. The characters are happily drawn."—*Globe-Democrat, St. Louis.*

"The question will be asked, who is the man with the power, skill, and inclination to write such a masterly arraignment? It is in every respect a work likely to create a sensation."—*Pittsburg Commercial Gazette.*

Events Now Occurring Cause Parts of This Remarkable Book to Read Like a Prophecy.

Price, $1.50. 560 pages. Ask your bookseller to order it, or address T. S. DENISON, Publisher, 163 Randolph St., Chicago.

What T. DeWITT TALMAGE and OTHERS say of Geo. Thos. Dowling's New Novel.

THE WRECKERS.

A SOCIAL STUDY.

Fourth Edition Now Ready.

12mo. Cloth. $1.25.

"The immediate success of 'The Wreckers,' by Geo. Thos. Dowling, does not surprise me, for I have watched him all along on his way to the front. Now he puts into the press a book, brilliant, life-like, unique, timely, and useful. It is certain that, as an author, he will fully equal his great power as a preacher."—T. DEWITT TALMAGE.

"It is full of life and movement, and we fully expect to see it dramatized."—*Philadelphia Inquirer.*

"'The Wreckers' is a social study, dealing with humble types of life, with a thoroughly fascinating plot, and one elaborated with skill and ingenuity."—*Boston Evening Traveller.*

"The story becomes intensely dramatic. The demand for it in this city has taken on the character of a rush."—*Cleveland Plaindealer.*

"It is an excellent story, abounding in good lessons. In its romantic characters, fine descriptions, sarcasms without bitterness, with its friendly interwoven argument, the author proves himself no novice, even if it is a first effort in fiction."—*Chicago Inter-Ocean.*

"A book like 'The Wreckers' will help better to a comprehension of our duties to each other, and a proper understanding of the rights and needs of labor, than would volume upon volume of essays on political and social economy."—*Philadelphia Record.*

THE WEALTH OF HOUSEHOLDS.

By J. T. DANSON. 12mo, cloth, $1.25.

OXFORD: CLARENDON PRESS. NEW YORK: MACMILLAN & CO.

The substance of this work was first put together by way of using the experience of a man of business on the education of his children . . . . Being out of print, it is now entirely rewritten as a Text-book, and with especial reference to some of the economic questions of the day.

Among the subjects treated are Exchangeable Value—Sources of Income—Wages—Profit—Rent—Interest—Commerce—Capital—Credit—Money— Competition — Taxation — Pauperism — Foreign Commerce—Property in Land—Socialism, Communism, and Nihilism.

HISTORY OF ASTRONOMY
DURING THE NINETEENTH CENTURY.

By A. M. Clerke. Post 8vo, cloth, $4.00.—Contents: Astronomy During the First Half of Nineteenth Century—Recent Progress of Astronomy.

"The authoress has modestly described her 'History of Astronomy' as a popular work. We certainly hope that the book will be as popular as it deserves, and that it will be widely and extensively read. We think, however, that few men of science who use this book will think that it ought to be classed as a popular work in the ordinary acceptation. It might be more correctly described as a masterly exposition of the results of modern astronomy in those departments now usually characterized as physical. The work has been most skilfully and faithfully executed, and we heartily recommend it to every one who is interested in the noblest of the sciences."—*Nature.*

The Nation.

NEW YORK, THURSDAY, MAY 20, 1886.

The Week.

THE appointment of a Collector of Internal Revenue is in itself a comparatively trivial act, but circumstances may render the President's action in filling such an office a matter of general interest. Such is the case with regard to Mr. Cleveland's selection for the Boston Collectorship. A year ago, through too implicit reliance upon party advisers whom he did not know so well then as he does now, he was persuaded to appoint Pillsbury to this place. The Senate rejected the nomination, and Mr. Cleveland's course in choosing Pillsbury's successor became a test of his fidelity to reform. After taking ample time for reflection, he has picked out Mr. John E. Fitzgerald, a Democrat of high character and of proved executive ability, a sincere believer in civil-service reform, and an outspoken advocate of better methods in politics—in short, a man thoroughly satisfactory to all Independent voters. All the circumstances of Mr. Fitzgerald's selection emphasize its significance. He was so far from being a seeker after the office that the President had to urge him to accept it as a duty. In an interview with him, as reported by a trustworthy Washington correspondent, "Mr. Cleveland expressed an earnest desire to make such appointments in Massachusetts as would give satisfaction to the Democratic party and to the young Independent element, whose work in the campaign of 1884 proved so powerful an aid to the Democratic party, and whose influence, the President believes, can be made a powerful factor in securing good government and in building up the party. He remarked incidentally to Mr. Fitzgerald that he did not know very much about affairs in Massachusetts, and what he desired as much as anything was accurate and trustworthy information about men. He wanted to appoint men of real standing to office, and not mere hangers-on and place-hunters. He did not seem to have a very high opinion of town committees as a source of information about candidates for office." The Blaine organs have been rejoicing over the story that the President had finally resolved to "abandon the Mugwumps," and prophesying that he would administer a pointed snub to the Independents every chance he got. The more abandonment and snubs of the Fitzgerald sort the Mugwumps suffer, the better will they like it.

The thriving little city of Springfield, Mass., is preparing to celebrate the 250th anniversary of its foundation next week, and has been felicitating itself upon possessing the fresh distinction of being a port of entry. Early in the session the business men made a push for the enactment by Congress of a law constituting Springfield a port of entry, and a few days ago the bill was sent to the President, who was expected to sign it as a matter of course. But on Monday Mr. Cleveland returned it with a statement of his objections, which are that, instead of increasing the number of ports, and thus the intricacies of the present system for collecting customs duties, the system itself should be reformed; that an experienced force of employees at the ports where goods for Springfield are admitted would be much better qualified to adjust the duties upon the same than the Surveyor of Customs at Springfield, whom it is proposed to add to the vast army of Federal officials; that there are many cities in the different States having larger populations than Springfield, and fully as much entitled (upon every ground presented) to the advantages sought by this bill; and that the following of precedents which the proposed legislation would establish could not fail to produce confusion and uncertainty in the adjustment of customs duties, leading to irritating discriminations and probable loss to the Government. Of course, the expense of these little inland custom-houses would not stop with the appointment of a Surveyor of Customs at each place. The Surveyor, in due time, would want clerks and office room and a bonded warehouse, together with furniture, stationery, lighting, heating, and repairs. Very few persons knew that any such bill was pending until the President returned it with his objections. The reasons why it was passed are still unknown to the country, and will probably forever remain a secret.

One of General Grant's notable services to the country as President was his firmness in blocking a threatening raid of the pension demagogues upon the Treasury by his refusal to approve the equalization of bounties scheme nearly a dozen years ago. This was a project for giving the soldier who received a small bounty early in the war the difference between that sum and the larger amount paid later in the struggle. The fatal defect of the proposition consisted in the fact that no real equalization was possible, since it was as unfair that a man who enlisted near the end of the war and never saw active service received $300, like the man who enlisted in 1862 and went through a score of battles, as that a man who enlisted in 1861 for three years received only $100, while another who enlisted in 1862 got $300. No one could tell how much the equalization scheme would cost, but $100,000,000 appeared to be a reasonable estimate. General Grant saw the unfairness of imposing upon the taxpayers so heavy a load for so unjustifiable a purpose, and when the bill came to him in the expiring hours of the Forty-third Congress on the 4th of March, 1875, he vetoed it and defeated the scheme.

It was hoped that this defeat of the project by the most distinguished soldier of the war meant its death, but it has maintained a lingering existence ever since, until Senator Logan has taken advantage of the present pension craze in Congress to report another bill for this purpose. In advocating its passage he says that "the reasons assigned by the President for his failure to give it his approval when it passed both houses in the Forty-third Congress—that the depleted condition of the Treasury would not warrant the payment of so large a sum—cannot be assigned at this time." Cannot, indeed? Senator Logan has apparently never taken the trouble to investigate the present and prospective condition of the Treasury. If he had done so, he would have learned that the estimated expenditures for the next fiscal year (beginning with July 1, 1886) exceed the estimated revenues by nearly $25,000,000, according to Secretary Manning's figures last December, while the act increasing widows' pensions since passed will swell the deficit to about $30,000,000. Moreover, Senator Logan is disingenuous when he gives the impression that General Grant based his veto solely upon the ground that the Treasury could not stand the strain. He gave another reason, which is now, as it was then, conclusive against the scheme, whether the Treasury were full or empty, in these words:

> "Second—I do not believe that any considerable proportion of the ex-soldiers who, it is supposed, will be the beneficiaries of this appropriation, are applicants for it, but rather it would result more in a measure for the relief of claim agents and middlemen, who intervene, or would intervene, to collect or discount the bounty granted by it."

Happily, if the Congressional demagogues should in 1886 again pass this $100,000,000 Equalization Bill, the taxpayers may depend upon a Democratic President to protect the Treasury, as a Republican President did when a similar raid was made in 1875.

A cable telegram from London supplies the long-concealed reason of the Canadian authorities for seizing the fishing schooner *David J. Adams*. It was drawn out by an inquiry in Parliament, which led to the statement on the part of the Under-Secretary for the Colonies that "the schooner had not complied with maritime law, had concealed her name, her port, and her register; that the case would be investigated in the Halifax Admiralty Court, and that no question of territorial waters was involved." This was the substance of a reply made by the Marquis of Lansdowne, Governor-General of Canada, to an inquiry from Lord Granville. Other information corroborates this, but there can scarcely be a doubt that the seizure was made for a different reason (viz., bait buying), and that the fact of the *Adams* being without regular papers, and having thus committed an infraction of maritime law, came in as a lucky accident, and supplied an afterthought to justify what would otherwise have been a serious breach of international comity.

The amendment to the Dingley Shipping Bill, passed by unanimous vote of the Senate on Monday, authorizing the President to accord to the vessels of foreign countries the same trading privileges that they accord to our vessels, is of course intended to put a little common sense into the heads of our Canadian neighbors, who are now seizing American fishing vessels for the offence of buying bait in their ports, in violation, as they say, of the Treaty of 1818. That treaty admitted our fishermen to Canadian ports for shelter, repairs, wood, and water, and for no

other purposes. Since that time, however, both Great Britain and the United States have extended the privileges of foreign vessels in their ports to all the subjects of lawful trade except the coastwise carrying trade, the laws of Great Britain including that also. At all events the contention on our side is, that the Treaty of 1818, as regards trade, but not as regards fishing limits, has been specifically superseded by subsequent legislation. Of this there can be very little doubt. Still less can we doubt that the technicalities which surround the fishing business — and they are certainly numerous—must yield to the prime consideration that what the Canadians are willing to sell, whether it be firewood or ice, tarred rope or bait, we have the right to buy. The right to fish within the three-mile limit is a different matter altogether, and when any such question is raised it must be considered by itself; but the right to buy herring for bait is in nowise different from the right to buy herring for food. There can be no two opinions upon this question among us. Those who regard this whole fishery dispute as an unworthy trick and device to tax the people of the United States a cent a pound on their fish food for the benefit of a class whose industry, according to their own account, has been increasing, and therefore flourishing, without any duty these ten years past, are bound, equally with all others, to uphold the common rights of maritime intercourse for fishermen, as well as for everybody who finds his livelihood upon the sea.

Mr. Blair got his little pension bill before the Senate on Thursday, and urged its passage on the ground that it would take "only $25,000,000" a year out of the Treasury—which is, of course, a mere bagatelle to the New Hampshire statesman. An excellent speech against the scheme was made by Mr. Berry, of Arkansas, an ex-Confederate soldier, whose chief points are thus summarized:

"Mr. Berry said the Senate was asked to vote on this bill with eyes closed. The Committee gave no estimate of the amount of money it involved. Even the personal opinion of Mr. Blair upon it was admittedly indefinite, and the Senate could not say whether the amount called for by the bill would be $25,000,000 or $50,000,000. Nobody denied that the men who defended the flag were entitled to reward—least of all would that be denied by the men who had opposed them; but it did not follow that every other obligation should be ignored, or that we should be unmindful of the rights of the vast number of people in this country who were not soldiers. Mr. Berry thought it time to call a halt. He did not believe the Union soldiers wanted this bill. As a rule they were men able to take care of themselves. He judged of the Union soldiers by their opponents in saying that he did not believe they wanted this bill. The soldiers of the South, he said, returned from the war to find only lone chimneys standing to mark the places where happy homes had stood. Yet those soldiers had worked their way out of their difficulties. He had never known an Arkansas soldier to beg for bread or become dependent on the public for support. He (Mr. Berry) was opposed to the bill—not that he is not as loyal a citizen and as proud of his American citizenship and of his country as the men that had followed General Grant, but because the condition of the soldiers did not demand it, and the condition of the people and their finances did not warrant it."

It would scarcely be possible to state more strongly the argument against the proposed law of Congress to tax bogus butter out of existence than it is stated in an article in the *Ohio Farmer*, by Mr. J. T. Brooks. The fact is brought out with great clearness that the rights of those who make butter out of tallow are as sacred as the rights of those who make it out of cream, and that legislation discriminating against one of them may be invoked against the other and against all other trades and occupations in turn. In other words, it will eventually devolve upon Congress to decide what trades and industries, harmless in themselves, people shall be allowed to make their living by. Mr. Brooks holds that when laws shall have been passed to prevent the deception of the buyer, so that he may know exactly what he is buying, all the ends of safe and proper legislation will have been reached. Anything beyond that is a dangerous infringement of liberty.

Governor Hill's appointment, for it really is his, of John O'Brien as Receiver of the Broadway Railway is thoroughly bad. Mr. O'Brien is Chairman of the Democratic State Committee and the largest contractor upon the new aqueduct. He is generally believed to be hand-in-glove with Squire, and to have organized with him and John J. O'Brien the "deal" by which the new Aqueduct Bill was passed. He is a politician pure and simple, who believes in using every office and position of public trust for the benefit of his party. His appointment means the introduction of "politics" into the settlement of the Broadway Railway controversy, and greatly complicates a case which was sufficiently complicated before. The Governor's hand in the selection is perfectly plain. The appointment was approved by Judge Parker, who was himself Chairman of the Democratic Executive Committee of this State in the campaign in which Governor Hill was elected, and whose services in that campaign the Governor rewarded by making him a Supreme Court judge in place of the late Judge Westbrook. The Governor is using every appointment in his gift as a means for building up in the State a Hill Machine which will boom him as a Presidential candidate. He was elected as a genuine Jeffersonian Democrat, who represented the spoils wing of his party, and he is simply carrying out the doctrines which he has always professed.

There is a curious experiment being made by the politicians of both parties in this State, and we shall watch with great interest to see how it results. Governor Hill is doing his best upon the one hand to make himself a Presidential nominee by the use of patronage. He makes an occasional pretence of zeal for the public good, but it is usually very feeble, and is so thinly disguised that it deceives nobody. He has the solid Democratic organization behind him, and he may be said to represent an organized and systematic movement of the Democratic party in New York State to demonstrate that civil-service reform doctrines are played out, and that the spoils doctrine is the one for the party to win on in 1888. In the Republican ranks, the politicians are making a precisely similar movement in the interest of Mr. Blaine. Indeed, they have openly joined hands with the Hill Democrats in a plunder combination, dividing the patronage, and scoffing at reformers and reforms. Thus a Hill boom and a Blaine boom are being "worked" side by side in New York State, each based upon public plunder, each based upon open defiance of the public interest, and each vying with the other in derision of reform principles. The pushers of each are trusting that the same spoils machine which they expect will give their candidate the Presidential nomination, will be powerful enough to give him the electoral vote of the State afterward—in other words, that they can secure enough plunder from the taxpayers to buy a Presidential election.

Massachusetts has lost her old leadership. It was not until a year after New York had set the example that a civil-service law was enacted in Massachusetts, and now that the politicians in this State have unwillingly concluded that the merit system cannot be overthrown, the legislators in Massachusetts are diligently engaged in breaking it down, with every prospect of success. A bill has passed the lower House by an overwhelming majority, against the earnest protests of many veterans, allowing old soldiers to be appointed to office without passing any examination. The politicians make no concealment of their expectation that this will prove the first step toward doing away with civil-service reform entirely, and the fact that such a measure should pass the Massachusetts House by a vote of nearly three to one shows a sad state of demoralization among the law-makers.

The naïveté of the Central Labor Union all through these labor troubles has been something very diverting. There is probably no other body of men earning an honest livelihood in this country who would publicly denounce the police as their great enemy. In all free countries, whatever objections some may have to the army, every man, even the thief, at least affects to feel no dread of the constable. But the Central Labor Union actually passed the following resolution on Sunday:

"Resolved, That we, the members of the Central Labor Union, view the passage of the bill to create 500 extra police as a direct menace to the organized workingmen of this city, and we ask Governor Hill to withhold his signature."

This suggests the question whether the Union does not consider the proposed increase of the force really an aggravation of an existing evil—that is, whether the whole force is not a menace to the Union, and the addition of 500 men a deepening of the wrong. Not long ago a Labor Union in Troy passed a resolution calling on the delegates to the Legislature from the district to introduce a bill forbidding the introduction into the county of strange detectives from other counties, by way of preparation for a grand strike this summer. Shall we not soon have a meeting of "laborers" in the upper wards asking for the withdrawal of the police from the district above Fifty-ninth Street between ten and five every night? Is not the presence of the police in that region a constant and insulting threat to a large class of toilers?

A "Union" in Brooklyn a few weeks ago peremptorily ordered the sugar refiners to strike

at an hour when a cessation of work would cause immense loss to the employers, and not to resume work unless their employers would accede to their demands. The employers saw that compliance meant the surrender of all control over their business to this irresponsible body, and refused to yield. The strikers loudly declared that they would only return in a body, and they set out to prevent by violence other men who were anxious to work from taking their places. The employers gradually filled the refineries with men who had courage enough to take the chances of getting their heads broken, until the strikers saw that all hope of success was gone and made a rush for the vacant places. Now that all of them have lost a month's wages, and many of them all chance of earning wages in their old places, the interesting fact comes out that the strike was ordered by an "Executive Committee" of three, only one of whom ever worked in a sugar house, while of the other two, one keeps a liquor-saloon which has been the headquarters of the "Union," and the third is about to open a rum-shop!

The first trial of a boycotter for law-breaking has just occurred at New Haven, where a "walking delegate," who had been trying to break up another man's business, has been fined $50 and costs. The case goes to a higher court upon appeal, but no doubt appears to be entertained that the decision will be sustained. The idea that one man may deliberately go to work to ruin another man's business, is not likely to hold water in the courts of any State.

Boycotting appears to be as unpopular in Western as in Eastern courts. A Milwaukee baker chose to employ men who did not belong to a "Union," and the "Union" resolved to ruin his business by boycotting him. But one of the boycotters was arrested while distributing circulars in front of the bakery, and promptly sentenced by the Court to pay a fine of $25, the Judge declaring that "such interference was unlawful, as it was clearly a scheme to destroy the business of a man who refused to be intimidated." He compared boycotting with mob rule, and added that he was surprised that the people had stood so much of it without bringing the offenders to justice.

The recently issued report of the Superintendent of Public Instruction in Kentucky is the most encouraging piece of news that has come from that State for many a year. The curse of Kentucky has been the ignorance of the masses of her people, and the despair of her enlightened citizens has been the contentment of the masses with their ignorance. The State is rich and prosperous; it is much better able to provide efficient public schools and give all its children a good education than such New England commonwealths as New Hampshire and Vermont. The trouble has been that the taxpayers could not be made to see their duty. The encouraging thing about this report is that it shows that the people have at last awakened to a sense of the situation. In 1880 the State school fund was only $627,143; in 1886 it is $1,029,481. In 1880 local taxation for school purposes yielded only $384,910; now it yields $589,082. The total increase since 1880 exceeds $600,000, while a new assessment law is expected further to increase the school revenues by fully $400,000 a year. The absurdity of the Blair bill, which a Kentucky representative, Mr. Willis, has dishonored his State by advocating, could not be more conclusively demonstrated than by these figures. In 1880, the advocates of Federal aid begged for it on the plea that Kentucky could not raise any more money for schools than she was then raising; in 1886 she is raising above $600,000 more than in 1880, and in 1887 the increase will probably exceed $1,000,000.

The departure of Mr. Augustin Daly and his company for England and the European Continent on Saturday is an event of something more than merely theatrical interest. Mr. Daly is one of the very few managers in this country who are qualified by education, experience, and natural aptitude for the positions which they occupy, and who understand and try to illustrate the artistic possibilities and real significance of their profession. Admirers and students of the stage would despair of its future were it not for the intelligent efforts of men like him and two or three of his most prominent rivals, and the hearty support which has borne witness to the public appreciation of those efforts. Mr. Daly's company is unrivalled on this side of the Atlantic in representations of light modern comedy, and certainly need not fear comparison with any organization of a similar character in Europe. It is honestly entitled to exhibit itself as an example of American dramatic achievement in a most attractive and varied field, and will dissipate, it is to be hoped, some of the false impressions which must have been created during the last two or three years by certain pretenders who have disported themselves in London, and have been accepted as actors of high standing in America. Mr. Jefferson, Mr. Booth, Mr. Barrett, and Mr. McCullough have proved by their individual excellences that the dramatic art is not neglected here, but their triumphs were personal, whereas Mr. Daly trusts to no one member of his company for success, whether it be artistic or pecuniary. It is because his company is essentially American in its composition, its training, its intelligence, and its methods, that his enterprise deserves to be watched with sympathetic interest. The critical praise bestowed upon his players upon their first excursion across the sea makes it certain that their welcome this time will be hearty. They will challenge fortune not only in London, but in Liverpool, Glasgow, Edinburgh, Dublin, Hamburg, Berlin, and Paris, where they will find many old friends. In this tour Mr. Daly, if he be wise, will find a double opportunity. Money is good, and his countrymen will wish him an abundance of it, but instruction is better still, and it is to be hoped, for his own sake and New York's, that he will give his actors a chance of studying the best acting in Europe, as well as of displaying their own abilities.

All signs point to a dissolution of Parliament n England. This appears to be the only way of getting rid of the opposition to home rule which has been developed within the Liberal party under the leadership of Chamberlain and Hartington. That it will get rid of it pretty effectually there now appears to be little doubt. In other words, Gladstone seems likely to sweep the country almost as overwhelmingly as in 1880. The leading Liberal organizations are one by one rallying to his support—the last being that of London, perhaps the most radical of all. All that have spoken repudiate Chamberlain, whose blunder appears to be one of the most inexplicable ever committed by a public man. His overestimate of his own weight with the country as compared to Gladstone's has evidently been immense. What has most damaged him, however, is not so much the fact that he has differed with Gladstone and separated himself from him, as the manner in which he has done it. The first sign of departure from the paths of rectitude was his suggestion that because Gladstone made a mistake about the secessionist movement at the South, he therefore had probably made another about the home-rule movement in Ireland. This was clearly not only a spiteful but a disingenuous suggestion. It does not follow from Gladstone's having erred twenty years ago about a foreign question on which his information was necessarily imperfect, that his opinion is worthless on a home question to-day with which he has been familiar for half a century. The mention of it, in fact, was a mere jibe, which, coming from a political youngster to a veteran under whom he had made his début, was, to say the least, unbecoming.

Mr. Chamberlain's new position, about the right of Ulster not to be governed by the rest of Ireland, is so disingenuous and misleading that it cannot but still further shake the confidence of the mass of English Liberals in his honesty as well as his sagacity. Of all the pretences put forward by the opponents of home rule, the pretence that Ulster is an exclusively Protestant and English or Scotch province is the shallowest, and yet it has played, and is playing, a leading part in the discussion. The total population of the nine counties of Ulster is 1,464,587; of these 633,566, or nearly one-half, are Catholics. But this is not the whole story. In only four of the nine counties—Antrim, Armagh, Down, and Derry—are the Protestants in a majority. In all the others the Catholics outnumber them overwhelmingly. So that what the opponents of home rule really mean when they are talking of "Ulster" is a small part of Ulster, and when they are demanding autonomy or separation for it, they are really claiming the right of the 671,687 Protestants in these four counties, out of a population of over 5,000,000, to set up an *imperium in imperio*, and live apart from the rest of the community, which is ridiculous. There is no doubt that these 671,687 are on the whole more wealthy and prosperous than other Irishmen, which is a reason why they should have the fullest protection against any sort of hostile or discriminating legislation; but Mr. Gladstone's bill affords all such protection that law, backed by the British army and navy, can give.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 12, to TUESDAY, May 18, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Monday vetoed the bill making Springfield, Mass., a port of entry. He says: "I am of the opinion that the reforms of present methods, which have been lately earnestly pressed upon Congress, should be inaugurated instead of increasing the number of ports where present evils may be further extended. The bill now under consideration provides that a Surveyor of Customs shall be appointed to reside at said port, who shall receive a salary not to exceed $1,000 per annum. It is quite obvious that an experienced force of employees at the ports where goods for Springfield are admitted, would be much better qualified to adjust the duties upon the same than the person thus proposed to be added to the vast army of Federal officials."

Up to this date the President has in all sent about 2,100 nominations for civil offices to the Senate. Of these 1,700 have been confirmed and only 13 rejected. The remaining 400 will be disposed of in a comparatively short time, and it is not expected that the proportion of rejections will be increased.

The Senate on Wednesday passed the Inter-State Commerce Bill by a vote of 43 to 4. It contains the important amendment prohibiting the charging of more for a short than a long haul over the same line, in the same direction, from the same starting-point or to the same destination.

The Senate Committee on Commerce on Thursday ordered a favorable report on Senator Frye's bill to limit the commercial privileges of vessels of foreign countries in the ports of the United States to such purposes as are accorded to American vessels in the ports of such foreign countries. The bill will be reported as an amendment to the Shipping Bill.

In the Senate on Monday Mr. Frye (Rep., Me.) called up the House Shipping Bill. This is the bill passed by the House of Representatives on February 4 last abolishing the fees for measuring tonnage, for issuing licenses, registry certificates, and a great variety of other fees. Mr. Frye moved to add to it as a new section the provisions of the bill recently reported by him from the Committee on Commerce, authorizing the President to issue a proclamation, whenever he may deem proper, denying to vessels of foreign countries such privileges as are denied in such foreign countries to vessels of the United States. This means retaliation for the recent action of the Dominion of Canada in excluding United States vessels from certain privileges in Canadian ports, though the provision is not confined to Canada, but is made general, so as to apply to all foreign countries. The amendment was agreed to without debate, and the bill was passed and a committee of conference was ordered.

The Senate on Monday defeated a proposition of Mr. Logan that all pensions which have been allowed to soldiers at a less rate than $8 a month shall be increased to that amount, and that no smaller pension than $8 shall be hereafter granted.

The Copyright Bill which the Senate Committee on Patents has agreed to report favorably, is, in its main features, the bill which was introduced by Senator Chace, of Rhode Island. Stated in the briefest possible terms, the bill proposes to give to foreign authors copyright in the United States upon the condition that their books shall be printed in this country, and to prohibit the importation of foreign copyrighted books. The bill seems to be one for the protection of American publishers, with incidental protection for the foreign author. It contains no provisions as to the reciprocal use of stereotype plates in the two countries; it was decided that this subject was too technical to be considered. It is assumed by the friends of the bill that notwithstanding the severe provisions as to the printing of foreign books in this country, Great Britain will, by an order in council, give to American authors the benefit of copyright in that country. The bill will be vigorously opposed by those who advocate the unrestricted importation of British books and by the publishers of reprints, and it will also be opposed by many American authors.

The House on Wednesday passed the Army Appropriation Bill without amendment.

The House on Thursday passed the Diplomatic and Consular Appropriation Bill without a division. The Senate passed a bill authorizing the Secretary of the Navy to fit out an expedition to observe the total eclipse of the sun on August 29, on the west coast of Africa, and appropriating $10,000 for the purpose.

The House on Monday voted, 196 to 18, to suspend the rules, and set apart June 3 for the consideration of bills presented by the Labor Committee. An effort to include the Educational Bill failed. The list includes bills to prevent the employment of aliens on public works; to forbid the use of products of convict labor on public buildings; to allow Government employees leaves of absence who are not now entitled to them; to restore the old and higher rates of wages in the Government Printing Office; to extend the operation of the Eight-Hour Law; to protect employees in their wages; to amend the law relating to the importation of laborers under contract, and to grant national charters to trades-unions.

It is understood that the bill to levy a tax upon oleomargarine, which is in charge of the House Committee on Agriculture, will be put to a vote in the House as soon as the opportunity offers. There seems to be little, if any, doubt of its passage, and when it comes to the Senate the Committee on Agriculture will promptly report it for action. The bill, which also puts the manufacture of oleomargarine under the supervision of the Commissioner of Internal Revenue, will, it is said, surround the manufacture with wholesome restrictions.

In the Court of Claims, on Monday, Judge Davis delivered the opinion of the Court in relation to the liability of the Government for the French spoliation claims, in which the Chief Justice and all the judges concur. After deciding that the statute giving the Court jurisdiction required an examination of the validity of the claims as against France, and the assumption of the responsibility for them by the United States in the treaty of 1800, the opinion sets forth the obligations assumed by the two Governments in the treaties of 1778, by which France pledged herself to secure our independence, and we undertook to guarantee her American possessions, and to give her other special privileges. Following the history of the two nations after our peace with Great Britain, it shows the illegal attacks upon American commerce by the French Revolutionary Government, and our failure to abide by our promises to France made in 1778, and then concludes that by the treaty of 1800, as shown by that instrument itself and the negotiations which led to it, the spoliation claims were surrendered in consideration that the United States be released from any obligations under the treaties of 1778; and the Court, after discussing the law, is of the opinion that the claims are a valid obligation against this country, which sacrificed the rights of its individual citizens to secure a great national advantage. The court also holds that the treaties of 1803 and 1831 with France, and the treaty of 1819 with Spain, do not apply to the spoliation claims, and therefore the claimants should recover. Many reports have been made in Congress in favor of this view, and but three against it, and those three were made prior to the publication of the diplomatic correspondence on the subject. Two acts were passed providing for payment, but one was vetoed by President Polk, the other by President Pierce. Finally, Congress, by an act approved by President Arthur, sent the matter to the Court of Claims for examination.

Assistant Secretary Jenks of the Interior Department has resigned to become the permanent counsel of a millionaire.

The Interior Department has at last suspended Mr. McGillicuddy, the agent at the Pine Ridge Agency in Dakota. The charge is insubordination.

Captain Hatfield, with a troop of cavalry, struck Geronimo a heavy blow on Saturday morning at a point ten miles southeast of Santa Cruz, N. M. He stampeded the hostiles, capturing their horses and entire camp outfit. A few hours later, while passing through a cañon, a galling fire was suddenly poured on the little band. The men dismounted and made a gallant fight for an hour. Two of them were killed and three wounded. Many Indians fell. Captain Hatfield and his men finally reached Santa Cruz. The Mexican General Martinez routed the Yaquis from their stronghold in Sierra Bacatche on May 13, killing 100 and capturing 200 of the band. The Mexicans lost twenty killed and fifty wounded. This virtually ends the Yaquis war. A raid by Geronimo's band is apprehended in Arizona. The people are without adequate protection, and a massacre is feared.

The Chicago police on Friday night arrested a man named Louis Linng, who, they say, is beyond a doubt the man who threw the destructive bomb on May 4.

The Chicago lumbermen renewed their strike on Monday.

Five Socialists, while engaged on Sunday in San Francisco in haranguing a crowd, were arrested and charged with a misdemeanor.

The Ohio Senate on Wednesday reënacted the Scott Liquor Tax Law, which provides for a tax of $100 and $200. It has the lien clause and Sunday-closing feature in its provisions. It passed the House on Thursday.

Governor Hill on Wednesday signed two of the gas bills—the Reilly bill, compelling all companies to charge no more than $1 25 per 1,000 feet for gas, and the Thomas bill, regulating the method of organizing gas companies in future in New York. The third bill, providing for the establishment of a gas commission to protect the consumers, was vetoed by the Governor.

On Thursday the Governor nominated for Aqueduct Commissioners Hamilton Fish, jr., E. L. Ridgeway, and O. W. Barnes. The Senate immediately confirmed them without going into secret session. The Senate rejected the nomination of George H. Sterling, of Brooklyn, for Port Warden by a party vote.

Upon the application of Attorney-General O'Brien, Judge Parker, of Albany, has appointed John O'Brien (the principal contractor on the New York Aqueduct, Chairman of the Democratic State Committee, and political partner of Maurice B. Flynn) receiver of the Broadway Railroad.

In the New York Assembly on Wednesday the Bruns bill to practically put the different departments of this city in control of Commissioner Squire, was killed by an overwhelming vote. Both houses of the Legislature agreed on that day to adjourn *sine die* on May 20.

The New York Assembly on Thursday passed the Excise Commissioners Appointment Bill by 79 to 31. This gives the power of appointment to the President of the Board of Aldermen, instead of to the Mayor. Its passage is a victory for the "Johnny" O'Brien lobby

The Senate at Albany on Monday night sent the Excise Commission Bill to the Cities Committee, thus probably putting an end to it.

The Executive Committee of thirty-one citizens appointed to arrange for a mass meeting for the formation of an independent local political movement in this city, met on Friday

night for consultation. A committee of three was appointed to arrange for a mass meeting of citizens to be held at the Academy of Music on either the 28th or 29th inst. It was also decided to invite about 300 citizens outside of the committee to join the movement.

In the trial of Alderman Henry W. Jaehne, of this city, for bribery, in the Court of Oyer and Terminer, the case was given to the jury at 10:53 o'clock Saturday night. At 1:10 A. M. on Sunday the jury returned a verdict of guilty. A motion for a new trial will be made.

A dreadful tornado struck Odell, Ill., a town of 900 inhabitants, on Wednesday afternoon, destroying houses, barns, and sheds, and causing damage to the amount of $50,000. Scarcely a store in the town escaped injury. Two people were fatally hurt. Terrible wind and hail storms were also reported from Rockford, Ill., Peru, Ind., and Winchester, Va. A terrible waterspout at Xenia, Ohio, on Wednesday afternoon, swept away 100 houses. Twenty-four people were killed. Telegraph wires throughout Illinois, Indiana, and Ohio were prostrated. A tornado wrecked the town of Dunkirk, Ohio, on Friday night, killing four people. Severe storms were also felt in Michigan and Kansas.

FOREIGN.

A political meeting was held at the London residence of Mr. Joseph Chamberlain on Wednesday. Sixty members of the House of Commons were present. Mr. Chamberlain explained the renewal of his activity against Mr. Gladstone's Home-Rule Bill by saying, that he had been clearly informed on Saturday last that the Premier was prepared to expunge from the measure the clause excluding Irish representatives from sitting at Westminster, and thus maintain the unity of the empire as desired by the Radicals. Mr. Chamberlain declared that now nothing short of the withdrawal of the Home-Rule Bill would restore unity among the Liberals. The meeting unanimously adopted resolutions declaring that those present would do the utmost in their power to oppose the Government's Irish bills, as there was no hope that the measures would be amended in a way to make them acceptable to the followers of Mr. Chamberlain. Mr. Caine stated that 102 Liberal members had promised to vote against the Home-Rule Bill and that there were thirty-four Liberal members who were undecided as to what course to pursue toward it.

A meeting of the followers of Lord Hartington was held on Friday for the purpose of cementing the Whig and Radical opposition to the Home-Rule Bill. Sixty-four gentlemen attended, including Mr. Chamberlain, Mr. Trevelyan, and Mr. Caine. Lord Hartington made a twenty-minutes speech, in which he explained the reasons why Liberals should oppose Mr. Gladstone's measure. He declared that the pledges from Liberals to oppose Mr. Gladstone's Home-Rule Bill were sufficient in number to make the rejection of the bill on its second reading a certainty. The defeat of the bill, he said, would cast a heavy responsibility on him, which, however, he was quite prepared to accept. The meeting was harmonious throughout, and unanimously adopted a resolution that those present would oppose the second reading of the Home-Rule Bill.

Lord Hartington's "whips" report that 110 Liberals have pledged themselves to vote against the Home-Rule Bill, and 30 are doubtful.

The Orangemen of Australia have sent a cable despatch to the Loyalists of Ireland, promising to aid them in their endeavors to prevent the adoption of Mr. Gladstone's Home Rule scheme.

The debate on the Home-Rule Bill was continued in the House of Commons on Thursday night. Mr. H. Campbell-Bannerman, Secretary of State for War, declared that the Government were quite ready to consider all suggestions for the retention of Irish representatives at Westminster. Mr. E. A. Leatham, member for Huddersfield, a Reformer, asked whether Mr. Parnell would accept the bill as a settlement of the Irish question. Mr. Parnell rose in his place and emphatically replied, "Yes." Mr. Leatham retorted that he had been unable to gather that idea from Mr. Parnell's previous speeches. An uproar ensued.

After an informal Cabinet council, it is reported that Mr. Gladstone, yielding to the urgent advice of Mr. Morley and Lord Spencer, has decided if defeated to demand from the Queen an immediate dissolution of Parliament. Mr. Chamberlain is deluged with Radical protests against his action.

During the debate on the Home-Rule Bill in the House of Commons on Monday night, Mr. James Bryce, Under Foreign Secretary, said that the Government was perfectly willing to appeal to the country. The retention of Irish representatives at Westminster was a detail that it would be impossible to discuss at this stage.

Mr. Gladstone, in the House of Commons on Tuesday afternoon, moved that the House devote four nights out of the five given to Parliamentary business every week to the debate on the Home-Rule Bill. The proposal produced a sensation, as it was generally believed that the Government had about given up hope of carrying their measure, and would bring on the crisis as early as possible. An excited discussion at once followed Mr. Gladstone's motion. Sir Michael Hicks-Beach, Conservative, said his party wanted a pledge that the debate would be finished on Friday next. To this Mr. Gladstone answered that his reckoning extended the debate far beyond the date fixed by the Opposition. After a long discussion Mr. Gladstone's motion was carried. Nine converts to Mr. Gladstone's scheme have been made in the House since Saturday, and others are wavering. The chances for passing the bill are therefore considered brighter.

The London Liberal Radical Council on Monday followed the lead of the National Liberal Federation in supporting Mr. Gladstone strongly against Mr. Chamberlain. Although a very radical body, it was with great difficulty that Mr. Chamberlain's friends induced the meeting to drop from the resolution the clauses specifically censuring Mr. Chamberlain.

A mob of Nationalists attacked a number of Protestant peasants while the latter were returning from market at Cookstown, County Tyrone, Ireland, on Saturday. The Protestants resisted the attack, and several of them were roughly handled, two being badly hurt.

Sir Thomas Erskine May, who a few weeks ago became Baron Farnborough, died on Monday at the age of seventy-one. He was appointed Clerk of the House of Commons in 1871, and held that position until the opening of the present session of Parliament, when he resigned on account of ill-health. Mr. Gladstone, Mr. Parnell, and Sir Michael Hicks-Beach, as representatives of their parties, then delivered warm eulogies on his career. He wrote a treatise on the 'Law, Privileges, Proceedings, and Usage of Parliament' in 1844, which, being acknowledged as the Parliamentary text-book, passed through several editions.

Queen Christina, of Spain, on Monday gave birth to a son and heir to the Spanish throne. The usual pomp and ceremony were observed. In the Cortes Señor Sagasta expressed the satisfaction of the nation at the birth of the King, and he called upon Spaniards to defend their young monarch. Señor Torino made a similar appeal on behalf of the Conservatives. The babe will be christened during the present week and will probably be named Fernando Ildefonso. There is great rejoicing in Madrid over the event.

A terrible hurricane swept across the middle of Spain on Thursday. In Madrid thirty-two persons are known to have been instantly killed, and 620 others have been seriously injured. The wind struck the city with the suddenness of lightning. Tramcars and cabs were overturned and broken into splinters, roofs were dislodged, and telegraph wires everywhere torn from their poles. The parks in and about the city were devastated and in some cases entirely denuded. One church tower was blown down. A number of houses in the suburbs were entirely wrecked. The damage exceeds $1,200,000.

M. Valvis, as Premier and Minister of Justice, has succeeded in forming a new Greek Ministry. The Ministry is colorless, and the only duty imposed on it is to convoke the Chamber of Deputies. The Greek Government has rescinded the order for the advance of troops to the front.

M. Pillot, an agent for the Banque d'escompte of Paris, who recently fled after uttering a large amount of forged paper, on Friday suddenly appeared in the private office of Baron Soubeyran, the director of the bank, and, at the point of a loaded revolver, compelled him to sign three checks for $30,000, with which Pillot then escaped.

Professor Leopold von Ranke, the aged German historian, is seriously ill.

In the Canadian House of Commons on Monday the Minister of Marine introduced a bill confining the rights of foreign fishing vessels in Canadian waters to those expressly mentioned in the Treaty of 1818, and proposing that if a foreign vessel has been found fishing or preparing to fish within three miles of the coast, or has entered Canadian waters for any purpose not permitted by the law of nations, or by treaty or convention, or by any law of the United Kingdom or of Canada, or, having entered such waters, has failed to comply with any such law of the United Kingdom or of Canada, such vessel and the rigging and cargo thereof shall be forfeited.

The American fishing schooner *Ella M. Doughty*, of Portland, Me., was seized on Monday by the authorities of Englishtown, N. S.

Mr. Stevens, the American, who is making a tour on a bicycle around the world, has been arrested while crossing the frontier of Afghanistan.

Vice-Admiral Don Patricio Lynch, of the Chilian Navy, while on his way to Peru from Spain, where he was Minister, has died at sea; his body was landed at Teneriffe. Admiral Lynch was the son of a wealthy Irish merchant who married a Chilian lady. He was born in Santiago in 1825. His early training was received in the Chilian and English navies. His career was notable for daring achievements. Throughout the recent war with Peru he was the most conspicuous Chilian commander. At the head of a naval and military expedition he undertook the invasion of the northern provinces of Peru, which up to that time had been unvisited by war, and which furnished the enemy with abundant supplies. This expedition, which required on the part of the Admiral courage and science of no ordinary character, was conducted with consummate ability and terminated in brilliant success. He ravaged the enemy's territory, spread desolation far and wide, captured cities containing 10,000 inhabitants, took part in a campaign which reduced Lima, and terminated in a decisive manner the war between Chili and Peru. He was Military Governor of Peru throughout the period of occupation, and his rule was eminently humane and effective. He suppressed the Calderon Government, and planned the campaign by which Caceres, marching against Iglesias, was defeated at Huamachuco in 1883. He managed the instalment of Iglesias in Lima in the following October, and then withdrew his Chilian garrison to Chorillos. There he remained till the Iglesias peace was fully ratified by the Peruvian National Assemoly. Admiral Lynch became the head of the Chilian navy in 1883.

THE WAY THE SOUTHWESTERN STRIKE WAS ORDERED.

THE exhaustive treatment which every important event in our times receives from the daily newspapers, seldom leaves anything of consequence to be developed by the more leisurely inquiries of the authorities. For this reason nobody expected that the Congressional Committee appointed last month to investigate the great strike in the Southwest would bring to light much that was new or important, and the press associations sent East shorter and shorter abstracts of the testimony given at St. Louis as the investigation neared its close last week. But, contrary to all the precedents, we have found, by a careful reading of the full reports in the St. Louis papers, that the evidence given by a number of the witnesses before this Committee is of the most vital importance to a correct understanding, not only of the strike itself, but also of the secret, oath-bound organization by which the strike was ordered. The "true inwardness" of the despotism which has been established by the Knights of Labor has here for the first time been thoroughly exposed.

Everybody knows that the whole gigantic disturbance of industry in half-a-dozen States grew out of the discharge by the Texas-Pacific Railway Company of a man named Hall, who was a foreman in the company's shops at Marshall, Tex. The Texas-Pacific is in the hands of a receiver appointed by the United States Court of the Fifth Judicial Circuit, and some weeks ago Captain C. E. Henry, of Cleveland, Ohio, was directed by the court to make a thorough investigation into the causes of the trouble on that railroad. Captain Henry visited Marshall, Jefferson, Texarkana, Dallas, Fort Worth, and Big Springs, where he diligently prosecuted his investigations, obtaining data sufficient to enable him to make an exhaustive report on the subject. A reporter of the *Globe-Democrat* interviewed him as he passed through St. Louis on his return last week, and thus summarized Captain Henry's statements:

"From what information he had obtained he considered that the property of the road had been in great danger for three or four weeks, and that it was only through the greatest vigilance that more of it had not been destroyed. The most active and zealous among the Knights of Labor considered it their duty to assault every man who asked the privilege of working without being molested. He commenced taking testimony at Marshall on April 9, and the evidence generally obtained was that most of the men engaged in the strike did not know what it was for. *He inquired specially into Hall's case, and the testimony showed that he was a worthless workman by reason of his indifference to his duties, his attention being absorbed in studying the rules of the Knights of Labor, and devoting time to committee work for his order that should have been given to the railroad company.* Everything in his (Hall's) estimation appeared to be secondary to the Knights of Labor, and he assumed in his imagination the responsibilities of the general manager, legal adviser, and general executive officer of the road, and wanted everything subordinated to the organization to which he belonged. Captain Henry said he had examined the company's books, which showed that under Hall's foremanship the work in the shops had cost the company 50 per cent. more than it did under his predecessor. He thought the company would have saved a great deal of money if it had paid Hall a good salary to keep away from the shops."

So much for the man about whom the strike was ordered. Now for the man who ordered the strike, and who forced the Knights of Labor to stop work not only on the Texas-Pacific, but on the whole Gould system of railroads. Martin Irons appeared before the Committee on Friday. The *Republican*, which has always been disposed to show the strikers as much favor as possible, thus describes the man:

"A weak, irresolute, half-cunning, half-frightened face he turned toward the Committee. He wore a dirty white shirt and a dirty white collar, held in its place by a brassy stud. An imitation diamond relieved the discolored area of shirt front, and a heavy brass watch-chain dangled from his unbuttoned vest. His first act, after taking his seat, was to draw a spittoon towards him, and take a huge quid of tobacco, which he chewed heavily while he listened to Chairman Curtin's opening address to him. This expressed the object of the Committee, and its hope that it would get from Mr. Irons, the author of the strike, all the information they wanted as to its cause and extent."

The *Globe-Democrat* gives this report of his attitude during the examination:

"Throughout the entire examination Irons adopted an aggravatingly listless attitude, chewed tobacco incessantly, and expectorated to a degree only to be described as filthy. He spoke in as low a tone as possible, and kept a roll of paper between his teeth so as to make his utterances less intelligible. He was repeatedly requested by Governor Curtin to put it down or let 'some one else hold it' for him, but without avail, and from first to last his answers, such as they were, could only be heard by painful straining."

Irons testified that he is fifty-four years old, was born in Scotland, and could not tell when he came to this country, though he "believed" it was when he was about fourteen. He said that he had been naturalized, but "had no idea of the date," nor did he know whether it was before or after the war; neither did he know who was the first President for whom he voted. He is a machinist by trade, and a rover by disposition, having lived for longer or shorter periods in a dozen cities, from New York to New Orleans and from New Orleans to Sedalia, Mo., where his home now is. He joined the Knights of Labor about a year ago, became Master of his Local Assembly within three months, and a few weeks later was made Chairman of the Executive Board of District Assembly No. 101. In this capacity he is practical dictator over all the thirty subordinate local assemblies, reaching from Missouri down into Texas, with a membership of about 5,000 men, who are bound by oath to obey the orders of the Chairman of the Executive Board.

As to the reason why the strike on the Gould system was ordered, Irons had prepared a written statement, the points of which are thus summarized:

"At the time of Hall's discharge, delegates of the Knights of Labor were at Marshall, Tex., and had just finished a session; and the discharge was regarded as a distinct attack on the order. Witness personally made efforts to get Hall reinstated, but without success. Passes for three were given to Hall, in witness's presence, to take them to Dallas, where grievances and Hall's discharge were to be discussed. But as the board numbered five, and only three passes were given, and as they were handed to Hall and not to him, he regarded the act as another slight on the order, and declined to use them or go to Dallas. He telegraphed to Dallas to that effect, and received no reply. The next day he telegraphed again, and received a message purporting to come from the operator to the effect that Colonel Noble was from home. Witness wired back, unless he had a reply by 2 o'clock the next day, he should call out the men. He received no reply and did call the men out. Seeing it was useless to hope for an adjustment of grievances, he afterward called out the Missouri-Pacific men."

The Committee, however, were not satisfied with so indefinite a statement, and pressed Irons for particulars as to what steps he had taken to secure a settlement before ordering the strike. The examination upon this point was so interesting and important that we quote at some length:

"Mr. Burnes—What were these grievances you speak of?

"Witness—There were the bridgemen's and many other grievances.

"Q. Did any cases of grievance come under your personal knowledge? A. Yes.

"Q. State some. A. I don't remember.

"Q. Give the names of any men who complained to you. A. I don't remember any.

"Q. What were the grievances considered by your executive board when you discussed about calling out the men? A. I don't know.

"Q. Now, Mr. Irons, you knew these men were for eight or nine months suffering from grievances and pointing them out to you. Now, what did you do toward getting these grievances before the officers of the railroad? A. *I didn't present any.* It is not the place of an employee to present his grievances directly before Mr. Hoxie or a high officer. If I were a master mechanic or a yard-master, I should take it as an insult if any man under me took a grievance direct to a general officer.

"Q. Do you mean to tell me that you, as practical head of the organization in this district, allowed a question of etiquette to intervene between you and a head officer? A. If I had reported to Mr. Hoxie, he would have referred me to Mr. Kerrigan, and he would have referred me to some one else.

"Q. Have you complained of any case to Mr. Kerrigan direct? A. Yes, I had one conference with Mr. Kerrigan.

"Q. What about? A. About a man named W. T. New, of Kansas City.

"Q. Well, what of him? A. He was giving away situations to those who gave him the biggest presents and the biggest bribes. Mr. Sibley told me he had investigated the matter, and that there was nothing wrong. So I went to Mr. Kerrigan.

"Q. What did Mr. Kerrigan do? A. The man was discharged.

"*Q. So in the only case you have been to Mr. Kerrigan you got your point? A. Yes.*

"*Q. And you have never brought specific grievances before Mr. Hoxie? A. No.*

"Mr. Parker—What were the words of the order to strike? A. I don't know.

"Q. Now, if this examination is to continue, I must have the best of your recollection of the words of that order. A. Haven't I said I can't remember?

"Q. Please remember this was an order to call out thousands of men. Tell me the wording of it? A. I tell you I can't.

"Q. Did you ever see it in writing? A. I wrote it.

"Q. And yet you can't give any idea as to its length or how it began? A. No.

"Q. Was it sent by telegram or mail? A. I don't know. Some of the assemblies were telegraphed to.

"Q. Where is the order filed? A. I don't know."

As showing what sort of man this dictator is, take these further extracts from the examination:

"Q. How many men went out on the strike? A. About 5,000.

"Q. How many others did it affect? A. I have no idea at all; it is no concern of mine.

"Q. No concern of yours, when you ordered the strike? Now, tell me, to the best of your knowledge. A. I can't

"Q. Have you any knowledge of the fact that 9,000 men in the lumber business had to stop work on account of your strike? A. No; I don't concern myself with a census of the United States.

"Q. Did the engineers strike? A. No; they were not manly enough to. They gave us reason to believe they would help us, but they turned out too cowardly to do it.

"Q. Did you send out 'missionaries' to persuade men to go out? A. No.

"Q. Did you authorize it? A. I suppose so.

"Q. Now, do you remember when the boycott was ordered on the Wabash? A. No; I suppose I do, though.

"Q. Under what circumstances was it ordered? A. I don't know anything about it.

"Q. Come, come, Mr. Irons, did not your brother officers tell you why the boycott was

ordered? A. Well, yes. We consider an injury to one in the order an injury to all, and we ordered the boycott because the Wabash men were badly treated and had grievances.

"Q. Did you sanction the boycotting of the Texas and Pacific? Witness replied in the negative, but when pressed said he supposed he did.

"Q. Did you not know with all these thousands of men under you that the freight business really found most of their wages, and that by boycotting the Texas and Pacific freight you were reducing the wage-paying power of the Missouri Pacific? A. (doggedly). The boycott was only requested.

"Q. Did you protest against it? A. Did I protest? No. Why should I?

"Q. But as an intelligent member of your order, what possible good could you hope to effect by the boycott? A. To make them redress grievances.

"Q. Did you not know that the laws of this State compel railroad companies to interchange traffic without discrimination? A. Oh, yes; and also that the charter of the companies compels them to run trains, but does not fix the employees' wages.

"Q. Never mind that now. You admit you were aware that in demanding this boycott you were asking for an unlawful act to be committed? A. I don't know.

"Q. Let me ask you again with reference to this boycotting cars. Do you not realize that the wage-paying powers of the companies depended largely on their freight business? A. *Oh, if I was to stop and study questions like this before ordering a strike, grievances would go unredressed forever.*

"Q. But you recognize the fact that the freighters find most of the money to pay wages. That being so, what right had you to call the men out without giving them notice? A. By the same right which gives the railroad company power to compel you to pay your fare before you enter a car.

"Q. What do you think about labor producing wealth? A. Labor produces everything and capital produces nothing at all.

"Q. So you argue that as God created the world and has a right to manage it, so as labor creates all wealth, it has a right to manage it? A. Yes, with due respect to the rights of others."

This is the way in which the Knights of Labor order a strike. We may hereafter take up the means which they use to make it succeed.

THE CHURCH AND THE LABORER.

Bishop Potter has written a pastoral letter to his clergy on the labor crisis, in which, without going far into the economical side of the case, he comments with much severity on the moral condition of the wealthy class among us as one of the causes of the strange growth of class hatreds on American soil. He says in one place:

"A nation whose wealth and social leadership are in the hands of people who fancy that day after day, like those of old, they can 'sit down to eat and drink and rise up to play,' careless of those who earn the dividends that they spend and pay the rents of the tenement-houses that they own, but too often never visit or inspect, has but one doom before it, and that the worst. We may cover the pages of our statute books with laws regulating strikes, and inflicting severest penalties on those who organize resistance to the individual liberty, whether of employer or workman; we may drill regiments and perfect our police; the safety and welfare of a State is not in these things, it is in the contentment and loyalty of its people. And these come by a different road. When capitalists and employers of labor have forever dismissed the fallacy, which may be true enough in the domain of political economy, but is essentially false in the domain of religion, that labor and the laborer are alike a commodity, to be bought and sold, employed or dismissed, paid or underpaid, as the market shall decree; when the interest of workmen and master shall have been owned by both as one, and the share of the laboring man shall be something more than a mere wage; when the principle of a joint interest, in what is produced, of all the brains and hands that go to produce it is wisely and generously recognized; when the well-being of our fellow-men, their homes and food, their pleasures and their higher moral and spiritual necessities, shall be seen to be matters concerning which we may not dare to say, 'Am I my brother's keeper?' then, but not till then, may we hope to heal those grave social divisions concerning which there need to be among us all, as with Israel of old, 'great searchings of heart.'"

This is all doubtless true, but does it make the way of the employer and laborer any straighter? Many, we were going to say most moralists, who write or speak on the labor problem, seem to assume that the capitalist is always a man in possession of abundant means, with an assured future, complete master of every situation in which he finds himself, and completely free from the anxieties which torment the laborer from the rising to the setting of the sun. But the melancholy fact is, that in modern life the lot of the employer is almost as precarious as that of the laborer. Do clergymen who censure the capitalists for not doing more to lift the laborer up to their own level, realize that 95 per cent. of the men who "go into business," in this country—that is, become employers of labor—become insolvent, and have to begin over again, and continue to fail and try again, until they sink themselves into the rank of the employed, and become dependent on their children or on friends? Do they realize that nine out of every ten strikes for higher wages or shorter hours are made against men who are so absorbed in the terrible problem of meeting their own notes, and thus saving themselves from bankruptcy and their families from want, that it would be impossible for them to bestow a thought on the labor problem were they never so full of sympathy and pity? It is really only among a few large employers, such as the great railroads and great manufacturers, that there exists the security, the abundance of means, and the superfluity of energy and leisure necessary for a strong and persistent effort to lift the laborer, often as he has to be lifted, in spite of himself, out of his present condition of helplessness or dependence.

Industrial life in the modern world is a tremendous battle. It has always been so, but, as in physical warfare, the hosts now engaged are larger and the results more rapid. Too many of our philanthropists talk as if it was a battle in which only the rank and file perished. The truth is that the casualties are even more numerous in proportion among the captains than among the men. The peculiar combination of mental and moral qualities necessary to make successful capitalists—that is, to make a man who can save money, keep it, and add to it—is one of the rarest of human gifts. The proof of this is to be found, not simply in the number of capitalists who fail, but in the small number of cases in which coöperative societies for production have succeeded. They are not more numerous simply because the capitalist qualities are scarce among the laborers as well as among the employers.

We say these things, not in support of a policy of despair, but to remind all those who take up the labor problem, whether in the pulpit or the press, that it will not do to rely too much on the extraction of more talent and virtue from the capitalist class. Taken as a whole that class is, all over the world, at its wits' ends. The rise of the manual laborer, like the rise of every other kind of man, must come in the main from the increase of his own knowledge, and self-control, and sagacity, and self-respect—or, in other words, from the improvement in his own character. This does not mean that nothing can be done either by legislation or philanthropy to improve his condition. But it does mean that all attempts to improve it through increasing his sense of dependence instead of increasing his sense of independence, must end in increasing the evil which they seek to remove. Let us preach profit-sharing; let us preach co-operation; let us call for the curbing of stock-gamblers, and railroad wreckers and bribers, but do not let us treat the laborer as a child, who has to make his way in the world through other people's humanity, and self-sacrifice, and common sense. The United States is a republic of men, each of whom is supposed to stand on his own feet and provide for his own household. Do not let us convert it into a republic of kindly patricians charged with the board, lodging, washing, and amusement of a vast and discontented proletariat.

But Bishop Potter's observations on the prevailing tone of the rich about their riches, of the steady and increasing worship of wealth in this city particularly, no matter how or by whom acquired or how used, and on the moral, economical, and political mischief which it works, will be read with the keenest pleasure by every one who cares for the success of the great American experiment. It is here that our greatest danger lies. The popular hero to-day, whom our young men in cities most admire and would soonest imitate, is neither the saint, the sage, the scholar, the soldier, nor the statesman, but the successful stock-gambler. Stocks and bonds are the commonest of our dinner-table topics. The man we show with most pride to foreigners is the man who has made most millions. Our wisest men are those who can draw the biggest checks; and—what is worst of all—there is a growing tendency to believe that everybody is entitled to whatever he can buy, from the Presidency down to a street-railroad franchise.

THE UNION PACIFIC RAILWAY AND THE GOVERNMENT.

The annual report of the President of the Union Pacific Railway leaves upon the mind of the casual reader the unpleasant impression that the Company is being "worked" in Congress by outside speculators for what they can make out of the fluctuations in its stock, to the disadvantage of both the Government and the Company, and that the reason why no decision can be had upon the debt-funding bill is that that measure would take the Union Pacific out of the reach of strikers and lobbyists. Mr. Adams is careful to say that in his opinion the persons responsible for non-action are not generally aware that they are used as the tools of speculation, but that, being naturally anxious to distinguish themselves, and being under some hostile bias toward corporations in general, and toward subsidized railroads in particular, they are easily led to take the view that whatever is opposed to the interests

of the Union Pacific must be favorable to the interests of the Government. The truth is precisely the opposite of this theory. The Government, being the holder of a second mortgage on the property, is vitally interested in its prosperity. It stands in the same relation to the Union Pacific that the holders of the junior securities of any other railroad hold to the property in which their money is invested. Any movement intended or calculated to depress the stock of the Union Pacific is calculated also to lessen the value of all the securities, including the Government's lien. Any measure which looks to the improvement of the Company's earning power is quite as much for the interest of the Government as for that of the shareholders.

The Thurman Funding Act has proved unsuccessful inasmuch as it leaves a door open for interminable disputes and unceasing litigation. It was supposed that all questions regarding "net earnings" were settled by a crop of decisions rendered by the Court of Claims in January, 1885. The Company promptly acquiesced in these decisions, foregoing the right of appeal, and paid over the sum of $916,704 to the Government. But scarcely was this done when a claim was set up by the bookkeeper of the Commissioner of Railroads that the accounts of the "aided" part of the Kansas Pacific Railroad had been wrongly kept for a series of years, and also that the subsidy paid by the transcontinental pool to the Pacific Mail Steamship Company, although a part of the disbursements of the Union Pacific Company, was really a part of the "net earnings," of which the Government was entitled to 25 per cent. under the Thurman Act. Of course these claims opened up a vista of fresh litigation without any defined horizon. Shortly before Congress assembled, the bookkeeper of the Commissioner appeared in Boston, armed with instructions from his superior officer, which he was careful to say that he had drawn up himself, to make a very searching investigation of a lot of things that had been investigated many times before. He finished his investigation on the 26th of January. Then he gave out that an order would shortly be issued prohibiting any more payments to the Pacific Mail Company. Then Pacific Mail and Union Pacific stocks fell about ten points each in the market. The evidence that this action on the part of a trusted Government clerk was part of a corrupt speculation was so strong that Secretary Lamar immediately dismissed him from office. Of course the credit of the Union Pacific Company was seriously impaired by the disclosure that it was still open to attacks of this nature, notwithstanding all the pains taken and all the time consumed in settling disputed points in the Court of Claims.

Obviously the only way to put an end to such corrupting influences, alike injurious to the Government and to the Company, is to prescribe a series of fixed payments, in lieu of a percentage of net earnings, to the Government, and then leave the Company free to fight for its existence in competition with other roads which are entering its territory. This plan was first devised by Railroad Commissioner Armstrong. It has been approved by the present Railroad Commissioner, General Joseph E. Johnston, and also by Mr. Lamar when he was Senator. It has been recommended by the Government directors of the Union Pacific Company, and reported favorably by the Senate Judiciary Committee. It must be acquiesced in by every thoughtful and disinterested person who will take the trouble to consider it. The Thurman Act was wise in its time, for it caused the Company to take steps toward securing the eventual payment of the debt due to the Government. Up to that time there had been an uneasy feeling in the public mind that the Company hoped and intended to slip away from this obligation somehow. The Thurman Act set up dams and dykes which have prevented such slipping. It has also made it the Company's interest to provide for Government debt. So far, so good. Now it is no longer a question whether the Company shall pay in good faith what is due, but whether it shall be allowed to earn the money with which to pay. Other companies not hampered by artificial restrictions, not exposed to the attacks of speculators in Washington, are closing around it. The only source of earnings from which the Government can get its debt paid is the business of the country west of the Missouri River. If the Union Pacific loses any considerable part of what it now holds, the Government will lose in the same proportion.

SUGAR BOUNTIES IN EUROPE.

THE bounties on the export of sugar, given by Germany and other countries of the continent of Europe, are among the most curious events in recent financial history. These bounties cost Germany alone several million dollars a year; they are unsettling the sugar trade of the whole world; they are seriously affecting the agriculture of the Continent; they put most perplexing problems before English, French, and German statesmen; and yet they are the result of nothing more than an accident.

The bounties came about as an unexpected result of the German method of taxing beet-sugar. The excise on sugar in Germany is levied by taxing the raw beets. Every metric hundredweight of beets, as it comes to the sugar factory, is charged 1 3-5 marks. That method of levying the tax is adopted both in Germany and Austria, and has a good many advantages. One disadvantage, however, is that the fixing of the drawback on the export of sugar is not easy. The sugar is extracted from the beets, and, if exported, a drawback is given equivalent to the amount of tax paid on the beets from which the sugar is made. Now, in 1869, when the present rate of tax on beets was imposed, about twelve pounds of beets were required to make one pound of sugar. On that basis the drawback was calculated. For every hundredweight of sugar exported there was granted a drawback of twelve times (very nearly, not quite) the tax paid on each hundredweight of beets. The drawback was 18 4-5 marks.

For a number of years after 1869 this arrangement worked well enough, the drawback being practically equivalent, and no more than equivalent, to the tax. But about 1878 a change began to take place. The quantity of beets which was required for making a pound of sugar began to grow less and less. The natural operation of improvements in production was in this direction; and obviously the manner of levying the excise tax strengthened the tendency. In 1878 only 10.75 pounds of beets were needed, on the average of all the German factories, to make one pound of sugar. In recent years the quantity has been:

1882.	10.08	pounds of beets	for one pound	of sugar.
1883.	10.30	do	do	do	do
1884.	9.28	do	do	do	do
1885.	8.96	do	do	do	do

The effect of this change of course was to make the drawback on export no longer equivalent to the tax, but much more than equivalent. The exporter got his drawback as if he had paid an excise tax on twelve pounds of beets; in fact, he paid in 1885 a tax on less than nine pounds of beets. The result was a virtual bounty on export, varying according to the saccharine qualities of the beets. In the last year or two the net bounty has been about one-half cent a pound. And, as it happened, this bounty arose just at the time when the protectionist feeling got the upper hand in Germany, in the years of depression 1877, 1878, and 1879. Consequently, nothing was done to stop it; on the contrary, it was viewed with some complacency.

But as time went on, and the bounty became larger and larger with the increasing yield of sugar from beets, the sugar industry showed the effect of the artificial stimulus. As lately as 1876 the total product of sugar in Germany was not so much as 4,000,000 hundredweight. In 1883 it had risen to more than 8,000,000 hundredweight; in 1885 it was nearly 12,000,000 hundredweight! Of this extraordinary increase the greater part, of course, was exported in order to get the benefit of the bounty. In 1876 the export amounted to no more than 500,000 hundredweight. But in 1885 more than 6,000,000 hundredweight were exported—*i. e.*, more than half the total product of beet sugar in Germany. In 1884 the German taxpayers paid out about $5,000,000 for bounties on this sugar. In 1885 the amount probably was $6,000,000, which represents so much money thrown away by them. Or, rather, the money was given away—given away to the foreign consumers of the exported sugar, who got it for less than the cost of making. These consumers were very largely the English; but the bounty sugar has been sent to all parts of the world. Last year no inconsiderable quantity made its way to the United States. More sugar was, at length, poured out than the world could absorb, even at the reduced price which the bounty made possible. The dividends of sugar factories, which had averaged more than 8 per cent. in the years 1881–83, fell to 3 1-3 per cent. in 1884; while the balance last year was probably a negative one. At present the sugar industry is suffering under the severest depression. Germany has on her hands a large investment of capital and a large aggregation of labor in an industry dependent, for continuance on its present scale, on the bounty. To stop the bounty would mean great loss to the sugar-makers and great suffering to their employees. Yet its continuance means an insufferable waste of money by the German people—a waste more obvious than is generally the case with protective taxes, because it comes in the shape

of direct money payments out of the Treasury. One or two feeble attempts have been made to devise a remedy, but nothing has been done, and matters remain in the same perplexing state.

But the most remarkable result of the German bounty has been its imitation by France. It is not very strange that Austria should have the same fiscal system as Germany, and should have got the same sort of results from it. But France had taxed her sugar in a different way, taxing the sugar and not the beets, and had been free from these bounty complications. Indeed, she had given up in 1881 a bounty which had resulted from an excessive drawback under the tax system then in force. But the development of the German sugar industry, and more particularly the importation into France of German sugar, was more than the patriotic spirit of the Frenchmen could bear. In their jealousy of their neighbors, they were determined not to be outdone in the sugar fight. So in 1884 they not only put a duty on the import of sugar, which was aimed at keeping out the German product; they also adopted the German system of taxing the raw beets, clapped on an excessive drawback, and entered the field as competitors in selling sugar to the world at large at less than cost. Their net bounty has been calculated to be 11½ francs for the metric hundredweight for this year, when it first becomes effective—that is, it is nearly three times as large as the German bounty. It will be curious to see how long this sorry struggle lasts, and what results will follow from so wasteful a misdirection of industry.

ROYAT IN AUVERGNE.

THE thermal springs of Royat lie at the entrance of a deep valley; they are at an elevation of 1,476 feet above sea level. The hotels overlook the magnificent plain of the Limagne; it would be hard to find a finer view of its sort in France or even in Switzerland; and the valley itself, the Tempe of France, is enchanting.

Nil sub sole novi. This place fascinated the Romans as now it fascinates the modern visitor. Two thousand years ago the Roman world flocked hither for health or pleasure; and the remains of their massive constructions have been successively uncovered during the past sixty or seventy years. The first digging was made in 1822. In the cellar of an old mill near the mouth of the valley of Royat a square well was found, a cold spring playing feebly through the immemorial rubbish of it; red pottery, vases in a gray paste, and some medals of the early Empire were disclosed. The spring was named the Source César, and then was forgotten again for twenty years.

In the winter of 1843 the curé, the Abbé Védrines, and the mayor of Royat were walking in this snow-clad valley, and they remarked that at a certain spot the new-fallen snow instantly melted. What was the cause? Was a little volcano, last of the volcanoes of Auvergne, still plying its works beneath the surface? The mayor, the curé, and the abbé recommended their townsmen to dig. They dug, an undreamed-of innovation; and two metres below the surface they came upon a little warm spring, patient, unchilled, that had kept its little heart of heat alive and beating all these centuries in hope that some kindly hand would come to its resuscitation. They found, too, a Roman *piscina* thirteen feet square, supplied with water at 35° Cent. (95° Fahr.) and a second *piscina* near by, communicating by a tunnel with a vaulted chamber. This was choked with earth and with travertine marbles, while masses of *béton*, formerly pipes for the mineral waters, with capitals, sculptures, and fragments of walls, attested the existence under the Roman Empire of a flourishing bathing establishment upon the site.

The good people of Royat meditated upon these facts for eight years. The question of rehabilitation had been quiescent for eighteen hundred years or so; why should we be in a hurry? But in 1852, after due and proper deliberation, and with that prudent forethought, careful estimate of profits and losses, and solid pecuniary backing which are the usual features of economic enterprises in "frivolous" France, the work of constructing a modern establishment was begun—an establishment that should restore the classical glories of Royat, and replace new *thermæ* upon the ruins of a thousand years.

Never were French common sense and French enthusiasm more happily combined; never have these national traits been better justified in the result of an enterprise. I will not now stop to describe it; it is enough to say that the establishment completed in 1854, a building of two hundred and sixty feet front, is, with its park, casino, and recent additions, one of the finest that I have seen in Auvergne or in France. The construction of the new building led to more than one important discovery. In 1852 there was a find of Gallo-Roman vases and of Samian pottery; during the following year the great "Eugénie" spring, with its yield of 1,000 litres of thermal waters per minute, was rediscovered and released from its subterraneous prisons. In 1876, the Saint-Mart spring was reclaimed; it had flowed away into the Tiretaine River heretofore. The diggers found a well made of framed pine logs, about four feet long; and below this was a leaden supply-tube six inches in diameter, at a depth of twenty feet. This was unhappily cut off short instead of being unearthed, the Mayor and his two friends being absent, it must be supposed, at this point in the proceedings. This construction, though wooden, must have been at least as old as the early fourth century, for medals of the time of Constantine were found in the well. Antiquarians, indeed, have argued that this well and its leaden pipe were of the Celtic period; but I will not enter upon the tormented ground of this discussion, in which even French good nature ran at times the risk of perturbation.

Discoveries thickened as time went on. Two years later, in 1878, the railroad, after creeping all around the mountain quadrilateral of Auvergne, began to extend its *réseaux* toward their fastnesses, as I have described in these columns in writing of La Bourboule. The railway from Bordeaux to Clermont made its pathway across the valley of Royat; and a splendid viaduct was constructed just below the establishment. Each one of the massive piers of this viaduct required very considerable excavations for the foundation; and under the third and fourth piers they found heavy masonry work, with colored marbles and tiles interspersed. The next year a Roman aqueduct was discovered during the construction of a new avenue that was made necessary by the growing prosperity of the place; it was one metre deep by eighty centimetres in breadth, and had conducted the waters of the Eugénie spring to the Gallo-Roman baths. But the crowning discovery was not made until three years later.

In February, 1882, in the present park of the establishment, the gardeners struck a massive wall only three or four feet beneath the flowers. At first they began to demolish it; then, finding it cyclopean in its proportions, authority was given to uncover the ruins. They proved to be the substructions of two immense Gallo-Roman buildings. The marbles of Greece, Italy, Africa, and the Pyrenees had been employed in their construction and ornament—rose, red, red-veined, green-veined, gray-blue, and cipolline marbles, besides white marble in abundance—the same decoration, in short, that was used upon the cyclopean structures that crown the summit of the Puy-de-Dôme—the temples of Mercury and of the Divinity of Augustus—where, also, Greece, Italy, Egypt, and Asia were represented in magnificence of marble and porphyry, especially employed in fine mosaics. Even now the ruins of the thermæ of Royat preserve something of their ancient grandeur. Now wholly uncovered, they occupy the greater part of an area of forty by seventy metres, and the walls are several feet in height. It would be tedious to describe, at least without the aid of plans and pictures, the details which prove the importance and the splendor of this ancient bathing establishment—the *hypocausta*, the *piscinæ*, the pillars, the inscriptions, the cubes of mosaic glass which (when discovered) glowed with the iris-colors of many centuries. One cannot look upon these ruins without feeling anew that the destruction of the Roman civilization was, and still remains, a backward step in human development—a catastrophe by no means made good, as yet, by what we have in its place.

Nothing, indeed, is new under the sun. Two thousand years ago, says the accomplished Dr. Petit, of Royat, "senators, magistrates, orators, consuls were already coming here to cure their ailments, to drink new forces with the pure air of the mountains of Auvergne." The Royat of to-day is not the ancient village; the springs, the pretty park, the splendid hotels, the villas and boarding-houses have almost stolen away the very identity of the little place, further up the valley of the Tiretaine, which bears the ancient name of Royat. The Royat of to-day is a lively and pretty town, standing upon the broken ground at the mouth of the valley of the Tiretaine, musically named and musically flowing, as La Bourboule stands upon the Dordogne; the valley behind it is of all valleys the most musical with running waters of any that I know outside of certain far Pacific island valleys. The sweet springs of Fontanat—the upland village beyond Royat, towards the Puy-de-Dôme—pour down into the Tiretaine, sliding over green slopes of meadow-grass, or breaking up alive from the pathway, as if formed only yesterday, by a hundred runnels, and pouring forth a delicious gelidness. When I saw them, last August, the pedestrian had to change his path constantly to avoid the ablution of these pure waters. Never was there such a land of springs. I would call it the valley of the Dryades were it not so wet. Where the runnels gather themselves into a torrent, you see pre-Adamite water-wheels slowly turning, with the heavy motion of turning planets, in the green ravine, and grinding or not as chance, apparently, directs. Lower down the course of the torrent stand still more ancient overshot wheels, decayed and motionless, tethered with immemorial mosses, and apparently centuries dead; they seem a part of nature, one with the green glade and the singing Tiretaine.

Royat thus stands upon the edge of the wildest and sweetest nature on the one hand, and of a beautiful civilization on the other. Clermont-Ferrand, two miles away, has a grand cathedral, a library, and learned societies. The Puy-de-Dôme, in the opposite direction, with the ruins of twenty centuries, looks down upon one of the most grandiose views in Europe—mountain, river, plain, cities huddling toward the horizon, until, far in the east, the clear air of a winter morning

will reveal the tops of the higher mountains of Switzerland in their bright array, shining softly in the sunrise like films of gold. Mont Blanc, a little brighter and higher than the rest, appears clearly, one hundred and ninety-three miles away as the eagle flies. The Puy-de-Dôme is the furthest point, so far as I can learn, from which Mont Blanc is visible. I have seen Mont Blanc from the fortifications of Montfaucon in Besançon, a distance of one hundred and three miles, and from the top of the Ballon d'Alsace in the Vosges, one hundred and thirty-eight miles in an air-line; and this latter is, perhaps, the finest *ensemble* of western Switzerland that can be seen anywhere, for all the great summits, from Mt. Blanc to the Matterhorn and Monte Rosa, are there together, vivid in their snows. There is no such view in Switzerland itself, because there is no point in Switzerland that is at once sufficiently elevated and at a comparatively equal distance from the great summits.

TITUS MUNSON COAN.

PUBLIC FEELING IN IRELAND REGARDING MR. GLADSTONE'S BILL.

DUBLIN, May 4, 1886.

THE objections from an Irish point of view to Mr. Gladstone's bill, as it stands, may be brought under three heads: (1) the limited powers vested in the Irish Legislature, (2) the exclusion from the Imperial Parliament, and (3) the financial arrangements.

(1) Among other matters concerning which the Irish Legislature "shall not make laws" is "Trade." In so far as this may mean restrictive legislation on trade intercourse between the islands, or anything like protection for Irish goods, no insuperable objection is probable. But the clause must be fully and clearly defined, or it might complicate almost every legal measure and quite cripple the powers of the Irish Legislature. The same objection holds good as to the fifth of the seven subjects on which "the Irish Legislature shall not make any law"—"Impairing, without either the leave of her Majesty in Council first obtained, or an address presented by the Legislative Body of Ireland, or the consent of the corporation interested, the rights, property, or privileges of any existing corporation incorporated by royal charter or local and general act of Parliament." If this clause mean, or could be interpreted to mean, "the rights, property, or privileges" of all existing railways, carrying companies, and private limited-liability companies, it certainly requires alteration or definition. There is hardly any local act which might not in some way interfere with these "rights, property, or privileges." In the construction of new roads and railways, in the improvement of towns, or the widening and deepening of rivers and harbors, it would be almost impossible to avoid infringing some such "rights, property, and privileges."

(2) There are strong objections on the part of a large body of Irishmen to exclusion from the Imperial Parliament. We have no analogy in modern European history for such a large nationality as Ireland being unrepresented in the family of nations—excluded from consideration in the making of countless laws which she would be bound to obey; deprived wholly of many right which she now in a degree possesses, and in which, according to legal fashion, she has as large a proportionate share as England and Scotland.

(3) The fiscal arrangements of the bill are complicated, and their scope and effect are not easily grasped. They are the clauses in the consideration of which the Irish party will probably find itself weakest. As yet no member has shown himself fully qualified to deal with such problems; but the party has so unexpectedly developed aptitudes and powers in so many other directions that on this also it may prove equal to the occasion. The main objection to this portion of the measure has been strikingly brought out by the *Statist*, in an article entitled "Whiskey the Arbiter of Home Rule." The stability of Irish credit would depend mainly upon the permanence of the revenue at present derived from the excise duties on spirits, paid in Ireland. Spirits can be moved freely in bond from Ireland to England, and the duty paid in either country. The *Statist* sums up its argument as follows:

"We arrive, therefore, at this remarkable result—that of the maximum amount of £6,180,000 which may possibly be received in respect of customs and excise, no less than £5,380,000 odd will be deducted for imperial first charges before a penny can be paid into the Irish Exchequer to help to carry on the business of the country. The net proceeds to Ireland from customs and excise would appear, therefore, to be at most £800,000; and remembering what we have pointed out as to the probable transference of duty payments from Ireland to England, it seems unsafe to reckon upon anything solid from these sources in aid of Irish taxation. Indeed, it might conceivably happen that in the event of all the £1,100,000 of whiskey duty belonging to England and Scotland, but paid in Ireland, being transferred to the consuming instead of the producing country—as in strict equity should be the case—Ireland, so far from deriving any pecuniary advantage from the imperial control of the customs or excise, would find that it had to pay as permanent fixed charges £300,000 more than those imposts produced."

This article has been widely copied into Irish papers, and has attracted considerable attention. The dangers it indicates are not the greatest that might arise from this dependence of the stability of Irish credit on the excise: it might most seriously interfere with the progress of temperance and the moral and material advancement of Ireland. If whiskey became one of the "institutions" of the country, as slavery was in America, its opponents would be denounced as anti-Irish and anti-national. Proclivities to drink, in human nature, are sufficient everywhere—we are by no means exempt from them in Ireland. It would indeed be unfortunate for the consumption of whiskey to be considered patriotic.

Our anti-National, and till lately ascendancy party—mainly Protestant—never felt more bitterly than at present. To their previous contempt for and distrust of the mass of their countrymen, is added their indignation at being, as they consider, betrayed. The defection of Mr. Gladstone, Mr. Childers, and some others might be borne—there was, to most Conservatives at least, nothing surprising in that. That Earl Spencer, "the firm and gentle"—their ideal next to Cromwell—should advocate home rule, is a blow the sting of which is intolerable. Considerable spirit is shown by the Conservative class in adhering to their opinions and prejudices, despite the changes which they must recognize as imminent here in one form or another. It might at least appear prudent for them to keep their opinions to themselves, to temporize, or try to make terms. But no; they seem determined to hold out till the very moment the doors of the Parliament House in College Green are opened. This sustained hostile attitude is a real evil. It will obstruct and delay the fusion which is inevitable.

Protestantism in the north is showing itself peculiarly sectional and selfish in demanding that, if their coreligionists in the rest of Ireland be sacrificed, at least Ulster must be saved—or at least the three counties in Ulster where Protestantism is undoubtedly in the majority, and where, nevertheless, the Catholics form one-third of the population. Eyes flash and voices vibrate at the possible indignity of having to submit to laws made by Papists in that centre of national iniquity, Dublin. There is little use in opposing such sentiments with reason. Protestants form the fourth of the population of Ireland. They are likely to have their full share in the representation; and let the success of the Irish party at Westminster be an earnest of what a Protestant party in College Green could achieve if real wrongs gave it cohesion. Did Irish Protestantism but realize the situation, many of those considered the extremest Nationalists would not be averse to some arrangement through which, by proportional representation or otherwise, the Protestant minority scattered over Ireland would be fully represented in proportion to its numbers. In any case, Irish Protestantism in an Irish Legislature will be much more powerful for right than ever it has been since the Union. Appeals based on justice and on argument cannot permanently be silenced or set aside; one grain of reason and truth will ultimately outweigh whole windbags of false economics and inflated rhetoric.

The most virulent opposition to the bill, then, comes from the Irish Conservative party, who in one breath demand a reversion to Cromwellian statesmanship, with the total disfranchisement of Ireland, and decry the proposed measure as dishonoring and degrading to Ireland and to Irishmen. Many who profess to believe that they will be driven out of the country through the action of this legislation, openly declare that they would prefer and will indeed strive for separation. "I used to be called a rebel," remarked to me the other day a Protestant clergyman, an old and tried Nationalist; "but now when I talk to these fellows I find that I am the loyal man and that they are the rebels." The Radical anti-Nationalists are angry because Nationalists will not join them in denunciation of the bill on account of its "double order" and other clauses which appear contrary to their democratic ideas. Irish Nationalists, as a rule, are not radicals in the British acceptation of the term, and as long as their nationality is conserved, they are likely to prove more really conservative than their opponents.

Nationalists are not inclined to be led into any general or severe criticism of the bill at its present stage. They believe that their leaders and representatives will secure as much as possible for them—that they will finally agree to nothing dishonorable or dishonoring to Ireland. They have confidence in Mr. Gladstone and his colleagues, who now recognize the justice of their claims and suggest remedial measures. In so far as the bill would give circumscribed powers, Irishmen generally believe that they will so work those circumscribed powers as to gain the confidence of all sections of their countrymen and of the British people, and to secure additional prerogatives. The power which representation in the Imperial Parliament would give the Irish minority to impede and nullify the process of amalgamation in Ireland, might be attended with many and grave dangers. There is now in Ireland no real extended love for the Empire at large or interest in its affairs. We may hope that responsibility in an Irish Parliament will lead to a reversal of this feeling and a genuine desire for participation in the affairs of the Empire at large—a desire which could then be gratified in one form or another. The tactics of the opponents of Irish self-government are directed to wreck the bill, to destroy the hope of a speedy settlement, to adjourn the contest as much as possible, and to discount the chances of Mr. Gladstone's health failing. Nationalists are not inclined to fall in with these plans, or to indulge in any very severe and open criticism of the clauses of the bill until its principle has been affirmed by the second reading.

—Since writing the foregoing, Mr. Gladstone's lofty and touching manifesto has appeared, and Earl Spencer has made another noble speech in

favor of home rule. It is difficult to avoid a feeling of bewilderment at seeing all that the mass of Irish Nationalists ever contended for advocated by such men. Truly the ultimate success of no cause need be despaired of that is based on common sense and justice. D. B.

MYKENÆ AND TIRYNS REVISITED.

ATHENS, April 20.

SOME of the readers of the *Nation* may remember that I wrote some years ago from here, impeaching the antiquity of the inhumations discovered by Schliemann at Mykenæ, on the ground that the construction of the tumulus (for such it must be considered) was patently of later date than the classical Mykenæ destroyed B. C. 468. Returning to Athens after a long interval and after new discoveries by Schliemann of the same character as those at Mykenæ, I profited by the recent visit of Mr. Penrose, the celebrated architectural archæologist (whose discovery of the system of curvatures in the Greek temples has connected his name imperishably with the noblest works of Greek architecture, and whose elaborate studies into the remains of all known Greek structures have given him an authority probably higher than that of any other living man in this branch of archæology), to revisit Mykenæ and Tiryns in his company. We were accompanied also by Dr. Sterrett and Mr. Lewis of the American school.

We went carefully over Mykenæ, and on the most thorough review of all the indications which had led to my previous conclusions, and the evidence afforded by structural character alone, Penrose decidedly rejected any pretension of the tomb to be of greater antiquity than the Macedonian epoch; and I believe that an intelligent examination of the structure, which remains substantially as found—only trivial and immaterial restorations having been made by the Greek Archæological Society—will confirm in any scientific mind this conclusion, and will certainly show that there can by no possibility be any relation to the heroic epoch in it, much less to that prehistoric epoch to which the original Mykenæ belongs.

We subsequently visited Tiryns and examined Schliemann's prehistoric palace, which Mr. Penrose unhesitatingly pronounced of a late barbarism, even subsequent to the tombs at Mykenæ, and probably not earlier than the first century B. C. We did not then know the objects found in the ruins at Tiryns, and now preserved at Athens, so that there was nothing to point out more precisely the epoch to which this structure belonged; but the mixture of sawn stone, cut stone, rude burnt bricks, with rubble and stones taken from the ancient city, determined its character as semi-barbarous, and subsequent to all good Greek work. To avoid repetition, I will give further on the details of the evidence, over which I went again a week later in company with some friends from Oxford, Hellenists and students of archæology, and one of whom, Mr. Pelham, had made an especial study of prehistoric monuments. This visit not only confirmed the conclusions which Penrose and myself had agreed in, but gave more definiteness in some respects, owing to Mr. Pelham's criticisms.

In my previous study of the Mykenæ tombs, I had come to the conclusion that the partition walls between the circular substructure and the ancient wall of the city were contemporary with the circle, and had been constructed as buttresses to support the latter, which is of rough broken stone, laid without cement of any kind. These partition walls, being in part composed of débris of the archaic and of the classical Mykenæ, are indisputably marked as post-classic, being later than the destruction of Mykenæ by the Argives. Mr. Pelham pointed out certain details which are almost absolutely conclusive of the priority of these partition walls to the inhumation, and that the tomb was an intrusion into a mass of habitations rudely raised by some poor tribe who had profited by the massive walls of Mykenæ to construct a refuge there—perhaps only temporarily, because their walls were flimsy, and would not have stood long alone. No mortar was used, so far as we can now see, and the stone was mostly merely broken masses, the exceptions being material from the older walls. This explains what had always puzzled me before—viz., the rude houses which lie beyond the monument, and which, being of the same construction as the partition or supposed buttress wall, I had been troubled to connect satisfactorily with the tombs. The history of this series of works, therefore, is in brief as follows:

Mykenæ, the city, with its still remaining circuit of walls, the Lion Gate, the postern gate, and the so-called Treasury of Atreus, are of the polished stone period; traces of remains of the classical period being shown in the pilasters which had been placed in the front of the "Treasury" entrance and the second tomb—clearly a late imitation of the greater one. Then came the ruin of the city by Argos, and its abandonment for centuries, probably, and the refuge here of some poor people who were content to build a hamlet of rude stone habitations in the so-called Agora, or space which was left between the ancient Acropolis and the outer wall, there being no trace of such habitations found on the Acropolis hill. I conjecture that these houses had been already again abandoned, when there came a barbarian tribe who chose this sheltered enclosure to construct a huge tomb for the interment of several of their own number, probably a chief and other important people, perhaps in single, perhaps by successive burials; the remains of one (that which Schliemann identified with Agamemnon) being pronounced, I understand, to be those of a woman. To effect this interment the ground was excavated to the rock, demolishing in part the houses there, and the circle of stone raised round the graves so as to form a common tomb, and on this was reared a circle of flat stones, something after the manner of a druidical circle, which Pelham pronounces substantially the same in plan as the Celtic remains at Carnac. In some part of this were erected the barbarously ornamented stelas now in the Patissia Museum at Athens, and which again entirely correspond with similar stones from the Celtic tumuli in France to be seen at the Museum of St. Germain-en-Laye. All the evidence of the locality goes to confirm my original theory, that this was a Celtic interment of the period of the barbarian invasions stimulated by Pyrrhus.

The examination of Tiryns is even more convincing to any one who is acquainted with the archæology of architecture. The conclusion is inevitable that this series of buildings or building which Schliemann has called a prehistoric palace, is not the first but the last occupation of the site. This appears from the facts that while the construction which figures so imposingly on the plan of Dr. Schliemann's book is based on the débris of a former construction, there was no layer of later débris over it, and that the stones of which it is constructed are sometimes taken from the early Tiryns, sometimes masses of limestone sawed and drilled with a metallic tubular drill, such as does not occur until the later classical times. Moreover, the most massive blocks, which are sawn marble not finished from the saw marks or in any way polished, bind in with rubble and rude bricks well burned, the whole held together by superfluous abundance of a poor mortar. The bases of the prehistoric columns of Schliemann are simply rudely cut bases of a style which would induce the opinion that they were Byzantine without the remains of Byzantine chapels and graves, which could not be ignored in the plan, but are in the Doctor's conclusions and theory; without reference, too, to the fragments of Byzantine pottery of a late epoch—it may be as late even as the tenth or eleventh century A. D. Dr. Sterrett finds in the whole ruin the exact character of the early Turkish work found in numerous localities in Asia Minor, and would have classed it as Turkish if he had come across it in the Asiatic provinces. But the pottery is unmistakably glazed and painted earthenware, of a coarse quality, with the brilliancy of the glaze perfectly preserved, and with the usual Byzantine allegorical animals. There was no object of distinctly high antiquity found, and the painting on the wall, which is so carefully copied in the illustrations of the Doctor's book, is simply barbarous wall-painting done on a very gross and perishable plaster, with nothing archaic in it except its rudeness. The Greek official who is at the head of the department of excavations and archæology, had little or no doubt of the ruin being Byzantine, and if we had seen him before we went to the site, we might have saved ourselves a period of perplexity, for when once it was suggested that it was Byzantine the difficulties cleared up rapidly. A late Byzantine occupation, and the construction of a palace or series of houses on the ruins of the citadel of Tiryns, account for everything that was found, and no other hypothesis will.

Dr. Schliemann has carefully refrained from exploring the débris on which part of the palace was built, or he would have been unable to sustain his theory. As it is, how any man with the least experience in prehistoric work could have conceived that this belonged to it, I cannot understand, for the barbarism and comparative modernness of it *sautent aux yeux*. Schliemann's theory and treatment of the subject are simply stupefying, and this was the impression of every one of us—seven in number.

W. J. STILLMAN.

Correspondence.

JOHN HARVARD: FURTHER NOTES.

TO THE EDITOR OF THE NATION:

SIR: I have reason to know that considerable interest has been excited by my letter which was printed in the *Nation* of March 4 (*ante*, p. 191), and therefore you will perhaps permit me to revert to the subject with which more particularly its last paragraph is occupied, and to say a few words on another subject.

The register of Emmanuel College is a compilation of the last century, and is, therefore, of quite secondary interest in relation to John Harvard, but I find elsewhere contemporary evidence of what in his time his own college looked upon as the main point to be recorded on admission. In 1634 Richard Newell, and in 1638 William Maxey, on migrating from Emmanuel to another college, took with them testimonials in the customary form, from which I cite so much as suffices for my purpose:

(December 16, 1634.) "These are to certify . . . that Richard Newell, borne in the county of Hartford, was admitted . . ."

(May 12, 1638.) "These are to certify . . . that William Maxey, borne in the county of Suffolke, now batchelour in arts, was admitted . . ."

These documents, issued as they necessarily were after reference to the register, speak for themselves.

I desire to enlarge somewhat upon the political

position of the borough of Southwark, or, in city language, of the Ward of Bridge-Without, not as defined in legal documents, but as coming to the surface and appearing to the inhabitants in every-day affairs in John Harvard's time; and for this purpose I will avail myself of original papers of his date remaining in the archives of the Corporation of London.

In 1608 the Justices of the County of Surrey assessed, for a certain purpose, the carmen of the city residing in Southwark, together with other inhabitants of the borough—that is to say, treated them as inhabitants of the county over which they had jurisdiction. The Lord Mayor, being informed, wrote at once to the Board of Green Cloth complaining, and stating in so many words, that "the Borough of Southwark had never been taken for any part of the County of Surrey." In 1611 we have another matter which in principle was similar. The same Justices had appointed a meeting in the Borough of Southwark for the purpose of administering the Oath of Allegiance to the inhabitants, but again the Lord Mayor was equal to the occasion. He intimated to the Justices that he would see to the business, and that they were not to expect the appearance before them of persons who dwelt within the government of the city. And in 1624 we find something in connection with the home original of what was a necessary adjunct to every New England village, the training-field. The inhabitants of Bridge-Without, finding themselves summoned to Croydon to be mustered with the inhabitants of the County of Surrey, contrary to ancient custom, which had been recognized by Secretary Walsingham in the reign of Queen Elizabeth, sought the aid of the city, with the result that an Order in Council was issued directing that they should be mustered by the city, as formerly, and not with the county. Matters such as these, continually occurring, subjects of common talk, with results patent to all, brought home to the dweller in Bridge-Without, in a very intelligible manner, that he belonged to the great city of London just as much as the dweller in Cheapside.

It is to be hoped that the American, be he who he may, who in due course will collect and arrange the materials for the biography of a great worthy, may take, as he easily can, those means which will prevent his falling into the irritating blunders which, to a greater or smaller degree, mar all that has been written on your side of the Atlantic concerning the English period of John Harvard's life, since the present discussion began. I have noted a want of acquaintance with forms of expression in common use during the seventeenth century, and even an evident inability to read the handwriting of that age. Passing by this matter, I will notice two points only, out of very many calling for remark, in the latest writing which has reached me from the United States, and which comes from the Massachusetts Cambridge. The author, recalling that in a legal document John Harvard is styled "clarke," tells us that "this fortunate clause" establishes "that he was a man of learning," and adds, "it is impossible to say whether he had received orders in England." Indeed! Why, "clarke" is the very word which settles the question—the very word which for many centuries has alone been used in all formal instruments to describe a man in holy orders. This same gentleman, I see, discards the words given *ante*, page 297—"power being reserved, . . . come to seek it"—in favor of a translation of his own, the result being what I dare say he little supposes. Let me tell him that those words are the identical words which, ever since English has been the language of the courts, have been used as the equivalent of the Latin formula which he reprints. It is with some difficulty, if at all, things of this kind can be excused, because they may be avoided without any. Z.

CAMBRIDGE, ENGLAND, May 7, 1886.

FREE LABOR.

TO THE EDITOR OF THE NATION:

SIR: A moment's reflection is sufficient to convince any employer that, other things being equal, a free moral agent is worth more to him as an employee than a man who has bound himself to quit work, without knowing why and however much against his will, whenever some self-important, worthless "walking delegate" makes his appearance and snaps his fingers, or otherwise signals for him to do so. Workmen of average intelligence applying for employment cannot fail to understand that such is the case.

Were employers generally to act upon this, and, in taking new men into their employment, pay those who have retained their independence more than they pay those who have surrendered it, such a course would do much to render organizations binding their members to become like so many cattle, unpopular with the workingmen and in the community. It may be suggested that employers would be likely to be deceived. Very possibly. But when workingmen hesitate to acknowledge that they belong to such organizations, the end thereof is near at hand.

GEORGE B. UPHAM.

BOSTON, May 15, 1886.

REMEDIES FOR BOYCOTTING.

TO THE EDITOR OF THE NATION:

SIR: The recent strikes have given thinking people a very forcible suggestion of the dangers to be apprehended from the laboring classes when under the leadership of ignorant and unprincipled men. If the law-abiding portion of the community will lay this experience to heart and *act* upon it, our troubles will not have been in vain. There are two points to which special attention should be given:

1. The arm of the law must be strengthened.

We must have legislation explicit enough to cover every possible case of interference with a man's natural and constitutional right to go about his lawful business unmolested. The penalties attached to the violation of such laws should be very severe. The man who steals my month's wages after it is earned, is not half so dangerous an enemy to society as the man who robs me of my right to earn it. In Missouri we are glad to see the annouacement made in the most influential paper in the State, that every candidate for the Legislature will be interrogated in writing, as soon as nominated, as to his willingness to support a law defining and punishing the crime of boycotting. This is a move in the right direction, and should be actively taken up in other States; but it must be earnest and aggressive, for its very suggestion will put within the reach of demagogues a larger purchasable vote than ever before. The Knights of Labor will soon be playing an important part in politics—let no one deceive himself as to that. We have already been treated to the disgusting spectacle of a Congressional Committee deferentially requesting an ignorant inciter of riots to suggest changes in the Federal Constitution. When Congressional committees show themselves ready to compound with the confessed enemies of law and order for their continuance in office, it is time to drop mere questions of party out of sight, and do a little energetic work for the preservation of liberty. The formation of Law and Order Leagues is a good movement, always providing that they do not allow the excitement of the moment to draw them *outside* the law.

2. Something must be done to infuse among the masses some knowledge of the cardinal principles of economics.

The prevalent opinion that these principles are too abstruse to be comprehended by any but educated people, is unfounded. Professor Jevons, in his 'Primer of Political Economy,' gave ample demonstration that the most important elements of the science can be stated in a manner both interesting and easy to comprehend. The child in the public schools or the laboring man of ordinary intelligence who could not understand the teachings of this little work, is the exception and not the rule. When the seed of the economic heresies held by such men as Powderly, George, and Gunton falls into soil entirely unoccupied by the truth, we can expect nothing else than a disastrous harvest. We are not unaware of the difficulties in the way of having political economy properly taught in our public schools. The baneful influence of protectionism stands ready as yet to destroy a large proportion of the good which might be done in that direction. A great deal may be done, however, by private effort in the way of circulating literature and organizing local associations for the study of such questions. Every little helps. W. J.

STATE MILITIA FOR STATE DISTURBANCES.

TO THE EDITOR OF THE NATION:

SIR: It is not to be wondered at that the War of the Rebellion left us with an exaggerated sense of nationality as against State rights, and an undue contempt for militia as against regular troops—two sentiments which find expression in Mr. Bumstead's communication of April 29. But the framers of the Constitution, who made the States an integral part of our national system, and carefully provided for a militia, did not build upon the experience or for the needs of a single generation. And however it may be in Illinois, we of Wisconsin have no reason to wish these things otherwise than as they are. The independent action (not *sovereignty*) of the States, and "the necessity of a well-regulated militia to the security of a free State," have been amply vindicated by these events. With militia—and with regulars no less—everything depends upon how they are handled. We were so fortunate as to have, in the two most important positions at this juncture, men of nerve, sound judgment, and promptness of action—Governor Rusk and Adjutant-General Chapman. Both of these hastened to the scene of disturbance, summoned the militia (which was in an excellent condition of discipline and morale), and, by one volley of musketry and a few well-directed cavalry dashes, quelled the riot so effectually that the police was able to do the rest. I am old-fashioned enough to believe that this way of dealing with a mob promises better for the future of free institutions than if there had been a detachment of Federal troops stationed at Milwaukee.

W. F. ALLEN.

MADISON, May 8, 1886.

THE FAULTY TEACHING OF ENGLISH GRAMMAR.

TO THE EDITOR OF THE NATION:

SIR: Allow me to add my testimony to that of your correspondent in the *Nation* of May 6th, as to the present imperfect system of teaching English grammar. Is it not a system which slights the inculcation of the universal laws of language (the main object, one would suppose, of the study of grammar), while at the same time the accidents, the differentiations, of English speech are so magnified as to give an altogether misleading idea of their relative importance; in fact, to treat them as laws, rather than as the exceptional

variations which they really are? There is nothing which proves that the present method of teaching English grammar is bad, more surely than the general dislike and apathy of the children toward the study, while there is nothing more certain than that this dislike and apathy disappears as soon as the students are made to comprehend something of the general laws of language, which they can hardly do from the mass of irrelevancies with which most of our so-called English grammars teem. Every one who has had a common-school education, followed by a thorough classical course, will bear witness to the fact that it was this latter course which finally cleared up the whole subject of grammar, if it ever has been made clear to him, and which gave him a comprehensive view of the whole field of language-study.

Your correspondent's strictures on the usual treatment by English grammarians of the subjunctive, of the cases, of the adjectives—he might have added, of the much abused and misunderstood tenses—are justified. The writers of our present English school grammars would seem, from all indications, to have been conversant with only the English tongue, and not to have had a very scientific acquaintance even with that. A disciple of Bopp, or Corssen, say, ought to be capable of explaining on general principles to the English student the use of the subjunctive mode in his own vernacular, and would instinctively avoid the vicious subdivision complained of; and so a thorough student of the strictly logical tense system of the Greek verb should be able to make clear to the ordinary scholar the equally logical English verb. Certainly there is better reason for subdividing the imperfect tense of the English verb, with its "was having, had, did have," than for the division of the subjunctive which your correspondent so justly criticises.

The study of English grammar, as at present pursued in our public schools, is almost useless to all students, and entirely so to those who intend to take a subsequent classical course. The writer has found by sad experience in tutoring that the work of the schools has virtually to be undone before the student can be made to comprehend the broad principles of the laws of speech, and thus, and thus only, become prepared to overcome with comparative ease the difficulties of Latin and Greek. This general condemnation of the study as practised in our schools is justified also by facts derived from a considerable experience in the examination of teachers for the public-school service—these would-be teachers being themselves the product of the common-school system. In ninety-nine cases out of a hundred, the applicant's "knowledge" of English grammar has consisted in the memorizing of a set of idiotic rules, and in a system of pettifogging parsing which alone would be sufficient to hide from his view the logic of language, and which rendered him entirely unable to cope with questions based on general laws. It would seem that there might be a grammar devised which should make these general laws the prominent and essential feature, leaving to a subordinate part or treatise the explanation of idiomatic variations.

Conscientious educators could do no better service to the cause than, in general committee, to revise the whole subject, and, among other evils, to correct the absurd and uncertain grammatical nomenclature, which every upstart grammarian thinks it his special province to remodel. Let us call the grammatical spade a spade, in whatever language it is encountered.

C. T. Williams.

Kent, Ohio, May 13, 1886.

DAISIES AND DAISIES.

To the Editor of The Nation:

Sir: A marked illustration of the misleading power of a pleasant association when it fastens on the name of a thing instead of on the thing itself, may be found in the very general use among us—and the warm defence of such use, by many people—of the name daisy for the common white flower of our fields. It is a lamentable mistake, for this reason, that knowledge of the true daisy so dear to English poets is confused by such familiarity with its name. The intelligent comprehension of all the exquisite allusions to the daisy in English literature must pass from American readers if they permit themselves to suppose that the (so-called) ox-eyed daisy, the whiteweed, is the same with the true daisy. It is quite another genus, and its character, its charm (I should be the last to deny that it has its own charm) is of an entirely other quality. Its free and somewhat flaunting growth is in direct contrast to the humbleness of the little turf-loving daisy, which, as Burns says,

> "Scarce rears above the Parent-earth
> Its tender form."

The chief delightfulness of the whiteweed springs from childish memories, from such associations as give poetry to the buttercup: it has the delightfulness of commonness.

Commonness is also one of the special glories of the daisy: it is "nature's favorite." It is so dear to the heart partly because it is so widespread a gladness in its own fields; but they are the fields of Europe, not of America, that rejoice in it. It is consecrated to Americans only by literary associations deepened by foreign travel. In Europe it grows everywhere, from Iceland to the extreme south; in the United States it is not to be found. Its special and perfect home is an English lawn—the little circlets stud the sward as with embroidery; but it is companionable also with the wild grass of hilltops and of brooksides. Pastures and meadows here are adorned—more abundantly than the farmer likes—with our whiteweed; but do we like it on our lawns?

But let us not compare the two at all. I only wish to bring forward some of the descriptions of the English daisy by English poets, which make it impossible for any reader of them to speak of the American daisy and the English by the same name—a fact of which the majority of young Americans seem to me to be singularly ignorant. Yet one would think that for women at least (with whom the love of flowers is usually instinctive), whatever their other enforced studies, the first "elective" and the last would always be the study of English poetry. And one would think that Chaucer would not be unknown to them—the most ardent lover of the daisy—and that they would read once and again his 'Legende of Goode Women'; and that even once reading it they would never forget the enchanting praise of the daisy in the lines beginning

> "Of alle the floures in the mede
> Thanne love I most thise floures white and rede
> Suche as men callen daysyes in our toune."

"White and *rede*"; it is there that lies one of the lovelinesses of the daisy, in the red tips and red underneathness of its petals. "Daisies pied"; how much of the delicate color of the picture is lost to those who do not recognize the force of the epithet in the heavenly verse—

> "When Daisies pied and Violets blue,
> And Lady-smocks all silver-white,
> And Cuckoo-buds of yellow hue
> Do paint the meadows with delight."

Wordsworth not only compares the daisy to

> "A queen in crown of rubies drest,"

but goes so far as to speak of her "crimson head" in a verse I will return to in a moment. But it is Burns who, with his characteristic felicity of touch, has painted the daisy in an immortal line,

> "Wee, modest, crimson-tippèd flower."

Those epithets, once heard and appreciated, become one's very thought of the flower as completely as Shakspere's "violets dim."

In a pleasant little paper on the daisy by the Rev. H. N. Ellacombe, of Gloucestershire, published as an appendix to his 'Plant-lore of Shakespeare,' I find he mentions as one of its chief charms the fact that "there is scarcely a day in the whole year in which you might not find a daisy in flower"; and it is this which Wordsworth dwells on for a moment in one of his many "addresses" to the daisy:

> "When soothed awhile by milder airs
> Thee Winter in the garland wears
> That thinly shades his few gray hairs;
> Spring cannot shun thee;
> While Summer fields are thine by right,
> And Autumn, melancholy wight,
> Doth in thy crimson head delight
> When rains are on thee."

Another of the attributes of the daisy—"the bright daye's eyes," as Ben Jonson called them—its closing at sunset, is prettily described in a verse quoted by Mr. Ellacombe from Clare, a peasant poet of nice powers of observation:

> "Now the blue fog creeps along,
> And the birds forget their song;
> Flowers now sleep within their hoods;
> Daisies button into buds."

For the love of English poetry, may I not entreat every reader of the *Nation* never again to call ox-eyed daisies "daisies" *unqualifiedly*? I fear it would be considered going to an extreme to urge the courageously honest use of the name whiteweed! We are the more bound to do so because it is our own American name, unknown, I believe, in England, whence the plant came to us as a weed. But who would ever think of calling the daisy a weed? * *

THE UNIVERSITY SYSTEM AT THE UNIVERSITY OF MICHIGAN.

To the Editor of The Nation:

Sir: In the present communication I wish to supplement my letter on the elective system, which you published in the *Nation* of May 13, by some account of our method of dealing with the question of marks and of voluntary attendance on college exercises, and more particularly by a description of our so-called "university system."

The first two topics can be dismissed quite briefly. As to marks for recitations and rank in class, they are practically unknown to us. Doubtless each instructor in a general way forms an estimate of the relative proficiency of his pupils, but the official record preserves nothing beyond the results of examinations. On the completion of a study the student is reported to the Faculty as passed, conditioned, or not passed. If passed, he receives a credit that counts toward graduation; if conditioned, he is allowed a year in which to make up the deficiency; but if he fails to do so within that time, he is treated as not passed, which means that his work in that study counts for nothing, and that he must do it over again in class before he can get credit. Attendance at recitations is to this extent voluntary, viz., that no specific penalty attaches to any single absence, nor is there any graduated system of penalties for repeated absence. But it must not be inferred from this that either Faculty or students regard it as immaterial whether attendance is regular or not. A student absent from recitation follows custom and the unwritten law by making prompt explanation to his instructor. If in any case a tendency to excessive absence is noticed, the matter is reported to the Faculty, and steps are at once taken to remedy the evil. It would be pretty nearly true to say that at Ann Arbor the relation of theory and practice is almost the direct opposite of that criticised by the Harvard Committee in the report alluded to in my former letter, when they say: "In theory students are not permitted to absent themselves

from recitations except in a very limited way. Practically, in the judgment of your committee, there is in this respect the largest latitude."

In giving to the public a short story of our experience with the university system, I may say at the outset that my main object is simply to show the direction our efforts have taken in the search for a solution of an important problem in education. I do not propose to discuss the comparative merits of different systems. Our credit system allows a student to earn his degree by completing a specified amount of work, measured by full courses of study or by hours of weekly attendance. Under the university system the obtaining of a degree depends only in part on the number of full courses standing to one's credit; in addition to any credits he may have, the candidate is obliged to pass a special final examination, before a committee of the Faculty, on certain specified topics to which he has devoted at least a year and a-half of study. It is evident that the new system, though carried on side by side with the old, is adapted only for the more mature students —those who are already well grounded in the studies usually called disciplinary, who have some well-defined aim in view, and who wish to pursue special lines of work further than would ordinarily be practicable in connection with the courses of study offered to large classes. It is, in a word, a scheme to promote specialization in cases where specialization seems likely to prove profitable to the student. Premature entrance on university methods of study, as contrasted with college methods, is guarded against by providing that the privileges of the system shall not be open to any student until he has completed at least two years of his college course, and has completed all or nearly all the courses included in the set of studies prescribed for the degree he seeks.

The first public announcement of the requirements for graduation on this plan appeared in the calendar for 1882-83. It was at that time provided that students working on the new system would "not be held to the completion of a fixed number of courses," but would have to "take an amount of work approved by the Faculty," and leave the question of degree to depend on the result of an examination to be held at the end of their period of study. For the work done, no credits like those earned on the old system were obtainable. Students were encouraged, even while following instruction given in the classroom, to carry on, under the supervision of the Faculty, independent and original researches in broader fields. In the calendar for 1883-84 it was more explicitly stated that students at work on the university system would have to pursue "three distinct lines of study, one major study and two minor studies." The following combinations, taken from the schedule of examinations held in the spring of 1884, indicate the character of the groups that were approved, the major study standing first in order in each group; 1, Electricity, Analytical Chemistry, Mechanics; 2, Greek, Latin, German; 3, English Literature, Political Economy, Finance; 4, History of the United States from 1789 to 1860, Political Economy, International Law; 5, Philosophy, English Literature, German. Twelve students took their first degrees on that system in 1884.

In its practical working, the system, as above described, though it clearly furnished a valuable stimulus to those who worked under it, and was an efficient agent in securing a high grade of scholarship and mental training, did not prove attractive to so large a number of students as its more earnest advocates had hoped it would, nor, indeed, to the majority of those whose attainments were such as to fit them for work of the character contemplated. At the beginning of his third year in college, a student, with two roads before him leading to the same degree, can easily bring himself to believe that, by a judicious choice of studies, he can secure on the credit system the chief advantages to be derived from the other system, and at the same time spare himself the ordeal of the final examination, and avoid the risk of staking all his hopes on the issue of a single day. The student's reasoning, it may be granted, has some force; and possibly it is too early yet to expect, or even to desire, that many members of any college class will care to devote as much as one-half of their college career to specialties. During the present year, therefore, the Faculty has so far amended its regulations as to permit the studies designated as minors to be pursued, under prescribed conditions, on the credit system, the final examination being confined to the major study alone. It remains to be seen what the effect of this modification will be.

In the foregoing description, attention has been directed to the university system chiefly as a method of undergraduate study. In its application to post-graduate work, its success from the start has been more decided. It was under this system that Miss Lucy M. Salmon, for instance, while studying here for her degree of master of arts, prepared a thesis on the History of the Appointing Power of the President, which was afterwards published, probably with some additions, as one of the papers of the American Historical Association. The paper received favorable notice in the *Nation* of April 8.

W. H. PETTEE.

UNIVERSITY OF MICHIGAN, May 17, 1886.

"I AM BUT MAD NORTH-NORTH-WEST."

TO THE EDITOR OF THE NATION:

SIR: Permit me a brief space to make an inquiry as to this singular speech of *Hamlet* ('Hamlet,' II. 2). The explanation of "handsaw" as a corrupt dialectic form for heron, and Mr. Heath's note that "the expression obviously refers to the sport of hawking"; that with a northerly wind the heron would fly toward the south, and the spectator would consequently have the sun in his eyes: that with a southerly wind the heron flying north could be easily distinguished from the hawk by the spectator, who would then have the sun at his back, is a good explanation as far as it goes; to the extent, namely, that *Hamlet's* wildness came on him only with a northwest wind, or, dropping the metaphor, came from one source alone and did not extend to other matters. Such, at least, is the impression which he means to convey to *Guildenstern* and *Rosencrantz*.

What was this source of his trouble? Does he mean to refer to the guilty love-making of the King and the Queen; and was there a notion afloat among Shakspere's contemporaries that a *northerly* wind was any more a love-wind, or any less, than a *southerly* wind? Two passages in Chaucer seem to suggest something of the kind. In his 'Parlament of Foules' (ll. 113-119, ed. Lounsbury), Chaucer has this invocation to Venus:

> "Cytherea, thou blysful lady swete!
> That with thy firbrond dauntist whom thou lest,
> And madist me this sweuene for to mete,
> Be thou myn help in this, for thou mayst best!
> As wisly as I saw the *north-north-west*,
> When I began my sweuene for to write
> So gif me myght to ryme and ek tendyte."

Further on in the poem (ll. 260-280), he describes the place where he found Venus, whom, he says, he "saw *north-north-west*"! It is to be observed that Priapus is the last classical personage (ll. 253-259) whom he passes before reaching Venus, and that Diana is the next one mentioned (l. 281).

Again, in 'The Knightes Tale' (ll. 1045-1055, ed. Morris), Chaucer describes the temple erected by Theseus as having an altar to Venus in the east, one to Diana in the north, and one to Mars in the west. The following fancy suggests itself in this connection:

Venus and Mars are extremes, but extremes which meet, lawfully at the altar of Diana in the north, or unlawfully elsewhere; but they meet. So that a "north-north-west" love meeting might be both an *illicit* love meeting and a *bloody* one, not under the influence of the chaste Diana, but brought about by the murderous god of war; and so *Hamlet* would be thinking of the "most seeming, virtuous queen," his mother, and the "incestuous, murderous, damned Dane," his uncle; and so the Queen's conscience-stricken guess as to the cause of *Hamlet's* "distemper"—

> "I doubt, it is no other but the main:
> His father's death and our o'erhasty marriage"—

would be the opinion which *Hamlet* expects and desires her to entertain.

Now is there in Chaucer, or in Shakspere elsewhere, or in their contemporary literature, any traditional foundation for the northwest being a source of illicit love? Could Shakspere have found any such notion in Boccaccio, or in Dante, supposing him to have known Dante's writings? Evil and evil spirits come from the north, it seems; and, according to some of the critics, Milton makes his Satan come from hell gates on the north, past the pavilion of Chaos, the "anarch old," to our universe in the south. This mediæval idea of the local source of wickedness may be contained in *Hamlet's* queer definition of the kind of madness he was suffering from.

I hope some one having access to a good library will pursue the subject, fanciful though it be.

—Respectfully, W. T. T.

HOLLINS, VA., May 7, 1886.

Notes.

TICKNOR & CO., Boston, publish immediately 'The Saunterer,' by Chas. Goodrich Whiting; 'The Familiar Letters of Peppermint Perkins'; and 'Red-Nosed Frost,' a metrical translation from the Russian of N. A. Nekrasoff.

'Plutarch's Lives,' edited by Edwin Ginn, will be added in July by Ginn & Co. to their "Classics for Children."

'Southern California' is the title of a new work by Mr. T. S. Van Dyke, author of 'The Still Hunter,' to be published shortly by Fords, Howard & Hulbert.

A new volume of poems by Mr. Charles G. Fall, of Boston, is now passing through the press.

The Caxton Book Concern, limited, will publish a volume of poems by Mr. John Grosvenor Wilson, author of the well-known play, "Nordeck."

Henry Holt & Co. are about to publish Hugh Conway's last novel, 'Living or Dead.'

A Scottish History Society has been founded, with the Earl of Rosebery for President. Its object is the discovery and printing of unpublished documents illustrative of the civil, religious, and social history of Scotland. The annual subscription is one guinea. Lord Dalhousie has offered to throw open his archives.

The literature of the Browning societies is enriched by a second and revised edition of Mrs. Sutherland Orr's 'Handbook to the Works of Robert Browning' (Scribner & Welford). The aim of the writer is merely to group the poems and to condense or describe their contents in prose, with no attempt at criticism. To the student of Mr. Browning's works as a whole the service is a considerable one, and the analysis of his philosophy and apprehension of his poetic attitude which underlie the classification are just. The dates of publication in the case of each poem are given—a great help to the systematic study of his career; and there are a number of passages which would find their proper place as notes in an

edition of the poems, inasmuch as they clear up details. No one should expect to find the volume a means of avoiding the difficulty of the thought or the obscurity of its expression in the works themselves. It does not make Browning "easy"; but, at least, it starts one in the right direction and gives him his bearings. The revision of the first edition consists of minor corrections, slight changes of arrangement, and some expansion of the prose paraphrase in the case of the darker verses.

Another contribution to the same literature is Mrs. Caroline H. Dall's pamphlet, "Sordello: a History and a Poem" (Boston: Roberts Bros.). This is a résumé from the original sources of the biography of Sordello, and an account of the career made up from these by the imagination of Browning for his hero. It is well done. The first part is faithful and clear, and reproduces the various versions of the real Sordello's life with painstaking accuracy and fulness; the second part is a reduction of the facts of Browning's story, and serves as a kind of "argument" for the poem. The æsthetic philosophy of "Sordello" is slightly touched, and seems to have lain outside the author's purpose. The obscurity of the sequence of events and the relations of the characters in "Sordello" is, however, the least of its darkness; its power of expression bears about the same relation to poetry as the sounds ejaculated by a person born deaf do to speech.

From Scribner & Welford we have half-a-dozen of the later issues in the Bohn series: a new edition of Hazlitt's 'Spirit of the Age,' edited by his son, W. Carew Hazlitt; the 'Letters of Charles Lamb,' by the same editor, in two volumes; a new volume of 'Miscellanies, Æsthetic and Literary,' from the remains of S. T. Coleridge; a handy 'History of Philosophy, for the Use of Students,' by Ernest Belfort Bax; and the second volume (an illustrated glossary) of Fairholt's 'Costume in England to the End of the Eighteenth Century.' The four volumes first mentioned have a relationship in time, and might all claim a place in any "gentleman's library." Still, the elder Hazlitt's 'Spirit of the Age' has become almost unreadable, in spite of the interest yet attaching to many of the subjects of his characterizations. Mr. Justice Talfourd's similar attempt at portraiture of his contemporaries, in writing a life of Lamb to accompany his select correspondence, is also barely tolerable, but his services in elucidating the letters outweigh the distastefulness of his lumbering style, and the want of that *esprit* which so shines in Lamb. Mr. W. C. Hazlitt has none too much of it either, but, thanks to him, we now possess in one volume the two compilations made by Talfourd—an economy of shelf-room as meritorious as the making two blades of grass grow where one grew before. He has done more than unite—he has edited, annotated, and corrected. The Coleridge volume, of which Mr. T. Ashe is the competent editor, contains sundry essays on the Fine Arts and on the "Prometheus" of Æschylus; fragments and notes, mainly from the lectures of 1818 (on the Middle Ages, Cervantes, Wit and Humor, Dante, Mythology, Style); with numerous miscellaneous pieces and notes on books and authors, ending with the essay on the Theory of Life. In this heterogeneous collection one will find all sides of Coleridge's mind.

Harper & Bros. give a fresh career to Prof. Richard T. Ely's 'French and German Socialism in Modern Times' by bringing it out in their Handy Series.

Lieut. W. H. Jaques's elaborate monograph on the 'Establishment of Steel Gun Factories in the United States,' abounding in plates, well fulfils the author's intention "to provide a book of easy reference to the details of the manufacture of modern ordnance." It appeared as No. 4 in the tenth volume of the Proceedings of the U. S. Naval Institute at Annapolis.

Scott's 'Lady of the Lake,' 'Selections from the Table-Talk of Martin Luther,' and Bacon's 'Wisdom of the Ancients and New Atlantis,' are the latest numbers of Cassell's National Library, edited by Prof. Henry Morley.

That the Adirondacks have survived in popular favor the extravagant laudation that has been poured over them as an earthly paradise, shows their substantial merit. In the long run, exuberant, undeserved encomium is as damning as faint praise. The East is much blessed in having such a sanitarium at its doors, for it is a sanitarium of the first order, as well as a hunting park for men who cannot go to more distant and wilder regions. Dr. J. W. Stickler has edited and compiled a little book, 'The Adirondacks as a Health Resort' (Putnams), which resembles a composite photograph in that many minds are seen in the picture it makes of this haven of health. Many contributors have recorded their experiences, as they understood them. Some of these are authorities of the highest kind, who speak for classes; others tell briefly of the health found for themselves. The book is a good guide for health-seekers there, and, with its encouragement and its cautions, may be studied profitably by the not-too-ill invalid. The combination on which health is to be restored is abundant fresh air, good food, and freedom from care. The Adirondacks have no monopoly of these, but they are well supplied. The last chapter is the most useful in describing a sanitarium that has been established at Saranac Lake, under the best auspices for those possessing neither poverty nor riches.

'Food Materials and Their Adulterations,' by Ellen H. Richards (Boston: Estes & Lauriat), is a sedate compilation of much practical interest for all who set a table. The author lifts the general subject of comestibles to a very high plane, and opens a wide field for domestic missionaries, by starting out with the premise that "the health and the morals of a people depend mainly upon the food they eat and the homes they live in." She has arranged various scattered facts so as to point out the way over an important but imperfectly known region. The general tenor of the book is not such as to attract the lovers of light reading nor to satisfy the hungry seeker after all the facts, but it is a good manual for schools and the intelligent housewife. Perhaps more stress might be laid before a domestic constituency upon the possibility of harm in canned food from the chloride of zinc which is displacing the older and innocent rosin flux. It is mentioned, but is not emphasized. Such expressions as "when money is plentiful and gold at par," and "when gold was two dollars or more" (pp. 20,21) show that the author's views on political are not as clear as they are on domestic economy.

'Coast Defences against Asiatic Cholera' is a report to the Illinois State Board of Health by its Secretary, Dr. J. H. Rauch, on the subject of Quarantine. It is an excellent compilation of the quarantine organizations in actual use along the seaboard, and Dr. Rauch believes that if proper vigilance and thoroughness are exercised, the foreign disease may be excluded. But constant vigilance and the promptest action are essential. It is more probable, if the European epidemic keep alive, that occasional cases will pass the cordon; but if the local authorities do all that is required of them, there is little to be feared from these. The special value of the pamphlet is its convenient grouping of the defensive agencies now in operation by the local and national authorities of the United States and Canada.

The *Revue Scientifique* gives some interesting statistics bearing on the comparative healthiness of two systems of dealing with nightsoil. In Brussels the mortality from typhoid fever had reached 105 in 100,000 in 1870–71; but when the *fosse* or cesspool was given up it fell at once to 40, and for the ten years it has not exceeded 30. In Frankfort it was 89, but when closets connecting with sewers were introduced in 1870 it fell to 29. In Berlin it declined from the same cause from 50 to 28. In London the change is of older date, having begun in 1819 and been completed in 1848. The result is a mortality from typhoid of 26 and from diphtheria of 18, while Paris reports 70 and 75 respectively. No wonder the "capital of civilization" makes so bad a show; there are still 70,000 cesspools in it, many of them in the cellars of the houses, fermenting and poisoning the air. This is chiefly in the poor and populous districts at the north and northeast. In other quarters a better practice is obtaining. Some 700 miles of sewers are already constructed (discharging into the Seine 395,000 cubic metres of sewage daily), and 300 more are promised. When all is done, no doubt we shall hear of a fall in the death rate which will effect the object aimed at by the gratuitous education of every seventh child—the repopulation of France.

Exceptionally interesting is the April number of the *Pennsylvania Magazine of History and Biography*, which opens with a sketch and a portrait of Col. Lambert Cadwalader, of Revolutionary distinction. The lively journal of Miss Sally Wister is concluded, and will be missed. From the inedited journal of Dr. John Morgan, one of the founders of systematic medical education in this country, is given a curious account of a visit to Voltaire at Ferney in 1764. Noticeable in this is Voltaire's more than tolerable English, which he dexterously used in praise of Newton, Locke, Bolingbroke, and English free institutions. Likewise heretofore unpublished is a document proving the corporate existence and government of Philadelphia prior to the charter of 1701. Finally, we may mention a genealogical sketch of the late Gen. W. S. Hancock, whose paternal line is unknown beyond his grandfather, a seaman.

Gen. W. F. Smith's second and concluding article on the battle of Shiloh is the most significant article in the May *Magazine of American History*. It is essentially a vindication of General Buell against the generalship of Grant and Sherman.

There is not much to remark in *L'Art* for April 15 (Macmillan), unless it be the suggestive discourse—a beginning—on "La Montagne et le Paysage," by Pierre Gauthiez. But in the *Courrier de l'Art* for April 16, one must notice the criticism of G. Dargenty on the late Paul Baudry as an artist, apropos of an exhibition of his works. Baudry is denied either ideality or heart; is said to have fallen, as between two stools, in being equally drawn toward the antique and toward the modern; to have been a digester of masters, but not one himself—"un grand artiste, non pas."

We cannot judge of the likeness in the large lithographic portrait of Pasteur sent us by Parke, Davis & Co., Detroit, Mich. The head is at all events a striking one.

The principle of the well-known Game of Authors has been applied to Mythology, Roman and Greek, in a pretty set of cards published by the Chautauqua Press, 117 Franklin St., Boston. There are illustrations of certain divinities, but the ground of selection is not obvious, and many of the omissions seem strange. Nor are the accents of the proper names always accurate.

The abolitionists of Brazil, undaunted by the reaction manifested at the last elections, are renewing their attacks on the decaying but still powerful system of slavery. Foremost among them is of course Sr. Joaquim Nabuco, who edits

a popular, tract-like *Propaganda Liberal*, of which four issues have reached us. The essay which forms the body of each number is succeeded by a "Registo Politico," from which one may derive much information concerning the course of events and the state of parties on the main question. The office of the *Propaganda Liberal* is Rua da Quitanda 19, Rio Janeiro. Sr. Nabuco is also announced as the editor of a new Liberal Democratic organ, to be called *O Seculo*. We commend these publications to any one who wishes to combine a study of the Portuguese with the intellectual and moral gratification which Sr. Nabuco's writings always afford.

On the 25th of August next Professor Eduard Zeller, of Berlin, attains the fiftieth anniversary of his doctorate. His friends and admirers propose to commemorate the event by presenting to him on that day a bust of himself, with the names and addresses of all who contribute anything to the gift. A committee has already been formed, including such names as Bunsen, Bruns, Erdmann, Kuno Fischer, v. Hase, Helmholtz, Mommsen, Max Müller, v. Sybel, Vischer, and other leaders of European science and scholarship. To give Zeller's American admirers an opportunity of joining in the celebration, an American committee has been formed, consisting of Mr. Carl Schurz, 175 West Fifty-eighth Street, New York; President Barnard, Columbia College, New York; Prof. Geo. H. Palmer, Harvard University, Cambridge, Mass.; Prof. Geo. S. Morris, Michigan University, Ann Arbor; Prof. G. Stanley Hall, Johns Hopkins University, Baltimore; and Prof. J. G. Schurman, 15 West Fifty-seventh Street, New York. The Committee believe they will have the support of educated men and women all over the country, and especially of those who have found a guide to the speculation and science of the ancient world in Zeller's classic 'History of Greek Philosophy.' They ask all who are interested in the success of the celebration to bring the matter to the notice of their friends. It is very desirable that not only a fair subscription, but a large number of names should be sent from America. A list of names and addresses (but *not* of contributions) will be handed over to Zeller, and it is known that the American names will be especially gratifying to him. Contributions will be thankfully received and acknowledged by any member of the Committee, and any further information may be obtained from Professor Schurman.

—Teachers are very apt to believe that methods which they have tried with success in their own classrooms will be good for all other classrooms, whereas the success is often due to the men and not to the methods; and the good results that Profs. Smith and Blackwell have gained from their 'Parallel Syntax Chart of Latin, Greek, French, English, and German, based on the logical analysis' (Ginn & Co.), will not infallibly repeat themselves in other hands. Apart from a number of typographical errors and other infelicities—all which will doubtless be rectified in subsequent editions—the method pursued is useful only for the most elementary stage, and, if kept up, will do more harm than good unless checked by the influence of the teacher. Boys and girls trained in the logical analysis are very likely to write Latin and Greek, French and German exercises that shall have every virtue except that of being endurable; and, as it is, many a sensitive teacher gnashes his teeth at sentences which conform to every principle of syntax and shock every feeling for style. The acquisition of a foreign language is only to a certain extent a matter of science; and though science is steadily encroaching on the domain of art, and reducing what seems floating fancy to fixed formula, still, phrasing will always be a potent element, and deeper study will reveal under that phrasing a national conception that shall seriously diminish the value of parallelisms of syntax drawn from "the logical analysis." The gaps in one language as compared with another are often more significant than the correspondences. But, after making all deductions and limitations, no one can regret that the authors of the chart, who are experienced and skilful teachers, have put an instrument that they have found so effective themselves within the reach of others. Only we must add that sharp revision seems to be needed—better examples, more accurate perspective.

—Mr. Benn, in an admirable paper in *Mind*, defends the theory that the history of the world is and will be a history of progress, against Sir Henry Maine, who maintains, in 'Popular Government,' that improvement is a merely local and temporary phenomenon. He shows that the burden of proof has, in these days, been shifted to the other side; the law of improvement has become no mere empirical generalization, but a necessary consequence of simpler laws. For, even supposing that there is no inherent tendency to improvement in the various forms of life, individual and associated, it is plain, from the Darwinian point of view, that those forms which enjoy some accidental superiority multiply at the expense of the less favored, and eventually supplant them. And now that the process of universal evolution has become, so to speak, conscious of itself, it is quite possible to hope not only that the agencies which have been at work in the past will continue in operation, but also that, by being understood and artificially stimulated, their rate of operation may be indefinitely accelerated. Sir H. Maine is led to a different conclusion by attributing great power to habit and to the unpopularity of change. Progress, whatever else it means, means change, and change, according to him, runs against the grain of average human nature, even continuing to be unacceptable for some considerable time after its introduction. This is proved by the repulsion excited by bad manners, and by the conservatism of Oriental races and of women in all countries. Mr. Benn points out that change itself may become a habit, as we see in the case of those excursions to the seaside or the mountains annually undertaken by whole families at the cost of much temporary inconvenience; that dislike of bad manners has a very different origin, as is proved by the fact that good manners are not at all offensive to the ill-bred; and that the proposition that women retard the progress of civilization is purely fictitious. The evidence offered for this intensity of female conservatism, he says, is such as to make us doubt its existence; "for a cause which so powerful a logician can defend by no stronger arguments than are here adduced must be weak indeed. Apart from the commonplaces of the subject, most stress is laid on two considerations: the constancy of women, as evinced among other authorities by English fiction, and the character of that fiction itself. The first argument is entirely beside the question, for constancy is a virtue even more necessary to the friends than to the foes of progress, and just as likely to be exercised on its behalf. . . . A more astounding assertion has seldom been made" than that English fiction, which is "ever more written by women and read by increasing multitudes of women," is inseparably wedded to old-fashioned ideas. "Considered as an art, English fiction has passed since the beginning of the century through various stages of evolution, involving vast and continuous changes in the choice of subjects, in the mode of treatment, in the underlying conception of life; while in this evolution at least two women have played a decisive part. Besides this movement of its own, English fiction has reflected every other contemporary movement, practical or speculative, the ambition of the most recent writers being to reproduce with photographic fidelity every tendency of the time."

—The objection that the frequent change of fashion in women's dress is inconsistent with the theory that they are absolutely intolerant of innovation, Sir H. Maine meets by saying that new fashions are merely revivals of old ones, and that some of the Tanagra figurines are draped in a fashion resembling that of the present day. Mr. Benn points out that this is a vicious circle, and that, if it were not, most—if not all—of the radical measures now proposed have their parallels in ancient history, so that, on the Tanagra-figurine principle, they ought to be secure from feminine opposition. He reminds the reader that the sewing machine has silently and swiftly accomplished a revolution in domestic affairs, and that no woman has been known to oppose it on the ground of her aversion to change. He concludes that progress has not been shown by Sir Henry Maine to be insecure, for, however great a power may be attributed to the conservatism of women, the inference would still remain irresistible, that since civilization has advanced so far without their help, or even in spite of their opposition, and, what is more, has compelled them to follow, it will be able to pursue its onward course in the future as it has done in the past.

—From B. Westermann & Co. we have received a number of more or less interesting publications on Jewish subjects. Three are biographical. Of these the most readable is Dr. Adolph Kohut's 'Moses Mendelssohn und seine Familie' (Dresden and Leipzig, 1886), prepared for the hundredth anniversary of the death of "the Jewish Socrates," January 4, 1886. It condenses in an agreeable manner, and with a great deal of enthusiasm, many characteristic traits and much piquant matter culled from the writings of the Mendelssohns themselves, from Hensel's large work on 'Die Familie Mendelssohn,' Kayserling's biography of the philosopher, E. Devrient's 'Erinnerungen' of his grandson the composer, Raich's 'Dorothea von Schlegel' (the philosopher's daughter), Ludwig Geiger's 'Geschichte der Juden in Berlin,' and other books. Dr. Zimmels's 'Leo Hebræus, ein jüdischer Philosoph der Renaissance' (Breslau, 1886) is an extensive and drily learned treatise on the "life, works, and doctrines" of Judah Leo, eldest son of the famous Don Isaac Abarbanel (or Abravanel), who, on the expulsion of the Jews from Spain and Portugal, settled with his father in Italy, and there wrote his once so popular 'Dialoghi di Amore' (Rome, 1535), composed in a Platonic vein, and other writings. In a note we find the interesting particular—already communicated to us, some years ago, by Dr. S. Adler, of this city—that metric evidence afforded by several Hebrew poems of Don Isaac shows that at least the original form of the name of the family was the formerly general Abarbanel, and not the lately preferred Abravanel. Dr. M. H. Friedländer's 'Geschichtsbilder aus der nachtalmudischen Zeit' (Brünn, 1885) contains sketches of Jewish scholars of the sixteenth, seventeenth, and eighteenth centuries, and is to be followed by another *Heft*—which will complete the brief volume—containing biographical notices of celebrities of the latter half of the eighteenth and of the nineteenth century. It is characteristic of the process of evolution in modern Judaism that the author of this popular "Familienbuch," who officiates as a rabbi, has no hesitation in including among his Jewish "Geistesheroen" that great apostate from the faith of Israel, Baruch Spinoza. According to Prof. Rohling, of the University of Prague, who

has been carrying on an envenomed crusade against Jews, Judaism, and especially the Talmud, for a decade and a half, the Socratic philosopher who was Lessing's model for his 'Nathan der Weise,' Don Isaac Abarbanel, the trusted minister of Catholic kings, and (with the exception of Spinoza) all the heroes of Friedländer's 'Geschichtsbilder,' must have been, as true "Talmud Jews," sworn deadly enemies of the human race, and particularly anxious to destroy Christian happiness and lives. For such is Prof. Rohling's view of the Talmud and its followers, a view defended by quotations from its contents and other rabbinical writings, so maliciously commented upon, distorted, and garbled, and in some instances forged, that the author (who, by the by, glorifies the Inquisition and abhors Luther, Calvin, and free-thinkers almost as much as Talmudists) has been very freely branded as a "liar" by such Protestant authorities as Franz Delitzsch. These attacks he endeavored to parry by repetitions and fresh garblings; but when Dr. Bloch, a rabbi and member of the Austrian Reichsrath, denounced him in the *Wiener Allgemeine Zeitung* as a liar, forger, libeller, and perjurer, using among others the words, "The Professor of Hebrew Antiquities at Prague carries on lying as a trade," he sued him for defamation. The result was a protracted criminal suit before the jury of Vienna in 1884, in which Christian professors of Austrian and German universities acted as experts in Hebrew and Talmudical lore. The plaintiff was doomed to ignominious defeat, but forestalled it by dropping the prosecution. The counsel for defence, Dr. Joseph Kopp, a Christian member of the Reichsrath, subsequently summed up the conclusions to be drawn from the investigation of mixed anti-Talmudic and anti-Semitic charges in a volume entitled 'Zur Judenfrage nach den Akten des Prozesses Rohling–Bloch' (2d ed., Vienna, 1886). The book evinces serious study and reflection and a philosophical grasp of the question, but it is very painful reading.

A MISLEADING BOOK ON RAILWAYS.

The Railways and the Republic. By James F. Hudson. Harper & Brothers. 1886.

THIS book is likely to do harm. Not that it is by any means devoid of merit; but its merits are of a kind to render it all the more dangerous. Of certain phases of the railroad question the author writes with knowledge and ability. Of other phases, equally important, he has no knowledge at all, and seems hardly to suspect their existence. The result is, a brilliant treatise on railroads as viewed from a newspaper office by a man who has some familiarity with legislative investigations and judicial decisions, but none whatever with practical railroad business or the principles which underlie it. His presentation of abuses and dangers is clear and forcible; but the explanations which he gives are often unsatisfactory, while his remedy is one which has proved impracticable in the past, and would be sufficient to upset the business of the country if seriously applied at present.

The great evil in American railroad management at the present day is the existence of irresponsible power in the hands of a few men, which enables them to make arbitrary differences in charge. These differences, or "discriminations," are often given in favor of those who least need or least deserve them. The all-important problem for the community is, to find some means of checking this abuse; and if it can find the means, it will apply it and ought to apply it. The demand of some of the railroad men that they should be left to manage their own private business in their own way cannot be tolerated for a moment. It is not their own private business, it is a public duty as common carriers which they are performing. In consideration of this public character they have been allowed to take land under the right of eminent domain. Having used the right, they must accept the obligation. The last vestige of doubt on the subject was removed by the Granger decisions of the United States Supreme Court, which asserted the right to regulate railroads on other grounds besides the one just given.

All this Mr. Hudson presents forcibly. He shows the abuses of discrimination, as illustrated in the Hepburn Committee testimony and in the history of the Standard Oil Company. He also shows the fallacy in the attempt to excuse the railroads from their public obligations. But in his attempt to show how these abuses have arisen he is less successful. He lays too much stress on the arbitrary action of individuals, and fails to see that this action is the result of natural laws which have affected the railroad system in nearly the same way all over the world. The American railroad system is not the creature of Vanderbilt or Scott, Jay Gould or Albert Fink; it is far truer to say that Vanderbilt, Scott, Gould, and Fink are creatures of the railroad system, each in his own way. Business has developed in such a manner as to bring men of certain types to the front; the men have done something to modify its course, but would have been powerless to alter its general direction.

Here is where Mr. Hudson makes his first great mistake. He attributes many things to the arbitrary purposes of individuals, when they are really due to the necessities of railroad business, and are carried out in much the same way by the state roads of Germany or Belgium as by the private roads of Vanderbilt or Gould. Take the matter of pooling as an instance. Mr. Hudson opposes it strongly. He believes it to be an agency for doing away with that healthful action of free competition which would result in basing rates on cost of service. When met by the fact that railroad competition, wherever it exists actively, brings rates *below* cost of service, he attributes this to the arbitrary action of railroad managers, who wish to force rival roads into a combination. In so doing, he falls into errors of fact.

"It may be shown," he says, "that every railway war which has carried rates below cost clearly arose, not from competition, but from the effort to compel combinations or agreements which would end it. The first railway war that reduced freights from Chicago below cost of service was waged to force the Baltimore and Ohio Railroad to abandon its differential rate from that city to Baltimore; the last one was a struggle to crush or prevent competition in the local traffic of the New York Central and Pennsylvania Railroad."

He is obviously unaware of the fact that in August, 1869, five years before the Baltimore and Ohio completed its Chicago route, freight rates from Chicago to New York were nearly as low as they ever have been since, and, in proportion to cost of service, decidedly lower. Nor does he see what would have been the result if the New York Central had refused to wage its competitive fight with the West Shore. The West Shore was making rates below cost of service. The New York Central was forced either to follow suit or to lose its business. Undoubtedly its managers felt that the harder it fought the sooner the fight would be over; but a policy such as Mr. Hudson would have had it adopt, refusing to carry at ruinous rates, would have been out of the question. So large a part of the expenses of a railroad are independent of the volume of traffic, that business at any price is often better than no business at all.

The effect of active railroad competition generally is to place the more conservative roads at the mercy of the more reckless ones. The disgraceful contracts of the railroads with the Standard Oil Company were not due to the system of pooling, as Mr. Hudson alleges, but to the irregular warfare between the railroads of which the Standard Oil Company was able to take advantage at every turn. Had a pooling system existed in 1873 it is not probable that the Standard Oil Company could have risen to its present dominant position. The organization of the Eastbound pool had the direct and immediate effect of breaking up the "Evener" system which had been doing for the cattle business what the Standard did for oil; but the oil monopoly was too firmly established to be broken up in this way.

Our courts at first assumed that free competition would be the best means of regulating railroad charges. Not merely in the United States, but everywhere else, this proved to be a mistake. It was gradually recognized, in various parts of the world, that this theory could not be completely carried out; and it is hardly too much to say that the growth of really effective control has coincided with the gradual abandonment of this theory. The United States has held to the principle longest—with what results, we all know. Within the last few years there have been signs that the courts are beginning to take more practical ground, insisting upon results rather than theories. But this movement has only just begun, and there is serious danger that Mr. Hudson's book may do something to retard it. The author not merely insists upon free competition, but he goes one step further back, and would have us treat the railroad as a public highway. Not mere competition between railroads, but competition of many carriers on the same line of railroad, is the result which he proposes.

The idea is as old as the railroad system itself. It was embodied in the early charters of England and Prussia, and, with some modifications, in parts of the United States. It is hard to find a place where it was completely carried out for any length of time; but there have been many attempts to recognize the principle to some extent, the most notable being those in England in 1854 and in some parts of Germany in 1872. In connection with this last attempt there was very active discussion; and a work by Richter ('Das Transport-Unwesen auf den Eisenbahnen Deutschlands.' Frankfort, 1872) took almost exactly the ground occupied by Mr. Hudson, though the latter obviously is quite unaware of its existence. In spite of the fact that the system has never succeeded in practice, Mr. Hudson says so much in its favor that it is worth while to notice some of the difficulties which he overlooks. There are some others which he mentions; but his lack of knowledge of the detail of railroad business leads him to overlook the most serious ones. We may grant, for the sake of argument, what he says about the possibility of overcoming the technical difficulties of train-despatching for a number of clamorous train-owners; we may admit, to the utmost, his view of the legal rights in the case, yet we shall be far from having surmounted the chief obstacle to the plan, which Mr. Hudson calmly waves out of sight. "The question of tolls," he says, "presents little practical difficulty." As a matter of fact, the difficulties are enormous. A great deal of the low-grade or long-distance traffic of the railroads could not by any means pay its share of the fixed charges. This was realized even under the old canal system, where the tolls were frequently graded according to the quality and value of the goods. The author calculates as a fair toll for the Chicago and Northwestern Railroad, 0.774 cents per ton per mile. For Nebraska or Dakota wheat this would mean 15 or 20 cents a bushel to Chicago, *besides carrier's charge*—a prohibitory rate. But if you cut off that part of the tonnage, you would have to increase the toll, because the smaller volume of business would no

longer pay fixed charges at the old toll. This again would cut off more business, forcing a further increase of tolls; and so on indefinitely. It may be that Mr. Hudson would have the railroads themselves carry the low-grade traffic, and leave outsiders the privilege of carrying the manufactured goods, etc., which pay the higher rates. If this plan were tried, it would mean a simple repetition of the experience of Wisconsin in the Granger movement. The reduction of rates on profitable traffic to the level of the long-distance or low-class rate left nothing to pay interest or even maintenance.

We cannot follow out this matter as it deserves; but let it be noticed, as a further illustration, that if it were applied to the passenger business, commutation would be impossible. This is obvious; and in the freight business a somewhat similar result, though not equally obvious, would be equally unavoidable. If the tolls were fixed, there would be no object in making extremely low rates to increase the volume of traffic. It is to the railroad company as a track owner, not as a carrier, that the increase in volume of business brings profit. If some one else owns the track, the carrier loses his chief incentive to offer low rates; nor will any competition which you are likely to secure make up for the loss of this stimulus.

AN ENGLISHMAN'S HISTORY OF MUSIC.

A General History of Music, from the Infancy of the Greek Drama to the Present Period. By W. S. Rockstro. Scribner & Welford. 1886. Pp. 535.

REFERENCE has been repeatedly made in these columns to an odd peculiarity of the average English writer on music, as revealed especially in Grove's otherwise excellent 'Dictionary of Music and Musicians,' which contains articles by almost all the leading English musicians and critics. The majority of them seem to be brimful of knowledge regarding everything that ever happened in the musical world up to twenty or thirty years ago; but beyond that their minds appear to be complete *tabulæ rasæ*. Thus Mr. Rockstro, in the volume now before us, gives a very learned enumeration of various histories and dictionaries of music, beginning with 1647 and taking in Burney and Hawkins, Fétis, Kiesewetter, Ambros, and Mendel, but forgetting to mention the more recent and more readable histories by Brendel, Dommer, Nohl, and others. Then we are told deliberately that "there is indeed no volume of moderate size, embodying the entire history of music, available at the present moment to the English reader," although Dr. Ritter has edited such a work, which, though less extensive than Rockstro's, much better observes the principle of giving honor to whom honor is due.

The merits of Mr. Rockstro's History are that it is written in a very clear, concise style, and that the author's erudition insures almost absolute accuracy in the statement of facts and dates. With the technical intricacies of notation and composition he is so thoroughly familiar that even those who have made no special study of harmony, counterpoint, and fugue may see at a glance wherein lay the differences and changes of style in the music of various epochs. What could be clearer and more incisive, for instance, than his brief description of Monteverde's epoch-making invention—the employment of unprepared discords: "Every one knows that the only discords permitted in strict counterpoint are those of transition and suspension. The introduction of those of a fundamental nature, employed by direct percussion, destroyed the school of Palestrina at a blow. . . . And unprepared discords are ineffably beautiful. Without these, passionate utterance in music would be impossible; instrumental accompaniments would be too weak for effective employment; and the musical drama would degenerate into a vulgar caricature." Very readable also is the chapter on Gluck and the absurdly artificial rules which degraded opera to the level of art for the artist's sake in those days. And in the chapter on the origin of the stave and clefs he succeeds in making clear, even without the use of colored inks, the various curious steps in the evolution of musical notation.

These and other merits make it a matter of regret that Mr. Rockstro's book should be marred by so many shortcomings. Of the ancients, the Greeks alone are briefly considered; while, at the other end, the most important factor in modern music, the orchestra, is so far disregarded as to its evolution that we are told concerning Berlioz that he has not left a "lasting impression either upon dramatic or instrumental music." The device of printing musical terms in capital letters is carried to excess, and far too much space is devoted to the enumeration of lists of compositions and to biographies of third to tenth-rate composers. This takes up the space that ought to have been devoted to the development of the *Lied* or accompanied song, of pianoforte style, of orchestral arrangement, and various other topics on which the author is silent.

A woful want of proportion and perspective is indeed the besetting sin of this book. The fact that a disproportionate amount of space is assigned to English composers is admitted in the preface, and may be pardoned under the circumstances, although even an English student must be puzzled to find that Handel gets seventeen pages and Beethoven only five, while Bach gets only half as much space as Handel, although he has had ten times more influence on the great modern composers, however much Handel may have surpassed him in popularity. Such disproportion is objectionable, because it gives the reader a wrong idea regarding the relative importance of composers; and it ought to be self-evident that this relative importance is decided by a composer's originality and his influence on contemporaries and successors, and not by the frequency of performance of his works, else Offenbach and Milloecker would rank higher than Weber and Beethoven. In the case of Mendelssohn and Schumann, this disproportion becomes positively ludicrous. Schumann, who has contributed a hundred times as many original ideas of permanent value to music as Mendelssohn, is disposed of in four pages, while Mendelssohn gets almost twenty, in specially fine print, thus making him the most important personage in the whole history of music. Of these twenty pages, one and a half are devoted to a description of Mendelssohn's visit to the Queen, on which important occasion the Prince Consort changed the stops, the Queen picked up some music that had fallen on the floor, and the parrot had to be carried out because it made so much noise.

In a history of music which devotes twenty pages to Mendelssohn, eight to Purcell, and four to Dr. Arne (whose name, outside of England, not one concert-goer in a thousand has heard), how many ought there to be for Chopin, one of the most original and quietly revolutionary minds the world has ever seen—Chopin, who effected as great a change in the style of pianoforte composition as Haydn, Mozart, and Beethoven together did in orchestral style? Mr. Rockstro settles the question very simply. He pats Chopin on the back by calling him "ineffably original," adds ten more *lines*, without indicating a single feature of his style or mentioning one of his works, and then passes on to Liszt, who is dismissed with the same condescending brevity. Indeed, it is nothing less than a burlesque on musical history to find the author setting up as the seven greatest composers the world has seen Palestrina, Handel, Bach, Gluck, Haydn, Mozart, and Beethoven; then, as the "seven lesser lights" next following, Schubert, Weber, Spohr, Mendelssohn, Schumann, Cimarosa (!), Cherubini; and Chopin by inference placed as a third-rate composer—Chopin, who never had but one equal as a melodist (Schubert) and no superior as an original harmonist, not even Bach or Wagner. There is also something supremely absurd in the idea that Schumann, Schubert, and Weber do not rank as high as Handel, Mozart, and Haydn. They were not only greater from an absolute point of view because standing on the latter's shoulders, but also from a relative point of view, because more original in their own period.

Under these circumstances it is hardly to be wondered at that Mr. Rockstro entirely ignores Rubinstein in the text, mentioning him only in two lines in a footnote. He protests, indeed, that a history does not deal with contemporaries; but why then does he devote two pages to Gounod, and more or less space to several other living musicians who are vastly the inferiors of Rubinstein? In the last chapter he bewails the absence of a leader to carry on the development of music. We do not hesitate to prophesy that Mr. Rockstro, if he lives ten years longer, will see Rubinstein placed on a par with Beethoven. He will find many of the most gifted amateurs of the present day preferring Rubinstein's dramatic symphony to any of Beethoven's; he will find them turning from Beethoven's chamber music to Rubinstein's as more sympathetic; and he will find that, *e. g.*, Rubinstein's 'cello sonatas are superior to Beethoven's not only as regards their musical contents, but as showing Rubinstein's better understanding of the 'cello as well as the piano. As between "Fidelio" and Rubinstein's operas, we frankly acknowledge our preference for the latter; and that Rubinstein's songs are infinitely more beautiful than Beethoven's, no sane person will deny. This may seem a bold comparison, but we speak advisedly.

However, there is hope that Mr. Rockstro and other English musicians will come to see, ere long, what a wonderful creative genius the Russian pianist is. This hope is based on the fact that Mr. Rockstro has quite recently entirely changed his mind regarding Wagner. A few years ago he told the readers of his articles in Grove's 'Dictionary' that "at present 'Non più andrai' and 'Madamina' still hold their ground, and may possibly win"; that the brilliant accessories of the Nibelung festival argued "a sign of great weakness" in the work itself; that "unless the experience of all history lies, Wagner will be lovingly remembered by *Senta's* Ballad [ballad is "English, you know"], 'Traft ihr das Schiff,' ages after his operas have ceased to be performed in their entirety," etc. In the volume now before us he frankly cries *peccavi!* "We do not hesitate to say that, during a certain stage of the controversy, we were led, in company with many others, into grievous misapprehension, through the repetition, *ad nauseam*, of unintelligent eulogies, which did more damage to the cause they were intended to support than could have been effected by any amount of vituperation culled from Herr von Tappert's 'Vocabulary.'"

It is amusing to note the intense hatred of recent converts to Wagnerism for those who had brains or opportunities enough to appreciate him from the beginning. Even Dr. Hanslick, after writing that it was a "torture" to listen to the Tetralogy, had the impudence to claim, after Wagner's death, that no one had ever opposed Wagner save only what Rockstro calls his "unintelligent eulogists"—*i. e.*, those who liked "Siegfried" better than *Senta's* ballad or the "Tannhäuser" march. However, it would be ungene-

rous to take Mr. Rockstro to task too severely, as he is now quite within the fold of the faithful. Not only does he devote a whole chapter of his precious space to Wagner, but he begins by telling the reader that "2,000 years ago the 'Antigone' of Sophocles affected the Greeks as 'Tristan und Isolde' affects us now." The opening bars of this ultra-Wagnerian work are "ravishingly beautiful," and the whole drama "may be fitly described as one long unbroken stream of melody, from beginning to end—melody infinitely more impassioned, and not a whit less tuneful, even at the moment of *Isolde's* death, than the most captivating strains in the poisoning scene in 'Lucrezia Borgia.'" Mr. Rockstro will now probably see to it that his utterances in the early numbers of Grove are properly revised up to date when a new edition is called for.

RECENT WORKS ON CHEMISTRY.

Elements of Inorganic Chemistry. By James H. Shepard. Boston: D. C. Heath & Co.

An Introduction to the Study of Chemistry. By Ira Remsen. Henry Holt & Co.

The Elements of Thermal Chemistry. By M. M. Pattison Muir, assisted by David Muir Wilson. Macmillan & Co.

An author must possess in large measure the courage of his convictions to venture to add another text-book on elementary chemistry to the already long list. Mr. Shepard pleads as his excuse "the hearty commendations of teachers of national reputation and undoubted ability." In his book no radical departure from the usual arrangement of the usual matter is made: the occurrence, preparation, and properties of the inorganic elements and some of their compounds are given; chemical theory is fragmentarily developed; a number of experiments are described, and an appendix conveys somewhat meagre information about laboratory apparatus, reagents, and operations. All this may be found, sometimes better, sometimes worse, in a dozen other books. What is not usual is the fusion of the elements of qualitative analysis with the rest, and, as a minor feature, the breaking of the text with numerous fine-print paragraphs of "suggestions," "notes," "remarks," "cautions," "queries," etc. Some of these last are calculated to annoy the competent teacher, who naturally prefers to ask his own questions, and is not given to propounding such inane ones as that in regard to the name of iodine (page 116). In his introductory remarks, the author makes a great deal of what he "begs leave to christen The Scientific Method"; but his discussion of methods, no less than the text, shows that he fails to apprehend and to apply even *a* scientific method (without the small capitals).

In returning thanks, in his preface, to those who have assisted him (and the list is a long one), Mr. Shepard makes Dr. Remsen appear as a quasi-godfather to his book. Our surprise at this, and belief that in some way Dr. Remsen's apparent endorsement must be due to a misapprehension on the part of Mr. Shepard, are strengthened by the publication, after a short interval, of an elementary text-book by Dr. Remsen himself. Of his qualification for the task he has undertaken it is needless here to speak. He is widely known, not only as an eminent chemist, but also as a clear and careful writer on chemical themes—a practical educator, intent on teaching students to *think*. He makes no apology for his book, nor needs to, for it will be welcomed by all who are anxious to see chemical teaching lifted out of the rut into which it has for the most part fallen. His book abounds in well-selected, explicitly described experiments, set in a text which is always clear and attractive, and often very suggestive. Rather more than half the book (231 pages) is devoted to the discussion of the chemical phenomena presented by four elements (oxygen, hydrogen, nitrogen, and carbon) and their compounds, thereby furnishing an admirable development of the fundamental laws and theories of chemistry. This is the distinctive feature of the book, and is a long step towards a proper teaching of the science which has probably been more unscientifically taught than any other. Dogmatic presentation has unhappily been too long the rule: chemistry has been treated by the teacher as a bundle of more or less vaguely connected facts about the properties and reactions of substances, while the training of the student in scientific thinking has been almost neglected. The use of Dr. Remsen's book will go far to correct this evil.

Mr. Muir follows his excellent work on the 'Principles of Chemistry' (1884) with an admirable text-book on thermal chemistry. It is the first attempt to give in English a connected account of this important method of investigating chemical phenomena. Planning at first, as we learn from the preface, to make a somewhat modified translation of Naumann's well-known 'Lehr- und Handbuch der Thermochemie,' the author fortunately concluded to present the subject in his own way and from a point of view essentially different from that of Naumann. The first chapter is occupied with a clear and concise outline of the underlying principles of Heat and of Chemistry, and is followed by a brief but adequate description of the instruments and methods employed in thermo-chemical investigations. Two chapters are then devoted to an account of the applications of thermal methods to the study of chemical phenomena and to phenomena partly chemical and partly physical; and the text closes with a chapter on the bearing of thermal results on the questions of chemical equilibrium and affinity. The last third (100 pages) of the book contains appendices giving most of the well-established data which have been obtained.

In addition to the very satisfactory presentation of the subject, the work has a distinct critical value. Thus, Thompsen's attempt to assign a dynamical value to each of the "bonds" of carbon is shown to rest upon a fundamental assumption which is quite unjustified, and Thompsen's conclusions are "meaningless or . . . completely demolish the theory of bonds they are supposed to support"; and the "law of maximum work" is proved to be too wide a generalization. Emphasis is laid on the difficulties which everywhere beset the interpretation of thermal data: "thermal chemistry is yet in its beginning; the facts suggest more questions than they answer." Mr. Muir indicates the lines in which work is most necessary, and does much to stimulate investigation.

The book is fairly free from errors, but it is a pity that the graphic diagrams on pages 83 and 96 should have been so carelessly drawn, and that the plate, referred to even in the "corrections" as facing page 158, should be found opposite page 1.

The Life of William Carey, D.D., Shoemaker and Missionary. By George Smith, LL.D. London: John Murray. 1885.

The life of William Carey, the Baptist missionary, is the third important work which Dr. George Smith has devoted to the vindication of missionary enterprise in India. The others are accounts of the life and labors of the two eminent Scotch missionaries, Alexander Duff, of Calcutta, and John Wilson, of Calcutta. The style in which these works are written will not be altogether pleasing to any but dwellers within the sanctuary. It is painfully stilted, excessively eulogistic, magnifying beyond all reasonable proportions the acts and sayings of his heroes; and is throughout characterized by an aggressive "cock-sureness" eminently provocative of dissent. At the same time, the author's industry and his intimate knowledge of what he is writing about are undeniable; and few who read these modern "Acts of the Apostles" will be inclined to deny that Dr. Smith has fully proved the surpassing value and importance of missionary labor in India as an agent, not less for the humanizing of British rule than for the elevation of the native character.

The labors of the Christian missionary in India are not to be gauged by the number of actual converts that he succeeds in making. These are by no means so inconsiderable as is generally supposed, while every convert constitutes an additional support towards the stability and duration of British rule. For, as Alexander Duff pointed out many years ago, while English education without Christianity appears potent only to kindle, if not positive disloyalty, a sense of discontent and antagonism to the established order of things, English education *plus* Christianity awaken feelings just the reverse. The native Christian perceives that the continuance of British rule is indispensable to the free and peaceful practice of the creed which he has embraced, and so it came about that in 1857, although the native Christian community were subjected at that time to cruel legal disabilities, they set a conspicuous example of loyalty to the State. But when William Carey and his two companions, Marshman and Ward, began their labors at Serampore, the state of British India was far other than it is now or was in 1857. The cardinal doctrine in the political creed of the English officials was that British rule in India depended upon absolute non-interference with the religious beliefs and religious practices of the native population. Not only were the authorities careful to abstain from all legal restrictions upon them, but they were bound to see that no one—missionary or otherwise—in his private capacity attempted to persuade the natives to a more excellent way. Even the introduction of English education was prohibited as calculated to "offend native prejudices." The men who set themselves thus sedulously to guard the sanctity of "native prejudices" naturally ended by becoming slaves to those prejudices themselves. The young civilian was told on arriving in the country, that his first business was to "stock a zenana." An officer writing in 1774 said that the "luxury of a large seraglio was reserved for those who were high in the service and received large emoluments." Gaming, dicing, drunkenness, appear to have been the principal relaxations of the English officials. In British India itself there was, as might have been expected, no security for men bound upon such an enterprise as William Carey with his two friends. And had they been audacious enough to begin their operations therein, they would immediately have been arrested, put upon shipboard, and sent back to England.

Happily for the people of India and the preservation of British rule, the town of Serampore, on the Hooghley, just thirteen miles above Calcutta, was, at that time and for long after, a Danish settlement. The arbitrary power of the British Government did not extend to residents within this settlement, and the Danish King was not possessed by the morbid terror of Christianity and Christian missionaries which had taken hold of the minds of the Calcutta officials. Here, accordingly, Carey and his friends were permitted to set up "the Serampore Mission"—the originator, it may be said, and, so long as it lasted, a most efficient inspirer and executor, of whatever good the English may have wrought in India. Those who are curious to learn by what gigantic labors, what disinterested and long-continued sac-

rifices, this good was effected, will find the story told with an abundance of knowledge in the volume under review. It is, in truth, difficult to see how British rule in India could have been preserved but for the quickening influence of the Serampore missionaries. They breathed a new life into it by showing that all which the authorities had declared to be dangerous and impracticable could be effected without danger to the state, and with immense advantage to both rulers and ruled. They led the way in the education of the natives; they not simply translated but *printed* the Bible in the principal vernaculars of India, thus laying the foundations of a literature for the entire continent; and to them is due the entire credit of so stimulating the European conscience that the Indian Government was at last emboldened to prohibit the cruelty of widow-burning and other like abominations which, till the Serampore missionaries raised their voices against them, no one had dared to meddle with, lest "native prejudices" should resent the proceeding.

Apart, however, from his labors at Serampore, William Carey must always be a remarkable figure in the history of mankind as the reviver of the missionary spirit in Great Britain and the United States. It is difficult to believe that at the beginning of this century this spirit was so dormant in both countries that when Carey first started the notion of missions for the conversion of the heathen he was everywhere denounced as a dangerous madman. At that time, neither in Great Britain nor in this country, did there exist an organization of any kind for conveying a knowledge of Christianity to lands which were ignorant of it. British Protestantism held itself exonerated from the duty of "preaching the Gospel to all nations" until a second Pentecostal visitation should have miraculously endowed its followers with the gift of tongues. Carey was a man of the humblest origin. He was a cobbler's apprentice and the member of a small sect, the Particular Baptists. But he had a genius for the acquisition of languages, and, almost without assistance, while cobbling shoes, he contrived to obtain a considerable knowledge of Latin and Greek. He had also a great love of geography Dr. Smith relates that sheets of paper were stuck on the walls of his room, divided into sections, each section standing for one of the countries of the world. In this section it was his custom to enter whatever information he gathered in the course of his reading regarding that particular country, and by this simple means he acquired, while still a young man, a remarkable acquaintance with the peoples and countries of the globe. Religious feelings of peculiar intensity combined with this knowledge to awaken within him that missionary spirit which, without money, friends, or other means of subsistence, sent him to attempt the conversion of the people of India. He had a hard battle to fight with the members of his own little denomination before they would look upon him as other than a man possessed with a devil. Sydney Smith poured all the vials of his satire upon the head of the "consecrated cobbler." All sections of Protestantism were amazed and irritated at his folly and presumption. But neither opposition nor adverse criticism caused him to deviate for an instant from the purpose on which he had fixed his mind, and the reawakening of the missionary spirit among the English-speaking races was the direct product of his earnestness and constancy.

The Choice of Books, and Other Literary Pieces. By Frederic Harrison. Macmillan & Co. 1886. Also, Harper's Handy Series.

MR. HARRISON takes pains to say in his preface that this collection of essays "deals solely with books, art, and history—not with politics, philosophy, or religion"; but he thus only shows the more clearly that he is too much in earnest ever to indulge in merely literary criticism. It is one of the results of Comte's life which do honor to his memory, that his influence always seems to turn to an energizing vital principle in his disciples. Mr. Harrison's mind has been so absorbed in the idea of society that he cannot write without some political, philosophical, or religious reference to it; and the most he can mean by claiming that the present volume is distinctly literary is, that the essays set out from a literary starting point. The Comtist watchword, Humanity, indicates to most readers a vague revolutionary tendency of a doctrinaire kind; but it has proved a rich idea to those who have allowed it to germinate in their minds, and in effect has caused a reaction against the Revolution as commonly understood. In these essays it is easy to observe how it has given value to man's past, in Mr. Harrison's case, developed his catholic sympathies, and especially made him preëminently a seeker of the organic centres and bonds of union in society, and an upholder of order above all things. He could never be an anarchist.

This incorporation of Comtist ideas into his life appears most impressively in one of the essays that are now first printed, the review of Mr. Monson's 'St. Bernard of Clairvaux.' This study of a man who represents almost, if not quite, ideally the typical Apostle of Humanity, in whom mere excellence dominates and blesses the life of men in their grand social relations, is the most valuable of the fifteen papers which the book contains, and is of the highest moral reach and suggestiveness. The same seriousness, though not so intense, pervades the book; and though there are many passages of cleverness, of wit and sharp sarcasm, and flashes of the lighter play of his brilliant literary art, the preacher's earnestness is never far away. It is good sermonizing, too. The glowing indignation at the lot of the poor, the fixed faith in the destiny of the people, the unrestrained denunciation of the waste and folly of the energies and pursuits of most of us, kindle many an ardent page; and through all breathes the spirit of a man who, whether duped or inspired, is settled on doing his part in the work of the time. To read such words is both vivifying and humanizing. There is instruction to be had, also. 'The Choice of Books' is the sage advice of so many wise men repeated once more—to trust the sentence of the race and read the classics. The essay on Carlyle is at once appreciative of his genius and character and just to his stupendous errors. The paper on the eighteenth century, with its widening of the field of view, and the one on the nineteenth, with its interrogations as to the justice of our self-gratulation, are admirable examples of the way in which historical periods should be examined; and these, which we have mentioned, are typical of the whole contents of a volume which, though it belongs to magazine literature, attains the highest level in that class.

American Statute Law. By Frederic J. Stimson. Boston: Charles C. Soule.

MENTION has already been made in these columns of Mr. Stimson's work, which he describes on the title-page as being "an analytical and compared digest of the constitutions and civil public statutes of all the States and Territories relating to persons and property in force January 1, 1886." We wish that the trained and enthusiastic scholar who prepared this book might be sure of a sale of it which is at all proportioned to its merits, for these are very great. In the first 134 pages a comparative summary is given of the provisions of all the State constitutions, and of certain analogous laws of the Territories and of the United States relating to the Territories. For convenience the Territories are included among the "States," and the constitutions count as "statutes." Then follows a like statement of the private civil law of all the States and Territories, covering more than 600 pages. Another volume is in preparation which is to include "Public Law," under the two divisions of "private corporations and municipal corporations"; "Adjective Law," under the two heads of "Probate Code and Civil Procedure"; and "Criminal Law." These titles, it may be presumed, will be more fully explained and justified hereafter. One may see something of the author's method by the following specimen of it, from the early part of the book, relating to the Bills of Rights:

"Article 1. Natural Rights.

"§ 10. Freedom. The Constitutions of eighteen States have a provision that men are free.

"(A) Thus, in two States the Constitution declares that all men are born free and independent: Mass. C., 1, 1; S. C. C., 1, 1. (B) In seven, that they are by nature free and independent: N. J. C., 1, 1; O. C., 1, 1; Ill. C., 2, 1; Io. C., 1, 1; Cal. C., 1, 1; Nev. C., 1, 1; Fla. C., Decln. R'ts, 1. (C) In one, that they are equally free and independent: Ala. C., 1, 1. (D) In seven, that they are born equally free and independent: N. H. C., 1, 1; Me. C., 1, 1; Vt. C., 1, 1; Pa. C., 1, 1; Wis. C., 1, 1; Neb. C., 1, 1; Ark. C., 2, 2. (E) In two, that they are by nature equally free and independent: Va. C., 1, 1; W. Va. C., 3, 1."

The letter C stands for constitution; and the omission to mention any State imports that there is nothing on the subject there. The author's divisional arrangements of the book are very carefully thought out, and, with a little preliminary attention to the explanations given of them, will be found clear and simple. It has only been possible to present in so small a space the substance of the enormous mass of matter with which the writer had to deal by omitting statutes of "purely local interest or special application," and by the author's availing himself of a curious discovery that the legislation of the States goes largely in groups.

"He found that one main stream of legislation could be traced, occasionally comprehending all the Northern, Eastern, and Northwestern States, more often divided into two main bodies, the one following in its legislation the general model of the State of New York, the other that of the New England States. He found, besides this, another important group, containing the Southwestern States, under the general lead of Maryland and Virginia; and still a third and smaller group, comprising the Gulf States. Besides these three main groups, there was one State with laws wholly anomalous (Louisiana), and others (like California, Dakota, New Mexico, and Georgia) with laws peculiar to a greater or less extent."

We have had occasion to make practical use of Mr. Stimson's book repeatedly, and can speak confidently of its careful and thorough quality. The index might with advantage be made more complete; we have now and then had to search unduly long, for lack of some fulness there. This defect is the more important for the reason that the writer and his reader may have a different theory of arrangement. We found ourselves, *e. g.*, at much loss to get at some of the matter contained in s. 553.

This book should help rapidly to the uniformity and improvement of our State legislation. It will prove of the greatest help to the student of social science and comparative law; see, *e. g.*, the eighty-four pages which summarize the legislation on Marriage, Divorce, and Husband and Wife. Few practising lawyers who have to prepare a case which requires any wide range of argument and illustration, will find it possible to dispense with this excellent guide. It is a monument of devoted and faithful labor in a region which attracts far too little attention.

Oblomoff; Scènes de la vie russe. Par Ivan Gortcharoff. Traduction de Piotre Artamoff; revue, corrigée et augmentée d'une notice sur l'auteur, par Charles Deulin. Paris: Didier et Cie.

It is not among "the books of the week" that this volume belongs in any sense of the phrase. It was written twenty-eight years ago, and the French translation was published nine years ago; yet it is "a new book" to most of us. It ought not to remain unknown to the readers of Turgeneff, Tolstoi, and Dostoyevsky; and if the name of Gortcharoff will not take rank precisely with these, none the less this little volume might serve as an admirable and very interesting preface to the greater, the loftier, and the deeper, the more imaginative and more thoughtful works of these other authors. It is, indeed, in its own nature and structure a preface—a prologue or an epilogue—more than anything else. In its original form it has the least possible "story," and in the French, which is only the first portion of the original, there is literally no story at all: it is simply the narrative of the hours from eight in the morning till four in the afternoon of a day passed by the unheroic hero in bed—out of pure laziness. The scene is confined to his apartment in St. Petersburg, the action to his thoughts and conditions, and the visits he receives from four of his friends and his doctor. Not a woman appears on the stage; the protagonist is not in female shape, but may be discovered in Oblomoff's fifty-years-old man-servant, who is made vividly known to the spectator (for with this book one is *spectator* rather than *reader*) by a portrait of extraordinary vigor and equal carefulness, which to classify as "a man-servant" renders no justice to the complete originality and really the importance of the type, an animal-like serf in the garb and position of a valet.

The ability of which this creation gives proof is likewise evidenced by the delicate skill with which an almost breathless interest is excited in the action of the drama of Oblomoff's mind, in the events of his thoughts. So admirably true to human nature is this representation that there are few of us who have not known at least some one man more or less of an Oblomoff; but so particularly true is it to the characters produced in Russia, especially during the last generation, under the influence of the national institutions and modes of life as well as of the climate, that we are told the word *oblomovism* has there come into use to designate the dreamy and vacillating indolence peculiar to the Russian temperament.

A considerable portion of the book is arranged in the "cadre" of a dream; a dream which brings before Oblomoff his childhood and boyhood, and his provincial, ancestral home. As we gaze at the vision thus displayed to us we perceive infinitely much beside, behind, beyond the immediate scene. Conditions of life absolutely unknown to our own experience reveal themselves as causes and consequences of familiar pages in history; strange surprises of social facts explain and are explained by old political truths. In a word, no one interested in Russia should fail to read this book. But every one interested in the book will demand eagerly and we hope imperatively a complete and satisfactory translation of it. The French translation (seemingly of the best as far as it goes) wandered about Paris for fifteen years seeking a publisher. Let some American publisher see to it that fifteen months from to-day we have an English translation of the whole work in our hands.

It is a book which it is absolutely impossible to make known at all by extracts. There is no one sentence or paragraph which lends itself to quotation. Its merit consists in the tone, the coloring that pervades every page, and that harmonizes and dignifies the innumerable details, which, almost in the manner of Flaubert, abound to an extraordinary degree.

The Spartan and Theban Supremacies. By Charles Sankey, M.A., joint-editor of the series, assistant master in Marlborough College. With five maps. [Epochs of Ancient History.] Charles Scribner's Sons. 1886.

Mr. Sankey's work probably completes the series of Ancient Epochs, at least for all except the latest and perhaps the earliest period. The epochal or "horizontal" treatment—not conspicuous in more than one or two of this series, and, indeed, not well fitted to ancient history as a whole—hardly appears at all in this volume. It is simply a history of Greece during the hegemonies of Sparta and Thebes. Persia is mentioned incidentally in connection with the expedition of Cyrus and the Peace of Antalcidas, but we are told nothing of its history. Of Syracuse we have a bare mention; of Rome—which during these years passed through very critical experiences—not even that. The rather uninteresting period under review possesses nevertheless a well-defined unity, so far as Greek history is concerned—the establishment of the harsh and unjust rule of Sparta, the iron despotism under which Greece was held, and its deliverance at the hand of Thebes. But Thebes, while strong enough to throw off the Spartan yoke, had not the qualities to establish a permanent leadership for herself. A short account—too short, we think—of the career and works of Epaminondas supplements the history of the Spartan rule which makes up the greater part of the volume.

The interest in these years is chiefly political, and here Mr. Sankey is at his best. The account, for example, of the Government of the Thirty Tyrants at Athens and its overthrow, is exceedingly well told, and the characters of Theramenes and Critias sketched with great fidelity. Agesilaus, too—the hero of the greater part of the volume—is very well described, and his exploits narrated at length. The Theban period, notwithstanding the excellence of the characterization of its two great men, is, as we have said, rather too briefly told; and a very abrupt ending corresponds perhaps to the abruptness with which Thebes lost its place at the head of the Greek States, and the rapidity with which Macedonia succeeded to it.

Studies in Greek Thought. By Lewis R. Packard. Boston: Ginn & Co.

In this small volume the friends of the late Prof. Packard have gathered from the papers of that lamented scholar a number of essays and outlines which will serve to recall to those who knew him the intellectual image of the man, and to give those who never had the privilege of his personal acquaintance the impression of a grave and thoughtful student, of one who had made what he had learned from others his own by individual reflection, and who had caught from intimate association with the great masters of expression the purity of style that became the elevated range of his thought. The brief preface does not give clearly the keynote of his heroic life, of the long struggle with pain and weakness under which a nature of less noble temper would have sunk without an effort. The calm of his style is the calm of one who has overcome.

To judge this little collection of essays as anything else than a personal memorial would be unfair. The themes of some—such as the Morality and Religion of the Greeks, or Plato's Scheme of Education—are too large for the compass to which the treatment is limited, while the other papers only serve to show how well that work was done which was intended for no wider circle than a college class. That such a man, known by his intimates and divined by his pupils to be a scholar of a high order, recognized among the Grecians of the country as the foremost of their Homeric students, should have left no great work as a monument of his long and influential career, is a matter of just regret to the great college in which he nobly maintained the high tradition of his predecessors, and to his friends whose devotion to him living and dead is the fairest testimony to the true lovableness of his nature. Authorship is exacted more and more of teachers—perhaps not always wisely; but here was a teacher endowed for authorship as few are endowed, and yet, by what seems an untoward fate, denied the achievement for which he was so rarely equipped. Still, he had written enough to keep his memory bright among American scholars of his generation, and he will live on in the lives of the many who had in him a guide and an example in the higher walks of Greek thought. All but one of these essays have to do with grave themes, and all show that we have lost in him a man who was something more than a grammarian, who had looked into problems of which the "corner-hummers," the γωνιοβόμβυκες of the Greek epigram, never dream in their drowsy buzz. And how great that loss is we can best estimate when we see how entirely our scholarship has run to grammar—grammar unmitigated by any such charm of literary expression as we recognize in this little volume.

Twenty-four Sermons Preached in All Souls' Church, New York, 1865-1881, by Henry W. Bellows, D.D., Minister of the First Congregational Church, 1839-1882. Selected and Edited by his Son, Russell N. Bellows. New York: Published by the Editor. 1886.

These twenty-four discourses may not appeal successfully to the general public, but among Unitarians they will be highly valued, especially among those to whom Dr. Bellows preached for more than forty years, and they will enable others to know something of the habitual preaching of one of the most brilliant and erratic preachers of the Unitarian sect. It was as an extempore speaker that Dr. Bellows had his great successes, and at times when his speaking was absolutely extemporaneous, without the least premeditation. Often he then said what he did not mean to say when he set out, but something worse or better: he was carried away, and his hearers with him, by the tide of his resistless eloquence. For the best enjoyment of these discourses, one should be able to remember him at such times. Then the printed matter will be informed with his voice and gesture.

The discourses are hardly less extempore than were his most spontaneous speeches. They were evidently written just as fast as he could drive his pen. The defects of such easy writing are palpable. It is not hard reading, but the argument is sometimes fanciful and superficial. Dr. Bellows is revealed in some of his most poetic moods and also in the stress of his denominational zeal. He was never a consistent thinker, but during the last years of his life his tendencies were clearly rationalistic. He said of Parker, soon after his death (1860), "I will not say that Theodore Parker is a lost soul, but I am obliged to say that he had not conformed to the conditions of salvation." But in these discourses we find him insisting upon Parker's views of many things, and it would have been easy to find others in which he ranked Parker with Channing as a typical Unitarian. The sermon on the "Resurrection of Human Nature" is perhaps the best, as well as the most characteristic, in the entire collection. To those who know Dr. Bellows well this book will seem to represent his later thought imperfectly. But he was

a man of many moods, and in the pulpit did not always have the courage of his more secluded hours.

Roberts Brothers'

NEW BOOKS:

READY MAY 25.

Hours with German Classics.

By Frederic Henry Hedge, D.D. Crown 8vo, cloth, price $2.50.

Dr. Hedge is one of the most eminent German scholars of the century and one of the few living Americans who have met and conversed with Goethe. This book is the fruit of a lifelong study into the history of German literature.

A Shadow of Dante.

Being an Essay towards studying Himself, his World, and his Pilgrimage. By Maria Francesca Rossetti. With illustrations. 12mo, cloth, price $1.50.

As a guide-book, a commentary, and an exposition of Dante's great poem, Miss Rossetti's work stands alone. The increasing interest in Dante has necessitated this new edition at a reduced price.

Constance of Acadia.

A novel, by an anonymous author, the first in a series of historical novels connected with the early history of New England under the general title of the "Old Colony Series." 12mo, cloth, price $1.50.

13. UP THE RHINE. By Thomas Hood. With 53 Illustrations. 16mo, paper, 50 cents.

Spring lists sent on application.

NEW NOVELS

FOR

Summer Reading.

A NEW STORY OF ARMY LIFE.

Marion's Faith.

A SEQUEL TO 'THE COLONEL'S DAUGHTER.'

By Captain CHARLES KING, U. S. A.,

Author of 'The Colonel's Daughter,' 'Kitty's Conquest,' etc.

12mo. Cloth. $1 25.

The Boston *Literary World* says of Captain King's former novel, of which this is a sequel, "There have been few American novels published of late years so thoroughly readable as the 'Colonel's Daughter.' There are brilliant pictures of garrison life, a taste of fighting and adventure, and a chivalrous love affair, interwoven with clever sketches of military types. The style is bright, the dialogue simple and natural, the heroine a charming creature, with just a spice of wilfulness, and the favorite lieutenant one of those fortunate fellows whom most men envy and many women admire." The present story promises to be equally brilliant and entertaining.

Mrs. Wister's New Translation.

VIOLETTA.

A ROMANCE.

After the German of Ursula Zöge von Manteuffel.

12mo. Cloth. $1 25.

"'Violetta,' as adapted by Mrs. Wister, is a clever novel. The characters are clear-cut, natural, and strong. The situations are full of interest, the dialogue is bright and vigorous. The heroine is a particularly happy conception, worked out with much skill. There is decided power in the book, and a delicacy of manipulation so rare as to be very agreeable. Mrs. Wister has so skilfully adapted the story that it could not read more smoothly if it had been written in English."—*New York Tribune.*

Court Royal.

A STORY OF CROSS CURRENTS. By S. BARING-GOULD, author of 'John Herring,' 'Mehalah,' etc. 16mo. Extra cloth. 75 cents. Paper cover. 25 cents. Being No. 39 of *Lippincott's Series of Select Novels.* Price, 25 cents each.

"The most entertaining novel that we have read for a long time. We know from having read it through that it is vastly entertaining, and that the interest lasts to the last page."—*New York Mail and Express.*

In a Grass Country.

A STORY OF LOVE AND SPORT. By Mrs. H. LOVETT CAMERON, author of 'Deceivers Ever,' 'Pure Gold,' etc. 12mo. Extra cloth. 75 cents. Paper cover. 25 cents. Being No. 40 of *Lippincott's Series of Select Novels.*

"Like the rest of Mrs. Cameron's stories, this one is intensely interesting and strong in illumination. It is a passionate love story, presenting various phases of society life in England."—*Philadelphia Evening Call.*

A Mental Struggle.

Authorized Edition.

A Novel. By the "DUCHESS," author of 'Lady Branksmere,' 'O Tender Dolores,' 'Phyllis,' etc. 16mo. Extra cloth. 75 cents. Paper cover. 25 cents.

"It is a capitally-told story in the best vein of the 'Duchess,' is full of life and incident, humor and sprightliness, and will be read through to the end and laid down with regret." *Pittsburgh Chronicle-Telegraph.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

First Volume Now Ready.

CYCLOPEDIA

OF

Painters and Paintings.

Edited by John D. Champlin, Jr.

Critical Editor, Charles C. Perkins.

Four volumes, Quarto, with more than two thousand illustrations.

Price, 25 Dollars per volume.

Messrs. CHARLES SCRIBNER'S SONS have the pleasure to announce the completion of a work which they believe to be the most important and comprehensive yet attempted in its field. For more than five years they have had in preparation an exhaustive Cyclopedia of Painters and Paintings of All Times and Schools, a book of reference not only new in plan—since it is the first to present a complete series of biographies of painters, a great dictionary of all well-known paintings themselves, and an extended bibliography of the art—but also more elaborate in its illustration and mechanical execution than any work of reference thus far devoted to the subject, the text being very fully supplemented by portraits, outlines of pictures, etc.

Edition limited to 500 numbered copies containing fine full-page reproductions by photogravure, etc., which will be used in these copies only.

Send to the publishers for a descriptive circular.

Charles Scribner's Sons,

743-745 Broadway, New York.

FOR SALE BY ALL NEWSDEALERS.

What T. DeWITT TALMAGE and OTHERS say of Geo. Thos. Dowling's New Novel.

THE WRECKERS.
A SOCIAL STUDY.

Fourth Edition Now Ready.

12mo. Cloth. $1.25.

"The immediate success of 'The Wreckers,' by Geo. Thos. Dowling, does not surprise me, for I have watched him all along on his way to the front. Now he puts into the press a book, brilliant, life-like, unique, timely, and useful. It is certain that, as an author, he will fully equal his great power as a preacher."—T. DEWITT TALMAGE.

"It is full of life and movement, and we fully expect to see it dramatized."—*Philadelphia Inquirer.*

"'The Wreckers' is a social study, dealing with humble types of life, with a thoroughly fascinating plot, and one elaborated with skill and ingenuity."—*Boston Evening Traveller.*

"The story becomes intensely dramatic. The demand for it in this city has taken on the character of a rush."—*Cleveland Plaindealer.*

"It is an excellent story, abounding in good lessons. In its romantic characters, fine descriptions, sarcasms without bitterness, with its friendly interwoven argument, the author proves himself no novice, even if it is a first effort in fiction."—*Chicago Inter-Ocean.*

"A book like 'The Wreckers' will help better to a comprehension of our duties to each other, and a proper understanding of the rights and needs of labor, than would volume upon volume of essays on political and social economy."—*Philadelphia Record.*

*** For sale by all booksellers; or sent, postage prepaid, on receipt of price, by the Publishers.*

Floating Flies

AND HOW TO DRESS THEM.

A Treatise on the Most Modern Methods of Dressing Artificial Flies for

Trout and Grayling.

With full illustrated directions and containing ninety hand-colored engravings of the most killing patterns, and accompanied by a few hints to dry-fly fishermen. By FREDERIC M. HALFORD.

A large-paper edition printed on Dutch hand-made paper, limited to 50 for America, vellum, $12.

A Chronicle History of the Life and Work of

William Shakespeare,

PLAYER, POET, AND PLAYMAKER. By FREDERICK GARD FLEAY, author of the 'Shakespeare Manual.' With two etched illustrations. Fine paper, medium 8vo, half leather, gilt top, $4 50.

The theatrical side of the career of Shakespeare has never yet received any adequate consideration, his connection with the theatres and acting companies in his earlier years not having been traced or even investigated. His relations with other dramatists, especially with Jonson, have also been grossly misrepresented. While every idle story of mythical gossip has been carefully collected, and the pettiest details of his commercial dealings have been garnered, little attention has hitherto been given to his dealings with the plays by other men with whom he was fellow-worker, and a large group of evidences bearing on the chronology of his work, derived from the early production of English plays in Germany, has been cast aside as valueless. In this work an attempt is made to collect this neglected material, to throw new light on the Sonnets, and to determine the dates of the production of all his works. A complete list of all plays published with due authority anterior of 1640 by any dramatic writer is given from the Stationers' Registers. Many unfounded hypotheses of Collier, Halliwell, and others are for the first time exploded, and the work of ten years' investigation is condensed in a single volume. In many instances one paragraph represents months of labor, and it is hoped that a permanent addition of value is thus made to Shakespearian literature. The arrangement of the book is made so as to appeal not merely to the specialist, but to every one who feels an interest in the greatest writer of any literature, and the crowning glory of our own.

BOLINGBROKE: AN HISTORICAL STUDY. Reprinted from the *Quarterly Review*. To which is added an Essay on Voltaire in England. By J. CHURTON COLLINS. Crown 8vo; cloth, $3 00.

THE APOSTOLIC AND POST-APOSTOLIC Times: THEIR DIVERSITY AND UNITY IN LIFE AND DOCTRINE. By G. V. LECHLER, D.D. Translated from the Third Edition (thoroughly revised and rewritten) by J. K. DAVIDSON. 3 vols., crown 8vo, cloth, $6 40.

CREMER'S LEXICON. Supplement to Biblico-Theological Lexicon of New Testament Greek. By H. CREMER, D.D., Prof. Theol. in the Univ. of Greifswald. Translated from the last German Edition by WILLIAM URWICK, M.A. Demy, 4to, cloth, $5 00.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

Bohn's Libraries.

Containing Standard Works of European Literature in the English Language, on

History,	Theology,	Natural History,
Biography,	Antiquities,	Poetry,
Topography,	Science,	Art,
Archæology,	Philosophy.	Fiction,

With Dictionaries and other Books of Reference, comprising in all Translations from the

French,	Spanish,	Anglo-Saxon,
German,	Scandinavian,	Latin and Greek.
Italian,		

$1.40 or $2 per volume (with exceptions). Complete sets in 677 volumes. Special prices on application.

The following works are recommended to those who are forming public or private libraries. The volumes are sold separately:

ADDISON'S WORKS. 6 vols..... 1.40 each.
BACON'S ESSAYS, MORAL AND PHILOSOPHICAL WORKS. 2 vols ...$1.40 and 2.00 each.
BOSWELL'S LIFE OF JOHNSON and TOUR IN THE HEBRIDES, &c. (Napier). 6 vols. $1.40 each
BURKE'S WORKS AND LIFE. 9 vols. .. ... 1.40 each.
BURNS'S LIFE. By Lockhart..... 1.40 each.
CERVANTES' DON QUIXOTE. 2 vols... .... 1.40 each.
CHAUCER'S WORKS (Prof. Skeat). 4 vols... 1.40 each.
COLERIDGE'S WORKS. 6 vols..... 1.40 each.
DEFOE'S WORKS. 7 vols..... 1.40 each.
GIBBON'S ROMAN EMPIRE. 7 vols..... 1.40 each.
GOETHE'S WORKS. 14 vols..... 1.40 each.
GOLDSMITH'S WORKS. 5 vols..... 1.40 each.
HAZLITT'S WORKS. 6 vols..... 1.40 each.
LAMARTINE'S WORKS. 8 vols..... 1.40 each.
LESSING'S LAOKOON, &c..... 1.40.
LESSING'S DRAMATIC WORKS. 2 vols.... 1.40 each.
MILTON'S PROSE WORKS. 5 vols..... 1.40 each.
MOLIÈRE'S DRAMATIC WORKS. 3 vols... 1.40 each.
PLUTARCH'S LIVES (new translation by Long and Stewart). 4 vols..... 1.40 each.
SCHILLER'S WORKS. 6 vols..... 1.40 each
VASARI'S LIVES OF PAINTERS (with new appendix by Dr. Richter). 6 vols.. ..... 1.40 each.
BURNEY'S (Mme. D'Arblay's) CECILIA. 2 vols 1.40 each.
BURNEY'S (Mme. D'Arblay's) EVELINA..... 1.40.
FIELDING'S NOVELS. 4 vols.....$1.40 and 2.00 each.
PETRARCH'S SONNETS..... 2.00.
MANZONI'S BETROTHED. (I promessi Sposi). 2.00.
PEPYS'S DIARY. 4 vols..... 2.00 each.
KANT'S CRITIQUE OF PURE REASON ..... 2.00 each.
SPINOZA'S CHIEF WORKS. 2 vols ..... 2.00 each.
HUMBOLDT'S COSMOS AND TRAVELS. 3 vols.... .....$1.40 and 2.00 each.
STAUNTON'S WORKS ON CHESS. 4 vols... $2.00 and 2.40 each.
GILBART ON BANKING. 2 vols..... 2.00 each.
LOWNDES'S BIBLIOGRAPHER'S MANUAL. 11 parts .....$1.40 and 2.00 each

**** The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also of Bohn's Libraries, will be mailed, if desired, to those interested. New Catalogue of Musical Literature ready.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Triumphant Democracy;

Or, Fifty Years' March of the Republic.

By ANDREW CARNEGIE.

1 *Vol.*, 8vo, $2.

WHAT NEW YORK SAYS ABOUT IT:

The most eulogistic glorification of the United States ever written. His book is most interesting. It will be read with zest on both sides of the Atlantic.—*Herald.*

Mr. Carnegie takes the dry summaries of the census, and with a few striking illustrations turns them into wonder tales.—*Tribune.*

It is not simply a panegyric, but it is full of valuable information showing why the Republic is worthy of the high position he gives to her.—*Journal of Commerce.*

An interesting and useful book. . . . Will be read with surprise and profit on this side of the Atlantic by reason of the new significance given to familiar facts through striking comparisons.—*Sun.*

One protracted blast of eulogy of the United States.—*Commercial Advertiser.*

Shows Mr. Carnegie to be more American-hearted than many a native American is, and at the same time as appreciative of all that is good in the mother-country as an enthusiastic recruit to Democracy could possibly be expected to remain.—*Telegram.*

A book for the patriotic American. . . . Sure to attract attention, and will make a deep impression on the mind of whoever reads it carefully and thoughtfully. We hope it may be read abroad, and we hope it may be read at home.—*Critic.*

Presents an astonishing array of facts and figures to show wherein consists our superiority to all other nations of the earth. A rich repository of information.—*Home Journal.*

WHAT BOSTON SAYS:

A copy of Triumphant Democracy should be placed in every school library in the United States.—*Beacon.*

Very interesting and instructive and very flattering to our vanity.—*Gazette.*

In many respects 'Triumphant Democracy' is a book as yet unsurpassed; the theory and philosophy are admirable, and cannot fail to prove a vital and valuable suggestion and delight to every American reader.—*Globe.*

Will open the eyes of the masses in the United Kingdom to the wonderful advancement—physical, moral, political, and intellectual—of the United States during the last half century.—*Traveller.*

WHAT PHILADELPHIA SAYS:

'Triumphant Democracy' is an epic of material progress.—*Ledger.*

The English critics cannot controvert it, for it is wholly founded on fact. . . . We commend it to all Americans.—*Bulletin.*

Mr. Carnegie writes a prose epic in our praise. . . . No true American but must feel a glow of patriotic pride on reading this book.—*Inquirer.*

WHAT CHICAGO SAYS:

Readable from cover to cover. It is a valuable and important contribution to the literature and history of the country.—*Tribune.*

To the great mass of British people this book will be in the nature of a revelation.—*Journal.*

His comparisons of monarchical forms and observances with republican simplicity, and his scathing comments, will be read with interest not only here but in England.—*Standard.*

A good book for the study of Americans to the manner born. It cannot but increase their pride and love and veneration for the land and the institutions of the land which to-day stands out foremost among the nations of the earth.—*Inter-Ocean.*

Makes a showing of which any American may justly be proud . . . It should especially be read by those who are accustomed to fix their eyes upon the defects of American institutions and manners; while ignorantly extolling the supposed superiority of something across the sea.—*Dial.*

The Nation.

NEW YORK, THURSDAY, MAY 27, 1886.

The Week.

THE Senate last week passed, by a vote of more than two to one, the Blair Pension Bill, which proposes to pension every soldier who served in the army three months, and who is now disabled and dependent upon his own exertions for support, as well as all dependent parents of soldiers who died in the service or from disability contracted therein. This is an extension of the pension system beyond anything ever known in this or any other country, and is but one step short of granting a pension to everybody who served in the Union army, which has already been proposed by demagogues more reckless even than Mr. Blair. The New Hampshire Senator frankly says that he "has no idea" how much money his bill would call for. At one time he suggests $25,000,000 a year; at another, $50,000,000. Judging from all experience in such legislation, the scheme would be likely to involve far more than even the larger of these two amounts, for, incredible as it may seem to a man who thinks nothing of such figures, there are people in the United States who consider the increase of annual taxation by $50,000,000 a matter of consequence.

The roll showed that every Republican recorded was in favor of the raid. We observe with surprise that one-third of the Democrats stood with the Republicans on the side of extravagance. If every Democratic vote had been in the direction of economy, the scheme would not have been defeated, it is true, but the vote would have been so close as 26 yeas to 22 nays, instead of 34 to 14. We trust that the Democrats in the House will administer a needed rebuke to their brethren in the Senate when the project comes up in the lower branch. The Democrats have a good majority in the House, and they can block this raid upon the Treasury. Public duty and party interest combine to dictate this course. It would be an intolerable burden upon the taxpayers to add this great sum to the already large pension account, and the taxpayers will watch to see how their representatives stand upon the question of increasing taxation. The Democratic House could not do a more popular thing than to defeat this extravagant scheme of the Republican Senate.

The President sent in another batch of vetoes of private pension bills on Monday. His messages bring out very forcibly the injustice and recklessness of the policy by which the decisions of the Pension Bureau denying pensions are overruled in Congress. Such messages make Senators and Representatives indignant, because they tell the plain truth about their unjustifiable methods of legislation, but the Congressmen will look in vain to the public for sympathy. The evidence thus afforded that Mr. Cleveland is looking sharply after the course of affairs at the Capitol, will reassure the people, who have become alarmed at the nonchalance with which their representatives are voting away their money. The attention of the country needs to be concentrated upon pension legislation, and a constant fire of small vetoes like these can hardly fail to have that effect.

Republican organs are berating the Democratic House for doing nothing. But it is only fair to say that it is better to do nothing than to do things which ought not to be done. The two great achievements of the Republican Senate to date are the passage of Mr. Blair's "bill to promote mendicancy" by appropriating $77,000,000 to demoralize the educational system of the South, and the passage of Mr. Blair's other bill treating old soldiers as beggars, and scattering $50,000,000 or more of the taxpayers' money among them every year.

The President has given another notable proof of his fidelity to reform by his action in filling the place of Postmaster at Leominster, Mass. The office had been held for eight years by Thomas A. Hills, who, although a Republican in party faith, had never been an "offensive partisan," and had done his duty so acceptably to the public that many Democrats and all the Independents joined with the Republicans in asking his reappointment; the petitioners representing almost all the business interests of the town. A few professional Democratic politicians recommended the appointment of another man, simply and solely on the ground that he was a Democrat, but Mr. Cleveland declined to make a change upon this ground, and renominated the incumbent, to the great satisfaction of nine-tenths of the community. Thus by degrees the principle asserted in the reappointment of Postmaster Pearson in this city gains ground, and it is slowly coming to be recognized that a post-office does not "belong" to the party in control of the Federal administration, but is a business institution to be filled upon business grounds.

The House Committee on Appropriations on Wednesday week reported the Legislative and Executive Appropriation Bill, with two provisos intended to annul the existing Civil-Service Act. One of the clauses making the usual appropriation for the salaries and expenses of the Civil-Service Commission provides, "that this appropriation shall be available only when the rules of the Civil-Service Commission are so framed as that the names of all applicants for official appointment from any one State, found duly qualified on examination and without regard to age, shall be sent to the head of a department or other officer charged with making an appointment." This is virtually a repeal of competitive examination altogether, and since competitive examination is the very essence of the Pendleton Act, it is a repeal of the act; or, to speak exactly, it is a declaration that no salaries or office expenses of the Civil-Service Commission shall be paid until they rescind the principle of the law which they are appointed to carry out. This scurvy amendment to the bill is reported in the teeth of the twenty-first rule of the House, which forbids the reporting of any provision in an appropriation bill changing existing law "except such as, being germane to the subject-matter of the bill, shall retrench expenditures." Now this amendment does change existing law, for the law authorizes the President to prescribe the rules, and the amendment takes the power out of his hands to a certain extent. It does not retrench expenditures, because, if the rules are changed in the manner indicated, the expenditures will remain as before. The other proviso is in the clause making an appropriation for the pay of special pension examiners. It provides that the examiners shall "be appointed by the Secretary of the Interior on the recommendation of the Commissioner of Pensions" instead of being appointed in accordance with the Civil-Service Act and regulations as now required by law. This proviso is if possible more shameless than the other in its violation of the twenty-first rule. Both are cowardly attempts to repeal the Civil-Service Act indirectly. We have little apprehension that either of them will pass; but if they do pass, we shall know which party to hold responsible.

The meeting of the Illinois Republican State Committee last week was held merely to fix a date for the next State Convention, but importance was given to the gathering by a speech made during the session, and still more by the reception of the speech. David T. Littler is the Illinois member of the Republican National Committee, and when he was called upon for a speech, he announced his views upon the great issue of the day in these frank terms:

> "There is only one other question I desire to refer to: that is, the hypocrisy and cowardice of the members of Congress—I mean Democrats as well as Republicans—in their attitude toward this contemptible and fraudulent Civil-Service Reform Law as interpreted by this Administration. I believe it to be the duty of the next Republican State Convention to take bold ground against that infernal un-Republican and un-American measure in its practical operation. [A voice: "That's right." Applause.] I have the courage to say this, and I say it boldly, and there is but one other man who has adhered to his convictions. I refer to an ex-Confederate General, Senator Vance, of North Carolina, who introduced a bill in Congress to repeal the law in its entirety. . . . I don't believe in civil-service reform in any sense, and it is my view that the Republican party ought to take the position that the Civil-Service Reform Law should be repealed, and that all Republicans in office under this Administration should be turned out. [Shouts of "That's right!" "That's business!" and applause.] I don't believe in those sneaking Republicans holding office under this Administration. [Applause.] I will sign the petition of any Democrat who wants to get my signature for the removal of a Republican now holding office, on the ground that he is a Republican and has no right to the loaves and fishes under this Administration. [Applause and a voice, "Amen."]"

Mr. Littler was the last speaker of the meeting, and no formal declaration was made by the Committee, but the enthusiasm which such denunciations of civil-service reform by a member of the National Republican Committee aroused among the members of the Republican State Committee, shows that the professional politicians of that party are as hostile to reform as are Senator Vance and his supporters among the Democrats.

The publication on Saturday of the fact that Secretary Bayard had been doing his whole duty in the matter of the fishery troubles took the wind out of the Blaine organs' sails in a most exasperating manner. The *Tribune* could not conceal the evidence of its disgust, and printed a very ill-natured article on the subject on Sunday. The Boston *Journal* showed more sense, and accepted the situation in good temper. "The tone of Secretary Bayard's letter to Senator Frye," said the *Journal*, "leaves no room to doubt that he appreciates the seriousness of the question involved in the seizure of American fishing vessels, and intends to act in such a way as to assert and defend American rights." The *Journal* frankly stated what the *Tribune* disingenuously concealed, that the impatience with what had seemed the tardy action of the Administration, was due to the fact that the public gets its information concerning what is in progress on the coast of Nova Scotia through the newspapers and by telegraph, while the State Department, having to base its action upon more formal and authoritative advices, has to await the reports made by consuls after an investigation of the facts, which, of course, consumes time; the more so as the points at which seizures have been made are off the lines of direct communication. "It is impossible for the Secretary," said the *Journal*, "while communications and negotiations are in progress, to divulge their character; but his description of what has taken place as 'reprehensible action' and 'a gross breach of the commercial rights of a citizen of the United States' indicates plainly the Secretary's point of view." This is in refreshing contrast to the *Tribune's* ridiculous talk about "the deliberate action of our Government," and its remark that "no Government will long be tolerated by the American people which so ignores their rights and its duties."

We ought to congratulate ourselves on the seizure of a Canadian fishing-boat and a cargo of mackerel in Portland harbor in retaliation for the seizure of the *David J. Adams* in Canadian waters. As both these craft were sailing without the proper papers, the two seizures make an agreeable tit-for-tat. The Dominion authorities still owe us one ship for the *Ellen M. Doughty*, but it will go hard if we do not find something afloat under the British-American colors to balance the account. The daily bulletin from Portland will doubtless furnish a fitting reprisal in the course of the next few days, or bring us the news that the codfish war has been opened by an engagement between the private armed schooner that sailed from somewhere the other day, and the Dominion cruiser that is known to be waiting for her. Once upon a time our gallant sailors inscribed upon their colors the stirring words: "Not one cent for tribute." Their appropriate motto now would be: "Just one cent for tribute." The duty on salt fish must and shall be preserved.

The anti-polygamy amendment to the Constitution reported by the House Judiciary Committee prohibits "polygamy and polygamous association" throughout the United States. But the second section then forbids the United States or any State "to make or enforce any law allowing polygamy or polygamous association or cohabitation between the sexes." This is all very well, but it goes on to provide that "the United States and every State shall prohibit the same by law within their respective jurisdictions." One cannot help asking who drafted this amendment. The positive prohibition contained in the first section, followed by the direction to Congress to pass a penal statute in execution of it, would seem to do all that can be done by constitutional amendment. The direction to every State to pass a penal statute also would therefore seem as needless as it is novel, and nothing of the kind has ever appeared in the Constitution hitherto. How are the United States to compel a State to pass a law? If the State does not do it, what is the remedy? Can the Supreme Court mandamus the State Legislature? And what would be the use of the State law if one were passed, if the prohibition were already to be found in a constitutional United States statute?

What we hoped would come out of this anti-Mormon movement was a constitutional amendment putting the whole subject of marriage and divorce within the jurisdiction of the United States, and giving the country a uniform marriage law. It is quite safe to say that the difference of the State marriage laws is on the whole as great a cause of scandal and immorality, and does as much damage to the family relation, as the Mormon polygamy. American society is suffering far more to-day from the ease with which monogamists get out of their monogamy, than it suffers, or is ever likely to suffer, from legalized polygamy. What we need is a law which shall surround marriage with exactly the same legal conditions, and follow it with the same legal consequences, in all parts of the Union, so that no American citizen shall ever be less or more married in one part of the country than in another, and no American shall find it easier or more difficult to get a divorce in one part of the country than in another. An amendment providing for this would, of course, make polygamy as unlawful as an amendment specially directed against polygamy. The amendment reported by the Committee contains some very odd things; among others a distinction between "polygamy" and "polygamous association or cohabitation," after defining polygamy as "the marriage relation by contract, or in fact, by one person of either sex, with more than one person of the other sex."

The Pan-Electric people fired their heaviest projectile on Friday, being an affidavit from Z. F. Wilber, who was an Examiner of Interferences in the Patent Office at the time when the original Bell patent was granted. The Committee of Investigation declined to receive Mr. Wilber's affidavit, the time for receiving testimony having passed. Nevertheless the precious document was handed to the newspapers, and to one of them in sufficient season to supply itself with a wood engraving of that part of the Patent Office in which Wilber says he was bribed by Professor Bell in person. Wilber's own account of himself is that he was then in the habit of being bribed by Bell's attorneys through the process of borrowing money from them and not paying it back. Since that time he has been in the habit, he says, of making false affidavits while under the influence of liquor, said affidavits to be used in important lawsuits. In this way it comes about that the present affidavit contradicts some of the former ones relating to the same subject. This one, he says, is positively the last, and is given "for the sake of justice and the easement of his own conscience." He thinks it is quite likely that Professor Bell will deny the bribery, but that his (Wilber's) "mind is now clear and his conscience active." He then introduces the diagram of the rooms and corridors, showing exactly where he stood and where Professor Bell stood when the latter handed him a one-hundred dollar bill. This is the diagram with which the *Times* illustrated Wilber and itself on Saturday morning. The one-hundred-dollar bill, he says, was given to him after he had shown Professor Gray's caveat to Professor Bell. It is not stated whether a bargain was struck beforehand that Wilber was to show the caveat to Bell for one hundred dollars. The implication is that the money was given in the way of gratuity to a hard-working officer of the Government whose expenses customarily exceeded his income.

No step taken by the Bell Company in this investigation has so fatally discredited the Pan-Electric crowd as this Wilber affidavit. Setting aside the fact that Bell made no use of the information (if he received any) of the nature of Gray's caveat, the whole story, the acknowledged character of the witness, the contradictory nature of his several affidavits touching the same subject, make up a picture which excites both derision and pity—derision for those who rely upon such testimony to establish a truth, and pity for the poor tramp who has made such a sorry exhibition of the remnants of a Union soldier. Mr. Wilber ought to be in an asylum for inebriates or in some other secure refuge, where patent lawyers are not allowed to enter. The protection of public charity should be extended to him, in order that he may not be induced to commit further perjury, and that respectable and well-meaning public journals may not be exposed to the folly of printing his "after-davits."

About one year ago Secretary Manning decided to exercise the discretion vested in him by law to suppress the one and two-dollar greenbacks. The one and two-dollar bank notes had been previously suppressed by law. The object in both cases was to make room for the circulation of silver dollars. About $45,000,000, in addition to the amount now in the hands of the people, could be got rid of by the Treasury if the small greenbacks were called in and retired. The only way to suppress these notes is to cancel those which come into the Treasury in the course of business, and to issue fives and tens in place of them, keeping the whole greenback circulation up to the amount fixed by law. When the intention of the Secretary became known, the banks gradually ceased to return the worn and mutilated small notes to the Treasury for reissue, knowing that they would only get the larger ones in exchange; and persons having payments to make to the Government contrived as far as possible to avoid using small notes for this purpose. The consequence

has been that the one and two-dollar greenbacks are becoming very much dilapidated, and also very scarce. Silver dollars are coming into more general circulation, and as they come into use their inconvenience renders them unpopular. So the silverites have raised an outcry that Treasurer Jordan is insidiously "striking down silver" by his policy of suppressing small notes. It is very hard to satisfy such people. If silver is not paid out, they say that the Department is violating the law and conspiring with the bondholders. If it is paid out, they say that there is an evil purpose and design to make silver unpopular. We do not see any remedy unless Congress passes a law guaranteeing to silver men exclusively the use of small notes, and requiring the bondholders and the "gold-bugs" to use silver for all transactions under five dollars.

General Logan announced a very important discovery in his Providence speech on Friday, one which bids fair to solve the labor problem if both employers and employees will give their undivided attention to it. What is needed, he says, in order to secure harmony between labor and capital is to pay a fair day's wages for a fair day's work. The simplicity of this remedy must strike everybody with sudden and peculiar force. The customary way of looking at the subject—that of paying an unfair day's wages for a fair day's work, or a fair day's wages for an unfair day's work—is clearly at the bottom of all the disturbances of the time. It has cost the country, according to *Bradstreet's* calculations, $30,000,000 since the beginning of the present year. What Mr. Blaine will reply to all this we cannot imagine, but we are sure that he will have a bad quarter of an hour when he gets a copy of Logan's speech.

The Massachusetts Legislature is suffering from a very bad attack of demagogism. An arbitration bill was recently proposed, and the labor politicians insisted that the choice of the arbitrator to represent the employees in every case where a board is constituted should be restricted to members of labor organizations. Members who believe that men who do not belong to unions have some rights, urged that the range of choice should include the whole body of workingmen, but the demagogues raised the cry that "the labor vote" would be cast against anybody who showed independence enough to support such a proposition, and the bill has actually passed both branches with this discriminating provision in it.

It is a good sign that the countrymen of the Chicago and Milwaukee Anarchists are anxious to repudiate any sympathy with these enemies of society. An anti-Anarchist association of Bohemians held a meeting in this city on Sunday, and after a small number of noisy advocates of the Most policy had been suppressed, they adopted resolutions protesting against the idea that Bohemians as a race are Anarchists, and condemning such acts as those of the Chicago bomb-throwers. One fact bearing upon the attitude of the Poles and Bohemians has not received the attention which it merits. While Poles were prominent among the rioters at Milwaukee, Poles were also prominent in suppressing the disorder; the Kosciusko Guards, who turned out to suppress the mob, being a Polish military organization. The recent disturbances have shown conclusively that it is only a small fraction of even the most ignorant races in this country which believes in anarchy.

The annual exhibition of the Keely motor was given in Philadelphia on Saturday. A new set of terms descriptive of the "power" was introduced, but the tuning-forks and the fiddle-bow were retained to set the "vibratory force" in motion. Ordinary Schuylkill water was used to energize the vibrator. An entirely new machine has been constructed by the inventor, but it is not claimed that any saving of water is effected by it, or that the number of tuning-forks has been essentially reduced. The value of the new machine is that it can be taken apart and put together again in the presence of witnesses. This was done by Keely, to the satisfaction of a goodly number of sightseers, and the exhibition would have been as successful as any of the twelve former ones but for the impertinence of Mr. Hall, the editor of a scientific journal, who asked the privilege of performing the experiment without the use of the tuning-forks. This request was considered by Keely insulting, and he wanted to know if Mr. Hall meant to insinuate that the tuning-forks were a humbug. Mr. Hall replied that that was what he meant. Cries of "Put him out" were raised by the believers, who had come a long distance, they said, to see an exhibition, not to listen to a personal altercation. The insurgent Hall was suppressed, and the exhibition proceeded with much éclat. A "pressure" was obtained ranging from 10,000 to 20,000 pounds to the square inch, according to the pitch of the tuning-forks. At the conclusion Mr. Keely said that he would be prepared to take out his patents in about sixty days, at which time he would have a stationary engine of 200 horse pressure in operation.

The moral effect of the Jaehne conviction and sentence is good, but it is only half of what we hope to see accomplished. The bribe-takers have had warning that their business is a risky one, and that they can be caught and punished. What is most desirable now is to show that bribe-giving is equally risky. If a few of the men who have been engaged in buying legislation can be convicted and sent to the penitentiary, the public conscience will be likely to wake up suddenly to the enormity of that offence. We state it as a fact within the knowledge of everybody familiar with corporations, that a regular item of expenditure with many of them is a large one for influencing legislation. It is looked upon not only as a necessary but a justifiable outlay. Nothing but the startling revelation that every man in any way sanctioning such outlay is liable to imprisonment, will have much effect to stop this business.

Mr. Matthew Arnold begins a letter to the London *Times* on the Irish question by stating that he will soon be on his way to visit his American kinsmen, "who abstained from setting up a Southern Parliament themselves, but are so anxious, it seems, that we set up an Irish one." If this allusion to American affairs is to be taken as referring to the period when secession was beginning, it would be a fitting answer to say that if the North had been separated from the South by sixty miles of salt water, and especially if there had been no irreconcilable antagonism between the institutions of the two sections, it is extremely doubtful if any attempt would have been made to prevent the setting up of a Southern Parliament. Juxtaposition of territory, the conflicting interests of freedom and slavery, and the certainty that any treaty of peace would have been the prelude to war, and that war would be continuous, were the determining causes in the minds of the Northern people. Attachment to the Union would not alone have warranted the outpouring of blood and treasure which actually took place. There was added to this attachment a settled conviction that peace was not possible under the conditions existing. This conviction grew stronger rather than weaker as the war went on, and it has suffered no abatement since. But if there had been a dividing line of blue water even as wide as that which separates England from France, if there had been no fugitive slaves to take into account, if there had been any good reason to believe that peace could be maintained, coercion would not have been attempted. In order to succeed at all, substantial unanimity in the North was required, and such unanimity could not have been had. The Democrats were nearly one-half of the population, and they would not have lent their aid to coercion if the question had been merely that of subduing or not subduing the Southern States. In their minds and in all minds it was a question of subduing or being subdued. It was the culmination of "an irrepressible conflict between opposing and enduring forces," a conflict not to be stopped by paper constitutions or by drawing imaginary lines upon the map. Although the war was not begun to abolish slavery, it was the existence of slavery that made peace impossible.

There is nothing odder or droller in the home-rule discussion than Professor Goldwin Smith's attack on Mr. Gladstone for having shown a "hysterical manner and excessive excitement" during the debates on the question in the House of Commons. Mr. Smith has himself been suffering from hysteria over the Irish question for several years. Four years ago he published an article in *Macmillan's Magazine* gravely recommending that such Irish as were sent to this country with Government funds should be settled among the negroes at the South, where they would do the least mischief; and he declared in the same article that the Irish would probably "destroy Anglo-Saxon civilization" in both continents. A publicist who writes in this way is not an opponent to be argued with. He is a sufferer to be treated with sedatives and change of scene. His notion that Mr. Gladstone is suffering from his own disease is one of the familiar delusions of this class of patients.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 19, to TUESDAY, May 25, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND vetoed four private pension bills on Monday and two on Tuesday, because the reasons assigned for passing them were insufficient.

President Cleveland, in one of his pension-bill vetoes, says: "I am by no means insensible to that influence which leads the judgment toward the allowance of every claim alleged to be founded upon patriotic service in the nation's cause. And yet I neither believe it to be a duty nor a kindness to the worthy citizens for whose benefit our scheme of pensions was provided, to permit the diversion of the nation's bounty to objects not within its scope and purpose."

The Senate on Wednesday passed, 34 to 14, the Pension Bill, so amended as to provide that "no pension paid under any law to any soldier, sailor, or marine hereafter shall be rated at less than $4 a month," and to cover men who served only three months.

In a debate in the Senate on Tuesday, Mr. Ingalls (Rep., Kans.) made a pointed attack on Pension Commissioner Black, alleging that General Black obtained his own pension on false representations.

The House bill providing for closing the business of the Court of *Alabama* Claims was passed by the Senate on Friday without amending. The House passed the bill making a closed season for mackerel from March 1 to June 1 by a vote of 120 to 80. The Senate Committee on Patents directed Mr. Chace to report his bill providing for an international copyright. The House Committee on the Judiciary instructed Chairman Tucker to report favorably an amendment to the Constitution declaring polygamy unlawful.

The Senate on Thursday, without a roll-call, passed the Arthur Kill Bridge Bill. Mr. McPherson could get but five votes for his tunnel amendment. The House, by a vote of 178 nays to 80 yeas, defeated the $800,000 mail subsidy. Only five Democrats voted yea; twenty-two Republicans voted nay.

The Democratic majority of the House Committee on Appropriations has voted to add in the Legislative Appropriation Bill to the item for the salaries and expenses of the Civil-Service Commission the following proviso: "That this appropriation shall be available only when when the rules of the Civil-Service Commission are so framed as that the names of all applicants for official appointment from any one State, found duly qualified on examination, and without regard to age, shall be sent to the head of a department or other officer charged with making an appointment." The item for the salaries of the 150 special pension examiners at $1,400 a year each is accompanied with a proviso that they are "to be appointed by the Secretary of the Interior on the recommendation of the Commissioner of Pensions." They are now appointed in accordance with the Civil-Service Law and Rules.

The Ways and Means Committee on Tuesday morning, by a vote of 10 to 1, decided to report adversely the bill to give effect to the Mexican treaty.

Casey Young threw his "bomb" into the Telephone Committee on Friday, in the shape of an affidavit by Zenas Fisk Wilber, who was an examiner in the Patent Office in 1875, 1876, and 1877, and passed the Bell patent to issue, and who has made heretofore no less than five different affidavits in relation to the telephone controversy since July 29, 1885. He states that in none of these affidavits did he tell the truth or the whole truth, one reason being that he was under the influence of alcohol. His new affidavit says that he accepted a bribe of $100 from Bell to show him Gray's caveat and drawings. Prof. Alexander Graham Bell denies this in the most positive manner.

The Secretary of the Treasury has issued a call for $4,000,000 of the 3 per cent. loan of 1882, due July 1, 1886.

The schooner *Sisters* from Yarmouth, N. S., was seized at Portland, Me., on Monday for failing to have a manifest. The captain has sent a protest to Secretary Manning, in which he says: "Having little knowledge of the regulations of the Treasury Department, and no idea whatever of violating the same, I feel the fine imposed is unjust, and most respectfully ask that the same may be revoked."

The British Minister in Washington is urgently recommending a commission to consider the fishery controversy. Senator Frye, in a letter addressed to the Secretary of State on Thursday, said: "I assume that the State Department is giving this matter such consideration as its importance demands. The urgency of immediate action for the protection and relief of these American citizens cannot be overestimated. I regard the conduct of the Canadian Government as entirely unjustifiable, and without authority of treaty, of law, or of good neighborhood." Secretary Bayard replied: "The late reprehensible action of the Canadian officials in relation to American fishing vessels has occurred in remote localities without facilities for postal communication, and consequently there has been delay, regrettable but unavoidable, in receiving consular reports. But your assumption 'that this Department is giving the matter such consideration as its importance demands' will, I believe, be fully sustained when the proper time arrives for publication of its action. I trust I am properly conscious of my duty as an official charged with the execution of delicate and important public functions, and that the interests and honor of my country and the rights of its citizens will not be found to have suffered at my hands." The feeling in Maine over the seizures is intense.

The second General Assembly of the Knights of Labor of the United States met in Cleveland on Tuesday afternoon, 122 delegates out of 147 entitled to seats being present. The General Master Workman, Mr. Powderly, called the meeting to order, but made no address. The statement is made that a novel proposition will soon be laid before the General Assembly to bring about amicable relations between labor and capital by forming local and district assemblies composed entirely of manufacturers and other employers.

The great strike of coal miners in the Clearfield (Pa.) region ended on Tuesday. The men return to work at the old wages, the mine owners making some concessions.

Judge Barrett, of this city, on Thursday sentenced ex-Alderman Jaehne (convicted of bribery in connection with the Broadway scandal) to nine years and ten months at hard labor in the State Prison. The limit is ten years. Jaehne was taken to Sing Sing on Friday.

The New York Assembly, on Wednesday, passed the bill providing for the election of New York Aldermen on a general ticket, for holding municipal elections in April, and providing that any voter may on one ballot cast one vote for as many Aldermen as there are Aldermen to be chosen at such election, or may on one ballot cast more than one vote for any one or more candidates for the office of Aldermen, providing that the aggregate number of votes cast by any voter for Aldermen shall not exceed the number of Aldermen to be chosen at such election.

The Senate at Albany on Wednesday night, by a vote of 19 to 7, passed the New York Aldermanic and Spring-Election Bill as it passed the Assembly. The bill giving the appointment of Excise Commissioners to President Nooney of the Board of Aldermen was passed by the Senate, and the Census Bill was defeated.

A bill passed the Assembly on Wednesday, authorizing the Governor to appoint a commission of three to investigate the different systems of prison labor, and providing for the employment of convicts on the public account or piece-price system until this commission reports or until January 1, 1887. The Senate also passed the bill and it was approved by the Governor

Governor Hill sent to the Senate on Wednesday morning the name of Edward A. Durant, jr., to be Railroad Commissioner in place of John O'Donnell. Mr. Durant is a grain merchant of Albany. He is forty years old, and was graduated from Williams College in 1869. The nomination was a surprise, as Mr. Durant is a Republican. The Senate, however, did not confirm the nomination.

On Thursday the Governor sent to the Senate the following nominations: State Prison Commission—Wm. Bookstaver of Dunkirk, George Blair, of New York, and Enos W. Barnes, of Wellesville. Arbitration Commission—Wm. Purcell, of Rochester, Gilbert Robertson, jr., of Troy, and Florence F. Donovan, of Brooklyn. The Senate confirmed them. They were made mostly for political purposes.

Both houses of the Legislature adjourned *sine die* on Thursday noon with the usual ceremonies.

Governor Hill on Tuesday appointed Roswell P. Flower an Electrical Subway Commissioner for this city, in the place of Charles E. Loew, deceased.

The Yale Corporation on Thursday formally accepted the resignation of President Noah Porter, and unanimously elected Professor Timothy Dwight to succeed him. Professor Dwight is fifty-eight years of age, and is a grandson of Professor Timothy Dwight, who was President of Yale from 1795 till his death. He has been a Yale professor since 1858.

It is announced that the Board of Domestic Missions of the Reformed Church of America, whose office is in this city, has suffered a loss of upward of $25,000 through the misuse of trust funds by its Treasurer, John R. Smith.

Arthur Quartley, a well-known marine artist, died in this city on Wednesday, aged 47. He was the son of a London wood-engraver.

Mrs. Alice Pendleton, wife of George H. Pendleton, of Ohio, American Minister to Germany, was killed by a carriage accident in Central Park on Thursday afternoon.

Dr. Dio Lewis, the author of many popular works on hygiene, died at Yonkers on Friday, aged sixty-three.

Samuel Hand, ex-Judge of the Court of Appeals in this State, died at Albany on Friday, aged fifty-two. He was a close political friend of Governor Tilden and President Cleveland, and had been engaged in many important cases before the Court of Appeals.

Professor Joel Dorman Steele, widely known as the author of a series of school-books, died suddenly of heart disease at his home in Elmira on Tuesday. He was born at Lima, N. Y., in 1836, and was educated at Albany and Troy. He served in the late war with distinction.

Gen. Frederick Nash Ogden, who led the White League movement at New Orleans in 1874, which overthrew the Kellogg Government, is dead at the age of fifty.

FOREIGN.

In the House of Commons on Wednesday night the bill providing for the election by ballot of the Poor-Law Guardians in Ireland passed its second reading by a vote of 207 to 105. The debate was very warm. Mr. John Morley supported the measure on behalf of the Government.

In the House of Commons on Thursday night, after a heated debate, the Arms Act passed its second reading by a vote of 303 to 89. This led the Government whips to claim a majority of 15 for the Home-Rule Bill on its second reading.

In the home-rule debate on Tuesday in the House of Commons, Mr. Trevelyan quoted an alleged remark of Mr. Parnell, to the effect that he would not rest until the last link that

connected Ireland with England had been broken. Mr. Parnell indignantly said, "This is not the first time that this calumny has been uttered. I demand the date and place of the speech." Mr. Trevelyan replied, "Cincinnati. If Mr. Parnell considers his words derogatory, let him withdraw them and express his regret." Mr. Parnell retorted that Mr. Trevelyan had not given the date and title of the paper from which he quoted. He (Parnell) possessed verbatim reports of his Cincinnati speeches, which showed that he had not used such words. Mr. Trevelyan said that he fully accepted Mr. Parnell's denial, and added that the date was February 23, 1880, and the paper was the *Irish World*.

The Roman Catholic Propaganda has succeeded in inducing the bishops to exert their influence upon Mr. Parnell's followers, with the object of securing the latter's consent to the retention of a full Irish representation at London. Cardinal Manning initiated the movement. It is said that he believed that the removal of Irish members from Westminster would be injurious to the cause of Roman Catholic denominational education in Great Britain

Lord Salisbury addressed a great audience, under the auspices of the Primrose League, in London on Wednesday. He advised the maintenance of law and order in Ireland. He reiterated his advice to the Irish to emigrate from Ireland if they could not prosper and be contented under British rule, and urged the Conservatives to support the Liberal Unionist candidates in the coming election where Conservatives could not certainly be chosen.

Matthew Arnold has written a letter to the London *Times* on home rule, in which he says: "A separate Parliament for Ireland is Gladstone's irreducible minimum. Ireland is a nation, says Mr. Parnell menacingly and Mr. Stansfeld gushingly. A nation should have its national Parliament. Ireland has been a nation and a most unhappy one. Wales and Scotland also have been nations. Politically none of them are nations now. Britain could not have risen to her present greatness if she had given them separate Parliaments. You begin to make them nations politically again, but you begin also to undo what made the country. The awakening mind of the country demands not that we give a separate Parliament to Ireland, but that we seriously set ourselves to the task of giving her separate laws and institutions. Lord Salisbury's bad and arbitrary temper as a home politician is as great a misfortune to the country as Lord Randolph Churchill's intriguing. The establishment of a separate Parliament would be a dangerous and unnecessary plunge. Lord Salisbury talks only of coercion. Let us refuse a separate Parliament with firmness, but with equal firmness let us insist upon a condition which alone justifies this refusal. Lord Hartington has good temper. He is no intriguer. Mr. Goschen has made local government a special study. I hope they may be trusted to make our refusal firmly and our engagements emphatically. The passionate supporters of Mr. Gladstone are political dissenters and Radical workmen of the great towns."

Lord Randolph Churchill, in a long letter to Mr. Gladstone, accuses him of completely misstating his (Churchill's) recent remarks in regard to Ulster Loyalists and rebellion. Mr. Gladstone replies: "I greatly regret if I misrepresented your statements. My words rested mainly on your speech in Ulster and on the closing paragraph of your letter to Mr. Young of the 7th instant. This paragraph was as follows: 'If Parliament, for the sake of purchasing a short, illusory quietude, hand the Irish Loyalists over to their hereditary foes, Ulster will fight and will be victorious, because she will command the sympathy and support of an enormous section of the British community and the approval of free, civilized nations.' Let us consider this paragraph substituted for the words which I attributed to you in quoting from recollection. To this I am constrained to apply exactly the same words that I expressed in Parliament."

The Gladstone Committee is making a final effort to conciliate the Radical dissenters. The Committee has made overtures to Mr. Chamberlain, promising that if he abstains from voting against the Home-Rule Bill the measure will be dropped after the second reading, and the Government will then support a resolution affirming the supremacy of the Imperial Parliament, and promising adequate protection to the Irish minority. Mr. Chamberlain's acceptance of the offer depends upon Mr. Gladstone's giving guarantees that this course will be followed.

From the best information obtainable it is believed that the British Cabinet decides not to abandon clause 24 of the Home-Rule Bill, which provides for no Irish representation at Westminster. Mr. Gladstone, however, has declared his willingness to introduce further modifications, which he will explain at a general meeting of the Liberal party. In the call for this meeting, to be held on May 27, Mr. Gladstone says: "It is proposed to hold a meeting at the Foreign Office on Thursday, 27th, at noon, of all the members of the Liberal party who are desirous, while retaining full freedom in all particulars in the Irish Government Bill, to vote in favor of the establishment of a legislative body in Dublin for the management of affairs specifically and exclusively Irish." The special significance of this is its decision as to who shall and shall not be considered members of the Liberal party in the future. It is a decree excommunicating the Whigs, and making home rule the Liberal shibboleth. It is an official recognition of the break-up in the Liberal party.

An important session of the British Cabinet was held on Tuesday. It lasted more than an hour, and at its close Mr. Gladstone started for Windsor to see the Queen. Wild rumors were afloat—one that he would advise an immediate dissolution, and another that he would tender his resignation.

M. Stephanopulos was on Thursday elected President of the Greek Chamber of Deputies. He was the nominee of M. Tricoupis, and was elected by a majority of 60 over the candidate supported by M. Delyannis.

M. Tricoupis on Friday formed a new Greek Ministry. He assumed provisionally the offices of Minister of War and Minister of Finance. The other Ministers are: M. Lombardos, Minister of the Interior; M. Voulpiotos, Minister of Justice; M. Manetas, Minister of Public Instruction; M. Theokotis, Minister of Marine. The Ministry is for peace.

A number of skirmishes took place on the Greek frontier on Thursday night and Friday morning. The Turks were the aggressors. European markets were unfavorably affected.

The Greeks claim that during the frontier engagements on Friday they captured two positions from the Turks, 20,000 cartridges, and three prisoners. The commander of the Turkish troops explained that the firing by his men was due to a mistake, and he gave assurances that Turkey's intentions were pacific. There was an entire cessation of firing everywhere along the frontier on Saturday. Mutual explanations were made.

Severe fighting took place on the Greek frontier on Sunday morning. The forces engaged covered a distance of fifteen miles. The heaviest fighting was at Tirnovo, and the casualties were heavy on both sides. A truce was effected at noon, and efforts are making to arrange an armistice.

There was more fighting on Monday, in which the Greeks were successful. On the same day a royal decree was issued sending 50,000 Greek troops to their homes. No further trouble is anticipated. The immediate cause of the recent hostilities was the fact that the Greek troops, who had served all winter on the frontier and borne all the hardships, knew that as soon as Tricoupis came back to power they would be disbanded, and were eager to show what they could do. The conflict was practically provoked. The Greek General Loris has been mortally wounded.

United States Minister S. S. Cox had a three hours' interview with the Sultan on Wednesday. He presented to the latter gifts sent by President Cleveland, consisting of 1,000 views of scenery in different parts of the United States, portraits of celebrated and typical Indians, copies of the last census reports, etc. The Sultan was well pleased with the presents, and requested Mr. Cox to thank President Cleveland for the "unique and valuable gifts." The Sultan asked Mr. Cox to coöperate in the work of taking a Turkish census.

M. Rousseau, the delegate appointed by the French Government to inspect the work on the Panama Canal, has presented a report in which he denies the correctness of the canal company's statements respecting its facilities for construction, the time when the canal will be completed, and the amount of money still required to accomplish the work. The Minister of Public Works will inform M. de Lesseps and his fellow-directors that they must reply to M. Rousseau's report, as the Government cannot authorize the proposed issue of lottery bonds until the position of the company is made clear.

M. de Lesseps assumes to make light of the report. He says that if the Government refuses him permission to issue lottery bonds for the purpose of raising sufficient money to complete the canal, he will get funds by other means and elsewhere than in France.

It is considered certain that the French Government will prohibit the Comte de Paris, who is now in Lisbon, from reëntering France.

The French Cabinet on Tuesday by a vote of 6 to 5 adopted the principle of the expulsion of the Orleans Princes.

The German Reichstag on Tuesday referred the Spirit Bill to a committee, and adjourned *sine die*.

Leopold von Ranke, the aged and renowned German historian, died on Sunday in Berlin. He was born at Wiehe, in Thuringia, on December 21, 1795, and was therefore in his ninety-first year. At the age of twenty-nine he published his first works, 'The History of Roman and German Nations from 1494 to 1535' and 'Criticisms upon Modern Historians.' These works brought him a professorship of history at Berlin in 1825, which he retained until his death. A few years later he was sent by the Prussian Government to examine the historical material in Venice, Vienna, Florence, and Rome, in which work he spent four years. Libraries, public archives, and monasteries were ransacked, and much valuable historical material was brought to light. From this he produced a number of notable historical works. The work which first gave him European reputation was entitled 'The Popes of Rome,' which was really a continuation of 'The Princes and Peoples of Southern Europe.' This work appeared in 1834. The review of it by Lord Macaulay in the Edinburgh *Review* is one of his masterpieces, and it made Ranke's name familiar to English and American readers. His most complete effort, however, is his 'German History in the Time of the Reformation.' The closing work of his life, a history of the world, entitled 'Weltgeschichte,' was projected after he was eighty years of age. It was to be in nine volumes. Six of these have been completed, and it is believed that he has left sufficient notes and documents to permit at least one more to be prepared by his literary executor.

The official report of the Minister of Militia was presented to the Canadian Parliament on Friday morning. It shows that the total cost of the half-breed rebellion was $4,700,000, and the casualties 26 men killed and 206 wounded.

Maximo Santos has been appointed President of Uraguay, President Vidal having resigned.

DESPOTISM AND SECRECY.

THE two leading strikes of the late labor crisis were those of the Southwestern Railroads and of the Third Avenue Road in this city. One was started and managed by Martin Irons and the other by Joseph O'Donnell. Irons was Chairman of one Executive Committee and O'Donnell of another. In both cases the great body of the strikers had no grievances of their own to complain of. They struck because they were ordered to strike by the man representing the Executive Committee, and they held out because they got no orders from him to go back to work. There have been other similar cases on a smaller scale. In the Paterson silk factory 1,200 persons struck, without knowing why, on receiving a signal made with his fingers by a cigarmaker from Albany, who was also chairman of some committee, and sought to make the owner of the factory conduct the business of his dye-house to suit him (the cigarmaker). Being coldly received in the dye-house, he lost his temper, and snapped his fingers as he passed through the shops, with the above-mentioned result.

In all these cases the strikes failed utterly, but not without great loss both to employer and employed. The employer lost the profits on his business, the interest on his fixed capital, and probably some of his permanent custom; while the strikers lost their wages, and thousands of men and women all over the country lost the amount of a special tax levied on them, or assumed by them to support the strikers while loafing or rioting. A fortnight ago the Third Avenue strike ended in failure, and when it ended, O'Donnell, the man who started it and kept it going, had to resign and get out of the way of his constituents. For some days there was talk of mobbing him, and after having at one time occupied a position so eminent that he peremptorily directed the Inspector of Police not to suppress a riot which he was himself heading —and this with the approval of some of the newspapers—he has utterly disappeared from view, amid the curses of his dupes. More recently the Southwestern strike ended in failure also. Irons is in hiding, or has made his escape, leaving a mob of his former followers and many angry creditors vainly searching for him with hostile intent. In like manner the silk workers at Paterson went back to work ashamed and sorry, and the cigarmaker who snapped his fingers has been expelled from his assembly, or whatever the body is to which he belongs, and deposed from his high office.

Now, what is the moral of all this for working people? Is it not the old moral, which political history has been teaching for 4,000 years, that no man or small knot of men is fit to be intrusted with the exercise of arbitrary power over other men's lives and fortunes? Is it not astounding that there should be found so many white citizens of the United States ready to act as if they had no knowledge of the experience of their race with absolute rulers and secret cabals and committees; of the loss, and suffering, and sorrow which it has undergone at their hands, of the vast expenditure of life and treasure which it has taken to get rid of them and establish government by popular consent and public discussion? Louis XIV. and Napoleon I. and Napoleon III. were really nothing but Grand Master Workmen, with a lot of Inside and Outside Esquires at their beck and call, who had only to crack their fingers in order to tear people away from their occupations without telling them why, and levy on their property without rendering them an account. Charles I., too, really wanted to be a Walking Delegate, and go about the country and collect money, without letting people know what he wanted it for, but the English would not give him "assessments," or permit him to snap his fingers in their workshops; and on his persisting in the practice they cut his head off.

The strikes which Louis XIV. ordered were on a tremendous scale. He had constantly 300,000 or 400,000 men striking in one direction or another, without ever telling them what the cause was. He himself escaped the fury of the strikers by death, but his successor in the fifth generation perished for his ancestor's sins on the scaffold. Napoleon I. was a still greater organizer of strikes. He kept all France on a strike against the rest of Europe for twenty years. He used to order out a couple of hundred thousand men at a time, and when the wretched strikers asked what it was all about, he used to say, like Martin Irons, that it was to "show his power," and when they begged to be allowed to go back to their factories and fields, he used to say, like Master Workman Powderly, that though the strike might have been unjustifiable in the beginning, it had to go on for the credit of the Order. But the day came at last when, as in Missouri, the patience of the strikers was worn out, and they deserted him, and then, like Irons, he had to run, with a mob after him, and left the world wondering what he had done with all the money. His nephew, Napoleon III., had a somewhat similar experience. He headed and managed strikes in France, and collected assessments, and kept "pickets" out, and stopped trains, and ran opposition stages for twenty years, but at last he organized a bigger strike than he could manage, and he too had to run with the mob at his heels, followed by his Venerable Sages, and his Esquires, and his Local Assembly.

In fact, how any workingman who can read, and who has any habit of reflection, can bring himself, in the year 1886, in the United States of America, to join any organization in which his life and property can be controlled by arbitrary or secretly prepared orders, it is difficult to understand. For to be, not simply an American, but a modern freeman, it is before all things necessary that a man should make his own contracts; should pay no money, except debts, to anybody who is not willing to render him an account; should submit to no laws or "orders" which he has not been consulted about, or has not had a hand, personally or through his representatives, in making after open discussion. These things are among the essentials of freedom. A man who has only some of them is partially free. A man who has none of them is a slave.

HOW THE KNIGHTS CONDUCT STRIKES.

EXTRAORDINARY revelations as to the manner in which the Knights of Labor conduct strikes, were made by many members of the order during the late Congressional investigation. The sessions of the Committee were attended by Charles H. Litchman, first General Secretary of the order, and at present a member of the General Executive Board for the whole country, who was sent to St. Louis by Mr. Powderly as his authorized representative. What Mr. Litchman says as to the morals of striking, and of preventing by force other men from taking the places of strikers, is therefore of the highest significance. Here it is:

"Mr. Parker—What do you call a scab?

"Mr. Litchman—By a scab, the trades unionist means what the lawyer means by a shyster and the doctor by a quack.

"Q. Do you not acknowledge the right of any man to work and earn wages and support his family? A. When you put the question abstractly, in that way, I must answer it, 'Yes.' *But I do not acknowledge the right of any man, at the time a great conflict is raging between labor and capital, to step in between and scab.*

"Q. You said a while ago that when a strike was declared, everything in human power should be done to make it effective and successful. What did you mean by everything in human power? A. *I would rather not answer that question. The case is not here, and I don't care to make myself plainer.*"

Irons was asked for his views on the same point with this result:

"Q. Now, do you regard injuring property as lawlessness? A. Yes.

"Q. And killing engines? A. Well, sort of, I suppose.

"Q. Do you regard uncoupling cars and breaking up trains as violence? A. Well, yes."

On previous occasions Irons had been more candid in expressing his endorsement of violence. One witness produced short-hand notes of a speech made by Irons at a Knights of Labor meeting in East St. Louis, while the trouble there was at its height, in which he said:

"Talk to the scabs; go to their houses and talk to their wives, and make them quit. Do everything you can to make them come out, *and if they won't, give them some pills and — them out.* To hell with the Chinese! To hell with the scabs! We won in the Chinese fight, and we will win this."

At the same meeting, said this witness,

"another Knight of Labor advised the men to be quiet while the militia were there, but as soon as they were gone"—here the speaker winked significantly.

"Mr. Stewart—He didn't reduce it to words, but he looked it?

"Witness—Yes."

The way in which the teachings of men like Litchman and Irons were carried into practice was perfectly illustrated at De Soto, Mo., and is best told by some of the witnesses from that place. Joseph Cramer, formerly employed by the Missouri-Pacific at De Soto, was thus examined:

"Mr. Stewart—Are you a Knight of Labor?

"Witness—No; I used to be.

"Mr. Stewart—How did your connection with the order terminate?

"Witness—Well, on March 14, I was ordered to assist in stopping trains. I didn't go. On the 17th two members of the assembly asked me again, but I said I shouldn't have anything at all to do with such business. On the 18th I received the following written notice from the lodge:

"'You are hereby notified to come to the hall and report for duty to the Master Workman.'

At first I didn't go, but when they sent again I went. When I appeared, the Master Workman told me to go to the coal chute. I asked what that was for. He said, 'To stop trains.' I said I was not going to do any such thing as that. He said, 'Very well, you needn't do anything, but you can go and swell the crowd.' I replied, I didn't propose to violate any laws or make myself a criminal in any way. He told me I was a coward. I replied, 'Well, I may be, but I'm not afraid of you or any one else; all the same, I'm not going to damage the company's property.'

"Mr. Burnes—Where did this conversation take place?

"Witness—In the Knights of Labor hall at De Soto.

"Q. With the Master Workman? A. Yes.

"Q. Whose signature was attached to the notice? A. Master Workman McLaughlin's.

"Q. Who brought the notice? A. I don't know, but it was one of the officers who came the second time.

"Q. Here is a list of names of the men who broke open the round-house. Do you know of your own knowledge whether they are Knights of Labor or not? A. Most of them I have met at the lodge, and one of them abused me terribly.

"Q. Who was that? A. Rogerson. He said: 'Do you suppose the Knights of Labor will ever allow you to work in their shops again when they have got through this affair?' I said: 'That is a matter for consideration later on.' He said they were going to win the fight, and I should never be allowed to work with them afterward.

"Mr. Burnes—Did you withdraw from the Knights of Labor?

"Witness—I didn't withdraw; I was expelled.

"Q. Why? A. For refusing to stop trains and damage the railroad property.

"Q. When were you expelled? A. The same night I refused to go on duty. They also went so far as to say that they would give me twenty-four hours to leave the town.

"Q. Were you present when you were expelled? A. No, but officers of the assembly told me the next morning.

"Q. What were you told? A. That I was expelled for gross violation of the laws of the order.

"Q. What was the violation? A. Refusing to obey the officer's demand to stop trains and destroy property.

"Governor Curtin—Do you understand that there is a law of the Knights of Labor to compel a man to disobey the laws of the United States?

"Witness—No; and I told the Master Workman so. He said he didn't know anything about that, but I had got to do it."

Henry P. Becker, a merchant of De Soto, testified that he had witnessed several acts of violence by Knights of Labor. He himself formerly belonged to the order, and left it in this way:

"Mr. Burnes—Why did you leave the order?

"Witness—I was expelled because I was told to go on picket. I said I had done all the picketing I meant to do. The Master Workman pressed me, and I said: 'I'll be d——d if I go on picket.' I walked out of the room, and was expelled. After that I received notice that it would be well if my son did not make himself so busy. I went round to my son at once. He is employed in the office at the depot, and I said: 'You do your duty, and if any one interferes with you shoot him. You do this, and I'll stand by you.'"

John French, a blacksmith formerly employed at De Soto, testified that he had belonged to the Knights of Labor up to the 8th of March, when he retired because he could not countenance acts of violence and intimidation. Further evidence to the same effect was ready, but the Committee declined to hear more, one of the members saying: "I hardly see the use of continuing this line of examination. There is no doubt whatever that the Knights of Labor were implicated in these disturbances, and that the Master Workman gave notice that no trains should go out."

Finally, as to the character of the tyranny exercised over the Knights of Labor by the organization, two bits of testimony may be quoted. One is from the examination of Joseph Cramer, who was expelled from the De Soto Assembly for refusing to obey the Master Workman's order to stop trains and damage the railroad property:

"Mr. Stewart—Is it a principle in the order that members shall stop trains and damage property?

"Witness—I don't know about that, *but a man has to obey orders.*"

The other is from the examination of John Doyle, formerly a tinner in the Missouri-Pacific shops at St. Louis:

"Mr. Burnes—Why did you go out?

"Witness—Because I was ordered to.

"Mr. Burnes—Would you have gone out except for the order?

"Witness—No; I didn't suppose it would do me any good, *but when a man belongs to an order, he has to obey it.*"

This testimony of members of the order presents a complete picture of the Knights of Labor organization as it exists to-day. It is an organization whose authorized representative regards "labor" as meaning only laborers who belong to the organization, and who does "not acknowledge the right of any man, at the time a great conflict is raging between labor and capital" (meaning between Knights of Labor and their former employer), "to step in between and scab" (meaning for an unemployed man not a Knight of Labor to take a vacant place formerly filled by a Knight of Labor). It is an organization in which such an utterly worthless fellow as Martin Irons becomes absolute dictator over 5,000 men, so that they are bound by oath to obey any order he may give. It is an organization in which a Martin Irons possesses and exercises the power to order a strike which affects not only these 5,000 men, but all the industries of half-a-dozen States, because he fancies that a railroad official in one of these States meant "a slight on the order" when he discharged an inefficient workman. It is an organization whose local assemblies have ordered members to stop trains and damage railroad property without being called to account by the governing body, and whose authorized representative justifies such action by saying, when asked to define what he means by doing "everything in human power" to make a strike effective, "I would rather not answer that question." It is an organization which binds the member by oath to obey implicitly any command of anybody who chances to be his superior officer, no matter if that superior officer orders him, suddenly and without reason, to stop work, give up a place with which he is entirely satisfied, and leave his family without means of support, or even to break the law and by force prevent another man from working in his place—any act of disobedience bringing down upon the offender the vengeance of the organization: "*when a man belongs to an order, he has to obey it.*"

ONE OF MR. GLADSTONE'S DIFFICULTIES.

A GREAT deal of the trouble which Mr. Gladstone is experiencing with his Irish measures is due to the fact that to most Englishmen the whole Irish question is a complete novelty, and the island a terra incognita. It would probably be found, if the matter could be investigated, that only a very small number of Englishmen, prominent in public life, have ever been in Ireland, or, if they have ever visited that country, have stayed there more than a few days, or have seen more than one small class of the community. The same reasons, too, which keep Englishmen from going to Ireland have always kept them from studying Irish questions, or indeed giving them any attention except under the pressure of some such necessity as the holding of an Irish office. And then the persistent grumbling of the Irish ever since the Union has produced in most Englishmen the impression which grumbling always produces on people who know little and care nothing about the grumblers—that is, the impression that they are born grumblers and that nothing would satisfy them. A "man with a grievance" is always, even to his friends, a serious bore. After they have heard his story once or twice they cease to care whether it is true or not, and are inclined to believe that it is not true.

Moreover, the Irish, with all their oratorica gifts, are on the whole ill fitted to make a serious impression on English audiences, even if they get a hearing. Their rhetoric is too fervid, just as that of Frenchmen or Italians is, for the cold English temperament. Their exaggerations and flights of fancy excite disgust and distrust in the English mind. So that even if Englishmen had been disposed to listen to them, they would probably not have succeeded in making much impression. To these difficulties we must add what we may call the natural imperviousness of the English mind. As Matthew Arnold says, Englishmen "have become, in a certain sense, of all people the most inaccessible to ideas, and the most impatient of them; inaccessible to them because of their want of familiarity with them, and impatient of them because they have got on so well without them that they despise those who, not having got on so well as themselves, still make a fuss for what they themselves have done so well without."

Now, Mr. Gladstone's announcement fifteen years ago that Irish grievances were real, and could be redressed, and must be redressed, was really a disturbance of English life by the introduction of a new and essentially repulsive idea. His proposal to disestablish the Irish Church and to interfere between landlord and tenant was a new idea, which the English mind apprehended with difficulty and reluctance, and which first gave him the reputation in English clubs and drawing-rooms of being a dangerous man, who concocted strange and startling theories of English duty. His home-rule scheme is, of course, still more alarming and incomprehensible than anything which has gone before. Accordingly when it first appeared it absolutely shocked the middle and upper classes in England. They looked on it as a wild and grotesque concoction of Gladstone's brain, and, besides this, absolutely gratuitous. They had heard of home rule, but they had not considered it, or turned it over, or "taken it in," as the phrase is, or dreamed that anybody of note or consequence was disposed to treat it seriously. They were disgusted with both Gladstone and the Irish for having such an idea, seeing how well Englishmen had got on without it. Nobody in England, they said, felt the need of a Parliament in Dublin; why, then, should the Irish want one, and why should Gladstone propose to give it to them? They pronounced it, therefore, as Mr. Arnold does, in a recent letter to the London *Times*, a "leap in the dark." All novelties in legislation in England are to the English mind "leaps in the dark." Catholic emancipation was one. Lord Eldon

said it had caused "the sun of England to set forever." The Reform Bill in 1832 was another. The Duke of Wellington did not see, he said, if it passed, "how the King's Government was to be carried on." The Reform Bill of 1867 was also denounced by a large number of those who are now most vigorous in their opposition to home rule as "a leap in the dark." In fact, we believe these very words were used about it by Lord Sherbrooke, then Mr. Robert Lowe. All change is objectionable in a greater or less degree to the typical English mind simply as change, and it foresees hardly anything but evil from it.

We see some illustration of all this now in the gains Gladstone is making by waiting. As the weeks roll on, home rule is losing many of its terrors, and many of the Liberals who ran away when it first appeared are coming back. Mr. Chamberlain finds that but few of his followers are willing to stand by him to the end. Consequently the Tories and timid Liberals are anxious to bring the pending debate to a close as soon as possible, while Mr. Gladstone wishes to prolong it. He knows that time and resulting familiarity with his plan tell in its favor. He knows that the English public needs time to make up its mind, and that it cannot make up its mind about anything without getting used to it.

THE STUDY OF THE LAW AT THE GERMAN UNIVERSITIES.

It is a well-known fact that in Germany every one who wishes to practise law, or enter certain of the most important branches of the public service, must study law for at least three years at a university and pass two State examinations. One of these examinations is to be taken at, or shortly after, the close of the academic triennium, and the other at least four years after the first. As a matter of fact, the first is ordinarily taken three years and one-half after the student enters the university, and the second five years after the first, making in all a preparatory course of eight and one-half years before the student is admitted in full standing to the bar. All this is in addition to the completion of the course in the gymnasium, or classical college, which takes the student on the average until his twentieth year, and which must be finished before the student is admitted to the university. In spite of this long preparatory course, the complaint comes to us from Germany that too many students are studying law, that the supply is outrunning the demand. In a recent number of Conrad's *Jahrbücher für Nationalökonomie und Statistik* Professor von Schulte, in an article entitled "Das juristische Studium auf den deutschen Universitäten," discusses some very interesting phases of this question which should be of interest to students of university matters the world over.

The author begins his discussion with a reference to the valuable monograph by Professor Conrad, which was reviewed in the *Nation* some time ago, in regard to the attendance at German universities during the last fifty years, arranged according to faculties. The first interesting phenomenon is the great fluctuation in the number of students at different times in the history of the same institution. Thus, Berlin had 1,441 students of law in 1881, while it had only 348 in 1860. Breslau varied from 101 in 1841 to 432 in 1877; Halle, from 186 in 1832 to 42 in 1860; Leipzig, from 257 in 1862 to 1,130 in 1875; Munich, from 898 in 1852 to 212 in 1874; Kiel, from 113 in 1834 to 9 in 1872. For these facts it is hard to find any satisfactory explanation. Thus, the time of greatest attendance at Bonn occurred in 1851, when the leading professors did not lecture at all, owing to absence in Parliament. Twelve of the universities reached their highest attendance at a time which had nothing to do with the great extension of study that followed the wars of 1866 and 1870. The six old Prussian universities—Berlin, Breslau, Halle, Greifswald, Koenigsberg, and Bonn—had the smallest attendance during the years which followed the earnest warnings of the Prussian Ministry from 1855–60 that the business of studying law was being overdone. Five of the universities had their lowest attendance in 1870, which seems natural. On the contrary, Munich and Erlangen declined steadily from 1867 to 1880. Another interesting fact is to be found in the great difference in attendance between the winter and the summer semester. The greatest difference is to be seen in Berlin and Heidelberg, the former having at times about forty per cent. more students in the winter than in the summer, while the latter has fifty per cent. more in summer than in winter. Heidelberg and Freiburg, indeed, may fairly be called summer resorts for the German students.

The largest attendance at the different universities varies greatly. Berlin had at one time more than 1,400 law students, while Leipzig never reached 1,150, nor Munich 900, nor Heidelberg 600, nor Bonn 400, nor Tübingen 300, nor any of the rest 275, except Breslau and Goettingen, which at one time came near to 450, while Rostock never got above 72. The explanation of this great difference is found by the author in a variety of circumstances, the most important of which are the following: (1.) The large number from the immediate neighborhood of the university. Thus, nearly 10 per cent. of the students in Berlin come from the city itself, while in Munich more than 10 per cent. are from the city. (2.) The attraction which a capital city exerts upon the future lawyer or Government officer. This is particularly noticeable in Berlin and Munich, and is especially clear in the case of Berlin since it became the capital of the empire, as is seen from the great increase in attendance from outside of Prussia since 1870. (3.) The price of living, which is lower in a large city than in a small one. The rooms in a large city are perhaps somewhat dearer, but any one who wishes to economize can do so much better in a large city than a small one. The means of getting about are cheaper, and enable one to live at a distance from the university. The restaurants are better and cheaper. One who wishes to work is not drawn off by his companions, as he can always find students who also wish to economize and to work. Amusements are better and cheaper. For the impecunious student the great city offers decided advantages. It is, of course, the Paradise of him who has means. (4.) The universities of most of the States have an assured attendance, since all but Prussia require that the students shall spend at least half of their time at some university within the State, and where there is only one university it gets all the students for at least three semesters. Besides this, in some of the States the State examination must be passed before a board of examiners composed chiefly of university professors, and the students know that it is safer to hear the lectures of the examiners themselves. This accounts for certain tendencies at Munich and Tübingen. (5.) A chief reason for this great difference is also fashion, and a desire to see other universities. Thus, more than 40 per cent. of the Prussian students study at universities outside of Prussia, while less than 14 per cent. of non-Prussians study in Prussia. This is explained to some extent by the provision mentioned above in regard to studying at a home university. Less than 8 per cent. of the Bavarian students go out of Bavaria during their course; less than one-sixth of the Saxons out of Saxony; and less than one-third of the Würtembergers go out of their own State. To give an idea how extensive the habit of moving about among the different universities has come to be, the author makes an extract from the records of the University of Bonn, from which it appears that out of 200 students of law in 1875 40 had been at one other university, 41 at two others, 27 at three, and 7 at four other universities. In 1882 the facts were still more striking. Of 295 students, 47 had been at one other university, 70 at two, 45 at three, 17 at four, 1 at five, and 1 at six.

It is interesting to note that the author regards this feature of moving around from one university to another, which seems to be rather on the increase than otherwise, as a decided drawback to thorough work, although it is ordinarily held up, by Germans and foreigners alike, as a system which other countries might well adopt. The disadvantages of the plan are great both for student and instructor. A student who changes his university twice or thrice loses much time in getting accustomed to the place, in making new acquaintances, etc., so that the term time becomes very short indeed. The professors must go on the supposition that a large part of the students are new. Hence there can be no proper coördination of lecture courses. If a professor lecturing on the Pandects, for example, could be sure that his hearers had heard the courses on the history and institutions of Roman law, he could presuppose much. The various professors of Roman law could arrange their courses so that they would fit into each other. As it is now, each professor must take for granted as little as possible. The result of this is an absurd combination of courses on the part of the student. The average student, if he goes regularly to his lectures at all, takes those which come at convenient hours, takes the course which happens to be fashionable, etc. He wishes to attend as many different universities as possible; in summer he takes in the pleasant districts, in winter the pleasures of the metropolis, and withal hears continually the A B C courses, because they give him least trouble. Prof. Schulte says that the less said about the actual attendance at the lectures the soonest mended. It is a very good state of things if one-half or even one-third of the students regularly go to the lectures. The habit of performing during term-time their compulsory military service, which for students at the universities is limited to one year, interferes seriously with the attendance. The members of the *corps* and other societies among the students do not even pretend to go to the lectures.

The question as to whether the supply of law students does not exceed the demand is made the subject of a careful investigation. The law students are all looking forward to entering the Government service in some department or other, or practising law. The number of places in the civil service is, of course, definitely known, and, although it is continually on the increase, it is comparatively easy to estimate just how many new men will be wanted. The number of practising lawyers was until very recently limited by law to that number which in the judgment of the court was necessary to do the legal business of the community. Although the number is not now limited, yet as a lawyer must engage in the practice of his profession exclusively and not embark in other business, which is regarded as inconsistent with the dignity and duty of an advocate, it is plain that the number is very much smaller than in such a community as our own. It is, moreover, tolerably easy to estimate the number of lawyers who can earn a fair living by the practice of the profession alone. The num-

ber of positions in the civil service which are open to the educated lawyer in Prussia, and the number of "livings" from law practice, amount, according to our author, to about eight or nine thousand, about four hundred of which become vacant each year. The universities and courts are now turning out yearly about eight hundred and sixty assessors, as those are termed who have completed the second examination, making about four hundred and sixty more than can find positions in the Government service or openings in a practice. The author concludes that the number of students should decline by at least six or eight hundred before supply and demand will be fairly equalized.

Prof. Schulte concludes his article with the statement that certain measures, which, in the opinion of all who have studied the question, are imperatively necessary, should be immediately taken to check the enormous attendance. These measures he indicates to be (1) the lengthening of the period of university study by at least a half, and better by a whole, year; (2) the adoption of some means to secure the actual attendance of students at the lectures. The best means to do this would be to hand over the first examination entirely to the universities, so that the examiners in this test should be the professors themselves. A second means would be to introduce an examination at the end of the second year, and make the passing of it the condition of being promoted to the third year of the course. It is significant that both these changes would be in the direction of our American college system.

It may seem strange to an American that such universal complaints come to us from Germany that there are too many students at the universities; but such facts as are here given us make it clear why it should be so. If a man spends the years of his life from the sixth to the twenty-ninth in preparing himself for one career, he is very likely to be unfit for any other; and if there is no place for him in the one he has chosen, he is likely to make a poor showing in another calling where he must compete with men who have spent all the years he has given to the law to the work of preparation for that particular branch. A system which requires for each calling a special and long-continued technical training, is also a system in which a man cannot go from one branch to another: having been educated for one thing, he must stick to it. It is easy to see how, under such circumstances, a calling may be easily overcrowded without any hope of relief except by the comparatively slow process of discouraging young men from entering the preparatory stages. This is the state of things in Germany to-day, and the Government is actively exerting itself to discourage attendance at the universities. Another interesting fact about the German university is the class of considerations which determines whether a student shall enter one faculty or another. Unpleasant reflections are often made upon the devotion to the material side of life which is supposed to be characteristic of the American; but it may fairly be doubted whether any higher institution in the world affords a better example of a pure and undying devotion to the bread-and-butter aspects of life than a German university, where the mass of students rush this way or that, taking up law, medicine, theology, or teaching, indifferently, according to the prospect of finding Government employment soonest in one branch or the other. The only difference between Germany and other countries is that the Government of the former, with a wise foresight for the ideal side of life, has made a bread-and-butter employment of devotion to pure science, and has connected with this pursuit substantial rewards which are not to be had in other countries, and which have brought it about that Germany now stands at the head of modern nations in nearly every line of scientific achievement.

THE IRISH HURLY-BURLY.

LONDON, May 13, 1886.

Is Mr. Gladstone riding for a fall, or is he going to save the second reading of his Irish Government Bill by some great stroke of policy at the last moment? Such is the problem on which every political mind is now at work. Your readers may perhaps be weary of following the turns and changes of this home-rule debate, but there is nothing else in which our people can be induced to take any interest. Bills which at any other time would have raised debates of some importance drag wearily through their successive stages; and on the nights appropriated to private members the House of Commons is counted out as a matter of course. Lord Rosebery is working away at the irrepressible "claims of Greece," not without credit to himself; but his proceedings are hardly noticed by the active politicians who used to rouse the echoes of Willis's Rooms in the days when the Eastern question *was* a question for every elector. Troubles are not wanting in Burmah; there is a new fishery dispute (not a very serious dispute, I hope) in Canada; but these matters will hardly find their way into the question paper of the House of Commons until we know what is to happen to the Irish bills. All the prophets had made up their minds that the Prime Minister would make any effort and almost any concession to procure the acceptance of the principle of home rule. Mr. Chamberlain had formed his own estimate of the price that would be offered for his support. But all forecasts were falsified by Mr. Gladstone's speech of Monday night. He offered no concession; he made no special effort to convince or conciliate anybody except Lord Hartington—the one Liberal adversary whose vote is not to be had on any terms. As for Mr. Chamberlain, he was simply ignored; at one point he was brought within the scope of Mr. Gladstone's argument, but not by any personal reference; only by a backward wave of the hand which seemed to recognize him as a feature in the political landscape. This is not what Mr. Chamberlain is accustomed to, and he expresses his feelings and his intentions with even more than his usual frankness.

What does it all mean? It may mean that Mr. Gladstone feels that he has the country with him, and that he hopes to overcome the Liberal opposition, not by persuasion, but by the threat of having them ruled out of the party. Or it may mean that he no longer hopes to overcome; that he wishes to provoke defeat. If the Irish-Government Bill is rejected, he will be able to choose between several policies, any one of which affords him a hope of ultimate success. He may advise the Queen to dissolve Parliament. It is true that her Majesty is not bound to act on the advice; the constitutional rule is tolerably clear on this point, and it was laid down with emphasis by Mr. Gladstone himself in 1873. But if the Queen should prefer to send for Lord Hartington or Lord Salisbury, and if either of these gentlemen should undertake to form a Government, the dissolution must come, and that before long. Meantime Mr. Gladstone might hold the balance of power in the House of Commons, while enjoying leisure enough to make a series of great speeches out of doors in favor of home rule, and so to prepare a triumph for himself at the general election. Supposing (not a very extreme supposition) that the Queen is not strongly disposed to favor Mr. Gladstone and his bill, she may perhaps think it wise to dissolve. The Liberal party is now in complete confusion, and the Gladstonian section of the party could hardly succeed in ousting all the good Liberals who oppose the bill. The transfer of the Irish vote would not quite make up for the loss caused by internal divisions; and if there were a loss of twenty or thirty seats to the Liberals, they would still have a majority, but they would have sustained a moral defeat sufficiently marked to justify the Lords in rejecting or modifying any measure of home rule. But the chance of a moral defeat for Mr. Gladstone, if we suppose it to be an inducement to dissolve, ought not to prevail against the strong reasons which forbid a dissolution in the middle of the first session of a new Parliament, and in the busiest season of the agricultural year.

The delays and doubts of British parties are putting a severe strain on the patience of the Irish members, and they are bearing the strain very well. In private as in public they take a rational and moderate tone; they seem to be sincerely desirous of putting an end to the long struggle in which they are engaged, and if they obtain a separate legislature, I believe they will do their best to make it work. They admit that the provisions, and especially the financial provisions, of Mr. Gladstone's bill are likely to cause serious difficulties; but they hold that difficulties may be overcome if Englishmen will only go a little way to meet the spirit that will be evoked in Ireland by the concession of independence. One member from Munster assures me that an "incalculable effect" has been produced on popular opinion in his neighborhood by the mere promise of home rule. He added a remark which is worth recording: "You must not think," he said, "that the Irish people follow a constitutional question as you follow it. They care very little for all this discussion about powers and limitations; if you give them something they can call a Parliament, why, you may draw its powers yourself, and they won't object." While the Parnellites display the cheerful moderation of a winning party, the Ulstermen are in a state of dangerous excitement. It is certain that some of them are buying gunpowder, and sensational newspapers do their best to aggravate the dangers of the situation by talking loud nonsense about civil war. It is very unlikely that there will be anything to call war; but it is quite possible that there may be firing of shots. For some time past the people who buy up old Government rifles have found a market in Ireland, and especially in Ulster. The Protestant farmers have become accustomed to attend political meetings with rifles and revolvers; and when Lord Iddesleigh was in Ireland he had to caution his friends against firing off their guns "in the lightness of their hearts." And now the editors of certain London papers are doing their best to persuade these excitable persons that if they rise against a Parnellite Parliament, Lord Wolseley, and Lord Charles Beresford, and a host of loyal officers will throw up their commissions to join the revolt. According to credible witnesses, the two noble lords specially named have used very strong language about the Irish Government Bill and its author, and about their own Parnellite countrymen. But before we have time to construct an Irish legislature they will probably see cause to moderate their zeal for the Union, and they may even do good service by showing their friends in Ulster what exactly is meant by war, and what responsibility rests on those who begin it.

In the eighteenth century, members of the House of Commons, if they travelled beyond the history and constitution of their own country, drew their examples and warnings from classical antiquity. In our day it is the fashion to refer to the laws of foreign countries and the policy of foreign statesmen. This home-rule controversy is constantly enlivened by the introduction of side issues from every unexpected quarter. Why

were Holland and Belgium separated in 1830? Is the present Constitution of Austria-Hungary a success? and (a question some omit to ask) what *is* the Constitution of Austria-Hungary? Does federal government work well in the United States? This last question receives various answers, according to the taste and fancy of the individual debater. Politicians of the Chamberlain school assure us that it works admirably, combining the maximum of national dignity with the maximum of local independence. Anti-federalists assure us that the system produces confusion and over-legislation; that no country can provide fit men for two sets of representative bodies. We are also told that the federal system gives too much importance to lawyers and to the legal element in politics. Our own experiments in constitution-building do not seem to help us much in the present difficulty. We know how to establish a self-governing colony; but then no British statesman will admit that Ireland can ever become as independent as New Zealand. We have tried our hands at confederation in Canada; but then it is just a little doubtful how far the experiment has succeeded. There certainly has been a good deal of litigation between the Dominion and the provinces; Quebec has more than once pursued what Scotch theologians call "divisive courses." Nova Scotia, which has welcomed Mr. Gladstone's bill with effusion, is itself in the act of proposing to secede from the Confederation. All these cases are now more or less in point, and they are cited freely on all sides. If this controversy has no other practical result, it will at least have made considerable additions to the legal and historical knowledge of our people. R.

THE HOME-RULE MOVEMENT.—I.

ITS STRENGTH.

OXFORD, May 13, 1886.

THE revolution in England moves apace. But a month has passed since my last letter, and the movement for home rule has already entered on a new stage. My present object is to analyze, as dispassionately as may be possible to an opponent, the causes to which that movement owes its strength. In my next communication I shall say something of its weakness.

1. The primary condition on which depends the success of Mr. Gladstone's new policy is a peculiar state of English opinion.

For the first time in the course of our history our national policy is under the influence, not so much of democratic convictions, as of a much more formidable thing—democratic sentiment. Every idea which can rightly or wrongly be called popular, commands, even among persons who think themselves Conservatives, a ready assent. Hence (be it at once admitted) flow some of the best characteristics of our age. Hence the detestation of inhumanity; hence the growth of the conviction that property has at least as many duties as rights; hence the faith that by some means or other the toiling multitudes ought to share in the prosperity which is due, in part at least, to their ceaseless labor. Hence, too, arise a host of dubious, not to say ignoble, ideas, as that the voice of the majority is the voice of God; that it is useless to struggle with any prevalent phase of opinion; that any body of persons who claim to be united by a sentiment of nationality have an inherent right to be treated as an independent nation. It were needless to explain how the currency of democratic sentiment tells in favor of home rule. It is, however, worth pointing out that democratic ideas at the present day exert far less influence from any enthusiasm they excite, than from their singular capacity for dissolving the convictions by which the claims of every kind of revolutionists are opposed. The argument that if Irish householders had votes, the majority of the United Kingdom must concede anything which the majority of Irish householders desire, is logically absurd; but, combined with other causes, it convinced a Conservative Government that in Ireland the executive was under no obligation to enforce the law of the land. The most curious, however, and the most alarming feature of the situation is the way in which democratic sentiment blends in the minds of modern Englishmen with feelings of a much less respectable order. Dislike of trouble, hatred to the performance of arduous political duties, indifference (one is constrained to add) to ordinary commonplace ideas of law and justice, are at the present moment influencing both members of Parliament and, it may be feared, the electors on whose wishes the conduct of members of Parliament depends. It is hardly too much to say that half the arguments used by politicians in favor of home rule amount simply to this: that five hundred and odd English gentlemen cannot be expected to resist the continuous pressure of the eighty-six Parnellites. Respectable members of Parliament yield, to the terror of being bored, what their fathers would not concede to armed rebellion.

2. No foreign observer can fully appreciate the immense influence exerted by Mr. Gladstone's personality. He represents in his person in a very singular way the best and the worst features of the sentiment of the day. He is also one of the few modern politicians who possess the energy which characterized the statesmen of the last generation. When you add to this that he is, to use his own language, an "old Parliamentary hand"—that is to say, a thoroughly trained and very skilful party manager—you understand part, at least, of the sources of his influence; but there is a good deal more in this influence than it is easy to sum up in a few words. High personal character has at all times told very strongly on the imagination of Englishmen. It was admittedly quite as much the superior morality as the genius of Chatham and his son which made the two Pitts the heroes of England. George the Third, with all his dulness and his cunning, was a popular idol because he was the "Good old King"; and Mr. Gladstone is to the electors the "good man" of English politics. In part by his merits and great powers, in part also, in my judgment, by his genuine sympathy with some of the weaker sides of English sentiment, Mr. Gladstone has obtained a hold on popular feeling which he can hardly lose. Fickleness, as Macaulay pointed out long ago, is not really the vice of the people. The masses cling to their idols; it is more doubtful whether they choose the objects of their admiration with perfect discretion. But the influence of the Premier is, it is fair to remember, due to a great extent to a circumstance independent of either the merits or the defects of his character. Modern democracies, in Europe at least, show a marked tendency, which is not in all respects a bad one, to place more store by persons than by principles. The people (they feel) can judge of a man's character; they cannot judge of his policy. The result is, that the one predominant idea which sways the conduct of thousands of electors is that Mr. Gladstone's policy must be supported simply because it is Mr. Gladstone's. No sensible person doubts that his present policy would not have had a hearing if proposed by any other politician. Few cool observers can, I suspect, doubt that if Mr. Gladstone were to vanish from the political arena, two-thirds of his followers would hasten to explain that they had never meant to favor home rule. I can easily believe that the Prime Minister himself would admit the difficulties besetting his policy far more readily than would his followers. It is quite possible that Mr. Gladstone is not a Gladstonian.

3. Many persons who are neither swayed by sentiment nor victims to the disease of Gladstonianism, are so impressed, and naturally enough, with the failure of all past attempts to govern Ireland; they are so disgusted with the weary round of concession following on coercion, and coercion again succeeding to concession, that they are willing to try almost any experiment which may give a chance of closing the secular feud between Great Britain and Ireland. This feeling harmonizes well with the kind of political hopelessness which prevails among many of the educated classes. Mr. Gladstone is the most sanguine of optimists; it is quite natural that he should exert exaggerated power over men who feel their own lack of hope. A moralist or statesman may condemn all forms of despair; but it is the merest justice to persons who are not likely to receive just treatment from partisans of any class, to recognize the fact that Mr. Gladstone's proposals are supported by men, who appreciate its dangers, because they see in it at least a chance of making a new departure in our Irish policy. Nothing is so idle as to suppose that statesmen such, for example, as Lord Spencer, are influenced by the spirit of vanity or affection. They may be taking a leap in the dark, but they are taking it to escape from what they deem to be an untenable and intolerable position.

4. English parties, and especially the Liberal party, have of recent years been organized on a plan which approaches the American model. We have our caucuses, our managers, our wire-pullers—in short, our "machine." At the present moment the Machine, as far as the Liberal party is concerned, is worked wholly in Mr. Gladstone's interest. There is no need of explaining to the citizens of New York all that this means, but they will easily perceive that the fact of Mr. Gladstone's supporters being in command of the party mechanism greatly favors the movement for home rule, or indeed any movement which may be identified with the name of the Prime Minister. One curious result, however, of our new party organization may escape the attention of American observers. A new element of uncertainty is added to the numerous difficulties of ascertaining the true set of opinion among the electors. No one knows how far the resolutions of so-called public meetings do or do not express the feeling of the public. It is impossible to tell how far machine-made opinion may not pass current for the genuine article. In any case, members of Parliament are rendered extremely nervous about their seats should they oppose the party, and the party is at this moment identified with Mr. Gladstone. Here, however, I am nearly touching upon the weakness as well as the strength of the home-rule movement, and that topic I purposely reserve for my next letter.

A. V. DICEY.

THE DUC DE BROGLIE'S RECOLLECTIONS.

PARIS, May 6, 1886.

THE publication of the 'Souvenirs' of the late Duc de Broglie, the father of the present Duke, has begun. One volume has appeared, and I hear that it will be followed by the publication of two others. Among the men who have played some part in the affairs of their time, few have resisted the temptation to write such memoirs: "Ecce enim breves anni transeunt, et semitem per quam non revertar ambulo." The biographical notes which are now published were written when the Duc de Broglie was already advanced in years; they have not the form of a journal, you do not feel in them the spur of the occasion. They are wanderings over the past, but what a past!—the French Revolution, the Empire, the return of the old dynasty. The preface is written in a grave, solemn style:

"I have lived more than seventy years, I have gone through an epoch of disorders, of misfortunes, of crimes. God has spared me neither misfortunes nor defeats; he has given me the grace never to ignore the wisdom of his ways, nor the excellency of his works. I love life. 'Je l'aime et la cultive,' says Montaigne, 'telle qu'il a plu à Dieu nous l'octroyer.' I enjoyed it in my infancy, in my youth, in my middle age; I enjoy it still in my old age, mildly and gratefully. I regret nothing of what the progress of years has successively taken from me. I feel that, if we live long, we gain definitively more than we lose; and if we can belong to our age and to our time, as fast as the exterior man gets destroyed, the inner man gets renewed."

The Duc de Broglie was not a pessimist of the modern school, a misanthrope. He had a certain sort of serenity which came partly from good health, partly from self-contentment, partly from philosophy. I saw him in the latter part of his life, under the Second Empire. He was out of active politics, but he kept his interest in all the events of the time. He was much occupied with philosophical speculations, and saw the affairs of the world from those *templa serena* of which Lucretius speaks. He liked to speak in aphorisms, and when he had hit on a good one, he rehearsed it frequently. I heard him once, speaking of the policy of Napoleon III., at the time of the *Coup d'état*, when the future Emperor was coquetting at the same moment with the Socialists and with the Conservatives, say pointedly: "He says to the wicked, 'I am with you,' and to the good, 'I protect you.'" He was so pleased with this formula that he repeated it, as it were to himself, three or four times.

The Duc de Broglie was born in Paris, November 28, 1785. His grandfather was Marshal of France and Governor of Metz. His father was only thirty years old, and was Colonel of the regiment of Bourbonnais; he had, three years before, in 1782, joined the army commanded by Rochambeau in the United States. His regiment had reëmbarked for an expedition against Jamaica, and had returned to France after the signing of the peace. A manuscript of the journal of Colonel de Broglie exists among the papers of the family. The Colonel married a lady of Swedish extraction, who had large estates in Alsace, where her family had been established since the Thirty Years' War. Judging from the picture of her which is at Broglie, she was a person of great beauty.

The Marshal emigrated at the beginning of the Revolution. His son, who had adopted liberal ideas, remained in France, and was a member of the Constituant Assembly. He afterwards joined the army of the Rhine, under Luckner; he had himself Desaix, then a mere lieutenant, as his aide-de camp. His brothers, who had joined the Marshal, disavowed him, and would have no further communication with him. He was, nevertheless, ill looked upon by the Jacobins: he lost his command, and was finally arrested. He died on the Revolutionary scaffold June 27, 1794; his wife, who was reserved for the same fate, succeeded in making her escape from prison and fled to Switzerland, through the mountains of the Jura. She returned to France after the ninth Thermidor. Young Broglie had found a second father in M. d'Argenson, and received, during those terrible years, such an education as could then be received in France. He was capable of learning from events and things as well as from books; his mind was very receptive, and his character acquired in infancy a strength which it always preserved. When he was in Paris, he saw the remains of the old society mixed with the lights of the new society; all social distinctions seemed to have been lost in blood. As a very young man he made the acquaintance of Mme. de Chevreuse (who was afterwards exiled by Bonaparte), of Talleyrand, of M. de Narbonne, of the Suards, who received in their salon the Abbé Morellet, Garat, Daunou, Ginguené, the latest philosophers.

The first time he saw Bonaparte was in the garden of the Tuileries "giving his right arm to Bourrienne, keeping under his left arm a little Turkish sword: thin, slender, with a yellow complexion and a wild look." He saw him again at the château of the D'Argensons, when the Emperor was on his way to Spain. "All was changed: the bust was short and fat, the little legs fleshy; the complexion sallow, the forehead bare, the face cut like a Roman medal." Nobody, at the time, understood Spanish affairs, and the Duc de Broglie seemed to think that Napoleon himself had no idea what he was going to do at Bayonne. "He had surely prepared the trap, but he did not know exactly how much prepotency, wickedness, and perfidy would be necessary to attain the end." He describes very vividly the unexpected arrival, some time afterwards, of the King of Spain, of the Queen, and of the Prince de la Paix, who were sent, as prisoners, to Fontainebleau. The house of M. d'Argenson marked one of the halts of the royal party. The prisoners arrived in the same carriages which had taken Philip V. to Spain, enormous gilded carriages, with glasses on all sides, more fit for gala ceremonies than for a long journey; "and this was Spain, was the house of Bourbon!" The King was tall, bald, strong-looking, but merely strong in body. The Queen looked a very clean, nice little old body, dignified and reserved:

"Then came out of the carriage the Prince de la Paix, whom we have seen so long in Paris, a sort of cross between the butler and the *chasseur*. . . . The King did not stay a minute in the apartment which had been prepared for him; he walked incessantly in the château and in the gardens, shouting, 'Godoy, Godoy!' He would not lose sight of his favorite, and he finally established himself with him in the billiard room. . . . The Queen remained in her apartment. She received my mother with dignity, gravity, kindness, and put all sorts of royal questions: 'How many children have you? How many boys? How old are they? How long has this château been built?' . . . The name of Napoleon was never pronounced."

Three months afterward came the news of the catastrophe of Baylen.

In 1809 the Duc de Broglie was named *auditor* of the Council of State, and as such was attached to the Ministry of War. He performed various missions to the armies in Austria; he was afterward sent to Spain and again to Warsaw, on a diplomatic mission, of which the Abbé de Pradt was the head. He was attached to M. de Narbonne at the time of the Conference of Prague, and was initiated into all the negotiations which followed the disastrous war of Napoleon in Russia. One day the Emperor was talking with M. de Narbonne of this Russian campaign: "'After all,' said he to M. de Narbonne, who repeated it to me the same evening, 'what does all this cost me? Three hundred thousand men, and in this number there were a good many Germans.'" The Congress of Prague lasted twenty days, but it ended in nothing, and the Duc de Broglie returned to France full of sad apprehensions. He goes rapidly, with a feverish step, over the last days of the Empire, and begins his third book in these words:

"In the night of December 31, 1813–January 1, 1814, the Allies, after having long hesitated, crossed the Rhine between Spire and Bâle.

"January 24, the Emperor left for the army.

"March 31, Paris capitulated.

"April 2, the Senate pronounced the *déchéance*.

"The Emperor abdicated on the 11th.

"Louis XVIII., recalled to the throne, entered France on the 29th.

"May 2, he conceded the general principles of the *Charte* in the declaration of Saint-Ouen.

"The 30th, he opened the two Chambers."

The Duc de Broglie saw these great events as a mere witness: he took no part in the conclaves of the Legitimists. He witnessed the astonishment of the Parisians when they saw the allied armies from the hills of Montmartre and heard the first guns. "Nobody believed in anything, everybody expected everything." The Duc d'Artois arrived, and all the royalists went to see him in the Tuileries; then came Louis XVIII., escorted by the generals and marshals of the empire. "I saw, as a mere *curieux*, the great procession. I followed it from street to street, from boulevard to boulevard, as far as the Tuileries. I think that I am not mistaken if I say that there was a double current—one composed of people like myself, and it was by far the largest, curious, sad, resigned; the other, composed of ardent royalists, limited in number, but noisy and demonstrative." The King looked serious and unmoved; the Duchess of Angoulême was grave. The generals on horseback were visibly agitated and uneasy.

We come now to a curious passage in the memoirs. The Duc de Broglie received an invitation to take a place in the new House of Peers. He had desired to offer himself as a candidate for the House of Deputies, but he was only twenty-nine years old, and by the new law the candidates were to be at least forty years old. "I was not personally prepared for the compensation which was offered to me. It may seem extraordinary, but it is nevertheless true—I had completely forgotten that I was the head of the oldest branch of my family, the heir to the Dukedom of Broglie, and that, as such, since a House of Peers was created, I must necessarily be called to it." The fact is certainly a curious one. During the Empire the Duc de Broglie was merely called the Prince de Broglie; but that he should not have been conscious of his rights, shows how profoundly the French Revolution had mixed all the social elements in France. The Emperor had continued what the Terror had begun. We are living now in 1886, under a third Republic, and the passion for titles has never been so great as I see it. We have now society papers which give the lists of guests at a great party classified as the names are classified in the list of a levée at the Court of St. James—dukes and duchesses first, marquises, counts, viscounts, etc. This is quite an innovation in a country where the ancient rule was "un gentilhomme vaut un gentilhomme," and where mere titles were almost unimportant, except the title of *duc et pair*, which conferred a privilege. It must be supposed that the powers of imagination are very strong. At any rate, the young Prince de Broglie had forgotten in 1814 that he was a duke; his uncle, Prince Amédée, who was a friend of the Prince de Condé, remembered it, and so the unconscious Duke received a letter which summoned him to the Tuileries. "I found myself," says he, "transported suddenly, by the mere flow of events, to the first rank in society and in the state. I had not deserved it by my services; I had not made myself unworthy of it by my feelings, my language, and my conduct. There remained nothing for me to do but to use well this unexpected good-fortune."

At this very moment the Duc de Broglie was preparing to marry the daughter of Mme. de Staël. He tells us, at the end of his first volume, the history of Mme. de Staël during the Empire; of her return to France, with her son, her daughter, with M. Rocca, her second husband, and with Wilhelm Schlegel. He draws a portrait of this celebrated person, which is full of life, and of a warm and enthusiastic admiration. Her salon was the rendezvous of all the illustrious strangers whom the Restoration had drawn to Paris. The Duc de Broglie became acquainted there with the Duke of Wellington, with Canning, Sir

James Mackintosh, Humboldt; with Chateaubriand, M. de La Fayette, Benjamin Constant. During the "Hundred Days" she left Paris. The Duc de Broglie remained, and he describes all the incidents of this dramatic period which came under his eyes.

Correspondence.

CABINET OFFICERS ON THE FLOOR OF THE HOUSE.

To the Editor of The Nation:

Sir: I wish to call your attention to a bill now before Congress which, though of considerable importance, has not attracted the attention and discussion which it deserves. I refer to the bill giving Cabinet officers seats in the House of Representatives. It was introduced many months ago by Mr. Long, of Massachusetts, and was referred to the Select Committee on Reform in the Civil Service, where it now lies, and where it will continue to lie unless there is some popular agitation for or against it. The subject is an interesting one, and has been much talked of for many years by the public-spirited; and as it is now before the country in proper form, we should at least have a discussion of it, and find out what the wise and learned have to say.

The bill is in the following words:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the Secretary of State, the Secretary of the Treasury, the Secretary of War, the Secretary of the Navy, the Secretary of the Interior, the Attorney-General, and the Postmaster-General shall be entitled to occupy seats on the floor of the House of Representatives, with the right to participate in debate on matters relating to the business of their respective departments, under such rules as may be prescribed by the House."

It will be observed that the bill gives members of the Cabinet seats in the House of Representatives, and the right to debate and answer questions, but not the right to vote. It might be said that the privilege should not be confined to the House, and that the Cabinet officers should be given seats in the Senate also. But this is matter for amendment and may be passed by here, as I am at present concerned only with the main issue of the question. The bill is clearly constitutional. The Constitution says that "each house may determine the rules of its proceedings"; and it has always been the custom for Congress to give the privilege of its floor to whomsoever it pleased. Nor is the bill a violation of the clause in the Constitution which says that "No person holding any office under the United States shall be a member of either house during his continuance in office." A Cabinet officer with only the privilege of the floor cannot be called a member. He has neither the right to vote, nor freedom from arrest, nor any of the essentials of membership.

It is to be further observed that the bill does not make the members of the Cabinet hold their offices at the pleasure of Congress. In other words, there is no resemblance to the English system of a responsible ministry. In England, the Cabinet resign as soon as a majority of Parliament is opposed to their plans and policy. But our Cabinet officers will, under the change proposed, hold their positions whether Congress is with them or against them. In England the legislative and executive departments are merged, and the executive is simply a committee of the legislature. But it is a fundamental principle of our form of government to keep the legislature distinct from the executive. To have our Cabinet officers go in and out at the pleasure of a majority of Congress would require an amendment to the Constitution. The object of the present bill is simply to make the means of communication between Congress and the departments more convenient. Communication is now carried on between them by resolutions calling for information, and the information is furnished in writing: when mismanagement is suspected, an investigating committee is appointed, which takes testimony in secret and reports to the House. Congress cannot obtain easily from the departments the information which is necessary to intelligent legislation, and the heads of departments have no say, except by lobbying, in legislation which concerns their work. But if the Cabinet officers have seats in Congress, information will be obtained more readily and accurately, and, what is of still greater importance, openly, before the whole country. By the questions put to members of the Cabinet on the floor of Congress and their answers thereto, the people will be kept constantly informed of the doings of the Administration. There will also be an additional check on the Government, and frauds when suspected will be more easily traced and punished. The Administration, in its turn, will have the opportunity of defending itself openly before the people, and of exercising a salutary influence on legislation. Neither legislature nor executive will gain power at the expense of the other, but the power of each to check the other will be increased; and this is in exact accord with the theory of the Constitution.

There recently appeared in the *Atlantic Monthly* a very able article entitled "Ministerial Responsibility and the Constitution," in which the writer took for granted that there was a movement on foot to introduce a responsible ministry in this country, and then he proceeded to prove that it was in violation of the Constitution, and would, by merging the executive and legislature into one and making Congress all-powerful, destroy our principle of balanced powers of government. He succeeded in this most admirably, and showed himself a good constitutional lawyer and a valuable citizen. But he wasted his excellent ammunition and soiled his gun all for nothing. He fired at a phantom of his own creation. No one has any intention of setting up a responsible ministry in the United States, and there is no bill for that purpose before Congress. Such a thing could only be accomplished by an amendment, and an amendment of that sort could not be carried. F. G. S.

May 18, 1886.

TEXT-BOOKS IN CHEMISTRY.

To the Editor of The Nation:

Sir: In an article on text books of chemistry, which appeared in your last issue, there occurs a passage which calls for an explanation from me. It is this: "Mr. Shepard makes Dr. Remsen appear as a quasi-godfather to his book. Our surprise at this, and belief that in some way Dr. Remsen's apparent endorsement must be due to a misapprehension on the part of Mr. Shepard, are strengthened by the publication, after a short interval, of an elementary text-book by Dr. Remsen himself."

I beg to say that Mr. Shepard has said nothing which he was not fully justified in saying. At the request of Messrs. Ginn & Heath, I some time ago consented to examine Mr. Shepard's book in manuscript, and afterwards I agreed to make such changes and additions as I thought were called for. It seemed to me that the book was likely to prove useful in showing teachers how they could keep their pupils profitably at work in the laboratory from the beginning of their study. The lesson taught by the book is that chemistry can only be learned in the laboratory, and that the book is only a guide to experimental work; and this is a lesson which certainly needs to be taught above all others in chemistry.

As to the fact that "after a short interval" an elementary book by myself appeared, I have to say only this, that I did not begin my book until I had had a free correspondence with Mr. Heath and Mr. Shepard, and they had expressed themselves in the most friendly way in regard to the proposed work.—Yours very truly,

Ira Remsen.

Johns Hopkins University, May 24, 1886.

A BAD LOT.

To the Editor of The Nation:

Sir: Mr. Bear's statement (*Nation*, No. 1089, p. 393) about the character of the Irish majority—"a crowd of Fenians, priests, rogues, and paupers"—puts me in mind of the late Jones McCarthy in the 'Dodd Letters': "He loved his country, and it was a treat to hear him praise it. 'Oh,' he would say, 'there's but one blot on her. The Judges is rogues, the Government's rogues, the Grand Jury's rogues, and the people is villains.'"

Bear-ing the Irish stock, isn't it?

Respectfully, F. H. S.

Springfield, Mo., May 19, 1886.

A HAPPY THOUGHT.

To the Editor of The Nation:

Sir: Permit me through the *Nation* to make a suggestion for the settlement of the labor question and the solution of the silver problem, believing it will commend itself to all who are logical in thought and Christian-like in desire. The suggestion is this: Pay the eight-hours workmen with the eighty-cents dollar. Y.

Notes.

'Cut,' a West Point novel, by G. I. Cervus, author of 'White Feathers,' is in the press of J. B. Lippincott Co.

'Aspirations,' a story by Helen Hays, will be issued this week by Thomas Whittaker.

Harriet Martineau's 'The Peasant and the Prince,' edited with notes for schools, and a new edition of James M. Whiton's 'Six Weeks' Preparation for Reading Cæsar,' are announced for next month by Ginn & Co.

T. Y. Crowell & Co. will publish directly 'The Labor Question in America,' by Prof. Richard T. Ely; and 'A Vital Question; or, What is to be Done?' from the Russian of N. G. Tchernishevsky, by Nathan Haskell Dole.

The title of Miss Macfarlane's forthcoming novel, 'Children of the Earth,' is said to be derived from *Rosencrantz's* reply to *Hamlet's* inquiry of him and *Guildenstern*, "How do ye both?" The scenes are laid on the shores of Nova Scotia and in New York society.

Mr. William Archer, the author of 'English Dramatists of the Present Day,' and one of the most careful and acute of English dramatic critics, is collecting certain of his magazine papers into a volume, 'About the Theatre,' to be published by T. Fisher Unwin.

As a private souvenir of a long-shore cruise from Boston to Mt. Desert in a steam yacht, the 'Log of the *Ariel* in the Gulf of Maine' (Boston: Cupples, Upham & Co.) would be safe from criticism. Much taste has entered into the embellishment of it, and an expenditure of money probably sufficient to have made it at once more valuable and less costly to a circle of readers not specially interested in the small party and their insignificant adventures. If, for example, instead of drawings from photographs, we had had photogravures like the frontispiece showing the

Ariel from the original negatives, the book would have been better worth preserving. The owner is to be thanked, however, for an appendix frankly revealing the qualities and dimensions of his yacht, her accommodations and boilers, so that other like-minded voyagers may profit by his experience.

The maps of the United States at the close of the Revolution, in giving the Western claims which formed the basis of the cessions of the several States, assign to South Carolina a narrow strip west to the Mississippi River, affording a problem to the historical student which he is seldom tempted to solve, in view of the insignificance of the strip in question. Mr. W. R. Garrett, in his 'History of the South Carolina Cession and the Northern Boundary of Tennessee' (Tennessee Historical Society Papers; Nashville: Southern Methodist Publishing House, 32 pp.), has given a lucid and interesting account of the matter—in which, however, we note an apparent discrepancy of dates: "Mar. 8 of the same year" (p. 10) should, we think, be 1787; but the last date mentioned was 1786. On the same page Mr. Garrett corrects an error of Hildreth, who says that the lines described in the South Carolina cession "included nothing," whereas they were "valid, though useless, claims," embracing a strip twelve miles wide. The historical importance of this act is in its being the first cession of southwestern lands, and being probably designed to exert a moral pressure upon the neighbor States. The North Carolina cession followed in 1790, that of Georgia in 1802. The paper upon the northern boundary of Tennessee is longer, but is more a matter of detail and merely local interest.

Apropos of the recent call in these columns for an improved English Grammar, a correspondent writes us from Detroit that Sill's 'Practical Lessons in English' (A. S. Barnes & Co.) fills the bill, and has stood the test of the class-room.

Every one understands that no one who begins drinking desires or expects to become a drunkard, nor indeed at the first believes that he can be harmed by his pleasure. Such is not the opinion of many students, and Dr. A. B. Palmer, in the 'Temperance Teachings of Science' (D. C. Heath & Co., Boston), without passion shows the risks that the moderate as well as the immoderate drinker runs. This is a temperate presentation of a controversy sometimes waged with more zeal than kindly discretion.

In 'A Text-Book of Nursing,' modestly said to be compiled, by Clara S. Weeks (Appleton), there is an amount of good sense and clearly expressed precious information that rarely is found between the covers of one book of its kind. Probably its greatest value will be in the education of mothers and daughters who cannot be trained nurses, and who know that sickness must come into their families; but in the training of professional nurses and as a book of reference it will hold no mean place. "Air cannot be renewed by disinfecting it, any more than it can be disinfected by deodorizing"; "The use of a feather bed is nearly equivalent to putting the patient into an immense poultice"; "Cleanliness takes precedence in a hospital ward of all the other virtues"—are random extracts showing one face of its teaching. Besides being indexed, and having a glossary of unaccustomed words, it is followed by a copious body of questions that emphasize and give point to the teaching.

Shepard & Johnston, Chicago, send us the 'Library Catalogue and Index,' a blank book, of small quarto shape, arranged for 1,500 titles, with provision for a full description in each case, including price and position on the shelves. The index tracks the book by its author, and by its subject or title if desired. The scheme speaks for itself.

According to the latest advices, the International Copyright Bill, which is in charge of Mr. James Bryce, was half through committee in the House of Commons, with every prospect of passing. We regret that we can point to no preparations at Washington to put the United States in a position to enter the International Copyright Union. The existence of this Union, however, cannot fail to induce a sentiment in favor of our joining it sooner or later.

The last book of M. A. Loiseau, 'Histoire de la littérature portugaise depuis ses origines jusqu'à nos jours' (Paris: Thorin; Boston: Schoenhof), is a mere compilation. The scanty information dealt out is not taken from original sources; nor does the writer seem to know of the existence of some of the best books on his subject. Even such a work as Ferdinand Wolf's 'Littérature brésilienne' appears not to have been used by him. Except for one or two very vague phrases upon the press in Portugal, M. Loiseau's information stops before 1850, and all that is said about the nineteenth century might be condensed into a couple of pages. Nor are the more ancient periods treated with any precision or completeness. In the chapters on the 'Amadis de Gaule' the writer shows that he has no sources of information more recent than the unreliable work of Baret, which dates back to 1853. Thirty-four pages of matter bunglingly put together, on the 'Origin and Formation of the Portuguese Language,' are intercalated in the course of the work. In these the author shows that he has not used, at least with any profit, the grammar of Diez, which he complacently quotes as one of his sources.

For the eleventh time MM. Édouard Noel and Edmond Stoullig have issued their theatrical yearbook, 'Les Annales du Théâtre et de la Musique' (Paris: Charpentier; New York: F. W. Christern). It is an invaluable record of the events of the year in Paris. The fault we should find with it is that it is too bulky, and that the same facts might be more briefly recorded to greater advantage. The preface this year is an essay by M. Charles Gounod, called "Considérations sur le Théâtre contemporain," and devoted to a discussion of the present condition of the opera in France. M. Gounod rebukes the star-system, and sneers at the French imitations of Wagner.

Col. Chaillé Long's 'Three Prophets—the Mahdi, Gordon, Arabi' has just been published in Paris in a French translation, and so has Miss O'Meara's 'Un Salon à Paris: Mme. Mohl et ses intimes.'

The volume of collected 'Préfaces et Manifestes littéraires' of Edmond and Jules de Goncourt (Paris: Charpentier) will be accompanied by a bibliography of their writings compiled by M. Maurice Tourneux.

Our mention of the little exercise book, 'The Bridge,' in the Notes of May 13, seems to have been misleading, as it contained an inaccurate statement. It is merely a very small book of difficult exercises, some of them rather puzzling, with not a word of explanation. The first edition, the only one we had seen, was signed Oliver Straightways. A new edition appeared in 1885, increased in size but really much diminished in quantity, signed N. Perini (London: Hachette; Boston: Schoenhof). This contains nothing directly bearing on Pseudo-Synonyms, such as *improuver*, which is not 'to improve'; *lard*, which does not mean 'lard,' and similar words.

Although there are not a few books on bookbinding, æsthetic and practical, all book-lovers will gladly welcome a work just announced in France—'La Reliure Moderne, artistique et fantaisiste,' by M. Octave Uzanne (Paris: Édouard Rouveyre; New York: F. W. Christern). M. Uzanne is a writer with whose style readers of *Le Livre* are familiar. 'La Reliure Moderne' is to be abundantly illustrated with plates, both colored and plain, by the Albert-Dujardin process. There will be a special limited edition on Japanese paper signed by author and publisher, for subscribers only.

In a memoir presented last autumn to the Academy of Inscriptions, a curious confirmation of some Chaldean inscriptions is drawn from the petrology of Brittany. They had been interpreted to mean that the stone for the statues of diorite on which they occur had been brought to Chaldea by water, in ships which collected it at the foot of the cliffs on the sea-side. This seemed very unlikely to some critics, who thereupon threw doubts upon the whole system of interpreting Chaldean inscriptions. But last summer M. Heuzey, with this controversy in his mind, happened to visit the diorite rocks on the Bretagne coast, and he saw at once that the disputed interpretation was probably right. Diorite is exceedingly hard, and it is difficult to get off blocks of any size by the usual methods of quarrying. But what man can hardly do, frost and the waves are continually doing. Great pieces become detached and fall down upon the beach or the talus where boats can easily get them in calm weather.

As supplementary to the list of recent philological works of a compendious character, mentioned in a late number of the *Nation*, attention should now be called to two important undertakings of the Strassburg publisher, Karl J. Trübner: 'Grundriss der romanischen Philologie,' to be edited by Gustav Gröber, the well-known editor of the *Zeitschrift für romanische Philologie*, and, secondly, a 'Grundriss der germanischen Philologie,' under the editorship of the Freiburg professor, Hermann Paul. With Gröber are associated twenty-six co-editors, specialists of first rank, to whom are assigned severally the various departments and phases of the subject. Names like Tobler, Bartsch, Deecke, Kluge, Schuchardt, and Windisch assure the essential soundness of the work. Of the six parts proposed, the first, comprising 280 pages, has just appeared (price, four marks). With Paul are associated in the editorship of the second-mentioned work men of standing like Sievers, Sweet, Kluge, Noreen, Kögel, Wegener, and Behaghel.

Dr. J. J. Egli, of Zürich, author of a meritorious 'Nomina Geographica,' published in 1872, did much by that work to stimulate research into the origin of geographical nomenclature. He is now publishing in parts, through Friedrich Brandstetter, Leipzig, a 'Geschichte der Geographischen Namenkunde,' which is a bibliography and something more.

In his annual report to the Royal Astronomical Society, Mr. Christie, Astronomer Royal at Greenwich, states that, on the recommendation of the Board of Visitors, the Treasury have sanctioned an important addition to the optical means of the Observatory in the shape of a refracting telescope of twenty-eight inches aperture and twenty-eight feet focal length. This new telescope is to be mounted in place of the old equatorial, the glass of which is thirteen inches in diameter, and which has been the largest instrument possessed by the Observatory for more than a quarter century. Of late years the Royal Observatory has taken the lead in spectroscopic observations of the stars, and the new instrument will make a large increase in the number of stars available for this special work, which relates more particularly to their motion in the line of sight. The construction and mounting of the telescope have been intrusted to Mr. Howard Grubb, the well-known optician and mechanician of Dublin. At the time when the telescope is completed, it will probably rank third or fourth in size among the great telescopes of the world.

The summer courses for practical instruction in chemistry at Harvard University will open

July 5 and close August 14, and will be under the direction of Mr. Arthur M. Comey, of the Chemical Laboratory at Cambridge, to whom applications should be addressed. These courses are designed for all classes of students, but more especially for teachers, and are open to both sexes. Instruction will be given in general chemistry, qualitative analysis, quantitative analysis, organic chemistry, and mineralogy.

—The June *Atlantic* contains the first classical paper that we have seen in the magazines in a long time. It is the story of that attractive man who has come to be considered the most modern of the ancients—the younger Pliny; and so strong is the persuasion of his contemporaneity with the moderns in many essentials, that the writer has felt no impropriety in dubbing him "A Roman Gentleman." The events of his life are profoundly interesting, especially if one reckons among them the incidents of those other noble careers which touched him nearly. How fresh, as if it were of yesterday, does the narrative of the great eruption of Vesuvius in which his uncle made so good an end, still stand out; with what naturalness and charm the figure of the young nephew himself steals upon the page, doing what he could, beside his mother, in his boyish way, "to imitate the gods," and continue his studies unmoved by the black convulsion of nature. Great characters and famous deeds were nigh to him always: Verginius, his guardian, who twice refused the Empire; Arria, and the line, faithful to her, whose one sure inheritance was the death by which they gave the world a memory of stoic virtue worthy to close the Annals of Tacitus; Trajan—but we must leave the story to the authoress, who has dexterously set it in the landscape of Lake Como, and has kept mainly to Pliny himself, refined, humane, philanthropic, the lawyer and administrator, the lover of art and books and men, with the finest respect for women, and a conscience as pure as justice. Somehow we cannot think of this Roman as a "gentleman"; he was (let us not deceive ourselves) of another time. One turns to the true modern age, not without misgiving, where he will certainly find it, reflected in Mr. Lathrop's long review of Balzac. It is the old story—and is it only our fancy that Mr. Lathrop rehearses it with reluctant assent?—how Balzac is "a physiologist in a very literal sense," and we do not "reproach a physiologist for not having an ideal," and that any way Balzac is the Paris of his age. It may be so; but when all is said that can be urged for "the science of novel-writing," we think it a part of man's good fortune that there was no Roman Balzac. A Pliny is enough for what was noble, and the brevity of Tacitus ample for what was infamous. Commend us to such portrayers of life!

—*Harper's*, apart from its serials, its comedy from standard literature of the last century, and its little poems, is predominantly industrial; for one may fairly regard the naval article in that light. This is by Rear-Admiral Simpson, and, with the cuts, it gives a view of our navy and an account of the high perfection to which modern invention has brought the science of the warfare of iron against iron. The paper upon the sugar industry is a complete monograph, like the others of the series to which it belongs, and has a wonderful amount of information regarding the crop, manufacture, and mercantile value of sugar. In certain ways, too, it has a relation to current politics, but only by virtue of some of the facts it contains. There is also a readable contribution from a traveller in the region of the Cumberland Gap, the South being now a favorite hunting-ground for the magazines; and, indeed, there is no country that will better bear exploration with respect to the picturesqueness of the land or the oddity of the inhabitants. The gardening department is conducted by Mr. Roe, whose "Home Acre" is as capacious as Noah's Ark, and has a corner in this number for the vineyard and the orchard. The issue, which is the first of a new volume, seems to emphasize the aim of the magazine to be the favorite of "the home circle" wherever found.

—No one can read without a kindly feeling for the author Mr. J. C. Derby's 'Fifty Years among Authors, Books, and Publishers' (G. W. Carleton & Co.). What succeeds a brief and modest autobiographical introduction is a series of sketches of publishers, authors, and public men with whom Mr. Derby has been brought in contact in his long career. These are unpretentious in form, abound in curious anecdotes, and will be found eminently readable. Mr. Derby learned his trade in Auburn, N. Y., under Mr. Henry Ivison, who afterward became the head of the greatest school-book publishing house in the world. In 1852, with a brother and partner in Buffalo, Mr. Derby engaged in the venture of founding a bookstore in San Francisco, in charge of Mr. Hubert Howe Bancroft, a brother-in-law of Mr. George Derby. Everybody knows what has come of this besides establishing a most profitable publishing-house on the Pacific Coast. An early partner of Mr. Ivison, again, in Utica, was S. Wells Williams, the future Chinese scholar, missionary, and diplomat. Mr. George Derby, on removing from Geneva, N. Y., to Buffalo, left in charge of the business a former clerk, William Orton, afterwards President of the Western Union Telegraph Company. With his neighbor, William H. Seward, at Auburn, and the Conklings, not far off, Mr. J. C. Derby became acquainted through propinquity as well as in the way of business. These names we have selected (and many others might be added from the same pages) as reminders of the part which Central New York has played in the production of the great moral, political, industrial, and financial forces of the present century on this continent. Mr. Derby takes no thought of this in furnishing illustrations of it; but nothing else in all his book has impressed us so much.

—For some unexplained reason, the statistics of the Astor Library for the last library year show a large increase in the number of readers over the former year and any preceding year. This increase occurs among both the general readers and the alcove readers, and perhaps indicates that the library is becoming better known. But such a statement at this period of the library's existence seems a strange reason. Certainly, however, the new day has brought new wants, which the reader finds the Astor able to satisfy; and it is strange, not that so large an increase took place last year, but that, with so valuable a collection, the library's means of accommodating the public, in this large city, were not long ago exceeded. The books there, however, do not appeal to the ordinary reader or the usual lounger of the public library, who could easily be induced to occupy all the vacant room, but to the scholar. Yet the library has always had a large constituency towards whom its relations have been rather charitable than literary; and it will continue to have, probably, till the great city free circulating library is built, which will at once benefit the city in general and the Astor Library (by enabling the latter to concentrate its work more) in particular. According to the president's report, the total number of readers last year was 72,584, while in 1884 it was 59,057. In 1881 the number was 44,123. By the same report, with the superintendent's and the treasurer's, it appears that the number of books bought last year was 5,719, and the whole number added 6,852, not including pamphlets. $24,376 were expended for books and binding. The quick fund of the library is $411,550. This has been supplemented for a number of years by an annual gift of $15,000 from Mr. J. J. Astor for the purchase of books; and this, we understand, does not represent the whole of Mr. Astor's late donations, as the expense of the new catalogue, now printing, is also his special gift. The whole invested fund of the library to date, including increase, is $1,412,374.77, and the whole number of volumes is supposed to be 221,490, an increase of 69,000 in the last ten years. In July the library published a list of the more important accessions for the year, a 12mo volume of 141 pages, making the fifth annual list since 1881. It continued, also, a series which had been published at more frequent intervals since the fall of 1878.

—The great event of the present year at the Astor Library has been the printing of the new catalogue, of which the first volume has just been issued. It makes a very large book of 1,118 pages, and is printed (the main entries) in small pica, a luxurious kind of type and very easy to read. The old catalogue, in four vols., 1857 61, was also printed in this type; but the present volume is far superior in its mechanical arrangements to the former, and presents a more elegant page on account of the omission of the frequent dashes which the older work used to represent the same surname. In the new, every new author's surname, though the same as the preceding, is printed in full. Further, instead of giving initials only, as the old catalogue did, and burying them up in the title, great pains have been taken to ascertain the full names of authors, and print them in the vernacular; and, as authors' names are also printed in capitals, we have at once not only a more varied page than the old catalogue gave, but a greater clearness of page, and consequent ease of consulting it. As to other outside differences, italics in references have not been used, as they were not in the old catalogue, although they had been in the Supplement; and perhaps it would have been better for the sake of added clearness if they had been retained. But (another improvement) while the old catalogue used only one kind of type throughout, in the new, besides capitals for authors' names, the contents of books have been printed in bourgeois, and where this occurs we get a still greater variety of page.

—In what pertains to the science of cataloguing, aside from the mechanical appearance of the book, we notice in the new volume, which has been prepared mainly under the charge of Mr. C. A. Nelson, a closer approach to the uniform rules, as now recommended by the American Library Association, than in Dr. Cogswell's original catalogue, although similar rules were then followed by the British Museum and approved by other eminent cataloguers. Thus, in the matter of anonymous entries, the old catalogue put titles under the first leading word, and this method, combined with a desire to arrange anonymous and often other titles under headings where they would, in the opinion of the cataloguer, be most readily found, led to frequent subject-entries, although in an author-catalogue, and although a subject-index was afterward printed separately. These subject-entries occur rarely in the present volume, which has been made (with a few exceptions, rather survivals from the older work) simply an author-catalogue. One large exception occurs, however, in biographical articles and historical works relating to towns, which are here frequently catalogued under their respective subjects, and are printed in bourgeois. A characteristic feature of the old catalogue, that of printing neither a mere finding-list, nor, on the other hand, a catalogue of bibliographical fulness, has been followed in the present work. A mean title has been given, sufficient to identify

the book, though, of course, not to give all the information contained in the title-page; but this development may well be left to a later subject-catalogue. The old catalogue was often rather loose in transcribing titles, and frequently changed the order of words, etc., in titles for the sake of brevity. In a work whose execution covers so long a time as the present there will probably be found the marks of different hands, but the catalogue undoubtedly conforms much more nearly to the present requirements of bibliographical science than the old. This might have been expected. The old one did a good work in its day, and, as it is not superseded, it will continue to do so. It unlocked to the public the stores of the library very soon after they were collected, as the library was chartered in 1849, and opened in 1854. It contained a great deal of information in the way of contents of collections, and frequently printed these contents under their respective authors. These often required many pages, as may be seen under the headings: Shakespeariana, L. A. Muratori, J. P. Migne, etc. It also had other merits. But the new catalogue has gone further in the work of analysis, as may be seen on referring to the transactions of many learned academies; yet not to the fullest extent, on account of the great bulk to which the catalogue had already swollen. Even here a wise economy has been shown; and instead of printing again contents which other printed catalogues have spread out on their pages, reference is made to them, to the catalogue of the Boston Athenæum, Boston Public Library, etc. The catalogue's bulk is owing, too, partly to the including and consequent superseding of the Supplement printed in 1866. It was a wise proceeding, as well as a generous one, to include the Supplement. It makes the contents of the library all the more accessible. The present volume, which will be followed by three others, records no additions to the library of later date than 1880. A great many books have been added to the Astor Library in the meantime, probably more than 30,000. These are recorded in the card catalogue, and are made much more convenient of reference from the fact that the catalogue drawers will be relieved of the 100,000 cards printed here. It is a fine gift that Mr. J. J. Astor makes with this work to the literary resources of New York city, and it will always remain a noble memorial of his generosity towards this library, which for three generations has been a favorite investment for his family.

—In making photography serviceable to the astronomer, a very serious difficulty was early recognized, in that the achromatic object-glass, as corrected for the ordinary visual rays of light, would not bring to the proper focus the chemical, or actinic rays, by which the sensitive plate was to be affected. If specially corrected for these latter rays, the telescope would be useless as an optical instrument. Rutherfurd was the first to demonstrate, some twenty years ago, that an effective and satisfactory compromise of the two desirable ends was feasible; and his researches showed that any achromatic objective, well corrected for the visual rays, might be readily converted into an effective photographic telescope by simply adding to the outside of the objective a third lens ground to the proper concavo-convex figure. Several photographic telescopes of this pattern have been constructed, and they have generally given satisfactory results. We note the announcement, a fortnight ago, that the great refracting telescope of thirty-six inches aperture, now constructing for the Lick Observatory, is to have its value greatly enhanced by the construction, in this manner, of a third lens, or "photographic corrector," as it is called. The necessary disc of glass in the rough is already made, and the Lick trustees have recently purchased it from the makers, the Messrs. Feil & Mautois, of Paris. The Clarks, who are now well advanced with their work of figuring the object-glass itself, will undertake the grinding and polishing of this photographic lens also. The chief importance of so huge a photographic apparatus will appear from the proportionate size of the original negatives of the celestial objects obtained with it, the diameter of Jupiter and Saturn on the photographic plate being about one-eighth of an inch, while that of the moon will be somewhat in excess of six inches. With the exceptional atmospheric conditions of Mount Hamilton, it may be expected that the very perfect negatives obtainable will admit of proportionate enlargement. The English optician Dollond, by the way, is generally accredited with the invention of that combination of lenses which has been of incalculable benefit to astronomy, known as the achromatic objective; but it appears, from recent inquiries of the Royal Astronomical Society, that Dollond's invention was antedated some twenty-five years by Mr. Chester Moor Hall, a bencher of the Inner Temple. None of the object-glasses made by Mr. Hall are now known to exist, but as late as 1790 there was one mentioned in the *Gentleman's Magazine* as being in the possession of the Rev. Mr. Smith, of Rathbone Place. The presentation to the Society, at its April meeting, of an old legal document bearing the signature of Moor Hall, became the occasion for recalling the facts in the case. There are thought to be materials in existence for carrying the investigation further.

RECENT POETRY.

HEINE says that the image of a nation's future is always to be found in the breasts of its authors, so that the critic who dissects a young poet with a knife sharp enough can easily prophesy the future, as soothsayers used to do from the breasts of slain animals. He adds that he would gladly slaughter a few of these victims, for his own share in the work of divination, but fears that he might behold things which he should not dare to utter. The more modern and American critic fears rather that he may see nothing worth the uttering; but while the older poets continue to publish their latest fruits, even Mr. Stedman will admit that there is something to be said. Just now there is also the peculiar interest that the comparative poetic reputations of two English-speaking nations are trembling in the balance. Now that Emerson and Longfellow are gone, Tennyson and Browning have it all their own way as regards contemporary fame; and the most ardent American will not grudge them precedence over Holmes, Whittier, and Lowell. Let the two great Englishmen die to-morrow, and the same precedence would by no means be conceded to Swinburne and Morris, but the star-spangled banner would assert itself; let all these die, and it is "anybody's race." Meanwhile it is impossible to deny that Browning is holding his own better at seventy-four than Tennyson at seventy-six. Part of the poems in 'Tiresias' are of early date, part are languid; and it is to be observed that in the most vigorous production, "Hands All Round," Lord Tennyson unkindly omits the good-natured verse about America which this song included when first published by Tennyson the Commoner, under the signature of "Merlin," in the London *Examiner;* and as this leaves the volume incomplete, we will take leave to insert the missing passage:

"Gigantic daughter of the West,
We drink to thee across the flood:
We know thee and we love thee best,
For art thou not of British blood?
Should war's mad blast again be blown,
Permit not thou the tyrant powers
To fight thy mother all alone,
But let thy broadsides roar with ours.
Hands all round!
God the tyrants' cause confound!
To our dear kinsmen of the West, my friends,
And the great name of England, round and round."

It is a resounding verse; but, after all, when we compare anything in the volume—except its occasional humor—with such superbly vigorous fruits of advancing years as Browning's "Echetlos" and "Muleykah," it must be owned that the less conservative poet bears his old age better.

The lapse of a few months always brings a harvest of home-born poetic volumes, of which some are easily classed as below mediocrity, others as just reaching that point, and others as deserving especial attention. Among those below what may be called the dead-line of criticism may almost always be included those first volumes which are preceded by a portrait and autograph. For some reason or other, the state of mind which thus protrudes its personal semblance on an innocent public is unfavorable to the writing of good verse. Thus, when Col. John A. Joyce offers his 'Peculiar Poems' (Knox & Co.), illuminated in this way, one is not surprised to find in the preface such an announcement as this: "I do not claim for my lines the imperial flights of Homer, Shakspere, or Edgar Allan Poe, but I do claim some of the simplicity, heart, and love found in Tasso, Goldsmith, Longfellow, and the Carey sisters." And the weary critic can usually construct, out of his inner consciousness, the style of poetry that will follow this claim. Another book of the same class, but more easily pardonable, is 'The Poet Scout: A Book of Song and Story, by Capt. Jack Crawford, late chief of scouts, U. S. Army' (Funk & Wagnalls). The portrait reveals the accustomed length of hair that we associate with the stage frontiersman; and the biography gives some really interesting facts, as that Capt. Crawford never went to school, and was taught to read by the Sisters of Charity, while lying wounded in a Philadelphia hospital after the battle of Spottsylvania. The book itself might well be popular, for it is a dime-novel in verse.

Another type with which the critic becomes gradually familiarized is that to which the thin monthly pamphlets called 'The Perpetual Fire' (Davenport) belong. They are apparently published by their author, and the flame they represent is that of a religious enthusiasm, to which all charm of poetic measure is sacrificed as ruthlessly as in the days of Sternhold and Hopkins. The writer wishes to do good; why, then, should he utterly lay aside all those rhetorical attractions by which alone he can win an audience? Even Moody and Sankey sing; but our author gives us such crude and harsh measures that if he inserted "In the Sweet Bye and Bye," it would be hailed with gratitude. Another constantly recurring type is the Indian or Aztec poem. 'The Inca Princess, an Historical Romance' (Philadelphia: Lippincott), by M. B. M. Toland of San Francisco, is founded on the career of De Soto, and is as melodramatic as many very sensational illustrations can make it, although the verse itself is rather tame. 'Tecumseh, a Drama,' by Charles Mair (Toronto: Hunter, Rose & Co.), is a Canadian work, and is sustained with some vigor, though a little heavy and monotonous. It is hampered, too, like all such plays, by the necessity of having humorous passages, which are here couched in a dialect such as is to be heard nowhere on earth; the furthest eastern and the furthest western Americanisms being intermingled without stint.

The collection in authorized form of Mr. Howells's 'Poems' (Boston: Ticknor) is an interesting fact in literary history, for it shows clearly the path by which he came to that realism on which he is now putting a possibly overstrained em-

phasis. He came to it by the old familiar path of conversion, and his zeal is the proverbial zeal of a new convert. In his poems we have his wild-oats period: crude, diluted, and in the last degree sentimental. There is power in them, as the early development of a man of genius always shows gleams of power; but we fancy him now looking from the heights of his present severer faith and entitling this volume, like Miss Blanche Amory's verses, 'Mes Larmes.' Curiously unlike this uncertain and changing wake thus left behind by Howells's literary voyage is the even keel of Whittier, marking in youth as in age one straight heroic line. His 'Saint Gregory's Guest and Recent Poems' (Houghton, Mifflin & Co.) might be a reprint of poems of his earlier years, but for the absence of the slavery question from their pages; they have his old-time purity and directness, and his early limitations on the side of musical structure. It is especially delightful to find him following in that broad path indicated in William Penn's 'No Cross No Crown,' and versifying the hymns of the Oriental Brahmo Somaj "as a fresh revelation of the direct action of the Divine Spirit upon the human heart" (p. 64). Compared with this wide receptiveness, even the genial and devout hymns of Rev. W. H. Furness, in his 'Verses, Translations from the German, and Hymns' (Houghton, Mifflin & Co.), show some of the barriers of the pulpit.

"Firdausi in Exile, and Other Poems,' by Edmund Gosse (Scribner & Welford), produces that general impression of after-dinner confectionery which is so common among the younger London poets. And it is curious that when they essay a bolder strain, they are apt not to ripen, but rather spoil, as in the case of Michael Field, whose exuberant early fruit seems already a little tainted and over-purple. His (or shall we say her?) previous works suggested fear of this, but the three new dramatic poems, included in one volume —'The Father's Tragedy, William Rufus, Loyalty or Love?' (Henry Holt & Co.)—show this writer to be what an English critic, with probably unintentional satire, called "a tragedist"—rather than a tragedian. Nothing above the level of a Bowery theatre ever concentrated so many separate assassinations in a short space as appear at the close of this volume: in one place there are five separate murders or suicides within a page and a half. There is genuine power in these tragedies, but it is the power of the unknown author of 'Titus Andronicus,' not of Shakspere. At intervals there rise above the even surface of English poetry certain poets who attempt a more daring strain—Thomas Lovell Beddoes began this series some forty years ago—but they rarely seem to achieve anything beyond a turgid precocity. Miss A. Mary F. Robinson, who seemed in her 'Dream of Arcadia' to be going in this same direction, with a difference, has changed her course a little, after a visit to Italy, and now appears with a volume of dainty and melodious pessimism, having a heart-break at the foot of every page. It is 'An Italian Garden: A Book of Songs' (Boston: Roberts Bros.). Italy has certainly taught new graces to Miss Robinson; but it is a little tiresome to be called on to weep so constantly with the same poet, especially when that poet is very likely a comfortable Englishwoman with a good digestion and a proper appetite for lawn-tennis and Mudie's Library.

The American volume most in the vein of the mouthing English dramas is 'Sylvain; a Tragedy, and Poems,' by John Philip Varley (Brentano). The author makes one of his characters say of some tenor singer, the subject of conversation, that he "would sing a soft nothing of lunatic words with more mad airs and consummations of frenzy, more heart-beating passions, dilations of the chest, and swellings of the diaphragm, than ever a tom-cat at moonrise with Venus in the ascendant" (p. 18). Such a vigorous characterization shows Mr. Varley at least to sin voluntarily when he does this sort of thing himself; but there is among the smaller poems so much that is fresh and sweet, with just a racy flavor of seventeenth-century imitation, that the reader feels in a most forgiving mood before the end. If mannerism we must have, what an agreeable bit of mannerism is this:

TO ONE BEING OLD.

"Her aged hands are worn with works of love;
Dear aged hands that oft on me are laid;
Her heart's below, but oh, her love's above,
As flowers do sunward turn though in the shade.

"The set of sun is dear that lasts not long,
And she is sweeter far than light that dies;
But if her aged body's weak, she's strong,
Her folly, wisdom in a softer guise.

"The very smile of love is hers, and she
Hath him long known where others knew a shade;
Forget thine eyes, and learn herewith to see
Within this time-worn sheath the snowy blade.

"Upon her lovely cheek there still doth play
A maiden's blush, for her heart grows not old:
Her silver locks go sweetly all astray,
Though silver are her locks, her heart is gold!"
(P. 160.)

While certain English authors show decline, it is pleasant to find a veteran American poet reforming the defects of youth and shedding his mannerisms, even when he does not attain assured greatness. In Mr. William Ellery Channing's small volumes, 'Eliot' and 'John Brown' (Boston: Cupples, Upham & Co.), there is some sustained vigor and an absence of the whimsical. Both are in that somewhat varying blank verse which this poet has often employed, in which many halting or inadequate lines are relieved by continuous passages of much strength and beauty. The two poems are curiously unlike in their themes; Eliot himself being that type so dear to Mr. Channing's kinsmen of an earlier generation, Allston and Dana—the high-minded though erring recluse, who retires from the world and dies in solitude; while the John Brown he paints is the man of to-day, or of the immediate yesterday. There is a strain of Mr. Channing's old power in the conclusion. After painting the types of character with which his hero has been allied in the anti-slavery agitation, he thus draws to a close, his last two lines being as concentrated as Landor's:

"With this host he passed—
All that was acting on life's stage, he passed,
On crowding street, on miscellaneous wain
Towering with luxuries; the Mill whose bleach
Was spun from bloody thread; the Court, the Church,
Where never yet that name of Slave was breathed;
He knew them well; 't was the loud treacherous world
He oft had dreamed of, masking Human Right,
Till one man touch the cords and launch the bark,
With loud acclaim, United Liberty!

"He came; he touched the cords; 'tis done!
The chain is snapt; the vessel leaves the shore."

The name of Mr. Channing naturally suggests that of Poe, his most virulent assailant. A late critic of Poe has pointed out that he has succeeded to the place held first by Byron and then by Swinburne as the patron saint of wilful boys suspected of genius. Mr. Andrew F. Underhill must at some time have belonged to this class, or he would not have begun his little volume of 'Etchings in Verse' (Brentano) by anything so flagrantly Poesque as the following:

"DESOLATION.

"In the kingdom of the gloaming,
Where the days are gray and dim—
Dim, and gray, and pensive;
Where the dead Past's thoughts go roaming
Like the fallen seraphim—
Once I wandered 'neath the lustre
Of a spectral, leaden moon:
'Neath a moon of lurid lustre,
Where the sad lights fade and swoon."
(P. 9.)

This fails to accomplish even a literary desolation. The truth is, that the uncanny and exceedingly unpleasant land where Poe hunted his ghouls and spectres is now closed for ever: it has vanished as completely as the "Great American Desert" of old Western maps, and it is happily useless to try to recover it. Later in the book, after a less successful "Imitation of Byron" (p. 85), Mr. Underhill becomes cheerful and humorous—even this being a relief.

We have often pointed out that, in default of great originality or poetic power, a volume of verse may have a certain value for its local coloring, because it preserves, even imperfectly, the traits or traditions of some particular region; since one poet will hereafter build on another, and every nation needs to be saturated through all its soil with picturesque associations. Thus the 'Songs of Sleepy Hollow,' by Stephen Henry Thayer (Putnams), celebrate what may be called Washington Irving's country; 'Needles of Pine,' a collection of "lines without rhyme," by Charles Wellington Stone (Boston: Cupples, Upham & Co.), describes the aromatic pine-woods of New England. 'A Bundle of Sonnets and Other Poems,' by Henry Hartshorne (Philadelphia: Porter & Coates), includes Haverford College memorial verses, and has a flavor of the beautiful rural regions of Pennsylvania. 'The Thankless Muse,' by Prof. Henry A. Beers (Houghton, Mifflin & Co.), contains a pretty sketch of a New England garden, under the title of "Between the Flowers," and offers also some Yale College verses, not very inspired or inspiring. Mr. Henry Frank, in 'The Skeleton and the Rose, and Gems by the Wayside' (Brentano), has some verses celebrating the charms of Santa Barbara, Cal., and a really thoughtful poem on the old bell of the San Miguel Mission at Santa Fé; while Abraham Perry Miller, in his 'Consolation, and Other Poems' (Brentano), gives his readers the consolation of a commemorative poem on the discovery of St. Anthony's Falls in Minnesota. All these are successful in affording the flavor of some particular locality; but when, in 'America, and Other Poems' (Putnams), Mr. Henry Hamilton tries to do the same thing for a whole nation, he attempts more than he can grasp; and though he begins with a good generous purpose, among the emigrants at Castle Garden, he cannot hold a strain of sufficient compass. The rest of his poems are serious and earnest, but belong too continuously to the class of hymns.

Of American volumes by new poets, not relying mainly on local coloring for their value, we may especially mention three, all suggestive of hope, though not as yet giving absolute performance. The slightest of these three is a thin volume entitled 'In Fruitful Lands' (Boston: Cupples, Upham & Co.), by Minna Caroline Smith, apparently a student in the Harvard "Annex," and who inscribes her work in these modest lines to her would-be Alma Mater:

"TO HARVARD.

"The gracious Muse that crowns each minstrel soul
With hope and faith, bright laurels of her own
That time fades not, has a most joyous tone,
Singing thy future as the season's roll.

"I catch faint music from the coming days,
Nor hear the full, fine rhythm of the song,
But, echoing in the chorus sweet and strong,
Thy daughters join thy sons in love and praise."

Miss Smith shows in several instances—as in her three couplets called "June"—the power, rather unusual with beginners, of concentrating a distinct and vivid thought in a few clear-cut lines. A similar power, displayed in a difficult form, belongs to Miss Louise Brooks, whose 'A Year's Sonnets' (Boston: Cupples, Upham & Co.) is an exquisite piece of bookmaking and a charming series of studies from nature. There is no trace of immaturity except an occasional want of perfect keeping in some symbol, as, in the "stained with mire," in this pretty sonnet:

"APRIL.

"Hark! the frogs' birdlike piping has begun!
To lace-work turns the ice by garden wall,
And the big snowflakes melt before they fall,
And willows with their yellow mock the Sun.
April comes dancing, clad in palest green;
Behind her, a black cloud with fiery rift.
One hand she raises, her blown hair to lift.
And free her heaven-blue eyes that must be seen.
One dainty foot, all bare and stained with mire,
Peeps from her hem heavy with buds unblown,
Half child, half woman: rosy now with fire,
Shrinking again in shade; the world unknown,

To-day all smiles, to-morrow all despair,
Wayward and sweet, uncertain but most fair."

Maturer than either of these, although still a first volume, is the pretty little book called modestly 'Summer Haven Songs,' by James Herbert Morse (Putnams). Those who have heretofore known Mr. Morse only as a scholar or a prose critic, will be delighted at the self-control that has kept back his poetic work until it has taken a form so pleasing and thoughtful. The book is the reverse of sensational: those who look in it for turgid, meretricious verses of the "I am dying, Egypt, dying" type, will be wofully disappointed; but it is a volume for summer havens, as the name indicates—for those who will take it into the country and read it over and over, letting its quiet thoughtfulness sink into their minds, until it becomes a part of their actual summer life. How exquisitely touched, for instance, is this little picture:

"A MEMORY PICTURE.

"There is a scene deep-graven on my mind,
Once tinted with rare colors now half-gone:
On a fair bay, a boat; a merry wind,
Invisible, that thrust it gayly on.

"Along the crimson cushions at the stern
Are boys and merry girls with tell-tale eyes,
With speaking, rosy cheeks that seem to burn,
And lips half-open, framing sweet replies.

"Upon the bows two silent figures stand,
One with a kerchief waving a good-bye;
For this she could not spare her little hand,
Were not that other form so dearly nigh.

"How dull the painter that expressed so much,
Yet lost the thrilling sense of that sweet touch!"
(P. 91.)

Three new volumes have been lately added to the great Goethean library. Sir Theodore Martin gives us the Second Part of 'Faust' (Edinburgh: Blackwood); and neat and careful as his version is, it falls as visibly short of Bayard Taylor's as to give a perpetual feeling of disappointment. It is a curious fact that while there has been a rapid shrinkage, since Taylor's death, in all other aspects of his fame, the admirable merit of his 'Faust' becomes only more and more obvious; and it is clear that his permanent reputation is to be that of a translator and commentator in connection with the one monumental German book. In respect to commentary Martin attempts no rivalry; he indeed gives a few notes toward the close, but they are largely drawn from Taylor. The single advantage of his book will be in its small size and compact shape, making it the most convenient and accessible reproduction in English of the Second Part. The same advantage is not possessed by Mr. Frank Claudy's version of the First Part (Washington: Morrison), inasmuch as this portion of the book is now familiar in English through many different translations, and the external form of this one is rather awkward. It has, however, a peculiar interest, as being the work of a native German, and this after fifteen years of labor. We cannot agree with the glowing circular of the publishers, announcing it as "a splendid translation": but while it is far inferior both in ease and literalness to that of Charles T. Brooks, it has merits of its own. It would be curious to point out, had we the space to give to it, some passages in which the translator gains by his native intimacy with the German, and others where he loses again by his want of the same kind of knowledge of the English. Taking one of these last at random, we find that where Margaret apologizes to Faust for the hardness of her fingers, Mr. Claudy thus assigns the reason:

"What work have I not done! You'd never guess it!
For mother is much too exact." (P. 118.)

The German word here rendered "exact" is *genau*, which indeed means "precise" or "accurate," but quite as often "narrow," "parsimonious," or, in the rustic phrase, "near." Either of these last would have been a far more felicitous rendering; and on referring to Bayard Taylor, we find that he has "close," which expresses substantially the sense we urge. It is possible that Taylor's word and his own seemed substantially equivalent to Mr. Claudy; or, that the words "exact" and "exacting" may have confused themselves a little in his mind. Nevertheless, we accept his version as interesting and illustrative. The third book in this department contains 'The Poems of Goethe' (Holt) rendered by Commander Gibson. It is a thick volume of the smaller poems, and one cannot help respecting the zeal and patience implied in a work so extended and so careful. Commander Gibson had, it seems, the aid of Bayard Taylor in revising some of these; but it must be owned, after all, that the renderings are more remarkable for quantity than quality; and there is a frequent tendency to the prosaic or even the grotesque. To transmute the yearning "Dahin! dahin!" of Mignon's immortal song into "O thither! so" (p. 12) is bad enough; but it is difficult to treat the matter seriously when in another of her songs he gives us—the italics being our own—

"In severance and constraint,
My loved ones mourning,
Ah! I am giddy, faint,
My bowels burning:
Save with such grief acquaint,
None know my yearning."
(P. 347.)

Yet undoubtedly the book is to be welcomed, on the whole, as a most deserving effort. It will be remembered that it is not its author's first attempt in literature; and his previous volume of poems, although it contained no translations, yet took its motto from Goethe.

Of recent miscellaneous collections, 'Through the Year with the Poets,' edited by Oscar Fay Adams (D. Lothrop & Co.), is incontestably the best, and 'The Humbler Poets,' by Slason Thompson (Chicago: Jansen, McClurg & Co.), as surely the poorest. The latter is a most presentable volume on the outside and a dreary waste within. The author says in his preface that he began his collection in his first boyish scrapbook, and the difficulty is to believe that he did not compile it all at that same period of life. The incidental merit of the book comes from the literary ignorance of the editor, for he occasionally stumbles, in spite of himself, on a good poem from Stedman's published volumes (p. 123) or from Helen Jackson's (p. 415); and gives it as anonymous. In great contrast stands Mr. Adams's series, whose editor is equipped with thorough knowledge, and spares no pains to give us the fullest details of information, such as the precise place and day of each author's birth and the successive names of every married lady. Each volume of this series represents the aspects of nature for a separate month, beginning with December and already including May; and although he, too, must sometimes draw from "the humbler poets," they exhibit in his hands some merit besides humility. By careful arrangement he has escaped something of the monotony that might be expected under his plan; and he has skilfully bridged over those differences of aspect which make a sort of poetic parallax, so to speak, between observations taken in England and America. These little volumes are neat, attractive, and exceedingly cheap; they are sold singly. A curious little book, with a quaint mixture of poetry and prose—genius, ecclesiasticism, and commonplace—is 'Time Flies,' by Christina G. Rossetti (Boston: Roberts Bros.). It has a thought or selection for every day in the year, but few of these are so exquisite as this:

"Innocent eyes not ours
Are made to look on flowers,
Eyes of small birds and insects small;
Morn after summer morn
The sweet rose on her thorn
Opens her bosom to them all.
The least and last of things
That soar on quivering wings,
Or crawl among the grass-blades out of sight,
Have just as clear a right
To their appointed portion of delight
As Queens or Kings." (P. 158.)

Another collection which has at least a certain historical value is Frank Moore's 'Songs of the Southern People' (Appletons). It reads curiously, in the light of past events, and throws much illumination upon that mood of enormous blustre in which secession began. It is a great historical lesson, after the manly and candid addresses lately given at the North by former Confederate officers, to revert to the time when the Southern heart fired itself with strains like this:

"I'll sing you a song of the South's sunny clime,
Chivalrous C. S. A.!
Which went to housekeeping once on a time;
Bully for C. S. A.!
Like heroes and princes they lived for a while,
Chivalrous C. S. A.!
And routed the Hessians in most gallant style:
Bully for C. S. A.!

CHORUS. Chivalrous, chivalrous people are they!
Chivalrous, chivalrous people are they!
In C. S. A.! In C. S. A.!
Aye, in chivalrous C. S. A.!" (P. 96.)

ACTORS AND ACTRESSES.

Garrick and his Contemporaries. [Actors and Actresses of Great Britain and the United States from the Days of David Garrick to the Present Time.] Edited by Brander Matthews and Laurence Hutton. Cassell & Co.

THE plan followed in this volume is that of giving in the case of each actor or actress a brief biography, reinforced by extracts from writers who have spoken of them. This produces a somewhat disjointed effect, but in other respects is interesting, as giving the reader a good deal of contemporary anecdote and criticism. It must be confessed that by far the best part of English stage literature is its anecdote. Most criticism, on the other hand, loses its virtue with age. There is something almost pathetic in the difficulty which the best writers have found in preserving even for a couple of generations the impression made by the greatest actors. Garrick is a great name to us, and we readily perceive that he must have been one of the great actors of the world; but when we are asked to listen to detailed accounts of his acting, or the differences between him and his predecessors, we soon lose ourselves in a maze of conjecture. He introduced or revived the "natural" style; but was the "natural" in Garrick's day what we should now call the natural? Read the contemporary criticisms of an actor of our day, of Booth, of Salvini, of Irving, and then ask what will our descendants make of this a hundred years hence, when they can no longer hear the voice, nor see the gestures, nor measure the effect upon the audience. It is the only art which leaves no memorials behind it. Literature has no proper means of preserving them. It is in a much worse position than that occupied by the art of poetry before the invention of letters, for memory then did the work which printing does now; but the difficulty is almost aggravated by the constant and ineffectual effort of literature to overcome it.

"Michael Angelo," as the editors say (quoting Mr. Lawrence Barrett), "to gratify the whim of a capricious patron, carved a figure of snow, expending on this as much thought, perhaps, as upon his immortal Moses or the imperishable dome of St. Peter's. The sculptor and the architect, the painter and the poet, live in their works, which endure after them; the actor's work dies when he dies. He carves his image in snow."

Perhaps the best attempt ever made to preserve by literary means the effect of an actor's method is the description of Garrick's *Hamlet* by Lichtenberg, which has only been translated into English within a comparatively recent period. It is appended to the account of Garrick in the present volume:

"*Hamlet* appears in black attire, the only one, alas, which is still worn in the whole court, for his poor father, who has been scarcely dead a couple of months. *Horatio* and *Marcellus* accompany him in uniform. They await the *Ghost*. *Hamlet* has folded his arms and pulled his hat over his eyes. It is a cold night and just twelve

o'clock. The theatre is darkened, and the whole audience is still, and the faces as motionless as if they had been painted on the walls of a house. At the extreme end of the theatre one might have heard a pin drop. Suddenly, as *Hamlet* goes rather far up the stage somewhat to the left, with his back to the audience, *Horatio* starts. 'Look, my Lord, it comes,' says he, pointing to the right, where the *Ghost* is standing immovable, ere one is even aware of it. At these words Garrick turns suddenly round, and at the same moment staggers back two or three paces with trembling knees. His hat falls to the ground, both arms—especially the left—are nearly extended to the full, the hand as high as the head, the right arm more bent and the hand lower, the fingers spread out and the mouth open. There he remains standing with legs far apart, but still in a graceful attitude, as if electrified, supported by his friends. His features express such horror that I felt a repeated shudder pass over me before he began to speak. The almost appalling silence of the assembly, which preceded this scene and made one feel scarcely safe in one's seat, probably contributed not a little to the effect. At last he speaks, not with the beginning, but with the end of a breath, and says in a trembling voice, 'Angels and ministers of grace, defend us' —words which complete whatever may yet be wanting in this scene to make it one of the sublimest and most terrifying of which, perhaps, the stage is capable."

Nothing is here neglected, not even the life-like touch of real as distinguished from mock horror —that when the actor begins to speak, his violent emotion has taken away his breath. Lichtenberg saw and recorded everything, and his Garrick stands out before us a complete picture. We feel faintly in reading the same shudder that he says passed through him as one of this long dead audience of play-goers a hundred years ago. But the tone of voice, the pronunciation, the rhythm, the accent, almost everything that made Garrick himself and no one else, are vanished. It is a description of a work of art, instead of a work of art itself.

But nature is full of compensations, and if actors produce nothing permanent, the temporary impression they produce is something which painters, sculptors, and even poets may well envy; and, through their connection with literature, they live on in a remarkable way, long after what we may call their artistic identity is effaced. In the great periods of the drama there has always been a close connection between the stage and literature, and one of the most alarming signs of the present condition of the art is the divorce which has been effected between the two. The names of Macklin, Quin, Garrick, Sheridan, and Tate Wilkinson, which we find in the present volume, are rich with literary associations, and will live, by the humble aid of anecdote, as long as English letters themselves endure. We think, therefore, that the editors have done very wisely in determining to mingle biography and criticism with anecdote. There are to be five volumes of the series, with biographical and critical sketches of about seventy-five of the leading actors and actresses of the two countries from 1750 to 1886. We have already given the names of some of those considered in the first volume. Some of the writers are Austin Dobson (Katherine Clive, David Garrick, and Margaret Woffington), Brander Matthews (Samuel Foote and Thomas Sheridan), Percy Fitzgerald (Frances Abington and George Ann Bellamy). The second volume will treat of the Kemble period; the third and fourth, of the actors of the middle of this century (Edmund Kean, Junius Brutus Booth, William Charles Macready, and Edwin Forrest); while in the fifth volume the chief performers now before the public will be discussed.

We have little or no room left for further quotation, but cannot deny ourselves the pleasure of extracting another excellent piece of criticism (by means of which the manner of an actor has been well preserved in literature)—this time, however, not for purposes of admiration:

> "Mossop, attached to military plan,
> Still kept his eye fixed on his right-hand man;
> Whilst the mouth measures words with seeming skill,
> The right hand labors and the left lies still.
> For he resolv'd on Scripture grounds to go,
> What the right doth the left hand shall not know.
> With studied impropriety of speech,
> He soars beyond the hackney critics' reach;
> To epithets allots emphatic state,
> Whilst principals ungrac'd, like lacquies, wait;
> In ways first trodden by himself excels,
> And stands alone in indeclinables:
> Conjunction, preposition, adverb join
> To stamp new vigor in the nervous line;
> In monosyllables his thunders roll,
> HE, SHE, IT, and WE, YE, THEY fright the soul."

Mossop's name is now pretty well forgotten, though he was one of the leading actors of his day; but his method enjoys immortal life.

FURNESS'S VARIORUM OTHELLO.

A New Variorum Edition of Shakespeare. Edited by Horace Howard Furness. Vol. vi, Othello. Philadelphia: J. B. Lippincott Co.

MR. FURNESS has adopted for this play the text of the first Folio, which he reprints. The problem of the text of "Othello" involves some peculiar circumstances—as what Shaksperian topic does not?—but it is comparatively simple. The earliest Quarto was published thirteen years after the press had ceased to give first editions of Shakspere's plays, in 1622, just before the appearance of the Folio; and it differs from the latter by the omission of lines and by the retention of oaths. The second Quarto was issued in 1630, and though it restored many lost lines and showed other revision, it is clear that it was not under obligation to the Folio, but was a corrected edition of the first Quarto. The play, as we have it in print, thus represents two sources, two manuscripts: but whether either of these was from Shakspere's hand is doubtful, and it is generally agreed only that both reproduce acting copies of different dates and ownership. The readings of the Folio are as a rule so far preferable to the Quartos, especially the first, that there is no difference of opinion among scholars as to the priority of its claim to accuracy. The text given is, of course, from Mr. Furness's copy. Below it are the variations of the other printed sources and the emendations of the Shakspere editors, and below these such notes and quotations, from editors, lexicographers, critics, actors, and the like, as elucidate the meaning in detail, or try to do so. This work of selection and citation from the mass of Shakspere literature in order to produce a digest of scholarship and opinion regarding each play, which is the substance of a variorum editor's task, has been done with that thoroughness, tolerance, and good-nature, to praise which would now be an impertinence. In the appendix are the usual discussions and summaries in respect to the dates, sources, duration of plot, and impersonations by noted actors, and English, German, and French critical opinions, together with a few pages on the special topic of *Othello's* color.

The construction of a text, and the interpretation of the half-dozen *cruces* of verbal criticism which the play affords to the curious, are matters so narrowly limited in interest, and already so thoroughly threshed, that we shall not delay upon them. The play is, besides, tolerably plain, in the way of verb, and noun, and grammar. One or two of Mr. Furness's own suggestions, of which he is very sparing, are to be noted, such as his idea that *Roderigo* was disguised in Cyprus — "defeate thy fauour with a usurp'd Beard" (I. iii, 371). This is reasonable, and though not absolutely necessary to the working of the plot, in its minor intrigue against *Cassio*, falls in with the circumstances. It may not be superfluous to observe, too, that on the oft-quoted, much-disputed passage—

> "It is the green-ey'd monster, which doth mocke
> The meate it feeds on"—

Mr. Furness sustains Hunter and Staunton in interpreting "meate" as the jealous man; and that on another famous passage—

> "Of one, whose hand
> (Like the base Iudean) threw a Pearle away
> Richer than all his Tribe"—

he sustains what has been regarded as the fantastical interpretation of Halliwell, who rejects the common emendation "Indian," and refers "Iudean" to Judas Iscariot!

The perusal of the notes reminds one again of the traditional weaknesses of commentators, and often stirs up wrath or humor according as the reader is amused with a fool or aches to bray him in a mortar. The experienced editor's genial attitude toward all comers is to be reckoned the last result of wisdom in this matter, and so, too, is the placidity with which he winds up discussions with the remark that it is not to be expected that Shakspere editors should agree where there is such opportunity for difference. What strikes one most is, of course, the persistency with which the obvious sense of a passage is sometimes missed by narrowness or obliquity of vision. It would seem that when some small-brained creature starts a doubt, no editor has the courage to leave the words to themselves again, but must join with the pack in worrying all meaning out of them. One such instance, in our judgment, is the speech of *Othello* (I. ii, 22-27):

> "'Tis yet to know,
> Which when I know that boasting is an Honour
> I shall promulgate. I fetch my life and being
> From men of Royall Siege, and my demerites
> May speak (unbonnetted) to as proud a Fortune
> As this that I haue reach'd."

Difficulty is found in the word "unbonnetted," on the ground that to be unbonneted is to confess inferiority of station (the opposite of *Othello's* intention); and the passage has been emended and explained in several ways. Now, if the present writer may hazard his untaught understanding of English that never gave a doubtful sense to him, the natural meaning is that *Othello's* services need no addition of privilege, but by their own worth put him, the mere man, on a level with his "proud fortune." Take "unbonnetted" with what precedes, and does not the course of *Othello's* thought run somewhat as follows? "It is not known that I am of royal blood. I do not mean to seek honor by boasting of that ancestry, nor need I; for, though I am a prince, I have done such services that they alone, without any outward badge of rank (such as this royal birth would be if I promulgated it), lift me to an equality with my 'proud fortune.'" This interpretation, unless it be contained implicitly in Fuseli's note, is not given; but it is by following *Othello's* brains as well as his words that one understands him. With this audacious example, we leave the student to build up his own text and get his own meaning out of the ample materials set before him; he cannot err more ridiculously than some have done among the commentators, and he will find the best of them wiser in their good sense than in the ingenuities of their learning. With the text we dismiss, too, the date of the play, set in 1604 on the authority of Malone's memorandum, which is accepted as representing the lost original on which the Cunningham forgery in the Master of Revels' Account was based. In this Mr. Furness follows Halliwell-Phillipps.

The general features of the commentary on this play are not without some peculiar interest. It has sometimes occurred to us that when our century comes to be analyzed in future ages, a favorite illustration of its materializing spirit will be found in its Shaksperian criticism. The dramatist's imagination has imposed itself upon our time for reality; and this, too, so far as the body of Shaksperian literature is concerned, not so much with respect to its poetic substance as to its theatrical accidents. In "Othello" we have a

capital example of the sort of realism foisted on Shakspere because the plastic nature and symbolic significance of fact under a poet's handling are not apprehended. We do not refer merely to the attempt to date the action and make it tally with Venetian history, or to the scholarly effort of that admirable lover of Venice, Rawdon Brown, in which he tried to identify the Moor with a real lieutenant of the republic; so long as these are subordinate to the study of the sources of the play and remain in the region of historical fact, they have no offence in them. It is only when the domain of imagination, the play itself, is entered that the absurdity of confusing poetic truth (truth of representation) with historic truth (actuality of occurrence) becomes apparent. Out of the divergence of these two modes of truth arises the theory of Double Time, of which "Othello" is regarded as affording the best instance. According to this hypothesis, Shakspere reckoned by two kinds of time, the Dramatic and the Historical; the first is illusory, and measures the duration of the action on the stage; the second is real, and measures the duration of the action in its necessary course under the limitations and delays essential to its probability. The first appeals to the imagination, the second to the reason. Thus, as Rymer sneeringly pointed out, *Desdemona* is murdered within thirty-six hours after her arrival in Cyprus; and this is without doubt the dramatic time, the illusion for the imagination; yet the circumstances of the plot require a longer period and imply it continually, and in this latter Historical Time the reason finds the justification of the facts, the probability of the action. The discord of the two "times" is only discovered by reflection; it is not felt in the representation, and herein lies the poet's art; but an intrusive realism, dissolving the poet's synthesis, misses the imaginative unity of "Othello," and muddles itself in an attempt to understand how *Iago* could have asked *Emilia* "a hundred times" to steal the fatal handkerchief, how *Roderigo* could have spent all his wealth in a day, and *Cassio* have become so intimate with *Bianca*, etc., etc., until the poet's inconsistencies have been piled up, mole-hill on mole-hill, on the top of which the commentator flaps his wings.

Here, too, is the place to ask the horrid question—Was *Othello* black? Nay, more—Was he a *black negro?* There has been much ado over this, and the ethnographic and æsthetic whitewash has certainly toned down the jetty African of stage tradition to a very presentable light-brown gentleman. Time was when our stage *Othello* pulled off white gloves to emphasize his hue, and once this fine trick disillusionized a realistic spectator, who chanced to know that the inside of a black man's hands is whitish, like the soles of his feet and the skin of his new-born heir; but now dramatic proprieties have changed. *Othello* was not a negro, though his lips may have rolled just enough to suggest *Roderigo's* nickname; he was a Moor. Black, however, his visage was in Shakspere's mind, as Mr. Furness concludes, and therewith cites the inexorable passage—

> "My name, that was as fresh
> As Dian's visage, is now begrim'd and blacke
> As mine owne face."

"Grime" is not a synonym of light-brown. If any one requires the production of a live black Moor of "royall siege" before he believes this, let him search in lion-haunted Arden, where he will find many strange things.

But the most offensive example of what we have called the intrusion of realism in the interpretation of Shakspere is afforded by Mr. Furness himself in the professional opinions he prints, from eminent doctors of his acquaintance, in regard to the physical conditions of *Desdemona's* death. Was she smothered or (as the stage tradition says) stabbed? And, in either case, could both her smock and face have been pale? could she have revived and spoken, and then died without further violence? The doctors practically agree that, although a fatal stab would not necessarily cause effusion of blood in any quantity, she was smothered. Dr. Agnew decides that she died from "secondary effects of injury to the larynx"; Dr. Brinton says "cardiac exhaustion"; Dr. Hammond refers to the smothering case in his novel 'Mr. Oldmixon'; and Dr. Wm. Hunt renders his verdict as death by "fracture of the cricoid cartilage of the larynx"—a phrase which he expands into a description of how *Othello* "grasps her neck with his powerful hands, his thumbs being over the larynx, and with two strong squeezes and a 'So, so,' garrotes her." We submit that this is the most brutal intrusion of the realistic spirit into poetic art yet known; to read this note is to give to an ideal tragic scene a bias of physical horror, from which the imagination recovers with difficulty, and to destroy at a crisis of its culmination the sense of that moral control of events in which tragedy finds its only æsthetic justification. It is to reduce "Othello" to the level of "Titus Andronicus." With this prime example of the utility of science in the criticism of works of the imagination, one may well leave this branch of the subject.

The play has not been especially fruitful in the department of proper literary criticism. It offers few problems. Discussion has centred most distinctly about *Iago*, and the exploded opinion that his malice was motiveless has given rise to a considerable part of the character-criticism of the drama. To us his repulsiveness springs rather from his indifference, his cold-bloodedness, than from the mere sight of his villany in action. The power of the play lies less in the horror than in the "pity of it," the mere misery of *Desdemona*, the ignoble duping of *Othello*. It is naturally a favorite with those who interpret Shakspere almost exclusively from the ethical standpoint, and the commandments they have found written in it are more than ten; from the doctrine concerning the family tie which is extracted from the fact that the trouble comes originally from *Desdemona's* deception of her father, down to the doctrine of courtesy which is found in the notion that, if *Othello* had had the good manners to pick up the handkerchief when *Desdemona* dropped it, all the results might have been avoided, a marvellous array of "morality" is exhibited. But this intrusion of the logic of morals is hardly less to be reproved than that of the logic of facts. It ought to be always remembered that the primary endowment of Shakspere was the artistic temperament: he was a poet first, and everything else afterwards. To say this is the same thing with saying—though we must state it baldly—that the ethical principle in him was a necessity of the imagination, not of the understanding; was vision rather than inference; was a part and not the whole. One can no more imagine life truly without ethics than he can imagine mass without cohesion; a creative genius, consequently, a man of imagination all compact, does not necessarily start from ethics in moulding his works, but it is more likely that the moral principle which his works must contain as a part of their reality will be secondary and derivative. Shakspere is ethical because he imagined life truly; he did not imagine life truly because he had thought out, in Lord Bacon's manner, the general principles of morals. Of course what is here said applies only to the ethical motives and laws which are thought to pervade whole plays, not to the apothegms or detached reflections which occur in them. The present writer would contend that an ethical view was never a formative principle in "Othello" or any other of the plays, and that the attempt to ascribe such conscious ends to Shakspere's art is made in ignorance of the fundamental principles of æsthetic criticism. "Othello" has, it is true, the Æschylean swing of fate; but it derives it from life, not from thought. Hence Mr. Snyder's laborious discussions of this play, and all like them, must be regarded as moral disquisitions on topics suggested or illustrated by Shakspere, but by no means as Shakspere's view of the world and fate. In "Othello" this sort of criticism seems especially forced. Is it because the intelligence (*Iago*) is enlisted in the service of evil?

But this notice must be ended. The next variorum issue, "if there ever be one" (which heaven grant!), will probably be "The Merchant of Venice."

Memoirs of the Life of Colonel Hutchinson, Governor of Nottingham, by his widow Lucy; edited from the original manuscript by the Rev. Julius Hutchinson. To which are added the letters of Colonel Hutchinson and other papers. Revised, with additional notes, by C. H. Firth, M.A. With ten etched portraits of eminent personages. 2 vols. Scribner & Welford. 1885.

THE memoirs of Col. Hutchinson rank among the best-known and most instructive of the class of original historical documents to which they belong—writings private in their nature, throwing a side-light upon events, rather than presenting them in a direct and authoritative form, as is the case with public documents. This book does not give us an account of the Civil War; Marston Moor and Naseby, the Self-denying Ordinance and the New Model, Pride's Purge and the Expulsion of the Rump, are barely alluded to; but we have a complete narrative of the military operations, and the civil dissensions as well, of one corner of England. This is a view that the great historians omit. In their works we learn the conduct of the large affairs, but we can never get from them the perfect picture of the times that may be obtained from a book like this.

As time goes on and Col. Hutchinson becomes a more prominent and influential man, we find more frequent mention of the great events of his day. The Second Civil War, the Scotch War, and especially the events after the death of Oliver Cromwell, receive relatively more attention than those of the first Civil War, when the hero of the book was simply a country gentleman of Nottinghamshire, holding a post important, it is true, but quite secondary and relatively inconspicuous. Only relatively, however. The holding of Nottingham steadily for the Parliament, through all the dark days of 1643, was a service of the highest value. The whole north was in the hands of the royalists, whose stronghold at Newark gave them safe and continuous communication with the King at Oxford and in the west. But Nottingham, only a few miles from Newark, served in its turn as an advanced post on the Parliamentarian side—standing towards Cromwell's Eastern Counties' Association somewhat as Newark did to the royalists of the north under the Earl of Newcastle.

The side-lights of a book like this are, as we have said, of the highest value; and we are assisted by it to an understanding of that breach between Parliament and the army which is one of the most critical facts of the Civil War. We are familiar, in the history of our own civil war, with this source of dissension; but the relations between the two authorities were quite the opposite in the two cases. If our Congress interfered unduly in military operations, it was because it thought the army leaders deficient in zeal and ear-

nestness; the efforts of civilians were in the direction of inspiring greater intensity of action, and infusing a keener sympathy with the anti-slavery policy. In the English Civil War, on the other hand, it was the army that was in earnest and the Parliament that was ready to compromise. So that we find, besides the natural and unavoidable jealousy of the two powers, an antagonism in temper and policy which complicates the questions at issue, and makes it very difficult to determine in all cases where the right lay. The intrigues of the politicians against the single-hearted soldier are narrated at a length which, if somewhat wearisome by reason of its petty details, is nevertheless very instructive. The highest interest in the book is found in the later years, when the hostility was not the mere jealousy of power, but was upon fundamental questions of policy.

In these great questions of policy Col. Hutchinson occupied an attitude which classes him with Sir Harry Vane the younger—who, however, is hardly mentioned in the book. He was one of the judges of the King, and appears to have joined heartily in the policy of putting the King to death; but he was wholly opposed to the "usurpation" of Cromwell, and retired into private life, from which, however, he emerged after the resignation of Richard Cromwell, and had then some hope that the restoration of Charles II. would give England a good and free government. It seems clear that he changed his mind as to the execution of the King, and regarded it as a mistake—having led the way, not to a free government, but to a new despotism as unbearable as the old. At the same time, he never changed his opinions as to the questions at issue, and did not receive the new King with servile submission, but as, under the circumstances, the best hope of free institutions.

This is the conclusion that we draw, from the actions and language of Col. Hutchinson, as to his genuine sentiments in relation to the Civil War, the Protectorate, and the Restoration. After the Restoration he was placed in an equivocal and embarrassing position through a petition written by his wife, without his knowledge, and signed with his name. By this letter, which the editor characterizes correctly as an "humble and dishonoring petition for life," and by the assistance of members of her family—her brother, Sir Allen Apsley, had been an active leader on the Royalist side, and had now great influence at court—Col. Hutchinson was preserved from the punishment visited upon the other regicides. He felt keenly the dishonor of his situation; and although he acquiesced in the result, so far as even to address, shortly after, another petition, to the House of Lords, dignified and manly in tone, but expressing a degree of repentance which he certainly did not feel, yet he brooded over it in his mind, and did not conceal his satisfaction at being arrested, two or three years after, and thrown into the prison in which he died.

The intercession of Sir Allen Apsley for his brother-in-law illustrates one fact that we note in this history: there is no indication in any part of the book, so far as we can recollect, of the bitter hatred which civil war has the reputation of creating between near friends and kinsmen. Col. Hutchinson's relatives, the Birons, and his wife's relatives, the Apsleys, were ardent Cavaliers; but their intercourse with him, even when the contest was at its height, is represented as always friendly, while it was their influence that obtained his pardon at the Restoration. His enemies, and very bitter ones they were, were in his own party—the members of what we may call the Parliament faction as opposed to the army leaders.

The edition before us is sumptuous and beautiful. The ten portraits, etched with spirit, are of great value as historical portraits, most of them being of eminent characters. They are, besides Col. Hutchinson and his wife, the following: James I., Charles II., Cromwell, Ireton, Sir John Hotham, Lord Chaworth, and two kinsmen of the hero—Lord Biron and Sir Allen Apsley. Only five hundred copies have been printed, two hundred of which have been reserved for sale in this country, with an American imprint. We find an incorrect reference in a footnote on page 270 of vol. ii: it is given to page 378, when it should be 213.

The Story of the Jews. By James K. Hosmer. [The Story of the Nations.] G. P. Putnam's Sons. 1886.

CONFORMABLY to the plan laid down in the prospectus of this series, the present work is distinctly a book for young people. Its style is pure and graphic, and it can be read from cover to cover with unabated interest. Everything, even historical proportion, is sacrificed to the desire to bring out salient features of the Jews even more than of their history. Jewish history before the contact with Assyria is dismissed in one chapter, while two are devoted to the Assyrian period. The Maccabean age is strikingly depicted, though no attempt is made to separate the legends which have grown up about the actual history contained in the Apocryphal Books of Maccabees. When our author comes to the Middle Ages, he is full of sympathy with the Jews for the persecutions they had to bear in those dark days, though he thinks that Jewish pride and exclusiveness are somewhat to blame for such constant enmity. Concerning the Jews of modern times this work is much fuller than any book on the subject. Spinoza, Mendelssohn, the Rothschilds, Montefiore, Lasker, Crémieux, D'Israeli, and Heine, all have a place.

Prof. Hosmer shows throughout evidences of careful preparation, and yet there are constantly distinct traces of the dilettante's work. He is wrong in taking *Rabshakeh*, an officer's title, as the name of a man; again, no god by the name of Nisroch has been found in the Assyrian Pantheon, and it would have been much better to assume with Halévy that Nisroch is a mistake for Nesoch, the Assyrian god Nusku. Prof. Hosmer speaks of Cyrus as the "Mede," which he certainly was not, and repeats the traditional story of the Septuagint translation without any hint of his disbelief in it. There is, moreover, a marked lack of familiarity with Jewish customs. Each male was required to visit Jerusalem thrice, not twice a year. The Day of Atonement generally falls at the beginning, never at the end of October. Similar blunders are to be found in the account of the Passover service and the description of the interior of a synagogue. But few historians will agree with the dictum concerning Josephus, that "there is no reason to doubt his real accuracy." The philosophical system of Maimonides—a reconciliation of Judaism and Aristotelianism—our author does not seem to have appreciated. A whole chapter, entitled "Casting out a Prophet," is devoted to an indignation meeting over the excommunication of Spinoza by the synagogue of Amsterdam, though, whatever be his claims to consideration as a philosopher, Spinoza certainly had none which could weigh with the elders of the synagogue or of any other church. And, finally, there are some careless slips, such as the citing of Lucien Wolf's Biography of Sir Moses Montefiore as "Simon Wolfe's."

Vice in the Horse; and Other Papers on Horses and Riding. By G. S. Anderson. Edinburgh: David Douglas. 1886.

THIS little volume contains nine short essays on matters connected with horsemanship. They show the author to be a very competent horseman, though by no means a fancier of the school of clumsy "practical" horsemanship which for a century or more has been the vogue among the English. Other distinguished American amateurs have also of late declared in favor of Continental horsemanship, and have condemned the British modes of using the saddle-horse. The Southern people of the United States have never adopted the modern English manner of riding, though the Kentucky and Virginia horsemen cannot be said to follow any of the Continental schools. Their horsemanship, with its careful training in paces, more closely resembles that of the French than the fashions which now prevail in England. It appears that the modes of training and using horses on the Continent were, during the seventeenth and perhaps in the eighteenth century, common in England. That delightful braggart, Lord Herbert of Cherbury, describing in his memoirs the movements of the horse which his successors have relegated to the circus, says: "The most useful aer, as the Frenchmen term it, is territerr; the courbettes, cabrioes, or un pas et un sault, being fitter for horses of parade and triumph than for soldiers, yet I cannot deny but a demivolte with courbettes, so that they be not too high, may be useful in a fight or mêlée"—all of which he learned in western England about the beginning of the seventeenth century. The disfavor into which the old and somewhat fanciful horsemanship fell was probably due in part to its inutility in hunting, but partly also to its essential impracticability. In the same way the graceful but useless *salutes* preceding a bout of fencing, as well as many departments of the fencer's art, were abandoned in Britain as soon as French influence began to decline. Now that men of leisure in America desire to amuse themselves with horses, it is perhaps worth while to bring back the banished capers of the olden-time horsemanship. Persons who desire this diversion of training horses in nice details of action will find Mr. Anderson's hints very useful, while those who contemn such practices will find his suggestions on horse-shoeing valuable.

The Scientific Angler: Being a general and instructive work on Artistic Angling. By the late David Foster. 3d edition. London: Bemrose & Sons.

THIS is a new edition of an excellent angling book previously noticed in these columns, with the addition of delicately colored engravings of over sixty land and aquatic, natural and artificial flies, the natural and artificial being placed side by side. The imitations in some cases are wonderfully exact, in others scarcely to be recognized. The American trout is not, on the whole, as highly educated as his British cousin, and the very delicate and fine differences in the construction of flies is not so essential to success here as in England, although a good many of our Eastern waters are now breeding fish that laugh to scorn the attempts of the ordinary angler. That there is, however, a growing interest in the niceties of the art is shown by the fact that Mr. Foster's book has been reprinted here. It is stated erroneously in the preface that this and the 'Compleat Angler' are "the only English books on angling that our transatlantic cousins have deemed worthy of reprinting." The book is one every angler ought to have, and the colored plates of flies make this the most desirable edition yet published. There is a good deal of useful information about rods, reels, lines, etc., but the fact is, that we are as much ahead of the English in these utensils as they are of us in the fly-tying branch of the art of angling.

Glimpses of Three Coasts. By Helen Jackson (H. H.). Boston: Roberts Brothers. 1886.

THE papers that fill this volume are rather the fruit of travel than the description of it. The first coast visited, the Californian, is looked at in the main as the scene of the early Spanish missions, which interested the author ethically through her sympathy with the work of civilizing the Indians. The other coasts, Scottish, Norwegian, and Danish, are more picturesquely treated; but here, too, it is the novelist who writes, and scenes from the common life are of more consequence to her than landscape. Often the narrative becomes only a dialect-sketch. The village and play of Oberammergau, which are the last subjects, could hardly be "glimpsed" from any but a Bohemian seacoast. The volume has no unity, and most, if not all, of its contents have appeared in magazines or papers.

George Eliot and Her Heroines: A Study. By Abba Goold Woolson. Harper & Brothers. 1886.

THE very poor portrait of George Eliot prefixed to this volume—a mechanical engraving of a feeble photograph—is a fitting frontispiece for it. That this "study" has succeeded in producing a certain sort of likeness of George Eliot is not to be denied; but it is feeble in conception and mechanical in execution. Such power of representation as it possesses is impaired by frequent uncalled for criticism, of a kind that might even be pronounced impertinent, of George Eliot's works, though they are ranked as highly as they deserve. There is, too, a large amount of extraneous matter. There are few leading themes in the volume and no striking passages. It is, therefore, a book impossible either to analyze or to quote from. A few unfortunate misconceptions might be pointed out were it in any wise worth discussion.

Bilder aus dem englischen Leben. Von Leopold Katscher. Zweite Auflage. Leipzig. 1885. 342 pp.

Aus England. Von L. Katscher. Leipzig. 1885. 109 pp.

Nebelland und Themsestrand. Von L. Katscher. Stuttgart: G. L. Göschen. 1886. 473 pp.

GERMANY must be the paradise of the "literary journalist"—using the phrase in the sense in which it is understood by those who so describe themselves. In Germany, as elsewhere, scholars and specialists occasionally write articles, and the littérateur is not absolutely unknown; but the staple of German magazines and feuilletons consists of "reports" and political correspondence writ large, being as devoid of the literary flavor as are the columns of a newspaper. Mr. Katscher is one of the best, as well as one of the most prolific, of these journalists, and has turned his reporting faculty to the best account in connection with what seems to have been a long residence in London. But he has neither the grace of style necessary to make commonplace agreeable, nor the power of intuitive perception which draws from it an unobvious meaning. In these volumes we find discussed everything of current newspaper interest, from sewers and gas to the Salvation Army and the Shakers, but nothing is treated in any but the every-day, superficial aspect; so that, however useful as an encyclopædia of useful information, Mr. Katscher's collections cannot be said to have any claim to form an addition to literature. His sketches are always sensible, but never shrewd. He is too exclusively a journalist to take a particular interest in anything, and altogether too reasonable and careful to display the prejudice and ignorance which, faults as they are, give the foreign studies of his French contemporaries a certain interest, if not value. What is more surprising is that he shows none of that "thoroughness"—that special familiarity with some field of research or phase of life—which one expects to find in German books, and which characterized the English studies of Mr. Katscher's predecessors, Althaus, Rodenberg, Hillebrand, and Holtzendorff.

Die Buddha-Legende und das Leben Jesu nach den Evangelien. Von Rudolf Seydel, Professor an der Universität Leipzig. Leipzig: Otto Schulze.

THIS little book is a sequel to the author's previous work on the same subject ('Das Evangelium von Jesu in seinen Verhältnissen zu Buddha-Sage und Buddha-Lehre'). It includes in it arguments drawn from the most recent researches into the Buddha legend. The conclusion to which the author now comes is, that it is quite possible that the structure of the Gospels was framed after a Buddhist model. He says that the Evangelists need have known nothing of the Buddhist legend, as it was *Buddhist:* but that a poetical Gospel, or the framework of a Gospel, might have been put together at Ephesus or Antioch or Alexandria by a Christian poet brought into contact with a Buddhist mendicant attached perhaps to some embassy to the West—and that on the lines of this poetical outline, confessedly built on the Legend of Buddha, the Evangelists, with no knowledge of Buddha himself, might have constructed or shaped the Gospels of Christ. Professor Seydel gives an example of what he means by observing that the typical group of the Virgin and Child, as painted by Raphael or Holbein, must undoubtedly have been suggested by the Isis-Horus figures, although without any distinct recognition in the minds of the Christian painters. In other words, his theory is that there is always a surviving ideal of the fittest, whether in poetry or art, which commends itself to the mind of the man tuned to receive it, though he himself in accepting the ideal is utterly ignorant of the source or concrete origin of the idea itself.

Professor Seydel therefore takes for granted that the Buddha-life was an ideal of human perfection, not necessarily the most perfect ideal, but such an one as, in the development of man's capabilities, would commend itself to the great human conscience. This ideal, transplanted to another soil, and brought into contact with a higher knowledge and a more complete religious system, and at the same time with a more perfect ideal of human greatness, viz., the character of Christ, produced the first thought of framing a life of Jesus; or, in other words, suggested the idea of the Gospel narratives.

It is undoubtedly a fact, notwithstanding all contradiction, that the Buddha legend was put together before the Christian era; and when we follow Professor Seydel in his comparisons of the leading features of this legend with the particulars found in the Gospels, we cannot but allow that there is a great similarity of *framework.* But as this does not support the wild arguments of those who would convert the Christian system into a perverted form of Buddhism, neither does it seek any reconciliation with those who discard the Buddhist element in the development of the religious idea in man, which is embodied in history. We think that Professor Seydel has put the whole matter, as it concerns the parallels between the Buddhist legend and the Gospel narrative, in very fitting words, as concise as any canon can be, when he says, on p. 16 of his work, "The probability of the independent origin diminishes in proportion to the increasing specialty of the resemblances and the increasing frequency of such specialties."

RECOLLECTIONS OF

Mr. James Lenox of New York

And the Formation of his Library.

By the late HENRY STEVENS, of VERMONT.

Foolscap octavo, cloth extra, elegantly printed at the Chiswick Press on hand-made paper, with portrait of Mr. Lenox and two of Mr. Stevens, price $1.50, post free. A few large-paper copies on finest hand-made paper, with portraits on India paper, price $5.25 post free.

This little volume contains much bibliographical gossip and many anecdotes of rare and unique books, the reminiscences of a twenty-five years' correspondence between Mr. Lenox and Mr. Stevens, and cannot fail to prove of interest to all book collectors and librarians.

Houghton, Mifflin & Co.'s

NEW BOOKS.

[*Ready Saturday, 29th*]

THE WIND OF DESTINY.

A Novel. By Arthur Sherburne Hardy, author of "But Yet a Woman." 1 vol. 16mo, $1.25.

This is at once a fascinating novel and a picture of human experience and the mystery of human influence. The scenes are partly in Europe, partly in America. The same pure, bracing air breathes through this novel which was so noticeable and welcome in 'But Yet a Woman,' while the style is even more admirable and the story stronger and more masterly.

OLD SALEM.

By Eleanor Putnam. 1 vol. 16mo, $1.00.

This little book contains three articles which have appeared in the *Atlantic Monthly*—Old Salem Shops, A Salem Dame-School, and Salem Cupboards; in addition, Two Salem Institutions, and My Cousin the Captain; and an Introduction by Mr. Arlo Bates. The essays are written from a familiar knowledge of what is unique and curiously engaging in Salem usages and traditions, and in a singularly charming style.

THE TRANSFIGURATION OF CHRIST.

By F. W. Gunsaulus. 1 vol. 16mo, $1.25.

This is a fresh and engaging book on a theme which appeals strongly to the religious imagination of mankind. It is original, scholarly, and reverent, and cannot fail to interest those whom its subject attracts.

STORIES AND ROMANCES.

By Horace E. Scudder. In Riverside Paper Series. 16mo, paper, 50 cents.

Contents: Left Over from the Last Century; A House of Entertainment; Accidentally Overheard; A Hard Bargain; A Story of the Siege of Boston: Matthew, Mark, Luke, and John: Do not even the Publicans the Same? Nobody's Business.

IN PRIMROSE TIME.

A New Irish Garland. By Sarah M. B. Piatt, author of 'A Voyage to the Fortunate Isles,' etc. 12mo, gilt top, $1.00.

*** For sale by all booksellers. Sent by mail, post-paid, on receipt of price by the Publishers,*

CLARENDON PRESS SERIES—New Volume.

THE WEALTH OF HOUSEHOLDS. By J. T. Danson. 12mo, $1.25.
Oxford: CLARENDON PRESS.
New York: MACMILLAN & CO.

The substance of this work was first put together by way of using the experience of a man of business in the education of his children. . . . Being out of print it is now entirely rewritten as a text-book, and with especial reference to some of the economic questions of the day.

Among the subjects treated are Exchangeable Value—Sources of Income—Wages—Profit—Rent—Interest—Commerce—Capital—Credit—Money—Competition—Taxation—Pauperism—Foreign Commerce—Property in Land—Socialism, Communism, and Nihilism.

"One of the most valuable of the large number of volumes which the recent widespread interest in economic questions has called forth."—*Boston Evening Traveller.*

"A very timely and useful work. It discusses in intelligible language the various topics which now occupy the public mind as controverted points in political economy."—*New York Journal of Commerce.*

Price 15 cents; annual subscription $1.75.

*THE ENGLISH ILLUSTRATED MAGA*zine. No. 33. June. Contents: A Girl of Morocco, frontispiece; My Friend Jim, W. E. Norris; Yarmouth and the Broads, Joseph Hatton; Days with Sir Roger De Coverley, Mr. Will Wimble; The Unequal Yoke; In Umbria, K. S. Macquoid; The Witch-Maidens of Filey Brig; The Singing Voice, Dr. Morrell Mackenzie; Ornamental Friezes, Headings, etc.

MACMILLAN & CO.,
New York, 112 Fourth Avenue.

NEW NOVELS
FOR
SUMMER READING.

A NEW STORY OF ARMY LIFE.

Marion's Faith.

By Captain CHARLES KING, U. S. A., author of 'The Colonel's Daughter,' 'Kitty's Conquest,' etc. 12mo cloth, $1.25.

The Boston *Literary World* says of Capt. King's former novel, of which this is a sequel: "There have been few American novels published of late years so thoroughly readable as 'The Colonel's Daughter.' There are brilliant pictures of garrison life, a taste of fighting and adventure, and a chivalrous love affair, interwoven with clever sketches of military types. The style is bright, the dialogue simple and natural, the heroine a charming creature, with just a spice of wilfulness, and the favorite lieutenant one of those fortunate fellows whom most men envy and many women admire." The present story is equally brilliant and entertaining.

MRS. WISTER'S NEW TRANSLATION.

Violetta.

A Romance. After the German of Ursula Zöge von Manteuffel. 12mo, cloth, $1.25.

"'Violetta,' as adapted by Mrs. Wister, is a clever novel. The characters are clear-cut, natural, and strong. The situations are full of interest, the dialogue is bright and vigorous. The heroine is a particularly happy conception worked out with much skill. There is decided power in the book, and a delicacy of manipulation so rare as to be very agreeable. Mrs. Wister has so skilfully adapted the story that it could not read more smoothly if it had been written in English."—*New York Tribune.*

Court Royal

A Story of Cross Currents. By S. Baring-... of 'John Herring,' 'Mehalah,' etc. 16mo, ex... 75 cents. Paper cover, 25 cents. Being No. 39 of *Lippincott's Series of Select Novels.* Price, 25 cents each.

"The most entertaining novel that we have read for a long time. We know from having read it through that it is vastly entertaining, and that the interest lasts to the last page.—*New York Mail and Express.*

In a Grass Country.

A Story of Love and Sport. By Mrs. H. Lovett Cameron, author of 'Deceivers Ever,' 'Pure Gold,' etc. 12mo, extra cloth, 75 cents. Paper cover, 25 cents. Being No. 40 of *Lippincott's Series of Select Novels.*

"Like the rest of Mrs. Cameron's stories, this one is intensely interesting and strong in illumination. It is a passionate love story, presenting various phases of society life in England."—*Philadelphia Evening Call.*

*** *For sale by all booksellers, or will be sent by mail, postage prepaid, on receipt of the price, by*

You can, by ten weeks' study, master either of these languages sufficiently for every-day and business conversation, by Dr. RICH. S. ROSENTHAL'S celebrated MEISTERSCHAFT SYSTEM. Terms, $5.00 for books of each language, with privilege of answers to all questions, and correction of exercises. Sample copy, Part I., 25 cents. Liberal terms to Teachers.

MEISTERSCHAFT PUBLISHING CO.,
Herald Building, Boston, Mass.

A BOOK FOR EVERYBODY.

The Philosophy of Words.

A popular introduction to the science of language. By FREDERIC GARLANDA, Ph.D. 12mo, cloth, price $1.50.

☞ "*I read it with much interest, and recommended it to the young men at Oxford.*"—*Max Müller.*

Dr. Howard Crosby: "Admirably interesting and instructive."

George Perry, in the *N. Y. Home Journal:* "Not a dry study of abstractions, but a vivacious, fascinating ramble through the garden of English."

Wm. C. Prime, in the *N. Y. Journal of Commerce:* "*It will pay young and old persons to read it.*"

R. H. Stoddard, in the *Mail and Evening Express:* "It is not extravagant to say that 'The Philosophy of Words' *reads like a romance.* . . . Prof. Garlanda has described words, their origins, their growth and changes in so happy a vein that he entertains and instructs continually, and is equally intelligible to the novice in languages, and interesting to the studied linguist. . . . *It is pre-eminently a volume for the library table, and for the pocket of an habitual reader.* A vast amount of information and reading, a practical and intimate knowledge of the classic and modern tongues, and a marked originality of thought, combine to make Prof. Garlanda's book of UNIVERSAL INTEREST AND STERLING WORTH. The author calls it 'a popular introduction to the science of language,' and in that field it is probably UNRIVALLED."

*** *Sold by all booksellers, or sent, postpaid, on receipt of price by* GARLANDA & CO.,
31 East 17th Street, New York.

INVEST THROUGH THE SOUND AND RELIABLE Western Farm Mortgage Co.

F. M. PERKINS, President. LAWRENCE, KAN. L. H. PERKINS, Secretary

CAPITAL AND SURPLUS, $250,000.

Carefully Selected First Mortgage Farm Loans, payable in N. Y. Unrivalled facilities. Absolute satisfaction. Ten years' experience. No losses. Refer to Third Nat'l Bank, N. Y. City; National Bank, Lawrence, Kan.; and hundreds of investors. Send for pamphlet forms and full information. Branch Offices in N. Y. City, Albany, and Phil. N. Y. Office, 137 B'way. C. C. SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

SEASONABLE BOOKS.

The Boat-Sailer's Manual.

By Lieut. EDWARD F. QUALTROUGH, U. S. N., author of 'The Sailor's Handy Book.' 1 vol., 8vo, illustrated. $2 net.

A volume of the most absolute value and importance to all interested in boats and sailing. It contains a complete treatise on the management of sailing-boats of all kinds and under all conditions of weather, concise descriptions of the various rigs in general use at home and abroad, directions for handling sailing canoes, and "the rudiments of cutter and sloop sailing," etc., etc.

The Index Guide to Travel and Art Study in Europe, 1886 *Edition.*

By LAFAYETTE C. LOOMIS, A. M., with plans and catalogues of the Chief Art Galleries, Maps, Tables of Routes, and 160 illustrations. 1 vol., leather, 16mo, 600 pages, $3.50.

"Only words of praise can be spoken of this work. Any one who has been abroad and has endeavored to remember where some building or statue was to be found, and has hunted through guide-book after guide-book, will appreciate an alphabetical index, by whose aid everything which one needs to know may be found in a moment. One can see how this book would save vexation and expense a hundred times its cost."—*Christian Advocate, N. Y.*

Lawn Tennis as a Game of Skill.

With the latest revised rules, as played by the best clubs. By Lieut. S. C. F. Peile, B.S.C. Edited and with a preface by Richard D. Sears, American Champion. 1 vol., 12mo, 75 cents.

"Mr. Peile has more than usual insight into the game of lawn tennis, and has some valuable teachings to bestow. His little book tells players what they ought to do and what they ought not to do. . . . The book is, in fact, a companion of the game of lawn tennis, and should be in every player's hands."—*London Saturday Review.*

THREE NOTABLE NOVELS.

Face to Face.

1 vol., 12mo, $1.25.

"The book ought not to be anonymous; no one need be ashamed of writing so good a novel, or uneasy about its reception by the public."—*Phila. Bulletin.*

The Midge.

By H. C. BUNNER. 1 vol., 12mo, $1.00.

"What the Midge became to Dr. Peters and what he became to her, is the problem which Mr. Bunner set himself to work out, and which he has worked out in the freshest, frankest, and most delightful way imaginable. He has painted the French quarter of New York, among which his scenes are laid, with a quaint fidelity to the original that reminds us of Dickens, without his exaggeration, and he has drawn his characters with the touches of a master that save so much description."—*R. H. Stoddard, in the Mail and Express.*

The Late Mrs. Null.

By Frank R. Stockton. 1 vol., 12mo, $1.50.

"There is nothing like it in the domain of English fiction. It bubbles over with merriment; it leads you up to the most unexpected incidents; it has all the breezy charm of a pastoral."—*Phila. Record.*

Charles Scribner's Sons,

743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, JUNE 3, 1886.

The Week.

THE President sent in five more vetoes of private pension bills on Friday, and nobody can read the messages without feeling convinced that his objections in each case are well-founded. Mr. Cleveland lays down the rule which ought to govern in these matters, but which has come to be entirely disregarded, when he says: "It is not a pleasant thing to interfere in such a case, but we are dealing with pensions and not with gratuities."

The Boston *Advertiser*, last week, saw fit to speak of "the absurd secrecy which is being practised at the White House concerning the President's marriage." To our minds, so far from being absurd, it was most natural. We presume there are very few properly-constituted human beings who do not crave *some* privacy touching their tastes, habits, doings, sayings, social and domestic relations; or, in other words, do not desire that some portion of their life, be it never so small, shall be private. We think, too, that there is no man with a spark of gentlemanly feeling who, when about to be married, would not wish to regulate the amount of news about the match and the wedding which should be communicated to the public. His rights in this matter, too, are paramount. The public appetite for gossip does not annul or override them. It is only in savage communities that the claim of individuals to have secrets about themselves is totally denied. An Eastern traveller who had put up at a "hotel" in a mining town in Colorado, finding no shades in his window, which looked out on a piazza filled with loafers, pinned a shirt across it to screen him while he was dressing. In a few minutes it was rudely torn down by a hand from the outside, and on his asking angrily what that meant, the intruder exclaimed: "I want to see what there is so d—d private going on here." The loafer's surprise and curiosity were, perhaps, not unnatural, but the traveller was none the less entitled to his screen. Nobody has a right to know everything about anybody on any occasion in life, except the police about a man convicted of a crime. An honest man has a right, on any lawful occasion, to say to what extent he is willing to take the public into his confidence, whether the occasion be his own marriage or his mother's funeral.

President Cleveland doubtless feels all this strongly. He shrinks from having more of his private and personal affairs laid before the public than he chooses. He knows that it is impossible, as the newspaper business is now conducted, to get the simple facts of either his engagement or his marriage given to the people. He knows on what trifles columns of silly, flippant, ruffianly fiction are built up by some of our esteemed contemporaries, and with what disregard of the decencies of civilized life, with what contempt for the feelings of the living or for the memory of the dead, the work is done, if it is at all likely to be marketable. Moreover, his domestic affairs have no sort of resemblance to those of a European sovereign, though the reporters work them up as if they had. His place is not an hereditary one. He and his wife will in all probability be, a few years hence, plain citizens of Buffalo. But none the less his marriage is a matter of some interest to the people of the United States. It does concern them to know what manner of woman the mistress of the White House is, or is to be, but they ought to get their knowledge about her in a sober, respectable, and self-respecting way, like civilized men, and not like savages. The President would doubtless have been glad to gratify their legitimate curiosity about his marriage; but, knowing the agents by whom all knowledge on such subjects reaches the public, he probably endeavored to protect himself by precautions which looked like secrecy, whereas he was simply trying to keep something back, be it never so little, and felt that he should never accomplish even this except by trying to keep everything back.

The grievances of the trades-unions against the Knights of Labor have been reduced to writing, in the form of six demands, and presented to the Cleveland Assembly. These are, in brief, that the Knights shall not initiate any person or persons whose trade has a national or international organization without the consent of such organization; that no person shall be initiated as a Knight who works for less than the union scale of wages, or who has ever been convicted of "scabbing," "ratting," or embezzlement of the funds of a trade-union; that all charters granted to assemblies having a national or international union shall be revoked; that any organizer of the Knights of Labor who endeavors to induce trades-unions to disband, or tampers with their growth and privileges, shall be expelled from the order; that when any strike of trades-unionists is in progress, no assembly of the Knights of Labor shall interfere; and that the Knights of Labor shall not grant any label in competition with any label issued by any national or international trade-union. To grant these demands will be equivalent to disbanding the Knights of Labor altogether, or reducing the order to very contemptible dimensions. The idea at the foundation of the order is, that it is possible to bring "labor" of all kinds into one society, and direct its united power against capital in such a way as to squeeze profits down to nothing, or next to nothing. In practice it is an attempt to enable all trades to get the better of each other—as futile as the proverbial endeavor to lift one's self over a fence by the boot-straps. The trade-union idea is to enable each particular trade to do the best it can for itself, not intending any harm to other trades, but leaving them to look out for themselves. The Knights of Labor would seek to enable the workers in a coal mine and those in an iron furnace and those on a railway connecting the two to jointly get the better of the mine owners, the railway, and the furnace. In case of a "grievance" in the furnace, the workingmen in all three of the trades might be "ordered out." Two entirely innocent and disinterested trades, together with many others which depend upon the mine and the railway, would be prostrated or injured in order to give a victory to the furnace men. The trade-union method of dealing with the same grievance would be to order a strike of the furnace men, and, by means of their national organization, to prevent the furnace from getting other workmen to take their places. In an extreme case they would order strikes in all furnaces, but would not molest any other trade. The boycott would never be introduced as an auxiliary weapon by a single trade-union, but would be the natural and almost necessary weapon of the Knights of Labor.

The trade-union idea is not only the correct one, but is the only one which has any chance of lasting influence in the social and industrial life of the nation. Every trade pays out the great bulk of its receipts in wages, directly or indirectly. Our friend John Roach, in one of his tariff speeches, said that 90 per cent. of the cost of an iron ship in the United States was paid for labor—labor in the ship-yard, in the rolling-mill, in the iron mine, the coal mine, the forest, the saw-mill, etc. The statement was undoubtedly true as to Mr. Roach's yard, and is probably true as to all yards, both here and abroad. It is not necessary to make a parade of statistics in order to show that what is true of the ship-building trade is true of industry in general, namely, that all but a very small part of the price that anything sells for is paid for the labor of producing it. It follows that when the Knights of Labor seek to bring all trades into one organization in order to get the better of capital, they are fighting capital only to the extent of 10 per cent., while they are fighting labor to the extent of 90 per cent. Mr. Arthur understands this thing better than Mr. Powderly. He says in substance: "Our business is to see that locomotive engineers get their rights. The cigar-makers, the silk dyers, the jute weavers, etc., have our sympathy, but we have no mission to take care of them and ourselves too. They will get on better without us, and we shall get on better without them." This is the American idea, and it will carry the day.

A bricklayers' union in Washington has fixed upon $4 a day as the rate which should be paid to all workmen, whether good or poor, and, a number of men having found employers who are ready to pay them $6 a day, it is authoritatively announced that these men must refuse to earn over $4, and that "the Union will punish any member, by imposing a heavy fine, who shall accept anything in excess of $4." Hitherto in the history of the human race it has been held that the ambition to rise in the world, to make one's labor more valuable to one's employer, and thus to earn higher wages than the lazy and the shiftless, was a very proper and laudable ambition. But the union changes all this The fundamental principle

of the union is that all workmen shall fare alike; that the same wages shall be paid to the slow-going and inefficient laborer as to the active and capable one. The union holds that it is as great an offence for a member to earn more than the union rate as for him to take less, and the severest penalties are ready to be visited upon any man who makes the slightest effort to better his condition in the world and rise a little above the mass of his fellows.

The Oleomargarine Bill afforded the House as much merriment on Thursday as any circus clown or band of burnt-cork minstrels could supply. All "bogus" articles of food and drink were sought to be added to the list of things to be taxed, such as artificial eggs, motherless chickens, watered milk, sanded sugar, glucose syrup and honey, mixed liquors, and wooden nutmegs. The several amendments were voted down amid roars of laughter, and the bill was "progressed" toward final passage with an evident concurrence of opinion that while members must vote for it, they nevertheless held it to be a supremely foolish measure. The performance was not editying, but it serves to fix in the public mind the true character of the bill. There is one aspect of the measure and its consequences which may not prove to be so funny. If the price of butter be raised about ten cents a pound after the bill becomes a law—and if this effect be not produced, the only purpose of the bill will have been defeated—there will probably be a general inquiry as to the reasons for the sudden scarcity of an article of such prime necessity. It will then be discerned that although Congress has pretended to give us a free breakfast-table by removing the duties from tea and coffee, it has turned and put a tax on butter, not for revenue, but avowedly in order to make the article bring a higher price in the market. As an experiment upon the forbearance of the American people, the Oleomargarine Bill may have some value as showing how much "protection" the public will put up with. The passage the other day of a bill to prevent mackerel-fishing south of Cape Cod was an experiment in the same line. There is evident need of a bill to stop the manufacture of cotton-seed oil. This article has superseded lard and tallow to a considerable extent. If allowed to run wild in the markets of the country, there is no knowing how many people may find their profits curtailed. Why not pass a bill authorizing the Commissioner of Internal Revenue to collect taxes in his discretion on any new trade which seems to be getting the advantage of any old trade?

The Chicago *Tribune* reads a severe lecture to its New York namesake on the subject of South American trade, steamship subsidies, and the tariff. If American goods could be laid down in South American markets without any charge for transportation, says the Chicago paper, we should still be unable to compete with British manufacturers who get their raw materials free, while our manufacturers are taxed 40 to 50 per cent. on corresponding articles. "This country," it continues, "will never be able to secure the South American markets for her manufacturers until she pulls down the commercial non-intercourse, high-tariff wall which, by a back-action operation in shutting foreign goods out of our market, excludes our wares from foreign markets. This adamantine fact the New York *Tribune* must first learn to comprehend before it can intelligently discuss the subsidy question, or comprehend the reason that American goods are not exported and sold abroad." Which signifies, apparently, that the Chicago *Tribune* is not in the Blaine boom this year.

Just as the public has concluded, after a thorough study of the question of Federal aid to Southern schools, that the subsidy scheme would do more harm than good, Mr. Rutherford B. Hayes appears in an obscure magazine with a plea for such a scheme as the Blair bill, based upon the same old vague assertions of which the fallacy has been so thoroughly exposed. "Four millions of people in the South," Mr. Hayes says, "are unable to read and write," but he apparently does not understand that three-fourths of these people are too old to get any benefit from the most liberal system of schools. "Almost three millions of the young people of the South are growing up without the means of education," says Mr. Hayes. This is the same as saying that half the children of the South have no chance to go to school, whereas the reports of Southern school superintendents show that even in States like South Carolina and Mississippi, where the negroes are most numerous, the proportion of children of the school age who attend school is as large as in New Hampshire. The only bit of evidence which Mr. Hayes cites in support of his theory, is a statement made in a speech "a few years ago" by Dr. Ruffner, then School Superintendent of Virginia, that in his State they were not able to educate the people "in any tolerable sense," as he (Ruffner) had shown by statistics "a few years" before this speech. Regarding this, it is sufficient to say that Virginia has increased the amount of her school expenditures from $946,109 in 1880 to $1,428,678 in 1885, and now keeps her schools open 118 days in the year, against only 104 in Maine, and but 100 in New Hampshire. There might, perhaps, be an excuse for somebody else who should write an article upon so important a question without making the most elementary examination of the facts; but we do not quite see how an ex-President of the United States, leading a life of leisure, can reconcile such carelessness with his conscience.

The time has at last come when the task of answering the people who want to run future Republican campaigns upon a bloody-shirt platform can be left to Republican papers. Frederick Douglass made a speech to a Boston club the other day, in which he declared his belief that Mr. Blaine's ill-natured sectional speech at Augusta, after his defeat for the Presidency in 1884, would be "the key-note in the next campaign," and "carry the Republican party triumphantly to victory." A Republican paper in Mr. Blaine's State, the Portland *Advertiser*, discusses this proposition with great good sense. It says that under the reconstruction policy the negroes became the prey of demagogues, and "misgoverned the Southern States beyond all endurance," and it declares that "no New England State would submit for a month to such rapine as was perpetrated by the carpet-bag governments." The revolution which followed was inevitable, and it cannot be reversed, since "no act of Congress can organize and establish permanent anarchy and injustice." The *Advertiser* considers Mr. Douglass a man whose public utterances always deserve attention, but it assures him that "when he advocates the re-establishment of the color line and the carpet-bag governments, he talks of wild impossibilities." When a Maine Republican paper talks in such a strain as this, even Mr. Blaine must begin to perceive how far the country has got beyond his Bourbon ideas.

There are in this city at the present time 8,557 licensed liquor-saloons, or 1 for every 23 voters. This is the proportion for the whole city. If it were possible to get the number of saloons in each ward, we should find that the proportion varied in different localities. In Philadelphia, according to an interesting calculation published by the *Public Ledger* of that city, there are about 6,000 saloons, an average of 1 saloon for every 29 voters, the proportion ranging from 1 saloon to every 8 voters in the worst ward to 1 for every 50 voters in the most respectable ward. There are wards in this city in which the casual observer would say that there must be a liquor saloon for at most every half-dozen voters, for more than half the stores appear to be devoted to that business. But taking the general average of 1 saloon for every 23 voters, what an alarming condition of affairs that discloses! It is no wonder that the liquor-saloon and the liquor-dealer have come to be the controlling forces in municipal politics. Under the present system of mixing politics with liquor, there can be no other result than to multiply constantly the number of saloons. With an Excise Board composed of three men who represent as many different "halls" or factions, and who are all unscrupulous politicians, put there for the express purpose of making the position "pay" all that it possibly can for the benefit of the party, there can be no other outcome. Each Commissioner vies with his fellows to get the largest possible number of saloons which will yield a revenue to him.

The Rhode Island Republicans have carried out their plan, and have completed their alliance with the liquor interest by electing to the office of Chief of the State Police a defaulter, of whom the *Providence Journal*, the Republican organ of the State, speaks as follows:

"Who and what kind of a man Charles R. Brayton is and has been, is known to every citizen of Rhode Island, and to the members of the General Assembly who cast their ballots for him. There can be no plea of ignorance. Every one knows that when Postmaster of the city of Providence he was a defaulter in a sum exceeding $30,000, that he resigned to avoid dismissal, and that this defalcation had to be made good from the pockets of those who, in friendship and trust, gave bonds for his honesty and good behavior. For years before and after the discovery of his crime he has been notorious as the agent of corruption in politics. He has received the money and he has paid the money for 'Machine' politics. He has manipulated caucuses and conventions, and

been the acknowledged head and chief captain of the Swiss mercenaries of Rhode Island politics, with his fingers upon the keys of intrigue in both political parties, and with instruments in every town and ward in the State."

The *Journal* adds that this performance has excited great public indignation, and predicts that the men who have carried it through will be driven from the public service; if they are not, it says, "then the days of the Republican party in Rhode Island are over, and will deserve to be over." A letter from Newport to *The Evening Post* throws interesting light upon the way in which the scheme was carried through the Legislature. It is no secret that among the prime movers of this plan to strengthen the party by connecting it, through a defaulter, with the rumsellers of the State, are a United States Senator and other Republicans high in the ranks of the party. These are the same men who recently took General Logan to Providence, to arouse the party of moral ideas to a sense of its duties and responsibilities.

A panic is said to have been produced among the Ministerialists in England by the unexpected strength of the "dissidents" displayed at the meeting called by Chamberlain on Monday, which, according to Chamberlain's "arithmetic man," promises a majority of fifty-one against the Home-Rule Bill on the second reading. Their theory is, that if they can muster a majority as large as this, the Queen will see in it evidence that the Opposition can form a cabinet, and will ask Lord Hartington to undertake it, instead of allowing Mr. Gladstone to dissolve Parliament. Should the majority against the bill be but small, however, that is to say, not over thirty, a dissolution is certain. But it is very clear from the wide difference between the estimates of the arithmetic men on each side, made doubtless after most careful canvassing, that there is a large number of members who have not made up and cannot fully make up their minds, and whose course at the final moment nobody, not even they themselves, can accurately foretell. The chances would seem to be at this moment that the bill will be beaten by a small majority, and that Mr. Gladstone will then at once dissolve and appeal to the constituencies; but as the division will take place in all probability before the end of the week, prophecy is of no great value.

Mr. Dicey's letters on English politics are always interesting and instructive, and we make it a rule to let him, as indeed all our correspondents, say his say without note or comment. The letter we print to-day seems, however, to suggest one or two brief observations, which he will not think out of place. The first is, that the absence of "genuine enthusiasm" for Irish home rule in England seems an odd thing for Mr. Dicey to deem worthy of serious consideration. The absence of all genuine interest in Irish questions on the part of Englishmen constitutes the strongest of the arguments for home rule. Now, without interest of some kind to begin with, enthusiasm there cannot be. There was no "genuine enthusiasm" in England for Catholic emancipation, for the abolition of the Protestant tithes, or for any of the land acts, or for the disestablishment of the Irish Church. We have read, we believe, every speech of importance on both sides, and have, on analyzing those of the anti-Gladstonians, found invariably that the whole argument rested on the assumption that the Irish would in some manner fail to keep faith or fulfil the obligations imposed by the bill, not through want of ability, but through want of will. If this assumption were taken away, the whole superstructure went to pieces. That is to say, the bill has been opposed mainly by means of appeals to prejudice, partly religious and partly racial, or, in other words, on purely sentimental grounds. Secondly, we take leave to dispute Mr. Dicey's first "consequence." The first Reform Bill was undoubtedly the triumph of numbers over wealth, vested interests, and "thoughtfulness," even although the numbers did not vote. At the same time we agree with Mr. Dicey in thinking this a great danger and misfortune. But it is the inevitable consequence of refusing too long the redress of a grievance not felt by the "educated class." That class in England found it easy to bear with the woes of the Irish peasants until that complete social and political separation of the tillers of the soil from the owners of it which we now witness in Ireland, took place. This state of things cannot be cured by further resistance on the part of the educated class, and yet it must be dealt with in some new way.

Of Mr. Dicey's fourth "consequence," we would say that the propositions that "the Gladstonian idolatry is degrading the tone of public life," and that the bona-fide supporters of home rule in the Liberal party do not constitute a "respectable minority"—that is, that the bulk of its supporters are hypocrites or cowards—are too serious to rest on such assumptions as "it is the universal belief"; "every one out of Parliament thinks"; "all over the country Liberal managers" are doing so and so; "men who always opposed home rule" "are being informed" of something very absurd; "rumors are current," etc., etc. We should say that these expressions rather indicate a state of panic and disgust among the "educated class," than describe a whole political situation. Finally, touching Mr. Dicey's fifth consequence, we would remind him that all concessions made by an established government to a revolutionary movement, whether it take the form of simple disorder or of organized armed resistance, involve at the outset "the condonation and, indeed, the reward of lawlessness and injustice" in some degree. This was true of the American Revolution. It began in "lawlessness," and was marked by "injustice toward thousands of men," who "trusted to the protection of the English Parliament," and were "ill-treated because they respected the law," and "attempted to exercise their legal rights." It was true, also, of the Canadian rebellion, and of the concessions to the Dutch Boers. In fact, it is a form of misfortune, or evil, with which Englishmen ought by this time to be very familiar.

The Italian Parliament was dissolved more than a year before the end of its term, and the electoral agitation has begun. That Parliament was the first convoked under the new electoral law passed in the beginning of 1882, which, by considerably reducing the property qualification, as well as the educational tests, raised the number of electors in the kingdom from about six hundred thousand to upwards of two millions and a half. The law, which also included a narrow *scrutin de liste*, was initiated by the Depretis Government, under pressure of the more radical fractions of the Liberal party. The apprehension that the vast extension of the suffrage would bring the constituencies under clerical sway was not realized, the clergy, at the direction of the Vatican, continuing its policy of abstention. The Depretis Cabinet disposed of a good working majority, though continually harassed by attacks of the so-called Pentarchists—that is, the groups led by, or rather supporting, the political fortunes of Cairoli, Crispi, Nicotera, Baccarini, and Zanardelli. It leaned, to a large degree, on the Conservatives, from whom the Left, under Depretis, had wrested the long-held reins of administration in 1876. Both its external policy and domestic management were fiercely denounced, in spite of obviously favorable results, as illiberal, and thus faithless to the programme enunciated by the Left on assuming power. It was accused of tyrannically persecuting Irredentists, Republicans, and Socialists, of fawning upon Bismarck's royal coalition, of cringing before the Pope, of neglecting the interests of Italy in the Balkan Peninsula, in Africa, in Italia Irredenta, and of numberless other wrongs of commission and omission.

A vast improvement in the finances, the abrogation of a forced currency, the electoral reform, the final settlement of the railway problem, peace maintained with France under grievous provocations, a firm and most salutary understanding with Austria-Hungary and Germany—these are the main achievements of which Depretis and his supporters not unjustly boast. The Pentarchist opposition they declare to be devoid of principle and factious, and its protection of Anarchist tendencies, and especially of Irredentism, to be fraught with danger to peace within and abroad. They have not deserted their banner by yielding to necessities arising from changed conditions: it is the Pentarchists who have deserted the common camp. The greatest humiliation suffered by Italy—when France treacherously seized Tunis—was incurred under the Premiership of Cairoli. They cling to the Central-European coalition under honorable conditions, placing a powerful naval and military contingent at the disposal of the peace league. The alliance with the more advanced wing of the Conservatives is a natural consequence of a political evolution demanding a recasting of parties. The reproach of "transformism" they willingly accept. Mancini's foreign policy is a successful continuation of Minghetti's. The fact is, the moderate Liberalism of Depretis suits the ruling classes of Italy so well that even his exceptionally long stay in office—at the head of various cabinets—is not likely to speed the agitation for his downfall. There is no chance for a Radical, Clerical, Socialist, or Anti-Austrian majority, or even strong minority, yet, and coalitions of the advanced opposition with Conservative groups are but transient and partially effective. Depretis holds the same position in Italy which Tisza holds in Hungary by similar methods.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 26, to TUESDAY, June 1, 1886, inclusive.]

DOMESTIC.

THE following official announcement was issued from the White House on Friday night: "President Cleveland will be married at the White House on Wednesday evening, June 2, to Miss Frances Folsom. The recent death of a relative of Miss Folsom has changed the original plans for the wedding, and the invitations will now be limited to a few of the near relatives and the members of the Cabinet and their wives. The Rev. Dr. Sunderland of the First Presbyterian Church of Washington will officiate. The ceremony will be followed by a collation, and the wedding in all of its details will be plain and unostentatious."

President Cleveland on Friday vetoed five more private pension bills. In closing one veto message he says: "It is not a pleasant thing to interfere in such a case, but we are dealing with pensions, not with gratuities."

President Cleveland spent Decoration Day in New York and Brooklyn, and reviewed the parades.

The conference report on the Shipping Bill was adopted by both houses of Congress on Thursday. The bill contains the Frye amendment authorizing the President to treat foreign vessels in American ports as American vessels are treated in foreign ports.

It is asserted on good authority that the Canadian fishermen are all anxious and ready to sell bait to American fishermen, as it is their main source of income.

The Canadian schooner *The Sisters*, Capt. Anderson, which had been detained by the United States Collector at Portland, Me., was on Saturday released by order of the Treasury Department. It is said the release was ordered on the ground that the Captain did not intend to evade the law.

The captain of a coaster which arrived at Halifax on Tuesday reported that the *L. Houlette* had seized an American mackerel fisherman off the Guysborough coast.

In the Canadian House of Commons on Thursday the Minister of Marine, in reply to a question, said that six steamers and six schooners are being fitted out to protect the Canadian fisheries. The instructions to the masters of these vessels are to cruise around the coasts to protect the in-shore fisheries from the encroachments of foreign fishing vessels, especially those of the United States. They are to do their work with as great caution, as much courtesy, and as much firmness as is possible

The American revenue cutter *Dix* arrived at Cedar Keys, Fla., on Sunday, with the Spanish fishing smack *Chlotilde* of Havana, which she captured off Anclote Key, Fla., for violating the fishery laws by fishing within three leagues of the American shore, and for irregularities in her papers. The *Chlotilde* is a small schooner-rigged vessel and has six thousand salt fish on board. The crew consists of ten men and officers, none of whom speak English.

Senator Sherman moved in the Senate on Wednesday the bill defining some of the phrases in the law restricting the landing of Chinese in American ports. He said the bill simply defined phrases which had been interpreted in different ways by different courts. Mr. Hoar protested against existing and proposed Chinese legislation as among the great blots on the history of the human race. It was, he said, aimed at men simply because they were laborers, and belonged to a certain race. He intimated that American skill, talent, and industry were afraid they should be beaten. Mr. Ingalls denounced the Chinese restrictive laws as a disgrace to civilization.

Republican Senators held a caucus on Tuesday morning. Among the measures which it was decided to consider in the near future were the bill to repeal the preëmption and timber-culture laws and the alien land bill.

At the meeting of the House Committee on Education on Friday, Representative Miller of Texas introduced a substitute for the Blair Educational Bill. It is in substance as follows: It appropriates $8,000,000 annually for ten years, to be distributed among the States and Territories according to the ratio of illiteracy as established by the census of 1880. The money shall be paid to the States on the first of each July beginning with July 1, 1887, and shall be expended by the States in the maintenance of public schools under the State laws. The provisions of the Blair bill requiring reports from the States regarding the disbursement of the money, and to which objections have been made on the ground of interference with States' rights, are eliminated from the bill. In States in which separate schools are maintained for white and colored children, the bill provides that the money given the States shall be apportioned between white and colored schools in the proportion that the total number of children of each race of school age bears to the total number of children of school age in the State as shown by the scholastic census. Mr. Miller says that while he regards all bills of this class as unconstitutional, he prefers that a bill similar to the one proposed by him should be reported rather than one containing the objectionable features embodied in the Blair bill.

The Postal Savings Bank Bill is making little progress in the House Committee on Post-offices. It has been referred to a sub-committee, consisting of Jones of Texas, Chairman, Wood of Indiana, and Burrows of Michigan. They are holding no meetings to consider it.

The Special Committee appointed to investigate the strike in the Southwest has not yet made its report, and ex-Gov. Curtin, the Chairman, who was recently asked when the report might be expected, said that he did not think any would be made at this session. He said that there was something to be gained by holding the subject open, and that he thought it would be well to "enlarge the scope" of the inquiry, and to investigate the labor troubles in Pennsylvania, and that authority would be asked to do that. The Republican members of the Committee think that the delay, if finally decided upon, will be for a political purpose, and that one of its immediate objects will be to aid in the organization of a movement to secure the nomination and election of Mr. Curtin as Governor of Pennsylvania. That, beyond question, is his own object. He is in close relations with Mr. Powderly, and he has doubtless convinced his Democratic colleagues on the Committee that it will be possible for him to secure the coöperation of the Knights of Labor in the advancement of his political plans. The fact that Mr. Powderly is said to insist that the Knights of Labor are not to be used as a political organization, does not seem to have been considered by Curtin.

The Committee on Legislation of the Knights of Labor presented to the General Assembly on Monday a report on the land question, which was unanimously adopted. They demand that all public land shall be held for settlers only; that all land which is held by individual proprietors in excess of 160 acres, and which is not under cultivation, shall be taxed on the full value of cultivated land in the same neighborhood; that all land which is now held by railroads or other corporations when the conditions under which it was granted have not been complied with, shall be declared forfeited and revert to the Government; that patents shall at once be issued for all non-forfeitable lands, and that the taxation of them on the basis of the value of cultivated land shall at once begin; that all fences on the public domain shall at once be removed at the expense of those who have put them up; that after 1890 all lands in the United States the titles to which are vested in aliens shall be taken possession of by the Government under the right of eminent domain, by purchase at a fair valuation, which shall be fixed by appraisement; that after 1886 no alien shall be permitted to acquire the title to land either by purchase or in any other way. In addition to this they demand that Congress shall pass a law abolishing all property qualifications for the exercise of the elective franchise. In all the States they demand the passage of an act providing for a graduated income tax. They protest against the reduction of the appropriation for the Labor Bureau. The passage of a bill is urged prohibiting the employment of minors for more than eight hours.

The Grand Lodge of the Brotherhood of Railway Brakemen recently in Illinois expelled twenty-six of its members for originating the strike on the Union Pacific Railroad, and has suspended thirty more for ninety days for participating. As the Brotherhood is one of the most powerful labor organizations in the country, and now embraces Canada, the above action has created a profound impression in railroad circles.

The Chicago Grand Jury is making inquiries which may lead to the indictment of Most for connection with the riot there. There is evidence that the bombs seized at Lingg's lodgings and distributed by that person were manufactured in accordance with the instructions of Most—that Most was in correspondence with Spies and had a conference with him shortly before the bomb throwing; and it is believed that it can be established that packages of dynamite were sent from New York by Most to Spies for work in Chicago. Twenty-two Anarchists were indicted by the Chicago Grand Jury on Thursday, a number of them for murder.

The Anarchists John Most, Adolph Schenck, and Richard Braunschweig, charged with unlawful assembly, etc., were found guilty in the Court of General Sessions late Friday afternoon, and were remanded for sentence. Schenck was recommended by the jury to the mercy of the Court. Under the conviction, Recorder Smyth can sentence the prisoners to the penitentiary for one year, and fine them $500 each.

Judges Pardee and Billings, in the United States Circuit Court, sitting in New Orleans, on Monday rendered a decision in the notable case of the American Bell Telephone Company against the International Improved Telephone Company. In concluding their opinion, which is in Bell's favor, the judges say: "From the evidence submitted in this case it seems clear that now, in the present state of the art, neither the Reiss instruments nor any reproduction of them can be made to transmit articulate speech except by changes of some form in the instruments themselves or by the employment of Bell's methods. We therefore conclude that neither Reiss nor his successors anticipated the invention of Bell as set forth in the fifth claim of his application and patent, and as illustrated by figure 7 described in his accompanying specification. The injunction against the defendant company is ordered to issue."

The New Jersey Prohibition State Convention on Friday nominated Gen. Clinton B. Fisk for Governor. They hope to poll about 22,000 votes in the campaign.

In the General Assembly of the Southern Presbyterian Church at Augusta, Ga., on Wednesday, a vote was taken on the case of Dr. Woodrow, charged with teaching evolution in a theological seminary. By a vote of 137 to 13, the majority report, which declares that "man was created by an immediate act of divine power, without animal parentage," was adopted.

Judge Marcus Lyon, as Surrogate of Tompkins County, N. Y., on Wednesday filed a decision in the famous McGraw-Fiske will case, decreeing the legacies of Jennie McGraw Fiske to Cornell University of $1,500,000 for library purposes in all respects valid, ratifying the payments heretofore made, and directing Executor Boardman to pay the balance of Mrs. Fiske's estate to Cornell University as residuary legatee. This celebrated case has been pending before Judge Lyon since July 20, 1883. The alleged invalidity of the legacies to the Uni-

versity was based on the fact that its charter limited its property holdings to a sum not exceeding $3,000,000. Judge Lyon holds that it has not been proved that at the time of Mrs. Fiske's death the property absolutely held by Cornell University exceeded $3,000,000. He decides that the University does not own in fee or absolutely the lands sold by the State to Ezra Cornell, but only the income from them or their proceeds.

Andrew Carnegie, the millionaire steel manufacturer, has given $250,000 to Alleghany City for establishing a free library and music hall. This is in addition to his gift of $500,000 to Pittsburgh.

Gen. W. T. Sherman has announced his intention of residing permanently in New York.

John Russell Bartlett died on Friday in Providence, at the age of eighty-one. He was for many years Secretary of State of Rhode Island. In 1850 he was appointed commissioner for the survey of the boundary line between the United States and Mexico. He made extensive explorations and scientific observations, which he embodied in valuable works. Among the books which he wrote were a 'Bibliography of Rhode Island,' 'Progress of Ethnology,' 'Dictionary of Americanisms,' 'Literature of the Rebellion,' and 'Primeval Man.' Of these the 'Americanisms' is by far the best known.

John Kelly, the noted Tammany leader of this city, died on Tuesday afternoon. He had been ill for more than a year, but at times seemed to partly recover his health. He was born in this city on April 20, 1822, of Irish parentage. His education was meagre, and he fought his way to power through ward politics. He became known as the representative of the Irish Roman Catholic interest in the Board of Aldermen and later in Congress. He redeemed the Tammany Hall organization from the Tweed ring in 1872, but in 1876 opposed Mr. Tilden, and led the revolt against him in the Democratic National Convention. After his nomination, however, he pledged him his support. In 1879 he carried his warfare further, and was the Tammany candidate for Governor of New York. The bolt elected Cornell. From 1876 to 1880 Mr. Kelly was Comptroller of New York city. In the last National Democratic Convention he opposed the nomination of Cleveland. Since that campaign his health has been broken.

FOREIGN.

It was authoritatively announced in London on Thursday that Mr. Chamberlain would not attend the Liberal meeting, on the ground that Mr. Gladstone's circular was so framed as to exclude a certain section of the party.

The general Liberal meeting assembled on Thursday afternoon. It was well attended by the Premier's supporters, but none of the known Hartington or Chamberlain dissidents was present. Mr. Gladstone was cheered when he entered. He at once proceeded to the business on hand, and announced that the Government had decided to modify the clause (No. 24) of the Home-Rule Bill excluding Irish representatives from Westminster, provided the bill passed its second reading and was referred to a select committee for action during the autumn session of Parliament. Mr. Gladstone declared that he would at the autumn session of Parliament introduce an amended Irish home-rule bill. The meeting cordially approved the position taken by Mr. Gladstone.

A number of the Liberal dissidents who did not care to risk compromising themselves by attending the meeting, hailed with undisguised satisfaction the attitude of apparent conciliation adopted by the Premier. These now openly proclaim their intention to return to their party allegiance and vote with the Government for the second reading. Among the first to announce their return were Mr. John Fletcher Moulton, Radical Member of Parliament for Clapham, and Mr. Samuel Whitbread, Liberal Member for Bedford. Mr. Whitbread's accession is perhaps the most influential that the Premier could have desired.

In his speech at the Liberal meeting Mr. Gladstone said that the Government was willing to submit to Parliament a plan entitling Irish representatives to be invited to attend the Imperial Parliament whenever proposals of taxation affecting Ireland were up for consideration. Moreover, if the House of Commons wished, the Government was ready to undertake the responsibility of entitling the Irish to be heard in the Imperial Parliament on imperial or reserved questions. Changes in the Home-Rule Bill to accomplish these results would, however, entail a reconstruction of the measure. The Government, therefore, thought that after the second reading of the bill it might be postponed until the autumn session of Parliament; or the Government might resummon Parliament to an early session in 1887, and then again submit the bill, with such necessary amendments as during the interval had been deemed advisable without prejudice to the principle of the bill. Mr. Gladstone himself thought the latter method the preferable one.

It is asserted that the proposed modifications in the Home-Rule Bill include provisions for a full representation of Ireland when the House has under discussion army and navy estimates, votes of credit for war purposes, foreign treaties, fiscal changes affecting the customs and excise of the United Kingdom, and votes for the maintenance of the royal family. The Parnellites, at an informal conference on Thursday, agreed to accept Mr. Gladstone's proposal to read the bill a second time and postpone the committee stage till autumn. They were all inclined to agree to the proposed modifications.

In the House of Commons on Friday night Mr. Gladstone said that the Government considered it to be its duty, after the second reading of the Home-Rule Bill, not to ask the House to go into Committee on the measure, but to adopt one of the methods which he described at the recent Liberal meeting. Sir Michael Hicks-Beach, in view of the unsatisfactory statement of the Government, moved an adjournment. He was greeted with cheers by the Opposition, all the Conservatives rising to support the motion. Mr. Gladstone made a vigorous reply. He said that the Government had raised one of the greatest issues ever submitted to Parliament, and would endeavor to keep it clear of collateral issues. The Government had before it a conflict, and was prepared to go through the struggle to the end. It was perfectly confident as to the final issue. The Government was acting in accordance with precedent. It was because the course which the Government had taken was the best means of attaining the end sought that Sir Michael had moved an adjournment. Sir Michael asked to withdraw his motion, but the Parnellites insisted on a division, and the motion was lost by a vote of 405 to 1, the Opposition voting with the Government. The announcement was received with laughter and ironical cheers. The Government has decided to introduce a comprehensive registration bill in Parliament with a view to the holding of a general election in 1887. The Arms Bill passed its third reading by 156 to 65.

It was authoritatively announced in London on Saturday that Lord Hartington and his Whig followers have resolved to vote against the Home-Rule Bill when it comes up for second reading.

The aspect of the home-rule question was suddenly changed on Monday by a meeting of Mr. Chamberlain's party. Fifty-four members of Parliament attended it, and on a division forty-six decided to vote against the bill, five refused to pledge themselves, and three declared that they would support the bill. The news created intense excitement in the lobby of the House of Commons. Ministerialists admitted that defeat was inevitable, and there was a general rush of members to the telegraph offices to send orders to their election agents to prepare for an immediate dissolution of Parliament. The Conservative whips estimate the Conservative vote at 252, the vote of the Hartington and Chamberlain section at 96, the Liberal abstentions at 25, and the vote of the Gladstonians and Parnellites at 297, making a majority against the bill of 51.

The debate on the Home-Rule Bill in the House of Commons on Tuesday night was very exciting and acrimonious. Mr. Joseph Chamberlain made a long speech explaining his attitude of hostility to Mr. Gladstone. He was frequently interrupted by Parnellite howls and Conservative cheers. He explained at great length why he found Mr. Gladstone's concessions inadequate. In the course of his speech he said: If there had been any real element of finality in the bill, he would have voted for its second reading, but he failed to see any such element. The Irish people would not regard it as final. Had such a bill been offered to Scotland the people would have indignantly rejected it. Was there any man in the House who could maintain that the bill did not weaken the supremacy of the Imperial Parliament, or at least throw doubt upon it? He challenged the Irish supporters of the bill to get up in Ireland and say that they favored the continued existence of the real supremacy of the Imperial Parliament [Parnellite cheers] as it exists at present. [Parnellite cries of "No! No!"] Ah, now the House sees the view of its Nationalist members. They want to weaken that supremacy. [Opposition cheers.] They only support the bill because they believe it throws doubt upon it and leaves the supremacy a mere constitutional figment. We want a real and effective supremacy, and will not lower the powers of the British Parliament to the level of the suzerainty of the Porte over Cyprus. "There is not a man here," said Mr. Chamberlain in conclusion, "who does not know that every personal and political interest would have led me to cast my lot with Mr. Gladstone. Not a day passes that I do not receive scores of letters urging me for my own sake to vote for the bill and dish the Whigs. The temptation is no doubt great, but I am not base enough to gratify my personal ambition by betraying my country." Mr. Sexton replied to Mr. Chamberlain. A "whip" has been sent to the Government supporters, announcing a probable vote on the second reading of the Home-Rule Bill on June 3.

The Rev. Mr. Spurgeon publishes an attack on Mr. Gladstone's Home-Rule Bill. The preacher asks, "What has Ulster done to be cast off?" and adds: "The whole scheme is full of dangers and absurdities, as if conceived by a madman. Yet I am sure that Mr. Gladstone believes he is only doing justice and acting for the good of all. I consider that he is making one of those mistakes only made by great and well-meaning men."

The race for the Derby stakes at Epsom on Wednesday was won by the Duke of Westminster's bay colt Ormonde.

The French Chamber of Deputies on Thursday evening voted urgency for the Government's bill to expel the princes.

It is stated that Prince Jerome Napoleon will soon come to the United States. The ostensible object of the trip to America is said to be to meet his son, who is returning by way of San Francisco and New York from his trip around the world.

Advices from Samoa of May 22 state that a German man-of-war proceeded to the territory of King Tomasese, whom Germany upholds against King Malietoa. The British and American consuls at Apia drew up a formal protest against Germany's subversion of King Malietoa's authority, and, in response to that ruler's appeal for protection, the American Consul hoisted the Samoan under the American flag and immediately telegraphed to President Cleveland, notifying him of his action in establishing a protectorate over the disputed territory.

THE KNIGHTS AS AN EDUCATIONAL BODY.

We see that prominent among the delegates to the General Assembly of the Knights of Labor at Cleveland are Messrs. Caville, Graham, and Best, of whom the first-named is General Auditor of the order, and the other two members of the Executive Committee of the Empire Protective Association. All three are notorious for their connection with the railroad strikes in this city and in Brooklyn, in which they assumed the air of conquerors over the terrified companies. They not only ordered strikes on the slightest provocation, or entirely without any, as in Brooklyn in April, but have insisted on demands quite as outrageous as any that have been made since the trouble began. Caville, a Brooklyn man, ordered the first railway strike in that city, and, after that was settled by granting his demands, ordered the men out again on the pretext that Mr. Richardson had not discharged two or three men obnoxious to the Knights. On this occasion Caville addressed a very insolent note to the President of the Brooklyn City Railroad, saying that if he afforded the least assistance of any kind to the other companies, all of his cars would be "tied up." Various manifestoes from him in the *Eagle* during March show him to be as violent and unreasonable as poor Irons himself. Barry, a member of the Executive Board of the Knights of Labor, was a pot-house politician in Saginaw until the labor troubles broke out there last summer. These were fomented and encouraged by him, and he was the leader of the mob that went along the Saginaw River to the mills in July, and by threats of violence forced the men to quit work. His speeches before and during the strike were of the most incendiary and communistic character. He was arrested and tried at East Saginaw in January last. Threats of and incitements to violence were proved against him by a number of respectable witnesses, but they were sworn down by the Knights of Labor, who flatly contradicted everything charged, and Barry escaped. The strike he started lasted about two months, 20,000 men being idle, and great destitution and loss being the result. The men finally gave in and resumed work on the terms they were accepting before the strike.

Now, it is apparently very largely upon such men as these that the amiable Mr. Powderly is going to rely to enable him to convert the Knights of Labor into a social-science association, or, in other words, an association for mutual improvement, the members of which will discuss and read "papers" to each other at stated meetings. For this is what the Knights must be if, in accordance with Mr. Powderly's plan, they are going to discard strikes and boycotts. The object of his movement, he says in the preamble to his Constitution, is, in general terms, "to make industrial or moral worth, not wealth, the true standard of individual and national greatness," and "to secure to workers the full enjoyment of the wealth they create, sufficient leisure in which to develop their intellectual, moral, and social faculties—all of the benefits, recreation, and pleasures of association; in a word, to enable them to share in the gains and honors of advancing civilization." This is an official statement which we copy directly from the record. Now, it is obvious at a glance that these ends are also those of the Christian Church, of the public schools, of the Cooper Union, and various other educational and philanthropic associations throughout the country, including the Free Trade Club and the Social Science Association. If there be any difference, in fact, between Mr. Powderly's association, as he describes it, and that so ably managed by our friend Mr. F. B. Sanborn, it must be in the *modus operandi*. Their aims are identical. Mr. Sanborn invites every one to become a member who is willing to pay $5 a year subscription, while Mr. Powderly excludes bankers, stock-brokers, and professional gamblers, but is content with twenty-four cents a year, besides fixed but moderate prices for "charters" for local assemblies. The subjects to be discussed at Mr. Powderly's meetings are much the same as those discussed at Mr. Sanborn's meetings. They are: Labor statistics, the public lands, legislation affecting labor and capital arbitration, the incorporation of trades, the contract system in public works, factory and mining and convict labor, the income tax, the currency, the public credit, and so forth. We presume, too, that they are to be discussed by the Knights much in the same way in which the Social Science Association discusses them—that is, by reading papers and then debating the subject orally. Mr. Powderly has undoubtedly been far more successful in getting members than Mr. Sanborn has been, as he says he has got one million or thereabouts, while we doubt if Mr. Sanborn has one thousand.

But there are limits to the size of a Social Science Association, and we cannot help thinking that the Knights have grown far beyond the size at which such a body is manageable by even so great a man as we hear that Mr. Powderly is. The number of members who seek offices is already, according to all accounts, enormous, and the offices are sought largely because they are salaried, which is a bad feature; in Mr. Sanborn's Association nobody is paid anything, or at all events only the secretary and one or two clerks. Moreover, all the accounts show that the dependence of the organization on Mr. Powderly, and the reverence felt for him by the members, are alarming, considering that he is a delicate man. If he should die or become a helpless invalid, what would happen? The English Social Science Association has this year died quietly, by simply failing to meet, and hardly anybody has noticed its disappearance. But Mr. Powderly's association could not go out in this way. Such an organization as his when it falls must fall with a tremendous crash. Anything which undertakes the work of the Christian Church, of the schools and colleges and philanthropic and educational societies all in one, cannot go down without sending a tremor through society.

We say all this on the assumption that the Grahams, the Bests, the Barrys, and the Ironses have really fallen in with Mr. Powderly's idea of making the organization simply a debating society, and giving up strikes and boycotting. But, to be entirely frank, we do not think they have. They are concurring much as the Democratic politicians concurred before election with Mr. Cleveland's civil-service reform ideas. These men have no real faith in the power of discussion, or even comprehension of it. They still really rely for the elevation of the laborer on hitting people with clubs and bricks, tearing up tracks, killing engines, and burning freight depots. They are doubtless willing to humor the gentle Powderly for a while, but they are not going to let him convert them just yet into scholars and gentlemen.

GROWING POWER OF THE PROHIBITIONISTS.

It is evident to even the most careless political observer that the temperance movement, which has for several years played so important a part in the politics of certain Western States, is spreading with great rapidity to nearly all parts of the Union. Its growth in New York and New Jersey during the past winter has been especially noticeable, and it is safe to say that it is causing the Republican managers in both States more uneasiness than anything else. A State Convention of Prohibitionists has just met in New Jersey with an attendance of nearly 800 delegates, representing every section of the State. So alarmed were the New Jersey Republican managers about this convention, that they called a conference in advance to devise means for warding off the danger which it threatened to their organization. They agreed upon an address setting forth the party attitude upon the temperance issue, which was in brief a declaration in favor of local option as the most desirable method of settling the question. The address had a great deal of sounding rhetoric upon the glorious record of the Republican party as a party of moral ideas, and as an organization which had no sympathy with rum-sellers. Its most outspoken sentence was this: "It is neither wise, practical, nor necessary to insist that legislation on this subject should be restricted to the total prohibition of the liquor traffic."

The convention, nevertheless, adhered to its purpose of nominating a prohibition State ticket. The declaration in favor of local option might have had more influence had not the last New Jersey Legislature, with a Republican majority in both houses, defeated a Local Option Bill. This proceeding, combined with the declaration against prohibition, will confirm the delegates in their already strong belief that it is useless to depend longer upon the promises of sympathy and support which the Republicans have been so prolific in giving for several years past. They are able to see, from these two manifestations, that the Republican leaders are again making their familiar attempt to hold both the temperance vote and the German saloon vote by giving a sop to each.

There are many signs that elsewhere than in New Jersey the temperance advocates have lost faith in Republican promises. Indeed, it may be said that the recent rapid growth of the movement is due largely to this cause. In New York it certainly is. Our Republican Legislature not only refused to adopt a proposition to submit a prohibition amendment to the popular vote, but the power of the whole Re-

publican organization was brought to bear upon both houses to secure the passage of a bill confessedly drawn to protect "Republican saloon-keepers." The party managers were trying to get a portion of the rum vote in this city, while holding the temperance vote in the State at large. Sheridan Shook's famous telegram exposed the plot, and the consequence is that the Republican managers are now in great fright about the havoc which the prohibition vote is likely to play with their schemes for this fall and for 1888.

Aside from recent Republican legislation, there are two great causes which have led to the growth of the temperance party, and which seem destined to continue that growth far beyond its present limits. One is the utter absence of anything like a moral issue in the Republican party of to-day. The party represents nothing positive in government or morals. It is trying to live upon its past, and to regain power through the mistakes of its opponents. In the United States Senate, where it has control, it has done nothing notable during the present session except to pass a series of gigantic subsidy schemes, which were reckless enough in their folly to have been drawn by a Venerable Sage of the Knights of Labor. The party's leaders are either harping upon Jefferson Davis and the sectional issue, or attempting to make political capital against the Administration because the Secretary of State is conducting the fishery controversy in a dignified and proper manner. Instead of trying to put the party upon a basis of live issues, where it might command the support of intelligent men, the leaders are groping about for issues which will catch the Irish, the soldier, the labor, the liquor, and various other kinds of "votes." Not only are temperance advocates weary of a party thus led, but thousands of Republicans, who are not professed temperance men, are scarcely less weary, and would hail with delight an opportunity to vote for any candidate who represented a living and positive principle.

That the temperance question furnishes such a principle, nobody can deny. The increase of the liquor-selling evil is so alarming that no man who is interested in sobriety, and order, and good government can fail to be made serious by it. It confronts him on every street corner in all our cities, and makes him inclined to cast his vote with any party which will make an honest effort to mitigate or even to suppress it altogether. Therein lies the second and greatest cause of the present temperance movement. The truth, too, of the Prohibition party's charge, that neither of the regular parties can be trusted to grapple with this evil, cannot be gainsaid. The Democratic party, indeed, makes no pretensions of such purpose. The Republican pretensions are worthless, because there is no sincerity behind them. Their party leaders would like to have the temperance vote, and they would conduct the party so as to deserve it if they could only make up their minds that there were as many temperance voters as there are Irish and German Republican voters. That was the problem which confronted Mr. Blaine when he was called upon in Maine in 1884 to vote on the prohibition amendment, and he decided that the latter vote was the larger, and "dodged" accordingly. Every time the Republican party has been brought squarely to the same issue it has "dodged" in the same way, and it is small wonder that the temperance people have at last become tired of the game.

THE HOME-RULE MOVEMENT.—II.

ITS WEAKNESS.

OXFORD, May 18, 1886.

THE weakness of the home-rule movement arises at bottom wholly from two facts, which deserve the most serious consideration.

The first but not the most important of these facts is, that of genuine enthusiasm for home rule—of such faith in principle, for example, as prevailed among the advocates of Catholic Emancipation—there is in Great Britain no trace whatever. That, for one reason or another, the majority of the electorate may support Mr. Gladstone's policy, is to my mind within the range not only of possibility, but even of likelihood. But the very electors who vote for Mr. Gladstone's bill will, in general, vote for it because it is Mr. Gladstone's bill, and not because it is a measure for giving Ireland a Parliament. If the very scheme drafted by Mr. Gladstone had been propounded by Lord Salisbury, not one elector in a thousand would have looked at it; and if Mr. Gladstone had devoted his talents to opposing home rule, not a word would have been heard from any Liberal member in favor of conceding Mr. Parnell's demands. If the whole constitution of England is changed, a fundamental alteration in our polity will for the first time take place without being carried into effect by the force of popular enthusiasm.

The second and far more serious fact is, that on this matter of home rule the "educated classes"—the expression is not one I like, but it is the only term which conveys my meaning—are as nearly unanimous against Mr. Gladstone's proposals as it is possible for thousands of people to be on any one subject. Your readers may naturally think that, being on conviction myself an opponent of home rule, I am mistaken in my estimate of public feeling. Of course this may be so. All I can say is, that though not (I think) a person prone to feel too much confidence in my judgment as to the course of public affairs, I cannot feel the least doubt as to the truth of my assertion that the vast majority of educated men throughout England and Scotland are strenuously opposed to Mr. Gladstone's policy. It may well be doubted whether candid Gladstonians would maintain that I am on this point in error. The conduct of public men such as Lord Hartington and Mr. Chamberlain; the significant silence of John Bright, or rather his very unaccustomed restraint in utterance of his opinion at a great crisis; Mr. Gladstone's denunciation of "classes"; his son's wildly inaccurate version of history; the whole tone of the London press, and a score of other signs, seem to me to show, past a doubt, that not only rich men but thoughtful men are, in general, opponents of the new policy which Mr. Gladstone is attempting to make part of the Liberal creed.

Now, let any one take these two facts into consideration, and he will easily see the way in which they tell against the success of the home-rule movement. From the want of enthusiasm for it in England, combined with the opposition of the Liberal classes, flow the following (among other) consequences which I will attempt to enumerate, in the barest and clearest manner.

(1.) For the first time in modern English history an attempt is going to be made, and may very likely prove successful, to carry through a great constitutional change by force of numbers, as opposed to force of argument. Note that I do not assert (for this is a matter on which sensible persons may fairly differ, and my private opinions ought not to be thrust upon your readers) that Mr. Gladstone's policy is erroneous. All I do assert is, that at the present moment he is outargued. If (as is likely enough) he wins, he will win by virtue of an appeal to faith and sentiment, not to argument and to reason. Whoever will compare the utterances, say, of Mr. Goschen, of Lord Hartington, of Lord Selborne, of Sir Henry James on the Home-Rule Bill with the apologies for that measure put forward by Mr. Gladstone himself, Mr. John Morley, Mr. Bryce, and the other adherents of the Government, will admit that the opponents of the bill appeal to the understanding, while its supporters in the main appeal to the sentiment of the people.

(2.) Hence it follows that if Mr. Gladstone's policy meet with the approval of the electors, popular feeling will have triumphed over the convictions, be they right or wrong, of the educated part of the nation. This is in itself an immense evil. The best feature of the English democracy has been and still is the readiness of electors who can know little about public affairs to be guided by the experience and judgment of trained statesmen. Catholic Emancipation, the Reform of Parliament, the amendment of the Poor Law, the repeal of the Corn Laws, were all the carrying out by the people of measures some of which were opposed to popular feeling, but all of which had long been advocated by the best thinkers of the day. Break down the traditional deference paid in England by ignorance to knowledge, and you break down the one great security for the maintenance of wise government under democratic institutions.

(3.) The success of Mr. Gladstone's policy will inevitably be (though very likely against the wish of Mr. Gladstone himself) the inauguration of a system of personal government. Let a Minister obtain the confidence of the masses, and such a Minister can, it is already clear, persuade thousands of electors that the whole duty of a member of Parliament is to adhere not to such member's principles, but to his leader. The lesson is one easily enough taught, but it is one which is not easily unlearnt. Every one who knows the weak side of free institutions, dreads the advent of "providential men," of "saviors of society," of popular heroes; and Mr. Gladstone is undoubtedly at the present moment, in the eyes of his admirers among the electors, one of those heaven-sent guides whose wisdom can hardly be questioned without the sin of political blasphemy. The crowd have on this occasion singled out for worship a man who stands head and shoulders above the politicians around him; but the real glory with which an idol may be surrounded does not detract from the perniciousness of idolatry, and the condition of popular feeling with regard to Mr. Gladstone may be honestly deplored even by persons who believe that Mr. Gladstone's influence is being used for a good end.

(4.) Gladstonian idolatry is degrading the tone of public life. It is the universal belief that out of the members of the House of Commons who bona fide believe in the policy of home rule, the Ministry could not obtain, I will not say a majority, but even a respectable minority, in support of their proposals. Yet no one doubts that a great number of members, it may be a majority of the House, will support the second reading of the bill. Every one out of Parliament thinks (that is to say) that a large body of English gentlemen may, on a matter of supreme interest to their country, vote against their consciences. This idea may do gross injustice to our representatives, but there are certainly reasons enough for its existence. All over the country, Liberal

managers are urging on Liberal members the necessity of supporting a bill of which, as every one knows, many of these members do not approve. Men who always opposed home rule, and have recently denounced the Conservative alliance with Mr. Parnell, are being informed, with more or less plainness, that if Mr. Gladstone has become a Home-Ruler, followers of Mr. Gladstone must remember that a follower should follow; that it is for the Premier to find a policy, and for his supporters to find votes. Rumors are current that, to use the not very decent cant imputed to a leading politician, more than one member has "found salvation" by sudden conversion (under pressure) to the home-rule creed. Here, again, we see that the lesson is being taught to public men which, once learnt, will never be forgotten. Whatever be the end of the contest over home rule, it is certain that its incidents will lower the character of English statesmanship.

(5.) The home-rule policy, even if it be, as its advocates maintain, the wisest mode of dealing with Ireland, involves one admitted evil of which the magnitude may be exaggerated, but of which it is hard to deny the reality. It is a policy which must trouble instead of easing the national conscience. It involves at the outset the condonation, and indeed the reward, of lawlessness and injustice. It involves the desertion of men who, whatever their faults, have trusted to the protection of the English Parliament, and have been ill treated simply because they have respected the law and have attempted to exercise their legal rights. It involves in the future the surrender of all serious attempts to prevent the infliction of gross injustice on large bodies of men who are still citizens of the United Kingdom, and in any case will remain British subjects. This is and ought to be a most serious matter. A policy which may logically lead to the employment of British troops to enforce on Ulster obedience to a Parliament in Dublin, in cases where, in the opinion of Englishmen, the Irish Parliament is violating the rules of equity, may turn out wise and right; but it is a policy which rightly enough excites alarm, and disquiets the souls of men who think that the maintenance of justice between man and man is the main object for which the state exists.

I have purposely abstained from dwelling on what may be called the general arguments against the Home-Rule Bill. My aim has been rather to call attention to certain aspects of the present movement which may easily escape the notice of American observers, and which in my judgment render large bodies of Englishmen hostile to Mr. Gladstone's proposals, and, by stirring up such hostility, weaken the movement in favor of home rule. Let it, however, be carefully noted that I do not hazard any prophecy as to the relative power of the forces which favor, and of the forces which oppose, the success of Mr. Gladstone's attempt to place the relations between England and Ireland on an entirely new basis. We are in the midst of a revolution; it were the rashest and vainest of all things to endeavor to foretell what course that revolution may take. A great writer who remembered the first French revolution, has said somewhere that the worst of a revolutionary movement is that you begin it in company with all the honest men, and come out of it in company with all the knaves. This dictum is one of those sayings which impress on prudent men a possibly excessive dread of movements resting directly or indirectly on the encouragement of popular violence and the overthrow of law.

A. V. Dicey.

THE OPPOSITION IN IRELAND TO HOME RULE.

Dublin, May 18, 1886.

I have frequently drawn attention to the intensity of the opposition in Ireland to any plan of home rule, mainly among Protestants and the cultured classes. It is idle to ridicule or underrate the extent of this feeling. There it is, and it must be dealt with and allowed for. While 85 out of our 103 members are Nationalists; while the minority of 18 is confined to Ulster constituencies, except representatives elected by the close borough of Dublin University; while even Ulster has returned a majority on the National side, the opposition is nevertheless powerful and steady. If only as material for history, the intensity and persistency of this opposition are worth recording. On its reasonableness or unreasonableness the future alone can conclusively decide. The great meeting of the Irish Loyal and Patriotic Union, held at the Rotunda a few days ago, affords a good opportunity of estimating its strength. A careful perusal of the speeches at those meetings must make any Irish Protestant Nationalist feel what a responsibility he assumes in differing from such an earnest, sincere, and cultivated body of men, with whose views on other questions he so much more nearly coincides than with those of his Nationalist friends.

The Rotunda is the largest room in Dublin; it was thronged, and an overflow meeting occupied a large concert hall upon the same premises. Admission was by ticket. The attendance was eminently upper-class and "respectable"—very different in its appearance and bearing from that presented by an average assembly at Nationalist meetings. The *Freeman's Journal* remarked that the working-class element was scarcely represented—that the meeting consisted mainly of "dudes." The Conservative *Express* was on the whole more correct: "Peers of the realm, merchants, professional men, clerks, laboring men—all differences of rank disappearing for the nonce—here came together to pronounce the opinion of vast numbers of the Irish people." There was a larger sprinkling of Catholics than, since the inception of the Land League movement, there occurs of Protestants at Nationalist meetings. The chair was taken by the Provost of Trinity College, Mr. Jellett, a man of the highest character, who has been ready to show his sympathy with great moral reforms. Many of the speakers were merchants of high standing, entirely above the suspicion of narrow motives—men to whom the community would first turn for leadership or advice in any matter connected with trade or commerce. Prof. Dowden was there—the Shaksperian critic, the Shelleyist. It may be remarked that whereas the opposition of most speakers was based on distrust of their fellow-countrymen and dread of a general upturning and commercial depression likely to ensue from Irish legislation, the opposition of Prof. Dowden arose rather from his belief that the exclusion of the Irish members from the Imperial Parliament would be derogatory to Ireland and lowering to the character of its people. He termed the bill one "for the disruption of the Liberal party, the disfranchisement of Ireland, and the dismemberment of the empire." Under the proposed change, "the wealth of England would be no longer at our back." "The only reason that could be conceived for honest Englishmen supporting the bill was that it got rid of Ireland, and left England free to work her will on the world." Resolutions were enthusiastically passed condemning Mr. Gladstone's bill, and calling upon "our fellow-subjects to maintain, by every legitimate means in their power, the unity of these kingdoms, and we tender our best thanks to our many friends at home and abroad who came forward to assist us in maintaining the integrity of the empire."

This meeting only expressed the vehement convictions of a section of Irish society even more strongly declared in private than in public—except that in private the opposition to home rule is more admittedly based upon a dread of Catholicism *per se* than it is considered polite or expedient to confess in public. A thoughtful bank manager said to me, as Mr. Gladstone's exposition of his bill was coming in by telegraph, "You have *now* every step of the French Revolution unfolding before you: you now see the two orders debating together; the work will be crowned by the guillotine taking the place of King William in College Green." One of the first stock-brokers in Dublin declared: "If this bill becomes law, economic disasters will ensue, and before many years are over you will see men falling dead of starvation in the streets of Dublin." The librarian of a public library remarked: "You will yet see an auto-da-fé in Dublin, and you [Protestants who side with the Nationalists] will be the first victims"! "Every respectable person will leave the country" is the mildest prediction of most such individuals. Now that Gladstone and Spencer have spoken, it is certainly not utterly disreputable to be a Nationalist, as it used to be, but the lines are perhaps more sharply drawn; the battle is more closely knit than ever before. Men who could discuss the question together six months ago, now find it best to avoid the subject, if they desire to conserve their friendship for more settled times. We hear much of armed preparation in the north to oppose the measure if it pass, and to resist the authority of a Dublin Parliament. The mouthpiece of this party, William Johnston "of Ballykilbeg," is a man of sterling character. He figures on temperance, women's-suffrage, and other social-reform platforms—a man of small means, whose family have to make their way in the world, and who lately relinquished a Government situation of £700 a year rather than stifle the public expression of his convictions. The yearly meeting of the Society of Friends in Ireland is just over. Several of the northern Friends present said they would refuse to pay taxes if the measure passed. It is true that a motion to include condemnation of home rule in the Epistle to the London yearly meeting was defeated, on account of the strong protest of a few Friends; but were matters decided, as in other assemblies, by vote, it would have been carried by an overwhelming majority.

The opposition shown to home rule is by many said to be no greater than that exhibited on previous occasions by the same classes in Ireland to Catholic Emancipation and Church Disestablishment. This is scarcely correct. Those measures were dreaded by certain classes almost as much as is the present; but upon the whole the opposition was not so determined and clearly defined. Many Protestants advocated Emancipation; fewer, Church Disestablishment; though there are more Protestants sympathizing with home rule than show in public or on platforms, their number is certainly small. Fiery passages regarding Disestablishment, such as the following by the Hon. David Plunket, now M. P. for Dublin University, are quoted on Nationalist platforms as showing that the present talk is all bunkum: At a meeting in 1869, Plunket

"appealed to our brother Protestants in England, Scotland, and Wales to stand by us in this last awful hour of our fortunes. . . . We call upon them not to drive us again to that old kind of material, physical resistance which accompanied the first protesting of our forefathers three centuries ago; which accompanied the second protest in this kingdom by our forefathers two hundred years ago; which accompanied the glorious struggle for liberty

and Protestantism of our predecessors, and was a protest in act and word which they were willing to seal with their blood in martyrdom and battle, if need be, to protest against the oppression and the slavery of a system which they could not, and should not, and which their descendants never will submit to."

I might quote many similar passages, such as the famous declaration (cheered) of a reverend gentleman at a meeting about the same time as above, that if the Irish Church were disestablished, "Irish Protestants would kick the Queen's crown into the Boyne"; but I am bound to say that, in looking over the records of such past agitations, I cannot perceive as high a level of strong protest as we have at present. Separation is declared to be preferable to the proposed arrangement, because "under separation our hands would not be tied by England, and we should be fully able to reconquer the island from the Catholics."

It is remarkable that some, once apparently on the side of Irish self-government, now that the dream is likely to become reality, have joined the opposition. Among these are Goldwin Smith, William H. Lecky, whose 'Leaders of Public Opinion' drew many Protestants into the National ranks; Prof. Dowden, who was supposed by many to be National; also the author of "Who fears to speak of '98?" who was on the platform of the Rotunda; and, perhaps the most striking case, Boyd Kinnear, a Scotch advocate, the author of several papers on the National side, and who declared shortly before the murder of the Secretaries that, "if Scotland were governed as is Ireland, the life of no English official would be safe outside the radius of a policeman's baton."

The ascendency or coercion party are certainly standing to their guns. There is no seeking to make friends with the mammon of unrighteousness. They mean to show fight to the last. They appear entirely unable to recognize what in some form or other is inevitable. They profess themselves prepared for a continuance of the history of the past eighty-three years, with its sixty or seventy coercion acts. They must see some way of working in Parliament against eighty-five Irish members banded together like one man. If continued agitation be, as it is, so destructive of the best interests of the country, have they any better remedy to suggest than Mr. Gladstone's scheme? They seem blind to its checks and safeguards; also to the fact that it is frankly accepted by the Irish party—even by such "extremists" as John Dillon and William O'Brien—men who, whatever may have been their action in the past, are above all suspicion by those who really know them, men of transparent honor and honesty. Nothing could be stronger than the declaration of both these gentlemen, who, with Mr. Parnell, hold in their hands the feelings of the Irish people to a degree almost unprecedented in the past. The attitude of the Opposition as expressed in the Irish Loyal and Patriotic Union can arise only from complete ignorance of the real character and intentions of such men—of the real effect of concession upon them.

"What has happened in the case of Earl Spencer?" said Mr. O'Brien. "One touch of kindliness in one speech at Newcastle has effaced and obliterated years of bitter memories from the hearts of Irishmen [Irish cheers], and the speeches of the Prime Minister in this house and the kindly English feeling shown in this house, and, I am glad to say, out of it, sir—these things have done more than fifty coercion acts could do—have done more to bring about a union, a real union, a union of sympathy and of generosity and respect between the two countries. Well, sir, I ask you, Is that a people so hopeless to conciliate?"

The action and speech of men under antagonism and coercion are no measure of their action and speech under trust and responsibility. If the bitter feeling of opponents is best ascertained in private intercourse, so in private intercourse is that of the leading Nationalists most correctly gauged. And they show themselves to be steadied and altered men, impressed by a sense of the responsibilities likely to devolve upon them, and without the suspicion of a desire to act otherwise than fairly by their fellow-countrymen. A member of the party lately said, in private conversation, that he did not desire the modification of any one of the checks and safeguards in Mr. Gladstone's bill, believing all would be necessary, and would rather assist those who sought to pacify the country and to govern wisely and well.

These are the great difficulties before us: (1) The disappointments inevitable among the mass of the people at the results of home rule. The definite and absurd anticipations put forward by Nationalists to spur on the people to contend for autonomy, impossible as they will be of realization, will cause the greatest difficulty to be encountered in working home rule. This has been long acknowledged. "I know well what will ensue," remarked one of the leading Irish Nationalists some years ago: "the first home-rule Ministry will be assassinated." (2) The second great difficulty will arise from the present attitude and action of the upper classes. Those who at first will be best fitted to lead in thought, in economics, in manufactures, in the practical affairs of life, are those who have most resisted reform and the aspirations and desires of the mass of the Irish people. And it will be some time before the people learn to confide in that class as regards those matters in which, for the steady progress of the country, it ought to lead.

Seeing that the apprehensions of disaster from home rule are as great as they undoubtedly are at present, it is remarkable that Irish investments and property have not fallen even lower than they have fallen in value. Bank of Ireland stock is much depressed, but that is due less to the political outlook than to the realization, consequent on the failure of the Munster Bank, that for years it stood at an abnormal figure. The stocks of the three other principal banks, the Royal, the Provincial, and the National, have fallen within the year from 28 to 22, 29 to 20, 24 to 19; part of this decrease may be attributed to the failure of the Munster Bank, part to the state of the country. The stocks of the three principal railways, the Great Southern, Midland, and Northern, have in the same period fallen from 112 to 92, 71 to 62, 113 to 95. In the same period the stocks of some of the principal English lines, the North-Western, the North-Eastern, and the Great Western, have fallen from 162 to 152, 153 to 143, 135 to 127. The value of land as an agricultural investment has depreciated here as much as in England. Land let to tenants is, of course, here almost unsalable. The better class of mansion houses near Dublin have very much decreased in value; this has arisen from many other causes than those connected with politics. The residences of the better class trading and the rank and file of the professional classes, say those at about £100 a year in ordinary localities, have depreciated little, if at all. I was to-day speaking with a representative of one of our largest wholesale houses, that has connections all over the country. He is a cool observer, and insists that the commercial depression over Ireland is very much exaggerated, and that in any case it is little, if at all, due to the agitation. Be this as it may, the indefinite postponement of radical reform in the direction of self-government is not likely to benefit Ireland. Probably before very long many will declare publicly, what they now privately acknowledge, that anything would be better than a continuance of the present unsettlement.

D. B.

THE DUC DE BROGLIE'S RECOLLECTIONS.—II.

PARIS, May 17, 1886.

As soon as Mme. de Staël heard the news of the arrival of Napoleon at Cannes, she saw at once the consequences—the army in revolt, the country resigned to a new change, the King obliged to return into exile, and the Emperor at the Tuileries. She left Paris, the Duc de Broglie remained. The country offered a miserable spectacle. Treason was everywhere; the same people who had made great royalist demonstrations, prepared themselves for the new order of things. Benjamin Constant wrote a flaming article against the usurper, and the ink was not yet dry when he repented having written it. Louis XVIII. went to the Chambers, and announced solemnly that he had resolved to die on the throne, and to defend his people. The Duc de Broglie compares this scene to that of a play: "The curtain once fallen, the old King rolled away in his chair, and it was all over." When the fatal moment arrived, the Duc de Broglie did not feel for the persons any great regret. He did not go to the Tuileries; he knew that he was considered by the Legitimists there a secret enemy. He saw everything from the outside, as a mere witness. "It was easy," says he, "to see through the windows the movements, the precipitation, the trouble of people who feared to hear, from moment to moment, the quick step of the imperial grenadiers. In seeing this little man, exalted by a hundred victories, with a handful of old soldiers throw down with a movement of his hand this castle of cards, I remembered involuntarily the scene in the novel of Cervantes where the hero of La Mancha enters a puppet theatre, and, seeing a princess chained to a pasteboard giant, draws his great sword and cuts in two the prison and the prisoners."

The day after the departure of Louis XVIII. Paris was lugubrious. All the cafés were shut, the passers-by avoided each other. Nobody was in the streets but a few drunken soldiers, singing the "Marseillaise." Towards night "the master arrived. He came like a thief, to use the Scriptural expression. He went up the great staircase of the Tuileries, in the arms of his generals, of his former ministers, of all the past and present servitors of his fortunes, who bore as much anxiety as joy on their faces." The order of the day was a Constitution: the Empire proclaimed itself this time liberal and constitutional. The Duc de Broglie did not believe much in all these demonstrations; he recalls an ironical saying of the times: "How could I fail to be a Liberal? I served in the Mamelukes." We come here upon a curious incident. At a reunion of journalists of some eminence, the Duc de Broglie said openly that he did not for his part believe in this new constitutionalism; "that all hope of dressing the Emperor Napoleon in the garb of a constitutional king was folly; that the expectation of hindering him from attempting new adventures, and from bringing the Allies back a second time to Paris, was another folly. There was but one thing to do, which was to take advantage of this constitutional *coup de vent*, in order to organize a government to disembarrass France of the Emperor, and to prevent a second invasion. The oldest branch of the house of Bourbon had fallen, and not without reason, into great contempt. I pointed to the cadet branch as the only hope of good people and of men of good sense. I was not, however, initiated in any plot; I was not even in intimate relations with the Duc d'Orléans. I had been presented to him, he had received me affably, but I saw him rarely. His position marked him naturally in the circumstances in which we were."

It is singular to see the Duc de Broglie antici-

pating the Revolution of 1830 in the year 1814. He was probably not the only person who, at this time, desired to substitute the younger branch of the Bourbons for the eldest. Louis Philippe has left a curious volume of memoirs relating to this part of his life, and to his journey to Ghent. It is not difficult to see in it that he was suspected by the King. He had disapproved some of the measures of the Restoration, and was looked upon almost as a Jacobin.

Benjamin Constant, who had written violent articles against Napoleon when the news came of his departure from Elba, had fled to Angers. Since Tacitus and Juvenal, nothing more elo quent had been said against tyrants. Napoleon, who understood the man, instead of proscribing him, sent for him, asked his advice about the new Constitution, made of him a sort of political Egeria, and appointed him Councillor of State. When the Duc de Broglie saw him again, he was in his gilded uniform. There was no explanation; they jumped at once into the discussion of the articles of a new Constitution. Humboldt was present, and in high good-humor. The Duc de Broglie insisted upon the necessity of accepting the hereditary principle in a house of peers.

The Constitution appeared under the name of "Acte additionnel," and was submitted to the docile sanction of the people. It was adopted, as all preceding Constitutions had been. The Duc de Broglie took it seriously, and offered himself as a candidate for the new Chamber of Deputies; but he was not thought, he says, sufficiently Bonapartist, and he was not elected. When he returned to Paris he saw the grand review of the army—the Emperor, surrounded by his splendid staff; the Guard, the regiments who passed before Napoleon: "Cæsar, morituri te salutant." The whole of Europe was preparing to fall again on France; everybody felt that the end was approaching.

The Duc de Broglie remained in Paris till Waterloo. He speaks severely of some of the men who came back with Louis XVIII.: "His Excellency the Duc d'Otrante, the ex-Oratorian Fouché of Nantes, a monster running over with blood, with gall, and with mud, was enacting his latest treason (the smallest, surely, of his peccadilloes), in taking the oath from the hands of the son of Saint-Louis, the brother of Louis XVI., amid the acclamations of good royalists." His patron on this expedition was the ancient Bishop of Autun, who, after having successively thrown away his priest's gown on the fall of the monarchy, his toga on the fall of the Directory, his little crown of Benevento on the fall of the empire, had merely become now the Prince de Talleyrand, first minister of his most Christian King. What figure his most Christian King cut between these two *défroqués* I cannot imagine, but I have been told that when they remounted their carriage, Pozzo di Borgo laughed and said to his neighbor: "I should like to hear what these lambs have to say."

Blücher entered the Tuileries first with his Prussians. The doors of the two chambers were shut. The royalist reaction began all over France. The Duc de Broglie passes rapidly over the return of the King to Paris and the events which followed. The King struck from the House of Peers the members who had consented to sit in the Imperial House of Peers, and replaced them by noted royalists. He exiled thirty-eight persons more or less known, Carnot among the number, who, when he saw himself on the list, went to Fouché and asked him: "Where do you wish me to go, traitor?" "Wherever you like, imbecile," answered his ex-colleague of the Committee of Public Safety. The traitor soon followed the imbecile. The Government first offered Fouché the mission to the United States, he refused it; he accepted the mission to Dresden and finally retired to Grätz.

The Duc de Broglie is very severe on the House of Peers of 1815, of which he was a member. "I do not exaggerate," he says, "when I say that the violence of the dominant party, in the Chamber and out of the Chamber, recalled the worst days of the National Convention." The escape of M. de la Valette from his prison divided Paris into two camps: on one side the men whom the Duc de Broglie calls the Jacobins of the monarchy, and on the other side the moderate men of all shades of opinions and of all ranks. M. de la Valette had been arrested on the 16th of August and condemned to death on the 20th of November. Marshal Ney, arrested on the 6th of August, was condemned to death on the 6th of December. Three peers only were adverse to the condemnation, the Duc de Broglie, Lanjuinais, and Porcher de Richebourg. The Duke gives interesting details of the discussions which took place between them. The vote was nominal, and each peer had to answer these questions: Did Marshal Ney read this proclamation to the troops? In so doing, did the Marshal commit the crime of high treason? The facts were so clear that Lanjuinais said yes, though he added that, in his opinion, Ney was covered by the articles of the Capitulation of Paris. M. Porcher said yes, and begged the Chamber to be generous in the application of the law. The Duc de Broglie spoke among the last, and said boldly *no* to the second question: "There is," said he, "no crime without any criminal intention; no treason without premeditation. I see, in the facts with which Marshal Ney is justly reproached, no premeditation, no intention of treason. He left with the intention of remaining faithful. At the last moment, he succumbed to a current which seemed to him general, and which unfortunately was so. It was a weakness which will be severely characterized by history, but which does not fall under the definitions of the law. There are, besides, events which, by their nature and their consequences, are out of the pale of human justice." The Duke says that after having spoken thus, "he owes it to the Chamber to say that the temerity and, he might even say, considering the times and the circumstances, the scandal of his first vote excited no exclamation nor murmur; and that, at the exit from the session, nobody avoided him, or showed him any ill will."

This memorable sitting of the House of Peers ended very late. The Duc de Broglie returned to his house, but could not sleep. He opened his window in the early morning, and saw an English battalion marching, with drums and music. "It was at this moment that Marshal Ney, whom the fire and the sword of the enemy had always spared, fell under twelve French balls. The general of these Englishmen, the true commander of Paris, at this lugubrious epoch, Wellington, could have hindered this sacrifice with one single word. It would have been better for his glory to have even forced the text of the Capitulation in favor of Ney, than to have done violence to the conscience of Louis XVIII. by imposing on him as minister a regicide Terrorist."

Mme. de Staël had meanwhile established herself at Pisa with her daughter, with Schlegel, and with M. Rocca, whose health was rapidly sinking. At the beginning of 1816 the Duc de Broglie left for Italy with the son of Mme. de Staël. His marriage with Mlle. de Staël was celebrated in February. There were two religious ceremonies; the Protestant service was read by an Irish clergyman named De Lacy, and one of the witnesses was an Englishman, familiarly called Bob Smith, the brother of Sydney Smith, who was staying in Pisa for the health of a daughter. Robert Smith had been the friend of Mr. Canning from childhood, and was deemed his superior. When he entered Parliament, it was thought that he would be a great Parliamentarian. When he rose for the first time he could not speak; he sat down, and never tried to speak again.

During his stay in Italy the Duc de Broglie became well acquainted with Sismondi. He saw the Countess of Albany, and Gonfalonieri, the hope and ornament of the Liberals in Italy, who afterwards paid for this honor by a long captivity in the prison of Spielberg. He stopped on his return at Coppet, on the Lake of Geneva, and took as much interest in the politics of the Canton of Geneva as if he had been a Swiss. He often saw at Coppet Lord Byron, then a voluntary exile, who was living on the lake with an Italian doctor named Polidori. He also became acquainted with the famous Stein, and with Gen. La Harpe, with Lord Lansdowne and Lord Brougham. He gives very vivid portraits of these personages. On his return to Paris he took his place in the House of Peers, and his political career fairly began.

Correspondence.

JOHN HARVARD. — AUDI ALTERAM PARTEM.

To the Editor of The Nation:

Sir: I have received a marked copy of No. 1084 of *The Nation*, containing an article contributed by "Z.," of Cambridge, Eng., entitled "John Harvard and his Ancestry: Notes on Mr. Waters," which seems to call for a reply. I will refer to its statements and criticisms in order.

If "Z." will take the pains to inquire of John T. Hassam, Esq., the Chairman of the Committee on English Research of the New England Historic Genealogical Society, he will learn that more than two years ago, or early in 1884, an attempt was made to examine the Records of St. Katharine's Hospital, with results similar to those which attended his own attempt.

As to the significance of the clause in the Probate Act of Thomas Harvard's will, reserving power of probate for his brother John "when he should come to seek it," let me say that I have seen too many Probate Acts with like clauses, not to be aware that it was a "set form," which, on the face of it, shows simply that "the other executor did not then prove." The fact, however, that, within a short time after the probate of this will, *our* John Harvard made his appearance in New England, seemed to me, and I think rightfully, to impart to the "set form," in this instance, a special significance, as furnishing the reason why "the other executor did not then prove," viz.: that he may have been crossing the ocean, or that, intending so to do, he knew that he could not properly attend to the business of settling the estate of his brother. At any rate, my notice of this clause and the explanation of the non-appearance of "the other executor," which suggested itself at once to my mind, led to the discovery of John Harvard. From the extract from the letter of the late Col. Chester, published in the *New England Historical and Genealogical Register* of 1882 (p. 319), we may draw the reasonable inference that he had made this problem a matter of study: an inference which I have had confirmed by the positive testimony of one of his intimate friends, the Rev. Frederick Brown, whose loss the antiquarian world has had so recently to deplore. I will venture to assert that if Col. Chester had chanced to see this will of Thomas Harvard (hidden from a special search by a faulty index), so keen an investigator would not have failed to be struck by the significance of the "set form" in this instance, and would never have rested until he had solved the problem. He would have zealously

sought for every reference to these Southwark Harvards. He would have reëxamined and scrutinized with especial care the will of the father. He would have noticed the intimate relation which Richard Yearwood bore to the family, and would have most assuredly hunted for the will of that trusted friend of the Harvards. Finding that, he would have noted the significance of one little sentence in the bequests of the testator to his wife Katherine: "And I do further give unto her all such household stuff and so much value in plate as she brought with her when I married her." A genealogist of his large experience would have noticed this almost "set form" instantly; and instantly these questions would have suggested themselves: Was not this Katherine the testator's second wife? Was she not a widow when he married her? If so, whose? May she not have been the widow of his old friend Robert Harvard? I do not know how much experience "Z." has had; but, for myself, I can say that I never read such a bequest as "I give my wife such household stuff as she brought with her on our marriage," that the second of the questions above does not arise in my mind. I fully believe, therefore, that Col. Chester would have tried to find the will of Katherine Yearwood, if she made one; and, finding it, would have settled the question of the parentage of John Harvard. It seems to me clear that the interest he took in the subject only needed such a stimulus as that clause of reservation in the probate of Thomas Harvard's will to hurry him forward to the discovery, perhaps years ago.

Reserving for the present the consideration of errors in the text, I come to the matter of the excerpt from the records of the Clothworkers' Company, for which "Z." is entitled to my thanks and the commendation of all interested in the history of the Harvard family. Crowded with work as I was, and pressed for time, I simply held it in reserve (the story of Harvard's family and ancestry is not yet finished by any means). I could guess beforehand the nature of the genealogical evidence it would furnish, and knew just where to lay my hand on it when it should be needed. If the mother's will had not turned up, "Z." may feel quite sure this would have been presented in my first contribution, and relied upon as evidence to show that Thomas and John Harvard were sons of Robert. The mother's will found, this was not so necessary. I suppose, however, it will yet appear (subject to the decision of the Committee); only "Z.," I trust, will not think it strange if my copy differs a little from his.

Then follow two rather singular criticisms. First, as to the induction of John Sadler, the father, at Ringmer, he says: "Mr. Waters appears here to be mixing up the two separate acts of induction and institution." I derived my first information on this point from the MSS. of the well-known Sussex antiquary, Sir William Burrell, who wrote "Ind.," which I ventured to "extend," to quote an expression used by "Z." Further research proved Burrell to be right.

Second, in regard to John Sadler, the son, Master of Magdalen College, Cambridge, my statement, gathered from a well-known book, to which I referred, is thus criticised: "This statement can only have been made in ignorance of the facts." It seems to me that the charge of ignorance applies to Le Neve and not to me.

My omission of *uno* (!) before *executorū* and the error (!) of *petitur* for *petitum* remain to be considered. For calling my attention to the former, "Z." has my thanks. I find, on looking back, that I had already noticed this omission. I hope "Z." will pardon me if I suggest that the omitted word, in the present instance, is *unius*, and not, as he suggests, *uno*. As to the error of *petitur* for *petitum*, I must very decidedly take issue with "Z." In my reading of some thousands of English wills I must have seen some scores (I may say hundreds) which contained in the Probate Acts the "set form" to which "Z." refers, and I do not believe I have ever seen *petitum* or anything but *petitur*. I do not feel called upon to enter the lists as champion for the clerks who chose to employ the future active participle rather than the supine in "um" after the verb of motion, to express intention. I simply note the fact that they did so choose and I but followed copy. I did not even "extend" the original into *petiturus*, as probably "Z." would have done; although I cannot say that I have any serious objections to make to that, provided that due care be taken, *e. g.*, if the character ꝑ is to be extended, the context should be carefully examined, and the sense should determine whether it be extended into "par" or "per." To give examples—ꝑtem would be *partem*, nuꝑ would be *nuper*, and ꝑ *octo annos* would be *per octo annos*.

HENRY F. WATERS.

LONDON, ENGLAND, May 8, 1886.

COLLEGIATE ALUMNÆ.

TO THE EDITOR OF THE NATION:

SIR: A recent number of the *Nation* contained the review of a work describing life in an Eastern college, and conclusions were drawn from the book regarding the progress made in the collegiate education of women. If these conclusions are based solely on the books that have as yet appeared intended to describe the college life of women, they are unfortunately correct—the opportunities presented for higher education have simply prolonged for four years the period of boarding-school life. But the great majority of college alumnæ have not been inclined to write novels and romances, and while they feel it is only natural that the general public should derive its impressions from the works of those who have, they also feel that these books present as unfaithful a picture of the aims and work of the average college woman as do the current newspaper comments on athletics at Harvard and Yale of the intellectual life of these institutions.

The time is yet too short for them to point to many great results to substantiate their position, but beginnings have been made which it is hoped will put their work before the public in a truer light. In 1882 an organization was perfected in Boston of the alumnæ resident in the East of the thirteen leading co-educational and women's colleges, and it now enrolls 450 members. In 1883 a similar association was formed in Chicago of Western alumnæ; its present membership being eighty. Branch organizations have been established in all the leading cities East and West, where local meetings are held in addition to the annual meetings of the parent organizations. It is believed that these two societies fairly represent the aims of the college women of this country.

One purpose of the associations has been to investigate all questions affecting the higher education of women, and by scientific methods to enforce the theories of those advocating such education. The two objections most frequently urged against the advanced training of women are, first, that they are physically incapable of it; and, second, that it will be detrimental to the best interests of society by withdrawing women from domestic life. The first subject undertaken by the Eastern Association was an inquiry into the effect of collegiate education upon the physical condition of women. Elaborate statistics were collected by the Association, and afterwards compiled by the Massachusetts Bureau of Statistics of Labor. It was the wish of those engaged in the work that these facts should speak for themselves, and the general attention that has been called to them, and the conclusions derived from them by the thinking public, they feel have not been unfavorable to the cause.

A glance at the work already accomplished and at what has been begun will indicate the thought of the Association in regard to the second objection made. Among the first plans of the Eastern Association was the formation of a club for the study of the various phases of household sanitary science. Practical investigation was made of the subject of drainage, plumbing, ventilation, etc., a bibliography was prepared, the results of the studies made were put in circulation, and material aid given to others outside of the society on this important but neglected subject. Careful study has also been made of the opportunities for work open to women who have others dependent upon them for support, but who are prevented by domestic duties from seeking salaried positions. It is believed that important assistance has been given in the information collected and distributed concerning horticulture, silk culture, bread-making, fruit-canning, and other domestic professions. Again, it has been the aim of the Western Association to make inquiries concerning the training of women in household science. They have no desire to revolutionize society in any way, but they realize that hap-hazard ways often prevail in many households; that while much has been done to open new lines of work to woman, but little has been done to improve her work in those fields that have always been considered by the opponents of higher education for women legitimately hers. Plans have therefore been perfected to make extended inquiries into the advantages afforded for the industrial education of women, to consider the practical results of what has already been done, and to devise the ways and means for giving further help on this much-vexed question.

In the line of purely scholastic work, clubs have been formed among the members for the study of political science, art, local history, and kindred subjects. With the hope of still further stimulating the desire among women for sound scholarship, the Western Association has recently taken steps to secure the establishment of a fellowship open to women. But two colleges as yet offer such privileges, and it is earnestly believed that greater opportunities in that direction would be as productive of good results as has been the establishment of fellowships at Harvard and Johns Hopkins.

Other subjects have been considered by the associations, but it is hoped that the above will be considered indicative of an earnest desire on the part of college-trained women to prove "that the college course is not looked upon merely as an experience of the past, or as a means of securing a livelihood, but as a preliminary training which leads to a broad sympathy and ready co-operation with the interests of society."—Respectfully, M.

May 27, 1886.

NATIONAL DIFFERENCES OF LANGUAGE.

TO THE EDITOR OF THE NATION:

SIR: The unpretending little volume on French-English Pseudo-Synonyms, which you mentioned the other day in your Notes, is interesting not only in itself, but from the avenues of thought it leads into, but does not itself pursue. One of these is of the difficulties of translation and its frequent errors, to the consideration of which you have lately given so much space; and Mr. Attwell's illustrations of the subject are excellently to the point—both his quotation from an English newspaper to the effect that Père Hyacinthe had remarked that the cross had been *brutally* ("brutalement") removed from the Pantheon, and his reference to a mistake in an English

translation of a French sketch of peasant life in Russia, where "the sacred images in his humble room" were spoken of. This is a perfect example of how inaccurate a literal translation may be. "Image" in French may be *image* in English; but it is also *picture*, and that must be its meaning in such a connection, since sacred images are not permitted by the Greek Church. Mr. Attwell's personal reminiscence is amusing, of "hearing a well-informed man state as a grave fact, that it was the custom of the faithful, and even of Protestant visitors, to kiss the Pope's mule [slipper] while the Holy Father gave his blessing seated on the docile animal." His delusion might well have been supported by the Provençal "dicton," of which Daudet has made so diverting a story—"Cet homme-là, méfiez-vous! il est comme la mule du pape, qui garde sept ans son coup de pied."

But another class of thoughts which this book suggests is of the qualities of national character evidenced by the presence or absence of certain words in a language. Do not glance on at my next sentence, fearing lest the everlasting old "home" and "chez soi" is about to flow from my pen! No; my few trifling illustrations—most of them drawn from Mr. Attwell—are connected with political or legal rather than social phraseology.

"No French word," says Mr. Attwell, "renders at all closely the sense of the English noun 'bribe'": *présent à corrompre*, one must say clumsily, or use *appât*, which is far away. For our verb they have *suborner*, *corrompre*, *gagner*, *acheter*, not conveying precisely the same idea. Yet one would suppose it difficult to write history intelligibly—whether Roman, English, or French (we will not speak of American)—without a word expressing "bribery" as well as "corruption." I am reminded of a conversation between Dr. Whateley and M. De Beaumont, which is reported in one of Sir Charles Lyell's letters, when De Beaumont said: "Then you have another word, 'job,' which we cannot translate; it is a sublime word that—God knows we have the *thing*." It is curious that the English "bribe" is derived directly from the French *bribe*, and acquired its own meaning probably from the fact that the French word, meaning originally a "hunk" of bread, came to mean a piece of bread given to a beggar. For the last hundred and fifty years and more (through the signification of "broken victuals," "scraps") it has been used, in the plural, almost as a synonym of "citations," quotations; or, more exactly, for fragments of conversation or of books.

Again: "No French word represents *trespass*, in the sense of unlawful passing over a boundary of land; this offence is expressed by the phrase *violation de propriété*." *Trépasser* (from which trespass is derived) retains, from the Latin *transpassare*, only the figurative meaning 'to pass from life to death,' 'to die,' and the noun *trépas* is never made use of save in a highly poetic style; though in legal phrase "the deceased" may be *le trépassé*. It is evident that Frenchmen do not allow "trespassing on my grounds," and consequently have no word for it.

A word the signification of which we might do well to adopt from the French is *dilapidation*, used for "squandering of public revenues." Our "dilapidation" is in French *délabrement*; but we could easily retain our present use, and add to it the figurative use, which is in accordance with the Latin derivation and is as admirably suggestive.

These remarks might be indefinitely extended; but I have said enough to show the interest that attaches to such observations. * *

Notes.

We have received advance sheets of Gen. J. C. Frémont's 'Memoirs of My Life,' an elaborate work in which "the Pathfinder" will dwell particularly on his Western explorations and the seizure of California; the Presidental campaign of 1856; and his war experience—the last two divisions being in the nature of a vindication. Mrs. Frémont contributes a sketch of the life of her father, Senator Benton, in connection with Western expansion. The full-page steel engravings are a pleasant reversion to an almost obsolete style of illustration. The narrative cannot fail to command a high degree of interest, and may not improbably revive old controversies while rectifying current errors. The publishers are Belford, Clarke & Co., Chicago and New York.

Houghton, Mifflin & Co. announce an entirely new and complete edition (in two sizes of paper) of the writings of Longfellow, including his translation of Dante, in eleven volumes. The various readings of the poems will be recorded in footnotes, as well as the dates of composition and publication, for which the recently published biography affords invaluable data. Indexes will be given where convenient. There will be several portraits on steel. The large-paper edition will be limited to 500 copies. Delivery will begin in September.

Upon the completion of Mr. Lodge's edition of Hamilton's works, now near at hand, G. P. Putnam's Sons will undertake a new and complete but limited edition of the works of Benjamin Franklin, edited by Mr. John Bigelow, in ten volumes, uniform with the Hamilton. The Autobiography will be printed from the original MS. now in possession of Mr. Bigelow, who will also avail himself of the Stevens collection recently acquired by our Government. It is hoped to make this an *édition définitive*.

D. Appleton & Co. announce a 'Centennial History of the Protestant Episcopal Church in the Diocese of New York, 1785–1885,' prepared by General Wilson, and freely illustrated; 'Earthquakes and Other Earth Movements,' by Prof. John Milne, of the Tokio College of Engineering; and two volumes in a new "International Education Series," viz.: 'The Philosophy of Education,' by Dr. J. K. F. Rosenkranz, of Königsberg; and 'A History of Education,' by Prof. F. V. N. Painter, of Roanoke College, Va. Dr. Wm. T. Harris edits the series.

An educational novelty is promised in July by Ginn & Co., 'A Beginner's Book in French,' by Sophie Doriot, "with comic illustrations."

A new and enlarged edition of Prof. W. O. Crosby's 'Common Minerals and Rocks' is promised by D. C. Heath & Co.

Roberts Bros. have brought out a fresh edition of Miss M. F. Rossetti's 'Shadow of Dante,' first published in 1872. Time has not, we believe, impaired the value of this guide and key to the 'Divine Comedy.' The same publishers have added 'Eugénie Grandet' to their series of translations from Balzac.

Mr. F. M. Crawford's 'Mr. Isaacs,' as the first issue in Macmillan's Summer Reading Series, in paper covers, makes a very attractive appearance.

To their "Traveller's Series" G. P. Putnam's Sons have added Hood's 'Up the Rhine,' with the author's illustrations.

It is evident from the third edition of Mr. Charles Eyre Pascoe's 'London of To-Day' (Boston: Roberts Bros.) that this unconventional guide-book is not to be fettered in improvement by stereotype plates. The changes from last year's issue are very numerous: there are forty-three chapters in place of forty-seven, filling, however, the same number of pages; the arrangement of topics as of cuts has been freely altered; many of the illustrations are new; everywhere one sees fresh matter, as, under Theatres, the visit of Mr. Daly's company from New York. Mr. Pascoe, introducing the tourist to shops and hotels, does not always seem disinterested, but we are not prepared to say that any one will suffer by being biassed by him. His next improvement ought to be an index.

'Through the Yellowstone Park on Horseback,' by George W. Wingate (O. Judd Co.), is the story of a party of ladies and gentlemen who made a most enjoyable trip through the National Park by wagon and saddle, camping along the roadside. Those contemplating a journey to the Yellowstone, and knowing no more about the country than they do about Africa, as was the case with our author before leaving home, may find this book entertaining reading. As a guide-book, however, it cannot be highly recommended. The party were in the Park only ten days, and managed to pick up a good deal of misinformation from stage-drivers and self-appointed guides who, apparently, were also making for the first time a trip through Wonderland. A chapter on the Mammoth Springs is singularly faulty in its statements. Yellowstone and Shoshone Lakes, Mount Washburn, the Gallatin Mountains, the Fossil Forest, and the charming country between the Mammoth Springs and Yancey's were unvisited. That it is possible to make such excursions without too great expenditure of time and money is clearly shown by the author.

We have received Rowell's 'American Newspaper Directory' for 1886, a volume of nearly 2,000 pages which is not unwieldy, and is, as usual, a very handsome specimen of typography. Of the many works of its class it stands incontestably at the head. So far as our observation extends, it has always been free from traces of axe-grinding, and has endeavored in good faith to obtain and publish the exact truth concerning the newspapers which it catalogues, with exhaustive details. This spirit is not met half way by all newspaper proprietors—for reasons not far to seek.

Our readers have already made the acquaintance of the *Southern Bivouac* by our occasional comments upon its monthly bill of fare. It is a literary and historical magazine published at Louisville (B. F. Avery & Sons), and if on its literary side it is relatively weak, its historical articles (principally in connection with our civil war) have had and still have a very considerable value, and can by no means be neglected in the mass of military reminiscence now so much in vogue in our Northern periodicals. Maps, portraits, and other illustrations of good quality have been liberally employed by the editors, Messrs. Basil W. Duke and R. W. Knott. These remarks have been suggested by the completed and bound volume, No. 1 of the new series, now before us. The page is comely and the print excellent. We speak under correction, which we do not anticipate, when we say that the *Southern Bivouac* represents the high-water mark of Southern periodical literature in our day. This volume was worth a fuller index.

Mr. John Oldcastle's record of the life of 'The Cardinal Archbishop of Westminster' (Catholic Publication Society) from the time of the Gorham judgment in 1850, which determined Manning to join the Catholic Church, has an iconographic value that may be pointed out here. There are no fewer than five portraits of Manning, from early childhood to the present year.

The reprinting from the Report of the Michigan State Board of Health for 1885 of Mr. Erwin F. Smith's paper upon the 'Influence of Sewerage and Water Supply on the Death-rate in Cities,' read before the Sanitary Convention at Ypsi-

lanti last July, gives the opportunity for wider circulation of a very elaborate, careful, and valuable document. The author disclaims presenting anything new. In the sense of bringing to light some new ultimate fact, that may be true; but he has correlated so much, and has done it so well, that his work has a much greater value than the mere setting forth of something not before known. The paper, which is supported by more than thirty tables and is illustrated by several graphic charts, discusses especially the association of cholera, typhoid fever, and diphtheria with good and bad sewerage; the rates of sickness and mortality; the economic value of men sick and well, and the possibility of increasing the world's wealth-making power and of diminishing its ill-health and suffering by engineering agencies. The mere money waste by typhoid fever alone the author fixes, using a very low estimate, at $25,000,000 for the United States year by year. Diphtheria he does not regard as especially related to sewers.

The amiable if not very strong features of General Master Workman Powderly seem to have been well caught in the life-size lithographic profile sent us by J. H. Bufford's Sons, 293 Broadway.

No. 21 of the *Bibliographical Contributions* of the Library of Harvard University is a quinquennial continuation of a corresponding list published in 1881, which covered the publications of the University and its officers for the decade 1870-1880. We now have in sixty-two pages the publications for 1880-1885, together with the chief publications relating to the University. The fecundity of Mr. C. F. Adams, jr.'s "College Fetish" is shown in the large number of pamphlets and articles which it evoked; and the student of the question will find in these lists a pretty exhaustive guide to the current literature of the controversy over Greek (and the classics generally) in education. We may notice also the bibliography and phyllography—to coin a word signifying lists of newspaper and periodical articles—of John Harvard, and of the Elective System and College Discipline.

Sotheby, Wilkinson & Hodge, London, will sell on July 1 the second portion of the late Henry Stevens's Historical Collections relating to America. Copies of the catalogues can be obtained of the *Bookmart* Publishing Co., Pittsburgh, Pa., and of C. C. Soule, 26 Pemberton Square, Boston. It contains an index to 603 numbers, good as far as it goes, but with a geographical classification mainly. Mr. Stevens's own works are embraced in Nos. 491-521, the last being his 'Recollections of Mr. James Lenox,' just from the press.

Our American periodical indexes are beginning to have foreign imitators. Last year in Russia was issued a systematic table of articles contained in twelve leading reviews from 1830 to 1884; and Italy has just published a 'Catalogo metodico degli Scritti contenuti nelle Publicazioni periodiche italiane e straniere,' of which the first part, "Scritti biografici e critiche," has 534 pages, and 17,209 entries taken from 241 reviews. At the end is an index of authors.

The unfortunate Count Porro and his junior associate, Prof. Licata, slain in Harrar, are commemorated with portraits in *L'Illustrazione Italiana* for May 9, as is also the late Dr. Agostino Bertani, the eminent friend of Garibaldi and his companion in the field. Noteworthy, too, are numerous engravings from photographs of Mandalay, furnished by the Italian physician to King Theebaw.

Mr. Wm. R. Jenkins has begun his promised series of "Novelle Italiane" with the 'Alberto' of Edmondo De Amicis. English notes have been added by Prof. T. E. Comba. The eighth of Mr. Jenkins's "Contes Choisis" is 'Les Fiancés de Grinderwald' and 'Les Amoureux de Catherine,' by Erckmann-Chatrian.

The second volume of M. G. Vapereau's 'Eléments d'histoire de la littérature française' (Paris: Hachette; Boston: Schoenhof) makes a very good text-book of elementary literary history, biographical notices, and well-chosen extracts from the principal French writers of the seventeenth century. The author has in many cases merely reproduced parts of his very useful 'Dictionnaire des Littératures,' taking care, however, to present his subject in a more didactic manner, and omitting all that would tend to lessen the value of the work as a manual in the schoolroom. There is, for such an elementary work, rather a display of erudition, in the long lists of "works to be consulted" appended to every biographical and literary notice; but in this M. Vapereau seems only to be following the fashion which makes of many school-books works fitted rather for teachers' guides than for scholars' manuals.

The more important papers in M. Octave Uzanne's 'Nos Amis les Livres: causeries sur la littérature curieuse et la librairie' (Paris: Quantin) are those recording his personal recollections of the late Paul Lacroix, those indicating the hitherto uncollected writings of Baudelaire, and those describing the strange career of Jules Vallès. The tenth chapter is a lively study of "Le Livre à Paris." The seventh is a discussion of the many books which the police have seized, generally for good reason. It is to be noted that, although M. Uzanne himself writes cleanly and without offence, he betrays a certain hankering for the books which every gentleman's library should be without. 'Nos Amis les Livres' is beautifully printed in a limited edition of 1,065 copies only, and is illustrated with an inexpensive frontispiece—an etching by M. H. Manesse. There is an outline of an index, if we may so call it, altogether insufficient.

As M. Jules Claretie, now the manager of the Comédie-Française, has had to resign his position on the *Temps*, the 'Vie à Paris, 1885' is the last volume of his collected *chroniques* which we are likely to have for a long time. In the six volumes to which the series extends, the historian of the future will find a clever, brilliant, and honest record of life in Paris in the years 1880-5, much good criticism, many neatly turned anecdotes, an abundance of personal reminiscence, and a great variety of odds and ends of amusing information. Of especial interest in this volume are recollections of Edmond About and Victor Hugo.

The *Bulletin* of the Cercle Saint-Simon gives the programme of a forthcoming "audition de musique et chant de l'époque révolutionnaire" before the members of this active historical society—we believe, the second concert of its kind, the first having been folk-songs. The words of three of the choruses are printed in advance, ladies participating in these, as well as singing some of the solos.

Fifty years ago saw the beginning, under the auspices of Heinrich Berghaus, of physical atlases of the globe, and the name, of good right, remains at the head of the wholly new edition just begun by Justus Perthes (New York: Westermann)—'Berghaus' Physikalischer Atlas,' edited, with the aid of six eminent specialists, by Prof. Dr. Hermann Berghaus. The three maps of the first instalment are a pleasure to the eye and to the understanding. They represent the Mediterranean and Black Sea, with upwards of twenty side-maps; the isothermal lines; the flora of Europe—all in lively and harmonious coloring.

It will be remembered that Prof. Otto Keller's theory of the construction of the Saturnian verse ('Der Saturn. Vers als rhythmisch erwiesen,' Leipzig, 1883) was attacked with bitterness by Lucian Müller ('Der Saturn. Vers und seine Denkmäler,' Leipzig, 1885), whose apparently crushing arguments hinted at the danger in presuming to enter a field which he considered his own. Others, as well as Prof. Müller, still stoutly maintain that

"Dabunt malum Metelli Naeuio poetae"

was the metrical prototype of such a line as

"The queen was in her parlor, eating bread and honey."

Prof. Keller has, however, lately published a second essay (Prague, 1886) in rejoinder to Müller. His examination of this difficult subject is rather too technical for anything short of a philological journal; but to students of the classics we commend his most interesting and scholarly answer.

The University of Pennsylvania has recently established a limited number of unendowed post-graduate fellowships in political science and history. Graduates of any American college, either in arts or science, are eligible. Opportunities for advanced study will be open free of charge to the holders of these fellowships. Applications and testimonials should be sent to Prof. E. J. James, University of Pennsylvania, West Philadelphia.

—It became evident to the friends of the reciprocity copyright bill, upon the first day of the hearing before the Senate Committee on Patents, that Mr. Hawley had determined to abandon the bill, which, though introduced by him, he was careful to explain was really drawn up by the Authors' International Copyright League. The Senator's sensitiveness concerning the application of the term "pirates" to persons who make a business of republishing foreign books without paying the authors—who in doing so, according to Mr. Hawley, only "publish what they have a perfect legal right to publish"; his reading of selections from the tariff law showing what protection book-manufacturers now enjoy, only to admit that he favored a legislative enactment requiring that foreign books, in order to be copyrighted here, must be printed in this country; and his defence of the prohibition of importation, together with his anxiety to say something to promote a harmonious support of some bill "satisfactory to all," could not fail to convince his hearers that, from a defender of the simple *right* of authors, he had been converted into the anxious champion of *protection* for paper-makers, binders, compositors, stereotypers, printers—every one (but the author) employed in the production of a book. It was therefore no surprise when the Committee reported, not the "Hawley" bill, but Senator Chace's bill, which also had been referred to it, January 21. The amendments in the reported bill (many of them mere verbal corrections) are not such as change the intent of the measure; the most important being the striking out of the clause in the original bill which enacted that the copyright upon a foreign work should be void in case the American manufacturer abandoned the publication of it—in other words, that the very tort suffered by the author in his publisher's breach of contract should give occasion to the legal confiscation of his entire property!

—The bill as now presented to the Senate provides for such amendment of the chapter of the Revised Statutes relating to copyrights as will extend all its provisions to the works of foreign authors, provided the name of each book or other article copyrighted shall be recorded in the office of the Librarian of Congress not later than the day of publication in the country of origin, and that two copies of the best edition printed in the United States shall be deposited in the same office within three months after recording the title; from which date, until the expiration of the copyright, the importation of other editions is prohibited, and collectors of customs and postmasters are authorized to seize all copies received at the custom-houses or post-offices. But the copyright obtained for a translation does not

give the right to exclude the original work for which no American copyright has been secured. The fee for recording the title is one dollar, and is to defray the expenses of lists of articles copyrighted to be prepared by the Librarian of Congress (who is authorized to employ an additional clerk for this purpose), and to be printed by the Secretary of the Treasury, at intervals of not more than a week, for distribution to collectors of customs and postmasters, and also to such persons as may subscribe for them at a sum not exceeding five dollars per annum. Each number of a periodical is considered an independent publication, subject to separate copyright, and so, also, each volume of a book, provided the volumes are published at different times and "the first one shall not have been issued before this act shall take effect"; and it seems intended, too, to provide that *revised editions* of books heretofore published, if issued after the act goes into force, may obtain a copyright, "unless they form part of a series in course of publication at the time this act shall take effect." But the wording of section 4 is not quite plain. The two clauses which we have quoted are amendments, and seem to have been interpolated for the express purpose of preventing the proprietors of the 'Encylopedia Britannica,' and consequently all the authors concerned in its production, from availing themselves of the benefits which it is the purport of the bill to grant to English authors—a most unjust discrimination. The final section enacts that the bill shall go into effect July 1, 1887.

—One of the most curious perversions of history of which the late Henry C. Carey was guilty—and he was guilty of a good many—was in his notion that the decay of Ireland was to be traced to "British free trade." This idea of the high-priest of the protectionists has been cherished by his disciples, and turns up frequently in their denunciations of the unutterable greed and duplicity of Great Britain. Its basis, of course, is in the vicious policy of protection and mercantilism which Great Britain followed in the eighteenth century in regard not only to Ireland, but to the American colonies and all the rest of the world. No one defends that policy nowadays, and it has about as much pertinence to the protective controversy of the present day as the war of the Revolution has to our present relations with Great Britain. Nevertheless, our friends the protectionists very often hurl it in our teeth; and very naturally the Irish home-rulers charge it up in their list of the oppressions of the British. There is consequently some interest, over and above the purely historical interest, in finding out exactly what it is all about. Mr. W. Cunningham makes a valuable and interesting contribution to our knowledge of the subject in his article in the April number of the *English Historical Review*, on the Repression of the Woollen Manufacture in Ireland. He shows that the manufacture which was repressed by Parliament in 1698 and 1699, was a manufacture of cloths, chiefly broadcloths, called "draperies." It was carried on by the Protestants in Ireland, and had barely begun. A much more important and long-established industry, that of making friezes, was carried on by the Catholics. This was not interfered with at all; in fact, it was expressly excepted from the statutes. The Protestant cloth manufacture was repressed much more for political reasons than from any desire to check the economic development of Ireland. In any case, the industry was as yet insignificant, and its repression could have had but very slight effect. Of course no one can tell whether the industry, even if let alone, would have grown to any importance; probably it would not. The oppression, such as it was, was by the English in England on the English in Ireland. Thereby vanishes one of the grievances of Irish agitators; but as they have a good supply of others, the loss will not cause them much anxiety. Our protectionist anglers for the Irish vote might be more embarrassed by having one of their pet illustrations of the wickedness of Great Britain's commercial policy thus subjected to serious correction; for their stock of arguments is running low. But they will doubtless get over the difficulty by simply disregarding the results of a dry and prosaic historical investigation.

—M. Eugène Pellissier has put together a book of more than 400 pages, designed "for schools and candidates for public examinations," on 'French Roots and their Families' (Macmillan & Co.). The getting up of the book as to size, type, paper, binding, and general disposition does honor to its publishers; as to its practical utility there may be some question. There is just enough of etymology to make the learner wish for more if he is curious in such things, not enough to fix any scientific principles of derivations, and too much for one who only looks for a practical knowledge of words. There may be a certain utility in grouping together words of undoubted origin which mutually shed light on each other, but what advantage is it to the learner to put under *gueule*, on account of the Sanskrit *gar*, such words as *gargoter*, fr. root *garg=gorg; gargote, gargouille, gargouillis, gargamelle, gargariser, gargarisme*, etc.? And, besides, it may be doubted whether these words are all of the same family. Nor are the etymologies given always to be fully relied on. The writer has a tenderness for Greek and Sanskrit roots, and in this direction he may be misleading. Thus, for *nantir* he gives Low Latin *namium*, Greek *νέμω*, and there are many such etymologies given, with generally a Sanskrit root added, which ought to be verified by turning even to such elementary books as Scheler and Brachet. Even when the derivation may be relied on, it sometimes looks puzzling as given by M. Pellissier, thus: "*Tôt* (soon, early), L. *tostus* for *torstus*, fr. *torrere*, Scr. *tarsh*=to be dry." Evidently such criticism of the book as this could be carried on almost indefinitely, as the words given above were taken almost at haphazard. In spite of all this, 'French Roots and their Families' is not a useless book. It may, carefully controlled, be of real service in furnishing material to a teacher of French.

—The May number of the *Deutsche Rundschau* contains the conclusion of the notable series of articles on "Contemporary American Fiction," by Anton E. Schönbach. He devotes this chapter to the "realistic" school, as distinguished from the "analytical" discussed previously, and expends on the works of F. Marion Crawford and the politico-social novels 'Democracy,' 'Through One Administration,' 'The Breadwinners,' etc., a wealth of scholarly criticism hardly justified by their intrinsic importance, but in refreshing contrast to the ignorant flippancy displayed by so many foreign critics of things American. Judge Tourgée opens, somewhat strangely, the chapter on Southern novelists. Even his 'Fool's Errand,' Herr Schönbach says, shows the politician rather than the artist, and his other novels are severely dealt with. Cable naturally claims considerable space, and the description of the varied aspects of Southern life is steeped in colors as rich as Cable's own. Full justice is likewise done to "Uncle Remus," to whose stories the writer assigns not only a high literary but a distinct ethnographic value. He is scarcely less lavish in his praise of "Charles Egbert Craddock." Many delicate touches reveal Herr Schönbach's thorough familiarity with the lesser literary lights of the past and present, the allusion to Edmund Quincy as "the American Steub" being a case in point. That his fondness for our literature has not disturbed the clearness of his critical vision is evinced by his comparison between American and German novelists, from which we transcribe a few sentences: "As a rule, American novelists give us too many interesting and too few simple characters. But in one respect they show their superiority, especially to us Germans—in their high technical finish. Such sins against the most elementary rules of novel writing as our principal story-tellers commit every day — defective exposition, failure to maintain the level, purposeless motives and episodes — are rare with them. Therefore the average American novel is superior to the average German one, and an intelligent reader may enjoy an English or American novel of fair quality without a sense of irritation, whereas one equally good by a native writer will excite his ire. This accounts for the fact that America, while possessing no novelist of the first rank, has several who are very near it."

—The May *Rundschau* contains still another article on an American subject, "The Californian Plain," by E. Reyer, the fourth of a series. Among the other contributions a particular interest attaches to Julian Schmidt's posthumous essay on "Leopold von Ranke," sent to the editor only twelve hours before the writer's death, and hardly published before Ranke, too, is taken away. Paul Heyse's one-act tragedy "Zwischen Lipp' und Bechersrand" ('Twixt the Cup and the Lip) is a painful surprise to those who have learned to associate the grace of Heyse's execution with good taste in the choice of subjects. The idea of a bride discovering on her wedding night that her husband had seduced her mother and killed her father, would have been spurned by at least the æsthetic sense of a Feuillet or a Dumas. Dr. von Gizycki, in "Letters on Modern Philosophical Literature," disposes of about thirty philosophical works, in a manner exemplified in his "review" of John Fiske's 'Outlines of Cosmic Philosophy': "The best-known representative of evolutionism in America is John Fiske, whose principal work, 'Cosmic Philosophy,' however, I have not yet read."

—Leopold von Ranke died on the 21st of May. On the 21st of last December he celebrated (or, rather, all Germany celebrated) the ninetieth anniversary of his birth. According to a discovery made by one of his relatives, a quarter of a century ago, in the church book of his native Thuringian village, that celebration ought to have taken place twenty-four hours earlier, but the historian ascribed greater authenticity to the traditions of his family than to the ecclesiastical record. Religious earnestness and love of truth and accuracy seem, in fact, to have been with Ranke family heirlooms, nor did they abandon him to his death. He was endowed with great strength both of body and mind, and what he achieved as a close student at the Gymnasium of Pforta was hardly less surprising than his efforts between the ages of eighty and ninety. Greek literature powerfully attracted him, but, after finishing his university studies at Leipzig, he devoted himself to historical research, combining with it theological, philological, and classical inquiry. Thucydides, Luther, Niebuhr, and Fichte he subsequently declared to have been his principal masters. In 1818 he was appointed professor at the Gymnasium of Frankfort-on-the-Oder, and after publishing the first (and only) volume of his 'Geschichte der romanischen und germanischen Völkerschaften von 1494–1535' (1824) and 'Zur Kritik neuerer Geschichtschreiber,' he became, in 1825, professor of history at the Univer-

sity of Berlin. This position he held till his death, though interrupting his earlier professorial activity by years of research in the libraries and archives of Vienna, Venice, Florence, and Rome, preceded by discoveries of extraordinary interest in the collections of Berlin. Historiography from the original documentary sources, carried out with absolute objectiveness, with precision and clearness, though not without artistic grouping and due regard for relief and individuality, now became the task of his life and the ideal of a school of historians of which he is justly deemed the founder, though himself a disciple of Niebuhr, and in part also of Dahlmann. Giesebrecht, Sybel, Duncker, and Waitz (who died a few days after him) may be mentioned as his foremost followers. Dahlmann's friend, Gervinus, trod a different path, in which subjective and dogmatic illumination was a guiding consideration. Ranke at first concentrated his labors upon the history of the sixteenth and seventeenth centuries, producing successively 'Fürsten und Völker von Südeuropa im 16. und 17. Jahrhundert' (1827), 'Die römischen Päpste, ihre Kirche und ihr Staat im 16. und 17. Jahrhundert'—his masterwork—(1834-36), and 'Deutsche Geschichte im Zeitalter der Reformation' (1839-40). To this field belong his later voluminous works, 'Französiche Geschichte,' etc., and 'Englische Geschichte,' etc., the 'Geschichte Wallenstein's,' and other writings. The history of the Prussian state, of which he was appointed historiographer by Frederic William IV., shortly after his accession to the throne, he treated in 'Neun Bücher preussischer Geschichte,' 'Zwölf Bücher preussischer Geschichte,' and 'Der Ursprung des Siebenjährigen Kriegs'; in biographies of Frederic the Great and Frederic William IV.; in 'Hardenberg und die Geschichte des preussischen Staats von 1793-1813' (1880-81), and several other publications. One of his early and most popular productions was his sketch of the Servian rising for independence, which he reissued in a revised form in 1879. Of his 'Weltgeschichte,' which he began as an octogenarian, and planned to embrace nine volumes, about one-half has appeared. He had, however, long ceased to work with his own hand and eyes, though continuing active, wide awake, and indefatigable to the last. In politics he was conservative. King William ennobled him and made him Chancellor of the order "*Pour le mérite*," as successor to Böckh.

—The difficulties of archæology and the uncertainty of its chronology were well shown by some fragments of a vase that was last autumn laid before the Academy of Inscriptions. Every French antiquary would have pronounced it prehistoric if it had been found alone, and yet it contained, when unearthed, coins struck as late as 181. Either the vase itself was a survival, or else vases of that type continued in use as cheap utensils long after the age in which they are supposed to have originated. M. Robert, who brought the matter before the Academy, mentioned a similar discovery, made in the Crimea during the war, of a house containing bronze coins of the ninth and tenth centuries, and among the domestic utensils various cutting instruments of polished stone, which, found alone, would surely be referred to the stone age. The fact is, as we have before insisted, that different states of civilization coexist. The poor continued to make use of primitive furniture and tools long after the rich could indulge in articles of art of a much higher civilization. It was not till machinery to make things cheaply arose that there came to be anything like uniformity in such matters. Now the rich are separated in the style (not of course in the material) of dress and furniture by only a few years, sometimes by only a few months. Formerly they were centuries apart.

NETTLESHIP'S ESSAYS.

Lectures and Essays on Subjects Connected with Latin Literature and Scholarship. By Henry Nettleship, M.A. Oxford: The Clarendon Press; New York: Macmillan.

A GOODLY sheaf of papers, most of them published before in various forms, now gathered and dedicated to the memory of Mark Pattison. The volume shows nothing of the spirit of bold search for striking conclusions, but all the more for that it is a volume of solid merit, likely to guide the ambitious student in right directions, and likely to win the cordial respect of older scholars, who will often find that Prof. Nettleship has put with singular clearness and neat felicity of statement some well-ripened principle of criticism.

The range of fruitful studies in Latin scholarship to which these papers bear witness is very wide. A fitting keynote is struck in the opening tribute to the character and influence of Moritz Haupt. Nettleship, then already a mature student himself, heard lectures on the Epistles of Horace from this remarkable teacher in 1865. Many a foreigner at German universities must have had an experience analogous to his, which he thus describes:

"I may say without exaggeration that these lectures introduced me to a method of teaching which was wholly unknown at the time in Oxford, and perhaps in England. We learned in Oxford to read the classics, to translate them on paper, to think and talk about them, to write essays on them; but of the higher philology, of the principles and methods of textual criticism—in other words, of the way to find out what the classical writers really said—we were taught next to nothing. At least I can only say, speaking for myself, that although I was then beginning to write a commentary on parts of Vergil for Conington's edition, I had to instruct myself, with Conington's assistance, as it were piecemeal, and was without any general knowledge as to the kind of problems which might be expected to meet an editor in dealing with a classical author."

But Nettleship is perfectly aware that whatever of reproach there may be in these words, cannot fairly fall entirely to the charge of Oxford teachers—he doubts whether it can be said "that our average social and intellectual tone is seriously favorable to anything but the vigorous performance of tutorial duties, the preparation of candidates for examination." We fear there are not yet many teachers in America who find abundance of pupils willing to be taught the way to the sources for their information about the peoples and the literatures of antiquity. It is so much easier to commit to memory the teacher's opinion, to assume an air of modest submission to the higher competence of some great scholar. Nettleship treats Haupt's failings very gently, as indeed he ought; but he finds that he "must own to having experienced a feeling of weariness and repulsion at witnessing this castigation of the defenceless Orelli carried on for four days in the week during a period of three months."

Papers on "Early Italian Civilization" and on the "Earliest Italian Literature" treat of the linguistic and literary palæontology of the peninsula. They show abundant learning, candor, and caution, and are readable withal. The author decidedly rejects the notion of a Græco-Italian period, and seems to adopt Schmidt's view of the primitive relationships of the Indo-Germanic peoples. He declares that "to speak of the early Italians as having no original gift for literary creation is wholly misleading; as if the imaginative impulse could be implanted where it did not exist, or the gift of the Muses be borrowed like money." It can hardly be denied that there is justice in this protest, though the critic might perhaps fairly prefer to see the force with which it is put somewhat tempered.

Views original with our author are to be found, we believe, especially in the etymological notes to the two papers just mentioned; in the "Critical Miscellanies" at the end of the book; in the explanation of points which arise in Cicero's 'Pro Cluentio'; and in a series of discussions of which Verrius Flaccus is the principal subject, though Gellius, Nonius Marcellus, and Servius are also named in the titles. But such matters must be passed over lightly in these columns. One detail of etymology may be offered as an interesting specimen: the name Mars is connected with *marcus*, a hammer.

The three lectures on Horace treat of the Life and Poems, the 'De Arte Poetica,' and the Text in general. The author begins by admitting that "to attempt to say anything new about Horace may seem absurd." The critic is fairly bound to reply that these lectures prove abundantly that it is still possible to say things worth saying about Horace—things all the better worth saying because the only great novelty about them is in the skill with which they are put. The problem of the first lecture is to explain how it came that Horace won his place among the classics—to point out in him that earnestness of character which must in some way be the foundation of his greatness. The temptation here to quote freely is very strong—especially because, in the old controversy over the relative worth of Horace and Catullus, most lovers of poetry must find themselves vastly willing to be of both parties. We think the lovers of poetry are bound in the end, however, to accept this statement of the general verdict:

"Take two poets of equal powers of imagination and command of language, and let the one devote himself to the tale of his own loves and hatreds, while the other never loses sight of 'the wider scope,' of the great movement of events, of the larger interests of his fellow-men; and the style of the one, however luminous and intense, however great its command over the music of human passion, will be imperfect and fitful, while that of the other will rise to the height of his conception and become a beacon in literature. There is a moral element in the power which forms a great style; there is not only love of beauty and breadth of sympathy, but keenness of vision, ardor, courage, purity."

This, we take it, goes very near to the root of the matter. And yet—and yet, how true is the admission which follows in the next line, that the "Miser Catulle, desinas ineptire" would have been quite beyond the reach of Horace. But, after all, there must always be something of unfairness about any form of praise given to one poet at the expense of another who has in some different sort excelled. And—to quote this time from the shorter and much slighter essay on Catullus—"For all who can weep with those that weep, his poems are the transparent revelation of a pure, impassioned soul, of deep natural sincerity in love and hate, of commanding genius in expression."

Perhaps the very best of the book is to be found in the "Suggestions Introductory to a Study of the Æneid," first printed at the Clarendon Press in 1875. These suggestions are mainly devoted to the elaboration of an idea more sound than new, but surprisingly little prominent in the writings of many of those who write criticisms of Latin poetry—the idea that the mind and plan of Virgil had been profoundly influenced by the Greek tragedies. It would be well if the young reader who has been confused and persuaded into a gentle contempt for Virgil by all the talk about Apollonios Rhodios and about departures from Homer or borrowings from Homer, might always have at hand a sane monitor like Nettleship to clarify the confusion a little by suggesting the name of Sophocles. For we take it there will be little contempt for Virgil left

when once the nature of his debt to the Greek drama has been fairly apprehended. But this is a book which deserves to be allowed to speak for itself, and with one more quotation we must leave it:

"The episode of Dido is worked out very much in the spirit of the Greek tragedy, the confused moral conflicts of which it thoroughly recalls. It is the struggle of individual passion against the will of Heaven that Vergil intends to represent; the kind of struggle represented in the 'Ajax' and the 'Trachiniæ' of Sophocles, where the loser loses and the winner wins without any end being served except the assertion of superior power. The real difficulty which a modern reader finds in realizing such situations is, that we are accustomed and expect to see the right prevail and the wrong beaten; but this is not the spirit of the Greek tragedy, where it seems as if the natural moral feelings were playing blindly around undiscovered centres, where the powers at work are not commensurate with our ideas of the powers of right and the reverse, and where the righteous issue, as we understand it, is only dimly discerned, if discerned at all, by the straining eye. Dido falls, like Ajax or Heracles, for no offence commensurate in our eyes with the punishment which comes upon her. Yet I think it is clear that Vergil has no intention of exciting such a sympathy with her fate as a modern reader necessarily feels, and as a modern writer, were he handling the story, would wish to excite. Æneas sins, not by leaving her, but by staying with her; the will of the gods once clear, he has, according to ancient ideas, no alternative."

GUATEMALA, PAST AND PRESENT.

Guatemala. Reisen und Schilderungen aus den Jahren 1878–1882. Von Otto Stoll, Dr. Med. und Docent an der Universität Zürich. Leipzig: F. A. Brockhaus. 1886.

THE largest and most populous of the five republics which formerly made up the Central American Confederation is so far out of the ordinary line of travel that less is known of it than of any of the others. It is therefore satisfactory to have a thoroughly trustworthy account of this secluded land from a well-informed writer, who spent nearly five years as a resident and traveller in the country, and who is able to bring down his narrative of political events to the death of the late Dictator, Barrios. Dr. Stoll is favorably known by his previous work on the Ethnography of Guatemala ('Zur Ethnographie der Republik Guatemala,' Zürich, 1884), which was welcomed by ethnologists as furnishing the most complete and satisfactory account that had yet been given of the native tribes of that region. The present volume dwells to some extent on the same subject, and repeats with a few useful additions the excellent ethnographic map of the former work. But its scope is far more general. It comprises a narrative of travel; a history of the author's residence in different cities and towns; descriptions of the country and the various classes of inhabitants; sketches of society in all ranks; notes on education; reports and statistics relative to agriculture and commerce; and an account of the most important events in the recent history of the republic. Dr. Stoll is one of those thoroughly equipped observers of the well-known German stamp, of whom Alexander von Humboldt is the illustrious exemplar. He is a naturalist, an antiquarian, a student of sociology and political economy, and enough, but not too much, of a politician. His descriptions of men and places are evidently impartial, and are animated with a genial humor and cheerfulness which make him an agreeable travelling companion. His work well deserves translation, though for general reading some of the particulars, which would be valuable in a medical treatise, would need to be omitted.

Of the many topics treated in his work, two will particularly engage attention. These are the description of the population and the account of General Barrios. The two subjects are closely connected, the career of the Dictator being made possible solely by the character of the people. Of the 1,230,000 inhabitants enumerated by the census of 1880, about 850,000 were returned as belonging to the Indian race, and only 380,000 as of the Latin race. But the latter—the Ladinos, as they are styled—are nearly all of mixed origin. Of pure whites there are not more than 1,500 in the country, most of whom are emigrants from Europe and North America. There is a dash of negro blood among the Ladinos, but in the main they are the offspring of unions between the early Spanish settlers and the Indians. The Spanish invaders brought few women with them. It was an honor to the rude Spanish soldiery to mingle their blood with that of the ancient lords of the land. Thus there grew up a people of mixed race, noticeable for their slender but strong build, dark but clear complexion, full lips, black or brown eyes, and lustrous black hair. Of the natural capacity of this race the author expresses a high opinion.

"At present," he writes, "the Ladinos are the rulers of the country. The more numerous Indians are subject to them, and in their presence the pure white element disappears altogether. From the President to the stable-boy we find the Ladinos in all positions of life, as artisans, agriculturists, clergy, physicians, and lawyers; and it is certain that from this mingling of races there has sprung a most prolific and promising element: full of vitality and vigor, for which only the iron spur of necessity—a harder struggle for the means of subsistence—is needed to make it compete successfully with other races in the most widely varied pursuits. The young Ladino child is wonderfully quick-witted; but the school of life in that thinly-peopled land is not yet severe enough to bring this good talent to its full maturity."

On the other hand, Dr. Stoll found the Indians decidedly superior in moral qualities to the Ladinos, and especially much more faithful and trustworthy. According to his personal experience—and few can have had better opportunities of judging—"the Indian of Guatemala is in point of character a man of far better stamp than the Ladino." This testimony of an impartial observer need not surprise us if we recall to mind the fact that these Indians are mostly of that fine Maya race whose social organization and artistic endowments were displayed in the splendid cities and the many carved and lettered monuments which their rude Spanish conquerors destroyed or left to perish. Between these two races there is a great gulf, with opposing walls of language, tradition, custom, and sentiment, which nothing as yet, not even religion or patriotism, has been able to bridge over. The Indians, in their confidential intercourse with the author, did not disguise their confident hope of rising some day to overthrow the Ladinos and the foreigners, and regain the government of the country. It was to this feeling that the Indian President, Carrera, by whom the Central American Confederation was broken up, owed his success. And, strange to say, his latest successor in the Dictatorship, Barrios, though belonging to the opposite political party, was indebted to the same sentiment and partisanship for his exaltation and maintenance in power. He had been lucky enough in early life to secure the adhesion of the Indians, who looked upon him as their destined deliverer, and clung to his fortunes to the last—much as the peasantry of France clung to those of the first Napoleon.

The portrait of this remarkable man, which is given in the volume, shows a decidedly Napoleonic cast; and the like stamp was exhibited in his character and career, so far as the very different theatre of action would allow. Beginning as a military leader of the humblest grade, and seizing his opportunities during the civil wars which disturbed the country, he worked his way up to a position which enabled him to grasp the supreme power. He then displayed all the qualities which we are accustomed to contemplate in the biography of his great prototype. A boundless ambition, intense activity, a crafty diplomacy, utter disregard of all rights that interfered with his plans, unrelenting severity toward his opponents, a lavish hand for his followers, a love of flattery and a cynical contempt for his flatterers, were notable traits in his character. Coarse, hard, licentious, domineering, and vindictive, he yet had certain qualities which extorted admiration and even respect. Though a tyrant, he never forgot or disowned the principles of that Liberal party of which he had in early life been the champion. He kept up the forms of free government, with the evident idea that at some future time they would become realities. He was ardently patriotic, and eager for the improvement of his country. His favorite project, which he had partly accomplished, was the completion of a railway extending from the Pacific, through his capital, to the Bay of Honduras; and to carry this out he resorted, after his fashion, to the most arbitrary exactions, which could have been of no personal benefit to himself. His purpose of restoring the old confederation, if dictated partly by personal ambition, had in it a large grasp of statesmanship. With his restless and persistent energy, he might have succeeded in the end. Yet his death in the first battle of the war could not, on that account, be deemed a public misfortune. His faults of character made him utterly unfit for the difficult position of a chief of a confederacy; nor were the States which he sought to reunite yet ripe for the measure. While the majority of their people are Indians, belonging to many different tribes, utterly alien to one another, and speaking more than twenty distinct languages, no permanent union can be hoped for. The time will come when the Spanish language and Spanish-American customs and habits of thought, which are steadily extending, will prevail throughout those States, and will prove an irresistible force of mutual attraction. The same force will draw all these smaller provinces toward the Mexican Republic; and probably the next half century will see one great confederation extending from the southern border of the United States to the Isthmus, under a firm constitutional government. The work of Dr. Stoll, careful in its statements and unflattering in its pictures of the present condition of affairs, gives yet, in its clear and faithful descriptions of the country and the people, ample warrant for previsions of a better future.

Triumphant Democracy: or Fifty Years' March of the Republic. By Andrew Carnegie. Scribner & Sons.

IF any one has been reading Sir Henry Maine on 'Popular Government,' and feels depressed by the somewhat gloomy forebodings of that distinguished *laudator temporis acti*, we recommend to him the present work, to see if he cannot imbibe something of its exuberant joy. Judging from internal evidence, we should say that the writer, a Scotchman, had passed his life up to manhood under narrow circumstances at home, and then, coming to this country, had stepped at once into success, found his way smooth and prosperous, with the prospect of abundant provision for his declining years, and for his children; and all this, in the intoxicating atmosphere of equality, producing effects similar to the physical ones which foreigners on their first visit ascribe to our climate. Without doubt there are many thousands of such instances, and it is to be hoped that they all share, in some degree at least, the

feeling expressed in the following, which is the key-note of the book:

"To the Beloved Republic I dedicate this Book, with an intensity of Gratitude and Admiration which the native-born citizen can neither feel nor understand."

It is to be feared that Mr. Matthew Arnold would regard the author as an unmitigated Philistine. He is an undisguised worshipper of material success, and delights in big figures. He loves to tell how small things were fifty years ago, and into what splendor they have since blazed out. For his flights of imagination take this as a sample: "Last year she (Chicago) received nearly two million cattle, a million sheep, and five million hogs—more than twenty-five thousand animals per day. So that there marches into Chicago every day in the year—Sundays and Saturdays included—a procession of victims two miles and a-half long, ten animals abreast." "Spread-eagleism" used to be considered as a specialty of the native American, but here is a foreigner who out-Herods Herod. And yet, so far as the material side is concerned, there is perhaps hardly a word which passes the truth. It is only when it is placed before us in this vivid way that we realize the stupendous development. There certainly never has been anything like it in the history of the world. So far from wondering at the tide of immigration, the only wonder is that all Europe, or at least the poorer half of it, with its crowded population, its military burdens, and its caste distinctions, does not empty itself into such a land of promise. Such a book as this must read in Europe like the 'Arabian Nights.' It would probably pay well for one of the great land-grant railways, say the Northern Pacific, to have it reprinted by the million copies in a cheap form, with its own advertisements attached, and distributed broadcast throughout Great Britain.

After reading such a flourish of trumpets over material success, one becomes rather curious to know how the author will face problems much more open to question, such as art, literature, and politics. He is not a whit daunted. As to pictures, "The American is recognized now in the European markets as one of the shrewdest, as well as one of the most liberal, buyers"; while "the United States now possess more and finer examples of the modern French and German schools of painting than are to be found in Europe," and have, besides, an excellent school of their own. Under architecture, he observes that "one block in Chicago has thirteen stories, the highest hardly less elaborate in decoration or less perfect in its appointments than the lowest"; while in music he thinks there should be an international contest, the Thomas and Richter orchestras playing in competition on alternate nights, first in London and then in New York. "It is estimated that there are twenty-three thousand school libraries in America, containing forty-five million books—*twelve million more than all the public libraries of Europe combined*"; while it is further noted that the public schools of the United States cost in 1880 over sixteen millions sterling.

In political matters we should say that the author's zeal decidedly outruns his discretion. He approves, not only of elected officials, but of elected judges. "Who are so deeply interested in the able and pure administration of justice as the masses of the people, the poorer classes of the people, who may be trusted to elect the men least likely to lean unduly to the side of the rich, the powerful, and the strong?"—a proposition beautifully illustrated by the existing labor troubles. Speaking of British colonial wars, he says: "All this will change, however, when the Democracy rules their country. The parent land will become in Europe what the Republic is upon the American continent—the unselfish counsellor, the guide, the true and trusted friend of its less powerful and less advanced nations"—for example, of the Indian tribes. Again: "And upon my British readers let me once more impress the truth that in all that goes to make up a strong government, a power competent to maintain justice and to defeat attacks upon the rights or property of others, the American system is infinitely beyond the monarchical." One healthy sentiment, at all events, is very well expressed: "And for all the just and good measures by which the Republic has won my love, next to that by which she has made me her own citizen, and hence the peer of any man, kaiser, pope, or king—next to that, for which I will fight for her, if need be, die for her, and must adore her forever—I thank the Republic for her position in regard to international murder, which still passes by the name of war." The thoughtful American cannot but wince a little when he reads—"An important work done by the United States army is the improvement of rivers and harbors. Upward of a hundred million dollars have been spent by the engineer corps on rivers and harbors since the beginning of the Government, and the present annual appropriation for this purpose is very large." If the United States Government "is the largest printer and publisher in the world," the reflection unavoidably presents itself whether the quality (as, for instance, in the *Congressional Record*) is equal to the quantity. It is refreshing, again, to hear—"In none of the departments named in this chapter have politics the slightest influence. No politician could be found willing to apply any test but the suitability of the man for the work to be performed." Evidently the writer was not acquainted with Mr. Flanagan of Texas. When we read the summing up, in "the record of one century's harvest of Democracy" set forth in thirteen propositions, we are tempted, in view of Mr. Carnegie's unflinching optimism, to suggest to him that in the next edition of his book (and we hope there may be a great many) he should adopt the motto which he has proposed for the city of Chicago: "The Whole Hog."

Progressive Orthodoxy. A Contribution to the Christian Interpretation of Christian Doctrines. By the Editors of the *Andover Review*, Professors in Andover Theological Seminary. Boston: Houghton, Mifflin & Co.

WITH the exception of parts of the introductory and closing articles, these papers have already had some currency in the *Andover Review*. The authors do not affix their names to the particular articles, but jointly assume the responsibility involved in their publication. The introduction is apparently by the same hand as the first article, "The Incarnation." It is written in the same astonishing manner, as it were out of time and space, and with so much obscurity that a man of good average intelligence, unused to this way of writing, might almost as well read it backward as forward for any profit it might be to him. The various writers evidently think themselves possessed of a method and results that have considerable advantages over the orthodoxy which they consider unprogressive. There is something quite pathetic in their sense of being in "the way that some call heresy." They insist, however, that their progress is entirely within orthodox limits as defined by Holy Scripture and the Œcumenical Councils of the early Church. And certainly the claim will not be disallowed by any who are not well versed in theological disputes. It will seem to them that the positions taken here ought to be orthodox enough for any one. The rationalist and the free-thinker will find a little satisfaction in the later chapters, but in the earlier much to convince them that their occupation is not gone.

The first four chapters deal with the Incarnation, the Atonement, the fate of the impenitent, and the work of the Holy Spirit. The real animus of the book discloses itself in the third of these chapters, which is called "Eschatology." It is certainly humane, for it is bent on the relief of orthodoxy from the doctrine that the heathen world and those of Christendom whose lives have been conspicuously noble, but without Christian profession, are destined to eternal misery. The case of Sir Moses Montefiore is made the starting-point of the discussion. Dr. Hodge, of Princeton, is as little disposed as the Andover professors to send Sir Moses to perdition, but his way of saving him is not theirs. It is that he was an unconscious Christian; that the merits of Christ's sacrifice were applied to him without his knowledge. But the Andover professors say that this is salvation by magic. What they contend for is that Sir Moses will have a post-mortem opportunity to save himself by a conscious acceptance of Christ as his personal Saviour. A like opportunity will be accorded all the ignorant heathen. But without conscious relation to Christ, no salvation. The speculative basis for these conclusions is laid in the other three of the first four chapters already named. One might go far and not find another such example of modern scholasticism as they afford. Their exaltation of the person of Christ is equal to the most exacting demands. To develop "a Christocentric theology" is their purpose, and they would make Christ not only central to humanity, but to the universe. In these discussions every trace of the concrete humanity of Jesus, as we find it in the Synoptic Gospels, disappears. We are in the same region of speculation as that which the Gnostics of the early Christian centuries found so congenial to their minds.

The chapters on "The Christian," and "Christianity and Missions" are further applications of the ideas in the preceding chapters; the first insisting on the consciousness of personal relationship with Christ as essential to Christian character and salvation, the second insisting that the heathen world will have a chance beyond the grave. A chapter on the Scriptures fights an obscure antagonist. If what is really meant had been expressed as clearly as possible, rather than as vaguely, it would probably be far from the traditional doctrine of the Bible's inspiration. The suggestion that Christ was not omniscient while upon the earth (p. 227), and therefore may have been mistaken in his estimate of the Old Testament, is perhaps the most "progressive" opinion in the book. What is everywhere noticeable is a use of the Bible that assumes its absolute authority. But in justifying this the writers assume a conception of Jesus that depends for its validity upon the authority which it is made to justify, and so the argument of the book moves in a continual circle. The closing chapter, "Christianity Universal," is a résumé of the preceding chapters that will give a busy man the gist of them in half an hour. We can conceive that the concessions of the book will be welcome to many gentle spirits in the Christian church, while they will be particularly offensive to the co-religionists of Sir Moses Montefiore and some others.

Memoirs of General W. T. Sherman. By himself. 2d ed. D. Appleton & Co. 2 vols. 1886.

THIS new edition of Sherman's memoirs is enlarged by preliminary and supplementary chapters, and by an appendix made up in the main of letters from officers who served under the General, containing corroboration or criticism of the opinions expressed in the first edition of the book.

The preliminary chapter gives the pedigree and the early life and military service of the author, filling out the narrative to greater completeness as an autobiography by this account of his lineage and his youth. The supplementary chapter has an independent historical value of much importance. In it General Sherman gives the facts relating to the quarrel between President Johnson and Secretary Stanton, with some very interesting evidence touching the relations of General Grant to the President. This strongly tends to prove that Grant sympathized with Johnson in his view of the right of the Executive to insist upon having Cabinet officers in harmony with himself, and of the improper character of the Tenure-of-Office Act as applied to Stanton's case. The difference between them, it is intimated, arose when Grant had to choose between taking an aggressive part in opposing the operation of the law so as to make a test of its constitutionality, and a passive line of conduct which should avoid collision with either party. Then the General, though believing that Stanton was wrong in "sticking," and the President was right in asserting a power to remove, still naturally declined to be an active participant in the quarrel, and offended Johnson, who had reckoned upon his vigorous support. That Grant was already a candidate for the Presidency, though unavowed, counted for something in his determination of his line of conduct, as it fairly might. The statements of General Sherman on this subject are among the most conclusive and authoritative possible. His frankness and courage of opinion are indisputable, and his means of knowing the secret history of the time second to nobody's. It may fairly be said that he makes final disposition of the romance about Johnson's revolutionary purposes, and brings the whole chain of events within the ordinary purposes and motives of party intrigue or finesse; Johnson, Stanton, and Grant all being more or less openly in the field for the Presidential canvass of 1868.

Another topic of some importance, on which General Sherman's testimony is weighty, is that of the relations between the Secretary of War and the commandant of the army in ordinary administration. He gives very conclusive evidence that Grant, when General of the Army and at the beginning of his Presidency, was fully committed to the view that the military and disciplinary administration of the army should be conducted through the General in command. He carefully draws the line so as to show that this does not include or imply any diminution of the importance of the Secretary, who is the authoritative mouthpiece of the President. It is simply that, by making the General the channel through whom the business must be done, his judgment and knowledge are made available to give system and energy to the work. Sherman shows that under the influence of Rawlins, when the latter became Secretary of War, Grant reversed his own previous policy and fell into line with the custom of civilian Presidents, which has pretty uniformly resulted in making the position of the nominal commandant of the army a most uncomfortable and unsatisfactory one. The legitimate conclusion seems to be that the course originally proposed by Grant and advocated now by Sherman should be pursued, or that the office of commandant of the army should be abolished, and the affairs of the army be conducted by the Secretary of War through the generals in command of departments.

The ten years which have passed since General Sherman published these memoirs have not diminished the authority of the book or of the author. The correspondence in the appendix to the present edition is good proof that the criticisms to be fairly made upon it are neither very numerous nor important. In two or three instances only are there matters of real moment in controversy between him and other men, and the instances are rare in which he has found it proper to revise the expressions he formerly used. In some instances he has softened the form while preserving the substance; in others he has supplied omissions; in a few he has corrected errors. It may safely be said that, for purposes of military instruction and for giving a clear and fair view of the events described, it takes, and probably will continue to take, the first rank among the personal memoirs of the war period.

Madame Roland. By Mathilde Blind. [Famous Women Series.] Boston: Roberts Brothers.

THE first hundred pages of this little volume are on the whole satisfactory; but it then becomes, instead of a biography of Madame Roland, a history of the Girondins, and a history written not by an historian. The somewhat rash generalizations and assumptions of the authoress could be better pardoned were they connected with absolute accuracy of historical statement; but when we find Mirabeau compared to Samson, with the assertion, "the Delilah who shore [*sic*] him of his strength being the Queen, by whom he was bribed," one not only remembers his own proud exculpation of himself, "Je suis payé, mais je ne suis pas vendu," but one would be glad to assure Miss Blind's readers that the opinion she entertains is not the generally received opinion of the relations between Mirabeau and Marie Antoinette. And again—though a much more unimportant point—she entirely misrepresents the character of poor Lanthenas, and mingles truth and error in this statement: "His name, having been included in the list of the proscribed, was struck out by Marat, who declared him to be a mean-spirited creature (*pauvre d'esprit*)." The fact is, Marat, his ex-confrère in medicine, had some kindliness for him, and declared to the Convention (to save his life): "As for Dr. Lanthenas, everybody knows *que c'est un simple d'esprit* [that he is not quite right in his head]." Why a man should be spared because he was "a mean-spirited creature," Miss Blind does not explain. "Le bon Lanthenas méritait de mieux finir," as Sainte-Beuve says.

Miss Blind is not felicitous in her translations. In an enchanting *rural* letter of Mme. Roland's, redolent of the deliciousness of the country, Miss Blind gives us this somewhat startlingly incongruous phrase: "I am growing asinine by dint of attending to the little cares of a piggish country life." The original is, "Je m'asine à force, et m'occupe de tous les petits soins de la vie cochonne de la campagne." Sainte-Beuve, quoting this same letter, explains to the reader that the word "asiner" is here employed because Mme. Roland was then drinking asses' milk; and it would have been well if Miss Blind had at least perceived that "et m'occupe" has not the force of "de m'occuper." And if she had remembered that "cochonner" means to bungle, to botch, she might perhaps have spoken of the "clumsy" rather than the "piggish" country life, and relegated to brackets containing the original humorous words the untranslatable and merely suggested ass and pig of the sentence, conveying to the English reader only Mme. Roland's sense of the welcome casting off of the weight of human customs of thinking and doing.

We have not at hand the original of the passage quoted on page 158, but we have every reason to believe that Miss Blind has there mistaken *citrouille* for *citron*—pumpkin for lemon—and translated *plaisant* (humorous), by 'pleasing.' "I saw . . . little Barnave, . . . cold as a lemon fricasseed in snow, to use the pleasing expression of a woman of another century." This was Ninon de l'Enclos, who said of the young Marquis de Sévigné (as quoted by his mother): "C'est une âme de bouillie; c'est un corps de papier mouillé; c'est un cœur de citrouille fricassé dans de la neige." Lemon sherbet is not despicable; squash sherbet one conceives would be.

In calling the Duc de Saint-Simon "Henri Saint-Simon" (what would he have said to the omission of the *de*? and his name was Louis!) Miss Blind confuses him with his collateral descendant, the founder of Saint-Simonism; and also errs in placing a letter of his she quotes, "in the first quarter of the eighteenth century," since it is addressed to Cardinal Fleury as minister, who only came into power in 1726.

These are trivial indications of a sort of blunderingness which pervades the book and colors the thought, and is not redeemed by charm of expression. But the personal narrative, as we have already said, is agreeable. Any sympathetic picturing of the studious youth of Manon Phlipon, and the cheerful domesticity of the first years of her married life, of the early bloom and later fruitage of her noble and ardent uprightness of soul, has, of necessity, a peculiar delightfulness.

Review of the New York Musical Season, 1885-1886. By H. E. Krehbiel. Novello, Ewer & Co. Pp. 233.

THEATRICAL and musical year-books have been issued heretofore, but seldom in so elegantly printed and conveniently arranged a volume as Mr. Krehbiel's. The carefully prepared index occupies as many as fifteen pages in small type, which gives an idea of the extraordinary activity of the past musical season. Beyond a doubt, it was the busiest ever known to musicians in this city, and we suspect that, so far at least as quantity is concerned, no foreign city has ever surpassed this record. For this reason, and also because the season marked the beginning of several new and important enterprises, the volume before us is very timely. It offers so many conveniences that it is to be hoped the sale will be sufficiently large to insure its continuance in future years; but even should this not be the case, the volume will remain a valuable historic record of the most important year in the history of music in America hitherto.

The plan of the book is strictly chronological. It begins with the production of the "Mikado" on August 19, and ends on April 18, the day after the close of the American opera season. All the important concerts and operatic performances under each date are mentioned, with the names of conductor, artists, and principal works on the programme. All the novelties and many other important works are described and critically discussed at considerable length. Two tables, given in the introduction, give a list of forty-four new orchestral and vocal compositions heard for the first time this year, and a list of ten new operas and operettas, including "Die Meistersinger," "Taming of the Shrew," "Queen of Sheba," "Lakmé," "Sylvia," "Manon Lescaut," "Trompeter von Säckingen," "Gypsy Baron," "Amorita," and "Mikado." To these should be added "Don Cæsar," given a few weeks ago. The introductory chapter also includes a brief review of the three Metropolitan Opera-house seasons, with statistics of the operas produced.

The number of operatic performances given at our two houses this winter was 127, of which 19 were sung in Italian, 52 in German, and 56 in English. Of first-class orchestral concerts there were 84. The Thomas popular concerts and the American Opera, as the two most important new enterprises, receive their full share of attention. No fewer than eleven pages are devoted to an

erudite analysis of Beethoven's Ninth Symphony, and "Die Meistersinger" comes in for an article almost as long, at the end of which is reprinted, from Wagenseil, one of the original songs of the mastersingers which candidates had to sing, and which Wagner parodied in *Beckmesser's* music. The volume is handsomely bound, and should be in every musician's library.

The Great Conspiracy: Its Origin and History. By John A. Logan. New York: A. R. Hart & Co.

We have no idea of reviewing this volume. It is not a history, although it purports to be one. It is rather what might be called a narrative stump speech, with no limitation as to time of delivery except the orator's good pleasure or fatigue. Gen. Logan's thesis is, that the rebellion was the result of a combined pro-slavery and free-trade conspiracy for the control of the nation; that the Republican party "successfully solved" "the difficult and perplexing problems involved in the Reconstruction of the Union," and yet was credulously and good-naturedly led into taking back States and citizens bent on renewing the old conspiracy; and that these desperadoes got "on top," at the last Presidential election, "and they MEAN TO KEEP THERE—IF THEY CAN." With this shriek the book ends (so far as the main text is concerned) on p. 674. An appendix of 80 pages condenses the Lincoln-Douglas debates in 1858, which had already been summarized in chapter iv ("Popular Sovereignty") in 36 pages. In other words, this topic occupies a seventh of the book. On the other hand, the "Growth of the Slavery Question," chap. iii, is despatched in 16 pages, in which there is no allusion to the rise of abolitionism, and but one to the existence of abolitionists. They are then confounded with the party that voted for "John Birney" (as the index calls him) in 1844. That is all we learn about them in the entire "history." Gen. Logan is careful to avoid giving signs of original research or original ideas. His political judgments are uncontrolled by any innate or acquired moral consistency. He blames (by implication) the Liberty party for defeating the election of Clay, as if this were playing into the hands of the slave power; but he is proud of his own part in trying to gain acceptance for the peace propositions before the outbreak of the civil war—a compromise in the interest of slavery which we should have expected of Clay had he been alive.

Although Gen. Logan fills but a modest space in the index, he allows himself enough room in his narrative to smooth over his pro-slavery record, and to repudiate once more the imputations cast on his loyalty to the Union. In so doing he quotes with evident satisfaction a specimen of his florid oratory, which will bear framing along with a precious sentence near the very close (pp. 672-674), only one and two-thirds pages long. His opinion of Fitz-John Porter could hardly have been kept out of his military chapters. In other respects it cannot be said that he obtrudes his personality on his readers, or that he specifically recommends himself to the electors of 1888. His evident plan is to go before them as a protectionist, a soldiers' friend, and a waver of the bloody shirt. Unlike the historian Blaine, he has no calculated flattery of the South, no apology for repudiation, no distribution of compliments for his colleagues in the Republican party. Indeed, his living contemporaries are scarcely mentioned, and we regret to observe that Mr. Blaine is relegated to the footnotes, where he figures simply among the yeas and nays on three Congressional occasions. Since the late candidate for the Vice-Presidency passes over the Reconstruction period entirely, courtesy to his old chief might have prompted a reference to the latest source of sound Republican views on this subject. But, then, Gen. Logan can plead that he is habitually sparing of references to authorities.

The volume is illustrated with a few maps, and with numerous portraits, rather oddly selected and cheaply executed.

PUBLISH SATURDAY:

CHILDREN OF THE EARTH.

A NEW AMERICAN NOVEL.

By ANNIE ROBERTSON MACFARLANE.

"*Hamlet*—'How do ye both?'

"*Guildenstern*—'As the indifferent children of the earth.'"

16mo, Leisure Hour Series ..... $1.

*** A novel by a new though thoroughly trained writer. The author is already favorably known through short stories in *Harper's Weekly* and elsewhere, and as a regular writer of literary criticisms for *The Nation*. The story is one of every-day people swayed by ordinary motives, with which all "indifferent children of the earth" can sympahize; but it is presented with a clearness and power sure to evoke the sympathy. What "questions" are touched upon are presented in the characters and action, rather by synthesis than by the "subtle analysis" of which much of the reading world is becoming tired. The scenes are laid in a manor house on the wild Nova Scotia coast and in New York Society.

JUST PUBLISHED:

No Saint.

A STUDY.

By ADELINE SERGEANT (author of 'Beyond Recall'). Leisure Hour Series, $1; Leisure Moment Series, 30 cents.

☞ A new novel by this promising new author. Its "motive" is indicated by the lines from Matthew Arnold:

"Ah! from the old world let some answer give;
Scorn ye this world, their tears, their inward cares?
I say unto you, see that *your* souls live
A deeper life than theirs."

MEMOIRS OF

ARTHUR HAMILTON, B. A.,

Of Trinity College, Cambridge. 12mo, cloth, $1.50.

☞ The biography, real or imaginary, of a pious and sensitive soul, struggling with the questions between religion and modern thought, and leading a life of rare beauty and usefulness in the face of all perplexities.

"We find much in the way of fine elevated thinking, and of beautiful writing. . . . It is interesting, thoughtful, and well written."—*London Spectator.*

JUST PUBLISHED.

The Magic of A Voice.

By Margaret Russell Macfarlane. 1 vol., 16mo, cloth. Price, $1.

The scene of this story is laid in Germany, and the characters are drawn from life. The author's style is simple and direct, and the story has a special interest on account of the information it gives in regard to the manners and customs of a type of German society rarely presented to the novel reader.

Who is Guilty?

A Novel, by Philip Woolf, M.D. 1 vol., 16mo, cloth. Price, $1.

An interesting tale, with a dénouement that will astonish the reader.

FRENCH BOOKS.

WILLIAM R. JENKINS,

850 6th Avenue, corner 48th Street,

HAS JUST PUBLISHED:

"LES FIANCES DE GRINDERWALD."

By Erckmann-Chatrian. 18mo, paper, 25c.

This volume comprises the eighth number of the pretty series of "Contes Choisis," and the two stories contained in it are very bright, amusing, and characteristic specimens of the authors. Like all the publications of Mr. Jenkins it is not only entertaining as a romance, but well adapted for the student.

CONTES CHOISIS.

Previously Published: La Mère de la Marquise, by About, 25c.; Le Siége de Berlin, by Daudet, 25c.; Un Mariage d'Amour, by Halévy, 25c.; La Mare au Diable, by George Sand, 25c.; Peppino, by Ventura, 25c.; Idylles, by Gréville. 25c.; Carine, by Enault, 25c.

**ROMANS CHOISIS.*

*This series now comprises five charming French novels by some of the best French authors, and these romances are not only intrinsically interesting and pure, but are representative of the very best of contemporaneous French literature.

Dosia, 12mo, by Mme. Gréville, 60c.; L'Abbé Constantin, by Halévy, 60c.; Le Mariage de Gérard, by Theuriet, 60c.; Le Roi des Montagnes, by About, 60c.; Le Mariage de Gabrielle, by Lesueur, 60c.

ITALIAN.

Encouraged by the favor with which Contes Choisis has been received, Mr. Jenkins has begun the publication of a similar series in Italian under the general title of NOVELLE ITALIANE, which is intended to comprise some of the best shorter novels of Italian authors. The first number is now ready, "Alberto," by Edmondo de Amicis, 18mo, 35c., and is a story of Florentine life by the well-known traveller-author, which, for the benefit of English readers, has been carefully annotated by Prof. T. E. Comba.

THE 1856 SALON.

Catalogues and Publications are now ready as follows:

FIGARO-SALON.—Large 4to, magnificent illustrations, 5 parts each, 70c.

PARIS-SALON.—8vo, illustrated with photogravures, 2 parts each, $1 75.

What T. DeWITT TALMAGE and OTHERS say of Geo. Thos. Dowling's New Novel.

THE WRECKERS.

A SOCIAL STUDY.

Fourth Edition Now Ready.

12mo. Cloth. $1.25.

"The immediate success of 'The Wreckers,' by Geo. Thos. Dowling, does not surprise me, for I have watched him all along on his way to the front. Now he puts into the press a book, brilliant, life-like, unique, timely, and useful. It is certain that, as an author, he will fully equal his great power as a preacher."—T. DEWITT TALMAGE.

"It is full of life and movement, and we fully expect to see it dramatized."—*Philadelphia Inquirer.*

"'The Wreckers' is a social study, dealing with humble types of life, with a thoroughly fascinating plot, and one elaborated with skill and ingenuity."—*Boston Evening Traveller.*

"The story becomes intensely dramatic. The demand for it in this city has taken on the character of a rush."—*Cleveland Plaindealer.*

"It is an excellent story, abounding in good lessons. In its romantic characters, fine descriptions, sarcasms without bitterness, with its friendly interwoven argument, the author proves himself no novice, even if it is a first effort in fiction."—*Chicago Inter-Ocean.*

"A book like 'The Wreckers' will help better to a comprehension of our duties to each other, and a proper understanding of the rights and needs of labor, than would volume upon volume of essays on political and social economy."—*Philadelphia Record.*

*** For sale by all booksellers; or sent, postage prepaid, on receipt of price, by the Publishers.*

RECOLLECTIONS OF

Mr. James Lenox of New York

And the Formation of his Library.

By the late HENRY STEVENS, of VERMONT.

Foolscap octavo, cloth extra, elegantly printed at the Chiswick Press on hand-made paper, with portrait of Mr. Lenox and two of Mr. Stevens, price $1.50, post free. A few large-paper copies on finest hand-made paper, with portraits on India paper, price $5.25 post free.

This little volume contains much bibliographical gossip and many anecdotes of rare and unique books, the reminiscences of a twenty-five years' correspondence between Mr. Lenox and Mr. Stevens, and cannot fail to prove of interest to all book collectors and librarians.

HENRY STEVENS & SON,

115 St. Martin's Lane, London, England.

Macmillan & Co.'s
NEW BOOKS.

A Book for every Household.

THE WEALTH OF HOUSEHOLDS.
By J. T. DANSON.

12mo, cloth, $1.25.

OXFORD: CLARENDON PRESS.
NEW YORK: MACMILLAN & CO.

The substance of this work was first put together by way of using the experience of a man of business in the education of his children. . . . Being out of print it is now entirely rewritten as a Text-book, and with especial reference to some of the economic questions of the day.

Among the subjects treated are: Exchangeable Value—Sources of Income—Wages—Profit—Rent—Interest—Commerce—Capital—Credit—Money—Competition — Taxation — Pauperism — Foreign Commerce—Property in Land—Socialism, Communism, and Nihilism.

One of the most valuable of the large number of volumes which the recent widespread interest in economic questions has called forth is 'Danson's Wealth of Households.'—*Boston Evening Traveller.*

A very timely and useful work. It discusses in intelligible language the various topics which now occupy the public mind as controverted points in political economy.—*New York Journal of Commerce.*

But one might go on quoting to the end of the book and still find something vigorously and tersely stated to transcribe; and there is no aspect of the current "labor problems," so called, which is not handled, and the handling based upon inexorable laws of our nature. It is a book written primarily for the conditions of labor in England, but the principles upon which it is based are as wide as civilization in their application, and it may be as profitably studied in this country.—*Chicago Times.*

BOOKS OF THE WEEK 495

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.
Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

Scale of Agate lines.

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

SIXTH EDITION.

Triumphant Democracy;

Or, Fifty Years' March of the Republic.

By ANDREW CARNEGIE.

1 Vol., 8vo, $2.

Mr. Carnegie takes the dry summaries of the census, and with a few striking illustrations turns them into wonder-tales.—*New York Tribune.*

Readable from cover to cover. It is a valuable and important contribution to the literature and history of the country.—*Chicago Tribune.*

A copy of 'Triumphant Democracy' should be placed in every school library in the United States. —*Boston Beacon.*

A book for the patriotic American. . . . Sure to attract attention, and will make a deep impression on the mind of whoever reads it carefully and thoughtfully. We hope it may be read abroad, and we hope it may be read at home.—*The Critic.*

This intelligent writer, whose volumes of travels have delighted thousands of readers, in the present book takes up a different theme; but, while his astonishing statistics necessarily include some figures, his story is nevertheless told in a way to interest every reader.—*Hartford Times.*

We have seen no work in which the material progress and the development and the boundless variety of resources of the United States are displayed more completely, none in which the comparison with other countries is drawn more effectively, and none in which a more brilliant use is made of figures.—*Pittsburgh Post.*

It is a question whether a more peculiar and at the same time a more intensely interesting book than this from Mr. Carnegie has been written, certainly not in the literature appertaining to the rise and progress of the United States. Let one open the book with the resolution to read out an opening chapter, and we feel convinced that only sleep or exhaustion will suggest to him to lay down the volume. . . . All through the volume the American will find something for the glorification of his country; he will at times himself be dazzled by facts hitherto unknown to him; and as he lays down the book he will forget that he has read over five hundred pages, and wish that the feast of which he has just partaken was about to begin. The book seems like a wonderful pyrotechnic display that bewilders the looker-on with its thousands of different lights and exploding bombs; yet not a light, but it is clear and golden; not a bomb explodes, but it has the sound of genuine and well-made powder. As a compressed encyclopædia of great and important facts in American progress and development, Mr. Carnegie's work is invaluable, not alone to the capitalist financially interested in the industries of the country, but to the intelligent laborer as well.—*Brooklyn Magazine.*

BY THE SAME AUTHOR.

AN AMERICAN FOUR-IN-HAND IN BRITAIN.

1 Volume, 8vo, $2.00.

Popular Edition, paper, 25 cents.

ROUND THE WORLD.

1 Volume, 8vo, $2.50.

*** *For sale by all booksellers, or sent, postpaid, on receipt of price, by*

Charles Scribner's Sons,

743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, JUNE 10, 1886.

The Week.

THE House on Thursday, by a vote of 177 to 101, passed the Oleomargarine Bill, after adopting sundry amendments which do not affect the principle upon which it is based. That principle is simply that Congress possesses the power to pass an act discriminating in favor of one domestic industry as against another, and the adoption of such a principle is an unprecedented step in Federal legislation. The same theory upon which a majority now votes to favor butter at the expense of oleomargarine, would justify the next Congress in passing a bill favoring oleomargarine at the expense of butter—if the oleomargarine vote seemed better worth bidding for than the butter vote. The act covers "all substances made of oleomargarine, oleo, oleomargarine oil, butterine, lardine, suine, and neutral; all mixtures and compounds of oleomargarine, oleo, oleomargarine oil, butterine, lardine, suine, and neutral; all lard extracts and tallow extracts; and all mixtures and compounds of tallow, beef fat, suet, lard, lard oil, vegetable oil, annotto, and other coloring matter, intestinal fat and offal fat made in imitation or semblance of butter, or, when so made, calculated or intended to be sold as butter or for butter." It makes no distinction between any filthy compound made in imitation of butter and those substitutes for the dairy product which are pronounced by chemists not only harmless, but wholesome. It imposes a tax of $600 on the manufacturer, $480 on the wholesale dealer, and $48 on the retail dealer, and a tax of five cents a pound on all oleomargarine manufactured and sold, provision being made for the proper stamping and labelling of every package, and a penalty being prescribed for the purchase or reception for sale of any oleomargarine not so stamped.

The measure is a plain violation of the spirit of the Constitution, and the passage of the bill is simply a bid for "the farmer vote," just as the passage of the Blair Pension Bill by the Senate the other day was simply a bid for "the soldier vote." It is only fair to point out that in the House, as in the Senate, the Democrats have made a far better showing than the Republicans in standing their ground against demagogism. The Blair Pension Bill received the solid Republican vote in the Senate, and the Oleomargarine Bill secured almost the solid vote of the Republicans in the House (107 to 15), while a good majority of the Democrats (86 to 70) voted against the scheme. Mr. Gibson of West Virginia only told the notorious truth when he said that, if he were allowed to give the names of members of Congress who had told him on the floor of the House that they knew the bill was an infamous and monstrous one, but that they were afraid to vote against it, he would make a revelation which would startle the country and show what a mockery this legislation was.

Mr. Weaver's resolution in the House calling for an investigation of the consolidation of the Kansas Pacific and Denver Pacific with the Union Pacific Railway is an entirely proper proceeding in itself, but its bearings upon the proposed Union Pacific Funding Bill may be overestimated. The law authorized and practically required the consolidation of the two roads. By making the western half of the Union Pacific Road a part of the "continuous line" of the Kansas Pacific and Denver Pacific, and by requiring that the three sections should be operated together without discrimination of any kind, a joint ownership became necessary, and for this the law also provided. But the terms of consolidation were not prescribed in the act. The joint ownership was brought about under the presiding genius of Jay Gould, who bought the stock of the Kansas and Denver Pacific Roads at a very low figure and amalgamated it with the Union Pacific stock at par, letting his co-directors have their share of the "swag" pro rata. There was nothing in this transaction that impaired the Government's lien on the several properties. The real losers were the Union Pacific shareholders, whose stock was watered. It may be that the directors of the Union Pacific at the time when this "deal" was made are legally liable to the company for the profits of the transaction. It is to be hoped that they are. The courts are very strict in interpreting the duties of trustees to their *cestuis que trust*. It is not unlikely, therefore, that the investigation which Mr. Weaver's resolution calls for would lead to the paying of a large sum of money into the Union Pacific treasury; and that would be incidentally helpful to the Government as the holder of the second mortgage. But the pendency of such an investigation is not a good reason for postponing the Fund ing Bill if that measure is right in itself. The Funding Bill proposes to extend the time of maturity of the second mortgage, and give the company the advantage of the low rate of interest which the Government credit commands. Nobody is injured by this, but if any better and more certain way to secure the Government's claim can be devised, now is the proper time to bring it forward.

The Springfield *Republican* refreshes the recollections of the New England fishermen on the subject of the worthlessness of all the privileges accorded to them by the Treaty of Washington. The privileges Canada could give them were counted as of no importance when the whole pack had opened on Secretary Bayard, charging him with betrayal of his country, and declaring that he had been guilty of an impeachable offence in negotiating for a six months' extension of these despised privileges. Now they are calling for ships of war to enable them to buy bait. The whole squabble results from an attempt on both sides to apply the principles of "protection" to the catching of fish. Our people want to protect their catch by shutting out the Canadians from our market. The Canadians want to protect their catch by controlling the bait, of which they have a monopoly. Each wants something that the other side has. Both think that they can secure an advantage for themselves by putting restrictions on trade. The Canadian Constitution permits export duties. If the British Government should require the Canadian authorities to open their ports to trade in bait, it would still be legal to put so heavy an export duty on bait that it would not pay any foreigner to buy it. The racket began on our side, and we must not expect to hush it up in a moment, as Mr. Blaine would do if he were President.

The spiteful people who have been circulating the report for the last two or three months that Mr. Blaine was opposed to Irish home rule, and favored the Salisbury plan of coercion and emigration as a remedy for Irish wrongs, were rudely undeceived on Tuesday week by his speech at Portland. We ourselves, we may as well say, have never doubted that when he came out he would come out on the Irish side. In fact, it is the merest pretence to allege that his opinions on the Irish question were not already known. He has never made any attempt to conceal them, except through the reticence which characterizes every modest and unassuming man, and which was, perhaps, increased in Mr. Blaine's case by his unwillingness to have it supposed that he was angling for the Irish vote. Among his friends in private we believe he has made no secret of the fact that he would liberate Ireland if he could, and take shares in any enterprise got up for the development of her magnificent natural resources.

Of course, it must be admitted, Mr. Blaine's bold attitude on the Irish question is made easy by the absence of any considerable body of voters here who can be offended by it. We do not say that if there was a large number of citizens opposed to home rule, like those who are opposed to Chinese immigration, Mr. Blaine would advocate home rule with the fervor he now displays. He is a man of far too much tact and breeding for that. He would in that case look into the *Tribune* Almanac, and find out if possible how the numbers on both sides stood, and he would then talk and write so as to hurt the feelings of as few persons as possible. He would, in fact, deal with home rule as the French candidate did, who had a good many Anarchists among his constituents, and was told he must placate them. "My friends," said this gentleman, "there is much that is good in anarchy—no one knows this better than I; but we must not abuse it. We must not go to extremes in anarchy any more than in anything else."

We are pained to see Mr. Blaine engaged in another "conflict of veracity," this time with a stenographer, and a well-known stenographer to boot. As the stenographer reported his great home-rule speech, he abused Lord Salisbury very savagely; but he now says he did not abuse Lord Salisbury at all, but only Lord

Salisbury's acts. But the stenographer says he reported the speech correctly, and that the abuse of Lord Salisbury stands now, and must for ever stand, among the verities. The affair bears a striking likeness to the trouble with Mulligan about the famous interview in which Mulligan said that Mr. Blaine almost went on his knees. Here again Mr. Blaine said he had been misreported, and made numerous corrections in the Mulligan version, showing that he had acted throughout as a Christian gentleman. What the object of making the corrections in the Portland speech is, it is hard to see. We think the speech is, on the whole, more effective—from Mr. Blaine's point of view—with the Salisbury vituperation than without it. But we presume the habit of taking things back and explaining and denying is now so deeply rooted that he cannot miss a chance.

The Rev. Heber Newton, in a sermon on the "Labor Problem" on Sunday, mentioned a number of "agents" whose business it is to solve it. These are the labor organizations, the great manufacturing and commercial associations, the Church, and the State—or, in fact, the whole community. We are sorry to say that we think one of the great hindrances to the solution of "the labor problem" is to be found in the vagueness with which clergymen and philanthropists talk about it. The labor problem is primarily a problem for each individual man, and it consists in how to wring a living from mother earth. In so far as any individual is unable or unwilling to solve it for himself, he increases the labor of some of his fellows, they being, in the vast majority of cases, just as sorely beset in the effort to make ends meet as he is. Now this disposition to make A solve not only his own labor problem, but B's as well, which is at the bottom of much of our labor troubles, is much encouraged by such sermons as Mr. Newton's. Their tendency is to belittle the industrial value of individual skill, industry, prudence, and self-reliance, and exalt the value of unions, and congresses, and councils, and rules, and grips, and signs, and charity, and philanthropy, and legislation, and all sorts of other contrivances to save men from the natural consequences assigned by the moral government of the world to laziness and stupidity and envy. In these times nobody should demand solutions of the labor problem from anybody without working them out in detail himself. Whenever we mention the wrongs or rights of labor, for instance, we ought to describe them. Whenever we say "capital," we ought also to say what we mean by capital. We ought not to leave the impression that Jay Gould owns, or any 100 or 1,000 rich men own, all the capital of the country, when the fact is that ninety-nine-hundredths of it consists of the savings of poor men, who have already solved the labor problem, as far as they are concerned, and really have no duty whatever, legal or moral, towards lazy or turbulent and childish fellows like the Southwestern or Third Avenue strikers, except to help to lock them up when they riot and assault.

The Knights of Labor Convention has adhered to its original plan of organization as opposed to the trade-union system. In the general address issued to the public it says: "This organization embraces within its folds all branches of honorable toil and conditions of men, without respect to trade, occupation, sex, creed, color, or nationality." It recognizes the importance of trade-unions and their services in the past, but believes that the time has come when all laborers should be enrolled under one banner, and should receive protection from one common authority, to the end that "a uniform standard of wages and hours of labor should be adopted." Precisely what is meant by this it is difficult to understand, unless it be that the skilled and the unskilled laborer, the hod-carrier and the bricklayer, the coal-heaver and the engineer, should receive the same pay. Perhaps, however, it means merely that all men in similar occupations should receive the same pay, and that one organization, embracing all the people of the United States, without distinction of trade, occupation, sex, creed, color, or nationality, is better calculated to secure uniform wages for bricklayers, for instance, than a bricklayers' union would be. If this is what is meant —and this is the only alternative—we must respectfully take the side of the trade-unions, believing that the bricklayers' union will accomplish anything advantageous to bricklayers more speedily and certainly than a society composed of all the people of the United States. To take a familiar and often-used illustration, we have not the slightest doubt that the interests of silk operatives will be advanced more satisfactorily by their own Union than by a Walking Delegate chosen by the cigarmakers. The silk-dyers will undoubtedly have more money in their pockets at the end of the year by attending strictly to their own business than by joining in boycotts and paying occasional assessments to support switchmen and brakemen far and near. Enlightened selfishness requires that each trade should pursue the same line of action that the individual would pursue in a primitive state of society. Solidarity of interests, in any other sense than through the organization of justice, does not exist. It is for the interest of coal-miners that coal should bring a high price, but it is not for the interest of anybody else. To bring about a solidarity of interests *ad hoc* between coal-miners, and iron-puddlers, and engine-stokers, and housekeepers, is impossible.

It is unnecessary to speculate upon the motives which led the Knights to reject the platform of the trade-unions and adhere to their own. The most obvious one is that every organization, political, industrial, or what not, seeks first to perpetuate itself. To accede to the demand of the trade-unions that the Knights keep hands off from every trade that has a national or international union, would be an act of suicide, because most of the trades have such unions now and all may have them by and by. To revoke the charters of all assemblies which have a union of their own, would so greatly curtail the importance of the Order and so lower it in the estimation of those whose imagination is impressed by numbers, that it would soon disappear, and with it all the Master Workmen, Executive Boards, Venerable Sages, and Inside and Outside Esquires.

The newspapers have surpassed all their previous efforts in that line in "working up" the details of the President's wedding. Nothing has been too silly, or too trivial, or too vulgar to be printed, and the result is a mass of balderdash such as probably has never before been laid before a civilized community as a product of the human mind. And it must be remembered that, as we see it, it is nothing to what it would have been but for the precautions taken against the admission of reporters to witness the ceremony, or overhaul the White House during the preparations. Read this, as a sample of what editors think the American people demand on such occasions:

"Drawing up near the favored car, the occupant of the carriage, Miss Rose Cleveland, alighted and entered the car. She was out of sight only a moment. Miss Folsom, clad in a dark gray jacket over her silk dress, and with the bleak and white trimmings of her peaked chip hat stirred gently by the wooing air, came close behind Miss Cleveland on her reappearance. Her cheeks were tinged with soft color, and so far from showing any trace of the cares of state, she looked as though she had gone to bed early, like a sensible young woman, and had had a good night's rest. The reach was long enough from the lower step of the car to the walk to display to the fraction of the score of spectators gathered about who were not all eyes for Miss Folsom rather more of the anatomy of the President's sister than is usually to be seen in public. This misstep did not escape the quick eye of the bride, and with a dainty kick she gathered her skirts about her, and jumped to the walk with only her boot tips protruding."

And here is the way in which the journalistic profession sought to promote the comfort and consult the taste of the Chief Magistrate on his wedding day:

"It was expected that the President would try and slip away unobserved, and in order to prevent this a number of newspaper men stationed themselves near the southwest entrance to the grounds with carriages convenient to follow the President in case he should make his exit by that gate. This was reported to the President, so he instructed his driver to go out of the grounds by another and almost unused route, and in that way he avoided the reporters altogether."

And finally, let us call the attention of the American people to this:

"The train moved off at once towards Deer Park, where the couple hope to pass their honeymoon in quiet. . . . The Chicago Limited, which followed the President's special, carried a number of special correspondents, who will reach Oakland about sunrise. None of the hotels open at this season, and the question of providing the journalistic pilgrims with food and shelter will have to resolve itself when the unexpected colony invade the mountain precincts of the President's retreat."

The truth is that both he and his bride have been hunted down by the newspapers with no more mercy or consideration than if they were wild animals, whose sole function was to amuse the public by their struggles to escape.

The Boston *Record*, in some sensible remarks on the sad stuff the "reportorial" labors have produced in this case, observes:

"But what are the faithful managing editor and his obedient reporters to do, we repeat, if people call for and insist upon buying columns of matter about Miss Folsom and the President, when there is nothing to tell about except that a quiet girl, stopping at a quiet hotel in New York, goes quietly to Washington to marry the man of her choice in the quietest possible manner?"

But do the people insist on buying columns of this "matter about Miss Folsom and the President"? Where is the proof of it? Has any paper with, say, 20,000 circulation sold 1,000 additional copies on account of its re-

porters' sickening twaddle and inventions about the wedding? We doubt it very much. We doubt if any paper has by lying and embellishing increased its circulation 500 copies over what would have been obtained by telling the plain truth in a simple, gentlemanly way. Moreover, is it possible that journalism is really a calling in which men are called upon to do or say *anything* which will increase sales? If this be true, it is the lowest occupation, not absolutely criminal, known to modern society — in some respects, worse than keeping a brothel or gambling house, because there is no pretence or humbug about the conductors of such establishments as these. They do not preach, or give moral advice, or set up to be guides in manners. They admit frankly that their sole aim is to make money.

The poverty of ammunition on the Republican side in the Maine campaign was strikingly shown by the speech in which Congressman Reed of the Portland district accepted his renomination the other day. Two years ago Mr. Reed waxed eloquent over the dangers to the business interests of the country involved in the "clean sweep" of the office-holders which would be inevitable in case of Cleveland's election. Now, in the hope of teasing Democratic office-seekers, he says that "after fifteen months of power, the great majority of Republican office-holders remain in their places"—which is, of course, the strongest evidence that could possibly be given of the Administration's fidelity to its reform pledges. Two years ago Mr. Reed charged that the Civil-Service Law would not be observed if the Democrats carried the election. Now he seeks to exasperate Democratic "workers" by declaring that, where offices are filled with Democrats, they are given only to Democrats who have passed examinations—apparently not perceiving that he is thus bearing valuable testimony to the honesty with which the competitive system is maintained. Indeed, this speech of Mr. Reed's is about as high a tribute to the Administration at Washington as it has received from any source.

The mass meeting in Providence on Wednesday, to protest against the election of a defaulter by the Republican Legislature of Rhode Island to the important post of Chief of State Police, was very largely attended. The largest hall in the city was crowded with an audience which represented the intelligence and morality of the city. The President of Brown University presided, and in a terse and vigorous speech against the conduct of the Legislature said: "If the Republican party legislates in this way, the quicker it is placed under ground the better." As the Legislature has since refused to reconsider its action, the burying process cannot be begun too soon. The simple truth about the matter is, that the performance is precisely similar in character to many which the same party managers have for years been carrying through without exposure. Heretofore they have had not only the sympathy but the support of the Providence *Journal*, which, under the old management, was in the "ring" which the Anthony influence had built up. The new managers of the paper refuse to have anything to do with such politics, and the result is the present disturbance, which is likely to break up the old Republican organization and put an honest one in its place.

The report on the Field case made by the Committee of the Massachusetts Legislature is producing all the dissatisfaction that so lame and impotent a conclusion could yield. It is perceived that to exonerate Mr. Field without blaming anybody else and without explaining the loss of $90,000 to the State which resulted from the acceptance of the lower bid of the Boston parties for the second-mortgage bonds, is a gross and cowardly *non-sequitur*. If the facts are such as the Committee reported, viz., that Mr. Field and his syndicate had no pecuniary interest to be served by "wrecking the road," but that their interests were the other way, then the Committee were bound to state the facts and accept all the consequences, not tacitly, but openly and boldly. It follows from such a conclusion that the Governor was deceived, and that he was deceived by somebody. It may be that he acted too hastily. Somebody has been to blame. Somebody ought to pay the State $90,000. It is scarcely possible that the matter can be allowed to rest where it is. The suggestion of the Boston *Transcript*, that the Legislature should amend the report "so as to register the prevalent opinion that the Committee was incapacitated from forming a definite opinion upon the highly important subject committed to it," would be a fitting rebuke to the inconsequential character of the report, but would still fall short of the demands of the occasion. What is required is to know whether there has been any lying and false swearing, and if so by whom, and who is accountable for the $90,000.

The public mind in Boston is excited, and justly, by a proposal to pull down the present State House and build a greater on the same site. It is still the *new* State House in distinction from the Old (now the most precious public monument the city can show); and it caps the rising outlines of the ancient Trimountain in a way which has made it dear to the heart of every genuine Bostonian. It is also a good and even noble design in itself, and it is not at all likely that those who desire to see it replaced by a building that will ape the capitols at Hartford or Albany, will succeed in rearing anything so excellent or so fit, to say nothing of the associations connected with a pile of which Paul Revere laid the corner-stone ninety-one years ago. We remember when the project to put in the present underpinning, and again to enlarge the cupola to its present size, caused an outcry in Boston—proof of the hold that the State House had on the popular affection. Certainly nothing should be rashly done to weaken the feeling of historic continuity in a State, and we do not believe there is any occasion for it in this instance. The appropriation of closely adjoining buildings would secure the necessary room for archives and for other purposes at a trifling cost, and Massachusetts would not exhibit the spectacle, common elsewhere, of Legislatures more luxuriously housed as they descended lower in the scale of honesty and intelligence.

It is a refreshing novelty to find a California politician giving the people of the Pacific Coast a good dose of sound doctrine on the Chinese question, such as Senator Stanford administers in his letter replying to a resolution of an anti-Chinese organization. The Senator owns large farms on which Chinamen are employed, and he tells the League that the reason he employs them is simply because he cannot get good workmen of other races, although overrun by tramps. In conclusion the Senator lays down some elementary if forgotten principles, which it will do the Californians an immense amount of good to hear from a Californian of standing and influence, as this: "Let me say to you in general terms that the theory of our Government is founded upon the inalienable rights of man"—not excluding even the Chinaman—"which the poor, of all others, are most interested in maintaining."

The *Christian Union* lately published a characteristically ridiculous letter from Senator Blair, charging that the remarkable revolution in the sentiment of the nation regarding his "bill to promote mendicancy" during the last few months has been due to the Jesuits, who have been "subsidizing the press" "with the money of the Vatican." Last week it called attention to the fact that "no one authorized to speak either for the Jesuit Order or the Vatican denies the statement," and it declared that "in the absence of such a denial the statement must be taken as true"! The *Christian Union* is not ostensibly published as a "funny paper," but anything so humorous as this was never dreamed of by *Puck*.

In the debate in the House of Lords preceding another defeat of the bill legalizing marriage with a deceased wife's sister, the Duke of Argyll was the principal opponent of the bill. He maintained that the only sound principle to act on was that a man must not marry any woman whom if as nearly related to him as to his wife he could not marry, and he urged the House successfully to "stand firm in the ancient ways." But the *Daily News* shows that the ancient ways are only forty years old. Up to that date these marriages were legal, until somebody chose to impugn them in the lifetime of the parties. They were then made absolutely illegal as a condition of the passage of a bill legitimizing the offspring of a duke who had contracted such a marriage. Some of the bishops are so satisfied, however, of their wickedness, that they fear divine vengeance on the whole country in case the bill ever gets through. In fact, the hold which the dread of these marriages has on the Conservative mind in England is one of the most curious phenomena of the day. In the *Saturday Review* the supporters of the bill usually figure as licentious Dissenters, each animated by an unholy affection for his sister-in-law.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 2, to TUESDAY, June 8, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND was married to Miss Frances Folsom in the White House at seven o'clock on Wednesday evening, by the Rev. Dr. Sunderland. Those present were: Mrs. Folsom, mother of the bride; the Rev. W. N. Cleveland, the President's brother; Miss Cleveland and Mrs. Hoyt, the President's sisters; Secretary Bayard and Miss Bayard, Secretary and Mrs. Manning, Secretary and Mrs. Endicott, Secretary and Mrs. Whitney, Postmaster-General and Mrs. Vilas, Secretary Lamar, Daniel S. Lamont and Mrs. Lamont, Benjamin Folsom of Buffalo, Mr. and Mrs. Rogers of Seneca Falls, Mrs. Cadman and Miss Huddleston of Detroit, Mr. and Mrs. Harmon of Boston, relatives of the bride; Miss Nelson of New York, Mr. W. S. Bissell of Buffalo, the President's former law partner; Dr. and Mrs. Byron Sunderland. The ceremony was very simple and included the use of a ring. The party then passed into the dining-room, where an elegant supper was served. Soon after nine P. M. the bride and groom left Washington by a special train for Deer Park, where they are spending their honeymoon. Queen Victoria sent the following cable message to President Cleveland: "Pray accept my sincere congratulations on your marriage, and my best wishes for your happiness."

The last official act which Grover Cleveland did as bachelor President was to sign the bill for the payment of the awards of the *Alabama* claims.

Letters were published on Saturday from Secretary Manning resigning his office on account of the state of his health, and from President Cleveland declining to accept the resignation, and asking that the Secretary take a leave of absence till October 1, when the question of his remaining can again be considered. It is understood that Secretary Manning will never resume his office. The President is not ready to appoint a new Secretary just now, and if he needs the time will have some months to think over the matter. His desire is to find some man to take the place who will be able properly to fill it.

Senator Cullom (Rep., Ill.) introduced a joint resolution on Wednesday proposing the following amendment to the Constitution: Article xvi., sec. 1. The only institution or contract of marriage within the United States or any place subject to their jurisdiction shall be that of the union in marriage of one man with one woman; and bigamy or polygamy is for ever prohibited, any law, custom, form, or ceremony, civil or religious, to the contrary notwithstanding. Sec. 2. No State shall pass any law or allow any custom, form, or ceremony of marriage, except in obedience to and conformably to the institution of marriage as herein defined and established; but otherwise the regulation within each State of marriage and divorce and civil and criminal jurisdiction over these subjects, shall belong to the several States as heretofore. Sec. 3. Congress shall have power to enforce this article by appropriate legislation.

Mr. Dawes inquired in the Senate on Thursday afternoon whether the Foreign Affairs Committee had done anything in the matter of the fishery resolution introduced some time ago. Mr. Hale said that if the reports as to the recent action of the Ottawa Government are correct, more serious mischief is intended than had been supposed. He considered it important that the Administration should speedily discover and make known the fundamental principles of the Ottawa Government. Mr. Hale said as to the attitude of the Secretary of State: "He has disclosed a disposition to learn at once, and under every method in his power and at his command, the ulterior purposes of the Canadian authorities."

The bill providing for the taxation of railroad-grant lands was passed by the Senate on Thursday. It provides that no lands granted to any railroad company by act of Congress shall be exempt from taxation by States, Territories, or municipal corporations on account of the lien of the United States on such lands for costs of surveying, selecting, and conveying, or because no patent had been issued on the lands; this provision not to apply, however, to lands unsurveyed. All such lands sold for taxes shall be bought subject to the lien for those costs, and to all liens, mortgages, and rights of the United States. This act is made to apply only to lands situated opposite to, and coterminous with, completed portions of the roads and in organized counties. At any sale of lands under the act the United States may become a preferred purchaser, and in such cases the lands shall be restored to the public domain. If any railroad company required by law to pay the costs of surveying, etc., neglects for thirty days to pay such costs after demand by the Secretary of the Interior, the Attorney-General shall proceed at law to make the collection, and in cases where a purchaser has already paid such costs, they shall be refunded to him. It is further provided that the act shall not affect the right of the Government to declare or enforce a forfeiture of any lands granted by Congress, and all the rights of the United States to such lands are to remain as if this act had not been passed.

The Senate on Friday passed the Chinese Indemnity Bill by a vote of 31 yeas to 9 nays, the latter being Beck, Berry, Coke, Eustis, Harris, Maxey, Mitchell of Oregon, and Vest —all Democrats except Mr. Mitchell.

The Oleomargarine Bill passed the House on Thursday by 177 to 101. The negative vote was larger than expected.

Oleomargarine had the floor in the Senate on Monday morning. The contest was between the Committee on Agriculture and the Committee on Finance as to the question of jurisdiction. Messrs. Van Wyck, Miller of New York, and Blair earnestly contended that the bill should go to the Committee on Agriculture. Messrs. Aldrich, McPherson, Beck, Vest, and Butler insisted that it should go to the Finance Committee as a revenue bill. Senator Beck says the bill will raise $10,000,000 of revenue. The bill was finally referred to the Agricultural Committee by a vote of 22 to 21.

The House of Representatives on Friday, by a vote of 140 to 67, rejected the report of the Committee on Reform in the Civil Service recommending the expulsion of Luther F. Warder from the office of Assistant Doorkeeper of the House, and adopted a substitute resolution of censure for the offence of using money to secure an appropriation of $50,000 for the Jeffersonville (Ind.) levee. It is said that ex-Senator McDonald's influence saved Warder.

In Judge Kelley's speech in the House on Tuesday afternoon, in support of his motion to strike from the *Record* the speech of Representative Wheeler of Alabama, which attacked ex-Secretary Stanton, he read an unpublished letter of Mr. Stanton to the Rev. Hammond Dyer of New York, the preceptor of Mr. Stanton, in which a full and confidential explanation is made of Stanton's relations to McClellan and Lincoln during the civil war In this remarkable letter, dated May 18, 1862, Mr. Stanton says: "The official records will at the proper time fully prove: (1.) That I have employed the whole power of the Government unsparingly to support Gen. McClellan's operations. (2.) That I have not interfered with or thwarted them in any particular. (3.) That the force retained from his expedition was not needed and could not have been employed by him; that it was retained by express orders of the President, upon military investigation and upon the best military advice in the country; that its retention was required to *save* the capital from the danger to which it was exposed by a disregard of the President's positive orders of the 6th of March. (4.) That between the President and myself there has never been the slightest shadow of difference upon any point save the detachment of Franklin's force, and that was a point of no significance."

The House on Monday passed the Arthur Kill Bridge Bill without opposition. The House also passed, by a vote of 183 to 40, a bill repealing the preëmption, timber culture, and desert-land laws, and so modifying the homestead law that the settler is not entitled to a patent until thirty months after the filing of his claim, and six months after the presentation of proof of settlement and cultivation.

The House Appropriations Committee is determined to annoy the Civil-Service Commission to the last degree possible. The Committee well understands that the amendment which it has reported to the Legislative Bill, the intended effect of which is to destroy the Commission, cannot become a law. It has, therefore, been decided to pursue the Commission in another direction. The latest scheme is to endeavor to make the Commission houseless. The Commission since its organization has occupied, by the courtesy of the Agricultural Bureau, rooms in an annex to that Bureau. But these rooms are needed by the Bureau, and the Civil-Service Commission has received notice to seek quarters elsewhere after July 1. The Secretary of the Interior engaged suitable rooms; but Mr. Randall of the Appropriations Committee says that there shall be no appropriation for the rooms which Secretary Lamar has rented.

The state of business in Congress is as follows: In the House there have been 9,125 bills and 178 joint resolutions introduced—a larger number of bills than has ever been introduced at any previous session. Of this number the House has passed 72 public and 384 private bills. In the Senate there have been 2,580 bills and 68 joint resolutions introduced, of which 157 public and 323 private bills have been passed. The House has passed 36 public and 87 private bills which have passed the Senate. Altogether in the two houses there have been introduced 11,951 bills and resolutions, of which 108 public and 471 private bills have passed the two houses.

Mr. Winston, the new United States Minister to Persia, has tired of his place and resigned.

The United States Grand Jury at Seattle, Washington Territory, has found indictments against ten leaders of the recent anti-Chinese riots in that city. The jury's report alleges that evidence has been laid before the jury sufficient to convince them that there exists throughout the country a treasonable organization known as the "Red American International Workingmen's Association." This organization is described at great length. Among other things the report says: "This Association, with all its branches, is essentially anarchical in theory and practice. The main articles of its creed are arson, robbery, and murder. Its proclaimed purpose is the overthrow of our Government and the erection upon its ruins of a so-called Socialist commonwealth. The policy pursued by this Association is to secure control of all labor organizations, and particularly of the Knights of Labor. The scientific Socialists of the Red American International Workingmen's Association are, as shown by unmistakable documentary evidence before us, secretly instructing their deluded, ignorant, and brutalized followers in the means of practically applying dynamite; how to seize armories and military stores; how to prevent the departure of troops from concentrating points; how to preserve order in centres of insurrections; how to imprison and destroy men of property and influence. To accomplish this end this Association instructs its members to be particularly active in labor organizations."

The Grand Jury having found indictments against many prominent Knights of Labor and other trades-unionists in Milwaukee, the making of arrests began on Wednesday. Among the persons indicted, all in connection with the labor riots in that city, are Chairman McNally

of the District Executive Board, and Robert Schilling, the organizer of the Knights of Labor in the eastern part of the State. There is great excitement among the union men.

John Most, the Anarchist, was on Wednesday sentenced in this city, for inciting to riot, to one year in the Penitentiary and $500 fine. Braunschweig was sentenced to the Penitentiary for nine months and fined $250, and Schenck was sent to the Penitentiary for nine months, but not fined.

There was a general tie-up of all the horse-car lines in this city and Brooklyn on Saturday. The Third Avenue line, which employs non-union men, continued to run, as did the Bleecker, Twenty-third, and Eighteenth Street lines. The strike was ordered by the Executive Board of the Empire Protective Association. They said they had done this to force the Third Avenue Road, through the intervention of other companies, to come to terms, and declared that the fight would be forced all along the line. The old story of a combination between the car-companies was alleged again as one of the causes of the strike. The curious feature about the tie-up was that no proclamation or explanation accompanied the order to tie up.

The strike utterly collapsed on Sunday morning, the men going back to work without orders from the Association. They did not know what they had struck for; they knew nothing of the contemplated tie-up until early on the morning it took place, and when they found that they stood a chance of losing their employment without any adequate object other than, as they supposed, an attempt to revive a dead issue by trying to coerce the Third Avenue Road, they very wisely concluded to return to work at the earliest possible moment, whether an order to resume work was issued by the District Assembly or not, and the result was a general "bolt" from union authority.

W. L. Maxwell was on Saturday found guilty of the murder of C. Arthur Preller. This is the end of the St. Louis trunk mystery.

The Rev. John Williamson Nevin, D.D., LL.D., died at his home near Lancaster, Pa., on Sunday, at the age of eighty-three. He was born in Franklin County, Pa., February 20, 1803, of a Scotch-Irish family which has long been prominent in Pennsylvania affairs, and especially in the Presbyterian and Reformed Churches. Dr. Nevin was for many years President of Franklin and Marshall College, and a distinguished theologian in the Reformed Church. He was the author of many religious works.

FOREIGN.

Mr. Gladstone, replying to a letter from Thomas Henry Bolton, Liberal Member for North St. Pancras, writes: "I hold it to be indisputable, indeed elementary, that the voting of the second reading of the Home-Rule Bill affirms only the principle of the establishment of an Irish legislative body to transact business concerning purely Irish as distinct from imperial affairs. The Government consider and hold themselves free to accept any proposals which may be submitted to them previous to the autumn session consistent with the five main conditions which they consider essential to the solution of the question, including Irish representatives at Westminster to take part in the discussion and settlement of imperial business. The Government are not only at liberty, but they are in duty bound, to consider any such amendments."

Mr. Labouchere asking him if Mr. Gladstone's letter to Mr. Moulton would not enable him, if not to support the Home-Rule Bill, at least to abstain from voting, Mr. Chamberlain replied on Sunday that Mr. Gladstone had given no indication that the autumn bill would materially differ from the present bill. He continued: "On the contrary, Mr. Gladstone has distinctly stated that he will not depart from the main outlines. To those outlines myself and my friends are opposed. It appears to me that we should stultify ourselves if we should abstain at the last moment from giving effect to our conscientious convictions."

In the home-rule debate in the House of Commons on Thursday night Mr. John Morley made a speech in which he said that this bill might be regarded as the last will and testament of the present Government. The division about to be taken would not be the end. Even an electoral campaign might not be the end. Let not opponents of the bill imagine that by driving the Government from the stage the curtain would fall on the last scene of the fifth and final act of the Irish question. If the House refused to accept the solution now offered, it might rest assured that no other measure, unless based upon the lines of this measure, would be carried a single effective stage further.

The London *Standard* joined in the attack on Mr. Blaine for his attack on the Marquis of Salisbury in his Portland speech. It said: "We must try to believe that it was a false version of Lord Salisbury's speech which was adopted without inquiry by this American politician, who for personal reasons cultivates the Irish vote." The London *News* (Ministerial), commenting on the same topic, says: "We have nothing to do with Mr. Blaine. He belongs to a far from admirable class of American politicians. We can do very well without his opinion of this country. His advice is not required in the management of our concerns. Whether he misrepresented the Marquis of Salisbury or not, we do not know and do not care."

The London *Times*, in its turn, said: "Mr. Blaine may or may not catch the Irish vote by performances such as that of Tuesday's speech, and so win the prize which, fully as much on personal as on political grounds, has been snatched from him once and again; but we refuse to believe that his ignorant and presumptuous rant represents the honest and independent opinion and reflection of the Americans. It is peculiarly absurd that he should pose as the advocate of a plan which he supposes, quite wrongly, of course, would place Ireland in the position of a State of the American Union. He has been conspicuous, for the same reasons which now make him a flatterer of the Irish, in the bloody-shirt campaign against Southern State rights; and if any Southern State should now attempt to deprive negroes of suffrage, he would be the first to favor the settlement of that local affair by the armed interference of the central Government. His history is almost on a par with his reasoning."

The debate on the second reading of the Home-Rule Bill was concluded amid great excitement on Monday night. Speeches of great force were made by Mr. Goschen, Mr. Parnell, Sir Michael Hicks-Beach, and Mr. Gladstone. The vote, early on Tuesday morning, resulted in the defeat of the Gladstone Government by a majority of 30; 341 voting against the measure, of whom 94 were Liberals and Radicals, and 311 for it. Mr. Gladstone moved an adjournment till Thursday.

During Mr. Gladstone's speech closing the great debate the scene in the House surpassed any ever known there before. The crowd was tremendous. The Prime Minister was received with cheer upon cheer. He was very pale, but in splendid voice, and spoke for one hundred and forty minutes. It is not possible to summarize his speech. The peroration was impassioned and most eloquent. The closing sentences were as follows: "Ireland stands at your bar expectant, hopeful, almost suppliant. Her words are the words of truth and soberness. She asks blessed oblivion of the past, and in that oblivion our interest is a deeper interest than hers. Go into the length and breadth of the world, ransack the literature of all countries, and find if you can a single voice, a single book—find, I would almost say, as much as a single newspaper article—in which the conduct of England towards Ireland is anywhere treated, except with profound and bitter condemnation. Are these the traditions by which we are exhorted to stand? Oh! they are a sad exception to the glory of our country. They are more than a black blot upon the pages of its history. And what we want to do is to stand by the traditions of which we are the heirs in all matters except our relations with Ireland, and to make our relations with Ireland conform to the other traditions of our country. So we treat our traditions; so we hail the demand of Ireland for what I call a blessed oblivion of the past. She asks also a boon for the future, and that boon for the future, unless we are much mistaken, will be a boon to us in respect to honor no less than a boon to her in respect to happiness, prosperity, and peace. Think, I beseech you, think well, think wisely, think not for the moment, but for the years that are to come before you reject our plan."

One of the incidents of the debate was a passage at arms between Sir Michael Hicks-Beach and Mr. Parnell. This scene sprang from Mr. Parnell's calm assurance to the House that he had received from a Conservative statesman before the general election a pledge that the Tories would give him a measure of home rule so large as to include the power to protect Irish industries. This statement created "a sensation." The leader of the Tory party apparently denied the charge with great candor and some sarcasm. In fact, however, he only denied it with a qualification.

The Cabinet on Tuesday unanimously resolved to appeal to the country. It is probable that Parliament will be dissolved on June 28. Irishmen both in this country and Great Britain express satisfaction with the result as tending to hasten the final settlement of the whole question by bringing it immediately before the people.

A great funeral procession of 20,000 Catholics in Belfast on Sunday was attacked by Orangemen. Stones were thrown and shots fired. Several people were injured before the police restored order. The Catholics smashed the windows in a linen factory.

The Highland Reform League, at a meeting held in Glasgow on Thursday night, adopted resolutions favoring home rule for Scotland and the establishment of a separate Scotch Legislature.

The International Copyright Bill was read a third time in the House of Commons on Thursday night

The Earl of Rosebery announced in the House of Lords on Monday that the blockade of the allied Powers against Greece had been raised and the allied fleet was dispersing.

Prince Jerome Napoleon publishes a protest against the passage of the proposed Expulsion Bill. He predicts that the Chamber of Deputies by conduct such as the passage of this bill will drive the Republic into civil war.

The Grand Prix de Paris was won on Sunday by R. C. Vyner's Minting, ridden by Archer.

A farmer from Rumania died of hydrophobia in Paris on Monday while under treatment by M. Pasteur. The Rumanian was bitten by a rabid dog on May 11, and reached M. Pasteur on May 25. After he had been under treatment eleven days he exhibited symptoms of hydrophobia on Saturday last, and suffered the agonies of rabies for nearly forty-eight hours before death relieved him. This upsets Pasteur's theory about the period required for hydrophobia to incubate.

The Austrian Reichsrath is debating the first of a series of laws against the Socialists, providing for trial without a jury.

Gen. Caceres took his seat as President of Peru on Thursday.

MR. GLADSTONE'S DEFEAT.

THE general anticipation as to the fate of Mr. Gladstone's Home-Rule Bill was verified on Tuesday by its defeat by a majority of thirty. The leading speeches in the debate which preceded the division were Mr. Goschen's and Mr. Parnell's. The former has always been famed for his power of lucid statement, but the coldness of his temperament, which is *par excellence* that of an economist, has of late years caused a marked separation in feeling between himself and the Liberal party. He distinctly distrusts democracy and makes no secret of it, and could at the last election get no Liberal constituency in England to return him, but had to find refuge in Edinburgh. As an orator he has hitherto had the reputation simply of a very sensible and well-informed man. The Irish question, however, seems to have kindled something like fire in his brain, and he has produced speeches which have amazed his old friends by their vehement power. That on Monday night was undoubtedly his best, and must have weighted Parnell, who rose after him. The force of Mr. Goschen's opposition lies almost wholly, however, in his prophecies of the mischief the Irish will do if they get the government into their hands. He puts this argument better than any other opponent of the bill, because he is not restrained, as many of them are, by any affectation of respect for "the people." The Irish to him represent democracy in its worst and most dangerous shape, and he denounces them, therefore, and predicts their crimes and follies with a double earnestness.

Mr. Parnell resembles Mr. Goschen very closely in the coldness of his temperament and his incapacity for all kinds of oratorical adornment; but he has won probably more fame than Mr. Goschen by his skill in saying what he means exactly and distinctly—no more and no less. On Monday night he probably reached his highest mark as a Parliamentary speaker. There was not a word wasted. A fuller or more forcible and persuasive statement of the exact position of the Irish towards the Ministerial proposal could not be made. He was particularly strong in the point which the opponents of the scheme deem its weakest, and of which Mr. Goschen made much—the danger to the Protestant minority from Catholic tyranny and intolerance. We believe this danger is a pure concoction of the English and Orange anti-Papal imagination. The Irish Catholics have on no occasion, when the chance was offered them, displayed any disposition to oppress or discriminate against their countrymen of a different persuasion. One illustration of this has been frequently cited in the late debates. The Corporation of Belfast is and has always been a Protestant body, and has never been known to employ a Catholic in any capacity. The Corporation of Dublin is, on the other hand, wholly Catholic, and has Protestants in five or six of the best places in its gift. Mr. Alfred Webb of Dublin, a Quaker gentleman of the best standing there, whose father was in his day a stanch friend and supporter of the American abolitionists, has collected testimony on this point from over fifty representative Protestants in various parts of Ireland—Episcopal and Presbyterian ministers, manufacturers, and professional men, some of them English and Scotchmen, most of them living in places in which Catholics are a large majority of the population. Their experience may be summed up in that of Mr. Anderson, the Protestant rector of Dinagh, Cork County, who says:

"During my life, wholly spent in Ireland, and especially during sixteen years of it passed in districts of the south, in which a vast majority of the people are Roman Catholics, I have never met a single instance of religious intolerance on the part of my Roman Catholic neighbors. My experience of life among them records nothing but very constant kindness and courtesy."

There is, of course, nothing now left for Mr. Gladstone but an appeal to the country. Everybody acknowledges that the coalition against him is incapable of forming a ministry that would last three months. Moreover, on such a measure as the Home-Rule Bill, for which 225 English and Scotch votes have been cast in a house which has had no opportunity of taking the sense of its constituencies on it, an appeal to the voters is inevitable before long. Even if the Tories came into power, they would be compelled to make such an appeal almost as soon as Gladstone, for no representative body can live or do any business in a state of uncertainty on a theme so momentous. The mind of England on the Irish question must be known before the Government of the country can go much further. Mr. Gladstone may not live to see this question settled on the lines which he has traced out, but if Irishmen ever find themselves under a government of their own choice, they will assuredly not forget that they owe it to the great Englishman who was the first to acknowledge that the Union was an immense mistake.

THE PROHIBITION BALANCE OF POWER.

THE undisguised alarm with which the Republican managers are contemplating the growth of the Prohibition movement, is not without good cause. As the case stands to-day, the balance of power in all the decisive Middle States, New York, New Jersey, and Connecticut, is in the hands of the Prohibitionists. If they vote for a candidate of their own in any of those States, the Republicans will not have the slightest chance of electing their ticket. The figures of recent elections show this to be an entirely moderate statement of the facts.

Take first the State of New York for the latest three most important elections:

	Rep.	Dem.	Pro.
1882	342,464	535,318	25,783
1884	562,001	563,048	24,999
1885	490,331	501,465	30,867

In every one of these years, except in 1882, when Cleveland was elected Governor by a phenomenal majority, the contest has been decided by the Prohibition vote. Blaine would have carried the State in 1884 if St. John had not been in the field, and, without a Prohibition ticket in 1885, Davenport would have had a handsome majority. It is undisputed that the Prohibition vote is drawn from the Republican ranks. It was hoped to offset this defection in 1884 by the Butler candidacy, but that drew from the Democrats in the entire State only 16,955 votes, or 8,000 less than St. John drew from Blaine. The vote cast a year later for the Prohibition candidate for Governor showed that the party was gaining rather than losing in strength, for the total vote increased from 24,000 to 30,000. If an election were to be held in the State to-day, few careful observers would be surprised to see this total advance to 40,000, or even beyond that limit. The failure of the Republican Legislature to submit a prohibition amendment to the popular vote, and, more than this, the action of the same Legislature in passing the Shook Excise Bill, in the avowed interest of "Republican saloon-keepers," has not only deeply incensed former members of the Prohibition party, but has given them thousands of new recruits. Sheridan Shook's famous telegram to the *Tribune* has travelled, and is still travelling, through all the sections of the State, and is everywhere doing the Republican party incalculable harm. The real facts about the New York situation are frankly admitted in the following remarks by the leading Republican organ at Albany, the *Evening Journal:*

"The general statement we believe cannot be disputed, that a Prohibition vote of 30,000 in New York State will prevent the Republican party from carrying the State for years to come, unless a political earthquake shall change the face of things. Any scheme to make good that vote by securing so-called 'Republican saloon votes' is a sham."

The situation in New Jersey is even more grave than it is here. That State also was lost to Blaine by a Prohibition vote which is much larger to-day than it was in 1884, and is growing larger hourly. The figures of the last three most important elections there are:

	Rep.	Dem.	Pro.
1880	120,555	122,565	191
1883	97,047	103,856	4,153
1884	123,366	127,778	6,153

Here is a growth of about 6,000 votes within four years. Blaine would have carried the State if he could have held them, but without them he was 4,000 behind Cleveland. During the past year the growth of the Prohibition party in New Jersey has been remarkable. It has recently held a State Convention with nearly 800 delegates, and has nominated a State ticket. The Republican managers tried in vain to prevent this nomination by holding a conference just in advance, and issuing a formal address in favor of local option. This had no apparent effect, and has been completely nullified by the action of the Republican Legislature, which last week voted down by a large majority both a local-option bill and a plan for high license, thus going upon the record as opposed to all legislation for the restriction of the liquor traffic. It would not be surprising now if the Prohibition vote in the State in November next were to reach, as the leaders of the party are predicting, at least 20,000. Whatever be its limit, there is scarcely a doubt that it will be large enough to defeat the Republican ticket by an unusually large majority.

The figures from Connecticut tell a similar story. For the past three important elections they are:

	Rep.	Dem.	Pro.
1880	67,071	64,415	409
1882	54,853	59,014	1,034
1884	65,923	67,199	2,305

Blaine would have carried the State easily

with the aid of the Prohibition vote, and his total would then have been about the same as Garfield's was when he carried the State in 1880. The experiment of offsetting the temperance defection with Butler's candidacy failed in Connecticut as it did in New York, drawing only 1,688 votes.

Without these three States no Republican candidate can be elected to the Presidency in 1888, and instead of trying to keep the Blaine boom from collapsing, the Republican managers would be much wiser were they to concentrate their minds upon methods for getting the temperance vote back again. The two main causes for the growth of the temperance moment are, first, the failure of the Republican party to legislate in the interest of temperance, and second, the complete departure from the same party's principles of anything like a moral issue. The men who have gone into the Prohibition movement represent that great element which made the bone and sinew of the Republican party, and made it truly the party of moral ideas. They are men who believe in something, and who can no longer find anything to believe in in the Republican party. They have been driven out by such political management as the Shook telegram reveals, which has been the main reliance of the party for victory for several years. It is a management which bases its hope of success, not upon any principle, but upon trickery and trading. Its idea of legislation is not to enact laws in the public interest, but to enact no laws which may be likely to repel any class of ignorant or vicious voters. In its one anxiety to catch voters of this sort the party has lost the very vote which made it powerful—namely, the vote of the people who believe in something.

What the outcome of the present movement will be, it is too early to determine. That any permanent gain for the cause of temperance can be secured by it, we have very grave doubts. Prohibition, as a means for even checking the spread of the liquor evil, has been a failure wherever it has been tried on a large scale, and we believe it always will be a failure so long as it has only a minority of public sentiment in its support. If the present movement shall result in the enactment of new prohibition laws, the chances all are that those laws will in turn have to be repealed. We regard the movement, viewed in this light, as misdirected, and as merely a demonstration of current dissatisfaction with the way in which the Republicans as a party have failed in their duty toward one of the most pressing questions of the day.

COURTESY.

THERE is a delightful sentence in one of the entries of Montaigne's Italian Journal. He is speaking of the courtesies and kindlinesses shown him at Pisa, "which is held to be a most discourteous city, with citizens of haughty demeanor"—*ma, in ogni modo, chi è cortese ne fa altri:* however this may be, one who is courteous makes others so. Mr. Lowell has expressed the same thought, in a phrase of larger significance:

> "As one lamp lights another, nor grows less,
> So nobleness enkindleth nobleness."

It is, therefore, ourselves we should accuse when we blame the manners of others; and, regarding the world in general, the elders of a generation should find fault with themselves most seriously—in the fullest sense of the words—when the young people of the generation go astray in social customs. What more biting shame is there than the misbehavior of one's children? Yet when they socially misbehave in the company of other people's children, parents are wont to burden poor "human nature" or "the nature of things" with the catastrophe, even at the very moment that (father or mother) they are saying, "I never thought of doing so when I was young."

Two interesting papers on "Some Family and Social Customs which are Passing Away" have lately appeared in *La Réforme Sociale*, the journal which represents in France the school of social science founded by the well-known M. Le Play. The importance of these customs is indicated by their entering into the consideration of men who study society not as men of the world, but as Christians and humanitarians; and it will be well for us all if we instruct ourselves from their views. M. Rondelet, the mouthpiece of these views, expresses them admirably in saying that the customs of society are not an arbitrary invention by which gentlemen and ladies distinguish themselves from other people. "On the contrary, these customs represent a mass of moral ideas of which they are the translation. The usages and phrases of politeness express externally, by kindly actions, the fundamental relations which ought to exist between men. All the distinctions belonging to good breeding, so delicate and sometimes so complicated, answer to a profound (unconscious) analysis of the duties we owe one another." This cannot be questioned; and it explains, by showing the foundation of it, the charm of manner we sometimes find in persons called "uneducated." Many of us can say with Mr. Clough, "I have known peasant men and women in the humblest places, in whom dwelt these qualities [of consideration for others] as truly as they ever did in the best of lords and ladies, and who had invented for themselves a whole economy of manners to express them, who were very 'poets of courtesy.'"

On the other hand, it is the commonest ill fortune to be thrown with the discourteous, with those whom Shakspere has perfectly described out of their own mouths in the person of *Don John*, when he says, "I cannot hide what I am; I must be sad when I have cause and smile at no man's jests, eat when I have stomach and wait for no man's leisure, sleep when I am drowsy and tend on no man's business, laugh when I am merry and claw [flatter] no man in his humour." Such baseness of social demeanor indicates in any *Don John* of them all a "villonnie" of disposition which no stronger barrier than circumstances bars from wicked deeds; which easily passes from being careless of the pleasure of others to disregarding their happiness. We do not lay enough weight on the epithets "courteous" and "discourteous." Chaucer's "veray parfit gentil knight" loved

> "Trouthe and honour, fredom and curtesie";

and for all men, if truth be at one end of the line, courtesy should be found at the other.

The "poetry of courtesy" is not, in American society, very intelligently studied; nor now, it would seem, in French society, which was so long the acknowledged headquarters of worldly graces. And the evidences of deterioration which are to be observed in France are in many respects identical with conditions existing here—conditions which, if seen only on this side of the water, might be thought evidences rather of arrested development than of deterioration; but, when found to be of world-wide extent, must be classified under other laws. These laws it is most important to discover, that we may know whether they should be nobly rebelled against or painfully submitted to. But as yet little more has been done than to note the facts, one of the most important of which is that, with the increased ease of intercourse between the two sexes, there is a diminution of ease of intercourse between the two ages which make up society—or, more accurately, the three ages, viz., the girls and boys of twenty, the men and women of thirty-five, the men and women of fifty. The midway people, from thirty to forty years old, serve as a sort of connecting chain between the wild gayeties and the dull sobrieties of their younger and older acquaintances, and prevent that complete ignorance of each other which would otherwise result from the present entire mutual exclusion of the young and the old from the immediate circle of each. But social intercourse loses half its value if it is not at the same time homogeneous and varied; and to be always in the company of one's contemporaries is as fatal an influence as to be always in the company of persons of one's own sex. A man or woman of fifty who cannot make himself or herself agreeable to a girl of eighteen is wanting in good breeding; on the other hand, equally lacking is a boy of twenty who cannot give pleasure to a man or woman of sixty. But this good breeding can be acquired only by practice. Once acquired, it communicates a peculiarly exhilarating social enjoyment, as all will testify who have had the good fortune to be flattered in their youth by the kindness of older people, and in later years by the good-will of younger people. And few conversations are more charming for the interlocutors themselves, or for bystanders, than those in which the young girl or young man just entering into life is led to awaken, by the gay audacities of his ignorance, the deeper thoughts of the man or woman just passing out of active life. The flame-like fancy of youth kindles the glowing imagination of experience, and, in the interchange of ideas, each for the moment seems to gain all the advantages of the other. Such conversations cannot be held at germans nor at dinners, where most of the gentlemen have been busied with the stock market all day, nor at receptions, formal or informal, from which the young lady of the house is encouraged to exclude her father and mother and the fathers and mothers of her friends. They only still linger round the firesides of pleasant homes where the habitués of the house, old and young alike, are equally the friends of parents and children. Yet our Frenchman is right in declaring that "ces rapports de salon"—the relations between old and young—constitute "un fait social de la plus haute importance."

But beside the "rapports de salon" and the relations between people who know each other, a social fact of importance is the relations between people who are strangers to one another. In modern life these relations are becoming less and less courteous: yet think of the delightful numberlessness of our daily opportunities for the exchange of civilities with those whom we stand face to face with once in all our lives and never again. Not only by graciously making way for them in crowded streets and public conveyances, or by graciousness in accepting such attentions; not only by a kindly smile or word to a quiet passer-by on a lonely road, or by a silent salutation to a hurried fellow-citizen rushing past on the stairways of offices, or by a more respectful recognition of the often slightly perturbed woman astray in such places—not only thus, but in a thousand indescribable ways, it is possible for us to express hourly that universal sympathy with our fellowmen which we should so assiduously cultivate.

It is not, however, in relations with strangers

that this sympathy should be most thoughtful, nor in the "salon" that it should be most delicate. It is in relations with our servants, with those who serve us—whether cooks or clerks, chambermaids or janitors, coachmen or dressmakers; with all those upon whom, rightly speaking, *we* are "dependent"—it is with these persons that we should give the most evident proofs of that sympathy which results from the imaginative conception of the conditions of others, and of the *savoir-vivre* which such conceptions when true bestow on us. The members of our households who are not members of our families, should be treated by us with so constant and so sincere a kindliness of manner that the word "courtesy" would not be amiss in describing it. It is consistent with entire simplicity to be as courteous in one's bearing toward an inferior as toward a superior; and there is no such barrier to insolence. *Tel maître, tel valet:* and a mistress condemns herself when she complains of her servants. If they are not respectable, we should not keep them with us; if they are respectable, we should turn them into friends by the openness and honesty of our good-will expressed by our good manners.

In all these relations that we have been considering—of the old and young, of mutual strangers, of employers and employed—we are for the most part in the habit of allowing our manners to form themselves according to our individual temperaments, and to express the more or less good-will it chances to be our nature to feel toward various people and the world in general. We do not recognize as clearly as we should, and we certainly have not taught our children, that good-will and good manners are mutually and alternately cause and effect, and that, to quote again the writer in the *Réforme Sociale*, "to abbreviate and neglect the forms of politeness is really to diminish the sentiments and the needs of the heart. As soon as one ceases to express outwardly even the most essential sentiments, these sentiments become weakened to a certain degree in the soul; they lose something of their delicacy and of their energy." The cultivation of the forms of politeness must be begun in family life, between husbands and wives, parents and children, brothers and sisters. Till courtesy is honored in the household it will not appear in the "salon."

THE WATERS OF ROYAT.

FEW persons who are interested or curious in the matter of mineral waters have not asked themselves the question: Are mineral waters really useful by themselves; have they any intrinsic curative value? or is it the combined influence of changed climate, scenes, occupation, regimen, amusement, exercise, and in general the new life, spiritual and physical, of a watering-place, that works the undeniable cures at mineral springs?

In questions like this I confess myself to be, by temperament, one of the most sceptical of physicians. I have no doubt that many of the invalids who go to Royat, for instance, would be relieved of some grave ailments, and cured of some lighter, by a few weeks' sojourn in that pleasant place, even if they did not drink a litre of mineral water. But I am convinced that these are among the waters that have intrinsic value; in what way given, and for what kinds of invalids, I will try to show.

A word in advance about the climate of Royat. During the summer months at least it is mild and uniform, even according to the standards of western Europe, which, it will be borne in mind, are higher standards than ours, in the ratio of the greater equability of the Gulf Stream climates. The mean temperature of the summer months is 15° C. (=59° Fahr.) according to the observations of M. Alluard, former director of the Puy-de-Dôme observatory: in July and August (there as here the hottest months) the thermometer rarely passes 25 C. (77° Fahr.) in the shade. When it reached this point last summer, the inhabitants began to cry out upon the heat, and I joined them with as much earnestness as I could muster, while secretly felicitating myself on my escape from a thermometer of 97° Fahr. (on the 17th of July at 4 P. M. at the Central Park observatory). The climate of Royat during the season from May to October is delicious; but so is that of almost any place in western Europe, compared to the alternating India and Siberia of the United States—I had almost said of the entire United States, for the only exceptions are in the extreme south, where it does not freeze every year, and on the coasts of California and Oregon, where the ocean breezes and the Kuro-Siwo current produce a really equable climate. But in our Southern States their warmth gives them neither equability of temperature, day by day, nor equality from year to year, as witness last winter's ravages by frost in southern Florida. The climate of Royat, then, is both equable and equal. No mountain climate (for as such it is classed, owing to the elevation of the place and its nearness to the mountains of Auvergne) is better adapted as an adjunct to the medicinal treatment of the classes of patients that I will indicate.

What are the agents employed in this treatment? They are the thermal waters of the four springs of Royat, mainly alkaline-saline waters, the congeners of those of Ems, but containing also iron and a trace of arsenic as effective elements. They are used both externally, in flowing baths and in the great *piscine*, and internally as alterants and tonics. The four springs are in order as follows:

1. The Eugénie or Grande Source, one of the most abundant of warm mineral springs, pours forth a stream of twenty-seven hundred gallons per minute. Engineers say that this yield could be doubled if required; but experience at La Bourboule and elsewhere shows that there is a certain risk in tampering with the arrangements of the substrata, and it is not likely that risks will be taken in this matter at Royat. Seldom are warmth and abundance so combined in a mineral fountain as in the Eugénie. It flows at nearly the temperature of the blood, 35°.5 C. (96° Fahr.), limpid, inodorous, and highly charged with carbonic acid gas from the volcanic rock; it contains about sixteen grains of salts to the gallon. For bathing this spring is unsurpassed; it supplies eighty-five baths with warm, fast-flowing, and continually renewed or "living" water. These baths "au courant d'eau vive" form a prominent part of the Royat treatment.

2. The Saint-Mart Spring was used in a small way for baths as long ago as 1835. In that year a hurricane devastated the valley; the spring was neglected and even forgotten for forty years. In 1878 it was "captured" again. It flows at the temperature of 31° C. (88° Fahr.), and contains thirteen grains of mineral substances to the gallon, which are not precipitated when the water is bottled. The Saint-Mart is an intermitting spring. Every three or four minutes it awakes from quiescence and noisily dashes its yield into the *vasque* or fountain-basin, pouring out a limpid jet. It sparkles in the glass like champagne wine; and it is taken with pleasure, for its abundant charge of carbonic acid gas well disguises its richness in metallic bases.

3. The Source de César is the best known of the four springs: it has been used since the year 1822. Flowing at a temperature of 29° C. (84° Fahr.), it contains nine grains of mineral constituents to the gallon, and, both in composition and in temperature, resembles the Saint-Mart Spring. But the analysis of this spring discloses a very remarkable quality in its constitution: its mineral components, both in kind and in quantity, are almost exactly those of the serum of the human blood. Not only the César but several other springs in Auvergne approximate to this fortunate composition. But in the waters of Royat inorganic nature makes the nearest approach that has yet been observed at any mineral spring to the delicate combination of the vital fluids. Knowledge of this fact, however, does not explain their vogue. The César Spring was the favorite among these four waters long before this startling correspondence was pointed out by the analytic chemist. But the discovery tends to confirm the fitness of the water for the "reconstituant" uses to which, as I will point out, it is applied in cases of anæmia or debility. It supplies the lacking elements to impoverished blood.

At the springs of Bussang in the Vosges, a local scholar who had been restored to health and to philology by drinking those excellent waters, occupied himself in tracing the true derivation of their name. It was not far to seek. *Bussang*—what is *Bussang* but *sang bu?* The name of the village, he said, thus expressed with the utmost conciseness the reconstituant properties of the iron spring. If with no more etymologic accuracy, the César spring might with equal therapeutic truth be called *sang bu*. Its waters are a true mineral lymph.

The Saint-Victor spring, rediscovered in 1875, is the coolest of the four, flowing at 20° C. (68° Fahr.), but one of the most strongly mineralized, containing sixteen grains of solid matters to the gallon. It has enough of iron, carbonate of soda, carbonate of potash, and arsenic to make it a tonic of the first value for lymphatic, chlorotic, and anæmic subjects. This spring was held in special regard by the Roman physicians, and it still flows in the restored Roman "pump-room,' a chamber forty-nine feet long by thirty-three feet wide, covered with a flat vaulting forty inches in thickness. It is the same masonry that was discovered, in 1877, in the substructures of the temple of Vaso on the Puy-de-Dôme.

These four springs are of very complex constitution; as a group they may be characterized as alkaline-saline-iron waters. They contain the carbonate of lime, the bi-carbonate of soda, the chloride of sodium, iron, and arsenic in small yet appreciable quantity. To this combination they owe their power in the treatment of anæmia, chlorosis, and affections of the digestive organs. Individually, the different waters form a "gamut" of chemical and thermal values of most varied applicability. Let me point out briefly what these values are—who, in a word, should go to Royat, and who, also, should stay away. For what complaints are these waters especially suited? They are suited especially for the following classes of disease: 1. Affections of the respiratory organs. 2. Arthritic complaints. 3. Chloro-anæmic ailments.

1. Out of a hundred invalids treated at Royat thirty are treated for some affection or other of the respiratory tract. Bronchitis, pharyngitis, chronic laryngitis or "clergyman's sore throat," asthma, when not dependent on organic lesions, and pulmonary catarrh—all these are pre-appointed for relief or cure at Royat. For these complaints the waters are given both internally and by "pulverization," or spraying of the affected parts: this latter is the more effective form of exhibition. The treatment is given in rooms at a temperature of from 72° to 80° Fahr. The sedative effect of the carbonic-acid gas which is disengaged from the waters, with the diminished oxygen in the air and the presence of abundant watery vapor, aids the topical effect of the spraying. This treatment is especially effective in cases occurring in nervous and excitable tem-

peraments. Affections of the larynx meet with rapid relief under the influence of these soothing waters. The learned Dr. Rotureau has called attention to the similarity of the Royat waters to those of Ems, both in their marked curative action in this class of diseases and in their chemical composition. Royat is, in fact, the French Ems, with the advantage of a better climate and pleasanter surroundings, and of a spring—the Saint-Victor—which is a powerful tonic.

2. Arthritic affections, as gout, rheumatism, and the eczema that goes with the rheumatic diathesis. For these, at the outset, the stronger waters of Vichy or of Carlsbad are preferable, when the disease occurs in well-nourished and plethoric subjects: such should not go to Royat. But in asthenic subjects, or in the more advanced chronic stages of these complaints in any case, the waters of Royat are invaluable. The great point in prescribing treatment for this class of disease, a class in itself so varied and complicated, is to recognize the pathologic complications, and not to be led away by a name. One case of gout may require the utmost energies of a Carlsbad treatment, with all its austerities of regimen; another, occurring in a different constitution or at a different phase of its development, may much better be sent to Royat.

But of all the arthritic manifestations which are best adapted to treatment in this Vale of Tempe, those ailments which Bazin has named the *arthritides* must take the foremost place. They represent, so to speak, the youth, the maturity, and the ripened age of the gouty diathesis. To the first class belong the light attacks of urticaria and of herpes, which seldom require treatment, being briefly self-limited in their course. The second class comprises dry eczema; of the third the catalogue is long, ill-omened, and ill-sounding—nummular eczema, acne, sycosis, squamous pityriasis, and psoriasis—from each and all of which Mercury forefend rather than relieve us! But for those who are taken in their clutches the springs of Royat, patiently exhibited both within and without, are the nearest thing to an appointed cure.

3. The whole class of chloro-anæmic affections is satisfactorily treated by the iron springs of Royat, in conjunction with bathing, riding, rambles, and all the other gently reconstituant influences of this charming place. Royat is an almost certain cure for ailments which come from impoverished blood. The César and the Saint-Victor Springs, according to the special need, the baths in the "living waters" of the Eugénie—these never fail to bring relief to the sufferer from anæmia, from chlorosis, and from the attendant nervous depressions or exhaustions. Royat, like Bussang in the Vosges, is especially adapted to the reconstruction of the blood globules, and consequently to the cure of the delicate women who have succumbed to the wear and tear of life, or whose health has been run down by the fatigues of pleasure, social or other; whose bank account of red globules, in short, has been hazardously reduced by drafts and insufficiently repaired by deposits. The alkaline and saline principles in these waters stimulate the appetite and favor digestion; the assimilable ferruginous salts give their plastic qualities to the impoverished blood; and the abundant carbonic acid of the baths acts as a useful stimulant upon the capillary network of the skin. Uterine troubles caused by the anæmic condition, and all forms of dyspepsia which depend upon nervous derangements—and they are not a few—find also in Royat their place of healing. Gastralgia, acid dyspepsia in nervous subjects, and atonic dyspepsia dependent upon anæmia, are relieved at least by these waters, and not infrequently cured.

It must be borne in mind that a patient may leave Royat cured, but, by returnin to a faulty habit of living, may relapse into his old ailment. For such sufferers there are two courses: either to change the habit of living or to come annually—as some do—to the springs. I need not say that the prevention of such relapses is preferable to their cure, even at such an attractive station as this.

It remains to add a word about the way of living at Royat. First may be mentioned the hotels: they are numerous, handsome, and well managed, as far as my experience of them goes. At the "Grand Hôtel" I found perfect comfort and courtesy, and a magnificent view of the Limagne plain. The "Continental," the "Splendide," and the "Hôtel des Sources" are also good.

Next come the "villas" and boarding-houses, where families who wish comparative privacy without any cares of housekeeping may find stylish rooms and a good table. The visitor who goes to the villas Beausite, Dourif, De la Grotte, Tiretaine, or Allaigre, or to the Châlet des Roses, will not go wrong. And, finally, there are a number of *maisons meublées* and *garnies*, where families can hire furnished rooms and choose their own table, or have their marketing and cooking done for them. This independent form of *ménage* is, for many, the pleasantest way for a long sojourn. There are some twenty of these houses, one of which is kept by the sisters of the *religieuses dominicaines*.

I must not close without mentioning the learned inspector of the waters of Royat, Dr. Boucomont, and his younger colleague in medicine, Dr. A. Petit, to both of whom I am greatly indebted for lavish courtesies. It cannot be out of place to say that they occupy the first rank as consulting physicians. TITUS MUNSON COAN.

Correspondence.

DR. WALDSTEIN AND THE METOPE OF THE PARTHENON.

TO THE EDITOR OF THE NATION:

SIR: M. Reinach's letter, which appeared in *The Nation* of April 29, concerning your review of my book on Pheidias, calls for some explanation. For the first time my attention is drawn to the discussions which took place at the Société des Antiquaires of Paris in the autumn of 1882, from which it becomes evident that the authorities of the Louvre Museum realized the importance of the marble head, and recognized that it held some relation to the Parthenon, before I discovered the metope to which it belongs and published my discovery. I owe to M. Reinach this (to me new) information on a subject in which I am much interested. These discussions were first published in the Bulletin of that society in 1883, after I had published my discovery in the *Journal of Hellenic Studies* in 1882, and, as will be seen, they arose in consequence of my publication. Why I could take no notice of the facts mentioned in these reports will become evident from what follows.

In the Christmas of 1881-2 I visited the Louvre Museum. I then noticed the head in question in its temporary position, and identified it as described in my publications. I expressed my conviction that, if the provenance was known, it would be found to be Attica. I consulted M. de Villefosse in his office at the Museum and asked him for information. He referred to the books of the Museum and gave me the information I have published, namely, that the head came from the Peiræus and nothing more. At my request he opened the case containing the head, so that I might examine it more closely. Neither then nor at any other time was I told that any person suspected or knew that the head belonged to the metopes of the Parthenon. I asked the authorities of the Museum for a cast of the head, which was promised, but it was not until several months later that, through the kind exertions of M. de Villefosse, the cast was procured and sent to England, and I was thus enabled to find the actual metope in the British Museum of which this head forms a part. My discovery was announced by Mr. C. T. Newton in the *Academy* of August 26, 1882, and shortly after this my paper describing the whole discovery (by the way, an abstract of the essay as it stands in the book, handed in to the press and printed in the summer of 1882) was published in the *Journal of Hellenic Studies* in the autumn of 1882.

From the *Bulletin de la Société des Antiquaires* published early in 1883 I learn the following facts:

(1.) In the meeting of October 18, 1882, M. Read brings before the Society several papers of mine, among them the article describing the identification of the Louvre head, and makes complimentary remarks on my discoveries.

(2.) In the next meeting of November 8, 1882, M. de Villefosse refers to the report of the previous meeting, at which he had not been present, and, without denying my discovery, he begs to state that the authorities of the Museum had not underestimated the importance of the work, and in proof of his statement he quotes the minutes of a meeting of the Comité Consultatif des Musées (held in 1880), in which there is a list of works, and, under the heading *Marbres grecs et principalement attiques*, there occurs *une tête d'homme: style des métopes du Parthénon.*

(3.) In the following meeting (Nov. 22) Prof. Rayet observes that the minutes of the Conservatoire du Louvre do not authorize the administration of the Louvre to claim priority of the discovery made by me; and M. de Villefosse answers that he did in no way deny my discovery (*qu'il n'a en aucune façon contesté la découverte de M. Waldstein*), but that he wished personally to remark that the authorities of the Museum had bought the head because they considered it as having come from the Parthenon.

I am pleased to know and to state the fact that the authorities of the Louvre Museum bought the head as being related to the Parthenon marbles. But from 1879 to the publication of my discovery this opinion was followed up neither by further research and publication, nor by manifest action. For the head was not placed in the Greek room of the Louvre, where there is an original metope of the Parthenon, but remained in a case in a different part of the building, unlabelled. Furthermore, upon inquiry, I was not informed of its relation to the Parthenon. Your reviewer, as far as he was considering my discovery, was thus correct in crediting me with the identification of a head which lay undistinguished in the Louvre. Had I known of these discussions at Paris, which were subsequent to my publication in the *Hellenic Journal*, I might have referred to them in my book, though the essay in question was in print before the publication of the *Bulletin* in 1883. As all readers will know, it is beyond the power of any investigator to read all the abstract reports of the meetings of foreign societies embracing the most varied subjects of study. Though at the very time of the discussions in 1882 I was, as I have been for several years past and still am, in friendly correspondence with M. de Villefosse, who has referred to my discoveries and has sent me *tirages à part* of his papers, he never sent me an account of the meetings referred to, nor alluded to the facts discussed. I can only believe that he wished not to trouble me with this kind of question, now forced upon us by the zeal of M. Reinach. In my book I have on several occasions merged my own claims to independent discovery

where any doubt might have arisen, in order to avoid the possibility of a discussion of priority; for I feel strongly that discussions of this class are most detrimental to the spirit of scientific investigation, and to the maintenance of dignity on the part of those concerned in it. I regret it the more in this case as I am apparently put into opposition with men (M. de Villefosse and M. Heuzey) to whom I stand in personal relations of the most friendly nature; who, moreover, in their official capacity, have ever shown me the greatest liberality.

There is one point against which I wish to protest. M. Reinach's view, that such discoveries as I have had the good fortune to make imply a corresponding ignorance on the part of the directors of a museum, endangers the progress of research. As a director of a museum myself, I should deem it a great misfortune if, in my dealings with investigators working in the Museum of which I have charge, I should be forced to believe that every discovery they make would in so far prove my own deficiency in acuteness. Libraries and museums and their treasures might then become less accessible to researchers, if they were presided over by custodians who were inclined to be less liberal-minded than the authorities of the Louvre have proved themselves to be in their dealings with myself. Surely, men like M. de Villefosse and M. Heuzey have given sufficient proof of their sound scholarship without being endangered in their reputation by not anticipating all that may be discovered concerning the many thousands of objects in their care.

I must finally draw attention to the last paragraph in M. Reinach's letter. The essay on the Louvre terracotta was written and printed long before the facts were discovered which necessarily modified the whole question. Two courses were then open to me: I might rewrite the essay embodying the new information, or leave it as it stood and append the new material. I chose the latter course; because, first, it was more honest, and, second, it promised to be more conducive to the solution of the questions discussed. I thus clearly give the history of my own discoveries, enabling other researchers to follow me step by step, and putting them in as favorable a position for the future task as my own, arrived at through considerable labor and study. This is done in note F, which is not a mere footnote, as, from M. Reinach's letter, the reader might possibly suppose, but consists of eleven pages of print with a plate. What is now wanted is not a summary statement of personal opinion, but a careful examination of the varied material which I have adduced, and if possible the discovery of new facts and data upon which, perhaps, a final conclusion may be based. This final consummation no one can more warmly desire than I do; and no one will be more grateful to him who really brings it to pass. CHAS. WALDSTEIN.

KING'S COLLEGE, CAMBRIDGE, May 18, 1886.

GOVERNMENT AND THE RAILROADS.

TO THE EDITOR OF THE NATION:

SIR: The annual report of the Union Pacific Railroad Company would hardly be classed as a political document, yet none more eloquent in matter has been issued this year. It could hardly be expected that the directors should state the conclusion to which their argument leads, but what that conclusion is, we will let the argument state for itself:

"Nothing connected with the present condition of the affairs of this company has, during the past year, excited so much anxiety among its stockholders as the relations between it and the United States Government."

It seems that no question between the parties can ever be regarded as settled. Committees of investigation or officials appointed for the purpose are constantly taking up anew every claim against the company, no matter how solemnly it has been decided. As the report says, "There is no corporation in the world the affairs of which, during the last sixteen years, have been subject to such incessant searching and wearisome investigation as the affairs of the Union Pacific Railroad Company." The effect is, that many operations which promised great profit have been passed by on account of this fear of Government interference.

"Neither, the directors regret to say, do they, in these respects, see any immediate prospect of a better condition of affairs. Those familiar with the subject are well aware that such resolutions as the one above-quoted almost always originate in stock-jobbing circles. The Government is used as a lever to put prices up or down on the Stock Exchange. During the intervals between the sessions of Congress the situation is comparatively free from difficulty. Events are then allowed to take their ordinary course, and your property is managed, like other properties, on well-understood business principles. Meanwhile, in anticipation of each meeting of Congress, schemes of a stock-jobbing nature are quietly, though with infinite skill, matured. The departments and Congress are then worked upon to accomplish the object."

"The directors by no means imply that officers of departments or members of Congress knowingly permit themselves to be used to affect values, but [for reasons given] they fail to realize what serious consequences may follow measures instigated by adroit men, whose schemes they do not suspect and cannot be expected therefore to fathom."

In other words, in this as in all other respects, the Government is really controlled by the lobby.

For this state of things, according to the report, "there is but one remedy"—that, instead of a percentage of its earnings the Company should liquidate its indebtedness to the Government in fixed payments extending over a term of years. To this proposition I should take two exceptions: (1) it is not a sufficient remedy; and (2) there is another remedy which might be made much more effectual. In the first place, the remedy is defective because it cannot be carried out. If the lobby finds its profit in stock fluctuations caused by its schemes, it will strenuously oppose any measure calculated to put a stop to those schemes. I suppose nobody imagines that the settlement proposed by the Union Pacific Railroad Company has any chance of passing Congress at this session, and there is not much risk in predicting that year after year will continue to pass with the same result. Moreover, if it were passed, it would not be a final settlement any more than those which have preceded it. It would still be open to the lobby to charge that the policy pursued by the Company was endangering the security of its payments to the Government; and every new branch opened, every new change in the system of rates, and a hundred other items might furnish the pretext for just such attacks as are complained of in the report. The question is, however, far wider than the single case of the Union Pacific. That is only one of many of these gigantic corporations which are getting far beyond State control, but lie at the mercy of Congress under its power to regulate inter-State commerce. Suppose that Congress, under the stimulus of the lobby, should enter upon a course of experiments like those of the "Grangers" some years ago, should try to fix a maximum and a minimum of rates to prevent discrimination, and to regulate mutual encroachment on territory, with the accompanying apparatus of investigating committees: what a paradise of stock-jobbers presents itself to the imagination!

The only real remedy is that which corresponds to the real difficulty, government by the lobby. Mr. Gladstone, in one of his recent speeches, thanked God that the House of Commons was the place of the greatest publicity in the world. It is not very extravagant to say that, barring governments like Turkey and Russia, Washington is one of the most secret places in the world. It is the secrecy and irresponsibility of the committee-rooms which give to the lobby its power. That business should be dragged out of the committee-rooms into the publicity of the two houses; that there should be responsible heads of administration open to public cross-examination by individual members; that all the springs of administration, and every interference, whether by members of Congress or any outside interest, with the course of administration, should be laid bare to public criticism and condemnation—this is the only effective remedy for the evils set forth in the Union Pacific report and many others of the same class. Of course the lobby will fight this, like every measure contrary to their interests; but it has the advantage of presenting the simple issue whether this Government is to be carried on in the interest of the lobby or in that of the country. As your correspondent "F. G. S." well observes, it is not a question of establishing a responsible ministry after the English fashion, with resignation upon defeat, and dissolution of Congress at irregular intervals, but merely of the passage of the Pendleton Senate report of 1881, giving to the Cabinet officers seats in both houses, with the right of sharing in debate and the duty of answering questions; or of Mr. Long's bill of this year, making the same provision with regard to the House of Representatives alone. There is no common interest so complete and so urgent for all the great railroads of the country, if they wish to save themselves from stock-jobbing and blackmailing schemes by or through the Government, as to unite their efforts for the passage of these bills. G. B.

BOSTON, May 29, 1886.

TWO SOLVENTS OF THE LABOR TROUBLES.

TO THE EDITOR OF THE NATION:

SIR: If the laborers and the capitalists of this country (and the two classes together comprise the entire public, since almost everybody is either employer or employed, or both) could be practically recalled to a fundamental truth of political economy, one of the two indispensable solvents of our recurring labor troubles would be put into operation at once. I say two solvents, because there are no others of any relevancy or efficiency whatever. The first is that employers and employed recognize the simple fact that the transaction between them is pure buying and selling. There are no moral elements involved, no obligations on either side, except those underlying ones implied in all buying and selling, namely, that each party is bound to render in good faith just what has been previously bargained for in the trade.

The employer buys a service of a certain grade and quality, and sells a return service reckoned in money as wages, and the employed buys this return service and sells his own personal service against it; and each party is bound in common sense and common justice to do what he has agreed to do. That is all there is of it. All the preachers and all the philanthropists and all the master-workmen in the world cannot add to or detract from the essentials of this transaction one iota. It is just exactly in every particular of it as it is with the buyer and seller of commodities on the street and of credits in the Stock Exchange.

There is no compulsion and no obligation in buying and selling, and there is only one kind of it, and the motive on the part of both parties to it is forever the same, namely, to get something of more consequence to him than that which is given. Each buyer is at the same instant a seller, and each seller the same instant a buyer. Both

are on a level of perfect equality as persons, as individuals; and that man, whoever he is, is blind to his own interest as well as to the inmost nature of trade, who binds himself down to act only in conjunction with others in buying and selling. So doing, he scales down his own individuality. He loses his chief motive to make his own service the best possible, and so the chance to get the most for it. He sinks down to an average. He degrades himself to a herd, whether it be of employers or employed. And as the personality goes down, the illusion that *things* are the main element rises before the mind and confuses everything. The word "wealth," with its concrete and material associations, which has wrought a thousand mischiefs in political economy, is working untold mischief to-day in the minds of labor-givers and labor-takers. As they look at it, "wealth" is something that exists whether or no, something that can be divided up; something to be snatched after; something that all have a claim to; and hence legislation is appealed to to control the distribution, arbitrators must be created to look after the shares falling to each party, and Most and his crew, finding themselves out of supplies, make a dash at society itself for not furnishing them a living.

Political economy is a science of persons, not of things. It deals only with the desires and the efforts of men, and the satisfactions and returns for these. It insists that all trade, whether in tangible commodities, in personal services, or in commercial credits, is of one and the same nature; that trade is buying and selling, which is naturally profitable and ought to be free; that laborers are buyers and sellers in precisely the same sense as merchants are, and are as capable of attending to their own interests, man by man; that every seller has the right to get the most he can for his service under all circumstances—that is to say, to render the least of his own service needful at the time to get the service of the other man; that God ordained to be proper and profitable this mutual exchange of services among men; that no persons in the world except the parties themselves, man to man, have the wisdom to dictate its terms; and that, consequently, legislation, arbitration, combination, compulsion, ordering-out, strikes, and boycotts are each and all a fundamental impertinence.

Only when a traffic is clearly contrary to the public health, morals, or revenue, has legislation one word to say about it.

It is plain, then, that if employers and employed realized as they should that they are buyers and sellers only, man against man, nothing less and nothing more, our labor troubles would be at least one-half solved.

The second solvent, and the only other possible one, is to allow their natural markets, wherever found, to all the producers in this land. Laborers and capitalists are alike producers, joint producers, partners in production, and joint owners of the products. But products must have their markets, or the processes are a failure. A market for products is products in market. Therefore, if we would sell at a profit all that we can make or grow with all our laborers employed and all our capital invested in productive enterprises, we must necessarily admit freely all foreign products that want to come in, in order that these may take off at a profit—that is, pay for—all our domestic products that want to go out. To open our ports is nothing in the world but to find our natural and profitable markets. There is no other way to find them. There is no other way to get them. And the blessed thing about it is that there is no ghost of a rational objection to this way. I have been looking diligently for thirty years to see if I could discover any valid objection of any kind to our selling our surplus products to other people at a profit—that is, to our buying their products with our own products at a profit—and I have not gained, as yet, a glimpse of any such objection.

It must not be allowed to slip out of mind, that free trade would not compel anybody to trade, would not even recommend anybody to trade with foreigners, but would only permit all persons to trade with them in case they found it to be profitable. A trade not profitable to both parties to it ceases of itself, as a fire goes out for lack of fuel. What harm, then, could ensue to anybody from merely taking away the barriers to trade?

Just see how the taking away the barriers would give instant employment to idle laborers and to idle capital, and so tend powerfully by raising the rate of wages and profits to quell the contest between them. I suppose we might sell under freedom at least $2,000,000,000 a year to foreigners more than we do now, as that is only one-third the value of our *manufactured* goods alone for the census year 1880. Well, what a quick and strong demand for capital (now idle) and for laborers (now idle) with which to create these two thousand million dollars worth of goods! There are said to be one million idle laborers to-day in the United States able and willing to work, and that after twenty-five years of close protectionism. A new demand for laborers and a new demand for capital such as is implied in the production of $2,000,000,000 worth of new products to be sold abroad for ships and raw materials and finished goods for which we have not equal facilities (otherwise we should not buy them), would set all these hands to work in six months, and take up all these idle millions of capital which our banks are now striving in vain to loan.

A world market for products when the world is open to them is very wide: a one-country market under restrictions and protectionism is very narrow. A world market under freedom increases with every passing year, and a universal glut of products is at once a contradiction in terms and an impossibility in fact.

Were it not for the shortsighted policy, impoverishing at once to capitalists as a whole and to laborers as a class, of a few greedy and unscrupulous men caring nothing for liberty and less for justice, laborers and capitalists in this good land of ours, instead of eying each other with ill-concealed defiance across a widening chasm, would be to-day vying with each other in their well-rewarded zeal to increase the quantity and improve the quality of an ever enlarging volume of products, with which to supply directly, at the smallest possible cost, the wants of themselves and their countrymen, and indirectly these wants of another kind, and some of the wants of the wide, wide world besides. A. L. Perry.

Williams College, June 1, 1886.

LANGUAGE AS AN INDEX TO NATIONAL CHARACTER.

To the Editor of The Nation:

Sir: Your correspondent last week on National Differences of Language speaks of them as indicating differences of national character (or conditions); and says that it is evident French owners of property do not allow "trespassing" since they have no word for it. But in the midst of these remarks a Frenchman is quoted as acknowledging that while they cannot translate the English word "job," "God knows we have the *thing*." Does this hang together quite solidly? And is it not open to question how *far* and how *accurately* differences of language "evidence" differences of character? I am in much sympathy with your correspondent, but I am nothing if not Critical.

Notes.

J. B. Lippincott Co. have in press: 'Travels in Brazil,' illustrated: 'La Plata Countries of South America,' by E. J. M. Clemens; 'A Soldier's Reminiscences in Peace and War,' by Gen. R. W. Johnson; 'Harcourt,' a novel by Mrs. Annie Somers Gilchrist; 'Lyrical Poems,' by Emily Thornton Charles; 'Poems,' by H. S. Hagert; F. Anstey's 'A Fallen Idol;' and two translations of foreign medical works: 'The Accommodation and Refraction of the Eye,' by E. Landolt, M.D.; and 'The Parasites of Man,' by Prof. Rudolf Leuckart.

G. P. Putnam's Sons announce 'Reminiscences of the Filibuster War in Nicaragua,' by Gen. C. W. Doubleday, in his youth a participant in Walker's campaigns; 'American Railroads, considered from the Point of View of Investors,' by John Swann; and 'A Life in Song,' poems by Prof. Geo. L. Raymond.

The present set towards Russian literature is evidenced by the translation of N. G. Tchernytchevsky's 'What's to Be Done?' about to be brought out by Benj. R. Tucker, Boston. Apparently the French version has been followed.

An 'Elementary Course in Practical Zoölogy,' by B. P. Colton, A.M., is in the press of D. C. Heath & Co.

A. C. McClurg & Co., Chicago, will soon issue 'Mr. Desmond, U. S. A.,' an army story, the scenes and incidents being laid at Fort Leavenworth, and the characters taken from military life.

The publishers of the 'Century Dictionary' look forward to an interval of still two or three years before this work can see the light. The De Vinne Press will manufacture it.

The first volume of Critical Miscellanies in Macmillan's admirable uniform edition of John Morley's works contains essays on Robespierre, Carlyle, Byron, Macaulay, and Emerson. Any one of these may be said to be worth the price of the volume. That on Macaulay interrupts a certain homogeneousness that would otherwise have characterized this collection; for the essays on Carlyle, Byron, and Emerson are closely related, and the connection between Robespierre and the English Rousseau, as Mr. Morley styles the author of 'Sartor Resartus,' may be traced through Jean Jacques.

Under the title 'Representative Poems of Living Poets' (Cassell & Co.) Miss Jeannette L. Gilder issues a large and welcome volume of collected verse, whose novel feature is that the poets themselves selected the pieces to represent their genius. There are, of course, a few exceptions: the poems which represent Tennyson, for example, were chosen from a list of his known favorites, and received from his son the non-committal assurance that they "would answer the purpose." But in general one has here the poet's word for the choice, and if one considers what poor judges poets are thought to be of their own work, it may be a surprise to see how well they know their own points. Browning gives us "Abt Vogler," "Caliban upon Setebos," "A Forgiveness," "Saul," "Clive"; Holmes, "The Chambered Nautilus," "The Last Leaf," "Old Ironsides," "The Voiceless"; Tennyson, "The Revenge," "Boadicea," "Come Down, O Maid," and "The Daisy"; and so with the others—it is not the worst verses they like best. Some seventy poets are thus "represented," and the representation is as full for the minor poets as for the great ones. The absence of Swinburne and the two Morrises is noticeable and unexplained. Mr. Lathrop contributes a preface in which he protests against the humble worship of Shakspere *et al.*, and casts a reproving eye on those critics who "persuade the poet to enfeeble his gift of levita-

tion," by self-scrutiny, and similar morbid habits; and he evidently regards our poetical "twilight" with considerable "levitation" himself.

The third of Mr. Henry M. Brooks's "Olden Time Series" (Ticknor & Co.) deals with the 'New-England Sunday,' and is even more tinged with a moralizing purpose than its predecessors. Mr. Brooks is by no means favorable to a return to Puritan Sabbath-keeping, and his excerpts and remarks will dispose his readers to share his views on this subject.

Cassell's National Library grows apace with Macaulay's Bacon, Johnson's lives of Waller, Milton, and Cowley, and Burke's "Thoughts on the Present Discontent" and four speeches. Teachers of English literature should avail themselves of this series to supplement inexpensively the ordinary text-books.

Mr. Crawford's 'Dr. Claudius' continues Macmillan's series for summer reading, and Mrs. A. D. T. Whitney's 'Summer in Leslie Goldthwaite's Life' the Riverside Paper Series. Charles Lamb's 'Adventures of Ulysses' is the latest volume in the "Classics for Children" of Ginn & Co.

Despite the avidity with which works on popular medicine—to say nothing of popular medicines themselves—are devoured, the best judges have always distrusted the wholesomeness of such literature. This distrust is, first, as to the truth of the teaching, and, secondly, as to the risk of its use by the inexpert. Dr. Charles West's name, however, is a guarantee of the accuracy of his 'Mother's Manual of Children's Diseases' (Appleton & Co.). Whether the average mother would be the happier for an anticipatory study of the various ills that lie in wait for her offspring, may be doubted; and we are quite sure that when sickness comes, her hasty reference to any book of special teaching with a view to differentiate between its forms, would be futile. Dr. West disclaims presenting a handbook for the nursery, or attempting to teach the practice of medicine as a domestic art. He seeks, by describing the diseases of early life, to help the mother understand them, to relieve her fears in many cases, and to qualify her to second the doctor in his efforts. To a few cool mothers this may be possible, but anxiety is apt to overrule judgment. We have observed but one remark likely to mislead American mothers. With us remittent is popularly known as bilious fever; but Dr. West, speaking as an Englishman, says typhoid is popularly known as remittent fever (p. 35). Although avowedly written for the gentler laity, the inexperienced practitioner may acquire valuable "wrinkles" from this book.

Two important Latin books have been late in reaching us—the 'Orator' of Cicero and a volume of Cicero's 'De Natura Deorum,' both from the University Press, Cambridge, England (New York: Macmillan). The 'Orator' is edited by John Edwin Sandys, with a lively preface and an introduction on Greek and Latin oratory. It has further what is rather a novelty for an edition of Cicero, six illustrations in the form of lithographs, autotypes, or engravings. The 'De Natura Deorum' is the third and concluding volume of this interesting edition.

The Supplement to the fifth edition of Vapereau's 'Dictionnaire des Contemporains' has appeared (Paris: Hachette; Boston: Schoenhof), containing information to the 15th of February, 1886. It specially contains new information in regard to the French Senators and Deputies, and numerous new biographical notices of men who have become of importance since 1880. In many cases this information is very full. Thus, for Andrieux, Paul Bert, Ferry, Gambetta, Freycinet, every necessary detail is given of their recent political life. The new biographies, also, will be found very useful; but, outside of political characters, and especially of Frenchmen, the Supplement is very incomplete. We look in vain for any notice of Tolstoi, or of any writer foreign to France whose name, not in the fifth edition (1880), should at least be in this Supplement. Even the recent literary and artistic celebrities of France are very sparingly admitted. The names of Brunetière, Paul Bourget, Lemaitre, Édouard Rod, Richepin, Maupassant, Rollinat, Viaud ("Pierre Loti"), Quesnay de Beaurepaire ("Jules de Glouvet"), Mme. George de Peyrebrune, and many others, are not there. It seems as if M. Vapereau waited in general until a man, not in political life, became a member of the Institute before he gave him a place in his Dictionary. The necrology since 1880 is carefully done, but, as a rule, very few details are given.

It becomes difficult to follow M. Guy de Maupassant, not only on account of his facility of production, but also on account of the unsavory character of many of his novels. He has lately published a new volume of stories, 'La Petite Roque' (Paris: Victor-Havard), of which the first was evidently inspired by Dostoyevsky's 'Le Crime et le Châtiment.' It is the story of a man, esteemed and loved by those who know him, who, having committed an atrocious crime, finds no rest for his conscience until he has written to the prosecuting attorney avowing his guilt. The volume contains several other short stories not calculated to cheer the low-spirited.

If any one wishes to make a small collection of mistranslations from French into English, he should turn over the leaves of the last 'Catalogue Illustré du Salon' (1886) by F. G. Dumas (Paris: L. Baschet; Boston: Schoenhof). Leaving aside mere mistakes in words such as *chaume* taken for *chaumière*, *misère* rendered by 'misery,' *un grain* translated 'a storm,' we find such renderings as *le Paysan blessé*, 'the injured peasant,' *sentier perdu*, 'a lost track' (instead of an out-of-the-way or retired or secluded path). The translator has avoided many a trap by simply leaving out the hard words.

The Interior Department, through the First Assistant Secretary, Mr. H. L. Muldrow, has had encouraging success in its recent attempt to make a clearing-house for Government documents in the case of the *Congressional Globe* and *Record*. It now issues fresh circulars to public libraries, enabling them, at no expense to themselves, to dispose of their duplicates, and to fill gaps in their sets of reports of the Patent-office, Agricultural Department, Smithsonian Institution, Geological Survey, American Archives, American State Papers, Annals of Congress, and Register of Debates.

The eleventh annual meeting of the Spelling Reform Association is announced to be held at Cornell University in the second week of July. Its latest bulletin, No. 21, is dated May, and gives the proceedings at the winter meeting in December last. Mention is therein made of correspondence with the English and German Reform Associations, which it is to be hoped may come to something.

The *Antiquary* for May opens with a nine-page article, fully illustrated, upon the historic streets of Plymouth, their names and associations, by W. H. K. Wright. This is an article of great interest. Of the continued articles, Mr. Bird's upon the History of Crown Lands is devoted to the sixteenth and seventeenth centuries. Mr. Davey's paper upon Beatrice Cenci is perhaps the most interesting of the series, as it contains the sworn evidence as to the occasion and manner of the murder. It is evident that never was sympathy wasted upon a more worthless heroine than upon this Italian girl, who killed her father "because he kept her locked up and treated her badly." Mr. Jewitt's "Quaint Conceits in Pottery" treats of "mammiform liquor-holding vessels." Mr. Hodgett's instalment on the "Scandinavian Elements in the English Race," and Mr. Atkinson's "Notes on Common-Field Names," both contain valuable matter.

Recent inquiries set on foot by the *Academy* (Syracuse, N. Y.: George A. Bacon), and reported in the June number of that periodical, show that a little more than half the students of Latin in this country use the ancient pronunciation, and 46½ per cent. the English. As to Greek, a pretty wide and satisfactory investigation shows that, during the past thirty years, the sale of Greek books has increased 100 per cent. faster than the population; that where there were 100 studying Greek in 1865, there were 142 in 1875, and 244 in 1885; and that the study is encouraged by 70 per cent. of the teachers, particularly in the larger schools. Latin has made still greater strides—probably, as the editor suggests, because it "is not considered to any large extent as a college preparatory study, but is pursued by most for its own sake, as a preparation for life work."

The *Revue Bleue* contains in the number of May 22, an article on "Deux grands poètes ennemis"—Victor Hugo and Racine—whom the writer, M. Paul Stapfer, believes to be "the two poets who have had the most powerful influence on our [the French] poetic language and literature"; in other words, "sur la forme et sur la façon de dire." He adds: "And to fashion the style, is it not to fashion the thought? Can a prosody or a language be reformed without modifying somewhat, indeed very deeply, the soul of all the writers of rhyme (*le peuple rimeur*)?" M. Stapfer ranks Victor Hugo as the greatest of French poets, from the marvellous variety and magnificent richness of his achievements; but his admiration is far removed from the wild and worshipping enthusiasm to which Mr. Swinburne has accustomed us. With Racine, while recognizing the limitations of his genius, the critic asserts its supremacy in the delineation of one of the strongest of human passions, *guilty* love—guilty or jealous love—love whose violence impels toward crime; and extols also as supreme the quality of Racine's art in his two unrivalled religious tragedies—the quality of combined simplicity and grandeur.

We have received from Westermann & Co. the first part (out of five) of a 'Kulturgeschichte des Deutschen Volkes'—one of those popular works of which the Germans seem almost to have a monopoly. The author of this particular history of German civilization is Dr. Otto Henne am Rhyn, State Archivist of the Swiss Canton of St. Gall, who well understands the art of illustration, as this brochure shows. The cuts in the text are extremely abundant, but there are also numerous single and folding plates, in black and white and in colors—facsimiles of miniatures, charters, Biblical texts, and other primitive documents—executed in admirable style. The narration is clear and direct, and, in spite of the ground covered, a single volume of large page and open typography will contain the whole. The work is dedicated to the German race in the broadest acceptation of the term and in its widest distribution, and will, in fact, find its way into many German-American households as a welcome acquisition to the family library.

From the same publishers come four parts of an important work which will require thirty-six to make its three volumes, 'Das Volkschulwesen im Preussischen Staate,' by Dr. K. Schneider and E. von Bremen. It is a systematic documentary exposition of the present state of popular education in Prussia, in law, ordinance, and regulation, and, as a work of reference on this subject, must supersede

every other. It draws freely upon the *Centralblatt für die gesammte Unterrichtsverwaltung* (1859-1885), a periodical of which the early numbers are now very scarce, and which can hardly be used by the investigator without some such aid as this new work furnishes to discriminate the obsolete from that which is still in force. 'Das Volksschulwesen' should find a place in all our great libraries.

The lesser Brockhaus' 'Conversations-Lexikon' nears its end with parts 46-55 (New York: L. W. Schmidt). The greater, too, has the goal in sight with parts 189-195, completing vol. xiii. Rome, Russia, and her wars of this century, and the Reformation, are the most conspicuous topics among those treated at some length. The maps are of the Eternal City, of Prussia, Posen, the Rhineland, etc. A gayly colored plate depicts the poisonous mushroons.

One may find at Westermann's a prospectus of the important 'History of the Discovery of the Art of Book-Printing,' undertaken by Dr. Anthony van der Linde, the famous Dutch opponent of the Coster legend at the cost of expatriation. He now undertakes to prove affirmatively that the art is of German origin, and that to Gutenberg we owe printing with foundry-type, and book-printing proper. He demolishes the Coster myth anew in his second volume. There will be three in all, finely printed and illustrated. Asher & Co. are the Berlin publishers, with a subvention from the Prussian Ministry.

Mr. Christern has received a prospectus of a work prompted by the Jubilee Exhibition of the Royal Academy of Art now open at Berlin, in honor of the first exhibition given a century ago —namely, 'German Painting of the Present Time.' This is intended to be a lasting memorial of the works now brought together. Photogravure will be employed in their reproduction. There will be two styles of issue, that on Japan paper costing ten marks a *Lieferung*, say, $30 for the set of twelve.

J. H. Bufford's Sons have added another to the uninspired portraits of Lincoln—a life-size lithograph.

—We perform an act of justice to Mr. C. B. Todd, author of the recent 'Life and Letters of Joel Barlow,' in correcting a misstatement in our review (No. 1089), namely, that Thomas Paine's name is not mentioned in the book. This was in sad forgetfulness of a long letter of Barlow's to Paine's biographer, Cheetham, extenuating Paine's failings, and insisting on his intellectual greatness; not to mention another incidental reference. It is but just to our reviewer to add that the oversight was not wilful, or due, as might well appear, to neglect to read the book; but to his trusting his memory after the Life had temporarily left his possession.

—The June *Century*, which opens with a graceful literary "outing" of Mr. Austin Dobson's on the Thames, and has several light articles worth summer reading, comes to the front with one very serious contribution upon "Faith-Healing and Kindred Phenomena," by Dr. Buckley. The examination to which he submits this "pitiable superstition" is scientifically rigid, and the materials are held so well in hand, and are so systematically dealt with, that the view of the subject is both broad and definite to an extraordinary degree. A lifelong interest in alleged miracles, and, in general, in the great circle of phenomena which go under the various and ever-changing names of mesmerism, psycho-dynamics, spirit-manifestations, etc., has made Dr. Buckley acquainted with a wide range of facts; and personal communication with some of the more famous workers of cures, such as Dr. Newton, and direct investigation of cases extending over many years, together with experiment on his own account, have given him a very realizing sense of the nature of mind-treatment, and the circumstances under which it is efficacious either temporarily or permanently. In the comprehensive grasp of his article the "faith-cure" becomes only one form of miraculous healing, not to be differentiated essentially from that wrought by holy waters, relics and shrines, or by spiritualists, magnetic doctors, and others—who claim to have "the gift" in every age. The facts are practically the same, whichever group is attended to; and it is affirmed that cures are worked, within a certain range, through a mental state of which the principal elements are concentrated attention, reverence, and confident expectancy, and that such cases are physiologically explicable. The sifting and classification by which this conclusion is reached make the best part of the article; for the conclusion was, of course, foregone. The author is careful, however, not to deny providential interposition in disease, and especially to mark out clearly what he apparently regards as the impassable line of distinction between the works of the modern faith-cure (and all its congeners, present and past), and those of Christ and the Apostles. He concludes with a solemn warning against a delusion which "belongs exclusively to no party, creed, race, clime, or age," and of which "the natural tendency is to mental derangement." The memoir-reader will find in this number also some letters from the inedited Franklin MSS. at Washington—a foretaste of the edition lately announced as in preparation.

—The *Century* war papers for June are devoted to the campaign of Antietam, and are four in number. Three are from the pens of Confederate officers, and one is by a civilian who was a newspaper correspondent on the national side. All have the merit of sticking pretty closely to what the writers themselves saw and knew; but by far the most authoritative is that by Gen. Longstreet. His paper is a short one, but is a model of broad and strong sketching. His high rank in the Confederate service, which made him the immediate subordinate and natural adviser of Gen. Lee, put him in the way of judging of the campaign as a whole, its object and the degree in which it failed, better than any other living man on that side. His opinion was that it was a mistake for Lee to divide his forces for the sake of a separate capture of Harper's Ferry, and that energy on McClellan's part would have made the error fatal. Even as it was, he attributes to this cause the failure of the projected campaign and the subsequent ebbing of the Confederate fortunes. That Lee avoided this course the next year, in the Gettysburg campaign, when a garrison was left at Harper's Ferry under similar circumstances, is pretty good proof that he was a convert to Longstreet's opinion. The description of the battle of Antietam seizes the strong, salient points of the engagement and of its results, yet gives enough of minor and personal detail to make it a lively and most attractive narrative. Col. Douglas's article is from the standpoint of a staff officer with Stonewall Jackson, who is, of course, its hero. It, with Gen. Walker's paper, adds to the evidence we had before that the surrender of Harper's Ferry was culpably weak and unnecessary, and relieved Lee from the worst consequences of a false strategy. Mr. Coffin's paper on "Antietam Scenes" is a graphic description of the appearance of the battle to a visitor approaching our extreme right from Hagerstown, and passing in rear of the troops engaged to the centre and to McClellan's headquarters. What he saw is well told, but he cannot resist the temptation to general criticism of the battle—a field in which the opinions of casual visitors are of small weight.

—The stage which the discussion of woman suffrage has reached in England may be gathered from the articles on that subject in the last two numbers of the *Nineteenth Century*. The Hon. Mrs. Chapman presents the argument against it in April, and Millicent Garrett Fawcett meets her in rejoinder in May. Mrs. Chapman has no fault to find with the fact that women already enjoy the municipal and the School Board franchises, for these functions are administrative, not legislative, and are concerned with local, not national interests; they may be considered merely as a little wider kind of housekeeping, and there is no reason to be found in the feminine nature why women should not share them with men. But the Parliamentary franchise opens up for them a very different kind of question. Nature has set bounds to their too wide-reaching intellectual activity, and the larger concerns of the world can be of real interest only to men. Wise women will always offer their opinion with diffidence where (as in foreign politics, for instance) they can have but a very imperfect knowledge of data, and probably also strictly limited powers of estimating what they do know. Influence, in a general way, in favor of a high tone in public affairs, it is right and proper that they should exert on questions that lie within their range, for that is germane to their natural constitution and to their conditions of life; but there is no reason to suppose that that influence would have an added sense of responsibility attached to it, if it were accompanied with the duty of giving open expression to their opinions by a vote. Women do not ask for an extension of the suffrage, and while their judgment is in general weak, they are, after all, in practical matters, very good judges of what is best for their daughters and for themselves. If they were to vote in Parliamentary elections, moreover, there would be introduced into married life a sad source of strife and discord. It is certain that the normal relation between husband and wife must be one of control and decision on the husband's side and deference and submission on the wife's. This is inevitable so long as marriage is not made a mere civil partnership, dissoluble at will; and it is endangered if women are given equal powers with men in the conduct of the Government.

—Passing over the fact that Mrs. Chapman does not make it plain why a husband and wife who have voted amicably on local taxation and the establishment of schools should take to bitter quarrelling on questions of foreign policy, it may be noticed that she shows a not unusual British insularity in supposing that the English distribution of power between husband and wife is the only possible distribution. Mr. Collier, in his little book on 'English Home Life,' points out that the chief difference between the English and the American household is to be found in the absolute and unquestioned supremacy of the English husband: the English wife, apparently, exists only for the purpose of executing his commands. It would be greatly to the enlightenment of the English if Mr. Collier were to write another little book in order to show that there are countries where the great questions of where and how to live, of how much to spend, and on what plan to bring up the children, are settled by mutual consent instead of by supreme authority, and that quite as much happiness, in all probability, is got out of the married relation in those countries as is done in Germany, for example, where the wife is a working woman as well as a subject. There is no doubt that, as regards his relations with women, a higher type of man has been evolved in this country than the English type. It is not so much that wives assert their rights and by asserting obtain them, as it is that husbands are too fair-minded and too just to

be willing to treat their wives as beings of an inferior race, simply because the law gives them the power to do so.

—Mrs. Fawcett in her reply presents no arguments that are absolutely novel, but she calls attention to the fact that the proposed reform is not so much a change as a mark of a change; that it will not come as an isolated phenomenon, but as a necessary corollary of other changes which have been gradually and steadily taking place. It will have the effect of adjusting the political machinery of the country to the altered social conditions of its inhabitants. The revolution has been quietly taking place for at least two generations; the political change will not be a revolution, but a public recognition by the State that the lot of women in England is no longer what it was at the beginning of the century.

—Under the title "Un éditeur—Homme de lettres," M. Eugène Muller pays, in *Le Livre* for May, an affectionate tribute to the late publisher, J. Hetzel, and author, "P. J. Stahl"—two personalities, he says, equally remarkable, yet united in one. Hetzel, as his name (which the Romans spelled Attila) implies, was an Alsatian, a native of Strasbourg. He was the builder of his own fortune, and the virtual founder of the *librairie de luxe*, the *librairie populaire*, and the juvenile literature of France. To this last he was himself an ardent contributor, and M. Muller was among the first whom he invited to help edit the *Magasin d'éducation et de récréation*. Hetzel effectively broke with the traditional huge octavo, substituting a much handier form of volume; and gave vogue to the publication of works in illustrated parts. During a temporary exile in Belgium, after the *Coup d'État*, he maintained his editions against piracy by the excellence of their manufacture, and by declaring them alone authorized for foreign issue. Hetzel was an admirable critic as well as writer, and did not hesitate to give a lesson to Balzac, as is shown in a remarkable letter reproduced by M. Muller. That the same publisher harmonized in his list the works of this author and those intended for the youth of France is a circumstance which would excite reflection if not remark in an Anglo-Saxon country. Hetzel in the character of "P. J. Stahl," when too feeble to use his pen, found that he could not dictate. He was a tolerable writer, he told his friend; he was never a good talker: "Sans plume, je ne suis plus écrivain." A fine portrait of Hetzel accompanies this memorial sketch.

—*Les Lettres et les Arts* for May (Boston: Schoenhof) begins with a charming sketch, half story, half landscape, by André Theuriet, "Le Portrait," in which his most delicate qualities of description and of sentiment are accompanied by that dash of malice with which he brings out and accentuates his most poetic passages. The illustrations, with the exception of Jules Breton's "Grand Pardon breton," of which a fine full-page copy is given, are by Emmanuel Lansyer, many of whose best-known pictures of the bays, the reefs, the rocks, the *landes* of this very region seem to be here reproduced. Following this are six pages containing as many short poems by Paul Bourget, called collectively "Les Fleurs," with drawings of the flowers in loose masses above and below the verses, by Mme. Madeleine Lemaire, whose lovely portraits have added so much to the beauty of previous numbers of the *revue*. Bourget's poems are exquisite in execution, in form, and in conception; their delicacy and depth of sentiment and their grave and harmonious music are wholly satisfying. An article by Maurice Tourneux, "Les Salons de Peinture au XVIIIe siècle," is both interesting and instructive, with its stiff illustrations recalling the engravings of the last century. James Darmesteter, from whose scientific gravity nothing of the kind would have been expected, gives a fantastic poem in prose, "Lucia Galvani, légende italienne," which Maurice Leloir has accompanied with a striking picture of Galvani and Lucia floating in a little boat among water-lilies. M. Dujardin-Beaumetz, of the Academy of Medicine, writes an interesting paper upon "La Rage à Paris," of which the two principal illustrations are Gérôme's "Cimetière turc" and Edelfelt's Salon picture of the present year, "M. Pasteur dans son laboratoire." Full of interest and of information as this article is, however, it seems out of place in a purely literary and artistic periodical like *Les Lettres et les Arts*. M. Anatole France writes, in his usual charming manner, "Au Salon," and his remarks about the pictures are accompanied by some of the finest illustrations in the volume. By far the most beautiful and suggestive of the pictures reproduced is Jules Breton's "Repos des moissonneurs." Henner's "Orpheline" is more striking, perhaps, and it has a strange beauty of its own. Both are exquisitely rendered in very different manners, but in both cases with the finest and most delicate effect. The article upon "Le vicomte Eugène Melchior de Vogüé," by M. Victor du Bled, is very interesting and full of a sympathetic admiration.

—Although Heine was one of the wittiest writers that ever lived, and although the repertory of the most successful comedy company in this country, Daly's, confines itself almost exclusively to translations of German plays by Moser and others, yet as a nation the Germans are still too ponderous and serious to appreciate wit and humor as they are appreciated in England, France, and America. 'Die Familie Buchholtz,' which has had such an extraordinary sale in Germany, is exceedingly naïve and primitive in its humorous methods, and the leading comic paper, the *Fliegende Blätter*, is infinitely superior in its illustrations to its text. Yet a month or two ago a writer in the *Rundschau* sneered at the current jokes always found in American newspapers, which, he declared, the readers of German newspapers would little appreciate. The reason why may perhaps be found in the results of a prize competition for original witticisms arranged by the *Neueste Nachrichten* of Munich. Six prizes were awarded, of which two were for untranslatable puns of the weakest description. The highest prize, 150 marks, was given for this conundrum: "A—'A friend told me the other day he had seen Frankfort on the Oder from the Brocken. Do you believe that possible?' B—'Quite impossible, for how could the man tell at that distance whether it was Frankfort on the Main or Frankfort on the Oder?'" A prize of 100 marks was given for this archaic joke: "A woman who had looked under her bed all her life for burglars discovers an apprentice hidden away, and exclaims, 'Ah! there you are at last.'" Fifty marks were given for this joke: "The burgomaster of a certain small town is so strict in his diet that he does not even partake of [*geniessen*, enjoy] the respect of his fellow-citizens." The one that obtained the last prize was the best of all: "First Berliner—'You have studied astronomy: can you distinguish the Great Bear?' 'The Great Bear? Well, I should say so. True, I haven't seen him, but when the sky is clear you can hear his roar way over at Potsdam.'"

— On the 2d of May the Goethe Society celebrated at Weimar the one-hundredth anniversary of the first publication of Goethe's collected works, and Herr Erich Schmidt, Director of the Goethe-Archiv, fittingly outlined on that occasion the plan of the new and complete *Archiv-Ausgabe*, whose publication is to be begun next year. Prof. Wilhelm Scherer and Herr von Loeper will be Herr Schmidt's associates in the general editing, but numerous specialists will be intrusted with the biographical portion, which is to constitute one of the five subdivisions of the entire work, and will comprise three volumes. Two of these will be devoted to the biography proper, by Herr von Loeper, and a "historico-philosophical preface from the pen of a prominent historian." In the third volume Goethe's activity in the fields of science and philosophy will be considered. Prof. Haeckel will treat of his morphological studies, Prof. Ferdinand Cohn of his researches in botany, and Prof. Herman Grimm, it is hoped, will discuss his relations to art. Even his 'Theory of Colors' is to find a critic "who will impartially consider alike its errors and physiologico-æsthetic merits." Prof. Kuno Fischer, finally, will furnish a *résumé* of his philosophical views. The other four divisions of the publication will consist of Goethe's works properly speaking—substantially as arranged in the Cotta edition of forty volumes—his scientific writings, his annals and diaries, and his complete correspondence. The greatest treasure now released from the Archiv is the "diary" written in the winter of 1786–87 in Italy and addressed to Frau von Stein—fugitive leaves, partly of an intimate character, which form the groundwork of the 'Italienische Reise.' In addition there are "mountains of diaries and correspondences, and an almost overwhelming wealth of scientific studies covering sixty years." As might have been expected from Goethe's methodical manner of working, there are few fragments and abandoned schemes, but numerous reëlaborations and "clean copies." Among his most famous works only 'Goetz von Berlichingen' and the Roman 'Elegien' exist in the original manuscripts; those of 'Faust,' 'Wilhelm Meister,' 'Tasso,' etc., being lost. Of particular interest are a manuscript of 'Hermann und Dorothea' with metrical corrections by a strange hand, and a copy of 'Egmont' with Schiller's marginal remarks. Other manuscripts show Herder's correcting hand.

AMERICAN DIPLOMACY.

American Diplomacy and the Furtherance of Commerce. By Eugene Schuyler, Ph.D., LL.D. Charles Scribner's Sons. 1886.

MR. SCHUYLER is entitled to speak with authority on the subject of his book, as he has devoted himself to it for some twenty years. Within that period he has served as consul at Moscow and at Reval (1867-9), as secretary of legation at St. Petersburg for six years, acting as *chargé d'affaires* during nearly half this time (1870-1876), as secretary of legation and consul-general at Constantinople, as consul at Birmingham, as consul-general at Rome, as *chargé d'affaires* and consul-general at Bucharest, and as minister resident and consul-general to Greece, Rumania, and Servia (1876–1884). He has thus had a more than usually good opportunity of gaining a thorough knowledge of our consular and diplomatic service, and his book, which is based on two courses of lectures delivered at Johns Hopkins and Cornell, will be found full of valuable information. It is divided into two parts, the first of which treats of the "Consular and Diplomatic Service," the second of "American Diplomatic Efforts to Protect Commerce and Navigation." Of the many subjects touched upon in the first part we can only notice two or three of special importance.

Mr. Schuyler opens his discussion with the announcement of a paradox. He says that if we were to rid our minds for the moment of the "literary" theory of the Constitution and its working, which we have been taught from our childhood, and look only at "the practice of our representative institutions" as they have been developed, we should find that in the last analy-

sis the Government of the United States, in ordinary peaceful times, is "a nearly irresponsible despotism, composed of five or six men, working under and through constitutional forms, and subject only to the penalty which is always exacted for very grave mistakes." These six men are the President, "elected by the people, but only from two or three candidates proposed by partisan conventions as the result of intrigue or the failure of intrigue"; the Secretary of State and the Secretary of the Treasury, "named by the President as his colleagues and associates, rather than his advisers and servants, confirmed by the Senate, which never refuses its approval except for cause of the most scandalous nature, or for reasons of extreme partisan feeling"; the Speaker of the House, "elected as such by his fellow-Congressmen at the dictation of a clique or as the result of a compromise between the factions and the personal ambitions of the dominant party"; the chairman of the standing Committee on Appropriations and the chairman of the standing Committee on Ways and Means, both appointed by the Speaker, and generally his rivals for the Speakership. "These," he continues, "are the chief depositaries of power, and without the consent of one, two, or three of these men, no important step in public affairs can be taken."

This is unquestionably important if true; and if it is true, the next most important thing is to ascertain what are the consequences of "this grave conflict between actual practice and constitutional theory." But here Mr. Schuyler does not enlighten us. He says that the Secretary of State, by hasty or ill-timed or intemperate action, may embroil us with foreign Powers; through ignorance he may give up rights which we have jealously guarded for a century; by the negotiation of a treaty he may draw us into a scheme of annexation, or saddle us with a colony or protectorate. So far as these dangers exist, have they not always existed? They really inhere in the very nature of diplomacy, and in intrusting the foreign affairs of the Government to a State Department, or to the President, or to one or a small number of men. One thing which gives our Executive such great power in foreign affairs is the secrecy of the executive sessions of the Senate, and the secrecy which surrounds all diplomatic correspondence and negotiation, at any rate in the first stages. But this is an inherent part of the constitutional machinery, a page taken from the middle-age theory of the relations of governments to one another. This secrecy has been reinforced by the introduction of the telegraph, and the consequent power of dictating negotiations abroad from Washington, and the mischief which an ignorant or unprincipled Secretary of State might do has perhaps been increased in this way; but we fail to find in Mr. Schuyler's volume any justification for the statement that the management of our foreign relations involves a grave departure from constitutional theory. Mr. Schuyler seems to have in mind, indeed, rather the annual interference of the House Committee on Appropriations with the foreign service than the despotic powers of the Secretary; but while writing his book, the rules of the House were changed so as to take away from the Committee on Appropriations the control of the appropriations for the consular and diplomatic service, and to give it to the Committee on Foreign Affairs. He thinks this very important in "reducing the tyrannical and unconstitutional powers of the governing junto," but adds, "what has been written is nevertheless allowed to remain, in order to show to what point our Government had come when this salutary measure was taken."

We have not space for extracts, but can cordially recommend this book to students of our service. The information which it contains is just of that sort which is difficult to get from books, as it is the condensation of actual experience extending over a period of many years in a service in which experienced public servants are few and far between. The great triumphs of American diplomacy have been achieved by sheer force of native ability and merit, not reinforced, as they would have been in the case of any other powerful country, by long tradition, by an *esprit de corps*, by an atmosphere of precedent and training. Mr. Schuyler holds that the principles of civil-service reform might well be applied to the consular system, the higher posts being filled by promotion, and appointments being made only to the lower grades, and does not think much of the objection to long tenure, that a consul will become "denationalized" by long residence abroad. As to the idea that consuls can promote "trade," he very justly says, "English commerce was not built up by consuls." He seems to be of opinion that a salaried consular service is better than one paid by fees. With regard to diplomatic officials, Mr. Schuyler thinks it a mistake to give our envoys so universally the low rank of ministers, and mentions several inconveniences which result from this, the chief of which is that they are continually outranked by officials of other nations who really discharge substantially the same functions. He suggests that it ought to be made an international rule that there should be only one class of diplomatic agents, or, in other words, that all chief diplomatic representatives or heads of missions should be equal among themselves. He sees no objection to combining foreign missions, and gives a page of illustrative cases in which it has been successfully accomplished. He says that the suggestion that we entirely dispense with the diplomatic service, and confide diplomatic functions to consular officers, "has an appearance of reason," and calls attention to the fact that our ministers to Switzerland, Portugal, Denmark, Greece, Rumania, Servia, and some of the South American countries, are consuls-general as well—which seems at least to dispose of the objection that the combination of duties is impossible.

As to questions of ceremonial and etiquette, Mr. Schuyler notices the absurd idea, so common among travelling Americans, that they are entitled to the good offices of their minister in procuring them the necessary number of introductions and "tickets" for whatever is going on; and he suggests that it would be a good thing to have at Washington a master of ceremonies to keep the State Department straight in matters of ceremonial. But by what process should such an official be produced? Working for "the party" would never do, and there is confessedly no board of censors in Washington who know enough about etiquette to pass upon the qualifications of candidates for such a post.

We have not left ourselves much room to speak of the second part of Mr. Schuyler's book, which gives an interesting historical summary of our dealings with the Barbary Powers; the right of search and the slave trade; the free navigation of rivers and seas; neutral rights; the fisheries and commercial treaties. Neutral duties are not considered, nor the canal question, nor extradition. This part of the book is mainly expository. The author is more at home in the practical details and business of diplomacy than in the field of the *jus gentium*. His book is mainly valuable for the picture it contains of the service as it exists; and a wonderful picture it is. With its underpaid officials, selected in nine cases out of ten for other reasons than that of their fitness to discharge the duties of their office, unversed in the language of the people to whom they are accredited, and devoid of all knowledge of etiquette and ceremonial, our system flies in the face of every maxim that has ever governed the preparation of diplomatic machinery by civilized nations. One point, to which Mr. Schuyler does not allude, furnishes a curious commentary on American diplomatic business—the ponderous volume of instructions to its representatives abroad by which the State Department attempts to make up for their assumed ignorance and incapacity. These descend to details almost as minute as those of a book of tactics, and excite the amazement of the diplomats of other nations, who, being specially trained for their work, are assumed to be able to regulate their ordinary movements without a code. With such a system, it is wonderful that we get along as well as we do; but it is still a question how long we can keep it up without some radical reform.

RECENT FRENCH BOOKS.

M. Arsène Houssaye, poet, novelist, journalist, art critic, theatrical manager, literary historian, amateur painter, Inspector-General of Fine Arts, Inspector of Museums, member of numerous artistic associations and committees, and above all man of the world, of the Paris world, has completed his 'Confessions' (4 vols. Paris: Dentu; Boston: Schoenhof). In these four volumes, of which a great part is rather the *mémoires des autres* than of himself, M. Houssaye has recounted fifty years of his literary and artistic career, from 1830 to 1880. He has much to say of the society in which he played a part, of the *monde*, and sometimes of the regions bordering on the *demi-monde*: not enough of the latter to make the book entirely satisfactory to those who seek for information in that direction, but enough to give a certain perfume to the volumes distasteful to many. Nor does he confine various half-veiled details to the period of his youth; age never made him less impressionable, if we are to trust him, and even in his *été de la Saint-Martin*, an Indian summer of youthful warmth reaching to the limits of winter (he is now over seventy), he has things to confess which do not seem in the least to weigh upon his conscience as sins. In fine, he congratulates himself upon having been at a good school which taught him to take life gayly. Morny and D'Orsay were heroes to him; he strove, not without success, to imitate these models during a long life of literary and artistic dilettantism. It would be difficult to say where the truth begins or ends in the 'Confessions,' especially in the part devoted to the youthful years, a little too full of not very edifying adventures. Even when he speaks of well-known persons and events, his inexactitude is startling. Thus, vol. i, p. 387, he speaks of the Comte de Saint-Simon, but calls him the Duc de Saint-Simon, who was quite another person, and he talks about his receptions as if he had himself been present at them, whereas in reality M. Houssaye came to Paris only in 1830, and Saint-Simon died in 1825. Many of the pages will seem enigmatical to one not versed in the knowledge of Paris *salons*. M. Houssaye has a glib way of rattling off the most aristocratic names, and of hinting many things which he might be embarrassed to prove were he called to a strict account; but he usually, not always, stops short of scandal at least, and he will not satisfy those who seek for it in his volumes.

By far the most attractive pages in the 'Confessions' are those in which M. Houssaye recounts his administration of the Théâtre-Français during the years between 1849 and 1856. It was the time of Rachel's greatest successes. This part of the work abounds in pleasant reminiscences of Balzac, Dumas, Émile Augier, Scribe, Alfred de Musset. But even where the author is at his best the reader must be on his guard; he does not inspire confidence, and the sprightliness of his style does not always make up for the absence of veracity. Besides, this sprightliness of

manner degenerates too often into an affectation of levity which becomes fatiguing when continued through four octavo volumes. Although M. Houssaye never goes quite as far as Jean-Jacques Rousseau, the last volume contains many details that may seem of almost too private a character—the author's connection with Marie Garcia, his second marriage. There is much sentimentality mixed with his irrepressible levity; but it is asking too much of the lively and always charming author of so many volumes on the frivolous side of the eighteenth century to demand that he should be very serious when writing his own memoirs. Yet when he comes to speak of Napoleon III., whom he often saw, he endeavors to make his style rise to the dignity of history. He frankly and unhesitatingly admires those who supported the Emperor, and he seems to have been on intimate terms with many of the important personages of the time. But how much can we believe of the conversations he reports with the Emperor, the Empress, Morny, Persigny, or Walewski? There is, however, one point which he makes very clear—how the marriage between Napoleon III. and the Countess de Montijo was brought about, and the part which Mérimée played in the transaction. He lays a great part of the blame for the Franco-Prussian war in 1870 upon the Empress Eugénie, but he is throughout in full sympathy with the men and institutions of the Second Empire. On the whole, the 'Confessions' are agreeable reading. The author almost always keeps his cheerful humor; he has praise to bestow on almost all those whose portraits he presents to us. There are a few exceptions, however. He rather hints at than expresses some very ungracious things about George Sand, and he cordially hates Mérimée. M. Houssaye has made his book peculiar by several orthographic freaks. He spells *tems*, *cham*, *gourman*, *ven*, *hyver;* but he has not had the courage to carry out his reform to its utmost limits. Each volume is enriched at the end with about twenty pages of facsimiles, letters, portraits, drawings, selected from the collection of the author, all chosen to illustrate the text. This is the most reliable part of the 'Confessions.'

M. Houssaye, after mentioning his principal books, closes by saying that his best work is Henry Houssaye, and posterity will no doubt ratify this judgment. M. Henry Houssaye, though still comparatively a young man, has already produced several volumes, mostly upon Greek history and art. His 'Histoire d'Alcibiade,' his first work, was crowned by the Academy in 1874, and won for him a respectable place among French writers. For some time he has been contributing to the *Journal des Débats* articles upon artistic and literary topics, which he has now collected into a volume under the title 'Les Hommes et les Idées' (Paris: Calmann Lévy; Boston: Schoenhof). The subjects chosen by M. Henry Houssaye are of a more serious character than those in which his father delighted and still delights. He treats of Hellenism; the Science of Religions; Wit among the Greeks; Modern Greek Poetry; but the most attractive parts of the volume are those that relate to modern subjects—Zola or Flaubert; Paul de Saint-Victor or Victor Hugo. Even in these we find, where we least expect it, some phrase which reminds us that the author has written such works as 'Apelles et la peinture grecque.' A quotation from the anthology or a little story from Plutarch serves to close an article on a novel by Claretie or by Mario Uchard. He quotes Aristotle quite naturally when he speaks of 'Madame Bovary.' But the display of erudition becomes puzzling to the ordinary reader when, in the course of a not over-discriminating analysis of the style of Cherbuliez, which he calls "simple and natural," M. Houssaye tells us that he uses lavishly all the forms of irony, "depuis l'astéisme jusqu'au diasyrme." In spite of all this, 'Les Hommes et les Idées' is a very interesting volume, and the last essay especially, "Les Romanciers contemporains et le Naturalisme," is excellent.

M. Jules Claretie bade farewell in October to his readers of the *Temps*, where, for a number of years, he had given every week a series of articles, of which the sixth and last annual volume has now been published—'La Vie à Paris' (Paris: Victor-Havard; New York: Christern). The discontinuation of these rambling talks on the most varied subjects was owing to the appointment of M. Claretie to the honorable post of Director of the Comédie-Française. In these six volumes he has touched upon almost all the subjects of artistic, literary, dramatic, or general interest that came up in what is known as the Paris world. M. Claretie was always remarkably quick and ready as a journalist. He was often the first to bring into general notice a book, a picture, or a new author; but his interest was not limited to productions of the mind: celebrated suits, fêtes, balls, races, passing events of all kinds, found in him a sympathetic chronicler. Nor did these long weekly *causeries* seem to interfere in the least with the author's productiveness in other directions; so that he could easily have continued them, even in addition to his new duties as Director of the not easily manageable troupe of the Théâtre-Français, had he not felt that his official position would make it impossible for him to speak freely upon many things. As it is, the readers of the *Temps* will not feel too much the loss of M. Claretie's chatty articles, as something analogous, though very different in spirit, is now presented to them from the pen of M. Anatole France.

Those who are interested in personal details about the celebrities of Paris, both literary and artistic, will take a certain pleasure in reading M. Albert Wolff's 'La Gloire à Paris' (Paris: Victor-Havard; Boston: Schoenhof). The volume consists of thirty-four articles on some of the artistic and literary notabilities whom the author has met. With many, especially the actors and singers, he came in close contact in his quality of *feuilletoniste*. Thus he reveals in his article on Thérésa how the 'Memoirs' signed by this eccentric singer were composed by himself and Ernest Blum, aided by Henri Rochefort. Too often, however, the notices are mere hasty *feuilletons*, with little information in them, like those on Sarah Bernhardt, on Rossini and Meyerbeer. At times, too, the subjects, if they had their moment of *gloire*, scarcely deserve to be remembered; nor will M. Wolff's enthusiasm do much to carry down to posterity the names of the singer Darcier and of the painter Charles Marchal. 'La Gloire à Paris' is really the fourth volume of the series called by the author, with a certain conscious pride, "Mémoires d'un Parisien." For M. Wolff's greatest ambition is to be a Parisian; and, in spite of his German birth and of his beginnings as the correspondent of German papers, he has won for himself a respectable place among the lighter writers of a class which the asphalt of the Paris boulevards seems alone able to produce.

'Les Français en Russie et les Russes en France,' by M. Léonce Pingaud (Paris: Perrin; Boston: Schoenhof), is a large octavo volume of 500 pages, in which the author attempts, as he says in his preface, to sketch the history of French civilization in Russia, and to indicate its character and influence, from the death of Louis XIV. to the fall of Napoleon I. It cannot be said that M. Pingaud has succeeded in making an interesting narrative out of his very promising materials, or, indeed, that he has made anything deserving the name of an historical sketch of French influences upon Russia. He has brought together many scattered facts drawn from public and private documents, more or less known and unknown, under the headings: "L'Ancien régime"; "L'Émigration"; "L'Invasion"; but his book gives rather the impression of a mass of notes than of a well-digested narrative. With such actors at his disposal as Catherine II., Voltaire, and Diderot; or Louis XVIII. and his court and the army of Condé; or Alexander I. and Napoleon, it would have been impossible to make a book devoid of interest or of value, and M. Pingaud has not done so; but his volume is disappointing, and, what is even worse, at times tedious. The most interesting part of it is what he has to say of the connection of the Duc de Richelieu and his companions with the foundation and growth of the port of Odessa.

A new volume from the pen of Victor Hugo is necessarily something of a literary event in France; but more than one of the poet's admirers will be disappointed by what his literary executors have published under the title 'Théâtre en liberté' (Paris: Hetzel and Quantin; Boston: Schoenhof). The short prologue is in Victor Hugo's most extravagant style, unredeemed by any flashes of poetry. "La Grand'Mère" has a few tender touches, that remind us of Hugo at his best when he deals with child nature. The au hor was wise to write, in the fragment of a preface prepared by him, that the other dramatic attempts in the volume could only be played "in that ideal theatre which every man has in his own mind." This is perhaps the most poetic thought in the volume.

In 'Les Dames de Croix-Mort' (Paris: Ollendorff; New York: Christern) M. Georges Ohnet has overstepped the conventional limits within which he has hitherto confined himself, and ventured into the wilds of the *roman psychologique*. As his equipment for such wanderings was entirely inadequate, the result is what might have been expected. In sacrificing the romantic and sentimental characteristics which have given to his previous work a certain refreshing respectability, he has evidently tried to lift his present story out of the depressing atmosphere of commonplace and virtuous sympathies into those lofty regions of art where decency and morality do not exist. The attempt was too ambitious for his powers, and 'Les Dames de Croix-Mort' is at the same time unpleasant in its subject and unsatisfactory in its execution, and, worse than all, dreary and uninteresting from beginning to end.

'Geneviève,' by Mme. E. de Pressensé (Paris: Fischbacher; Boston: Schoenhof), is a very moral but not at all a religious novel. It is sufficiently well written to be readable, and even interesting to young persons who do not demand of an author either probable events or natural characters. The characters belong to the working classes with a few exceptions, and the events occur before and during the siege of Paris. If the author's theories of life and of art leave something to be desired, at least she has the best of intentions, and is never either offensive or tiresome.

The last work of M. Émile Zola, 'L'Œuvre' (Paris: Charpentier; New York: Christern), is the fourteenth of the gigantic series called by the collective name: "Les Rougon-Macquart, histoire naturelle et sociale d'une famille sous le Second Empire." In this the author aims to paint the artistic, and, to a certain extent, the literary world of the period of which he has undertaken to be the social historian. His hero is a painter of the *plein air* school, Claude Lantier, the son of La Gervaise. The story is merely that of the efforts of the artist, of his powerlessness in creation, of the hallucination which drives him to self-destruction before the monstrous creation of his pencil. M. Zola, in the early part of his career, was a constant visitor

at the studios of a class of artists whose resemblance to his hero is not very remote. He even for a while made a certain stir as an art critic, and his articles on Manet contain theories not at variance with those exposed in the present volume. There is scarcely another work of his, not even excepting his volumes of literary and theatrical criticism, in which his personal theories are more complacently set forth than in this. By the side of the painter is the young writer, Sandoz, Zola himself, or rather the Zola that Zola sees. There is no stronger pleading *pro domo* than the tirades of Sandoz on his new studies "de l'homme physiologique"; his explanations of his audacities of language, of his convictions that everything ought to be expressed in words, that there are hideous and abominable words that are indispensable, "qu'une langue sort enrichie de ces bains de force." Of course the most characteristic part of his utterances cannot be quoted or even hinted at. By the side of the main figures there is a whole band of young artists—Mahoudeau the sculptor, Gagnière, who, while the others dispute, dreams aloud of Berlioz, and Schumann, and Wagner, "le dieu en qui s'incarnent des siècles de musique."

M. Zola feels conscious of being himself, he, the high priest of the Naturalistic school, a product of the Romantic school of Hugo. As a critic, he saw through what was false and factitious in Hugo, and yet he has the very defects of the school, just as his hero, Claude, the painter who wishes to paint only the real, falls at every moment into exaggeration, into a secret symbolism which makes him introduce naked figures into the foreground of a picture which is to reproduce the Paris of to-day. If we are to consider Sandoz as expressing his ideas, he is painfully aware that his generation has been steeped in Romanticism: "Nous en sommes restés imprégnés quand même, et nous avons eu beau nous débarbouiller, prendre des bains de réalité violente, la tache s'entête, toutes les lessives du monde n'en ôteront pas l'odeur." It would take a specialist in painting to criticise M. Zola's pages on the processes employed by his hero. Here, as elsewhere, his vocabulary is inexhaustible, his precision fatiguing, his prolixity of detail annoying when it does not become unintelligible to a reader whose knowledge of the subject is only general. There is at times a perfect orgy of description in 'L'Œuvre.' Victor Hugo and his school have no richer tints with which to bring out the landscape than Zola has when he sees Paris, and the Seine, and the quays at sunset through the eyes of Claude and Christine in their long walks at the time of their first unconscious love. To the many descriptions of Paris that M. Zola has given (there are no less than five in 'Une Page d'amour,' all from the same spot), he has added several in 'L'Œuvre,' most of them as seen from the Pont des Saint-Pères looking toward the island of the Cité, at all hours and all seasons, and in all sorts of weather. It is in these descriptions that the author shows himself a consummate artist and creator in style.

Aside from the inherent repulsiveness of the matter, and the voluntary and even calculated disregard of the proprieties of language, 'L'Œuvre' is not one of the books in which M. Zola most offends the current taste and sense of decorum, though there is enough in it to make the work disagreeable even to readers not over-fastidious. On the whole, the same may be said of 'L'Œuvre' as of the other novels by the same author: they may interest on account of the many subjects they touch upon; they may even attract by the unusual nature of these subjects; but they cannot be said to amuse. They are often tedious reading. Even if we are not repelled by the brutal truth they claim to have, we certainly do not rise from reading them with our better nature stirred into activity. They depress and sadden by the persistent presentation of what is mean and selfish in man. They show, with entire unconcern, where the evil lies. They dwell on all the hideous and repulsive details of human maladies, and never suggest a remedy or raise a hope of some cure, however distant. The latter part of 'L'Œuvre' recalls forcibly to the mind 'Le Chef-d'œuvre inconnu' of Balzac. In that, too, the painter becomes absorbed in his *œuvre* enough to forget all else, and to lose his reason and his sense of the beautiful. Not so, however, with the Claude of M. Zola: he, on the contrary, can never be satisfied; he doubts at times his own genius, his mental equilibrium. Herein is the despairing note of the work—that "fatal powerlessness" which seems to pervade the best creations of the Naturalistic school.

Persia, the Land of the Imams. A Narrative of Travel and Residence, 1871–1885. By James Bassett. Scribners. 1886. Map, pp. xvii, 343. 8vo.

PERSIA is so important a factor in Central Asian politics that a trustworthy account of her present condition has a special interest at this time. Mr. Bassett has the great advantage over some recent writers on this country that he was not a mere traveller, but lived in Persia for eleven years. His first impressions were received when the country was suffering from the effects of the famine of 1871, during which it is estimated two millions of people perished. This fact perhaps unconsciously colors the whole of the book, and induces a more unfavorable tone than might have been the case a few years earlier or later. While in all the tours, with a single exception, which he describes, nearly every town and village presented scenes of suffering and death from starvation, a traveller through Persia in 1881 is able to say, "I saw neither man, woman, nor child in a state of weakness from insufficient food; . . . the physical condition of the peasantry seemed to leave nothing to desire." The author's journeys, of which he gives an account in the first chapters, were confined to the northern provinces, Ispahan being the furthest southern point which he reached. The most interesting of them was that to the sacred city of Mashad on the northeastern frontier, a place familiar to the readers of Vámbéry and O'Donovan. At the time our author visited it, in 1878, about 125 miles of the road from Teheran was known as the "Place of Fear," from the fact that it was exposed to the raids of the Turkomans. It was the custom, therefore, for all pilgrims and travellers, of whom there were always great numbers, to cross this stretch of country in caravans which were despatched twice a month under Government escort. The author's description of a night march with the caravan—the alarm as it approaches one of the "Stations of Terror," the songs of the pilgrims, the long-drawn-out cries of the dervishes, "like the ominous hoot of an owl"—is the best in the book. Though warned that it was not safe for a Christian to enter the city, he went about freely and without the disguise which other travellers have assumed. On this account, however, he was unable to enter the famous sanctuary ornamented with gold-enamelled tiles.

In the closing chapters Mr. Bassett gives the results of his observations on the country, its Government and people. There is much that is encouraging in its present condition: Persia has no debt, and its revenues exceed its expenditures. But, on the other hand, its revenues and, according to the latest returns, its commerce are apparently decreasing, and the cost of living has greatly increased. Consequently, "while a few people are growing richer, the peasants are growing poorer, if that be possible, and the whole country is falling into a financial stress, the only remedy for which, in the ordinary course of things, is a reduction of the population by war and famine." A principal cause of this is the fact that the means of communication are still of the most primitive character. Though the greater part of the country offers no obstacles to the easy and rapid construction of roads, there are but two of any length which are practicable for wagons. Mr. Bassett states that there is only one—that which connects the capital with Casveen, a hundred miles to the northwest; but the latest accounts say that there is now a second, between Teheran and Koom, which is about the same distance to the south. The cost of transport, therefore, is such as to effectually prevent the development of internal traffic. The Shah has made several attempts to induce foreign capitalists to build railroads, but hitherto without success, from inability to give sufficient security. Of this monarch, who has been on the throne for the period, extraordinary for an Oriental sovereign, of nearly thirty-eight years (not forty-five, as Mr. Benjamin states in the January *Century*), our author says he "is by far the mildest and best disposed prince that has ruled in Persia. He is also the most progressive." Though he has done much for his people, he has made no radical reform, no doubt despairing of overcoming the obstacles to progress common to all Mohammedan countries. To these should be added, according to some recent writers, among whom is the late United States Minister to Persia, the influence of Russia, which is said to be exerted steadily and powerfully to prevent the growth of a country which she intends to conquer. However this may be, that part of Persia which, next to Teheran and its immediate vicinity, seems to show the greatest improvement, is the province of Khorasan, which, thanks to Russia, is nearly freed from the raids of the Turkomans. The statement of the author that "the Turkman as he was, the scourge and terror of Eastern Persia and Central Asia, has ceased to be," is rather a prophecy than an accomplished fact, as Col. Stewart, of the Afghan Boundary Commission, reports their raids as still continuing in 1884 in the territory to the south of Mashad.

Mr. Bassett's work as a missionary naturally led him to make a careful study of the different religions of the people of Persia, and the chapters devoted to this subject are the most valuable in his work. The great mass are Sheah Mohammedans. "The essential and distinguishing tenet of this sect is that, by the command of Mohammed, the right to supreme spiritual and secular rule was possessed by the eldest living representative of Ale, until and including the twelfth generation." This last ruler or Imam is Al Mahdi, who disappeared when a child. He is not dead, however, but is concealed, and will make two revelations of himself. Of the numerous impostors to whom this tradition has given rise, the best known is the Bab, whose followers, called Babees, still exist in considerable numbers, though subjected now for many years to the severest persecutions. The non-Mohammedans are only about one hundred and thirty thousand out of a total population variously estimated at from five to ten millions. These consist principally of Armenians, Nestorians, Jews, and Parsis, or Guebers, as they are contemptuously called in Persia. This sect is rapidly decreasing in numbers under the constant oppression which it has suffered for many years; and though very numerous formerly, according to its recent historian, Dosabhai, "it does not at present exceed seven or eight thousand." It illustrates the difficulty of getting any trustworthy statistics of this country that Mr. Benjamin puts the numbers of the Guebers at 25,000,

while Mr. Bassett says they "do not number more than four or five thousand souls." The Jews are, if possible, in a still more degraded condition. "They are all polygamists, either in theory or fact, and the law of divorce is essentially that of the Mohammedans. In every place the Jews follow the most disreputable pursuits." The Armenians alone of the dissenters have acquired any influence in Persia. "Many of them are employed in important positions, and as postmasters, telegraphists, and officers of the army."

As a writer Mr. Bassett lacks imaginative power, and, while giving many minute details, is rarely able to present to the mind a picture of that which he describes. In spelling Persian words he frequently follows a rule of his own which, so far as we have examined, generally differs from that of other writers. It would have much enhanced the value of his work if he had, in some condensed form, given his readers a clear idea of the changes in Persia either for the better or for the worse during the fourteen years over which his observation extended. Its usefulness, also, as an authority and book of reference would have been greatly increased by an index. We regret this omission the more as the author has evidently taken great pains to be accurate in his statements. We have noticed but a single error, which is in the bibliography at the end: the author of 'Persia during the Famine' was not Buttlebank, but Brittlebank.

The Epic Songs of Russia. By Isabel Florence Hapgood. With an Introductory Note by Prof. Francis J. Child. Charles Scribner's Sons. 1886.

Essays in the Study of Folk-Songs. By the Countess Evelyn Martinengo-Cesaresco. Scribner & Welford. 1886.

ONE of the most unfortunate results of the movement which we call the Renaissance, was the introduction of a new standard of taste which, for over two centuries, almost entirely closed some of the most interesting and valuable fields of research. All investigation into national history and literature was abandoned for the passionate pursuit of Greek and Roman letters, and every intellectual manifestation of the middle ages, whether in literature or art, was characterized as barbarous. The reaction against the mental despotism of the Renaissance was slow, but never quite suspended, and finally achieved a brilliant victory in the German and French Romantic School. We can measure the immense gain of this victory by considering a single field of study which it has reopened to us—that of popular literature. Before the Renaissance there existed in most countries of Europe a flourishing popular literature, much of which has unfortunately perished by the neglect of later ages, but much more of which has been preserved by oral tradition than we could have believed possible. Almost every department of literature was represented, from the epic to the drama. This literature has suffered no break, but has combined and developed its original elements in the most interesting manner, and the Carolingian epics and the mediæval mystery still survive in many parts of Europe. The immense harvest gleaned during the past few years on this field shows no sign of diminution, and scarcely a month passes that we are not called upon to chronicle some new collection of folk-tales or folk-songs.

The value of this material is twofold: it constitutes no unimportant addition to literature, and it throws much light upon some of the difficult questions regarding the origin of the epic, the drama, etc. This secondary interest, if we may so call it, is just beginning to attract attention. First comes naturally the period of enthusiastic and sometimes indiscriminate collection; then follow the sifting and comparison of materials and the deduction of general laws and principles. The two volumes before us illustrate these two stages: one is a genuine and delightful addition to literature, and the other is an examination and comparison of materials already collected. We shall examine the two books in the above order.

One of the interesting things about the collection of popular literature is, the surprises it has in store for the collector and reader. When a country has apparently been ransacked by scholars, some outlying territory will suddenly afford a new and extensive branch of literature; or some forms, which, it had been thought, had disappeared forever, will all at once crop out in the most unexpected manner. Both of these cases have been verified in the Russian Folk-Epics so admirably presented to the English reader by Miss Hapgood. In some countries we have epics without epic songs, as in France; in others we have epic songs and no epics, as in Russia; and lastly, as in Spain, we have both epics and epic songs. In none of the southern countries, however, have we one of the most interesting features of the northern epics, the survival of the mythical age. The early introduction of Christianity in the south had so thoroughly destroyed the pagan mythology that we find no trace of it in popular literature, except, of course, as much as the Church absorbed into her ceremonies and legends. In the north, on the other hand, the persistence of pagan mythology communicates a tone elsewhere unknown. Finally, we may notice the absence of that form of chivalry which was developed on the southern soil under the influence of Christianity. It would be impossible, for instance, to find in the epic songs of the south a hero like Ilyá of Múrom, who was a peasant.

The epic songs of Russia were unknown until a few years ago, and the story of their survival and collection is engagingly told by Miss Hapgood in her introduction. The songs themselves are cyclical in their nature, and cluster about the exploits of heroes who had their homes at Kiev, Novgorod, and Moscow. There are, besides, separate songs upon the elder heroes. The contents are of the most fascinating description, and, with the exception of an occasional trait found in all folk-songs, will prove entirely new to the reader; while the admirable form in which the translator has clothed her text gives the book the value of an original literary work. Around the half-mythical figures of the peasant-hero Ilyá of Múrom and the Prince Fair Sun Vladímir gather the heroic shapes of their companions, who quaff the aurochs' horn of mead and wield the mace six tons in weight. Nor are fair ladies absent from these pages, where the imaginations of the Orient and Occident meet and fuse, but Vladímir's wife, the Princess Apráxia and her sister Nastásya woo their husbands or meet death at their hands like their sisters in the ballads of other nations. A world of romance is revealed to the reader in these pages, and the translator has our gratitude for bringing it within our ken.

The 'Essays in the Study of Folk-Songs,' by the Countess Martinengo-Cesaresco, offers a somewhat different interest. It is, as we have said above, an examination and comparison of folk-songs already collected, chiefly in the south of Europe, and parts of the book have already appeared in various periodicals. In spite of the desultory character of the work, it displays wide reading and excellent taste, and cannot fail to awaken curiosity. The contents may be divided into four classes: that in which the writer gives a comprehensive account of the folk-songs of some country or province, as in the chapters on Armenian Folk-Songs, Venetian Folk-Songs, etc.; that in which are examined the various modes of treatment of certain themes, as, Nature in Folk-Songs, the Idea of Fate in Southern Traditions, the Inspiration of Death in Folk-Poetry; or in which the author discusses such general questions as the Diffusion of Ballads; or, finally, the class treating of some of the divisions of folk-songs, such as Folk-Lullabies, Folk-Dirges, and Songs for the Rite of May. These essays are all entertaining and valuable, and will serve to show the reader what a rich mine is that of popular literature, and how little known in this country, notwithstanding the labors of Prof. Child and Mr. Newell. It is to be regretted that no references, except in the most general way, are given to the sources; and, as the texts are presented in translations only, it is impossible to trace them, in spite of the list of authorities given at the end of the book.

Whom God Hath Joined. By Elizabeth Gilbert Martin. [Leisure Hour Series.] Henry Holt & Co.

THERE is pleasure in the opportunity to describe as able a novel written by a woman. The author of 'Whom God hath Joined' provides that opportunity. The chief, but by no means the only interest of the novel lies in the spiritual development of Katherine Danforth, a girl born of Methodist parents and bred in an American town, where every tenth man has an infallible creed of his own for which he is ready to be uncompromisingly disagreeable until a new revelation compels him to readjust the definition of infallible. The girl, sensitive, impressionable, with unusual intellectual keenness, is tormented by doctrinal hair-splitting; she drifts through doubt to unbelief, and at last finds peace in the absolutism of the Church of Rome. The author's conclusions and the wisdom or folly of Katherine's behavior in the great crisis of her life involve questions of religious dogma. Centuries of theological strife and oceans of human blood have not settled them. Mrs. Martin has not undertaken to decide them for the universe, but she has discussed them through her characters very cleverly. The delineation of Katherine is fine and complete. The sketches of Mark Norton, who felt that Methodist fervor was, in some way, incompatible with slaveholding; of White, the chilly Unitarian; of Maria Rawson, the fanatical convert to Romanism, and of the Jesuit father, are all vivid and impartial. In Katherine the tendency towards Romanism is indicated from the first, and at the end the reader shares the author's conviction that her conversion is a logical and natural finality.

It is to the author's conviction that the book owes much of its power, and this is additional proof of a fact already pretty firmly established, that the woman in literature is strongest when she is "writing up" a personal feeling or conviction. In Mrs. Martin's case the gain of power more than compensates for any loss of literary beauty. She has managed her plot, too, almost as well as her motive and characters. It is coherent and ingenious, though the movement of the second part is so rapid that the reader cannot feel the tragedy of the dénouement. In natural connection with the narrative she has contrived to make shrewd and entertaining comments on life, and has occasionally achieved an epigram that bears examination.

Hamlet's Note-Book. By William D. O'Connor. Boston: Houghton, Mifflin & Co. 1886.

"HAMLET'S NOTE-BOOK" is 'Promus,' and the little essay it gives a title to is a reply to Richard Grant White's destroying criticism on the latter, when it was edited and issued to be the capstone of that monumental folly called the argument for Bacon's authorship of Shakspere. The writer

tries hard to be as severe and to laugh as boisterously as Mr. White. He had withdrawn his answer in deference to the death of the unmannerly critic, but the republication of the cause of offence in a volume of posthumous essays has released him from any bond of courtesy, and he now discharges the thunderbolt. He accuses Mr. White of many things; in particular, that he selected from the list of parallel phrases in 'Promus' and Shakspere those that had least likeness. Why, he loudly asks, did not Mr. White choose such as these?

"Thought is free." Promus, 653.
"Thought is free." Tempest, iii.
"All is not gold that glisters." Promus, 477.
"All that glisters is not gold." Merchant of Venice, ii., 7

One point he certainly makes, to wit: that the quotation from 'Promus' "O the," which Mr. White suggested might be "othe" (oath), is correct, being written "Oye" in the original. He declares Sir Walter Raleigh the author of the Sonnets, and so disposes of the argument from that quarter. Of the "charge" that Bacon was destitute of the poetic faculty he remarks it "is best met by the vast crescent smile it evokes upon the visage of the student of Verulam." The "vast crescent smile," we fancy, transformed its horns into a less amusing facial expression when "the student of Verulam" ran upon the Stratford bust in the following fashion:

"A fat fellow, sturdy, comely, fresh-colored, blobber-cheeked, no neck, a mouth full of tongue, a ten-per-center's forehead, the funniest perky little nose, a length of upper lip which is a deformity, and on it two droll little flat curls of moustache, supplemented by a short point of imperial on the chin."

Shades of Greene and Nash! what an ally did ye lose!

A Memorial of Mary Clemmer. By Edmund Hudson. Boston: Ticknor & Co. 1886.

MARY CLEMMER, better known to the newspaper-reading public as Mrs. Ames, and who (as we learn near the end of this volume) was for the last year of her life Mrs. Hudson, is in these pages given to the world by her husband. His object is to proclaim the importance of her public work, and to display the personal charm which endeared her to her friends. The first he endeavors to effect by affirmations which facts too frequently force into the form that "those who stood nearest to her . . . may be pardoned for cherishing the belief that opportunity alone was lacking to have secured for her a higher place in American authorship than she succeeded in attaining." Those to whom she was a stranger may perhaps be pardoned for cherishing the belief that the quality of the work she did was such as unmistakably to indicate an inability to do higher or better work, or to attain any place of distinction "in American authorship."

Mrs. Ames was for sixteen years a newspaper correspondent at Washington; or, as Mr. Hudson phrases it, "she lived a consecrated life." She herself, speaking of earlier work, describes it thus: "I entered into a written contract to write one column per day on any subject I was instructed to write on, for three years in advance; and at the end of that three years I had not for a single day failed of fulfilling my task, which included everything, from book reviews, comments on the Government, and public men and affairs, to a common advertisement paragraph. . . . The final result," she adds, "was not deterioration of style, but a much higher aggregate of forces and of command." This "higher aggregate of command" she placed at the service of the New York *Independent;* and her husband says that "few writers, even of the opposite sex, have been more influential."

In her newspaper correspondence Mrs. Ames indulged in excessive personalities, both concerning herself and others—wrote, as it were, private letters to the public, and "floated" them with what she perhaps called "breeziness," and what Miss Phelps calls "an endless capacity for gilding dull themes with vivacious light." There is a good deal of talk in this book about the "courage" required in "the woman who said her say at the seat of Government"; and Miss Phelps, in a burst of obituary emotion over the "powerful work" of "your great contributor," dwells rapturously on the "superb moral courage" of "this fallen leader." It would be discourteous to put into words the impression made on us by such language and by the whole book. It is more than a hundred years since Mr. Burchell permitted himself, at the conclusion of every sentence, to cry out Fudge!—"an expression which displeased us all, and in some measure damped the rising spirit of the conversation."

The Leading Facts of English History. By D. H. Montgomery. Boston: Ginn & Co. 1886. 12mo, pp. 254.

IT is no small merit in a history of England that one can read page after page without meeting with an unfamiliar proper name, or a date (except in the margin). But it is a merit which an historical composition to be *read* ought to possess, and which Mr. Montgomery has succeeded in securing. Such a plan of historical writing, however, ought to be supplemented with copious tables of genealogy and chronology; and here, too, he has supplied what is needed, in a table of descents and a table of events. As to the first, we must say that the descents would be far more intelligible if put in a tabular form; all that is contained in these eight pages, often in the shape of a long description, could be placed directly before the eye in a series of genealogical tables occupying half the space. There is one map, clear and good, but wholly inadequate for historical purposes; also an index. The statements are generally correct, although not always carefully sifted. On the occasion of Cromwell's turning out the Rump Parliament (p. 125), he is said to have "entered the House at the head of a squad of soldiers, and crying out, 'Sir Henry Vane,' etc." Now, as a fact, he left his soldiers at the door, sat and listened to the debates for a considerable time, and ordered the Parliament out before he called in the troops. The famous words addressed to Sir Henry Vane did not come in until almost the end of the proceedings. Perhaps it does not make much difference, but, if the story is told at all, it might as well be told right. The battle of Edgehill, by the way (p. 121), was fought not in Leicestershire, but in Warwickshire.

BOOKS OF THE WEEK.

Ainslee, A. D. Reynard the Fox. Macmillan & Co. $2.
Battersby, Col. J. C. The Bridle Bits: A Treatise on Practical Horsemanship. O. Judd Co. $1.

SHEPARD'S CHEMISTRY,

Though published two months after the opening of the school year, has already been adopted, SOLELY ON ITS MERITS, in *seventeen* Colleges and *forty-eight* High and Normal Schools.

Our Special Circular on this book (now in press, and from which we quote below) will show with what unusual favor it has been received.

The following have "carefully examined it":

DR. WM. E. LOCKWOOD, *Yale Coll.:* "I have used the book to some extent, and greater familiarity confirms my first impression of its merits, viz: that it is a very thorough elementary work."

PROF. C. F. CHANDLER, *Columbia Coll.:* "I find it to be an excellent book. A great degree of accuracy characterizes the entire work."

PROF. J. S. SCHANCK, *Princeton Coll.:* "I consider it one of the very best among the multitude of small works of late issue."

PROF. C. A. SCHAEFFER, *Cornell Univ.:* "After a careful examination of the contents, it gives me great pleasure to pronounce it excellent. The plan is well conceived, and embodies the method by all means the best for imparting in a thorough manner the first ideas of chemistry to the student."

PROF. OTIS C. JOHNSON, *Univ. of Michigan:* "I am very much pleased with it. I like it so well that I have nothing to say by way of criticism."

PROF. F. F. JEWETT, *Oberlin Coll.:* "This book comes the nearest to what I have been wanting of anything I have seen. I like it much."

PROF. T. H. NORTON, *Univ. of Cincinnati:* "It is most admirably conceived, and is at once entertaining, stimulating, and accurate."

PROF. W. W. DANIELLS, *Univ. of Wisconsin:* "It is a superior text-book."

PROF. LOUIS HABEL, *Lewis Coll, Northfield, Vt., editor of* THE SCIENTIFIC REVIEW: "Any attempt to criticise this book must prove a failure."

PROF. JAS. M. SAFFORD, *Vanderbilt Univ.:* "I know of no more satisfactory book of its class in the English language."

PROF. W. O. ATWATER, *Wesleyan Univ., Middletown, Ct.:* "My assistants as well as myself are very highly pleased with it. One of the most cheering signs of the times for the study of the sciences of nature seems to me to be the appearance of such books as this."

PROF. EDGAR EVERHART, *Univ. of Texas:* "It is the best elementary text-book on chemistry that I have seen."

PROF. W. G. RAPPLEYE, *Normal School, Oswego, N. Y.:* "It is refreshing to find a book of the grade of Mr. Shepard's written by a man who knows what he is talking about."

The following have "fairly tested it":

PROF. ROBERT B. WARDER, *Purdue Univ.:* "I have used this book five months. It has given general satisfaction, and I see no reason to alter my choice for the next class."

PROF. A. V. E. YOUNG, *Northwestern Univ., Ill.:* "I have used the book with more than usual interest."

PROF. G. W. KRALL, *Manual Training School, St. Louis:* "I have used it during the past session of school, and feel it a duty, as well as a pleasure, to recommend it as the best class-book and most teachable chemistry yet published."

PROF. JAS. T. ANDERSON, *Central Coll, Mo.:* "Having put it to rigid test in the class-room, I am now prepared to say that every expectation has been fully justified, and I have no hesitancy in declaring that the claims which the friends of the book make for it are modest indeed."

PROF. EDWIN R. LEWIS, *Wabash Coll., Ind.:* "This test of the book in the laboratory has been so satisfactory that I have no hesitation in deciding to adopt it as a means of increasing the interest and usefulness of the study in the college."

PROF. MARY H. SMITH, *Penn Coll., Pittsburg, Pa.:* "It has been a delight to me all of the year, and if, by a word, I can do anything toward its larger introduction, I shall feel that I have indeed done something for the cause of chemistry."

J. M. COIT, *St. Paul's School, Concord, N. H.:* "I have been using it, and find it an admirable text-book. It is eminently practical."

F. M. GILLEY, *High School, Chelsea, Mass.:* "Experience in the class-room and laboratory has confirmed my previous opinion of it. No greater commendation could there be than the increased pleasure and interest the scholars have in the subject. The book is unusually free from mistakes. It is far in advance of previous text-books."

FRANK W. BARROWS, *Academy, Worcester, Mass.:* "The book pleases me exceedingly. I began to use it before it was ready for the market. For clearness and completeness it is unexcelled by any book of its pretensions. As a contribution to improved methods of teaching and studying chemistry, it is deservedly a success."

LILLIE J. MARTIN, *High School, Indianapolis, Ind.:* "I have taught from it for eight months. I still think, as at first, that for high school use it is by far the best book yet published."

CHARLES R. DRYER, *High School, Ft. Wayne, Ind.:* "We are using it. There is no question that the plan of the book is more nearly the correct one than any other published."

DR. HEDGE'S NEW BOOK.

HOURS WITH GERMAN CLASSICS.

By FREDERIC HENRY HEDGE.

The student, the man of literary tastes, everybody who possesses a library, must add this volume to his treasures.

FROM THE HARTFORD COURANT.

"'Hours with German Classics,' by Frederic Henry Hedge, D.D., former Professor of German in Harvard University, is a volume of unusual literary interest and excellence. Its essays contain the substance of lectures delivered by the author in his capacity as Professor of German Literature. Many of our older readers will recall with pleasure Dr. Hedge's 'Prose Writers of Germany,' a book which opened the treasures of German prose literature to American readers, and greatly stimulated the desire and endeavor to study the language in which such treasures are hid. Dr. Hedge is not only a thorough German scholar, but is also a critic of the first order, and no scholar in our country is better fitted in all respects to write instructively of the German classics. His sketch of the heroic age of German literature, of the Nibelungenlied, and of the mediæval poems, is fascinating. Luther, Hans Sachs, Klopstock, Lessing, Wieland, Herder, Goethe, Schiller, Jean Paul, Hoffman, and Heine are the principal names that come under review from the period of the Reformation. It is a book that will be read with delight and profit, and nothing better of its kind is accessible to our readers."

FROM THE BOSTON BEACON.

"'Hours with German Classics' may be hailed as an American classic. It is a fact that Dr. Hedge is one of the best prose writers of whom our literature can boast, an honored and very considerable poet, a thorough thinker, and as familiar with the language and literature of Germany as if it was his own. . . . It is infinitely the best work on the German masters ever written in our language, itself a masterpiece that will indicate to coming generations the high-water mark of American familiarity with German literature."

FROM THE BOSTON GLOBE.

"Whoever takes up this volume of essays by Dr. Hedge need only glance at its titles to appreciate its rare value; for he will notice quickly that the twenty papers relate to epochs in that department of literature which the author has indissolubly connected in his literary reputation with that of philosophy and religion by equally profitable study and labor. And because once having known the quality of thought and style of treatment of Dr. Hedge—perhaps while sitting before him as Professor of German at Harvard University, or before him as a pulpit or a platform teacher of the people—one must always remember and recognize them, and desire to enjoy them anew. These essays contain the substance of several lectures delivered during his professorship, and, informally, afford an important critical history of German literature, from 'The Nibelungenlied' to Heinrich Heine. The plan has been to select in order, the author originating, or most prominently extending, a literary influence; to show his relation to his time, give a brief biography, and describe and criticise his principal works.

"In an interesting introduction he finds certain qualities peculiar to German literature, and making it a true exponent of the national mind—a predominant idealism, a tendency to see all things in the light of ideas; philosophic criticism; predominance of imagination; cosmopolitan breadth of view; generous appreciation of foreign merit. This issue must be regarded as an important one to convey to students cultured and correct knowledge of the growth and characteristics of German literature, as well as to set alluringly before general readers the beauties of the writings of the great German authors. It is a thick volume of 531 pages."

One handsome 8vo. Price $2.50. Sold by all booksellers. Mailed, postpaid, by the publishers.

Earthquakes and other Earth Movements.

By John Milne, Professor in the Imperial College of Engineering, Tokio, Japan. International Scientific Series. With 38 Illustrations. 12mo, cloth. Price, $1.75.

An attempt is made in this volume to give a systematic account of various Earth Movements. These comprise *Earthquakes*, or the sudden violent movements of the ground; *Earth Tremors*, or minute movements which escape our attention by the smallness of their amplitude; *Earth Pulsations*, or movements which are overlooked on account of the length of their period; and *Earth Oscillations*, or movements of long period and large amplitude.

II.

Shaftesbury (the First Earl).

By H. D. Traill. Vol. III. of ENGLISH WORTHIES, edited by Andrew Lang. 12mo, cloth. Price, 75 cents.

Previous Volumes in the Series:

CHARLES DARWIN. By Grant Allen.

MARLBOROUGH. By George Saintsbury.

"English Worthies" is a new series of small volumes, consisting of short lives of Englishmen of influence and distinction, past and present, military, naval, literary, scientific, legal, ecclesiastical, social, etc. Each biography will be intrusted to a writer specially acquainted with the historical period in which his hero lived, and in special sympathy, as it were, with his subject.

III.

Medicine of the Future.

An address prepared for the annual meeting of the British Medical Association in 1886. By Austin Flint (Senior). With Portrait. Square 12mo, cloth, extra. Price, $1.00.

IV.

A Manual of Mechanics.

An Elementary Text-book designed for Students of Applied Mechanics. By T. M. Gordere, M.A. 16mo, cloth. Price, $1.00.

V.

The Secret of Her Life.

A Novel. By Edward Jenkins, author of 'Ginx's Baby,' etc. 12mo, paper cover. Price, 25 cents.

VI.

Modern Fishers of Men.

A TALE OF THE VARIOUS SEXES, SECTS, AND SETS OF CHARTVILLE CHURCH AND COMMUNITY. By George I. Raymond. A new edition. 12mo, paper cover. Price, 25 cents.

VII.

Doris's Fortune.

A novel. By author of 'The House on the Marsh.' 12mo, paper, 25 cents.

*** *For sale by all Booksellers; or any volume sent by the publishers, by mail, post-paid, on receipt of the price.*

1, 3 & 5 Bond Street, New York.

G. P. Putnam's Sons,

27 and 29 W. 23d St., New York.

READY THIS WEEK:

I. FRANCE UNDER MAZARIN. With a Sketch of the Administration of Richelieu. By James Breck Perkins. Two volumes, large octavo, with portraits of Mazarin, Richelieu, Louis XIII., Anne of Austria, and Condé, $5.

"The period covered by the administration of Richelieu and Mazarin is one of both interest and importance. Yet I am not aware that any full history of this time has been written in English. The career and character of Richelieu are, to a certain extent, familiar, but perhaps most have a general idea of his administration rather than a familiarity with what he actually did. Both the character and administration of Mazarin are, I think, little known to most English readers. Yet eighteen years which embraced the Fronde and the treaties of Westphalia and the Pyrenees, cannot be deemed unimportant."—*Extract from Author's Preface.*

II. A LIFE IN SONG. Poems based on the Supposed Experiences of an Anti-Slavery Leader. By George L. Raymond, Professor in Princeton College. 16mo, cloth extra, $1.25.

Recently Published by the same Author:

POETRY AS A REPRESENTATIVE ART. 8vo, cloth extra, $1.75.

"Prof. Raymond's criticisms are exceptionally fine, and his style so polished that his is one of the most delightful books upon literature we have ever read."—*Washington Capitol.*

"The work will be welcomed, must be studied, and will grow upon the schools as it is appreciated."—*N. E. Journal of Education.*

"Its results are the most important ones yet attained in its department, and, we believe, the most valuable."—*Boston Globe.*

*** Special attention is invited to Messrs. Putnam's new descriptive catalogue, ready next week. Forwarded upon receipt of two stamps.

THE BOOKMART.

A LITERARY AND BIBLIOGRAPHICAL MAGAZINE.

This magazine, now in its fourth year, is the cheapest and best magazine of the kind in the world. Keeping fully abreast of the best modern literature, it is especially devoted to that of the olden time and to bibliography. A subscription to this magazine is economy to all seeking information about books, also where and how to buy or sell. Special features. Books wanted. Books for sale and book auction departments. Send 15 cents for sample copy. Published monthly.

BOOKMART PUBLISHING CO., Pittsburgh, Pa.

MOUNT DESERT.

FOR SALE.—The well-known and beautiful island called "Bald Porcupine" or "Round Porcupine," lying directly opposite Bar Harbor, half a mile from the Mt. Desert shore. This island, containing about twenty-five acres, lies under and commands a most magnificent and extended view of the mountains, bay, and open sea. On the southerly side is a bold perpendicular cliff about 150 feet high. The island from its level top falls away in a beautifully wooded slope to its northern shore. This property offers an exceptional opportunity for use for a gentleman wishing an independent private estate, or for hotel purposes, and will be sold at a price per acre far below the value of any adjoining shore lands within several miles of Bar Harbor.

SOULE PHOTOGRAPH CO.,

Publishers, 338 Washington Street, Boston, Mass.

Please mention the *Nation*.

For convenience of subscribers wishing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,

In regular book form, ready for use by any bookbinder. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, post-paid.

These covers will fit all volumes from XXXIII. to XL., *i. e.* since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering state the volume-number wanted.

Address Publisher of the *Nation*, Box 794, New York.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of the *Nation* has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates, the bindings generally counting for nothing. Volume I. has readily brought $10 and upward when complete, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased, a few years ago, a large quantity from the publishers. Mr. A. S. Clark, 34 Park Row, also has a stock on hand.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in the *Nation*.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XLII. comprising the first half-year of 1886.]

The Acropolis of Athens.

A selection of 13 views from the negatives of W. J. Stillman, enlarged by the Autotype Company of London to about 14x18 inches, will be sent, postpaid, for $15 to any address in the United States. These views have received the commendation of the highest archæological authorities, including Professor Michaelis, and, as photographs, received the medal of the Photographic Society of Great Britain at their last exhibition. Orders may be sent with remittance to W. P. Garrison, *Nation* office, New York. *The price named is* EXCLUSIVE *of any duty that may be exacted by the postal customs.* Examples may be seen at the office of the New York *Evening Post*, New York.

SCHOOL BOOKS IN FOREIGN LAN- guages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals. CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

"EMBRACE THE GOLDEN OPPOR- tunity." Volumes and numbers of the *Nation* to complete sets. Bought, sold, and exchanged. A. S. CLARK, 34 Park Row.

SCENES FROM ENGLISH HISTORY. With Portrait. Crown 4to, oblong. Cloth gilt, $2.25. By RICHARD DOYLE.

Twelve of these "Comic Histories" are now for the first time published, and are a facsimile reproduction by chromo-lithography of the finished water-colors. The legends attached to each drawing have been supplied by the kindness of Mr. James E. Doyle, the elder brother of Richard, who doubtless frequently assisted in the selection of the episodes.

A JOURNAL KEPT by DICK DOYLE IN THE YEAR 1840. Illustrated with several hundred sketches by the author. With an introduction by J. Hungerford Pollen, and a Portrait. Demy 4to, $7.50.

**The Journal has been reproduced in facsimile, and is printed on fine paper. It is handsomely bound in cloth, and forms a very elegant gift-book.

THE IRISH QUESTION: Its ESSENCE, COURSE, SOLUTION, AND THE ISSUES IT INVOLVES FOR IRELAND AND FOR ENGLAND. By W. H. WESTCOMBE. 8vo, cloth, $1.

MEMORIES OF A MONTH AMONG THE MERE IRISH. Containing Legends, Stories, and Anecdotes, etc. By W. H. FLOREDICE. 12mo, cloth, $1.40.

THE PARNELL MOVEMENT. With a Sketch of Irish Parties from 1843. By T. P. O'CONNOR, M. P. Demy 8vo, cloth, $7.20.

A MESALLIANCE IN THE HOUSE OF BRUNSWICK. Published by the Viscount H. DE BEAUCAIRE. Demy 8vo, cloth, $4.80.

HER MAJESTY'S COLONIES. A Series of original papers issued under the authority of the Royal Commission. 8vo, cloth, $2.

*THE CONFLICTS OF CAPITAL and LA-*BOR. Historically and economically considered. By GEORGE HOWELL. 12mo, cloth, $3.

A HISTORY OF MUSIC FROM THE EARLIEST TIMES TO THE PRESENT. By W. S. ROCKSTRO, author of 'The Life of Handel,' etc. 8vo, cloth, $6.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

Bohn's Libraries.

Containing Standard Works of European Literature in the English Language, on

History,	Theology,	Natural History,
Biography,	Antiquities,	Poetry,
Topography,	Science,	Art,
Archæology,	Philosophy,	Fiction,

With Dictionaries and other Books of Reference, comprising in all Translations from the

French,	Spanish,	Anglo-Saxon,
German,	Scandinavian,	Latin and Greek.
Italian,		

$1.40 or $2 per volume (with exceptions). Complete sets in 677 volumes. Special prices on application.

The following works are recommended to those who are forming public or private libraries. The volumes are sold separately:

ADDISON'S WORKS. 6 vols	1.40 each.
BACON'S ESSAYS, MORAL AND PHILOSOPHICAL WORKS. 2 vols	$1.40 and 2.00 each.
BOSWELL'S LIFE OF JOHNSON and TOUR IN THE HEBRIDES, &c. (Napier). 6 vols.	$1.40 each
BURKE'S WORKS AND LIFE. 9 vols	1.40 each.
BURNS'S LIFE. By Lockhart	1.40 each.
CERVANTES' DON QUIXOTE. 2 vols	1.40 each.
CHAUCER'S WORKS (Prof. Skeat). 4 vols	1.40 each.
COLERIDGE'S WORKS. 6 vols	1.40 each.
DEFOE'S WORKS. 7 vols	1.40 each.
GIBBON'S ROMAN EMPIRE. 7 vols	1.40 each.
GOETHE'S WORKS. 14 vols	1.40 each.
GOLDSMITH'S WORKS. 5 vols	1.40 each.
HAZLITT'S WORKS. 6 vols	1.40 each.
LAMARTINE'S WORKS. 8 vols	1.40 each.
LESSING'S LAOKOON, &c	1.40.
LESSING'S DRAMATIC WORKS. 2 vols	1.40 each.
MILTON'S PROSE WORKS. 5 vols	1.40 each.
MOLIÈRE'S DRAMATIC WORKS. 3 vols	1.40 each.
PLUTARCH'S LIVES (new translation by Long and Stewart). 4 vols	1.40 each.
SCHILLER'S WORKS. 6 vols	1.40 each.
VASARI'S LIVES OF PAINTERS (with new appendix by Dr. Richter). 6 vols	1.40 each.
BURNEY'S (Mme. D'Arblay's) CECILIA. 2 vols	1.40 each.
BURNEY'S (Mme. D'Arblay's) EVELINA	1.40.
FIELDING'S NOVELS. 4 vols	$1.40 and 2.00 each.
PETRARCH'S SONNETS	2.00.
MANZONI'S BETROTHED. (I promessi Sposi).	2.00.
PEPYS'S DIARY. 4 vols	2.00 each.
KANT'S CRITIQUE OF PURE REASON	2.00 each.
SPINOZA'S CHIEF WORKS. 2 vols	2.00 each.
HUMBOLDT'S COSMOS AND TRAVELS. 3 vols	$1.40 and 2.00 each.
STAUNTON'S WORKS ON CHESS. 4 vols	$2.00 and 2.40 each.
GILBART ON BANKING. 2 vols	2.00 each.
LOWNDES'S BIBLIOGRAPHER'S MANUAL. 11 parts	$1.40 and 2.00 each.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also of Bohn's Libraries, will be mailed, if desired, to those interested. New Catalogue of Musical Literature ready.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

NEW BOOKS.

Dr. McCosh's New Work.

Psychology: The Cognitive Powers.

By JAMES MCCOSH, D.D., LL.D. 1 volume, crown 8vo, $1.50.

Dr. McCosh has collected into this volume the lectures upon the Cognitive Powers delivered before his psychology class at Princeton. It is designed to be used as a text-book, but it will appeal also to the much larger audience who are concerned with modern physiology.

An American Four-in-Hand in Britain.

By ANDREW CARNEGIE, author of 'Triumphant Democracy,' etc., etc. 1 vol., 12mo, paper, cheap edition, 25 cents.

"A fresh and vivacious narrative of a very delightful trip. England has been done many times by Americans, but we doubt whether ever under circumstances more agreeable or in a manner more favorable to observation than by the party whose summer holiday is described by Mr. Carnegie."—*Boston Journal.*

MRS. BURNETT'S NOVELS.

"We have no hesitation in saying that there is no living writer (man or woman) who has Mrs. Burnett's dramatic power in telling a story."—NEW YORK HERALD.

NEW VOLUMES OF THE NEW AND UNIFORM EDITION:

Through One Administration.

One volume, 12mo, extra cloth, $1.50.

"The pathetic fervor which Mrs. Burnett showed so fully in 'That Lass o' Lowrie's' is exhibited in many a touching scene in her new story, which is only to be found fault with because it is too touching."—*London Athenæum.*

Louisiana.

One volume, 12mo, extra cloth, $1.25.

"We commend this book as the product of a skilful, talented, well-trained pen. Mrs. Burnett's admirers are already numbered by the thousand, and every new work like this one can only add to their number."—*Chicago Tribune.*

Books in Paper Covers.

STRANGE CASE OF DR. JEKYLL AND Mr. Hyde. By Robert Louis Stevenson. *20th Thousand.* 25 cents.

THE MARK OF CAIN. By Andrew Lang. 25 cents.

ACROSS THE CHASM. By Julia Magruder. 50 cents.

THE LADY, OR THE TIGER? By Frank R. Stockton. 50 cents.

RUDDER GRANGE. By Frank R. Stockton. 50 cents.

THAT LASS O' LOWRIE'S. By Francis Hodgson Burnett. 50 cents.

GUERNDALE: AN OLD STORY. By J. S. of Dale. 50 cents.

NEWPORT: A NOVEL. By George Parsons Lathrop. 50 cents.

AN ECHO OF PASSION. By George Parsons Lathrop. 50 cents.

IN THE DISTANCE. By George Parsons Lathrop. 50 cents.

THE DIAMOND LENS. By Fitz-James O'Brien. 50 cents.

MY HOUSE: AN IDEAL. By O. B. Bunce. 50 cents.

OLD CREOLE DAYS. By George W. Cable. In two parts, each complete; per part, 30 cents.

MRS. F. H. BURNETT'S EARLIER Stories; Pretty Polly Pemberton, 40 cents. Kathleen, 40 cents. Lindsay's Luck, 30 cents. Theo, 30 cents. Mrs. Crespigny, 30 cents.

A CANTERBURY PILGRIMAGE. Ridden, written, and illustrated by Joseph and Elizabeth Robins Pennell. 1 vol., square 8vo, 50 cents.

The Nation.

NEW YORK, THURSDAY, JUNE 17, 1886.

The Week.

MR. RANDALL'S disingenuous attack upon civil-service reform, through a rider upon an appropriation bill nullifying the competitive system, resulted on Saturday in the failure which was inevitable, the proposition being ruled out of order. A more honest attack by a Maryland Representative, who moved to strike out the appropriation for the payment of the Civil-Service Commission, also failed ignominiously, the proposition receiving only eighteen votes. The only results of the spoilsmen's raid have been to expose Mr. Randall's perfidy and to strengthen Mr. Cleveland's position.

Mr. Randall's attempt to take the life out of the Civil-Service Law proves to have been an even more glaring violation of personal pledges than appeared upon the surface. Two very interesting points in his record upon this question were brought out during the debate in the House. Mr. Cox of North Carolina recalled the forgotten fact that Mr. Randall was absent from the House at the time the Civil-Service Act was passed in 1883, but was not content to let the matter go without declaring his position, as he might have done. "After sleeping on the subject, he came into the House the next day, and stated that but for a mistake he would have been present and recorded his vote for the measure." Mr. McComas of Maryland recalled another forgotten fact, which places Mr. Randall's present attitude in a still worse light. In 1884, after the Civil-Service Act had been in operation for a year, 150 special pension examiners were required, and provision was made for their payment in an appropriation bill, but without requiring that they should be selected by competitive examination. Mr. Randall thereupon moved and carried a proposition to bring these offices within the scope of the law, saying:

"This proviso here removes these appointments from the civil-service rules. Therefore, to test the sense of the Committee, I move to strike out the proviso. *Let me ask the gentleman if the best way to judge of the capacity of applicants for this service is not by following the rules of the Civil-Service Commission?*"

Fortunately, the Democratic party in the House did not lack a representative who could effectively answer Mr. Randall. Mr. Cox of North Carolina, Chairman of the Committee on Civil-Service Reform, made a most excellent speech on Wednesday week. After remarking that the friends of reform had nothing to fear from the discussion, and declaring that "the reform will go on despite the opposition of grasping politicians," he made this forcible reply to one of the stock pleas against the system:

"Talk about it being aristocratic to appoint men on account of merit instead of political influence! Why, sir, it is the very genius and essence of democracy. It brings the offices within the reach of the people, and says to the tenant of the humblest hamlet, 'Qualify yourself to serve your country, and if you have merit you shall be rewarded without respect to influence or power.' There is in the Treasury Department to-day a chief of a division who but a short while ago was an obscure village boy. He was selected by a competitive examination, entered at the lowest grade, rose by his merit, and was promoted to his present position without extraneous influence or patronage, for, indeed, neither of his Senators had ever heard of him."

Mr. Cox proceeded to speak with the utmost plainness as to the attitude respectively of the Democratic President, who is living up to his pledges, and the Democratic Congressmen, who are violating theirs, as follows:

"My friend from Illinois (Mr. Cannon) said yesterday he believed the present Chief Executive was now the most popular Democrat in this country. I accept the compliment, coming from an opponent, and supplement it with the opinion that he is not only the most popular Democrat, but the most popular man of either party in this country. And why? Because he is recognized as an able, fearless, and honest public servant, a man of the highest integrity and the loftiest purposes; one who, when he gives his pledge to the people, will stand by that pledge, even though he fall in the attempt to fulfil it [applause]; a man who, while coveting popularity, runs not after it, but by worthy acts leaves it to come to him. When a man stands by his integrity, when an official gives to the public his best services, he may make mistakes—all are liable to do that—but the people will make all proper allowances for the errors he may commit. . . . We have an Executive who is endeavoring to faithfully execute a law which we placed upon the statute-book, and the question arises whether we will stand by him or embarrass him in fulfilling his and our own public pledges. If Congress does not stand by him, the people will. ["Good!" "Good!"] Here we breathe a fetid political atmosphere. It is a point at which the offices are distributed. Jealousies and rivalries excite the imagination of the Representatives, and, I fear, stimulate more of a desire to secure the patronage of office than to bestow their thoughts and attention to the preparation and enactment of wholesome legislation for the benefit of the whole people."

Another Democratic Representative, Mr. Findlay of Maryland, came out strongly in favor of civil-service reform on Friday. Such speeches as those of Mr. Findlay and Mr. Cox show that the leaven is working. The discussion is in every way most fortunate. In the first place, it has elicited from prominent Republican Congressmen the confession that Mr. Cleveland is living up to his pledges. "I believe," said Mr. Bayne of Pennsylvania, "the President of the United States is a sincere and honest friend of civil-service reform. I think he is doing his level best to carry out that law." It has extorted from other Republican Congressmen, like Mr. Cannon of Illinois, the admission that Mr. Cleveland has gained popularity with the people by his fidelity. It has shown that more than one Democratic Representative is ready heartily to sustain the President. And finally, it has exposed in the clearest possible way the perfidy of such Democratic politicians as Mr. Randall.

The Republican State Convention in Maine on Wednesday week did what was expected of it—which was simply to record the decisions of the Blaine Machine. These were that a Knight of Labor should be made Chairman, as a sop to the "labor vote"; that the platform should contain a "ringing" plank on the fishery dispute, to capture the "fishermen vote," and a liberal pension plank, to capture the "soldier vote"; that a candidate for Governor should be nominated who had "no record" on the temperance question, and who would therefore be equally satisfactory to the "Republican saloon-keepers," who constitute a not unimportant political element even in Maine, and to the Prohibitionists; and that the nominee should also be a rich man, ready to "come down" liberally both in 1886 and in 1888, with the prospect of recouping through Government contracts after his patron's election to the Presidency. That is the whole story of the selection of Mr. J. R. Bodwell, a wealthy granite contractor, and an excellent type of the contractor in politics, as Republican candidate for Governor in Maine.

The most significant plank of the Maine Republican platform is the plank which is not there. The platform begins with the announcement that "the Republicans of Maine hereby proclaim with confidence the principles to which they adhere, on national and State issues," and proceeds to bid loudly for the "labor vote," the "soldier vote," and sundry other votes. But, although there are seventeen resolutions, the list is scanned in vain for a single word on that most vital of national issues—the silver question. It is thus made conspicuous that "the principles to which the Republicans of Maine adhere" do not include the restriction of coinage. How could they, indeed, when "Maine's favorite son" wants the votes in the next Republican National Convention of all the States and Territories which believe in continued coinage?

Mr. Henry Labouchere, who is not only a most devoted ally of Mr. Gladstone in the home-rule struggle, but also by general admission is the keenest politician on either side, thus writes in a letter published in the *Tribune* of Thursday morning:

"Mr. Blaine would do well to be more careful in his utterances respecting Lord Salisbury and others. The English do not like America's Presidential candidates to lecture English statesmen, of whatever complexion their politics may be. My advice to the Irish in America is to be exceedingly careful just now and to keep as quiet as they possibly can. Gladstone and Parnell have acted in perfect harmony since the meeting of Parliament, and with the Democracy of England and Ireland behind them they will eventually win if they continue to do so, and if they both live for a year or two."

The trouble with Mr. Blaine's utterances is the old one—too little thought and too much "bounce." His only idea in making the speech was to excite British abuse, and in his eagerness to do that he made the mistake of endorsing Chamberlain's plan rather than Gladstone's. Instead of winning the gratitude and support of the Irish vote by this performance, he has, according to Mr. Labouchere, won its disapproval by seriously injuring the home-rule cause. The London correspondent of the *Sun* furnishes corroborative testimony on this point by telegraphing: "Friends of Ireland in America should understand that performances like Mr. Blaine's attack upon Lord Salisbury only serve to strengthen the hands of the enemies of Mr. Gladstone and home rule."

It will be seen, therefore, that the following able tribute of admiration from Mr. Murat Halstead on the success of Mr. Blaine's speech

was premature: "Mr. Blaine's unofficial utterances rattle around the world, while Stephen Grover Cleveland's Presidential observations excite no attention at home or abroad. It is not always the man who is elected who picks up the power and the glory." There is such a thing as too much "rattle." In public, as in private affairs, it is not the man who goes about shaking his fist in everybody's face who has the most successful and happy time of it. In the long run, dignity and sincerity pay the best. We advise Mr. Blaine and all other politicians to let the Irish vote alone for the next few weeks. These are to be momentous weeks for Ireland, and it will be the part of prudence to allow Irishmen to conduct their own battle. There are a plenty of "votes" nearer home to be angled for, among them those of the uneasy Prohibitionists.

The delightful creatures who lurked behind fences and hid in the bushes two weeks ago, watching the house in which a gentleman was passing his honeymoon, and the equally delightful creatures who paid them for doing it, are evidently very sore under the criticisms which their exertions have called forth. They do not like being considered that well-known thing, "a disgrace to journalism." But they must remember what a capacious category "disgrace to journalism" is, what a variety of offenders against decency it shelters, and how comfortable most of the inmates feel. Some of the happiest lives in this city are led by men who "disgrace journalism" seven times a week, not excepting Washington's Birthday and the Fourth of July, and feel none the worse for it. So the honeymoon spies must brush the mud off their clothes and cheer up. Other jobs of the same kind are sure to be forthcoming.

The Governor has done this city a valuable service in vetoing the Shook Excise Bill, which the Republican leaders of the State induced the Legislature to pass for the protection of "Republican saloon-keepers," and to give their party a hold upon a portion of the rum vote. The reasons which the Governor gives for his action are the same ones which have been advanced repeatedly by the opponents of the measure. He holds that there is no doubt about the intent of the law of 1884, giving the Mayor unrestricted power of appointment, and thinks that there is very little doubt about its constitutionality; if there be any doubt, he holds that the courts and not the Legislature should decide it. He denounces the bill as a "scheme to decapitate certain officials in order temporarily to make room for others"; says it is "mischievous in its tendencies and should never have been passed," and adheres to his former position in favor of allowing the Mayors of cities complete freedom of appointment. Incidentally, he gives his opinion in favor of the legality of the new Excise Board, and advises the members of the old Board, Haughton, Mitchell, and Morris, as "good citizens," to acquiesce and surrender their offices, somewhat brusquely reminding them that if they decline to do this, their board may be quickly put out of existence by the Attorney-General.

Col. George Bliss has been talking very freely with a *Herald* reporter about the inside history of Republican politics in this city, and his observations are interesting as a sort of official confirmation of what the opponents of the Republican organization have repeatedly charged. The Colonel, as everybody knows, was for many years an active member of the organization, and is as high authority as could be found upon the workings of the Machine. He confirms as a fact the statement already made in these columns, that John J. O'Brien received from Jay Gould, on the eve of the Presidential election of 1884, a check for $50,000 or $100,000—he cannot say which. Our information is that $50,000 was raised by the Union League Club, and to this sum Jay Gould added his check for $50,000, and the total of $100,000 was then placed in the hands of O'Brien for the purpose, we have always heretofore understood, of "protecting the poor negro." The Colonel says the "money was paid under some assurance that it was to be used upon Democrats with the concurrence of Mr. Kelly, and a high officer of the police force was a party to the agreement, and claimed to represent Mr. Kelly." He adds that he had Mr. Kelly's personal assurance that he had nothing whatever to do with the matter. "Mr. Gould and every other man who has paid any attention to the subject, has been unable to see where any portion of that money was expended for the benefit of the party," says the Colonel. They have, we are advised, always believed that O'Brien put the whole, or nearly the whole, of it in his pocket.

The date fixed by Col. Bliss for the payment of the money to O'Brien, two days before election, was November 2, 1884. Referring to the Colonel's statement, the *Herald* says editorially: "We take the liberty to add to the facts, that Mr. Blaine and Mr. Jay Gould passed four hours together on the afternoon of that day in conference at the house then occupied by Mr. Stephen B. Elkins in Fifty-eighth Street in this city." It is a curious coincidence that on the following day, Monday, November 3, 1884, the New York *Tribune* published the following significant editorial article:

TRUST THIS CITY!

We have one earnest word for our friends in the interior of this State.

From every quarter comes news that the country will do well—better than has been expected. Their only fear is that the splendid majority they promise will be swamped by an enormous Democratic vote here. We have taken great pains to learn the situation here, and believe we have some understanding of it. Our message to the interior of the State is this:

You can afford to trust this city! It may disappoint—it will certainly not displease you! Come down to the Harlem River with anything like the majority you talk of, and the Republicans of the metropolis will take care of the rest!

What was this exclamatory article but a thinly disguised notification to the party workers in the State at large that the city had been "fixed"?

The Third Avenue strike has had one result which is of great importance to all patrons of horse-cars in this city. It has transferred the discipline of drivers and conductors from an irresponsible Executive Committee of the Empire Protective Association to the responsible employers of the men. It will seem in future times incredible—indeed, it already almost seems so—and yet it is a fact that three months ago no street-car company in New York or Brooklyn possessed sufficient control over its employees to be able to enforce the most simple rules of good conduct. The Empire Protective Association actually claimed the right to sit in judgment upon the question whether a man who had been insolent or who had got drunk should be discharged, with the threat of "tying up" the road if the Superintendent persisted in dismissing him against the Executive Committee's verdict. Just before the Third Avenue strike occurred, an official of that line was riding on one of its cars when the driver, wanting a drink, coolly stopped his car before a saloon, went in and got it, and, when the official remonstrated, the driver replied that he was not responsible to him, but only to the Empire Protective Association. Everybody who has occasion to patronize this line must have remarked the great difference in the deportment of the new drivers and conductors toward the public since men have been employed who recognize that they owe their first duty to their employers. The other lines are now following the example of the Third Avenue in resuming control over their men, and such notices as they are now posting, that "your remaining in our service depends on your faithfulness and your honesty," and that "insubordination and insolence will not be tolerated," assure the return of common sense to the management of the street-car business throughout the city.

Mr. John Wanamaker's advertisements are in some respects the best things to be found in the Philadelphia papers. One in the *Press* of Thursday is amusing in the incongruity between its plain free-trade talk and the ultra-protection editorial essays of the same paper Here is a little of it:

We are often asked why we go 3,000 miles for things we can get at home.

The shortest answer is, We don't.

There's a heap of meaning in that little word, "thing."

American collars and cuffs not quite so good as these we tell of now and then as coming from over the sea, we could get for 50 per cent. more money.

American collars and cuffs are made in Troy. . . . The skill of the country is gathered there. That skill controls the country.

There's a keener skill abroad, or better organization, or better facilities. Better collars and cuffs for the money.

We bring these better collars and cuffs and put them right by the side of the best American. Which will you buy?

The question is answered. You are thinking of money. The money is yours. Is it wholesome to bolster Troy at a cost of a third of your money? Is it worth your while? Will you do it? We are not such ninnies as to seriously ask you.

That's the way you reason as buyers. That's the way we reason as merchants.

Etc., etc. The *Press* might almost have qualms of conscience about printing such free-trade arguments, even for pay.

A flood of light is cast upon the workings of prohibition in Kansas by the following letter, which was recently received by a student of Michigan University, from the proprietors of a drug-store in a Kansas town, to whom he had applied for a position as prescription clerk. We print the letter exactly as it was written, except for the suppression of

the names, and no comment could possibly add to its force:

——— Kans., June 3, 1886.

MR. ———— —, ———.

DEAR SIR yours Recd in Reply i will Give you a Brief Discription of our Buisness Perhaps you understand the nature of a Drug Store in kansas we Do Some liquor Buisnes in a Back Room By the Drink our Pesscription trade Runs from two to three thousand Pr year Some Clerks objects to the Back Room trade I Give you the facts in the case So that you will not be Disappointed your Bord By the week will cost you from $3.50 to $5.00 a week now if you except this Position answer By telegraph at once as I kneed a clerk very Bad & must have one as Soon as Possiable. yours truly ——— & Co.

The misfortunes of Mr. Cyrus W. Field seem to have no end. He sailed for Europe last week, a happy man, having in his pocket, as he thought, a complete "vindication" to show to Canon Farrar, in the shape of the report of the Committee of the Massachusetts Legislature declaring that nobody was to blame in that matter of the bonds, that, in other words, the Governor was right in suspecting Mr. Field and refusing to sell him the bonds, and Mr. Field was right in accusing the Governor and Council of jobbery. It was, of course, an absurd report, very like the judgment in the Dilke-Crawford divorce case, that Mrs. Crawford had committed adultery with Dilke, but that Dilke had not, so far as the court knew, committed adultery with anybody. But then Canon Farrar is not learned about bonds or railroads, and the report would have done well enough for him, had it been accepted. But now comes the Legislature, and, recognizing its absurdity, refuses to accept it, and not only this, but by a vote of 109 to 82 passes a resolution giving Mr. Field "leave to withdraw." This is taking away the vindication from him in mid-ocean, and landing him on foreign soil a still suspected man.

This is not all. Some of the speakers were not nice to Mr. Field in the debate. Mr. Field's main point in his defence against the charge that he intended to foreclose the mortgage and wreck the stockholders, if he got the bonds, was that he had so much of the stock himself that such a transaction would have been against his interest. But Mr. Wharton of Boston showed that his stock was only worth $108,000 at the market price, which, added to $30,000 which he subscribed for the preferred stock, made his whole stock interest only $138,000, a mere bagatelle for him to pay for what he sought—the possession of the road. But in any view a decision that both he and the Governor were right in the affair was ridiculous. The stories so freely circulated that Mr. Field "squared" the Committee, and that Mr. Blaine wrote letters to the Republican members urging them "to let up" on a man who had contributed and would contribute so liberally to the Republican campaign fund, we dismiss without examination. They may or may not be true.

The statements made by Mr. Parnell and Mr. Justin McCarthy agree upon two points: first, that the Earl disclaimed anything like a treaty or bargain; second, that he was willing as one member of the Conservative Government to favor a large measure of home rule. How much home rule he was willing to agree to, is the only essential matter in dispute. When we recall the political conditions prevailing at the time—the close alliance between the Parnellites and the Conservatives, and the rattling Irish demonstrations of Lord Randolph Churchill—there is the strongest reason to believe that, if there is any coloring put upon the unreported conversation between Mr. Parnell and the Earl, it is not on Mr. Parnell's side. In short, the circumstances of the time would have warranted the Earl in taking the position which Mr. Parnell says he did take.

Everything seems to be ready now for the approaching contest in England. The elections will probably be held within a month, but if Mr. Gladstone is victorious, Parliament will not meet until the fall. If, on the other hand, he is defeated, it will meet at once to receive his surrender of power and prepare for the confusion which must follow. Mr. Gladstone's address to the electors of Midlothian has the simple persuasiveness which marks all his written papers, and which makes them in some degree rhetorically superior to his speeches. The condensation and directness which documents of this kind call for seem to have the effect of increasing the force and point of his utterances. It would hardly be possible to state more compactly than he has done in this address the issues on which the electors have to pass. He shows that they must decide between home rule and coercion, and not between home rule and Chamberlain's plan, or Trevelyan's plan, or any other man's plan—first, because the Irish will not accept anything but home rule as a settlement, and, secondly, because there is no agreement among the opponents of home rule on any plan in particular. All the Opposition, whether Tories or "Unionists," as the dissenting Liberals call themselves, have to offer is what Mr. Gladstone well describes as "the halting, stumbling, ever-shifting, and ever-vanishing projects, of an intermediate class, which have proceeded from the seceding Liberals." In truth, the only alternative presented to the electors is Mr. Gladstone's plan or Lord Salisbury's plan, and Lord Salisbury's plan is coercion for twenty years, after which Parliament would again consider what would be best for the Irish. It is true, he does not call it "coercion." That word has lately become so odious that both the Tories and the Unionists refrain from using it, and have substituted for it the phrase "firm government," which means, of course, just the same thing—that is, the free use of summary processes in the administration of justice, and increased restrictions on personal liberty through police regulations, and, in a general way, finding out what the Irish do not like and doing that vigorously.

Mr. Gladstone also makes good use of the fact, which has occupied so prominent a place in English history during the last eighty years, that the Union has failed; that after having been brought about by a mixture of force and fraud, it has never become anything more than what it was in the beginning—a paper or legislative union. The Tory and Unionist way of accounting for this failure is that the Irish are a peculiar people, who would not be content under any form of government. This is an old-fashioned explanation, which used to do good service early in the century in accounting for political troubles in various parts of the world, but it is especially an explanation which finds acceptance only among gentlemen and philosophers, or what our correspondent Mr. Dicey calls the "thoughtful" classes. Whatever be its value, there is not much use in offering it to democratic constituencies. One of the foremost articles in the democratic creed is that for long, persistent, and deep-seated discontent on the part of a large community which does not manage its own affairs, the Government is to blame. It must be conceded, too, that the thoughtful people have made so many mistakes in their diagnoses that they are worsted almost before they take the field. The Irish may prove unfit for self-government, but the English Radicals will not believe it on à-priori grounds. They will only accept it as the result of an actual experiment.

The particulars of the Parliamentary election in Italy abound in interesting features, although the general result, the decisive victory of the Depretis Cabinet, is far from being a surprise, except to heated Opposition partisans. The supporters and allies of the Ministry were overwhelmingly successful in Piedmont, Venetia, Liguria, the Romagna, the Marches, Tuscany, Umbria, and Latium—that is, in almost all the northern and central provinces of the kingdom; the Opposition, embracing Progressive-Liberals, Dissidents of the Centre, Radicals and Socialists, was moderately victorious in South Italy, and more decidedly so in Lombardy. In the islands of Sicily and Sardinia the parties were very nearly equally balanced. The result in South Italy is ascribed in great part to the indefatigable agitation—more striking by its aggressiveness and volubility than by consistency—of the ex-Minister Nicotera, one of the "Pentarchs"; and the electoral campaign there was not without a sectional character. Nicotera himself was elected by three constituencies—at Salerno, Lecce, and Reggio di Calabria—a distinction which fell to the lot of no other candidate. Of the other Pentarchs—Cairoli, Crispi, Zanardelli, and Baccarini, all of whom were elected—only Cairoli carried two seats, including one at the capital, in which the Opposition developed unexpected strength. Nicotera's Conservative co-worker, Rocco de Zerbi, was also successful in two contests, and so were, among others, the Radicals Cavallotti and Bovio, and the notorious and condemned Anarchist Cipriani, who was elected by large majorities at Forli and Ravenna. The equally notorious Coccapieller was also returned, but the fugitive Sbarbaro's candidacy proved a failure. Among the most noted successful supporters of Depretis, from both the Liberal and Moderate ranks, are Minghetti, Mancini, and Bonghi. The Clericals, following directions from the Vatican, abstained from voting. Depretis himself and his "transformism" were the chief objects of attack during the contest, but the Government's foreign and colonial policy was also fiercely dissected. The disastrous end of Porro's exploring expedition was, among other deliquencies, imputed to the Cabinet's bungling in African affairs. Whether the triumph of the Cabinet is now to be followed by a thorough recasting of parties, remains to be seen.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 9, to TUESDAY, June 15, 1886, inclusive.]

DOMESTIC.

IN a speech on the Legislative, Executive, and Judicial Appropriation Bill, in the House of Representatives on Wednesday, Mr. Compton (Dem., Md.) attacked the Civil-Service Law as unconstitutional. He said it was an anti-democratic and anti-republican usurpation of the people's rights. He was against the law as it stood, radically and irreconcilably. Mr. Hitt (Rep., Ill.) commented on what he termed the extraordinary provision (Randall's amendment) which had been forced upon an appropriation bill to nullify the Civil- Service Law. If it were not ruled out on a point of order, he hoped that the House, representing the country and the advanced thought of the day, would defeat it with a square vote. The law had been tried; it was no longer a speculation; and it had, upon the most thorough trial, been found to be conducive to the efficiency, honesty, and purity of the civil service. Mr. Bayne (Rep., Pa.) protested against the provision, and called attention to the fact that the change proposed to be made could be made by the President. To put this proposition in the bill was to vote a want of confidence in the President and his Cabinet. He believed that the President was doing his level best to carry out civil-service reform, and that most if not all of his Cabinet were endeavoring in good faith to execute the law. The only gentlemen who were complaining of the civil-service rules were the members of the "kitchen Cabinet"—who they were, he did not know.

Mr. Bayne (Rep., Pa.) brought on a contest over the civil-service rider to the Appropriation Bill on Friday, by moving to add to it the item appropriating the President's salary. He spoke briefly against the spirit of his amendment, but insisted that if the proviso was going into the bill at all, it ought to be applied directly to the President's salary. After Mr. Townshend (Dem., Ind.) had made the point of order against the amendment that it was new legislation, Mr. Findlay (Dem.) made the amendment the text of a strong speech in favor of civil-service reform. He denounced this covert attack on it, did not spare his Democratic associates, and, in illustration of the use that would be made of a full list of eligibles, said the recent Baltimore Postmaster (Veazey) had in some manner obtained a full list, and the result was that he discharged every man in the office and filled his place with a Democrat. The amendment was ruled out on the point of order. The discussion of the rider was continued vigorously on Saturday in Committee of the Whole, Mr. Reed (Rep. Me.) mercilessly ridiculing the division in the Democratic party on the subject of reform. Finally Mr. Blount (Dem., Ga.), Chairman of the Committee of the Whole, ruled out the "rider." He held that under the rules it is not competent for the Committee on Appropriations to consider the question of civil-service reform; that jurisdiction of that subject belongs to the Civil-Service Committee, and that the proposition changes existing law.

The events of the debate seem to make it clear that, while there is very determined opposition to the reformed civil-service system in the rank and file of both parties, and while there are a few leaders in both parties who have the courage to assert their convictions, a majority vote can be relied upon, either through a sincere desire for the reform, or from fear of openly defying public opinion, to prevent the passage of any act which, upon its face, is intended to thwart or to destroy the new civil-service system.

The First Comptroller of the Treasury has decided that the word "office," in the first clause of rule 19 of the Civil-Service Commission, applies to the head of a bureau as well as to the head of a department; that the head of a bureau is the "head of an office" also; that when the head of a department believes that the public service will be promoted thereby, he can appoint a confidential clerk for the head of a bureau in his department without requiring him to undergo the civil-service examination, and the appointee can receive the pay of any clerk in the classified service, provided there is a vacancy in any grade for which an appropriation has been made.

The Senate on Thursday, by a vote of 8 yeas to 32 nays, refused to take up the resolution providing for open executive sessions. In the House the Chairman of the Committee of the Whole ruled out Mr. Holman's items of the Appropriation Bill, cutting down salaries fixed by law, as being new legislation.

Senator Beck had remarkable success on Thursday with his bill which forbids Congressmen from acting as attorneys for land-grant corporations. The bill was passed without a reference to a committee—37 to 11.

As agreed upon in the House Committee, the Sundry Civil Appropriation Bill appropriates $21,053,822. The estimates aggregated $33,554,600. The appropriation for the present year was $26,205,747.

Mr. Randall has informed the President that he thinks Congress can adjourn early in July. The President expressed a desire that it should do so. It can be stated upon authority that after the Legislative and Naval Appropriation Bills have been passed, Mr. Morrison will call up his Tariff Bill.

The crop report of the Department of Agriculture makes the area of spring wheat nearly the same as last year, about twelve million acres.

Returns from every county in Oregon but two elect Pennoyer (Dem.) for Governor by 1,800 majority. The Republicans have elected beyond doubt the Congressman, Superintendent of Public Instruction, and State Printer. The Democrats have elected beyond doubt the Governor and Treasurer. In Portland, Senator Mitchell's law partner, M. Dewint, was put up for County Judge, and, in the face of 1,500 Republican majority, was defeated by 100. The Prohibition vote was about 2,000.

The Republicans of Maine on Wednesday nominated J. R. Bodwell for Governor. He worked on a farm in early life, then learned the shoemaker's trade, and later became very largely interested in granite quarries.

The Ohio Democratic State Convention will meet at Toledo on August 18.

When the Field report was reached in the Massachusetts House on Tuesday forenoon, one of the Republican leaders moved to substitute this: "Resolved, That Cyrus W. Field and the others, petitioners in the matter of the sale of certain bonds of the New York and New England Railroad, have leave to withdraw." By a vote of 109 to 82 the House accepted this resolution. The Democrats voted solidly for the Committee's report, and were joined by some Republicans.

Governor Hill has vetoed the bill putting the power of appointing Excise Commissioners in the hands of the President of the Board of Aldermen of this city. He has also vetoed the bill granting to this city the right to elect Aldermen on a general ticket. The bill also provided for spring elections and cumulative voting.

The Chicago *Times* openly charges that the ordinance allowing the North Chicago City Railway to change its lines to the cable system was passed through the City Council by means of bribes aggregating $127,000.

The Rev. Dr. Henry R. Wilson of the Presbyterian Church died on June 8 at Elizabeth, N. J. He was born in Bellefonte, Penn., June 10, 1808, and was graduated from Jefferson College in 1828. In 1876 he was made Corresponding Secretary of the Church Extension Board in this city, and held this position till his death.

Mrs. Erminie A. Smith died on Wednesday in Jersey City at the age of forty-eight. In 1876 she organized the Jersey City Æsthetic Society, composed of ladies, and was made its President. Mrs. Smith in 1880 was engaged by the Smithsonian Institution to investigate the folk-lore of the Iroquois Indians, and she joined their tribe, receiving an Indian name. At the time of her death she was engaged in preparing a dictionary of the Iroquois language.

The writer, Robert Barry Coffin, whose nom de plume was "Barry Gray," died at Fordham, N. Y., on Thursday, aged sixty years. He was born at Hudson, in this State. Besides a good many poems, he wrote: 'My Married Life at Hillside,' 'Matrimonial Infelicities,' 'Out of Town,' 'Cakes and Ale at Woodbine,' and 'Castles in the Air.' He was a valued contributor to the *Home Journal* when it was edited by N. P. Willis.

The Rev. Dr. Samuel K. Lothrop, for nearly forty years pastor of the historic Brattle Square Church, Boston, and during his active career one of the most prominent of Boston's Unitarian clergymen, died on Saturday after a brief illness of pneumonia. Born in 1804 in Utica, he had reached the age of eighty-two. He was graduated from Harvard when twenty-one years old.

David Van Nostrand, the well-known publisher of military and scientific works, died in this city on Monday, aged seventy-five.

FOREIGN.

Queen Victoria telegraphed to Mr. Gladstone on Wednesday afternoon announcing her consent to a dissolution. The Queen had previously asked Lord Hartington whether he was willing to form a Ministry. Lord Hartington, in reply, advised that Parliament be dissolved. The Liberal clubs have split, like the party. The Reform and Devonshire Clubs support the dissidents. The members of the National Liberal Club are Gladstonians, and Mr. Schnadhorst has his headquarters at that club. Mr. Schnadhorst declares that not a single Liberal association has swerved from its allegiance to Mr. Gladstone. In the House of Commons on Thursday the Queen's consent to a dissolution was formally announced.

In the House of Lords on Thursday afternoon the Earl of Carnarvon made a statement respecting Mr. Parnell's charge last Monday, that the Conservative party purchased Irish support in the last elections by a promise made through a Cabinet Minister that they would in return introduce a home-rule bill which, in addition to other features, would confer on Ireland the right to control her own tariff policy. Lord Carnarvon said that when he was Lord Lieutenant of Ireland under the Marquis of Salisbury's Government he received from Mr. Parnell a request to be allowed an interview. "As Mr. Parnell was the elected head of the Irish party," continued the Earl, "I acted on my personal responsibility, and conversed with him. The conversation was private; I never communicated it to any member of the Cabinet. Mr. Parnell and I left the room as free as we had entered it. I desire to repudiate the statement that has been printed and circulated, that I acted on that occasion in the capacity of a member of the Government." Speaking of the present Government's Irish bills, Lord Carnarvon said he objected to them in many points, although he should be perfectly willing to see introduced some system by which the Irish people, in a modified way and without being disconnected from the Imperial Parliament, could conduct their own affairs.

Mr. Parnell has written a letter in which he says: "I positively deny that I sought the interview with Earl Carnarvon. I also differ with the Earl as to two conditions upon which he alleges was based the interview, namely, that he was acting entirely on his own responsibility, and that he declined to hear or say one word to the detriment of the Union. Earl

Carnarvon did not lay down any conditions previously. I admit that there was foundation for the third condition mentioned—that is, that he hoped it was understood that he was not engaged in making any treaty or bargain. Replying to an inquiry in regard to the proposal to establish a central legislature, founded upon county boards, I said that I did not think Ireland would accept that as a settlement; that the central body ought to be a Parliament in name and in fact, having power to deal with the local government of counties. Earl Carnarvon stated that this was his own view, adding greatly to the weight of Irish opinions. He also suggested basing the Parliament at Dublin upon the colonial model. I remarked that the protection of certain Irish industries from English and foreign competition would be absolutely necessary. The Earl replied: 'I entirely agree with you, but what a row there will be in England.' I then left, believing that we were in complete accord upon the main outlines of a plan for the settlement of the question of the Government of Ireland. I have reason to believe that the Earl impressed his views upon the Cabinet, and that many of his colleagues shared his views; also that the Earl resigned the Lord-Lieutenancy of Ireland because we did not give the Conservatives a majority at the polls." Mr. Justin McCarthy, who brought about the interview, has furnished for publication a letter which in the main supports Mr. Parnell's declaration.

The Orangemen carried on a serious rioting in Belfast on Wednesday, wrecking 100 houses. The police arrested twenty-five of them. Rioting was renewed on Wednesday evening, and the Riot Act was again read. The mob of Orangemen increased in size and began throwing stones at the police. The latter fired, killing four persons. The mob returned the fire, and a brisk fusillade was kept up for twenty minutes. The mob drove a force of 150 policemen into the barracks, and then attacked the buildings, firing revolvers and throwing stones at the doors and windows. The police fired, killing eight persons and wounding several scores. Several Protestant clergymen tried to disperse the mob, but their efforts were unavailing.

The city was comparatively quiet on Thursday forenoon. Seven hundred extra policemen were in town, the total force being 1,300. The rioting was renewed on Thursday night. An infuriated mob held possession of the streets and wrecked and pillaged the taverns. The police were compelled to fire buckshot into the mob. Many of the police were injured by stones. Eventually the troops cleared the streets. In a recent speech Mr. Herbert Gladstone attributed the Belfast riots to Lord Randolph Churchill's violent speeches.

A serious riot occurred in Sligo on Saturday night. The rioting was begun by Catholics, who were angry because somebody had destroyed the rails surrounding the Bishop's palace. They gathered in thousands and attacked houses of Protestants and molested and hooted many persons. The Orangemen made no attempt to retaliate. The Riot Act was read and the soldiers were ordered to clear the streets with their bayonets. A general stampede ensued, during which sixteen rioters were arrested.

Mr. Gladstone has issued an address to the electors of Midlothian in which he says: "There are two clear, positive, and intelligible plans before the world. There is the plan of the Government and there is the plan of Lord Salisbury. Our plan is that Ireland should, under well-considered conditions, transact her own affairs. His plan is to ask Parliament to renew repressive laws and enforce them resolutely for twenty years, by the end of which time he assures us Ireland will be fit to accept any government in the way of a local government, on the repeal of the coercion laws, you may wish to give her. I leave this Tory project to speak for itself in its unadorned simplicity, and I turn to the proposed policy of the Government. Our opponents, gentlemen, whether Tories or seceders, have assumed the name of Unionists. I deny them the title to it. In intention, indeed, we are all unionists alike, but the union they refuse to modify is in its present shape a paper union, obtained by force and fraud, and never sanctioned or accepted by the Irish nation. They are not unionists, but paper unionists. True union is to be tested by the sentiments of the human beings united. Tried by this criterion, we have less union between Great Britain and Ireland now than we had under the settlement of 1782. . . . Among the benefits, gentlemen, I anticipate from your acceptance of our policy are these: The consolidation of the united empire and a great addition to its strength; the stoppage of the heavy, constant, and demoralizing waste of the public treasure; the abatement and gradual extinction of ignoble feuds in Ireland, and that development of her resources which experience shows to be a natural consequence of free and orderly government; the redemption of the honor of Great Britain from the stigma fastened upon her almost from time immemorial in respect to Ireland, by the judgment of the whole civilized world; and, lastly, the restoration of Parliament to its dignity and efficiency, and the regular progress of the business of the country. Well, gentlemen, the first question I now put to you is, How shall Ireland be governed? There is another question behind it and involved in it. How are England and Scotland to be governed? You know how, for the last six years especially, the affairs of England and Scotland have been impeded and your Imperial Parliament discredited and disabled. All this happened while the Nationalists were but a small minority of the Irish members, without support from so much as a handful of members not Irish. Now they approach ninety, and are entitled to say: 'We are speaking the views of the Irish nation.' It is impossible to deal with this subject by half measures. They are strong in their numbers, strong in British support, which brought 313 members to vote for their country; strongest of all in the sense of being right. But, gentlemen, we have done our part; the rest remains for you. Electors of the country, may you be enabled to see through and cast away all delusions, refuse evil, and choose good."

Mr. Chamberlain issued an electoral manifesto on Friday evening. It declares that the Government's Irish proposals have been condemned in advance by every Liberal statesman of the country. Mr. Chamberlain dwells upon the fact that the Government has made no attempt to deal with matters which Mr. Gladstone's election manifesto declared were ripe for legislation. "The Government," Mr. Chamberlain continues, "came into office upon a resolution that immediate legislation should be enacted for the benefit of agricultural laborers, but it has not tried to fulfil its pledge; and Parliament is to be dismissed because a majority of the English and Scotch members refuse to accept proposals which are not supported by any section of the House of Commons, outside of the Government and those Irish members whom Mr. Gladstone recently described as marching through rapine to the disintegration of the empire." Sir Charles Dilke has also issued a manifesto supporting Irish home rule, but disagreeing with some details of Mr. Gladstone's scheme.

Queen Victoria has offered the Comte de Paris, during his exile from France under the terms of the Expulsion Bill, the use of Claremont Castle, where Louis Philippe found a home and where he died. The Count has declined the Queen's offer, on the ground that he does not intend to reside in England permanently.

The French Chamber of Deputies on Friday resolved to consider the Committee's clauses enacting the immediate expulsion of all the princes. The Chamber subsequently rejected the first clause of the Committee's bill, enacting a general expulsion. The vote was 314 to 220. An amendment was adopted, by a vote of 315 to 232, making the expulsion of the chief pretenders compulsory, and all others optional with the Government. Clauses 2 and 3 and after that the whole bill were passed. The Government is empowered to expel by decree the princes not affected by clause 1, provide penalties of two to five years' imprisonment if they return to France, and disfranchise the princes remaining in French territory.

Dieudonné Alexandre Paul Boiteau, the French author whose *nom de guerre* is "Boiteau d'Ambly," is dead at the age of fifty-seven. Among his works are 'The Adventures of Baron Trenck,' 'Errors of the Critics of Béranger,' and 'The State of France Before 1789.' He was editor of the posthumous works of Béranger, and a contributor to many French periodicals.

The physicians appointed to examine the mental condition of King Ludwig of Bavaria reported that his malady incapacitated him from governing properly. In consequence of this Prince Luitpold, uncle to the King, assumed the Regency, and summoned the Diet.

Ludwig refused for a time to admit the Ministers who came to inform him of his downfall, but finally consented to go to Berg Castle, on Lake Starnberg, a charming white-turreted castle close to the water's edge. The scenes along the route on Sunday were very affecting. The peasants knelt in the roadways weeping, and the ex-King responded mournfully. On Sunday evening the King started out for a walk in the park at Berg Castle accompanied by Dr. Gudden. Their prolonged absence caused anxiety at the castle. The park and the shores of Lake Starnberg were searched. The bodies of the King and Dr. Gudden were found in the water. It is supposed that the physician endeavored to save the King when the latter jumped into the water. Marks on the physician's body show that there was a struggle between them. King Ludwig II. was born August 25, 1845, and succeeded to the Bavarian throne in 1864. He has been eccentric for many years, lavishing his money on palaces and other luxuries. He was the friend and patron of Wagner, and enabled the composer to present his works with magnificence at Bayreuth.

At ten o'clock on Monday morning the generals of the Bavarian Army met and took the oath of allegiance to King Ludwig's brother Otto, who at once assumes the title of King under the name of Otto I. He is three years younger than Ludwig. Otto, however, will be simply nominal King, as he is mentally incapable of governing, and Prince Luitpold, his uncle, will remain Regent. The generals of the army have taken the oath of allegiance to Prince Luitpold as Regent.

The death at Freiburg is announced of Prof. Friedrich Michelis, a distinguished clerical leader of the Old Catholic movement in Germany. He was seventy-one years of age.

Prince Alexander in person opened the Bulgarian-Rumelian Assembly. He thanked the nation for rising as one man in defence of the fatherland. They had sacrificed everything to save their honor, their liberty, and the integrity of their territory. He concluded by asking the Assembly to vote the necessary money to defray the remaining unpaid expenses of the war.

It is asserted at St. Petersburg that the Shah of Persia has granted Mr. F. S. Winston, ex-United States Minister to Persia, concessions for the construction of railways between Teheran, the capital of Persia, and Bushire and Meshed, near the Afghan frontier, with such branches as may be found necessary for the development of business on the main lines.

Juarez Selman has been elected President of the Argentine Republic.

The new city of Vancouver, B. C., terminus of the Canada Pacific Railway, was burned on Sunday afternoon. The fire originated in the clearings. Hardly a house in the place remains, and several thousand people are homeless. Loss, $1,000,000.

THE WORK OF THE CONGRESSIONAL COMMISSION ON THE SURVEYS.

To appreciate correctly the important report submitted to the Senate by Senator Allison from the Commission on the Government Surveys, we must glance at the history of the investigation. In two of his annual reports the expediency of leaving the Coast Survey under the Treasury Department was vigorously contested by Secretary Chandler, who brought an imposing array of arguments to show that it properly belonged to the Navy Department, and ought to be transferred thither without delay. By an unfortunate coincidence this attack came at the very time when the Superintendent of the Survey began to show such marks of inefficiency that a change of management seemed imperative. As the Committee on Appropriations had already lost confidence in him, they were ready to welcome such a change as that suggested by the Secretary of the Navy.

Moved by these considerations, the sub-committee of the Appropriation Committee who had charge of the subject drafted a measure practically abolishing the present Coast Survey office; turning its land work over to the Geological Survey, and its coast and hydrographic work to the Secretary of the Navy. The full Committee deemed so sweeping a measure hasty and premature. The matter was finally compromised by referring the organization and management of the Coast Survey, the Geological Survey, the Hydrographic Office of the Navy Department, and the Signal Service to a Congressional Commission, to be composed of three Senators and three Representatives. The Geological Survey and Hydrographic Office were included, not because the Committee deemed any investigation of their conduct necessary, but because, according to the plan which it was supposed the Commission might favor, they would become the receivers of the Coast Survey, which was intended to become defunct. The addition of the Signal Service was an entirely separate matter, arising from the prevailing dissatisfaction with its military management.

The Commission have listened to arguments and evidence on the subject of their work for two years. The opinion of leading experts was sought. Not only the chiefs and employees of the bureaus, but the National Academy of Sciences, as an independent, impartial adviser, was asked for its opinions. So far as the surveys were concerned, the main question was that of the division, and hence of the practical abolition, of the Coast Survey. Although naval officers of ability and distinction presented cogent arguments in favor of transferring the hydrographic work to the Navy Department, yet they failed to show with force and clearness such a prospect for improved management as was necessary to make a strong impression on their hearers. Their position was weakened, as well as strengthened, by the fact that the work under consideration was already done by them; the only change they proposed being that they should do it under the direction of the Navy Department instead of that of the Treasury Department. On the question whether the former department would superintend it more effectively and economically, their position was defensive rather than aggressive. This was a fatal weakness in such a case. On the side of the Geological Survey no attempt was made to favor the proposed measure; the general position assumed by Professor Powell being that the two organizations were doing different kinds of work, and had better be kept separate. That the Coast Survey itself, with its wide reputation, the high prestige given by the great names of its former superintendents, its efficient organization, and its excellent method of work, should make a strong argument against its own death, is a matter of course. It is therefore not surprising to find that the majority of the Commission deem the proposed policy unadvisable.

The really surprising feature of the report is that the Commission find no serious wrong in the conduct of either survey that can be remedied by legislation. All the objections against the administrative system of the two works are considered in detail, and the conclusion in each case is that they are either unfounded, or such as the executive authority alone can obviate. The Commission do not find that the work would be done any better under the Navy Department than under the Treasury Department, and lay stress upon the fact that only a small portion of it comes within the legitimate duties of a naval officer. They do not find that the Coast Survey and the Geological Survey are duplicating each other's work, and do not see that anything would be gained by placing them under one department. They are not in favor of the formation of a department of science, which was recommended provisionally by the National Academy of Sciences as a measure well calculated to unify the work of the surveys as well as the other scientific work of the Government. They even disapprove of the formation of the commission of experts which was suggested by the Academy as an appropriate authority to direct the general policy of the surveys, and thus to operate as a check upon the individual wills of the directors. They decline to enter upon the disputed question of a change in the method of work, excusing themselves on the ground that it is scientific in character, and has the sanction of more than two generations of experience and criticism. It is very significant that the more fully they investigated the subject, the less legislation they found to recommend. For example, only a month ago it was announced on authority that the members of the Commission were unanimously of the opinion that the power exercised by the director of the Geological Survey should be restricted by proper legislation, though it was admitted they were not agreed upon the precise form of such legislation. But during the intermediate month four of the members have been led to abandon that view. Nothing more restrictive than a requirement to make specific estimates is now asked for.

If this extreme optimism is justifiable at all, it is so on negative rather than on positive ground. Although the Coast and Geological Surveys are nominally under the direction of heads of departments, yet their whole policy is modelled by the individual will of their immediate heads. The latter are not only under no obligation to consult with any scientific authority, but nobody but the Committee on Appropriations need know what they are doing or what they intend to do. If we ask why the Coast Survey adopted a minute system of topography upon its maps which naval officers declare to be not only very expensive, but worse than useless to the navigator, or if we inquire why the whole direction of the survey was changed by transferring a considerable portion of its work to the interior of the country, we shall historically find no other answer than that the Superintendent deemed, for the time being, such a course advisable, and that Congress sanctioned it by making it the necessary appropriations. So also with the Geological Survey, the annual expenditure of which exceeds half a million of dollars. If we ask who has framed the policy under which all this money is expended, we shall find no other authority actively engaged in the matter than the director himself.

Now, we hold this system to be a crying evil. We fully admit that executive efficiency requires that the directors of such work as we are now considering should be left untrammelled in the execution of their plan. But executive efficiency does not require that they should themselves devise the plan of work. Twenty years ago the question whether the Coast Survey should expend tens of millions of dollars in interior triangulation, ought to have been publicly deliberated upon for months or years by the highest attainable authorities before being decided. To-day the same sort of an authority should decide how the large appropriations for the Geological Survey should be expended. What is most disappointing in the report of the Commission is that the necessity for some regulations governing this subject has been entirely overlooked.

Messrs. Morgan and Herbert submit a minority report, in which they reach conclusions radically different from those of the majority. They find serious faults in the management of both surveys, propose the transfer of the Coast Survey to the Navy Department, the abolition of its interior work, and such restrictions upon the work of the Geological Survey as in the opinion of the director would cripple its usefulness. The objection to this proposed remedy is that it would aggravate rather than cure the evil. What is wanted is a change of ideas rather than of administration, and this will not be gained by removing the work from one department to another.

THE PRESIDENT'S VETO.

THE political theorists of this country have been quite generally carried away by the magic of the late Mr. Bagehot's commentaries upon the English and American constitutions. He was indeed such a master of style and method, and withal so keen an observer, that it is not easy to resist any conclusion about which he has thrown the charm of his manner. But it must be remembered that Mr. Bagehot lived in an aristocratic community, and was intimate with the members of an aristocratic government, and that, however keen his observation of the American Constitution may have been, it could not take the place of personal familiarity. If "Presidential" government had

to do the work of the English Parliament, the weakness which Mr. Bagehot criticised might be a very serious evil. But in the case of the United States there is very little resemblance between the functions of the general Government and those of the English Parliament; and, what is of more consequence, the constitution of government under a democracy requires very different elements from those that prevail in aristocratic constitutions.

For the truth of the matter is, although a natural self-respect prevents our publishing it among foreigners, that nearly the most indispensable requisite in our government is some provision for checkmating demagogues. When a people has reached the self-governing stage, its disorders are apt to become internal. The natural rights of citizens having been secured by the machinery of government, this machinery becomes a convenient means for the accomplishment of other purposes. The government, being popular in name, is considered to be properly employed in the gratification of what are called popular demands. Hence the absolute necessity of all manner of checks and restraints, especially upon legislative action. In many of the States conservative feeling has compelled the adoption of biennial sessions, and constitutional restrictions have been everywhere multiplied. The gathering of the Legislature when it does occur is viewed by a great many persons with apprehension, and its adjournment causes general relief. Indeed, if Congress met only in response to a genuine demand, it is somewhat doubtful if it would meet at all.

Thus it may be that in an aristocratic government such as has hitherto prevailed in England, the veto power as well as other checks are unnecessary or unavailable, while in a democracy they have great value. The veto of the President in the first place calls public attention to a bill which in most cases would be enacted practically in complete secrecy. It is peculiarly damaging to schemes for trading votes, "log-rolling," and other transactions that require private agreements for their success. The pension bills, for example, that President Cleveland is now vetoing, must be dead beyond the possibility of resurrection. They passed because no one called attention to their character, and perhaps, as Congress is constituted, it would have been impossible for members to call attention to their character. But the conspicuous position of the President draws public attention to all his utterances, and where he can adduce any plausible arguments against a measure or a class of measures, he has an immense advantage in the discussion. He may be comparatively powerless when a bill represents the sincere convictions of a majority of the members of Congress, especially when they feel sure of popular approval; both President Johnson and President Hayes failed in their vetoes of such bills. But there is a perennial crop of bad legislation that represents no sincere conviction, and rests only upon private support, and in the repression of such legislation the veto power is most useful.

It is true that in the hands of a weak or corrupt officer this power may be of little service to the public. Such a functionary is not likely to oppose the will of Congress unless under strong stimulus. But even a bad man may be placed in a situation so conspicuous that the inducements to proper action are irresistible. It is impossible for the country to hold individual representatives to a strict responsibility. The very mischief that is complained of by the country may be grateful to a particular district. The President, however, is the representative of the whole country, and his responsibility is to the whole people. However willing he may be to allow jobbery to take its course, he is exposed to a scathing fire of criticism if he is believed to be wilfully closing his eyes to corruption. Even a demagogue may be forced to calculate that he will in some cases lose more by working for his friends than by preventing them from carrying out their schemes.

On the other hand, when the country is so fortunate as to secure a man not only of personal incorruptibility, but also of political conscience, his use of the veto power may give tone to the whole Government. Many Congressmen seem to think that they must vote for any measure that will "please the people"; that is, any measure, good or bad, for which an outcry can be raised. They do not hesitate to confess that they believe measures to be injurious which they nevertheless support because they do not dare to oppose them. This pusillanimity is a very grave evil in a democratic government. It is, in fact, *the* evil of government of that type. The conception of the representative is lost and that of the mere delegate substituted—the servant who dares take no step without special orders from his master. It may be that Congressmen find this abject policy to be, on the whole, for their personal advantage, although it is obvious that they frequently lick the dust to no effect. But the spectacle of a courageous President winning the support and affection of the country by his simple fidelity to the trust that he has assumed, cannot be anything but salutary for legislators.

There is truly something wonderful in the scepticism with which our politicians regard the policy of honesty. They are a keen, sharp class of men, but their vision is strangely limited. The heart of the people longs and faints for upright rulers; there is a fund of loyalty of immeasurable extent ready to be poured out for any one that will prove himself worthy of it. Yet a most deplorable dearth of respectable Presidential candidates exists, and it may very easily happen that the voters at the next election will have to make their choice of evils. Doubtless the politicians will do their best to prevent the renomination of President Cleveland, but every veto strengthens him, because it shows that he is carefully discharging the duties of his trust. There is little danger that he will obstruct any salutary legislation, and there is a growing conviction that he will obstruct whatever jobbery he can discover. The veto power thus administered is really a source of strength to the Government, and not of weakness. By improving the quality of legislation the attachment to the Constitution of all the conservative forces of society is increased, and there is little reason to dread evil results from a personal popularity that rests not on the arts of the demagogue, but upon the commonplace virtues of courage and honesty.

MUGWUMPISM INCREASING.

The general definition of a Mugwump is, we believe, a man who is unable, for one reason or another, to vote his regular party ticket. The regular party men speak of him as a "holier-than-thou man," a "Pharisee," and a "kicker." All these definitions come back to the same point. In other words, the Mugwump is an independent voter. It was the hope of all the regular party men a few months ago that the race of Mugwumps was dying out, and that they would make little trouble in future elections. Recent developments have, however, dispelled this hope, for they have shown that there have probably never been in the country at large so many Mugwumps as there are to-day. They are not confined to a few localities, but are scattered all the way from Maine to Oregon. Some of them are called Prohibitionists, some of them anti-Blaine men, some of them anti-Brayton men, and all of them are animated by the common purpose of supporting for office better men than the regular party candidates.

The first election of the year occurred in Oregon the other day, and the result was a complete victory for the Mugwumps. They were opposed to the Republican candidates for Governor and some other State offices because they were not worthy men. They refused to vote for them, while voting for the Republican candidate for Congress, and they succeeded in defeating the former while electing the latter. All the men elected were the most deserving in the field. The State Government was put in the control of the Democrats for the first time in several years, the Republican plurality of over 2,200 in 1884 being replaced by a Democratic majority of 2,000 this year. "The Oregon Republicans lost," says that devoted Blaine organ, the Philadelphia *Press*, "because the people could not approve of their cause." That is, there were too many Mugwumps. The Portland *Oregonian*, the State organ of the party, put the same thing in a more forcible way when it said that it could not, "consistently with self-respect and with public duty, aid those who, in the name of the Republican party, are 'working politics' solely for selfish ends, through ring and Machine methods."

Coming east to Rhode Island, we find a portentous Mugwump movement there, organized and led by the Republican organ of the State and the only newspaper of commanding influence within its borders, the Providence *Journal*. The movement has within its ranks all the best intelligence and character of the State. There is not the slightest doubt upon this point. The President and Faculty of Brown University; all the leading clergymen of all denominations; all the ablest members of the bar; all the most reputable merchants, and all the most influential and honored manufacturers, are enrolled in it. And what is their movement directed against? Nothing less than the official Republican organization of the State, which has recently forced through the Republican Legislature a most infamous measure, whose chief effect is the election to office of a notorious political corruptionist and confessed defaulter (as Postmaster of Providence) in a sum

exceeding $30,000. Petitions signed by over 3,000 names were sent to the Legislature requesting it to repeal this measure, and the Republican majority contemptuously refused to receive them with ordinary courtesy, and in the face of them declined to reconsider its action. The charge made against the movement is that the men in it are "Mugwumps" and "soreheads," or men who are too good for every-day politics. Yet, as we have intimated, they are the very flower of the State. They are the kind of men who made the Republican party a power in its best days. Many of them were Blaine men under protest in 1884, because they feared to trust the Democratic party. The very act which they are in revolt against now would in all probability never have been committed had they not thus surrendered to their fears two years ago.

Does anybody doubt that there are more Mugwumps in New York, Connecticut, and Massachusetts than there were two years ago? In the latter State what are the indications? Here is the Boston *Journal*, which advertised itself in 1884 as the only Republican morning newspaper in Boston whose conscience was equal to the strain of supporting the national Republican ticket, forced to protest against the conduct of the Massachusetts Republican Legislature for passing a bill for undermining the Civil-Service Reform Law. When the Boston *Journal* becomes "tainted" with Mugwumpism, it is time for the Republican party to get frightened. In New York, Connecticut, and New Jersey the original Mugwumps are not only solid in the faith, but they are reinforced by thousands of Prohibitionists who of themselves are numerous enough to hold the balance of power. The Prohibitionists are against the Republican party for a Mugwumpian reason—namely, that its candidates and conduct do not meet their approbation.

The leading Republican organ of Wisconsin, the Milwaukee *Sentinel*, protested the other day against the renomination of Mr. Blaine, on the express ground that the Independent vote was as hostile to him and men of his kind as ever. It said: "There is unquestionably a large class of voters who will support almost any other prominent Republican, but who will not vote for Mr. Blaine. Two years ago he lost this class of voters, and we have not heard of one among them who would be likely to support him in case of his renomination." The Olean *Times*, a Republican newspaper of this State, which admirably represents the conservative, common-sense views of rural Republican voters, takes a similar position. It says it supported Mr. Blaine in 1884, and will support him again if the "sense and voice of the party shall again concur in his nomination," but adds: "We think it would be a serious and are afraid it would prove a fatal mistake." Among its reasons for this belief the *Times* gives the following:

"Again, it will be said, it has been said, that Mr. Blaine was defeated by the Independent Republican vote, and he would not encounter that element of opposition in another canvass. Why not? We see no indications of their reconciliation to him. On the contrary, we fully believe that in a second candidacy the bolting vote against him would be greatly increased. Many men voted for him in 1884 who would vote for his adversary in 1888. The truth is, that there is in the party a large and influential class of honest and earnest men who, while admitting Mr. Blaine to be an able man, still believe him to be somewhat sordid, and not by any means immaculate. The great majority of these preferred him to his adversary in spite of their scruples, and either voted for him or refused to vote at all. But this is not likely to happen again, and the probability is that that class of people, reinforced by many sympathizers, would vote in solid phalanx against him. We see no promise of recruits, but a rare prospect of desertions in the event of his renomination."

Of course there would be such desertions. Everybody knows that thousands of Republican voters were fairly forced into voting against their will for Mr. Blaine by their distrust of the Democratic party. They honestly believed that the country would be imperilled by the election of Mr. Cleveland. All these know now that they were mistaken, and if the opportunity recurs, they will join the Mugwump ranks. Indeed, nothing has done so much to stimulate Mugwumpism of all kinds as the overthrow of this bugaboo of danger from Democratic rule. If Mr. Blaine and his blind adherents fully realized this truth, we firmly believe he would lose all desire to be again a candidate.

THE EXPULSION OF THE FRENCH PRINCES.

THERE is a good deal of indignation and sorrow felt in Europe, even among good Liberals, over the bill which has passed the French Chamber and is now before the Senate, providing for the peremptory expulsion of the heads of all families which have ever reigned in France, and their direct heirs in the male line under the custom of primogeniture, but allowing the Government to exercise its discretion with regard to other members of these families. The persons at whom the bill is aimed are the Comte de Paris and his son; the Prince Napoleon and his son being probably thrown in merely to give the measure an appearance of fairness. The extreme Radicals have long been clamoring for something of this kind, but what has precipitated it is the marriage of the Comte de Paris's daughter to a son of the King of Portugal. On this occasion the Count gave a large reception, to which the whole diplomatic corps were invited, and President Grévy wrote a letter of congratulation to the King, as if it were a national affair.

But ever since the death of the Comte de Chambord, and the consequent transfer to the younger branch of the Bourbons of whatever claim the elder branch had on the French crown, the Comte de Paris has been an object of increasing suspicion on the part of the Republicans—a suspicion, too, for which, as long as there is a large monarchical party in France, there is absolutely no cure. There is a considerable body of rich and influential people in France who consider the Count entitled by divine right to reign over France and establish such institutions as would to him seem best. There is another and perhaps larger body of rich and influential people who, while thinking nothing of his divine right, nevertheless prefer a monarchical government, and think the heir of French kings is the best person to exercise it. In fact, everything which is called "society" in France—that is, the well-to-do class which takes its pleasure and measures its success and importance in life by dining and picnicking and intermarrying with other well-to-do people—is still monarchical in its tastes, and has a great deal of reverence for a man who can show thirty-six generations of illustrious descent, and whose ancestors for nearly a thousand years were the foremost figures in French history and among the foremost in European history. In fact, there are not many Frenchmen, who know any history at all, whose imagination is not touched by facts like these. On the people, it is true, they have absolutely no hold. Mr. Hamerton, in his charming picture of French country life, 'Around My House,' mentions in illustration of this that when the Comte de Paris passed through the neighborhood there was probably not a peasant in the whole region who knew that he was the heir to the French throne, or anything about him, so completely has the monarchical tradition perished in the country districts. But this does not reassure French politicians. They have been so long accustomed to see the form of the government settled in Paris, and so long accustomed to see it carried on by people "in good society," that the doings and sayings of that class still fill them with anxiety. They are made nervous by the crowds of well-dressed people who accept the Comte de Paris's invitations, by the practice, both among them and among the army officers, of addressing him as "Monseigneur"—the old title which used to be reserved for princes of the blood and bishops—and by the eagerness even of military men to be among his friends or belong to his "set." They cannot believe that all this does not cover intrigues of some sort looking to a restoration, or that, as long as there are so many people ready to suggest a restoration, the Count himself can help thinking about it and seeking it.

They feel, moreover, that as long as the Count is the centre of a circle of this sort, and his movements are watched and chronicled by the press as those of an important personage, with a possible political future, the Republic will never assume in the eyes of the people that air of finality which is in France so necessary to the success of a government. Thus far the Republic has given no more proof of durability than any of the half-dozen governments which since the Revolution have preceded it. That is to say, every one of them has lasted about twenty years, and the Republic has not yet succeeded in lasting as long as that. The consequence of this experience is that every Frenchman looks with more or less certainty to seeing the Government under which he lives overturned; he does not expect it "to last his time"; he thinks he will see the end of it just as his father saw the end of the one which preceded it. Each generation, in fact, thinks the régime it lives under only transitory, and looks for a revolution in its own day.

To conquer this expectation, or live it down, is now the great aim of the Republicans, and they not unnaturally, as it seems to us, seek to remove from French soil every agency which in any considerable degree helps to keep it alive or strengthen it. That the presence of the heir to the throne in Paris, as the head of a large and wealthy circle, is one of

these agencies, nobody can deny. There is no doubt that the Comte de Paris is an accomplished and estimable man, who loves France well, and who would not set on foot any scheme of violence against the existing order of things. But he cannot help being the centre of revolutionary hopes. He cannot help reminding people or suggesting to people that something else than the Republic is possible or even probable. He cannot help, in short, being a Pretender — a worthy and honorable Pretender, we admit, but still a Pretender. Now, why should a republic permit a Pretender to remain on its soil any more than a monarchy? We confess we do not see. No monarchy has ever yet permitted a rival claimant to the throne to live within its dominions and keep on foot a court circle of his own. One of the first things the successful claimant of a crown always does is to expel his rivals, and the rivals go cheerfully and naturally, and wait on foreign soil for something to turn up, or until, as poor Chambord used to say, "God's hour strikes."

This is hard, but it is simply one of the numerous discomforts attendant on the condition of a deposed or disinherited sovereign in our day. France will in many ways lose by the departure of the Orleans family, but their absence will in all probability make the Republican experiment easier, and if so, the Republicans are fairly entitled to ask for it; and on the point whether it is necessary, their judgment is certainly worth more than that of any foreigner.

PASCAL AND HIS 'THOUGHTS.'

PARIS, June 4, 1886.

THE 'Étude sur le Scepticisme de Pascal, considéré dans le livre des *Pensées*,' by M. Édouard Droz, is a new commentary on a book which is still enigmatical in many parts, and which will always be considered one of the greatest works in French literature. The 'Pensées' appeared under this title, 'Thoughts of M. Pascal on Religion and on Some Other Subjects, found after his death among his papers' (Paris: Guillaume Deprez, 1670). This little volume was a mere collection of notes taken by Pascal with a view to a great apologetic work on the Christian religion. The notes and fragments were found in different *cahiers*, without any order or any apparent method. Pascal wrote his 'Thoughts' on little bits of paper whenever they had taken hold of his mind. They seemed at first so informal that his friends doubted whether they could be printed and published. These friends remembered, however, an occasion when Pascal had developed orally the plan and method of his Apology, and they classified the thoughts (those, at least, which did not seem too obscure) as well as they could according to their recollections.

Pascal's work cannot be confounded with the works of the moralists of his time. It is full of maxims, but his object was not merely to strike intellectual medals, if I may so express myself, like Mme. de Sablé or La Rochefoucauld: Pascal clearly felt the influence of the literature of his time, and the form of detached thoughts or maxims was a favorite with his contemporaries. But the 'Reflections, or Moral Sentences and Maxims' of La Rochefoucauld appeared only in 1665, and, therefore, they could not have inspired Pascal, who, besides, had the most original mind, and did not belong to the "imitatores, servum pecus." It seems probable that Mme. de Sablé asked Pascal for some maxims, and that many of the 'Thoughts,' in their terse form, were written for the select company which was assembled at Port-Royal. Some of the 'Thoughts' were found in the portfolios of Vallant, the secretary of Mme. de Sablé.

There is some danger in the excess of conciseness which is characteristic of the form of the "maxims": too much thought is placed in few words, and by this process the "maxim" becomes often a sort of Procrustean bed. But with Pascal we have not much to fear, as his "maxims" are but notes and indications; they are not his object, they are only his means. What was his object? It was, as we have said, to write an Apologia of the Christian religion. M. Cousin made a great sensation in the literary and philosophical world when he undertook to prove that Pascal prepared this Apologia for himself as well as for his contemporaries, and that the secret of the 'Pensées,' or of their apparent inconsistencies, lay in what he called scepticism. M. Faugère rendered a great service when he published the autograph manuscript of Pascal in all its unrevisedness, with even mere portions of phrases and isolated words, Then came M. Havet, who, in a very remarkable work, united, in this collection of notes, what seemed to have a precise sense, and put all the fragments in a convenient and logical order. We must cite also M. Molinier, who gave in 1877–79 a new and more correct edition of the 'Pensées.' M. Molinier, in his preface, treated the question of Pascal's scepticism. This question has not really been solved. Can it ever be? Can we go down in the abyss of any human soul? M. Droz denies the scepticism of Pascal, and will have it that his faith was not tainted by any doubt.

We know that Pascal, at the time when he wrote his 'Pensées,' had entirely given himself to religious ideas; that he always bore on his person an act of faith, a sort of religious confession (which has been called the amulet of Pascal); but we know also that his soul was not always at rest. In a letter to his sister, when he was already a believer, but had not yet felt the effect of grace, he confessed that he felt a great abandonment on the side of God; that he felt no attraction, that he was only drawn by his reason and by his mind, and not by the movement of God. At other times he is full of joy, he has "certainty, joy, peace." M. Droz maintains that Pascal really believed in the miracles of Port-Royal. M. Havet says, also, that the "polemical discussion which arose from the miracle of the Holy-Thorn was the origin of the 'Pensées.'" Mme. Périer says formally that "the joy which the miracle gave him was so great that he was penetrated with it, . . . and it was on this occasion that he showed this extreme desire to work at the refutation of the principal and most false reasonings of the atheist." In the opinion of M. Droz, Pascal was not a sceptic trying to find his way to religion, but an ardent believer, yet a believer who knew sceptics well, and who was trying first to combat them with their own weapons.

"Let us not," he says, "place Pascal among the French moralists between La Rochefoucauld and La Bruyère, and let us well understand their different points of view. The authors of the century study man or men in a series of analyses, having for their only object to collect them in a synthesis. Pascal, on the contrary, is a profoundly religious man, whose faith is entire and cannot be augmented. If he undertakes the study of man, it is only one of his means to a certain end."

M. Scherer, the most profound of our present critics, does not quite agree with M. Droz: "I believe," he says, "that Pascal believes and doubts in turn, but always very seriously; that the boldness and the penetration of his mind show him difficulties which he tries to conquer by reasoning, but which he can sometimes only avoid." The real secret of the 'Pensées' is the secret of the great, profound, and troubled mind of Pascal. That there was in this mind something excessive, cannot be doubted. He was really what must be called a genius; that is to say, he was always superior to the subject he touched, he was a born master of things. As a child he rediscovered the geometry of Euclid. Nothing could enslave him, chain him. Staying in Normandy with his father, an *intendant des tailles*, or receiver of taxes, he amuses himself with making an arithmetical machine. He discovers the properties of the cycloid curve, merely to forget the pain of a toothache. He is at one moment on the verge of the discovery of the differential calculus. His physical discoveries seem to be mere inspirations, like his mathematical discoveries. When he becomes acquainted with Port-Royal, and feels the charm of this admirable society of pure minds, he finds his new friends engaged in a quarrel with the Jesuits. He throws himself boldly in front of the battle, and in a few days writes the first 'Lettre à un Provincial.' In a moment, he shakes to its very foundation the powerful society. But all this was a mere preparation. Whether as a polemist or as a geometer, it seems that Pascal thought only of putting himself in training. He attaches but a slight importance to his discoveries; the only important thing is salvation. How can he reconcile a frivolous, corrupt society with religion? And his religion is not religion made easy, the religion of the world, the religion of the Jesuits and the casuists; it is the religion of Port-Royal—the pure, and austere, and puritanic doctrine of the *solitaires*.

When he began his Apologia, he saw at once that the first duty of the apologist was to be understood, and therefore to understand well his interlocutor. The interlocutor here is man taken in the abstract, or, if you like, human nature, with all its shortcomings, its defects, its ignorance, its limitations. This is why Pascal begins his work by a study or description of man, the most powerful, the most profound that ever has been written. This is why the tone of the 'Pensées' is so pressing, so passionate, so fervent. It is like an eloquent conversation with somebody whom you are anxious to persuade. You address yourself to his heart as well as to his mind—even to his prejudices, to his interests. Some of the arguments of Pascal have been thought very strange, some have even been an occasion of scandal; but those who have accused him of being a sophist, or even an infidel, have not understood his method. He wrote for unbelievers, and he sometimes adopted their language and identified himself with them for a moment. His great object is to carry conviction, to move, to stir the dormant waters of the soul. He acts with the sinner as a father who speaks to a little child. If he deals with a gambler, he offers him a wager. "I will only act with you," he says, "according to your own principles, and I intend to show you by the same way you reason every day on things of the smallest consequence (on your game of cards or the amount of a bet) in what way you ought to reason in this, and what side you ought to take in the solution of this important question of the existence of God." Then comes the argument, which has become famous in the philosophic school under the name of the argument of the wager. "God exists or he does not," says Pascal to his interlocutor. "You must accept one or the other alternative. From the fact that you are a man and are embarked in this life, you must believe one or the other, so as to regulate your life by your decision. Which way will you adopt? Reason, you say, cannot determine you, since in your opinion such questions are above the domain of your reason. Then fol-

low your interest, and see that the stakes are very different. If you admit the existence of God, you run the chance of gaining an infinity of life, infinitely happy; if you do not admit it, you gain merely the free disposition of your terrestrial life. So, the chances being equal, it is more advantageous to bet on the side on which the gain is the greatest."

Many have been scandalized by this argument —M. Havet among others; but it is quite clear that this is merely the play of a mathematical mind, and, if you look at it very seriously, what does the argument mean which is not found in the famous "Initium sapientiæ timor Domini"? The argument of the wager is only a forcible form given to the hope of heaven and the fear of punishment.

We cannot, however, repeat often enough that the 'Pensées' do not constitute a doctrine: they are merely the discussions of a powerful mind with itself, the struggles of a living conscience; and this is what makes them so interesting. If the Apologia had been finished, put in fine order, and pruned of all excrescences of thought and of sentiment, it would not have, in our opinion, the almost dramatic interest of the 'Pensées.' Renan has writen somewhere, in his own paradoxical style, "that the finest thoughts are those which have never been expressed." This is quite true if we mean those dreams of our intellectual life which float before us in the hours of solitude and of isolation. Pascal gives a sort of life to these phantoms; his written 'Thoughts' are the most sincere picture of the troubles of a sensitive soul. He is ironical, he is sublime, he rises and he falls, he doubts and he believes, he is alarmed and he is confident. He is inexorable in his criticism of the metaphysical proofs of the existence of God, he is not less inexorable in his criticism of ordinary morals. He anticipates Kant and his analysis. His good faith is absolute, his logic is terrible, but he has a refuge in faith: he believes, and why does he believe? He has seen in the religion of Christ a revelation of moral beauty which has taken possession of him. He is not convinced by argument, he is drawn by the ideal forces of sentiment. He looks all the time for proofs, and sometimes he seems to think his proofs triumphant; but at other times he is struck by the insufficiency of the best arguments, and reminds us that God must be a hidden God. He talks sometimes as a lawyer, and sometimes as a friend. He is essentially a mystic; he has sinned and he will sin no more, he has been touched by grace and enjoys peace; he feels so sure of himself and of his faith that he can recognize the poverty of all argumentation. His attempt at an Apologia ends in the vanity of all *apologiæ*, and the recognition of the fact that the religious mind is directed by hidden laws.

Correspondence.

THE CLERGY AND THE LABOR PROBLEM.

To the Editor of The Nation:

Sir: Will you permit me to make one or two observations concerning your comments upon my sermon of last Sunday? In an earlier sermon of the series, I had spoken as plainly as my command of English permitted to the workingmen who heard me, concerning the prime duty of self-help; assuring them that there was no help to come from the heavens above or the earth beneath as a substitute for the very qualities which you commend as the ample solution of the Labor Problem. Having done this, in the last sermon of the course I proceeded to speak of what I supposed to be the generally admitted conditions of our civilization which make this solution of the Labor Problem harder than necessary. To him who sees nothing in our economic and social and political conditions handicapping Labor in this effort at self-help, these concluding remarks must have seemed superfluous, and such strictures as you passed must commend themselves as entirely appropriate to such a work of supererogation. I am not, however, one of that happy class who thus look out upon our present environment. Seeing, as I think, very many things which make such a solution of the Labor Problem needlessly hard for our workingmen, I felt constrained to indicate what might be done to better those conditions. As you observed, I did point to many lines of action, but I did this precisely because I wanted to bear in upon the minds of the workingmen the fact that there was no ready-made solution of this larger problem—that the good time coming would have to come by a general advance along the whole line of civilization, in which each of us might lend a hand from his own position.—Yours truly, R. Heber Newton.

Garden City, L. I., June 11.

MR. MANNING'S RESIGNATION.

To the Editor of The Nation:

Sir: Of the many thousands who have read without direct personal interest Mr. Manning's letter to the President, almost if not quite all will recognize the utterance of an able and faithful official, and will regret the loss of his services to the country; but very few will probably appreciate the real significance of that letter. A short extract will serve as a text for indicating this:

"Our present tariff laws are a needless oppression instead of an easy burden. Our currency is a chaos into which we pour forced purchases of one of the precious metals, a mechanical increment under a coinage law so ill judged and untimely, etc. All our customs revenue might be collected by strictly revenue duties upon a few score articles instead of by extravagant or prohibitory duties upon more than 4,000 articles. A better currency than exists elsewhere might be had by a few lines of repealing and empowering legislation, followed by two or three years of capable administration of the Treasury. Under the operation of currency laws and tariff laws now in force, which you and the present Congress were elected to repeal and reform, the burdened industries of our country are plunging heavily along a miry road towards foreseen danger."

That this gloomy view of affairs is justified by facts is not the most important point. The curious part of it is, that the nominal head of the finances, the confidential adviser and nominee of the President, has hardly more power to apply any remedy than an ordinary citizen, while his only public utterance on the subject, outside of his annual reports to Congress, is this wail of despair addressed to the President on taking leave of his office. The real conduct of the finances is in the lobby, and the Secretary of the Treasury, in order to accomplish anything, must resort to the same expedients and stand on the same level as any agent of a protected interest. Meantime, in what a helpless chaos Congress is floundering; how completely it is at the mercy of the keen and skilful intriguers who pull the wires by which its movements are directed, ought to be apparent to anybody who reads a daily paper. Is it not the simplest common sense, the most obvious interest of the country, that the Secretary of the Treasury, being nominally responsible for the finances, should have some voice in the conduct of them; that he should be able on the floor of Congress, the only place where it can be done with any effect, to explain to the country why things are going wrong, and how they can be made to go right? G. B.

Boston, June 14, 1886.

TWO POINTS IN ENGLISH CONSTRUCTION.

To the Editor of The Nation:

Sir: Apropos of a new English grammar, as called for by a recent correspondent of the *Nation*, may I be allowed space in which to call attention to two constructions?

(1.) A Frenchman or Italian says, "You are stronger than I *didn't* think you were," where it is plain that the "not" pops up to the surface out of the other thought, "I did not think you were so strong."

In our language we frequently hear such a sentence as "I should not be surprised if it didn't rain this evening," the second "not" making the speaker say precisely the opposite of what he means.* The influence of the first negative works forward and produces a second, just as, in the common solecism, "I like those sort of girls," the last plural works backward and produces "those" for "that."

How shall we account for the *omitted* negative in the following? "He evidently dislikes manual labor as much as anybody, however, and does not mean to do any more of it than he can help" (*Nation*, No. 1089, p. 392). I was about to say that it is perfectly clear that the thing really meant is, "any more than he can *not* help"; but, in fact, it is not so clear. At least, I have right often found persons who could only with considerable difficulty be made to see that "not" is absolutely required by the sense; that "not" before "help" is just as much *in* place as it is out of place in "I should not be surprised if it didn't rain." I do not think I ever heard or saw the logically correct form "than I can't help." The desire to avoid a negative cannot be the explanation: our main tendency is just the other way.

(2.) There is a common use of "have" not noticed in the latest Webster, nor in the Worcester of some years ago. Nor do I find mention of it in Maetzner: "Mr. So and So had a valuable horse stolen last night." "Ney had five horses shot under him in the last charge at Waterloo." "Sometimes the scientific man has put upon him the task of devising a terminology as well as a nomenclature" (Whitney, 'Language and the Study of Language'). The explanation is clear: it is nothing more than a grammatical device to enable us to have a passive expression in which the *person* and not the *thing* shall be the subject. When the active construction has an accusative of the thing and a dative of the person (as, "the judge granted (to) the man a new trial"), we can easily turn this into a passive and say, "the man was granted a new trial." But as soon as we have the person in the active, governed by other prepositions than "to," we do not use a simple passive—*e. g.*, "He stole a horse from me." "I was stolen a horse" will not do, but "I *had a horse stolen* out of my stable last night" meets the case very well. This form of passive often comes into play in rendering into English the similar Greek idiom, as the Greeks too were fond of having a *person* as the subject of the passive: "He was taken away all his property" naturally becomes, "He had all his property taken away." Is there any other explanation to be given of this use of "have"? A curious extension of this hankering after a personal passive occurs in a translated article in the *Popular Science Monthly* for February, 1886, p. 527, end: "I had several cases of men who *had been spit in the eyes* by the spitting-snake," where a possessive genitive is made the subject of the passive. This is matched by a recent remark attributed to a man who had just been jolted in riding—"That hole ought to be throwed dirt into."—Respectfully, A. H.

Hampden Sidney, Va.

* Is not our correspondent dealing here with a local or southern solecism?—Ed. Nation.

REPUBLICANS AND PROHIBITION IN IOWA.

To the Editor of The Nation:

Sir: I notice that in closing your editorial, in your issue of June 3, entitled "Growing Power of the Prohibitionists," which, by the way, contains much of truth, and for that reason demands correction, you say:

"Every time the Republican party has been brought squarely to the same issue it has 'dodged' in the same way, and it is small wonder that the temperance people have at last become tired of the game."

By the phrase, "in the same way," as is shown by the context of the article, is meant that every time the Republican party has been called upon to take a stand on the moral issue presented by the liquor question, the party leaders have busied themselves with a calculation as to whether "there were as many temperance voters as there are Irish and German Republican voters," and, failing to determine the question, or resolving the problem against the temperance voter, the Republican party has, without exception, "dodged" the issue.

Will you kindly correct your statement or explain wherein consisted and when occurred the "dodges" during the six several times that this moral issue has been presented to the Republican party of the States of Iowa and Kansas during the last few years? L. W. Clapp.

Iowa City, June 8, 1886.

[We had rather in mind the Republican party in its national aspect, but our language was not carefully chosen.—Ed. Nation.]

THE AMERICAN SCHOOL AT ATHENS.

To the Editor of The Nation:

Sir: I have frequent occasion to speak with the students of archæology of various nations who come to Athens on the scope and work of the American School, and almost without exception they express surprise at the singular device of sending out each year a new head for the institution. Nor does it become more reasonable when explained as a device for getting a head without any charge on the resources of the School by the method which your readers probably all know, and which at best results simply in sending one more student out to learn archæology, and calling him home again when he has learned a little of what the director ought to know. The general opinion is, that nothing could be expected of such an institution, and my own experience, like the testimony of the students, is that nothing worth the trouble is achieved. The sending out of a professor who knows nothing but ancient Greek to teach in Athens what he can just as well teach at home, may be very pleasant for the professor if he needs change; but to suppose that a school of Hellenic studies can be started in this way, is as absurd as the hypothesis that the United States of America can establish a diplomatic body by sending meritorious politicians abroad for a term of four years and then replacing them by a new lot.

If the object of the School in Athens is to teach the ancient Greek, it is a mistake altogether, for ancient Greek can be better learned in Germany than in Athens; if to teach modern Greek, an American professor or school is quite superfluous; and, so far as philology is concerned, therefore, the School is sheer waste of labor and money. Students come to the French and German schools to learn archæology, and for this Athens is peculiarly adapted in being the centre of ancient Greek life, and of that sphere of investigation which is calculated to throw light on Greek polity, sociology, letters, and art by new discoveries through excavation and exploration. To send a man who knows nothing of archæology to direct the School for even a year is mocking the young men who come here to study, for it only gives them a fellow-student no wiser than they. It is a perfectly useless expense, and the same end would be gained by having a housekeeper who should keep the building in order and see that the books were not stolen. And if there are no idle ambitions to be gratified, a better disposition of the money, I should say, would be to employ it in coöperation with the English Society for a school open to students of all qualified English and American universities.

It is not purely on à-priori grounds that I judge the American School to be thus far a conspicuous failure, but on the testimony of the students themselves, who, so far as I have heard their evidence, have found it an utter disappointment and illusion; and it is even in response to repeated requests from the students of this year that I have promised to ventilate the matter in the *Nation*. If they came here without any connection with any school, they could have the advantages of the Greek, German, and French libraries, and the advice of the directors and senior students of the schools, all given generously to all students who seek them; and our School is therefore no advantage to them.

The first requisite, even before a building, is to provide the School with a competent permanent head, who shall have had opportunity to learn at least as much of archæology as one of the scholars will acquire in one season's work. As a matter of course he must know ancient Greek thoroughly well, and be a master of epigraphy, because in most cases a thorough knowledge of Greek epigraphy is the key of archæology, as far as it is a positive science. Other nations generally make such positions as this would be, provision for their able scholars who have not private means to follow classical studies, and whose enthusiasm for them is sufficient to induce them to accept teaching positions: they are the recognized compensation for lives devoted to erudite research. To wait till we have an accomplished archæologist and epigraphist at once, educated in America, would be to postpone the utility of the School to the Greek Kalends, for it is only in the classical world that such an education can be obtained; but what we can hope for is, that somebody may be found who will be able to take the American student, arriving full of enthusiasm and ready to be put in the right path and started off intelligently, and prevent him from losing heart and enthusiasm and wasting his opportunities through finding no kind of instruction in response to his demand—save the bland permission of his director to make use of the library whenever the director and his family have no use for it. The general opinion of the students this winter, as well as of the local archæologists, so far as I have had any conversation on the subject, indicate Dr. Sterrett as the person to fill the position which the existence of the School supposes. As an explorer and epigraphist he is not only our best, but he has attained a reputation among the first of his generation, and his knowledge of archæology is far beyond the stage at which our young students must begin their work at Athens. I do not know any other American scholar half so well qualified by study and enthusiasm in his science to fill the place which must be filled if the School is not to remain the mockery it now is. I understand that Dr. Sterrett has been offered a professorship of Greek in some Western college; and as his means do not allow him to remain in the pursuit of classical discovery, in which he has shown such indefatigable enthusiasm and attained such splendid success, we may have the misfortune of losing him from the field where our national vanity, if not our national recognition of merit, should maintain him. It is most probable that in America Dr. Sterrett is less known than to Hellenists in Germany and England; but certainly he must have become sufficiently well known to our scholars to call out more authoritative recommendation than mine, though none may be better able than I to state the needs of the School, or judge how utterly it fails, under its present organization, to respond to any part of the plan of its founders and supporters.

Yours truly, W. J. Stillman.

Athens, May 27.

PUBLIC MANNERS.

To the Editor of The Nation:

Sir: In M. Zola's last book, 'L'Œuvre,' among the many extraordinary descriptions of Paris and Parisians—extraordinary alike from the scenes themselves and from the power of their delineation—there is one which is perhaps worth a moment's attention on the part of those persons who are not likely to read the book. It is worth attention because M. Zola writes not as a romancer, but as an historian, or, one may say more accurately, as a scientific traveller; and if we may accept (and in some measure it would seem that we must accept) his observations as documentary evidence of what can be witnessed in the centre of the highest civilization, it may well give us pause as to the meaning of "the highest civilization."

The page I am about to translate is the account of the "manners" of a crowd at an exhibition of pictures, an exposition of the *rejected* pictures of the Salon of the year. I must confess that it is impossible to translate the style of M. Zola; but the following is the substance of the passage.

I must premise that the "great work" of the hero of the story, a landscape with figures, is among these pictures; and he, tragically uncertain whether or not the public will recognize his genius (as the jury of the Salon has not done), and bestow on him the praises really his due, goes to the Palais de l'Industrie (the place of exhibition) agitated with excitement. As he enters one after another the various halls, he hears everywhere the laughter of the public, "the contagious hilarity of a crowd come together for amusement"; but, by a deceptive accident, gaining courage about his success as he advances, he comes at last to his own picture. And looking at it with clear and intelligent eyes he finds it is quite other than it had seemed to him in his atelier, and perceives it is a failure, but a failure redeemed by touches of genius:

"He turned to Sandoz and said simply: 'They have cause to laugh, it is incomplete. No matter, some parts of it are excellent.' His friend tried to draw him away, but on the contrary he obstinately drew nearer. Now that he had judged his work he listened to the crowd and observed it. The explosion continued, increasing in an ascending gamut of wild laughter. As soon as the visitors were within the door he saw them become open-mouthed, and their eyes almost disappear in the breadth of their smiles; and then were heard the noisy chuckles of the fat men, the harsh cachinnations of the thin men, and dominating over these the little sharp titters of the women. Opposite, against the wainscot, young men threw themselves back as if they were being tickled. A lady let herself drop on to a seat, her knees drawn together, choking, trying to catch her breath behind her handkerchief. The report of this 'droll' picture spread; people crowded in from all quarters; they came in troops, pushing, trying to get in front. 'Where is it? Over there! Oh, what a joke!' And witticisms flew fast; . . . [as] 'Look! it has been dyed; the flesh tints are blue, the trees are blue; he has certainly dipped it into a blue-pot, this picture of his!' Those who did not laugh became angry; this bluishness, this new notation of light, they took as an insult. Was art to be thus outraged? Old gentlemen brandished their canes. A serious personage departed, out of temper, declaring to his wife that he did not like bad jokes. But another, a conscientious little man, looked in the catalogue for an explanation of the picture, and, read-

ing aloud, for the benefit of his companion, the title 'Open Air,' it gave birth to a formidable renewal around him of cries and hootings. The words were caught up, repeated, commented on: *Plein air, oh! oui, plein air! . . . tout en l'air, tra la la laire!* The crowd grew larger, and became more and more insulting; the faces, reddening in the increasing heat, had each the gaping, stupid mouth of those who are ignorant undertaking to judge of painting, and expressing all the sum of arrant blunders, of ridiculous reflections, of silly and malicious sneers that the sight of an original work draws forth from middle-class doltishness."

I should perhaps say that the sentences I have omitted indicate that the nature of the subject of the picture, as well as its treatment, displeased the spectators; but what I want to bring forward is the good taste and refinement, or, without irony, the odious vulgarity of such a scene.

* *

Notes.

We are glad to learn from the publishers, Belford, Clarke & Co., that the recent total destruction of their premises in Chicago did not involve the loss of the plates of Gen. Fremont's Memoirs, which were stored in Philadelphia.

D. Appleton & Co. have in press 'The Rear-Guard of the Revolution,' by James D. Gilmore ("Edmund Kirke"), a story of the pioneer settlement of Tennessee under James Robertson and John Sevier; and 'Studies in Modern Socialism and Labor Problems,' Sunday evening lectures by T. Edwin Brown, D.D., of Providence.

D. Lothrop & Co., Boston, have in preparation an illustrated work, 'Among the Lighthouses' (namely, of the Maine coast), by Mrs. Mary Bradford Crowninshield, wife of Commander Crowninshield.

Lotze's 'Outlines of Æsthetics,' translated by Prof. Geo. T. Ladd, will be published next month by Ginn & Co.

Next fall D. C. Heath & Co. expect to bring out a work on 'Manual Training,' by Prof. Woodward, of Washington University, St. Louis. It will give practical directions, based on long experience, as to the organization and conduct of manual training schools.

Ginn & Co. will issue, in season for the fall school term, 'Homer,' being the first part of a short history of Greek literature by Prof. R. C. Jebb of Glasgow University.

Mr. Henry George's 'Protection or Free Trade' (Henry George & Co.) is a restatement of his well-known views on the evils of private land-ownership. Real free trade, according to Mr. George, is exemption from all taxation, the public revenues of every kind being collected from land in the form of a rent-charge due to the state. The argument against protective tariffs is very strongly put, but its value is lost by a declaration that the abolition of such tariffs would be of no advantage to the workingman, since the land-owner would intercept and swallow up all the resulting gains. The land-owner is the robber who takes all that is not needed to keep the residue of the human race alive. Why this cormorant should allow even a bare subsistence to his fellow-men is not clear, there being no law compelling him to do so, nor any agreement among land-owners themselves to restrict their exactions at any particular point.

The seventh volume of the works of Alexander Hamilton, edited by Mr. Henry Cabot Lodge, has appeared (Putnams). It opens with a speech deprecating an attempt on the part of New York to recover Vermont, chiefly on the ground of expediency, but also because of the repugnance of forcible dominion over an unwilling people to ideas to which the Revolution had given currency. The eulogy of General Greene follows, and is a striking summary review of the military career of that commander. Most interesting of all the pieces in this volume are Hamilton's drafts of speeches and messages for Washington, including the Farewell Address. Criticism of Jefferson's message of December 7, 1801, fills a large space. So does the defence of Harry Croswell for his libel on Jefferson in the *Wasp*. An inedited fragment on the French Revolution is curious, but of slight importance. Not so is the elaborate defence of the Funding System. The volume closes with the private correspondence, which comes down to 1779, and will be continued in the eighth volume. Great pains have been taken here to insure correct transcripts from the original in the case of all the letters, whether heretofore published or inedited.

The odds and ends of Goldsmith will be found in the two concluding volumes of his Works (embracing five in all) lately added to the Bohn series (New York: Scribner & Welford). His biographies of Voltaire, Nash, Parnell, and Bolingbroke are followed by numerous specimens of his hack-work in criticism, by later collected essays, prefaces, and introductions, and—in deference to Mr. Charles Welsh's very probable vindication of Goldsmith's authorship—by Goody Two-Shoes. There is a copious index to the entire series.

No. 750 in Lovell's Library is 'Somebody's Story,' by Hugh Conway, which one may read in fair print first, and then afterwards in the facsimile of the author's minute MSS. Happily, the tale is short, or the latter reading would be destructive of eyesight.

Teachers should have their attention called to the following text-books issued by Macmillan: 'Johnson's Lives of Dryden and Pope,' with introduction and notes by Alfred Milnes, who sketches the life of Johnson himself; Dr. Buchheim's 'Heine's Harzreise,' expurgated and furnished with notes—like the foregoing, one of the Clarendon Press series; J. E. Nixon's 'Prose Extracts for Translation into English and Latin,' in which the extracts from ancient and modern authors are cleverly matched in spirit, and printed facing each other, as, Burke against Cicero, Robertson against Sallust, etc.; and the Rev. Ellis C. Mackie's 'Parallel Passages for Translation into Greek and English,' in which a similar juxtaposition is carried out.

A book which seems worth considering is De Fontaine's 'Condensed Long-Hand,' or a system of phonetic abbreviation designed for the use of the type-writer under dictation. The author anticipates for it an increase of speed on this instrument of from fifty to a hundred per cent.—in short, that a close approach can be made to the stenographic rate. The American News Company are the publishers.

The eighth issue of 'Zell's Classified United States Business Directory,' for 1886, has reached us from the American Reporter Co., 65 Duane St. As it dispenses with any prefatory account of annual revision, it appears to trust to its established favor with the public. The work is primarily classified by trades, etc., and the subordinate arrangement is of course geographical. At the close, some foreign countries are added—France, the West Indies, South America, Australia, etc.—with the reverse arrangement.

Booklore for June (D. G. Francis) begins a bibliography of English topographical works with those relating to Bedfordshire. The arrangement, singularly enough, is by authors and not places.

There are not a few eminent names among the contributors to the first volume of the *New Princeton Review* (A. C. Armstrong & Son), and the table of contents shows that current topics have been well looked after. No one but the editor could say to what an extent he has had to act as a purveyor, and to what extent as a sifter of articles spontaneously and unstintedly offered to him—in other words, whether the *Review* supplies a want, or merely enlarges the opportunities of those who make literature a profession. Nor is the close of a first volume a proper time to raise such a question.

The Appalachian Mountain Club, Boston, is about to issue advance sheets of its forthcoming map of the White Mountains, on a scale of 1: 50,000, by tracing what is now done of it, roughly lettering it, and copying by the blue-print process. A northern and a southern sheet will thus be supplied (apparently to members only) at about seventy-five cents each.

We have already had occasion to mention an illustrated paper on the movement cure in China, by Dr. Macgowan, which originally appeared in the series of Medical Reports issued by the Imperial Maritime Customs at Shanghai. There is in these reports much to repay the curious lay reader, and now and again one finds papers of only indirect or limited medical bearing. Such, in the issues (27-29th) before us, are the notes on the aborigines of southern Formosa, or those on black lime—amorphous graphite, used to mix with lime in making a capital mortar, or for dying cloths, and also capable of medical application. There are meteorological notes, too, and district health maps. Though foreign male physicians are seldom called in by the Chinese unless in extreme cases, their native practice is increasing, particularly the obstetric branch. But it is impossible to obtain bodies for dissection. One physician reports that not a few cases of injury from falls, as broken bones, burns, and scalds, arise from deformed feet; another, that leprosy is not contagious, contrary to the view which is fashionable on the Sand Lots.

A new and recast edition of Victor Duruy's 'Histoire des Grecs,' with 1,500 illustrations and 50 maps and plans, is now appearing in parts from the press of Hachette. It will make three volumes.

The admirable studies of Russian literature which M. Melchior de Vogüé has been contributing to the *Revue des Deux Mondes* are about to be republished in a single volume, 'Le Roman Russe' (Paris: Plon; New York: F. W. Christern). The preface on Realism in Literature is to be found in the *Revue* of May 15. It will delight the soul of Mr. Howells.

A year ago M. Ch. Gueullette made a little book out of his criticisms on the various performances at the Théâtre-Français, and it is good evidence as to the surpassing merits of that play-house that he has now put forth a second volume devoted to 1885, and is intending, apparently, to continue the series annually. His 'Répertoire de la Comédie-Française' (Paris: Jouaust; New York: F. W. Christern) is rather lightly written, but it is introduced by a very characteristic preface by M. Théodore de Banville, is beautifully printed by MM. Jouaust & Sigaux, and is adorned with an etched portrait by M. Abot of Mlle. Dudlay, the tragic actress whose reëngagement by M. Claretie has caused the resignation of M. Delaunay and M. Coquelin, the two best comedians of the Comédie-Française.

The British Museum has very recently acquired two manuscripts of considerable interest to students of the history of the American Revolution. One is an account of Burgoyne's campaign, written by a Lieut. Digby of the English Army, who describes briefly, in a dry, precise, professional tone, the various military movements of which he was cognizant. Those operations in which Digby was personally employed are narrated with rather more fulness, but the object of the whole is strictly military, and there is little reflection of the author's opinions or feelings. The other document, the title of which is at this writing the very last entry in the manuscript

catalogue of the Museum, is an account of some passages in his own life by Alexander Chesney, a native of Ireland who settled in the South Carolina up-country in 1772, and who served on both sides during the Revolution, but very reluctantly, if we may believe him, on the side of the colonists. In the later years of the war he was Captain of Loyalists, and distinguished himself, apparently, by his courage and enterprise. His story is told with sufficient modesty. He gives many interesting particulars of the partisan warfare in Carolina, and relates only too briefly his experience at the battle of King's Mountain, where he was wounded.

The eighth annual session of the American Philological Association will be held at Ithaca, N. Y., in the pleasant Botanical Lecture-room of Sage College, Cornell University, beginning July 15, at 3 P. M. President Peck's address will be delivered on the evening of that date. Members intending to be present are requested to notify Prof. W. T. Hewett, the local secretary; and those who will read papers, to send their titles to Prof. John H. Wright, at Hanover, N. H. The eleventh annual session of the Spelling Reform Association will begin at the same place on Thursday, July 15. President March's address will review "Ten Years of Spelling Reform," and should be interesting.

—The April number of the *English Historical Review* contains some articles that will command general interest. One of these we have already mentioned—Mr. Cunningham's paper upon "The Repression of the Woollen Manufacture in Ireland." The opening article, "The Growth of Plebeian Privilege in Rome," by Mr. Strachan-Davidson, does not cover the whole ground of the growth of plebeian privileges, but is confined to a single question—the establishment of the plebeian right of legislation by the Hortensian law, and the relation of this law to the Valerio-Horatian and the Publilian laws, which apparently enact the same privilege. The theory here presented is marked by the practical and commonsense character which we should expect from an Englishman. It is that the original power of the plebeian assembly, as shown in the Terentilian law and the Icilian law *de Aventino publicando* (both of them antecedent to the law of Valerius and Horatius), was that of petition; the petition being considered by the Senate and then adopted by the *Comitia Centuriata*, which was, "except for the addition of a handful of patricians, the same persons who had already voted in the assemby of the *plebs*." A foot-note points out the analogy of this action of the plebs to that of the Commons in the English Parliament of the fourteenth century. This proposition seems very probable, and in it "no power is ascribed to any person or body in the state, excepting such as from independent sources of information we know that they possessed." It does not seem to us, however, to exclude Mommsen's theory of the Valerio-Horatian and Publilian laws, according to which these laws had reference not to the plebeian assembly, but to the *Comitia Tributa* proper; and it seems altogether likely that the earlier of these laws (of 449) stood in direct relation with this assembly, which makes its first appearance at just about this time. On the whole, we prefer this explanation to that of Mr. Strachan-Davidson, who would make these laws mark steps in the process of converting the right of petition into that of legislation. Another article of general interest is by Mr. James Gairdner, upon "The Death of Amy Robsart." Mr. Gairdner exposes Froude's argument to a searching examination, and shows, by full citations from Mr. Froude's documents, that they do not sustain his conclusion that she was murdered by Leicester, but rather go to prove his innocence in the matter. Mr. Simcox's article on "Alfred's Year of Battles"; Miss Hamilton's graphic description of "Paris under the Last Valois Kings"; and Mr. Bent's account of "King Theodore of Corsica" also deserve notice. And one of the most important papers is to be found in the "Notes and Documents"—an examination, by Mr. W. Aldis Wright, of the authenticity of the Squire papers, a subject extensively discussed last year in the *Academy*. The article occupies thirty-seven pages, and comes to a conclusion in favor of their genuineness, largely on the ground of the intimate knowledge that Carlyle had with everything relating to Cromwell: "Was he then completely deceived by documents which others, certainly not better qualified to judge, can at once confidently pronounce to be forgeries? I confess that I find this very difficult to believe."

—Of the recent translation of Feuillet's 'La Morte,' by J. Henry Hager, entitled 'Aliette' and published by D. Appleton & Co., it may be noted first, that, after the fashion of the day, it is expurgated; then, that (in speaking of an *écuyère*) it renders "elle a une main étonnante" by "her seat is something wonderful," and renders "C'est un grand manoir à toits pointus et surbaissés" by "It was an extensive manor-house, surbased and with pointed roofs," not observing that *surbased* applies to the roofs and to the roofs alone —and this is only one of countless instances of similar carelessness or ignorance. It may also be noted that the tone is constantly misrepresented; *e. g.*, "Je voudrais que la mémoire [de son père] fût chérie et vénérable à tout le monde comme à moi," becomes "I could wish to have his memory as cherished and revered by you as it is by me"; this speech being made by a young girl to a young man, "the first time" that she talked with him "as to a friend rather than a passing acquaintance." Again, in talking of an old house, the speaker refers to "the aspect of your home, the style and quality of the household arrangements (*la tenue de la maison*)." This is translated, "the style, the tone, and *the conduct of the family*"! A charming and clever conversation on the men and women of the society of Louis XIV. is metamorphosed into something absurd by such touches as this: "All their passions, their weaknesses, their errors," says one of the interlocutors, existed in conjunction with "un fond sérieux et solide." "Beneath all this there was a substantial foundation of *earnest belief*," says Mr. Hager —which is inexpressibly mistaken. Mr. Hager should also be informed (and in no spirit of hypercriticism) that a bishop is never addressed as "your Highness"; "Votre Grandeur" is at best "your Grace," and may be "your Lordship." Also that the Miss Edgeworth-like "my dear" from wife to husband does not represent "mon ami." Also, that *savoir gré* is not "to know," but 'to take it kindly,' 'to be grateful'; and that *un oiseau bleu* is not "a little bluebird," but 'a creature of the fancy'—'a phantom of delight.' In turning the pages one's eye is incessantly struck by such and other blunders. "Fashionable life at Paris is a terrible machinery of wheels (*engrenage*)"; "a terrible *treadmill*" we have instead, which has no relation to the idea which the succeeding sentences fully develop. But perhaps the most entirely satisfactory rendering is this—"satisfactory" as making further criticism unnecessary: "Ma femme, dont la terrible beauté, malgré ses mélanges—peut-être, helas! à cause de ses mélanges!—n'avait pas cessé de parler fortement à mon imagination"; "whose terrible beauty, in spite of its inconveniences, perhaps, alas! on account of these very inconveniences, still strongly appealed to my imagination." It is only just to say that some passages in the volume are fairly well done; but the expurgations are unjustifiable, since unavowed.

—Karl Wilhelm Nitzsch was a scholar equally distinguished in the field of Roman and of German history, and one whose influence upon historical thought in these fields was far out of proportion to his fame or the actual amount of his written works. He did not write a history either of Rome or of Germany; but his writings upon both subjects are of so profound importance, and his courses of lectures upon both made so deep an impression upon his hearers, that we have, since his death, the publication of connected works upon each, prepared by his pupils for his papers and the notes of his lectures. The German history is a work of considerable extent, the 'Geschichte der römischen Republik,' edited by Dr. George Thouret (Leipzig: Duncker & Humblot) is in two thin octavo volumes. The central point of Nitzsch's researches, in relation to both Germans and Romans, is the social and economical relations of the peasantry; and his Roman history probably more than any other throws light upon the economical causes of the growth and downfall of the Roman Republic. He starts with the fundamental fact, overlooked by many writers, of the rural plebeians, as a class almost peculiar to Rome and the controlling fact of the Roman Republic. The existence of this class, the champion of the equality of the orders, and the source of the plebeian nobility, is a fact generally admitted, if not generally appreciated at its real value. What is peculiar in Nitzsch's theory is the view that these rural plebeians represented the policy of war and conquest, as opposed to the commercial policy of the old patricians; the Claudii were the leaders of this commercial policy, while the Horatii and Valerii allied themselves with the plebeian leaders. This theory is not to be accepted hastily; it gives, nevertheless, a helpful clue to the mazes of early Roman politics, and, whether true or not, will be suggestive and serviceable to students of the first decade of Livy.

—The name of the Bohemian scholar Vaníček is not an illustrious name. He himself claimed no higher position than that of being the "registrar of comparative philology," and the modest pamphlet which one of his friends has recently put forth in commemoration of him makes no extravagant demand for the man whose 'Etymological Dictionary,' whose 'Latin Grammar,' whose careful indexes to the works of Georg Curtius, are well known to all classical scholars, and have been found useful enough to insure their compiler a modest niche in the *columbarium* of philology. But here and there in the works of Vaníček there is a half-revelation of the frightful disadvantages under which this worthy scholar labored, and Dr. Glaser's pamphlet brings the painful details to the light. It is not needful to repeat them here: other and greater men have passed through like misery to high position. But the lesson of Vaníček's life has especial interest for American scholars, because, while none of them can possibly know the depths of poverty to which he was reduced, many of them know something of scarcity of books, many of them know the disadvantages of unfavorable surroundings. Here was a man of fair but not great gifts, with a mild vein of idealism to keep his spirit alive, who did good service to his department with as slender an equipment and as discouraging an environment as any American scholar can complain of. One thing, however, is worthy of note—that this man was brought into intimate relations with a brilliant genius, Aug. Schleicher, and into friendly contact with the luminous intellect, the serene balance, and the kind heart of Georg Curtius; and these two men, by their incitement and their encouragement, saved him from utter obscurity, and introduced him to the line of work by which

he is known. To the last-named steady friend he owed his appointment, after long years of waiting in unsatisfactory positions, to the professorship of Sanskrit and comparative philology in the University of Prague, which he held only a few months before he was struck down. It is this, after all, that makes the difference between so many American and so many European careers. It is not simply the lack of suitable environment, the lack of means, the lack of will: it is the absence of that early potent, personal influence, which is hardly possible under the formal constraints of the college classroom. Fortunately a better day is at hand, and the freedom of study in the higher ranges of college life, and the specialization of work in our American universities, will bring about, is bringing about, a closer contact, a warmer sympathy between master and disciple, and a more earnest purpose to advance the frontier of knowledge in every direction.

SCHOPENHAUER IN ENGLISH.

The World as Will and Idea. By Arthur Schopenhauer. Translated from the German by R. B. Haldane, M.A., and J. Kemp, M.A. Three vols. London: Trübner & Co. 1883-1886.

ALTHOUGH the publication of an English translation of Schopenhauer's principal work has not been heralded with such a flourish of trumpets as attends many an ephemeral book of one-thousandth part its value, it would nevertheless be difficult to name more than two or three works of the century that have provided the English mind with such a strong ferment as Schopenhauer's work is calculated to supply. In Germany, as is well known, Schopenhauer has practically eclipsed all his predecessors, except Kant, in influence, although Hegel, Fichte, and Schelling still continue to be lectured on by a few octogenarians at the universities. In France, too, as the *Revue Bleue* told us the other day, Schopenhauer is not only being diligently studied at present, but there is a current to make him the fashion in literary circles, as he is in Germany. For Englishmen and Americans something has been done in the way of magazine articles, and by Mr. Sully's book on 'Pessimism,' to familiarize the public with his thoughts; yet the best abstract of his works must always be to the original as chemical is to natural wine; and for this reason the present translation cannot be too warmly welcomed. Orthodoxy in philosophy and religion will, of course, be shocked by these volumes; but no one will be able to withhold his tribute of admiration from the most poetic and fascinating philosophic writer since Plato. To give a striking instance: Prof. Bowen of Harvard, though he "detests" Schopenhauer's system, admires him so immensely as a lucid writer and thinker that he not only forgives him his sins, but apparently teaches no other philosophic treatise so much *con amore* as Schopenhauer's.

It is well known that, notwithstanding these merits, Schopenhauer had to wait many long years for recognition. "Although I was only thirty years old when the first edition of this work appeared," he tells us, "I live to see this third edition not earlier than my seventy-second year." This was written in 1859; and again a quarter of a century had to elapse before the appearance of the first English edition. That the first volume, which was issued three years ago, did not excite much attention, is principally Schopenhauer's own fault. Not only is its style less crystalline and simple than in the later volumes, but it is much less attractive because it embodies the skeleton of his metaphysical system, while the second and third volumes represent the more inviting outside—the flesh, complexion and brilliant literary dress. The author prided himself chiefly on the skeleton—the alleged discovery that the "Will" is the "Ding an sich," the essence underlying all phenomena, and heretofore considered absolutely unknowable. The effort to prove his unprovable and self-contradictory theory involves him in numerous super-subtleties and obscurities foreign to his usual manner. But in the succeeding volumes his metaphysical hobby becomes less and less obtrusive, until it finally assumes the form of an inconspicuous thread on which he strings his pearls—very much as in the 'Parerga und Paralipomena,' which forms the continuation of his main work, and which it is to be hoped the present translators will now immediately take into hand.

Those who do not wish to make a systematic study of Schopenhauer, but would yet like to come under his magic influence, will do well therefore to merely glance over the first volume, picking up the general drift of his system, and then pass on to the second, in which, if so disposed, they may gather the main points of Kant's philosophy in a "criticism" of 157 pages, very much more lucid than in Kant's original. Then there are chapters on concrete and abstract knowledge, on rhetoric, the ludicrous, on mathematics; an ingenious argument to prove "man's need of metaphysics"; a chapter on the will in self-consciousness, etc. But it is in the third English volume that the reader will find the most inviting themes and the most brilliant treatment. The chapter on "Death" is an eloquent and poetic argument for impersonal immortality; "The Vanity and Suffering of Life" and "Denial of the Will to Live" are spicy essays on pessimism, lurid as Dante's "Inferno"; the chapter on "Imperfections of the Intellect" is full of the most subtle and lucid psychologic analysis; genius has never been so truthfully depicted as in chap. xxxi.: and in the "Metaphysics of the Love of the Sexes," the theory of complementary qualities is discussed in a manner to interest all but lovers, who, as Schopenhauer admits, will be highly displeased with it. In this chapter, by the way, Schopenhauer formulates for the first time the modern theory of instinct, for which he has never received due credit. Other modern thoughts are anticipated in his chapters on teleology, heredity, etc. Of exceeding interest are his chapters on the æsthetics of natural beauty, architecture, painting, poetry, and even music, though this last chapter is a medley of blunders. Students of Lessing will find a novel and plausible solution of the famous question why Laocoon is not represented in the statue as crying out.

But it would be absurd to attempt even a partial enumeration of the interesting topics touched on by the great pessimist. That there was hardly one on which he did not touch is shown by Frauenstädt's "Schopenhauer Lexicon," in two volumes, which constitutes an almost complete cyclopædia, invested, however, with a charm of "*genial*" individuality that no work of reference can give. And again we must revert to the style, which, when the author is not encumbered with metaphysical lumber, assumes a picturesqueness and lucidity which, as in the water of some of our Western lakes, seem all the greater on account of the depth of thought. Sometimes the profusion and poetic beauty of the illustrations are so great that the reader is apt to lose the drift of the argument, and to plunge into a reverie over one of the illustrations—for no philosophic writer is so suggestive as Schopenhauer; and for young writers who have difficulty in collecting their thoughts, nothing is so tonic in its effects and so apt to set the wheels of thought in motion as the perusal of a few pages of Schopenhauer.

The backwardness of the literary art in Germany is emphasized and illustrated by the fact that it took his countrymen so long to recognize his merits. He attributed the slow growth of his fame to the systematic ignoring and suppression of his name by envious professors of philosophy In this there may have been some truth; but the chief trouble lay in the fact that Schopenhauer refused to write in the philosophical jargon of the day. German philosophers of his epoch scorned to use words that were not of the doubly-distilled essence of vague abstraction. To descend to details, to vulgar, concrete, tangible cases, was considered a grave breach of philosophical etiquette. In a word, concrete writing was tabooed, and bad writing became fashionable and obligatory. By this fashion the metaphysicians did a great deal to demoralize the general literature of Germany, and one of the chief merits of Schopenhauer lies in this, that he turned the tide, and taught the Germans that philosophy and obscurity are not synonymous terms.

The translators' work has been admirably done. If any one compared all the 1,537 pages of the three English with the 1,376 pages of the two German volumes, he might discover errors. We have not found any in the pages we have examined, and everywhere the translators seem to have been successful, not only in giving Schopenhauer's meaning, but in preserving some of his individuality. Sometimes there is a little less compactness, and a little less attention to prose rhythm and the rule (which Schopenhauer strictly observed) of placing an emphatic word in an emphatic or accented place. The difficulties often presented by the choice of a word for a philosophical term which has no exact equivalent in English, have also been successfully met. The choice of the word "Idea" for the title, instead of the clumsy "Representation," must meet with every one's approval. One of the most difficult words is *Anschauung*. Our etymological equivalent, "intuition," has a subjective significance which makes it unavailable in translating Schopenhauer, who uses it with an objective, or, rather, sensuous meaning, roughly indicated by the original significance—"looking at." The word "perception," too, which is used by the translators, jars on the ears of those who know their Schopenhauer in the original; for it also seems to emphasize slightly the intellectual side of the process. In the chapter on "Genius," the word perception seems especially inadequate; yet it would be difficult to suggest anything better.

One advantage which the English has over the German edition is an index of nineteen pages. The translators might have made another improvement by translating Schopenhauer's numerous Greek quotations into English. Schopenhauer thought it sufficient to translate these into Latin, and the way he did this shows his thorough knowledge of these languages, which, he emphatically declared, every educated person ought to possess. But there are many things of interest in Schopenhauer to those who have never learned or forgotten their Latin; and to these the frequent Greek and Latin quotations will be impediments.

It remains to mention the synopsis of Schopenhauer's essay on "The Fourfold Root of the Principle of Sufficient Reason," which the translators have appended to the third volume. Schopenhauer claimed that the perusal of that was necessary to a full understanding of his work, as was also some previous knowledge of Plato and Kant. Indeed, he went so far as to assert that no one could fully appreciate him before he had read the whole work over twice, inasmuch as all the parts were so interlaced that the last chapters threw as much necessary light on the first as the first on the last. This, and much more, might be true, to convince any one of his metaphysical vagaries; but a much less arduous regimen is required of those who merely wish to enjoy the in-

exhaustible supplies of wit and wisdom stored up in these volumes.

RECENT LAW BOOKS.

Mr. Clement Bates's 'Law of Limited Partnership' (Little, Brown & Co.) is a valuable little treatise upon a highly interesting branch of American statutory law—one which has close relations to other parts of the law—to the law of trusts, of corporations, and, of course, to the law of general partnership. The author speaks of the notion of a limited partnership as originating in Italy, as developing extensively in France, and as being introduced into our system something over sixty years ago; "but the process of integrating it with the common law choked the exotic outgrowth in the germ, and produced a native system bearing no resemblance to the parent." "The American system, . . . adopted in all the organized subdivisions of the United States except . . . Arizona, Idaho, and New Mexico, is unknown to the rest of the world." The author has found, as regards this subject, what Mr. Stimson mentions in his work on 'American Statutory Law' as a general fact, that the legislation of our States falls mainly into groups; and it is possible, therefore, to present a fairly compact and generalized statement of the law of limited partnership as existing in all our States. It appears to be very well and carefully put together. Mr. Bates acknowledges the value of the large work of Troubat published a generation ago.

From the preface we learn that the writer has in hand a larger treatise on general partnership, and that the present work has grown incidentally out of that. His method seems to be one of great thoroughness, and justifies excellent hopes; but we trust that he will think many times before he adopts the form of book to which he alludes in speaking of "an ideal treatise, constructed, by the use of different sizes of type, so as to combine at once a small and general work of ultimate and fundamental principles in large type; a medium-sized work, by placing in smaller type under the general principles their corollaries, deductions, qualifications, and exceptions; and, lastly, an exhaustive statement of all decisions, with the minutest possible analysis." Mr. Bates is a law writer of too much promise to be allowed to commit himself to such a project as this, without a remonstrance. Let us beseech him to avoid it, as a delusion and a snare.

Mr. Edward P. Usher's 'Law Pertaining to the Sale of Personal Property, as Contained in the Statutes of Massachusetts, the Decisions of its Supreme Judicial Court, and the Statutes of the United States' (Little, Brown & Co.) is a very good book indeed, although not a little indebted to Benjamin's large treatise. It is a small octavo of near 400 pages, stating with great conciseness and yet great fulness of reference to the Massachusetts cases, the law of that State on the subject named in its title. There is at the end a full and very valuable "Bibliographic Note," which must have been prepared with much pains, giving references to American and foreign text-books and to monographs and magazine articles upon the subjects covered by this book. The fourth edition of Benjamin is not included in the list. The author wastes no words. There is a direct, brief, business-like method of stating his points, as of one who does not wish to waste anybody's time. It is perhaps in pursuance of a purpose simply to give to his readers what he finds in his books, that Mr. Usher abstains from any discussion of his authorities. This is to be regretted. So accurate and intelligent a writer might have helped matters a little now and then by doing something more than give us the not always well-considered expressions of judges, as *e. g.*, at ss. 113 and 117. At s. 128 it would have been well to cite the important but neglected provision of the Public Statutes, c. 3, s. 3, cl. 25, which runs back to the revision of 1836. S. 216 is not accurately stated.

The subject of copyright is dealt with in a manner careful, thorough, and interesting in Mr. R. R. Bowker's 'Copyright, its Law and its Literature' (New York: Office of the *Publishers' Weekly*). The quarto form of the book is perhaps to be regretted, and so is the insertion of several pages of the facsimile autographs of authors appended to a petition on the subject of international copyright. This last gives a cheap, catch-penny air to a book of solid merit. The nature and history of copyright, the common law and the statutory doctrines on the subject, both in England and here, the European local and international doctrine, and the isolated and regrettable case of the United States on the subject of international copyright, are all set forth in clear and brief chapters; and the existing statutes in this country and England are then given. An admirably full and careful bibliography of the subject is added, covering about sixty pages, nearly half the book. This is the work of Mr. Thorvald Solberg, Assistant in the Library of Congress. It contains not merely the books in all languages, but the articles in magazines and periodicals. There is, *e. g.*, a full index to the *Nation* upon the subject of copyright. The word "copy," it seems, is from the Latin *copia*. The judicial replies given on pp. 6 and 7 should not be styled "decisions"; they are merely advisory opinions.

'The Law of Field Sports' (O. Judd Co.), by George Putnam Smith of the New York Bar, is an excellent little manual which should not have been left without an index. The object of it is described as that of providing "the American sportsman with a succinct statement of the rules of law affecting him in the acquisition of his outfit and in the pursuit of game." After warning the sportsman in the first chapter how to steer his way amid the perils that beset him in acquiring his equipment, *e. g.*, in buying a dog that may have been stolen, five other chapters follow on "Dogs," "Trespass," "Property in Game," "Game Laws," and "Fish and Game Clubs." The last half of the book, some sixty pages, is devoted to a valuable appendix containing in a brief and clear form a summary of the game laws of forty-five States and Territories, and of the District of Columbia. The volume will prove interesting even to the unprofessional reader. The writer would perhaps have done well to emphasize a little more than he has sometimes done, the need of examining the local statutes, *e. g.*, in the chapter on dogs.

Mr. Martin Lehmayer, of the Baltimore bar, publishes a brochure (Baltimore: Cushings & Bailey) entitled 'Should Juries in Criminal Cases be Judges of the Law and Fact?' He is concerned mainly with the law in Maryland, where, since 1851, the Constitution has said: "In the trial of all criminal cases the jury shall be the judges of law as well as fact." In 1858, and again lately, the Court of Appeals held that this was merely declaratory of the preëxisting law. But Mr. Lehmayer seeks to show that this provision "is *not* declaratory of the common law, but is on the contrary directly derogatory to it, [*sic*] as juries in England never were the 'judges of the law in criminal cases,' and that it is furthermore unequivocally in conflict with the great weight and preponderance of authority in the United States." After examining and quoting through some eighty octavo pages the "common-law authorities," the "American authorities," including text-books, and the "Maryland decisions," the writer ends his labors by submitting that "the clause of the Maryland Constitution above considered is a standing reflection upon the judiciary of the State. It conveys the inference that our courts cannot be trusted; it is contrary to reason, opposed to authority, and should be expunged from the law of the land."

This little book is useful as having a considerable collection of cases, and we are disposed to agree with its main opinion. But it is far from being an adequate discussion of the well-worn theme which it treats. The dispute upon this question is in a considerable degree a matter of terms. Nobody disputes that a jury had at common law, and still has, generally, in criminal cases, by giving a general verdict of not guilty, a power to close the case beyond any control; the Government cannot have a new trial. This is called a power, and so by some a legal right, to decide law as well as fact. Others call it by a different name. If Mr. Lehmayer is not acquainted (and we judge that he is not) with the extremely learned consideration of this general subject by Mr. Horace Gray, jr. (now Mr. Justice Gray of the Supreme Court of the United States), in a note to the case of Erving *v* Cradock in Quincy's Reports, 553, he will be glad to be referred to it. Mr. Gray, who declares for the common-law right of the jury to pass upon the law, appears to have ranged over all the cases; and after a profusion of citations, he ends his long and very valuable statement with these striking words:

"It is worthy of notice how the history of this question after the English Revolution of 1688 repeated itself in America nearly a century later. The great constitutional lawyers and judges of either Revolutionary period—Somers and Holt; Adams, Jay, Wilson, Iredell, Chase, Marshall, Hamilton, Parsons, and Kent—with one voice maintained the right of the jury upon the general issue to judge of the law as well as the fact. But they had hardly passed away, or fifty years elapsed since either Revolution, when the courts of the new Government began to assert as much control over the consciences of the jury as had been claimed by the most arbitrary judges of the monarch whom that revolution had overthrown. The analogy recalls the motto from Grotius, placed by Mr. Dallas upon the title-page of his reports: Atque eo magis necessaria est hæc opera, quod et nostro sæculo non desunt, et olim non desuerunt, qui hanc juris partem ita contemnerent, quasi nihil ejus præter inane nomen existeret."

Perhaps no entirely satisfactory statement upon this subject can be made until the full history of the English jury is written—a work demanding far more learning than has ever yet been applied to it.

'The Student's Kent: An Abridgment of Kent's Commentaries on American Law' (Houghton, Mifflin & Co.), is prepared by Mr. E. F. Thompson, and has a brief introduction by Mr. Justice Nelson of the U. S. District Court for Massachusetts. We do not fully share the favorable opinion of the work which is given in this introduction. It undertakes to present the meat of 2,253 pages in 315, which are considerably smaller than the original ones. This, of course, is a formidable task. A careful comparison of the editor's treatment of the subject of Sale, in compassing the last eighty-nine pages of Kent's chapter xxxix within eight pages of this work, shows that the task has been done with skill; but it reveals also the fact that the "student" gains literally nothing of all that the last half-century has contributed to this important branch of law. What that means will be understood by any lawyer who reflects that Blackburn on Sale was printed in 1845. All the old ambiguities, and the antiquated interpretations of some points in the Statute of Frauds, are here repeated, and an intolerable air of quaintness is imparted to the pages by the citations (taken from Kent), of which not one is less than about fifty years old. If this work was worth doing at all, it should have been done better. No doubt there is advantage in having a

readable summary of the law, good for the earliest use of a student and for the general reading of laymen. What Chancellor Kent would furnish to-day for such a purpose would be indeed most valuable; but a condensation of what he said half a century ago and more, with little or no adaptation to the modern law, is an ill-judged enterprise.

A second edition of the 'Treatise on the Trial of Title to Land,' published in 1882 by Arthur G. Sedgwick and Frederick S. Watt, has now appeared (Baker, Voorhis & Co.). This fact (and the work, we are told, has been out of print for a year) indicates that it has met a want of the legal profession. Although it is cast in a form that relates to procedure, it really incorporates a great mass of substantive law. The treatise is intended as a handbook for practice, and it is a very good one. While some parts of the extensive subject are dealt with in a manner which, from the point of view of a specialist, leaves much to be desired, it is also true that, as a whole, the work is prepared with an unusually skilful combination of learning with sound judgment as regards the needs of a practitioner. The first two chapters furnish an instructive history of the action of ejectment and real actions in the United States. "The system of real actions," say the authors, "is practically extinct in America, excepting in parts of New England. It may be stated generally that our modern remedies constitute a single general system of procedure, disguised under a variety of names." This circumstance has enabled the authors, while making wide citations, to give to the book a unity of character which is often denied to general treatises in this country. It is really a treatise on the *American* law of the subjects dealt with. The present edition has been enlarged by adding four new chapters and twenty-six hundred cases.

A third edition of Angell's well-known treatise on 'Highways' (Little, Brown & Co.) is published. It is edited, as the second edition was in 1868, by George F. Choate, one of the probate judges of Massachusetts. The larger part of this work was written, not by Angell, but by Thomas Durfee, now Chief Justice of Rhode Island, who took up the unfinished plans of his deceased friend, and completed them by the addition of many more pages than Angell left behind him. All this, indeed, appeared in the preface to the first edition, in 1857, but it seems a pity that some hint of Chief-Justice Durfee's highly important labors should not have been preserved in the accepted title of the book. There is no need to discuss, at this time of day, the characteristics of a treatise so well known as this. It is useful and trustworthy. In looking through the chapter on the "Laying Out of Highways by Legislative Authority," one finds himself doubting whether something be not lacking in the way of acknowledgment to others who had previously published careful work upon that subject.

A new edition of Stephen's 'Digest of the Law of Evidence' is published by Little, Brown & Co. from the fourth English edition, which was out five years ago. This edition, besides being thus slow in coming, is prepared in a manner quite unworthy of the house that publishes it. The new editorial work is too scant and too poor. The fairly good notes of the former editor are preserved. A far better edition, indeed a very good edition, of this work was published last year by Prof. Chase of the Columbia Law School. Both books have unfortunately omitted Stephen's important and very characteristic preface to his third edition. He himself omitted it in the fourth. It is too important to be left behind; it helps a careful reader to estimate justly this useful but dangerous and over-praised guide to the law of evidence.

In Dr. Erwin Grueber's 'Roman Law of Damage to Property' (Oxford: Clarendon Press; New York: Macmillan) the learned author, who is Reader in Roman Law at Oxford, has presented "a commentary on the titles of the Digest *Ad Legem Aquiliam* (ix, 2), with an introduction to the study of the Corpus Juris Civilis." It is a pity that the author has neglected to give an index. The body of the work consists of two parts, (1) a "commentary" on the text of the Lex Aquilia, which gives, by sections, the Latin, a careful translation, and then a short explanatory and illustrative passage by the author. This fills a hundred and eighty pages, and must be highly useful to students of the Roman law. The last hundred pages of the book are taken up with the second part, "a systematic exposition of the Roman law of damage to property" and a convenient summary of the same. The author handles his topic with minute care. The student of English law will find this volume instructive. It will introduce him to the methods of treatment and illustration used in the Roman law, and thus not merely will satisfy his curiosity, but will broaden his conceptions.

English Merchants: Memoirs in illustration of the Progress of British Commerce, by H. R. Fox Bourne, author of 'The Life of John Locke,' 'The Romance of Trade,' etc. London.

THIS book is an excursion into one of those byways of history which, as a rule, are attended with results far more profitable and interesting than are to be found along the broad and beaten highway. When we speak of "byways of history" we speak after the manner of historians, for, assuredly, in the history of Great Britain there are few factors of greater interest and importance than the "growth of British commerce." It can be spoken of as a "byway" only because historians have chosen to give an arbitrary prominence to wars, dynastic revolutions, and parliamentary conflicts. Mr. Fox Bourne's narrative bears in every page the indications of long and laborious research, and the only complaint that we have to make against him is, that he has endeavored to compress the results of his wide and varied studies within too narrow a compass. It is at times difficult to see the wood from the closeness with which the trees are planted together. The best portions of his book are the general surveys of British commerce which he takes from time to time, and we incline to think that he has cut down these with an unsparing hand in order to obtain the more space for his biographical details. Especially interesting is his account of the growth and development of Liverpool, and we could wish that he had entered as fully into the growth of London, Bristol, Hull, and other of the great commercial centres of past times.

Curious is it to note how, at almost every stage of their history, Englishmen have striven desperately to obstruct and impede the growth of their commercial greatness by rules and prohibitions inspired by the most ingenious perversity. For example, this:

"In a regulation of the City of London, made some time before 1237, it was laid down that all foreign merchants, and especially merchants coming from Normandy and Picardy, if once they entered the Thames, 'might not and should not, according to the ancient customs and franchises of the city and the realm, come to, or anchor at, any other place than London only.' They were forbidden to have any dealings with foreigners or residents of other English towns, 'seeing that all their buying and selling out do take place within the city, and that only with the men of the city.' They were not, however, to stay in London more than forty days, and at the end of that time they were to go back to their own place, or, at any rate, to retire to some part as distant, and they were to see that within the forty days all their wares were sold or exchanged in open market—'as, when the term had expired and it was his duty to depart, the merchant might not hand over any portion of his stock to his host or to any other person.' Nor might he carry aught away with him. Whatever was found in his possession after the time appointed for its disposal was forfeited for ever."

From another passage we learn that the "Fair-Trade" craze was as rabid in England in the days of Charles II. as in those of Queen Victoria.

"The immense importation," writes a Fair Trader of that olden time, "into England of French wares of various kinds gave just umbrage to all wise people, as occasioning a vast annual loss in point of the general balance of England's trade; some say to at least one million sterling, others to considerably more, because while we were wantonly and without measure importing and using the produce and manufactures of France, the wiser French Ministry were from time to time laying heavier duties upon the English manufactures and produce. Hereby, the English foreign trade in general languished, rents fell, and all ranks began sensibly to feel its bad effects."

Under this impression, Mr. Bourne tells us, an act was passed in 1678 declaring the importation and sale of French goods in England to be "a common nuisance to this kingdom in general, and to all his Majesty's subjects thereof," and ordering that for the future French goods should not be admitted into any British port or dependency.

There are, in all, three chapters in this volume devoted to the subject of British commerce generally. The remainder, as the title indicates, consists of biographical notices of the most illustrious among the great merchant princes of Great Britain from the days of the Plantagenets until our own time. The series begins with the De La Poles of Hull—the leaders of British commerce in the days of King Edward III.—and closes with an account of the Gurneys of London. It is a various and remarkable company to which the reader is introduced, but he will not fail to be impressed by the sterling honesty, the zealous patriotism, and active spirit of benevolence which inspired by far the greater portion of these men. But for the self-sacrificing coöperation of the De La Poles of Hull, it would have been impossible for Edward to carry on his French wars, which, barbarous, bloody, and futile as they seem to us, were in his day accounted achievements of the highest utility and honor. After these we are introduced to the famous Richard Whittington of London, and then through a series of Cannynges, Thornes, and Greshams, until we arrive at those bold mariners of the Elizabethan age who combined the business of merchant with those of discoverer, pirate, and sea-captain in the service of the Virgin Queen. Their method of forcing a trade, when one could not be had spontaneously, was peculiar. Of Sir John Hawkins we are told how he "proposed to exchange his negroes for the hides and sugars of Rio de la Hacha":

"But seeing that they would, contrary to all reason, go about to withstand his traffic, he would not it should be said of him that, having the force he had, he was driven from his traffic perforce, but would rather put it in adventure, whether he or they should have the better, and therefore he called upon them to determine either to give him license to trade or else stand to their own defence."

The townsmen, after deliberation, answered that they would buy his negroes for half the sum he asked—

"Whereupon the captain, weighing their unconscionable requests, wrote to them a letter, saying that they dealt too rigorously with him to go about to cut his throat in the price of his commodities, which were so reasonably rated as they could not by a great deal have the like at any other people's hands; but seeing that they had sent him this to his supper he would in the morning bring them as good a breakfast."

This breakfast, Mr. Bourne adds, had the desired effect upon the Spaniards, and "they made their

traffic quietly." It is not the least of Mr. Bourne's merits as an historian of past times that he has a keen relish for the incomparable force and quaintness of the English written by our ancestors, and allows them to speak freely in their own language.

As we draw to later times, the composite character of commerce gradually ceases. The British merchant divests himself of his buccaneering attributes, and becomes a citizen with no greater flavor of war about him than comes from being sworn in, once in a way, as a special constable in some momentary emergency. The fortunes amassed by several of Mr. Bourne's heroes would be accounted large even at the present day, but their benefactions, it must be acknowledged, were in not a few instances upon a scale in proportion to their wealth. Few rich men have lived whose wealth was devoted to such noble uses as that of Edward Colston, of Bristol. Mr. Bourne mentions the following as among his "casual charities":

"On one occasion he gave £1,000 towards the relief of the poor in Whitechapel; and in 1701 he sent another £1,000 to be spent in maintaining the poor children of the same parish, then as now one of the wretchedest parts of London. Twice every week, we are told, he had large quantities of meat and broth prepared for distribution among the paupers in his neighborhood. Every year he went through Whitechapel Prison and the Marshalsea, to empty his purse in liberating the most deserving debtors for small amounts; and at one time he spent a lump sum of £3,000 to relieve and liberate the poor debtors in Ludgate Prison. In 1709, again, a year of famine, he sent a noble present of £20,000 to be applied by the London Committee in helping the starving poor of the city."

Worthy to be ranked, in respect of public munificence, with Edward Colston, is William Brown of Liverpool, a merchant of our own century. After a life spent in good works, his last act was to present the people of Liverpool with a free library, built and furnished at a cost to himself of £40,000. The political services rendered to the country by others in Mr. Bourne's roll of great merchants were hardly less conspicuous than the charities of the more wealthy among them. Indeed, the general impression left by the book is that the influence of commerce and commercial men upon the political destinies of Great Britain has been greatly underrated or altogether unknown to historians hitherto. Mr. Bourne lets in considerable light upon this neglected subject in the volume before us; but the reader feels, all through, that want of space has obliged him to withhold much—perhaps more than he has imparted. His chapters, none the less, abound with curious and instructive information respecting Old World times, and we commend it to the attention of all students of history.

Massacres of the Mountains: a History of the Indian Wars of the Far West. By J. P. Dunn, Jr., M.S., LL B. Illustrated. Harper & Bros. Pp. 784.

This is hardly a systematic history, and at first glance would seem to have too many of the elements of sensational writing for popular use. A more critical examination of the book, however, shows that a good deal of conscientious labor has been bestowed upon it, and that it may fairly claim to be the "History of the Indian Wars of the Far West" which, as a secondary title, is affixed to it. The period covered is that which begins with the Mexican war and the acquisitions of territory which followed it. The chapters are not strictly chronological, but take up the more striking incidents connected with the conflicts with various tribes, making the division of the subject topical from the standpoint of the Indian organizations and the locality of the disturbances.

The writer concludes, as many have done before him, that nothing more inconsistent, more vacillating, or more dishonest can be found in human history than the record of our Governmental dealing with the aborigines of the great West. He finds the Indian Bureau generally in the wrong—doing the things it ought not to do, and leaving undone the things it ought to do. Yet he does not wholly approve the military policy which has been pursued by the War Department, though he would probably have favored the plan of making the army the general administrator of Indian affairs as well as the power to suppress outbreaks by force.

We take it, however, that the book was not written with much expectation of offering a "solution" of the problem. Its less ambitious purpose seems to be to give such graphic descriptions of the Indian wars of the West as will enable the reader to comprehend, and in some degree to realize, what were the horrors of those frontier struggles which have accompanied the gradual subjugation of the red men of the plains and mountains. The problem has solved itself, after a fashion. The buffalo are gone, the smaller game is fast going. The Indians themselves are surrounded by overwhelming numbers of white settlers; they are mainly supported by "Government rations," and the remaining question is whether they shall dwindle away as perennial beggars and vagabonds, or take on some part of civilization and its thrift as a condition of survival in their present environment.

The retrospect is not flattering to our wisdom or our humanity; but the history is one which cannot be greatly varied in any case of conflict between civilized and uncivilized man. Neither can understand the other. Neither can honestly judge the other. There is no common tribunal. Desperadoes of either race have always the opportunity to stir up war, and each will almost necessarily charge the responsibility upon the other. A popular government cannot resist the general current of popular feeling; and whether it be a Chief Joseph unwillingly dragged into a war which he foresees will be the destruction of his tribe, or a President seeing with shame a horde of miners and adventurers breaking in upon Indian reservations, we see in either case phases of the same struggle for existence in which the alien contestants cannot be just to each other, and in which the worst elements and worst passions give character to the conflict.

Mr. Dunn's book has the great merit of sincere effort to bring the actual situation and the prejudices and habits of both sides into view, so that even in the most bloody wars we may see something of human nature in both parties to the contest. We could wish that he had spared us some of the revolting particulars of barbarous practices by both red and white savages; for there are limits of decency which no writer ought to pass, and where the common law of literature in all ages has tolerated at most a suggestion of things which must not be too plainly spoken. The fearful facts are part of the history of the subjugation of a continent by invaders of a more progressive race than the aboriginal stock, but, in spite of the fascination of the tale of mingled heroism and suffering, the intelligent reader must close the book with a sense of shame that a great nation could find no other way to solve such a problem.

Among the numerous woodcuts in the book, the portraits of both Indians and American officers are authentic drawings from photographs, and many of the landscape views are spirited and accurate.

Economics for the People. By R. R. Bowker. Harper & Bros. 1886.

The number of elementary treatises upon political economy has become of late years so considerable that we should have supposed that the supply must be fully equal to the demand. The author of this little book, however, says that it was written because there seemed to be a need for it, and, after a careful examination, we are inclined to commend his judgment. Of course, there is no room in such a book for original research or development of doctrine, but the style is throughout so lucid, the illustrations so abundant, and the treatment so thorough, that the beginner will find it a very satisfactory guide. We cannot agree with the cheerful statement of the writer that economics "is really a simple matter," but we may properly say that he has done a great deal to present it in simple language. His reading has evidently been very wide, and it is certainly surprising that such a diversity of topics can be so adequately treated within the compass of less than three hundred duodecimo pages.

In view of the comprehensiveness of the author's purpose, we think, indeed, that he has been rather unusually successful in avoiding serious inaccuracy. In one or two cases, however, readers unacquainted with political economy might be misled. Thus, at page 46 we read that Ricardo's law of rent is that the amount of rent does not affect price. This is rather a corollary than the law itself, and although it is recognized as true by the writer, he in several places speaks of rent as entering into the cost of production. At page 112 we read that our national-bank currency is protected usually by about 12 per cent. gold reserve, a statement that is in several ways misleading. To say (p. 123) that the doctrine of Malthusianism "holds that population, increasing in much greater proportion than food, will finally outrun food, so that most of the human race must starve to death unless population is checked," is to give an account of this doctrine that no Malthusian would accept. And to say (p. 251) that the 'Wealth of Nations' assigns to the state a wide function as to education, is enough to make Adam Smith turn in his grave. It is a much more serious matter to lay it down that the wages-fund doctrine is now exploded. The notion that wages are paid out of the product of the labor for which they are paid is utterly fallacious, and is probably the source of most of the mischievous doctrines of the Socialists. Wages must necessarily be paid out of previous and not out of anticipated accumulations of wealth. Otherwise it is impossible to escape the absurd conclusion that if a million dollars is paid in wages to the laborers that dig a mine that proves worthless, this amount of money is realized from a product that has no value. The consequences of the prevalent error upon this point are much more grave than is commonly supposed, and must be considered by all who interest themselves in "profit sharing" schemes.

The book is thoroughly optimistic in tone, and is well calculated to arouse the hopes of those who may be inclined to despair of the republic. We must confess, however, that the condition of affairs described in the following statement seems to us as unlikely of attainment as it is desirable: "The American people will probably come, within a generation, to the simplest form of taxation, levying a single tax on land, at its fixed place, not where the owner lives, by which, probably, the national as well as State and local taxes will be collected on one system by the same tax-gatherers, half-yearly or quarterly, and each taxpayer will know all he pays and how it is spent." That is a capital description of the ideal system of taxation, but if there is a shred of evidence showing the existence of the slightest tendency in this direction in any recent legislation, we have failed to discover it.

Gesammelte kleinere Schriften, Reisegedanken und Zeitideen: Ein Lebensbuch. Von Wolfgang Kirchbach. Munich and Leipzig: Otto Heinrichs; New York: Westermann. 1886. Pp. 494.

THE miscellanies here gathered together into a volume have been given the name of a "Lebensbuch," not because they are intended to furnish any one with a substitute for the venerable volume which is often called the Book of Life, but simply because they are supposed to reflect at various stages the intellectual life of their author. The book consists of essays, reviews, addresses, sketches of Italian travel, and a large batch of reflections in the vein of Theophrastus Such. To this list must be added a satirical *jeu d'esprit* at the expense of Paul Heyse, who has often been charged by his critics with an inclination to pose as a modern Goethe. In this piece, which is certainly witty enough in the details, whatever one may think of the central *motif*, Heyse is made to appear before Apollo and the Muses on Parnassus, and to undergo a process of disinfection before he is admitted to the circle of the immortals. In the presence of all the classical magnates of German literature, he descants majestically upon the dramatic shortcomings of Goethe and Schiller, and, by way of showing how he has improved upon his predecessors, recites the plot of his own "Alkibiades." Wieland charges him with having stolen his (Wieland's) inventions. Lessing is called in by Goethe as judge in the case. Heyse proceeds to set forth the points of difference in dramatic theory between himself and the judge. Lessing thereupon pronounces the defendant guilty, and sentences him to recite the plots of all his dramas without blushing and without showing signs of weariness. After that he is to commit to memory the 'Hamburgische Dramaturgie.' Apollo then declares the disinfection complete, and Goethe requests the Muses to bestow a few caresses upon Dr. Heyse, saying graciously: "I shall not be jealous; it would take half a score of such new Goethes to supplant me in your affections."

Of the serious portions of the book (and seriousness is emphatically the author's normal frame of mind) we feel no call to speak at length. The subjects treated represent a wide range of study, and the treatment is usually thoughtful and suggestive, though it is occasionally marred by a certain quality for which there is perhaps no more suitable name than bumptiousness. Critics and criticism, poets and poetry, music, painting, the Homeric question, mind-reading, Hindu philosophy—these are only some of the matters upon which the essayist sets forth his opinions; opinions which pretty uniformly turn out to diverge sharply from those held by representative authorities upon the particular subject under consideration. Thus, by way of example: German criticism has all run to rhetorical phrase-making, and has utterly lost touch with the intellectual life of the nation. Nowhere else is the influence of the higher criticism upon the public taste so feeble as in Germany. Again: The 'Iliad' and 'Odyssey' are indubitably the work of one man, and each poem is dominated by one controlling artistic purpose; a man who can't see this is a literary noodle, and the future is going to put him to shame. Other illustrations might be given of Herr Kirchbach's independent way of looking at things, but we forbear.

We cannot refrain, however, from calling special attention to one essay, a seriously meant performance, which we at any rate have found considerably more diverting than the humorous "Munich Parnassus," already spoken of. It is the short chapter upon the merits of the German as compared with the Roman printed character. Our author is an uncompromising partisan of the former. He defends the German print not only on practical and patriotic but also on high æsthetic and psychological grounds. It is not only that the German letters are the more beautiful, being the natural outgrowth of the mediæval Germanic effort to embellish the stiff and graceless legacy of the Romans, but these highly embellished letters are, if one would but admit it, clearer and easier to read. "All our reading," says Kirchbach, "is in great measure divination (*Erraten*). This divination is facilitated by the highly evolved form of the German letter, whereas the Roman letter impedes it. It is precisely the advantage of all those little hooks and crooks and angularities that they promote rapid divination in the same way that the runes were formerly divined." Equally precious, in the essayist's judgment, are the capitals at the beginning of every substantive:

"Frenchmen and Americans," says he, "make merry over our intricate sentences. Well, it is precisely in virtue of our initial capitals that we can indulge ourselves with these intellectual prodigies. We do not need to prattle in short sentences like children, but, like Demosthenes, the Greek, and like that people of intelligence generally, we can in our might put forth a whole Gothic cathedral of syntax at one powerful mental effort. These initial capitals are bound up with the best part of our intellectual life, since they permit us to anticipate the general import of long sentences. . . . After a fashion they symbolize the nouns, or thing-words, as things, and so come to the aid of our fancy. *Wir sind ein Phantasievolk, und wollen es bleiben mit unseren schönen, geistvoll erfundenen, deutschen Lettern.*"

One may perhaps look indulgently upon this philosophy of the initial capitals, but really it seems as if that of the "hooks and crooks" were a case for the favorite ancient prescription, a dose of hellebore.

Woman in Music. By George P. Upton. Chicago: A. C. McClurg & Co. 1886. Pp. 221.

SIX years ago Mr. Upton wrote a book on woman's influence in the musical world, but only a few copies got into circulation, as the plates were destroyed by fire. He has now enlarged and reprinted the work, which makes very pleasant summer reading. Though he admits that no woman "has written either an opera, oratorio, symphony, or instrumental work of large dimensions, that is in the modern repertory," he yet succeeds in showing that to woman's influence we owe many of the finest inspirations in musical literature. For great musicians have generally been great admirers of the fair sex, and, like the poets, have written their masterpieces under the influence of love. Mr. Upton adopts two methods to show woman's influence on composers: first, in a series of short biographies of Bach, Handel, Beethoven, Haydn, Mozart, Schubert, Mendelssohn, Schumann, Chopin, Weber, and Wagner, in which we learn that some of these shining lights were almost always in love or at least influenced by admiration and affection; secondly, by an appendix giving a list of works dedicated by these musicians to various women. Thus Beethoven—who was constantly a victim of the tender passion, was twice refused, and more than twice made up his mind to marry—has 36 pieces dedicated to more than 20 different women; Chopin, "whose very name suggests the name of woman," has 39 compositions dedicated to 36 different women; Schumann, who, in his early years flitted from one flower to another, has 35 dedications to almost as many women; etc.

As an interpreter of music, woman has done even more for its advancement than through her influence in rousing the energy of men. The list of great female singers is larger and more imposing than that of tenors and basses. But in instrumental music the relations are reversed, great female players being comparatively rare. And in composition, as already intimated, woman cuts a sorry figure. Mr. Upton gives a list of four female composers in the seventeenth century, 27 in the eighteenth, and 17 in the nineteenth; and of all these the only names generally known are Clara Schumann, Fanny Hensel, and Elise Polko, who, however, got her reputation by her stories rather than by her songs.

The first chapter of Mr. Upton's book is devoted to an analysis of the probable causes which have prevented any woman from being as great in original composition as a few have shown themselves in art and literature. Four reasons are suggested: (1) woman's essentially emotional nature prevents her from "projecting herself outwardly," whatever that may mean; (2) she loses her interest in music with age, while man's seems rather to grow; (3) woman cannot endure the discouragements of the composers—the great battles they have to fight against traditional and prevailing taste; (4) music is not only an art, but an exact science, requiring for its mastery long years of patient toil and continuous application. Concerning the third reason assigned, it is to be said that it does not account for woman's failure to produce works of second-rate merit in the fashion of the day. These are appreciated and pay; but even of these the list is absurdly small. The fourth reason—woman's inability or unwillingness to apply herself to music as a science with sufficient concentration—is the most approximate solution of the question. Musical composition, for orchestra especially, involves an amount of brain power, by reason of its excessive complication, which few who have not tried it can realize. But perhaps the chief reason of woman's failure lies in the fact that music is an impersonal art. Woman's interests are chiefly limited to personal or human relations; hence they excel, to a certain point, as novelists, whereas musical ideas, though they may serve to embody human emotions, are in themselves exceedingly impersonal. Women, though they may study harmony and counterpoint for years, seldom even learn to improvise interestingly.

The Fresh-Water Fishes of Europe: A History of their Genera, Species, Structure, Habits, and Distribution. By H. G. Seeley, F. R. S., etc. Cassell & Co. 1886.

MR. SEELEY has given in this book, we believe, for the first time, a systematic and classified description of the fresh-water fishes of Europe, including the migratory species, such as sturgeon, salmon, and trout, whose existence is divided between inland waters and those of the seas. Owing to the occasional presence of many fish not distinctively migratory in fresh water, which pass most of their time in salt, brackish and salt, and brackish water, and vice-versa, it is difficult to define clearly all the species belonging in the province of fresh-water fishes. While there are trout which pass their entire lives in fresh water, others visit it only for the purpose of spawning, and we think it reasonably certain that a good many salmon rarely, if ever, return from the sea to their native streams. Mr. Seeley mentions "the presence in the brackish waters of the Baltic Sea of perch, pike, roach, and other familiar fresh-water types, making it probable that after a fish has once become a denizen of fresh waters it may again return to a salt-water life." There are also certain of the flat fishes, like the flounder, the plaice, the sole, whitebait, and many others, which come into the shallow and sheltered places at the mouths of rivers to spawn; and as some of them make their way far up the waters, they occasionally become acclimatized, and in any case may be mentioned as fishes found in fresh waters during their wanderings. The sole, though essentially a marine fish, we are told on page 88,

has been kept in confinement in fresh-water ponds in Guernsey, much to its increase in growth, and it frequents the River Arun in Sussex, where it breeds, and attains, as in the Guernsey ponds, a much greater weight than its salt-water brother.

After a few pages devoted to the principles of classification, which are simple and easily understood, we come to the "table of geographical distribution" and the classification itself, which gives the orders, families, genera, species, and principal varieties. Nothing could be better than this preliminary arrangement, which brings what follows easily within the scope of the unscientific reader. The Salmonidæ, as the most important family, is given the greatest space. The waters of Europe are much richer than those of this country in varieties of trout; Mr. Seeley mentioning twenty-nine principal varieties, while we have, so far as known, less than half as many. We make up, however, somewhat for the deficiency in the comparative number of species of trout by the excess in those of salmon, of which our Pacific Coast has five or six well-defined varieties, while only one—the Salmo salar of the Atlantic—is to be found in European waters. The habits of this interesting fish are given to the extent that they are known, though much still remains to be learned. Mr. Seeley is decidedly of opinion that it feeds in fresh water, and gives as instances of its remarkable growth in salt water the case of a grilse kelt of two-pounds' weight, marked on going down to sea, which was captured four months later weighing eight pounds, and a marked salmon of ten pounds increasing to seventeen pounds in six months.

In the chapter on the Pike is narrated what Mr. Seeley says, "if true, is one of the most curious incidents of natural history," as occurring in some of the Swedish lakes, where large birds of prey are in the habit of swooping down on the pike basking at the surface of the water. In these cases, if the pike is more powerful than the bird, the latter, unable to extricate his talons, is borne to the bottom and drowned.

"Incredible as the story seems, Eckström, the Rev. M. Möller, and other writers state that the flesh of the pike heals with the talons of the bird in its back, while the bird becomes converted into a skeleton, which is carried about by the pike. One skeleton, which had long been exhibited by a pike in Lake Wetter, had acquired a greenish tinge, and was regarded by the fishermen as a harbinger of misfortune. Mr. Lloyd tells of another skeleton carried by a pike in Lake Fryksdal, which was known to the fishermen for some time as the Sjötroll, or water sprite, and they fled from it in fear. It is said to have appeared like the horns of an elk or reindeer moving rapidly over the water; but at last Lieut. Lekander put a shot in the pike which carried it, and solved the mystery by proving the water sprite to be the skeleton of a sea eagle."

The book has a general index, an index to specific names and one to common names, and contains many illustrations.

A Stork's Nest, or Pleasant Reading from the North. Collected by John Fulford Vicary. Frederick Warne & Co.

Once in a great while there is a waif of a book, blown to one from some unexpected quarter, which is as refreshing as a cool breeze in summer; it has naturalness and humor and a touch of quaintness, and is so good a "care-charmer" that one forgets all about realism and Paris and Russia, and reads just as if the vast sophistication of modern literature was a thing of naught. This collection of short Danish tales has afforded this happy experience to us. There is a foreign burr in the style, half-a-hundred or more lapses of English, but they need offend no one; if he wants the pure idiom, let him search for it in our popular novelists and bless his stars if he find it there. Here are a number of plain, downright stories, without any theory of life or art, told simply to please the old-fashioned taste in man for a narrative. They are so simple that one thinks they must be meant for children. No steppes, nor slums, nor spiritualists; only homely people in country places, common loves and hates, provincial customs, folk-lore superstitions, humors independent of time and place—surely this is not for grown folks, at least for such as have matured enough not to like Sir Walter Scott. It is all very charming, however, and the thought flitted through our mind that it was like Italian pastoral, with a difference—the difference there is between the Dutch masters and the Italian idealists in painting. But, not to push praise or fancy too far, it is a human book out of the Danish soil, and has fed on pure air; and so we leave it to those who are old-fashioned enough in their literary tastes to relish plain food.

The Pleasures of a Book-Worm. By J. Rogers Rees. George J. Coombes. 1886.

This little volume, which belongs typographically to the catalogue of *Deliciæ Literarum*, is not meant for all comers, but only for those initiated into the art and mystery of literary epicurism. There is a sort of confession in its looks which says: "Don't meddle with me unless you have my weaknesses." The "worm" is a different species from the old kind, the Disraeli breed, which devoured knowledge; it is not of the Dibdin variety either, which feeds on vellum, rare bindings, and unique engravings; it is very modest, very restricted in range, and one suspects that the choice of its diet is determined by its youth and inexperience, since it seems to have got its color principally from the library of the Charles Cowden Clarkes, man and wife. The books of the late Georgian time, Lamb especially, are its sanctuary, and it has made a pretty web out of some poets' dedications, and it has a few bits of quotations on out-of-the-way matters. It loves authors more than books—a quite improper human quality in it; the "worm" of the true stripe does not care a rap for mankind. "Fresh woods and pastures new" is the best wish—and advice—we can give it.

Heraldry, English and Foreign, with a Dictionary of Heraldic Terms. By Robert C. Jenkins, M.A. London: Kegan Paul, Trench & Co. 1886. 16mo, pp. 111.

At first sight there would seem to be no especial need of another manual of heraldry. Within the past twenty years there has been a revival of interest in the subject, and works like Boutell's have given fresh instruction in an attractive form. The old manuals issued by the book trade have also been retouched, and, while no simple and concise treatise has appeared, the old ground is well covered. This work by Canon Jenkins does not fill the want, but it has a distinct value and interest to the student. He has devoted his labors to a branch of the subject hitherto neglected in English heraldry, but largely considered in Continental heraldry—that is to say, to those varied divisions of the field of which the gyron, the pile, the point, and the mound are examples. In English heraldry, the lines of the divisions are usually straight. The chief, the bend, the pale, the chevron, and the cross are the principal ordinaries. In German and French heraldry the lines are often curved, and much use is made of interlaced or combined ordinaries. So, also, the effective arrangement known as counterchanging is largely used. On these topics our author has much to say, and it may well be that he will thereby enlarge the scope of English heraldry. His book will interest the student, and deserves to be issued in a larger form. But, we must add, his woodcuts are a disgrace to his publisher. The designer evidently was making his first essay in heraldic engraving; and we are not sure but that he was trying his 'prentice hand with the graver on any subject for the first time.

BOOKS OF THE WEEK.

Anson, Sir W. R. The Law and Custom of the Constitution. Part I. Parliament. Oxford: Clarendon Press; New York: Macmillan.
Brady, J. E. Die Lautveränderungen der neugriechischen Volkssprache. Göttingen.
Buchheim, Prof. C. A. Heine's Harzreise. Vol. VIII. of German Classics. Oxford: Clarendon Press; New York: Macmillan & Co. 60 cents.
Cervus, G. I. Cut: A Story of West Point. Philadelphia: J. B. Lippicott Co. 50 cents.
Conway, H. Somebody's Story: John W. Lovell Co. 10 cents.
Crawford, F. M. Dr. Claudius: A True Story. Macmillan & Co. 50 cents.

ALMON T. MOURY, Nantucket.

JUST PUBLISHED.

Solar Heat, Gravitation, and Sun Spots.

By J. H. Kedzie. 12mo, cloth, with 22 fine illustrations, $1.50.

This work explains the phenomena treated of in its several divisions by a single, well-defined principle; and while combatting many generally accepted beliefs, it advances a theory at once plausible and satisfying. The positions taken are strengthened by quotations from Newton, Faraday, and other eminent names in the realm of science, and the whole scheme is so closely connected, and so ably presented that it must attract the attention of every thoughtful person who feels any interest in the grand problems of science.

PRESIDENT PORTER'S NEW BOOK.

*KANT'S ETHICS. A CRITICAL EXPO*sition. By President Noah Porter, D.D., LL.D., of Yale College. 16mo, cloth, price $1.25. Being the fifth volume in the series of GRIGGS' PHILOSOPHICAL CLASSICS.

"It is an able, scholarly volume, and will richly repay the student for the time devoted to it."—*Christian at Work, New York.*

This *Handy Edition of Thackeray* is printed on good paper, with clear type, and well adapted for reading while travelling or resting at the mountains or seashore. The low price will enable all lovers of this great novelist to possess a good edition of his works.

Cut:

A Story of West Point. By G. I. Cervus, author of 'A Model Wife,' 'White Feathers,' etc., etc. 12mo. Extra cloth. $1.00. Paper cover. 50 cents.

A Fallen Idol.

By special arrangement with author. By F. Anstey, author of 'Vice Versa,' etc., etc. 16mo. Extra cloth. 75 cents. Being No. 46 of *Lippincott's Series of Select Novels.* Paper cover. 25 cents.

Mary Wollstonecraft Shelley

By Helen Moore. 12mo. Extra cloth, gilt top, rough edges. $1.25.

"It is an intense, fascinating, altogether tremulous, and utterly sad story, but the beauty of it covers its sadness with a rare glory."—*Philadelphia Times.*

Consular Reminiscences.

By G. Henry Horstmann, late United States Consul at Munich (July, 1869, to December, 1880) and United States Consul at Nuremberg (December, 1880, to April, 1885). 12mo, extra cloth, $1.25.

"The book is well worth reading. It is written in a plain, simple, narrative style, is unpretentious in its purpose, and full of amusing incidents, valuable information, and useful suggestions."—*Boston Saturday Evening Gazette.*

The South.

Its Industrial, Financial, and Political Condition.

By A. K. McClure. 12mo, extra cloth, $1.

"This interesting volume of 257 pages is a series of letters written by the editor of the Philadelphia *Times* to his paper during a recent trip through the South. Mr. McClure is a close observer, a clear, comprehensive, and logical writer, and this series of letters contains some of his best work. The letters, besides being very entertaining, contain a great deal that the general reader will find profitable."—*Savannah Morning News.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

"A great and noble work."—*Boston Beacon.*

Cyclopedia of Painters and Paintings.

Edited by JOHN D. CHAMPLIN, Jr.
Critical Editor, CHARLES C. PERKINS.

Four volumes quarto, with more than two thousand illustrations.

PRICE, $25 PER VOLUME.

Edition limited to 500 numbered copies, containing fine full-page reproductions by photogravure, &c., which will be used in these copies only.

"It covers the history of Painting from earliest times down to 1886. Not only is a sketch given of every painter, ancient and modern, and of every nationality, but each famous picture is indexed and described under its own title, thus adding great value to the work in making it also a dictionary of subjects. The labor involved is almost incalculable."—*The Examiner.*

"No art book of the exhaustiveness of this monumental work has been attempted in this country, and this ambitious undertaking should be appreciated by those who stand in need of a comprehensive, well arranged, and well edited book of reference."—*New York Tribune.*

"The most important art publication undertaken by any American house."—*Brooklyn Eagle.*

Send to the publishers for a descriptive circular.

SEASONABLE BOOKS.

The Boat-Sailer's Manual.

By Lieut. EDWARD F. QUALTROUGH, U. S. N., author of 'The Sailor's Handy Book.' 1 vol., 8vo, illustrated. $2 net.

A volume of the most absolute value and importance to all interested in boats and sailing. It contains a complete treatise on the management of sailing-boats of all kinds and under all conditions of weather, concise descriptions of the various rigs in general use at home and abroad, directions for handling sailing canoes, and "the [illegible] cutter and sloop sailing," etc., etc.

1886 Public Library

The Index Guide to Travel and Art Study in Europe, 1886 Edition.

By LAFAYETTE C. LOOMIS, A. M. With plans and catalogues of the Chief Art Galleries, Maps, Tables of Routes, and 160 illustrations. 1 vol., leather, 16mo, 600 pages, $3.50.

"Only words of praise can be spoken of this work. Any one who has been abroad and has endeavored to remember where some building or statue was to be found, and has hunted through guide-book after guide-book, will appreciate an alphabetical index, by whose aid everything which one needs to know may be found in a moment. One can see how this book would save vexation and expense a hundred times its cost."—*Christian Advocate, N. Y.*

Lawn Tennis as a Game of Skill.

With the latest revised rules, as played by the best clubs. By Lieut. S. C. F. PEILE, B.S.C. Edited and with a preface by RICHARD D. SEARS, American Champion. 1 vol., 12mo, 75 cents.

"Mr. Peile has more than usual insight into the game of lawn tennis, and has some valuable teachings to bestow. His little book tells players what they ought to do and what they ought not to do. . . . The book is, in fact, a companion of the game of lawn tennis, and should be in every player's hands."—*London Saturday Review.*

PREPARATORY SCHOOL FOR LE- high University.—Recommended by Robert A. Lamberton, LL.D., President of Lehigh University.
Prepares young men for Lehigh University, one of the most excellent technical institutions of the East, and so richly endowed that it offers free tuition to all.
Apply to W. ULRICH, Ph.D., Principal.

PENNSYLVANIA, Bryn Mawr.

BRYN MAWR COLLEGE.—A College for Women.—Offers courses for graduate and undergraduate students in Sanskrit, Greek, Latin, Mathematics, English, French, Old French, Italian, Spanish, German, including Gothic and Old German, History, Political Science, Chemistry, Biology, and Botany. Instruction given in Philosophy and Physics. Well-equipped laboratories, Gymnasium, with Dr. Sargent's apparatus. For Program address as above.

PENNSYLVANIA, Ogontz, Montgomery Co.

OGONTZ SCHOOL FOR YOUNG LA- dies.—The fourth year of this School (known for thirty-three years as Chestnut Street Seminary) will open Wednesday, Sept. 29th, at Ogontz, the spacious country seat of Jay Cooke, near Philadelphia.
For circulars, address the PRINCIPALS, as above.

PENNSYLVANIA, Philadelphia.

NATIONAL SCHOOL OF ELOCUTION and Oratory, Philadelphia. Aims to make natural elegant, and forcible Readers and Speakers. Large and experienced staff of teachers. Diplomas and degrees. Fourteenth year begins Sept. 27th. Send for catalogue.

PENNSYLVANIA, Philadelphia, Norwood Avenue, Chestnut Hill.

MRS. WALTER D. COMEGYS and Miss Bell's English and French Boarding and Day School for Young Ladies will reopen Sept. 21.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S SCHOOL for Young Ladies will reopen Sept. 23, 1885.

PENNSYLVANIA, Philadelphia, 50th and Woodland Avenue.

THE DIVINITY SCHOOL OF THE Protestant Episcopal Church in Philadelphia.—The next year will begin Sept. 16. Complete faculty; thorough work; sound learning, manliness, earnest spirituality cultivated in students. Special and post-graduate courses. New, commodious building; new chapel.
Address the Dean, The Rev. EDWARD T. BARTLETT.

PENNSYLVANIA, Swarthmore.

SWARTHMORE COLLEGE.—Opens 9th Month, 14th. Thirty minutes from Broad St. Station, Philadelphia. Under the care of Friends, but all others admitted. Full college course for both sexes; Classical, Scientific, and Literary. Also a Manual Training and a Preparatory School. Healthful location, large grounds, new and extensive buildings and apparatus. For Catalogue and full particulars, address
EDWARD H. MAGILL, A. M., Pres't.

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with Physicians who treat mental or nervous disorders. Not a secret. Formula on every label.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion; refreshes weakened vital powers in old or young. A Vital Phosphite, not a Laboratory Phosphate.

It is used by the Emperor Dom Pedro, Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

School Agencies.

BROCKWAY TEACHERS' AGENCY, *Times* Building, Chicago, will supply superintendents, grade teachers, specialists with positions in Central, Western, and Southern States for ensuing year.

SCHOOL AGENCY.—Oldest and best known in the United States. Estab'd 1855. J. W. SCHERMERHORN & CO., 7 East 14th St., New York.

THE BOSTON TEACHERS' AGENCY Supplies Teachers to Schools, Positions to Teachers. Circular free. E. O. FISK, 13 Tremont Place, Boston.

Teachers.

A CLASSICAL TEACHER, PH.D. OF Harvard, now studying abroad, seeks an engagement for next year. For reference apply to the Rev. Dr. J. M. CLARKE, Syracuse, N. Y.

A LADY, EXPERIENCED TEACHER, Classical Course at Oxford, England, desires a position. Address H. J. K., care of the *Nation*.

AN M. A., UNIVERSITY OF VIR- ginia, desires a position as assistant in a first-class school, or as private tutor. One year's experience. Unexceptionable references. Address J. C. R., Overton, Va.

A PROFESSOR OF MODERN LAN- guages and Music in a Western University wishes to change his position. Please reply to the office of the *Nation*, under "J. B.," care *Nation*. Best of references given.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

JOHN W. DALZELL, PRIVATE TU- tor, 15 Appian Way, Cambridge, Mass.

TEACHERS.—Drawing and Painting.— A lady student for several years at the National Art School, Kensington, London, and in Germany, wishes a position in some school of high standing in New York, Boston, Philadelphia, or Baltimore. References. Address by letter, Miss C., care of Mrs. G. FISHER, 176 Washington Street, Brooklyn.

TO PARENTS AND GUARDIANS.— A lady of superior attainments and large experience in teaching, residing in the vicinity of Central Park and Riverside Drive, having also a country seat, would educate and take entire charge of two or three girls; to persons of means who desire for their children or wards earnest care and liberal culture, exceptional advantages are offered. Highest references given and required. Address E. L. R., P. O. Box 2580, New York, or Keyport, N. J.

TUTORING FOR THE SUMMER.— By a college graduate, for two years a fitting-school teacher. Mathematics a specialty. W. A. PERKINS, Harvard, Mass.

Wants.

WANTED—AS SECRETARY AND companion to an aged lady, and to assist in housekeeping, a lady of education, not over thirty-five years of age. Must be an experienced accountant. Apply by letter, "M.," P. O. Box 14, Hastings-on-Hudson, N. Y.

YOUNG MAN PERFECTLY FAMI- liar with French, and experienced in travelling on his own responsibility, would like to take an intelligent boy or two to France for the summer. Is at present tutor of French in Yale College. For particulars apply to WM. PRICE, 139 Elm Street, New Haven, Conn.

Courses in Political and Social Science.

Graduate Department,

YALE COLLEGE, 1886-7.

The following Courses will be given during the College Year beginning September 23d, 1886:

Prof. Sumner—"Finance and the Science and Art of Politics in the History of the United States"; "The Industrial Organization of Modern Society." Prof. H. W. Farnam—"The Principles of Public Finance." Prof. A. T. Hadley—"Railroad Administration"; "Industrial Legislation." Mr. A. S. Wheeler—"Roman Law." Mr. H. T. Terry—"The Doctrine of Rights." Mr. E. V. Raynolds—"Comparative Constitutional Law." Mr. H. C. White—"Local Government in the United States." Mr. E. G. Bourne—"A View of Trade and Industry in Europe in the Middle Ages."

For further information address the SECRETARY OF YALE COLLEGE, New Haven, Conn.

INTERNATIONAL EDUCATION SERIES.

Edited by W. T. HARRIS, LL.D.

THE undersigned have pleasure in announcing that they have arranged for the publication of a series of volumes on education, such as is needed by teachers and managers of schools, for normal classes, and for the professional reading and training of educators generally. There will be four departments represented:

As the series will contain works from European as well as from American authors, it will be called the "International Education Series." It will be under the editorship of W. T. Harris, LL.D., who will contribute more or less matter for the different volumes in the way of introductions, analysis, and commentary, as well as some of the works entire.

Arrangements for the first fifteen volumes have already been made, and preparations are in progress for others. It is intended that the "International Education Series" shall cover the entire field of practical, theoretical, and historical education.

The price of the volumes of the series will be $1.50 for the larger volumes and 75 cents for the smaller ones.

NOW READY:

A HISTORY OF EDUCATION.

By Prof. F. V. N. Painter, of Roanoke College, Virginia. 12mo, cloth, price, $1.50.

NEARLY READY.

THE PHILOSOPHY OF EDUCATION.

By Johann Karl Friedrich Rosenkranz, Doctor of Theology and Professor of Philosophy at the University of Königsberg. Translated from the German by Anna C. Brackett.

D. APPLETON & CO., Publishers, New York.

JUST PUBLISHED:

Childhood, Boyhood, Youth.

By COUNT LYOF N. TOLSTOI.

With Portrait of the Author. 12mo. $1.50.

A series of reminiscences and traditions of the author's early life, in which, under the guise of fiction, are reflected his mental and moral youth, showing that the author's ideas of thirty years ago were precisely similar to those which he is putting in practice to-day in his own person.

ALSO BY THE SAME AUTHOR:

ANNA KARENINA.
Royal 12mo. $1.75.
(Fourth Thousand now ready.)

MY RELIGION.
(Third Thousand now ready.)
12mo. $1.25.

FOR SALE BY ALL BOOKSELLERS.

FOR SALE.

A Choice Rarity!

The Harvard Book.

Two quartos. Full Morocco.

The undersigned offers for sale the two large quarto volumes of 'The Harvard Book'; published in 1874 by Vaille & Clark; bound in full morocco [Macdonald & Sons]. This is the greatest work on Harvard University, as it is the combined monographs of over a hundred eminent men, illustrated with over a hundred views and portraits by the Heliotype-Photographic Process. By reason of the fires of Houghton, Osgood & Co. and Macdonald's bindery this book has become absolutely out of print. There never were but several hundred copies issued, and as they are now owned by libraries, public institutions, and wealthy Harvard families, they are seldom to be had at any price. This set of two volumes will be sold at $40 to the first responsible applicant.

MOSES KING,
279 Broadway, New York.

AUTOGRAPH LETTERS.

The Nation.

NEW YORK, THURSDAY, JUNE 24, 1886.

The Week.

THE Democratic platform of 1884 pledged the party to "revise the tariff in a spirit of fairness to all interests," on the principle, however, that "all taxation shall be limited to the requirements of economical government." The Republican platform of the same year in like manner "pledged the party to correct the irregularities of the tariff . . . by such methods as would relieve the taxpayer without injuring the laborer or the great productive interests of the country." So that both parties acknowledged that there were irregularities in the tariff which ought to be corrected, and pledged themselves to correct them; and that the duties levied by the tariff were too high, and ought in some cases at least to be reduced, and pledged themselves to reduce them.

It is now just two years since these pledges were made; Congress has sat for two winters, and nothing has been done to redeem the pledges by either party. Revising bills have been introduced each winter by the Democratic Committee of Ways and Means, have been more or less debated, and then unceremoniously voted down. On Thursday the last of these bills came up, at the end of a long session, on the question, not whether it should pass, but whether it should be considered, and even consideration was denied to it by a vote of 140 to 157. The opposition to consideration was made by 122 Republicans and 35 Democrats, while it was supported by 136 Democrats and 4 Republicans. It will thus be seen that if the Democrats had kept their pledges, or shown any desire to do so, a revision of the tariff would, as far as the House could do it, have taken place. If the Republicans had kept theirs, the revision of the tariff would have been at least discussed, and the voters would have ascertained what, from the Republican point of view, the "irregularities of the tariff" spoken of in the platform were, and by what "process" the party proposed to reduce the surplus instead of "the vicious and undiscriminating process of horizontal reduction," and what "the methods" were which would "relieve the taxpayer without injuring the laborer or the great productive interests of the country." Regarding all these things the country is now as much in the dark as ever. The irregularities in the tariff are admitted on all sides, but there appears to be no power in the nation capable of correcting them. Neither party seems to be willing to become responsible for any useful legislation. Beyond a lavish distribution of pensions, and a bootless quarrel with the President about nominations to office, Congress has nothing in either house to show for its salaries, or for the trouble and expense of electing it. Moreover, it appears to be clear now that, no matter what a man's views on the tariff may be, he can do nothing to carry them out by voting for either party. Both refuse to touch the tariff at all.

A fortnight ago the House rejected a motion to starve out the Civil-Service Commission by refusing to make appropriation for their salaries, only 18 members out of 325 voting for it. On Friday the Senate voted to postpone indefinitely, which is equivalent to rejecting, a bill to repeal the Civil-Service Law, only 6 members out of 76 recording themselves in the negative. To understand what these overwhelming defeats of the spoilsmen in the two branches of Congress mean, one must recall the fact that only a dozen years ago a Republican House, with but little opposition, refused to make any allowance for the expenses of the Commission appointed by President Grant, and thus for some time blocked the progress of the movement. Even the spoilsmen at last appreciate that the reform "has come to stay," and only the blindest politicians any longer venture to fight it. Nothing more fortunate for the cause could possibly have happened than the recent assaults upon the merit system by Mr. Randall in the House and Mr. Vance in the Senate. They have provoked a discussion of the subject by the press, which has shown that the Democratic voters heartily support the President, and have no patience with his assailants, and that, in the words of the Galveston *News*, the leading Democratic paper of the strongest Democratic State in the Union, "any interference with the reform law, except in a spirit of progress, and to extend its efficiency, would be considered odious by the country." The President proposes to meet this popular demand for an extension of the law's efficiency, and the announcement that the rules will soon be so revised as to widen the scope of the competitive system, is only a proper response to a popular demand. It would thus appear that the "clean sweep" so often announced by the *Sun*, and for which, according to the "gentleman who claims to know the facts," all the preparations were recently made, has again been indefinitely postponed.

Mr. Springer made a speech in the House the other day on the treatment of the civil service by the present Administration, in which he said, apropos of the charges of partisanship and "clean sweep" made against Col. Black, the present Commissioner of Pensions, that the late Commissioner of Pensions, Col. Dudley, took the eligible list furnished him by the Civil-Service Commission, and appointed from it for one year eighty-five special examiners, all Republicans. The remainder of the 150 provided for by the law of 1884 had been taken by promotions from among those already in the service. In 1885 Col. Black came in, and the term of these 150 expired during the year. Seventy-five of the vacancies, Mr. Springer says, Col. Black filled from those already in office. For the remainder he drew on the list of eligibles of the Civil-Service Commission, which sent in to him (Col. Black) the whole list, without reference to the rule confining the choice for each vacancy to the first four names on the list. It is charged, and we believe admitted, that he filled seventy-one of the remaining seventy-five vacancies with Democrats. Mr. Springer's defence of this is that, in doing so, he did no worse than Col. Dudley had done. This may be true, but if it be, it is true also that when he selected these candidates because they were Democrats, he violated both the spirit and letter of the law; but the Commissioners connived at, and indeed facilitated his offence, by sending him in indiscriminately the whole list of eligibles. The case is a good and useful illustration of the way in which the Randall rider would have worked.

Mr. Springer gives a most tantalizing list of good fat offices in the classified list still held by Republican appointees. We may as well say, however, for the information of lazy, good-for-nothing Democratic politicians, that they are all or nearly all offices requiring special training of some kind, such as a rockribbed Democrat or a political "worker" hardly ever possesses. There is also a formidable list of Presidential offices not covered by the Civil-Service Law, to which Mr. Cleveland has not made new appointments. We will not say what the number is, because it would excite the bad passions of tens of thousands of worthless Democrats, and perhaps prevent their making another attempt to take up some line of honest industry. Suffice it to say that their number is such as to furnish a striking proof of the President's resistance to the abuses of the old system.

Gov. Robinson of Massachusetts has done the whole country a service by the forcible and effective way in which he has frustrated the attack of the demoralized Republicans of that State on the State Civil-Service Law. There, as at Washington, "the soldier element" is used to breed and spread a spirit of hostility to all reform, and a disregard of the condition of the public service.

The President sent another batch of vetoes to the Senate on Monday. One of them stopped a bill which was almost a grotesque illustration of the carelessness with which Congress passes these measures. It directed the name of a soldier's widow to be placed on the pension roll, subject to the pension laws. It turns out now that her name *is* on the pension roll under the law already, and has been there since February of this year, her pension dating from November of last year; so that the bill seems to have been drafted and passed in sheer ignorance of the facts of the widow's case. To send up such a bill for the President's signature is, of course, to say the least, disrespectful. Another of these bills puts on the pension roll the widow of a commodore in the navy who died of heart disease ten years after the war, and her application had been already rejected by the Pension Bureau because of her failure to show that the disease of which her husband died had any connection with the war. Another gives a soldier, already in receipt of a pension, $9,000 of back pension, for a period of fifteen years, during which he had made no claim on

account of incapacity from disease, and removes the limit of time fixed by the law of 1879, or in other words repeals it for the benefit of this one man. Another gives a widow a pension on account of the death of her husband from inflammation of the stomach ten years after the war, and disregards the fact that her application is pending before the Bureau. Another provides for the erection of United States buildings at a cost of $100,000, at Sioux City, Iowa, not because the business of the Government at that point calls for them, but because the population is growing rapidly, and there is already a considerable number of other buildings in the town. Another orders a "substantial and commodious public building, with fire-proof vaults," at a cost of $100,000, with an open space around it to protect it from adjacent fires, which is to provide accommodation for the post-office, and internal revenue office, and pension office, at Zanesville, Ohio, though the only Federal office in the place is the post-office.

The Republican Senate did a good piece of work on Friday in passing the joint resolution providing for the submission to the States of a Constitutional amendment extending the period of the President's term and the session of the Fiftieth Congress until April 30, 1889, and substituting April 30 for March 4 as the beginning in future of the Presidential and Congressional terms. The Democratic House should promptly concur, and thus send the amendment to the Legislatures of the various States, which will undoubtedly ratify it. The measure is non-partisan; there are sound arguments in its favor, and no valid objections to it, and its adoption would fittingly commemorate the hundredth anniversary of Washington's original inauguration.

The way in which the Canadians have behaved to Blaine, Frye, Butler, and the Gloucester fishermen is one of the basest acts of treachery in political annals. As our readers know, they issued on the 1st of May an order forbidding foreign vessels to come within the three-mile limit for any purposes but shelter, repairs, and obtaining wood and water. American ships could not under this order obtain bait or other supplies, or men. This was a most useful arrangement to the Maine politicians, and they prepared to base on it a beautiful and stirring war with Great Britain, which would revive industry, ruin the Administration, enrich our fishermen, and give the White House to its rightful owners. Blaine, Frye, Hale, Reed, and all of them wanted war, and war to the knife. They were going to arm themselves and all their neighbors, and fight eight hours a day, but with a half holiday on Saturdays, until Canada crawled on her belly and England was brought to her knees. Now what have the Canadians done, after considerable expense had been incurred on our side, but rescind the order, and issue another allowing Americans to get everything they please within the three-mile limit as long as they do not stay over twenty-four hours? The baseness and cunning of this does not call for comment from us. It deprives the fishery issue of all value in our politics at one stroke, and without a cent of compensation to its owners.

The failure to punish Mr. Edmunds in Vermont for his conduct towards Mr. Blaine during the canvass of 1884, is one of the numerous bad signs which have attended the reproduction of the latter gentleman's "boom." Nothing would have been more effective in support of Mr. Blaine's claims at the Convention of 1888 than such proof as Mr. Edmunds's loss of the Senatorship would have afforded, of the danger of doubting Mr. Blaine's value as a Presidential candidate. In fact, what is most of all needed to make his reappearance really successful is a striking example of ruin overtaking some Republican politicians who opposed him, or failed to support him cordially, or else of Mugwumps really sorry for having opposed him, and honest enough to confess it. Thus far nothing of the kind has appeared. In fact, we have never heard of any evil consequences to any Republican for not supporting or for opposing the Republican nomination of 1884, except the cancelling of some lecture engagements which had been made with Mr. Schurz and Mr. Beecher, in very rabid districts, and these demonstrations occurred immediately after the election. To-day we presume their authors are rather ashamed of them. Not one Mugwump has come forward to say that if he had known in 1884 what he knows now, he never would have voted for Mr. Cleveland. We have never heard or read of such a person. On the other hand, we presume everybody has dozens of persons within the circle of his acquaintance who are willing to confess that the political reasons which led them to swallow Mr. Blaine's unsavory personal character were not well founded, and would not again influence their judgment.

The Vermont Republicans seem to have found it pretty hard to get proofs of Democratic unfitness to control the Government. Their platform cites as evidence that the Democratic party is opposed to civil-service reform, the fact that a "rider practically annulling the civil-service rules was attached bya Democratic committee to an important appropriation bill," although, as everybody knows, the rider was rejected, and a motion to starve out the Commission by refusing to appropriate for their salaries, such as Gen. Butler carried through a Republican House a dozen years ago, received only eighteen votes. The platform also condemns the "extravagant appropriations made by the Democratic House," although the truth is that the extravagant legislation of the session has been initiated in the Republican Senate, which passed by large majorities Mr. Blair's $77,000,000 Educational Subsidy Bill and his Pension Bill, which would take out of the Treasury anywhere from $50,000,000 to $200,000,000 a year —the Vermont Senators in each case being recorded among the majority.

The Tennessee Republicans were very frank in their treatment of the prohibition question at their recent convention. A platform was reported in which there was a resolution favoring the submission to the people of a prohibitory constitutional amendment. There was a lively debate upon this, and the outcome of it was the adoption of the following as a substitute: "Resolved, That the Republican party of the State of Tennessee recognize the right of the people to have the prohibition amendment voted upon at the ballot-box." This resolution was the production of Congressman Houk, who made a speech explaining its purport, in which he said: "I believe in the right of the people to vote on this subject if they want to. I tried to make the resolution look both ways, to straddle. It is the people's prerogative. When you look in it you don't say which side is right." This speech was received with uproarious laughter, and the resolution was regarded as a fine bait for prohibition votes. That there may be no question of Mr. Houk's party orthodoxy, we quote the following sentence from his speech at the opening of the convention:

"Suppose Jim Blaine had been elected. [Continued applause.] If James G. Blaine and John A. Logan [cheers] had been elected and either occupied the White House to-day, would we have what is virtually civil war in strikes in so many parts of the country?"

Ohio is making another experiment at regulation of the liquor traffic. The State Constitution prohibits the licensing of the business, and the difficulty has been to place any restriction upon the traffic which did not amount to a license in the eye of the law. Two attempts of this sort in recent years have been overruled by the Supreme Court, but the last Legislature made another trial which it is hoped will stand the test of the courts, the present law imposing a reasonable tax upon the saloon-keeper. The liquor-dealers at first talked about resisting the enforcement of the law, upon the plea that it had not been legally adopted, as the Senate which adopted it had not a quorum by reason of the absence of the Democratic members, who, it will be remembered, left their seats and ran out of the State. The Supreme Court, however, has just decided that the Senate was legally constituted when it passed the law, and the saloon-keepers appear generally disposed to accept the situation. Ohio has had a sad experience with liquor legislation during the past decade, and it will be a great thing for the State if it has at last got an efficient system of restricting the traffic.

There has been a good deal of discussion as to whether the prohibition law is enforced in the State of Maine. The Prohibitionists of Maine cannot be suspected of a disposition to misrepresent the facts to the disadvantage of the policy which they advocate. The platform just adopted by the Prohibition State Convention at Portland says: "In Portland, Bangor, Biddeford, Lewiston, Bath, Augusta, Hallowell, and other cities and towns of the State, so far from the impartial enforcement of the law being adhered to from principle, the law is enforced or not as the personal will of the officer or party exigencies demand."

The Massachusetts Senate has closed the Field trouble by adopting unanimously the

House resolution giving Mr. Field "leave to withdraw." It appears, too, that four members of the Committee which signed the report pronouncing both the Governor and Mr. Field blameless, were seduced into that absurdity by being told untruly that all parties would be satisfied with this result, and they now regret their action. In the Senate the affair was fully ventilated, with the above consequence. Mr. James G. Blaine, too, appears to have taken a hand in the matter, and suffers through Mr. Field's failure. There is a rumor from London that Mr. Field has telegraphed from that city that he is going now to bring a libel suit. But he will only do this to keep himself in good standing with Canon Farrar while he is in England. He will not push the suit after he comes home.

The workingmen are finding out by bitter experience that professional "friends of labor" are their worst enemies. In all parts of the country, strikers who resorted to boycotting and violence to enforce their demands are being fined and sent to the penitentiary. Even the high dignitaries of the Knights of Labor are not exempted from the rigor of the law. The other day a Master Workman of a district assembly of Knights at Pacific, Missouri, was sentenced to two years in the penitentiary and fined $500 for trying to wreck a freight train during the strike. On Thursday at Pittsburgh, twenty-four coal miners who had assaulted non-union men, and committed other offences during a strike, were sentenced to eight months' imprisonment in the county workhouse. Fourteen of them are married men. One of their leaders thus bewails his fate: "The idea that I have to spend eight months of my short life in the workhouse in company with felons and criminals of every class, away from my sick wife and helpless family of eight children, makes me shudder. Particularly is it so when I consider that my crime, if crime it was, was that of presiding over a mass meeting at which I scarcely expressed an opinion. We may well ask: Where are our boasted liberties?" He has learned that this is a land of law as well as of liberty, but he does not seem to have realized yet that every man who breaks a law, whatever his motive in doing so, is a criminal. The idea that the cause of labor was so sacred that the laws of the land could be violated with impunity in its name, has, we trust, been severely shaken among the laboring classes as well as in the newspaper offices.

Some speculators in Confederate bonds recently tried to get up a "boom" by hiring a New York lawyer to go before a Congressional committee and with a serious face make an argument for the payment of the bonds by the Federal Government. The bloody-shirt organs hailed the performance with the greatest enthusiasm, and some of the more sanguine apparently expected to carry the fall elections upon this issue. Unfortunately for these plans, however, the Southern press refuses to take the matter seriously, the Richmond (Va.) *Dispatch*, a thoroughly representative paper, declaring that "talk about the payment of Confederate bonds is 'unmitigated rot.'" When the "rebels" themselves ridicule the idea of paying "rebel claims," even the most stupid of Republican organs must realize that this issue is unavailable.

The opponents of compulsory prayer at Harvard College have at last won a victory in securing the concurrence of the Board of Overseers with the Faculty in ordering its abolition, with the support of the Plummer Professor of Christian Morals and the college preachers. A more curious example of the power of conservatism it would be hard to find anywhere than the stubbornness with which this change has been opposed by the Overseers. The only argument against it which would bear a moment's examination was the probability that the respect for religion on the part of his elders shown in compelling a young man to go to prayers, whether he wished it or not, would somehow, after a while, make such an impression on him that he too would begin to respect religion; but there was probably hardly a man in the Board who did not know, as a matter of personal experience, that it was worthless. Of course the notion that the Deity would be pleased or placated, and induced to pour out blessings on the University or any individual member of it, by having a few hundred youths forced every week, under temporal penalties, into a house of worship, to listen, in a thoroughly irreverent and rebellious state of mind, to some one else praying, would not bear examination at all.

The *Times* says:

"Our contemporary, the *Sun*, is making war upon the indecent photographs and lithographs so plentifully exhibited in the windows of cigar stores. Its criticisms are just and proper. These pictures are becoming more and more immodest. They are not a legitimate advertisement, for it cannot be shown that they increase the sale of cigars and cigarettes; and they offend the public sense of decency."

The vendors of indecent photographs and lithographs have, however, exactly the same arguments in their favor as the vendors of minute "worked up" accounts of rapes, seductions, elopements, and scandals of all kinds. What these last plead in their own defence is that the public demands this sort of thing, and that it, therefore, increases "sales." We feel quite sure that the indecent photograph men have the same excuse. They do not exhibit their wares for pleasure, but for profit, and they find their account in it. They have probably learned that decent photographs and lithographs sell only moderately, while the indecent ones go off like hot cakes. They are therefore in precisely the same category with the indecent newspaper men. The *Sun*, which printed the filthy revelations of the *Pall Mall Gazette*, is a funny critic of the poor fellows who exhibit the indecent lithographs. Men and brethren, as Horace Greeley used to say, are not these things sickening?

Mr. Gladstone has, all accounts agree, opened the campaign most auspiciously. His worst enemies admit that they did not look for anything like the popular enthusiasm which his presence everywhere calls forth. He has put the Tories on the defensive from the first moment by laying hold of Lord Salisbury's foolish abuse of the Irish as no better fitted for self-government than "the Hottentots," and his proposal that they should be coerced for twenty years before receiving even a modified control of their own affairs. This has furnished Mr. Gladstone with his electioneering cry—"Salisbury and Coercion, or Gladstone and Conciliation." Accordingly, Lord Salisbury is now trying to explain every day that coercion is not what he meant; but it is very awkward to open an excited canvass with a protest against misconstruction. Mr. Gladstone also has performed on the Whigs and on the Chamberlainites the process known, in our slang, as "putting them in a hole"; that is, he has frankly abandoned his bill. He says it dies with the present Parliament as a matter of course, and all that the constituencies have to decide is whether Ireland is to have a Legislature of her own, and whether Mr. Gladstone is to be charged with framing a new measure for that purpose. Now a large number of the Whigs and all the Chamberlainites are committed already to the principle of home rule, and are estopped by long service under him from denying Gladstone's ability to deal with the question, if the constituencies desire it to be dealt with. It was the bill they attacked, and, the bill being now gone, they will, if they continue the contest, be reduced to the necessity of opposing home rule on the stump and denouncing Gladstone for proposing it in any shape.

The reported lack of funds and candidates among the Gladstonian Liberals is rather alarming for them. In England the election expenses are rigidly fixed by law, and anything beyond the legal maximum exposes the candidate not only to the loss of his seat on a trial before the courts, but possibly to a term of imprisonment. But they are nevertheless so heavy that a poor man cannot face them without assistance. In a borough, if the number of electors on the register does not exceed 2,000, the candidate may spend for all purposes, except personal expenses and the returning officer's fees, $1,750. If the number exceeds 2,000, then $150 for every additional complete 1,000. In Ireland the candidate is allowed to spend on a somewhat more liberal scale—that is, $1,000 for 500 electors, and $1,250 for any number between 500 and 1,000, and $1,375 for any number between 1,000 and 1,500. In the counties where the number of electors does not exceed 2,000, the candidate may spend $3,250 in England and Scotland, and $2,500 in Ireland If the number exceeds 2,000, then he may spend $3,550 in England and Scotland, and $2,700 in Ireland, and an additional $300 in England and Scotland, and an additional $200 in Ireland, for every complete 1,000 electors over 2,000. In all these cases the things on which the money may be spent are rigidly defined. Now, the Tories and Whigs are not nearly as rich as they were, but they are still far better able to supply money and candidates to meet these demands than the Radicals or Home-Rulers are, and they make no secret of the fact that they rely on their superior money power to save "the unity of the empire"

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 16, to TUESDAY, June 22, 1886, inclusive.]

DOMESTIC

THE Senate on Friday by a vote of 33 to 6 indefinitely postponed Mr. Vance's bill to repeal the Civil-Service Law. Of the thirty-three yeas eight were cast by Democrats. The nays were by Berry, Call, Eustis, Harris, Jones of Nevada, and Vance. Had they not been paired Beck, Kenna, and Saulsbury would have joined these six. The Senate passed Mr. Frye's bill "for the encouragement of the American merchant marine and to promote postal and commercial relations with foreign countries." This is the proposition to subsidize American vessels carrying the United States mails. The Senate also, by a two-thirds vote, passed the joint resolution introduced by Mr. Ingalls providing for the submission to the several States of a Constitutional amendment extending the period of the President's term and the session of the Fiftieth Congress until April 30, 1889, and substituting April 30 for March 4 as the commencement in future of the Presidential and Congressional terms.

The Senate Committee on Indian Affairs has finally reported favorably on the nomination of Morris A. Thomas to be Indian Inspector.

The House on Wednesday added a clause to the Legislative Appropriation Bill increasing the pay of the scrubwomen employed in public buildings throughout the country from $15 to $20 a month, and giving them a vacation with pay for thirty days each year.

In the House on Thursday Mr. Morrison moved that the House go into Committee of the Whole to consider the revenue bills. In answer to Mr. McKinley he stated that his purpose was to consider the general Tariff Bill. Thereupon Mr. McKinley said that he concurred with Mr. Morrison in his demand for the yeas and nays, and the Speaker ordered the clerk to call the roll. Mr. Morrison's motion to go into Committee of the Whole was defeated; yeas 140, nays 157. Messrs. Hewitt, Adams, Belmont, Beach, Felix Campbell, James, and Mahoney of the New York Democratic delegation voted for consideration, and Messrs. Arnot, Bliss, Tim. Campbell, Davenport, Dowdney, Merriman, Muller, Spriggs, Stahlnecker, Viele, and Pindar voted in the negative. The Speaker voted for consideration. Great applause greeted the announcement. Mr. Morrison gave notice that he would renew his motion on Tuesday, and Mr. McKinley stated that the opponents of the bill would be on hand. Thirty-three Democrats in all voted against consideration.

In the House on Friday Mr. Kelley (Rep., Pa.) read another important letter from the late Secretary Stanton to the Rev. H. Dyer. In it he said: "In respect to any combination by Mr. Chase, Mr. Seward, and myself against Gen. McClellan, it is utterly false. For reasons not necessary to mention, fire and water would as soon combine. Each does his duty as he deems right. In respect to the imputation of selfish or ambitious motives denial is needless. Those who make the imputation do it ignorant of my principles of action or with prejudiced feelings, and, like all other public men, I must expect and patiently bear misconstruction and false report. In respect to the present condition of affairs, all I can say is that the whole power of the Government is being put forth with more vigor, and, I think, more earnestness, on the part of military commanders, than at any former period. Treason is encouraged in the Northern States by the just discontent of the people. But believing our national destiny is as immediately in the hands of the Most High as ever were the Children of Israel, I am not only undismayed, but full of hope."

The President sent to the House on Saturday the Dingley Shipping Bill, with the Frye amendment, approved. He accompanied it with a message calling attention to some omissions in the bill which would prevent the First Comptroller from auditing some of the necessary expenses under the law, and suggesting supplementary legislation. Mr. Dingley and Mr. Frye are confident that the supplemental legislation will be enacted without opposition.

The House passed the Naval Appropriation Bill on Monday. The Senate disagreed with the House amendments to the Army, and Consular and Diplomatic bills.

The conference of Democratic Representatives in Washington, on Monday night, to secure action on the tariff, voted, on motion of Mr. Morrison, to appoint a committee of one Representative from each State that furnished Democratic votes for the motion to consider the Tariff Bill, to formulate an address to the country explaining the position of the party, and to secure votes for the consideration of the tariff measure. Mr. Morrison did not move to call up his bill on Tuesday, anticipating inevitable defeat.

It is said that Mr. Randall has prepared a bill reducing the tariff in accordance with his own protection ideas.

President Cleveland on Monday sent fifteen vetoes to Congress, most of them referring to private pension bills. In one of them he says: "With the Pension Bureau fully equipped and regulated by the most liberal rules, in active operation, supplemented in its work by constant special legislation, it certainly is not unreasonable to suppose that in all the years that have elapsed since the close of the war, the majority of the meritorious claims for pensions have been presented and determined. I have now more than 130 of these bills before me awaiting Executive action. It will be impossible to bestow upon them all the examination they deserve, and many will probably become operative which should be rejected. In the meantime I venture to suggest the significance of the startling increase in this kind of legislation, and the consequences involved in its continuance." In vetoing the Senate bill to provide for a public building in Zanesville, Ohio, he says: "While a fine Government building is a desirable ornament to any town or city, and while the securing of an appropriation therefor is often considered as an illustration of zeal and activity in the interest of a constituency, I am of the opinion that the expenditure of public money for such a purpose should depend upon the necessity of such a building for public uses."

The Tennessee Republicans on Wednesday nominated Alfred A. Taylor for Governor. The platform favors the passage of the Blair bill, the protection of American labor, and a protective tariff, and demands the repeal of the internal-revenue system, that corporations shall pay their employees in money and not in scrip and merchandise, and favors a better mechanics' lien law and home rule for Ireland.

The Vermont Republican State Convention on Wednesday nominated Ebenezer J. Ormsbee for Governor on the first ballot. It was a victory for the Edmunds men in the Convention.

The Maine Prohibition Convention on Thursday nominated Aaron Clark, a farmer, for Governor.

The Massachusetts Senate has voted in favor of the House resolve giving Cyrus W. Field leave to withdraw by 26 to none.

Gov. Robinson of Massachusetts on Monday vetoed the bill exempting soldiers from the provisions of the Massachusetts Civil-Service Act.

The Harvard Overseers, after a protracted debate on Wednesday, concluded action on the prayer petition. They voted to concur with the President and Fellows in their action as follows: "Voted, on the unanimous recommendation of the Plummer Professor and the preachers to the University, that the statute numbered 15, concerning religious services, be amended by striking out the clause by which the attendance of students is required."

The statue of Daniel Webster presented to the State of New Hampshire by Mr. Benjamin Pierce Cheney of Boston was dedicated on Thursday at Concord with imposing civic and military ceremonies.

Edwin Percy Whipple died on Wednesday of pneumonia. He was born in Gloucester, Mass., on March 18, 1819, and in early life was a bank clerk in Boston. He became Superintendent of the reading room of the Merchants' Exchange at its foundation, and continued to hold the position until 1860. A poem which he delivered before the Library Association in 1840 was full of humor, and made a decided hit. In 1843 he published his essay on Macaulay, which secured from the historian a letter expressing high regard. He contributed a number of essays to the *North American Review*, *Christian Examiner*, and other publications which were collected in book form. Mr. Whipple was some years ago one of the most popular lecturers in the field, and as such journeyed all through the Middle and Northern States. Whipple's published works include 'Essays and Reviews' (2 vols., 1848), 'Lectures on Subjects Connected with Literature and Life' (1849), a 'Life of Macaulay' prefixed to an edition of his essays (1860), 'Character and Characteristic Men' (1867), 'The Literature of the Age of Elizabeth,' a course of lectures delivered in 1859 before the Lowell Institute (1869), and a new volume of essays (1871). There is a comparatively new edition of his works in six volumes.

Benjamin Moran, ex-United States Minister to Portugal, died in Essex County, England, on Monday, at the age of sixty-six. He was Secretary of Legation in London from 1854 to 1874.

FOREIGN.

Mr. Gladstone left London on Thursday morning on his campaign journey to Midlothian. The scenes at the station were unparalleled in enthusiasm. When Mr. Gladstone arrived at Edinburgh 40,000 people lined the route from the railway station to the hotel. He was cheered incessantly. At all the towns on the way enormous crowds greeted him. At Carlisle Mr. Gladstone made a speech, in which he said that he should like to ask Lord Carnarvon what he told Mr. Parnell in the interview at Dublin, and to whom he imparted the conversation. If Lord Carnarvon knew his duty as a Cabinet Minister, he must have revealed the conversation to Lord Salisbury. It would have been treachery for him to hold such talk with a person in Mr. Parnell's position, and not tell Lord Salisbury. He (Gladstone) should therefore feel convinced that Lord Carnarvon did his duty until the latter should deny that he repeated the conversation. It was necessary for the nation to be exactly informed on this subject.

In Music Hall, Edinburgh, on Friday evening, Mr. Gladstone spoke before a very large and enthusiastic audience. He spoke for an hour and a half, and at the end of the speech a vote of confidence in him was carried unanimously. In the course of his address he said: "Well, gentlemen, the real rival policy is coercion. We won't quarrel about the word, but it means a policy of special repressive criminal legislation for Ireland to the exclusion of the remainder of Great Britain. You must choose between a policy of coercion and a policy of conciliation. Lord Salisbury describes my reference to his policy of twenty years' coercion as one of the most deliberate misstatements on record. Well, I hold by it; I mean to hold by it, I mean to repeat it, I mean to impress it upon the country, and I mean that the country shall fairly have the means of coming to an issue on it, and to know whether it is true or false. The Salisbury Government on the 26th of January announced in both houses a policy of coercion in Ireland. The Queen's speech, which had previously heralded such announcement of the intention to use the severest measures to re-

press the National League, was received by the Tories with frantic cheers, which rang long and loud. Lord Salisbury may deny that he advocated coercion, but his own words and acts prove that he did. He vainly endeavors to escape, but he is caught in a net wherein he is inextricably coiled. His other alternatives are simply quicksands, ever slipping, ever vanishing. Do not, gentlemen, do not stand upon those quicksands, however imposingly named. There are only two policies before the country, and it remains with you to decide between them."

Mr. Gladstone addressed another large and enthusiastic public meeting in Edinburgh on Monday. He asked: "What would you think, gentlemen, if on any subject vitally touching your interests, sixty of your seventy-two representatives with one voice made a distinct demand in behalf of Scotland—in respect to which it was clear that the interests of the empire were not threatened—what would you think of the rejection of that measure?" Mr. Gladstone spoke in Glasgow on Tuesday and then returned to England.

Lord Salisbury spoke at Leeds on Friday evening to an audience of 5,000. In his speech he said: "We may say that criminal law is all coercion. If Mr. Gladstone is opposed to it, we must presume that he sympathizes with criminals against whom efforts are being made. Our coercion, which he denounces, was directed against robbery, murder, mutilation, terrorism, and a system of organized intimidation which made life bitter to thousands of innocent persons. I wonder if he ever thought for a moment what following our Cabinet by an anti-coercion Cabinet meant. All we desire is that the law be sufficiently business-like and efficacious to carry out its own behests. Coercion means nothing else in our mouths, and to compare that with the coercion that Mr. Gladstone exercised at Kilmainham is a mere juggle upon words. You ask whether I am prepared to answer the demand for local government in Ireland. My reply is that local government and home rule have nothing whatever to do with each other. I have always advocated a good system of local government for England, Scotland, and Ireland, the essence of which is that it is under the control of the central Government and undertakes the duties consigned to it; that it passes by-laws, not laws, and should not be independent. Men can manage their local affairs better, or at least more to their taste, than those at a distance can manage for them; and they can also learn in the practice of local government their duties to the imperial Parliament. I thoroughly admit all this in the case of Ireland. But, unfortunately, Ireland is in a diseased state, and powers given her for a government might be used for oppression, or as a lever to press the imperial Government to give her possession of imperial powers. Earl Spencer warned us of this danger, and therefore I cannot treat it as chimerical, but as a subject for necessary precaution. I believe that the extension of local government to Ireland—I mean a good system—would have effect, though I fear it would take a long time of training to bring them gradually into the habits of mutual forbearance necessary for a civilized community."

Mr. Chamberlain, addressing his constituents at Birmingham on Saturday, significantly said: "Mr. Gladstone in Edinburgh said the bill was dead. If that is so, what are they fighting for? If there is a new plan, why is it not produced? It is impossible to criticise a bill lacking clauses, preamble, or schedule. I hope it will still be possible to reunite the Liberal party, and that they may find themselves agreed in the autumn upon some large measure for home rule and local government for Ireland; but I will not pledge myself blindly to accept and swallow whatever may be offered." The London *News* thinks that Mr. Chamberlain's speech indicates that he may be found supporting the Home-Rule Bill in the autumn.

Lord Hartington in his manifesto to the Rossendale electors says: "Parliament ought to continue to represent the whole and not a part of the kingdom; powers which may be conferred upon subordinate local bodies should be delegated, not surrendered; the subjects delegated should be clearly defined, and the right of Parliament to control and revise the action of subordinate legislative and administrative authorities should equally be clearly reserved; and, lastly, the administration of justice ought to remain in the hands of authority responsible to Parliament. It is asserted that such a limited measure will not satisfy Ireland; but if a majority of the people of the United Kingdom distinctly and firmly declare that they will not assent to any measure which would loosen the bonds of union, it remains to be proved whether the Irish people can be persuaded to maintain a hopeless and unnecessary contest."

Lord Randolph Churchill's manifesto takes the form of a violent attack on Mr. Gladstone, in which he says: "Mr. Gladstone has reserved for his closing days a conspiracy against the honor of Great Britain and welfare of Ireland, more startingly base and nefarious than any of those numerous designs and plots that for a quarter of a century have occupied his imagination. Nor are the results of the repeal of the Union a matter of moment to him. No practical responsibility will fall upon his shoulders."

In a speech on Wednesday evening Earl Spencer intimated that the Land Purchase Bill would not be dropped.

Mr. Parnell will speak in a number of English and Scotch cities.

A considerable sensation was created in London on Tuesday morning by the announcement that Mr. Chamberlain and his friends of the new Birmingham caucus have put down £20,000 as a guarantee fund for the election expenses of their candidates. The Gladstonians have no such fund at their disposal.

Parliament will be prorogued on June 25, and dissolution will occur the next day.

Sir Charles Edward Trevelyan, father of George Otto Trevelyan, is dead at the age of seventy-nine. He was Financial Master of India in 1862 and was created a baronet in 1874.

Honorary degrees were conferred upon Dr. Oliver Wendell Holmes at Cambridge, England, on Thursday in the presence of a brilliant assemblage.

It is officially announced in London that the report that Col. Lockhart's expedition to the Afghan Boundary Commission had been captured by hostile natives was untrue.

The French Senate on Tuesday passed the Princes Expulsion Bill by a vote of 141 to 107. A decree will be immediately issued expelling the Princes.

Louis Laurent Simonin, the French surgeon and traveller, is dead at the age of fifty-six. He visited the United States a number of times and wrote much about it. Among his books are: 'The Mineral Riches of France' (1865), 'The Great West of the United States' (1869), 'The American' (1870), 'American Society' (1876), and 'Gold and Silver' (1877).

Advices from Noumea, the capital of New Caledonia, confirm a report that France has annexed the Hebrides. The officers of a French man-of-war say that the expedition landed troops and hoisted the French flag over the islands of Sandwich and Mallicollo. After establishing the military posts deemed necessary for the protection of French interests, the residents, irrespective of nationality, were informed that France had taken possession. In the House of Commons on Thursday night, Mr. James Bryce said that the Government had instructed Lord Lyons to draw the attention of M. de Freycinet to the reported hoisting of the French flag and occupation implied thereby, as well as to the excitement caused in Australia by the reported seizure. The Paris *Temps* asserts that merely temporary measures have been taken to protect French subjects. Other reports say that France has interfered in the New Hebrides because several agents of a French company were murdered there last March, and the demand of France for the surrender of the guilty persons was not complied with.

King Ludwig of Bavaria was buried on Saturday with great honors in St. Michael's Church, Munich. He left no will. Dr. Schleiss denies giving an opinion upon the King's condition. He says that the chronic inflammation of the cerebral membrane justifies the theory of Ludwig's insanity, and that the normal condition of the cerebellum explains the faculty of clear judgment possessed by the King in spite of the fact that in other respects his mind was diseased.

The Spanish Cortes, by a majority of 200 votes, has declared that no Government of Spain will ever give autonomy to Cuba.

The elections in Holland have resulted in the return of forty-seven Liberals and thirty-nine anti-Liberals. The previous Chamber was a tie.

Fifty thousand acres of crops and two villages have been destroyed by floods in Hungary.

Hobart Pasha (the Hon. Augustus Charles Hobart), Marshal of the Turkish Empire, is dead. He was the third son of the Earl of Buckinghamshire and was born April 1, 1822, entering the British navy in 1836. His career was a brilliant one, and by 1862 he had risen to the rank of post-captain. In 1868 he was appointed to a high position in the navy of Turkey. A year later he was sent to Crete in command of the Turkish fleet, with unlimited powers, and obtained high praise for his conduct of delicate negotiations in the cause of general peace. On returning to Constantinople he was made by the Sultan a full Admiral, with the rank of Pasha. Soon afterwards he became Inspector-General of the Turkish Navy. In the latter position he organized the navy of the Sultan in such a manner as to bring it to a high state of efficiency, and established naval schools, with training and gunnery ships. On account of international complications his name was struck from the British navy list, at the instance of the Foreign Office, in 1867, but in 1874 he was reinstated to his former rank as Captain in the Royal Navy, and placed upon the retired list. When the war between Russia and Turkey broke out, Admiral Hobart Pasha was given the command of the Turkish fleet in the Black Sea. He then formally withdrew from the British service. In the course of the war, at great risk, he ran the blockade of the Danube in a Turkish gunboat. He was raised by the Sultan to the rank of "Mushir" and Marshal of the Empire on January 8, 1881, being the first Christian to receive this honor.

It is reported that an important change has been made in the policy of the Dominion Government in regard to the fishery question. Six weeks ago a fleet of cruisers was established, and instructions given the captains and all collectors of customs for a vigorous enforcement of the Treaty of 1818, including the power to seize American vessels buying bait or other supplies, shipping men or transhipping cargo. A few days ago these instructions were, it is said, modified by omitting the following sentences contained in the first circular: "For other purposes than those of shelter, repairing damages, purchasing wood, obtaining water; and if violating the provisions of the treaty by shipping men or supplies, or trading." Under these instructions American vessels can apparently go into Canadian ports, buy bait, secure supplies, and ship all the men they want during twenty-four hours. If at the end of that time, having been warned, they do not go outside the three-mile limit, an officer will be placed on board and the facts telegraphed to Ottawa. United States Consul Phelan regards the change as a vital and complete admission of the justice of the convention of the United States on the question of commercial privileges.

The total popular majority in Nova Scotia for secession from Canada is 12,000 in a vote of 60,000.

THE "VIEW-WITH-ALARM" PLANK.

FOR the last ten years before its overthrow the strongest reliance of the Republican party in every campaign was the dread of the Democracy, which it cultivated so sedulously. No platform was constructed which did not enlarge upon the ruin threatened to the country if the Opposition should come into power, and the "view-with-alarm" plank was always the one which aroused the party organ-grinder and stump speaker to the most powerful efforts. Especially popular was that count in the indictment which charged the Democratic party with a purpose to "bankrupt the national treasury" by paying "rebel claims," to the extent of thousands of millions of dollars, in case it should ever acquire power.

To go no further back than 1876, we find the Republicans of Vermont resolving that their party was "the only one under which we can hope to obtain an honest and effective maintenance of the Government, as well as the defence of the Treasury against unjust demands and expenditures growing out of the rebellion." The same year the Pennsylvania Republicans "arraigned" the Democrats for a long list of offences, chief among which was "the repeated indications of their purpose, only controlled by fear, to open the Treasury of the nation to the alarming and unjust pecuniary demands from the insurrectionary States." In New Jersey the party held that "the safety and honor of the nation, and its peace and prosperity in the future, can only be assured by intrusting the control of national affairs to the keeping of that party which saved the nation," and that "these would all be imperilled by committing our national interests to the hands of the Democratic party." The national platform of 1876 "charged the Democratic party as being the same in character and spirit as when it sympathized with treason," and "warned the country against trusting a party thus alike unworthy, recreant, and incapable."

The "rebel claims" proved so popular with the Republican managers that in 1878 Mr. Blaine had his Maine Convention adopt a "view-with-alarm" plank entirely restricted to this count; Eugene Hale reporting a resolution which declared that "the evident purpose of the Democratic party, if it should come into full power, to pay the *hundreds of millions* of suspended war claims of disloyal men" made it "doubly important" to elect a Republican House to hold in check the Senate, then "soon to pass under Democratic control." Not to be outdone by his Maine rival, Mr. Conkling, at his New York Convention in the same year, "arraigned" the Democratic party at much greater length, and resolved that in "this great exigency" the Republican organization is "the only efficient bulwark against national repudiation and disgrace."

The "alarm" of the platform-makers grew with the lapse of time. Mr. Conkling's third-term convention at Utica in 1880 declared that "the safety of the nation is again imperilled," that "in the presence of these grave and threatening dangers it is the duty of the Republican party of the Union, in its united strength, to meet and prevent them"; and "to this end" Grant ought to be again elected President. The Vermont Republicans, although having no sympathy with the third-term movement, found in the record of the Democrats "occasion for a just alarm on the part of the friends of a republican form of government," and resolved that "the Republican party must be sustained, as the only effective barrier to the success of treasonable schemes." The Kansas Republicans, who were for neither Grant nor Edmunds, but thought Blaine the man for the hour, considered the occasion equally critical. They found that "under the name of Democracy are arrayed against the civilization of the age men who, having striven by rebellion and open war to destroy the nation, are now endeavoring to seize the Government by force or fraud," and declared that "in the approaching Presidential campaign there will be no middle ground upon which timid patriots can stand, and those who are in favor of the perpetuity of the Union, the preservation of liberty, and the promotion of civilization are Republicans, and of necessity must vote for the Republican candidates; and those who are in favor of violence and anarchy, the dissolution and utter destruction of Republican government, will vote for the success of the Democratic candidates."

The campaign of 1884 found Republican platform-makers still in a terrible frame of mind. In electing delegates to the National Convention of that year, the New York Republicans put on record their confidence in the success of the party in the coming Presidential election, "because of the necessity for the continuance of Republican administration of the affairs of Government, which Democratic inability and incapacity would imperil." In New Jersey the Republican platform declared that "the Democratic party, although masquerading now as a party of patriotism and reform, is essentially the same as when it declared the war for the Union a failure." The Massachusetts Republicans declared their well-grounded confidence in the success of the party, because they believed "the people will not place the Federal Administration under a control which involves financial, industrial, and commercial peril."

Republican State Conventions have just been held in Maine and Vermont for the first time since the contest of 1884. A Democratic President has been in the White House for a year and a quarter, and the character of his administration has been fully established. Sufficient time has elapsed to disclose what are its aims and purposes, and to show whether those aims and purposes involve harm to the nation. And yet, when, according to all their past predictions, Republican resolution-drawers ought to find a superabundance of indisputable evidence that the country is far advanced on the road to ruin, and their platforms should tremble beneath the load of proofs which it ought to be easy to cite, a careful study of these two deliverances shows the remarkable fact that they contain, for the first time, no "view-with-alarm" plank whatever. The Vermont Republicans no longer, as in 1876, resolve that their party is the only one under which can be secured "the defence of the Treasury against unjust demands and expenditures growing out of the rebellion." The Maine Republicans no longer, as in 1878, declare that it is "the evident purpose of the Democratic party to pay the hundreds of millions of suspended war claims of disloyal men."

The extraordinary significance of these omissions will not be fully appreciated until the fall campaign is well under way—nor, indeed, in all their bearings, until the next Presidential contest is fought. For years the "view-with-alarm" plank has been the chief reliance of the Republican managers. When everything else failed to dissuade doubtful voters from supporting the Democracy, the claim that the Republican party must be sustained "as the only effective barrier to the success of treasonable schemes," to use the words of the Vermont Republicans in 1880, was expected to do the business, and generally did. Garfield would not have won in 1880 if "timid patriots" had not been assured that there was "no middle ground" between his election and "the dissolution and utter destruction of republican government." Blaine would have lost nearly if not all his plurality over Cleveland in Massachusetts in 1884, but for the charge that the latter's election would "place the Federal Administration under a control which involves financial, industrial, and commercial peril." The loss of this bugbear is a loss of campaign material such as no party in our history ever so suddenly suffered.

Every well-wisher of his country must rejoice at the change which has come about. The "view with-alarm" plank was an indictment against popular government. The Kansas Republicans in 1880 resolved that "those who are in favor of the perpetuity of the Union, the preservation of liberty, and the promotion of civilization are Republicans, and of necessity must vote for the Republican candidates; and those who are in favor of violence and anarchy, the dissolution and utter destruction of republican government, will vote for the success of the Democratic candidates." The count showed 4,454,416 votes for the Republican candidates and 4,444,952 for the Democratic. In other words, out of 9,000,000 voters only 9,464 more were "in favor of the perpetuity of the Union, the preservation of liberty, and the promotion of civilization" than were "in favor of violence and anarchy, the dissolution and utter destruction of republican government." Soberly to state such a proposition is to show what an absurdity the "view-with-alarm" plank was, and what a blessing it is to have it smashed.

MASSACHUSETTS REPUBLICANISM.

THE widely accepted opinion that Oliver Ames will receive the Republican nomination for Governor in Massachusetts is an impressive sign of the demoralization of the party. It is three months yet before the convention, and the prospect may change in the meantime, but the important fact is that the selection of such a candidate is seriously canvassed and earnestly favored by many if not most of the party leaders. Such a development may well engage the attention of the country.

Mr. Ames is a man of amiable disposition, who is esteemed by his neighbors and respected by the community in which he lives; but he is devoid of those qualities of mind which, in Massachusetts more than in any other State, have always been deemed essential in the aspirant after high office. He is the very embodiment of the commonplace in point of ability, and by virtue of his personality would never exert any influence beyond the circle of his intimates. He lacks the capacity to make a presentable appearance on public occasions; and his failures when, as Lieutenant-Governor, he has represented the State at such times, have been almost pitiable. In short, he is the sort of man whom, a generation ago, it would have been considered preposterous to suggest as a possible occupant of the highest office in the State. But Mr. Ames inherited the control of a great manufacturing industry and is a very rich man. Like so many rich men nowadays, he longs to hold public office, and when the Republicans wanted a generous contributor to the party's campaign fund in the fight with Butler four years ago, they put him on the ticket as Lieutenant-Governor, and they have re-elected him ever since, everybody supposing that this honor would satisfy his ambition. But, so far from this, the enjoyment of the second office has only made him eager for the higher place, and this year, Gov. Robinson having announced his purpose to withdraw from public life Mr Ames seeks to become his successor.

There has, perhaps, never been a case where the mere possession of wealth was so baldly advanced as a reason for giving a man the highest honor at the disposal of a State. His service in the Lieutenant-Governorship has established his lack of the proper qualifications for public service, and emphasized the absurdity of preferring him to such a man as ex-Congressman Crapo, for instance, who, under the old traditions as to the choice of Governors, would naturally have come to the front as the Republican candidate this year. And yet in the year 1886 there is nothing which should surprise anybody in the prominence of Mr. Ames in the Republican party of Massachusetts. His nomination would only be carrying out the same policy which has governed party management ever since Mr. Blaine was accepted as the Presidential candidate in 1884. The debasing effects of this lowering of the standard became apparent last year, and have been still more obvious this year. A conspicuous illustration was presented in the Legislature of 1885, chosen on the day of the Presidential election. The lower branch passed a so-called Dynamite Bill, which proposed new safeguards against the use of the explosive for the unlawful destruction of life or property, "within or without the Commonwealth," the motive being the then recent explosions in London. The measure went through by a vote of almost two to one, without attracting great attention, but, before it could become a law, a "Blaine Irishman," who had a seat in the House, became aroused to the significance of the act, and demanded a reconsideration. He boldly declared that the Republicans must choose between the friendship of the Irish voters, who, like himself, "were convinced by Republican arguments and voted for Mr. Blaine last year," and the duty of denying dynamiters the right of making Massachusetts their base of operations against Great Britain; in other words, they must abandon the attempt to do their duty as civilized men, or lose the support of the dynamiters. The issue was clearly made, and when the House, with 166 out of its 240 members Republicans, was called to meet it, it declared three to one in favor of the dynamiters on a *viva-voce* vote, while the small minority shrank from going on record when a demand was made for the yeas and nays.

The bid for the "Irish vote" by the last Legislature has been followed by bids for all sorts of votes by the present body. After for many years consistently and persistently opposing the proposition to repeal the poll-tax qualification for the suffrage, both branches, with large Republican majorities, have this year shifted their ground and voted for its abolition, for no other reason than the fear that the Democrats might gain a few votes if the Republicans did not go over to their platform. An arbitration bill came up not long after, and, because it was thought to be a good way of capturing the Knights of Labor vote, both branches sanctioned the rank injustice of restricting the choice of the arbitrator who represents the employees in any controversy, to members of labor organizations. A bill exempting soldiers from the necessity of passing competitive examinations, which was truthfully described by the Boston *Journal* as being "an assault upon the State civil-service system every bit as deadly" as the abortive assault of Mr. Randall upon the Federal law, went through both branches with the approval of a majority of the Republican members. The nomination by the party of a rich man and nothing else for Governor would be simply a fitting culmination of such a record.

In the days when the Republican party represented something, Massachusetts used to boast of her leadership in the party. She retains that leadership in these days of the party's degeneracy. The ruling idea of the Republican leaders now apparently is to bid for votes of various classes, by various devices of demagogism, and to buy with money such as cannot otherwise be got. Under this régime the fact that a man "is a perfect bonanza," as an admirer has styled Mr. Bodwell, the rich granite contractor in Maine, is the strongest argument for nominating him as Governor. The prominence of Mr. Ames in the canvass for the Republican candidacy in a State having the traditions of Massachusetts, is the most alarming symptom of a disease which seems to have secured a death-hold upon the party.

MONT-DORE AND ITS WATERS.

Is there any more exhilarating way of travel than riding upon the *banquette* of a diligence among picturesque valleys and over perfect roads? The tourist who has the true tourist's instinct will always appreciate this means of locomotion, and the more as routes on which it may be enjoyed grow fewer. With each decade, almost with each new season, some diligence route succumbs, in France, to the steady development of railroads—a transformation which, if it is not so rapid as with us, is quite as inexorable. Throughout France the steel-rail network is gradually extending itself up the mountain valleys and over the upland plains; and, worst of all (at least from the picturesque tourist's point of view), where the steel rail can gain upward no longer, the tunnel pierces the mountain, and you are given gross darkness, a Cimmerian whirl and roarings instead of mountain height, and stream, and distance.

But in central and southern France many of the old-time routes remain; and two of these, upon which the voiture will not soon be abolished, are those which lead mountainward from Clermont-Ferrand and from Laqueuille stations, on the new railway from Tulle, to La Bourboule and to Mont-Dore in Auvergne respectively. The old route by Clermont-Ferrand is the longer, and probably even finer than the one which I chose, the new route by Laqueuille; a station which you reach by a long sweep around the Auvergne mountains, thirty-nine miles west of Clermont-Ferrand. At this point the Auvergne railway has won an elevation of some two thousand feet; already there is a sweet mountain wildness on the hills. The diligences set off at sunrise up the valley of the Dordogne: as you advance, the mountains rise somewhat sternly on either side, but with a wild charm. The higher slopes are purple with long tracts of flowering heather, most beautiful of mountain vestments; the stream winds below, between tracts of yellow-green turf, more wonderfully vivid in hue, last August, than any that I have seen elsewhere, except, perhaps, at the Lakes of Killarney, much earlier in the season. There is every appearance of great fertility. The inhabitants claim, indeed, that this is the most fertile valley in France.

Certainly it is one of the most beautiful. The country could not well be more *accidenté*. For thirteen miles the road is tossed up and down among the hills; it passes through La Bourboule station, where the diligence lets off the morning contingent of visitors. You cannot avoid being struck by the names of places; it is a country of queer names, some of them more Gaulish than Latin in their look. The friendly guide-posts of the Club Alpin Français point out the way to the mountain passes from wild hamlets with still wilder names—Queureuilh and its cascade, Murat-le-Quaire, Banne-d'Ordanche (in the Gaulish tongue, *benna* meant a wagon), which is the name of the conical mountain, 4,970 feet high, that looms beyond the valley to the northeast. And what a land of patois! The curious local names are but the beginning of oddities; the local speech is a survival. Do not imagine that your pure Parisian French will help you to understand the talk of the driver with his mate, or of the peasants at the relay stations. They are talking a language which was probably thousands of years old when Julius Cæsar's veterans toiled up the same road. One word out of four, perhaps, you can understand; the other three are the rolled débris of the ancient Gaulish speech, the linguistic jetsam of these mountain shores, and here only to be found in Continental Europe, though the Celtic speech in Ireland is related to them. These words, or many of them, so the philologists say, are the words which Vercingetorix used in rallying his Arverni to make their unavailing stand against Cæsar.

The modern Auvergnat, however, is by no means restricted to his patois. Speak to him in French, or even in any American or Anglican version of that language, and he will answer you in French that is fairly good, though rustic. But this French is not so much his native tongue as his acquired accomplishment; the Gaulish dialect of Vercingetorix—which of course is not a patois, correctly speaking, but a survival—is his native and preferred speech. I need hardly add that the speech of cultivated people in Auvergne, as elsewhere throughout France, differs no more

from the French of Paris than the Bostonian's English differs from the Baltimorean's. It is a mistake to think that outside of Paris a patois is generally spoken. This common error comes from the American traveller's usual avoidance of the provinces in his journeys. It is true that every French province, almost every French commune, even, has its patois; but this is confined to the uneducated classes. If a patois is spoken in the kitchen, good French is the language of the drawing-room in every part of France.

Half an hour beyond La Bourboule the diligence sets us down in the bustling square of Mont-Dore, and upon the Dordogne River near its mountain sources. We are at an elevation of 3,445 feet above sea-level; excepting only Barèges, Mont-Dore is the most elevated mineral spring in France. I may add that it has another distinction: its name is misspelled with a more curious persistence than that of any other spring. Since the name of Gustave Doré became familiar it has not been given to any English or American compositor to abstain from adding the acute accent to the last vowel of Mont-Dore; even in the Index of the usually accurate Poole this error occurs. At first sight the mountain village of Mont-Dore has a somewhat severe aspect; the roofs of it are covered with hewn stone instead of tiles to resist the winter storms. Its two hundred houses are huddled together on the right bank of the upper valley of the Dordogne, still an infant stream, not far from its point of origin in the cascades of the Dore and the Dogne. Some thirteen hundred people live here all the year round; the number of the summer guests is several times as large. On either hand rise fantastically shaped mountains. The top of the Pic de Sancy, a few miles away, 6,181 feet high, is the most elevated point of the mountains of Central France. The springs have been known from great antiquity; here the Arverni had their *piscinæ* before history began, and here the Romans disported themselves after the fatigues of oppressing the Gauls. Then, during the dark ages, Mont-Dore, the *Mons Duranius* of the Romans, was forgotten; for a thousand years you will find but one mention of the place in all literature. This occurs in a letter written by the good Bishop of Clermont, Sidonius Apollinarius (agnomen of prandial suggestiveness), in the fifth century to his friend Oppert; in this epistle he refers to the springs of Mont-Dore at the *Calentes Baiæ*.

Early in the present century these waters began to resume their ancient importance. The inflow of patients led to the construction of new establishments. The new establishments in turn attracted new patients, convincing many doubting invalids that they could really afford the luxury of being ill. Hotels sprang up rapidly; and now, in place of the mountain rudeness, one finds at this station every convenience, and nearly every luxury, that the most determined and self-regarding invalid can desire, besides every means for the administration of the thermal waters. Baths, douches, "pulverizations," *piscinæ*, and all the modern therapeutic bathing appliances are here developed to their fullest perfection, and I need not attempt their description.

The climate of Mont-Dore is a true mountain climate, not dissimilar to that of Davos or of Saint-Moritz in Switzerland—that is to say, it is cool in the morning and evening, and generally warm during the day, with variations of the thermometer almost but not quite as sudden and trying as those of New York, Philadelphia, or Boston. But it is the tonic coolness and the agreeable warmth of the mountain air, without the seaside humidity. The season lasts from mid-June to mid-September; July and August are perhaps the pleasanter months to choose, though the crowd is then greater. There are charming days in early September; but after the 15th, winter is apt to leap down any night from the heights of the Pic de Sancy. At the elevation of Mont-Dore the mean barometer is but 26.58 inches, and this lessened pressure is well recognized as a beneficial influence in certain diseases which are specially treated at this station. In pulmonary phthisis the effect of elevation is still a controverted question among physicians. I am of those who believe that lessened atmospheric pressure is almost always beneficial in the earlier stages of phthisis and before there is any danger of hœmorrhage. In the later stages lessened pressure is mechanically dangerous, bringing too great a strain upon the pulmonary tissue, and inducing arterial ruptures. But it is only the earlier stages of phthisis that ever should be treated at Mont-Dore.

The springs are nine in number, with a daily yield of 100,000 gallons. Eight of these are thermal, ranging from 38° to 45° C. (100° to 113° Fah.); the other, the Sainte-Marguerite spring, flows at 10½° C. (51° Fah.). This spring contains little but carbonic-acid gas, and is used mainly in diluting wine. All these springs have their source in the rock at the foot of a mountain of granitic lava, the Angle. Their mineralization is not strong; they contain the bicarbonates of lime and soda, besides arsenic and many other less important constituents. The waters are taken *intus vel extra*. Internally a glass every half hour until the noon breakfast is the ordinary form of exhibition. As baths, inhalations, sprayings, the application is a very elaborate affair, and choice is made among the appliances according to the indication of the special case. Taken internally the waters quicken the pulse, awake the functions of the skin, and increase the bronchial secretions. At first they cause a freer expectoration in sufferers from pulmonary disease; then, in favorable cases, they check or stop it. After drinking the waters for a fortnight the moment of what is called "saturation" arrives; the appetite is for the first time checked, aversion for the mineral waters is felt; it is the moment to discontinue their use. A longer sojourn among the hills will help to complete the cure, unless the patient is possessed with the restlessness which leads him to fatiguing changes of habitat during the summer.

And for what complaints is the cure at Mont-Dore to be prescribed?

(1.) Affections of the respiratory organs are the main diseases treated at Mont-Dore. The reader need not be reminded that of all diseases of maturity these form the most extensive and the most fatal class. They include bronchitis, laryngitis, asthma, pharyngitis, catarrh, both bronchial and post-nasal; and last, but most important of all, phthisis, here treated in its early stages.

Chronic bronchitis is one of the affections most commonly and most satisfactorily treated at Mont-Dore. There are usually complications, as with asthma, pulmonary emphysema, dilatation of the bronchial tubes. Such cases are often sent as a last resort to Mont-Dore; but it rarely happens that a material improvement is not effected by the thermal treatment. The inhalations act directly upon the bronchial mucus, and check its secretion; and as a drink, the waters have a tonic and alterant effect.

With "dry" or "nervous" asthma, that obdurate form, namely, of this persistent disease, which is caused by muscular spasm of the smaller bronchial tubes, a three-weeks' course at Mont-Dore gives relief, sometimes cure; but in a certain number of cases repeated yearly visits are necessary. My friend Dr. Emond of Mont-Dore reports a considerable number of such cases, in which a perfect cure was brought about. In moist asthma the results are still more encouraging. In a case known to me—that of a lady who was sent from New York to Mont-Dore a few years ago by one of our best-known city surgeons—the most persistent symptoms were entirely cured; in this instance there was much dyspnœa. Chronic bronchitis and laryngitis, or "clergyman's sore throat," finds here, as at Royat, an excellent sanitarium; the difference being in the cooler climate of Mont-Dore, which for certain constitutions is more powerfully tonic than that of the other station.

Post-nasal catarrh, the most distinctively American of diseases in its frequency, and one of the most stubborn to treat, will seldom succumb to anything but energetic local measures. The tissues that are affected must be attacked; and these local applications require to be supplemented, in cases where there is a scrofulous, arthritic, or other constitutional tendency, by tonics and by general treatment. At Mont-Dore, at Aix-les-Bains, and at some other smaller places, both local and constitutional treatment are combined successfully; it is for the physician to choose among these places, according to his patient's special need. They are the appointed *sanatoria* for this distressing disease.

It remains to speak of phthisis, the master-malady of northern countries—the cachexia with which physicians and pathologists have struggled with but partial success. The bacillus theory of the origin of the disease remains to be proved by the pathologists; the cure of the disease, when once it is fully established, remains to be sought. It is a rare, though an occasional, triumph of the physician; and in some constitutions nature triumphs over even well-advanced cases, and leaves the sufferer of early years to a healthy old age. But the experience of nine cases out of ten is that the malady, if checked at all, must be checked before it has made much headway.

There is no doubt that in many cases this can be done. My own observation leads me to believe that pulmonary consumption could be arrested in four or five cases out of ten if it were taken early in hand, and if the proper conditions could be commanded for the patient. But the lot in life of the majority of sufferers makes this command of favoring conditions impossible. A cure that requires the entire change of the patient's way of living is not one that can be generally available; sometimes it is impossible on account of the expense required, sometimes impracticable on account of the invalid's natural unwillingness to suffer transplantation. One of my patients once said to me, "I would rather die in the North than live in the South." But, after all, these cases are exceptional; and summer transplantation to spots like Mont-Dore, Eaux-Bonnes in the Pyrenees, or Aix-les-Bains, is one of many beneficial influences that will sometimes arrest the early stages of consumption. In the later, the invalid is generally the better for staying at home. Exile, under sentence of death, is the most cruel of prescriptions. It is of little use to leave home unless the invalid can command the conditions of contentment, as well as of comfort abroad.

(2.) It remains to add that rheumatism in its milder forms, nervous paralysis, and uterine derangements not depending upon grave lesions, are all treated at Mont-Dore, and sometimes cured. Drs. Emond, Cohadon, and Alvin may be consulted with full confidence.

TITUS MUNSON COAN.

AFTER THE BATTLE.

LONDON, June 8, 1886.

"TELLERS for the noes, Mr. Brand and Mr. Caine." The House of Commons never refuses a mild joke, and the odd juxtaposition of names sent honorable members smiling and chuckling into their respective lobbies. Up to the last moment, everything was possible; and when the

clerk handed to Mr. Brand the slip of paper which is the symbol of victory, there arose a storm of excitement which carried everything before it. No such scene has been witnessed since 1866, when a combination of Whigs and Tories threw out Mr. Gladstone's Reform Bill. "These violent delights have violent ends"; the Whig victory of 1866 was followed by the Conservative surrender of 1867, when Tories and Radicals combined to set up household suffrage. Some of the older Liberal members sat silent last night while the two parties opposite were trying to shout one another down. Perhaps they were trying to discover which of the jubilant ex-Ministers on the front Opposition bench would rise in 1887 to introduce an Irish Government bill conceived in the spirit of Tory democracy. The Government accepted defeat without any sign of emotion; they must have known what was coming, and their plans must be already almost matured. Will they dissolve or resign? It is generally believed at present that Mr. Gladstone will resign, and that Lord Hartington may be induced to form a government; but dissolution cannot be long delayed. Setting aside the enthusiasts on both sides, there is but little expectation that a general election will produce a decisive change in the balance of parties. Even if Mr. Gladstone were to come back with a compact majority of British home-rulers, it is almost certain that the House of Lords will reject, once at least, any measure of home rule sent up from the Commons. We have before us the far from pleasant prospect of a series of short and barren Parliaments; the strife of parties and sections may continue until at last, in sheer weariness, we accept some unsatisfactory compromise of the Irish question. For the Liberal party the outlook is very gloomy. We are most seriously divided, and instead of discussing quietly the principles now at issue, we are wrangling furiously over the question who is to blame for what has happened. The Associations are all for making an example of Mr. Chamberlain; but Mr. Chamberlain is not in the least frightened. He goes about with the air of a good man basking in the sunshine of prosperity. He told us what would happen if his advice should be neglected, and now his prophecy has been fulfilled.

To speak seriously, Mr. Chamberlain has not greatly distinguished himself in the course of this great controversy. He has shown himself a consummate debater, but he has been very inconsistent and very superficial. In his speech on the second reading, he declared for a Constitution on the Canadian model, but he seemed to be unaware of the scope of his own argument. He has fallen back on federalism in order to save the supremacy of the Imperial Parliament. Yet who can doubt that the federalization of the United Kingdom would alter the position of Parliament much more radically than Mr. Gladstone proposes to alter it? Even in making his citations from the British North America Act, Mr. Chamberlain managed to show that he has not made a thorough study of his subject. He quoted the general words of the section which defines the legislative authority of the Dominion; he took no note of the general words which define the legislative authority of the Provinces. Nor does he seem to have heard of the decisions of our courts by which the Canadian Provinces have been upheld in the exercise of independent powers such as he would probably deny to Ireland. Mr. Chamberlain stands on dangerous ground as a party man. He has given up his hold on the Associations; he has inflicted a conspicuous humiliation on his own friends. He might therefore have been expected to make his constitutional platform as safe as possible, instead of which he has done his best to convince us that his platform is not one on which any practical politician can stand beside him. He has succeeded in his immediate purpose, and now, where is he to go? If he takes office under Lord Hartington, he will finally alienate his Radical friends. If, on the other hand, he means to remain unattached till this Irish difficulty is settled, he may find himself classed as a sort of Radical Goschen—one of the small band of distinguished impracticables who are always with the Liberal party.

But if Mr. Chamberlain deserves censure as a party man and as a statesman, there can be no doubt that the chief responsibility for our present confusion must rest on Mr. Gladstone. We are sometimes told that our failure to respond to his proposals is another proof of our national inaccessibility to ideas. That is hardly a fair statement of the case. Mr. Gladstone had certain ideas about home rule which he continued to expound with great vigor for fourteen or fifteen years. He told us on many occasions that the Imperial Parliament was both competent and willing to make good laws for Ireland. He pointed out the difficulty of separating between British and Irish affairs. He said he would never give Ireland any home rule except such as might be given to Scotland. He "would never condescend to the prejudices of the Home-Rulers"; he would never consent to "disintegrate the capital institutions of the country"; and if Irishmen made unreasonable demands he would remind them that "there is a higher law than the law of conciliation." So late as May, 1884, Mr. Gladstone argued that the franchise might safely be extended in Ireland because "there is a security for the loyal minority in the composition of the House of Commons." These were the ideas which found access to the mind of the Liberal party down to the end of 1885. About that time Mr. Gladstone parted with his old ideas, and laid in an entirely fresh stock. He became convinced that Parliament could not legislate for Ireland, and that if there was a higher law than that of conciliation, it was not for us to apply it. We must meet the prejudices of the Home-Rulers against "foreign" law, by disintegrating Parliament, and by giving them a legislature of their own. These new ideas may have been perfectly sound, but they could not be expected to penetrate all at once into minds already occupied by the Gladstonian ideas of 1871-85. This, however, is a kind of difficulty for which the Prime Minister had no consideration. He had himself not only discarded, but honestly forgotten his old opinions, and he felt sure that he had the heart of the people with him in his new venture. He allowed no delay; he scouted the notion of prolonged inquiry; he paid no attention to differences of opinion in his own party. His new principle occupied his mind to the exclusion of everything else; trusting in that and in his own powers of management and persuasion, he went right forward and broke up his party.

What the effects of the split may be, we cannot yet foresee. Some of the Whigs desire to organize themselves strongly as a party of Liberals opposed to home rule, state socialism, and disestablishment of the Church. Radicals of the Labouchere type profess to look with satisfaction on the Whig movement. They hope to recapture Mr. Chamberlain, but they would like to force Lord Hartington and his friends into the Conservative camp. It is not at all likely that they will succeed, but if they do, they will probably be disappointed by the result. I do not believe that Radicalism in this country is strong enough to stand by itself without the help of the moderate Liberals. All the recent triumphs of the Liberal party have been due to the fact that Mr. Gladstone commanded the confidence of Whigs and Radicals alike. There is hardly any one among his possible successors who can command the support of both sections. Perhaps Lord Rosebery might manage it, but then he has the great misfortune to sit in the House of Lords. A single leader is not absolutely necessary for the maintenance of unity; but after enjoying the services of a leader who makes perhaps the best party hero on record, Liberals will hardly know how to do without a chief of one sort or another. In the meantime they make light of their difficulties, and they fight out their domestic quarrels with perfect indifference to the presence of the Conservatives. And the Conservatives have not done much to shake the confidence of their opponents. Lord Salisbury has had a splendid opportunity, and he has missed it, not for want of ability, but for want of a little elementary politics. His recent speeches have been very able, but they might have been expressly composed in order to confirm the popular impression that the Tories are a party of coercion, totally destitute of sympathy with the Irish people. His phrase about not giving self-government to Hottentots was of course only a figure of speech, but Irishmen believe that he has compared them to Hottentots, and that is enough. Again, Lord Salisbury's recommendation of twenty years of "firm" government was perfectly well meant; but nothing he can say will persuade British Radicals that he meant anything but twenty years of repressive legislation. Lord Salisbury also has the misfortune to sit in a House whose members are not brought directly into contact with the people; and that is one reason why he is so extremely weak as an electioneering agent. The difference between the Lord Beaconsfield of 1880 and the Mr. Disraeli of 1874 was not merely a difference of age. R.

THE DEFEAT OF MR. GLADSTONE'S BILL.

DUBLIN, June 12, 1886.

MR. GLADSTONE'S Home-Rule Bill has been defeated, and defeated by a larger majority than either supporters or opponents anticipated. This is only what we might have expected. It was not reasonable to suppose that a measure could be rushed through at once which has been advanced by British statesmen only within the past few months, and advanced almost without British party and press support—rather in the face of party and press opposition—and without the animating influence of a vigorous British public agitation. In this respect and as regards a measure of first importance, it appears to me that Mr. Gladstone and Mr. Morley stand out in (as Mr. Healy put it) their "almost divine courage." The defeat is only what we might have expected, and it need not be deplored. It is better that the English people should have time to consider the question and appreciate the wisdom of the change. They will be more likely to give home rule their moral support, and less likely to consider it as still an evil—if only the least of two evils. As to Irish Home-Rulers, the delay is altogether an advantage. It is not good for the country generally that the present disorganization should be continued, and continue it will until matters are taken in hand by an Irish Administration; but it is well that the thinking portion of the country should appreciate and be made to accept the position to which the Irish party has now brought the question.

Reviewing the past eight years, since Mr. Parnell fully undertook the unravelment of the Irish skein, we must acknowledge that in a certain sense parties in Ireland have been manœuvred rather than persuaded into accord. Mr. Parnell has "drawn all men unto him," not so much by the force of argument as by making each man think that he, Parnell, agreed with him—or at least was not opposed to him. Hostility and outspoken denunciation are generally the attitude of an earnest political or moral leader towards

those followers who only partially unite with him, or accept his guidance with reserve. To keep all the abuse for the enemy has been Mr. Parnell's policy. Eight years ago the Irish cause stood, as it generally had stood, shivered into fragments. There were the Fenians and the Fenian sympathizers, the simple Repealers, the Federalists, the moderate and the advanced Home-Rulers—agreeing in nothing but in hating each other more than they hated the common foe. Mr. Parnell has, by the power of his statesmanship, fused these heterogeneous elements apparently into one. In some respects the process has not been ennobling. There appeared more simplicity and honesty in the old bungling straightforwardness—every man saying what he thought and acting accordingly. There was, however, no result, and we must give the credit to the man that has at length made the egg stand on end. But the Irish party, and Mr. Parnell especially in his speech before the final division, in their full acceptance of Mr. Gladstone's bill as a final settlement of the quarrel between the countries, have put a strain upon the extreme sections of supporters, abroad and at home, whose effects it is important that we should have time to appreciate. Were the measure carried precipitately through, extreme sections might say they had been jockeyed, repudiate their part in the settlement, and try to use it as a fulcrum for further agitation. The delay of a few months will be a test. What will our countrymen in America and Australia say? how will our countrymen at home vote, now that it is beyond all question apparent what the party are going in for? I shall be agreeably surprised if there be not an appreciable cooling down of enthusiasm in some directions, but entertain no fear as to the verdict of the average Irish common sense. The atmosphere has been cleared and purified. After all, humanity more easily loves than it hates. Good feeling is taking the place of animosity on both sides of the Channel. Mr. Gladstone's alchemy of justice will be as effective in this case as justice has been always and everywhere.

The majority of Irish Protestants, adherents of the Irish Loyal and Patriotic Union—among whom must be included, as a rule, the wealthy and the most refined classes and some of the best educated and most elevated natures—never felt more bitterly than they do at present. One of their principal mouthpieces in Parliament, Major Saunderson, exclaimed, "Hear, hear," when Mr. Parnell said, in the course of a late speech, "One would think that the Protestants of Ireland were going to be handed over to the tender mercies of a lot of thugs and bandits." Regarding the defeat of the bill, the (Orange) *Dublin Evening Mail* wrote:

"Yesterday, when the result of the great debate was known, the streets presented a curious phenomenon to the observer. Every person you met, whose appearance indicated even a moderate social standing, looked as if he had recovered the key of his front door from the hands of a gang of burglars."

"Are we idiots or are we fools?" cried Mr. Healy the other day. No, these Protestants regard the masses of the people as the fools and idiots, and the leaders as thugs and bandits, and consequently do not believe one word regarding the acceptance of the principles of the bill by the Irish party: they consider it is all pretence. And yet, perhaps, they do believe the leaders are "idiots and fools," to play such a game. Discuss the question candidly with an honest friend on the opposite side, as any one living in Ireland must occasionally do who has definite opinions of his own, and who does not wish to close his mind to reason and argument, and the differences always resolve themselves into these points: Are the intentions of Mr Parnell and his friends in the main honest or malevolent? Are the mass of the Irish people likely to be swayed by ordinary motives, or are they bent on a lawless democracy? Can religious freedom be maintained under a government mainly Catholic?

As to Mr. Chamberlain and his "cave-men," I see no reason to suppose that they are actuated by dishonest motives. It would have been easier for them to follow their natural leader, Mr. Gladstone. A year ago Mr. Chamberlain sought the opinions of Irish Nationalists regarding a feasible settlement of the home-rule question. His rejoinder to at least one of the communications he received, showed that his conceptions of a settlement were far behind Mr. Gladstone's present plan. He and his friends are the exponents of what may be called the Cavour policy regarding Ireland. It must be forty years since Count Cavour visited this country and published, in a pamphlet of extraordinary vigor, his impressions regarding the Irish problem. He maintained that what Great Britain owed to Ireland was a system of national education, an efficient police, the disestablishment of the Church, and the thorough reform of the land laws; but that under no circumstances would it be safe for her to permit the establishment, even for local affairs, of a separate Irish Legislature. Twenty years later, in the height of the Fenian agitation, and while home rule was still in the air, this pamphlet was translated by Dr. W. B. Hodgson of Edinburgh (whom to know was to love), and widely circulated. It is doubtless to be found in all the public libraries, at least on this side of the water. Before and since that publication the *Spectator* newspaper has been the most powerful exponent of the Cavour policy—perfect justice to Ireland, but, in Mr. Froude's words, "England an extinct volcano" before the establishment of a separate legislative assembly in Dublin. Such were the views of nine English Liberals out of ten until within the past few months. We have no right to suppose that those who retain such opinions are disingenuous, and this party will die hard—harder, perhaps, than is now supposed.

There is one matter which the discussions of the past few months have made clear, and that is the position of "Ulster"—not of "Ulster," for the Ulster fallacy has exploded, but rather of the three corner counties. If the Protestants of these corner counties are willing to leave their coreligionists who are scattered over the rest of Ireland to the tender mercies of the Catholics, the Nationalists of the rest of Ireland will never consent to leave their friends in those three counties to the tender mercies of the Orangemen.* Ireland must stand or fall intact. And, indeed, regarding Ulster Protestantism things are not as hopeless as they appeared some months ago, when one of the most intelligent Protestants in Ireland put down the number of Irish Protestant Home-Rulers at "under thirty." An apparently vigorous Irish Protestant Home-Rule Association has been established in Belfast; branches are in course of formation at least in Dublin and Cork, and the publication of a collection of 'Opinions of some Protestants regarding their Irish Catholic Fellow-Countrymen' shows that home rule has taken a wider and deeper hold among Irish Protestants than was supposed.

Journalism on either side has not been playing a very dignified part in the discussion. Seeing that the average human mind cannot bear the state of indecision and the strain upon its self-esteem (apart from the consumption of time) necessary for the study of papers on both sides of the question, both sides might feel it incumbent upon them to be a little fairer than they are. Few readers have ever been so privileged as were the readers of Garrison's *Liberator* in having a column reserved as a "Refuge of Oppression." But a new evil has been added in sensational journalism, and of that we had a good example in the *Pall Mall Gazette* of the 31st ult., when it devoted four pages to an elaborate muster-roll—infantry, cavalry, and artillery, engineers and rifles, divisions and brigades, active and reserve forces—of the "enrolled Orange army of 73,561 men." Such journalism can serve no end but to "sell the paper"—for the time; and it does immense harm in flattering the vanity of those who would desire the establishment of such an army, and in making Englishmen generally believe that in the interests of peace and order in Ireland no form of home rule would be safe.

We are now to have a general election. If home rule carries the day, we shall doubtless have a measure much better than the bill just wrecked—for that it needed alteration in many important respects, only the necessities of party unity prevented many of its supporters from admitting. If home rule be defeated, we shall have a prolongation of the contest. In either case, the Conservative and the Cavour parties will make a desperate fight, and the House of Lords is also to be passed. The delay of a few years, another trial of coercion, are possible before the inevitable is accepted. In any case, until this question is decided, it will be difficult to accomplish any other important business in the Imperial Parliament.

D. B.

* The *Graphic* maps of June 5 cannot be too highly commended as an aid to the consideration of the Ulster question. It is much to be regretted, however, that the colorist did not adhere to one shade of tint for "best" or "worst" in all the maps.

A RADICAL VIEW OF THE ITALIAN ELECTIONS.

ROVIGO, May 29, 1886.

THE general elections are over, leaving confusion worse confounded, the excitement intense, the disappointments numerous, the surprises most surprising of all. The worst feature of the elections is that a fewer number of electors have taken part than in past times, which proves a growing sense of the impotence of present institutions as now working to promote the general interests of all classes. Hence numbers of peaceable citizens say: "If we belong to an electoral committee, if we take a prominent part in public meetings or in private electoral reunions, we are sure to make no end of enemies, and by no means so sure of gaining any friends." Then, again, with the exception of the Radicals, there has been no programme patent to the ordinary mind, no special measures to carry to which a certain party is pledged, the opposite party opposing them. Every one expected from Depretis the announcement of a future policy at home and abroad, but in his only speech, made at the Roman banquet, he spoke entirely of himself, of the calumnies hurled at him, of friends turned foes, of his excellent intentions, of the reasons which had prevented him from carrying them into effect.

It cannot be said that even a personal programme has been kept before the electors. You are aware that here we have what they call the *scrutinio di lista:* instead of the one-membered colleges, each province elects a number of members proportioned to its population, which system has the benefit of preventing wealth and land from carrying the day exclusively. In 1882, when this system was first adopted in most of the provinces, there sprang up three electoral committees—a Moderate, a Progressist, a Radical. In some, the Moderates and Progressists coalesced; in others, the Radicals and Progressists united; but during the present elections the members of the late Legislature cast about simply and solely for the best chances of keeping their seats, and in several we have had the immoral specta-

cle of Ministers, Ministerial supporters, and their stanchest antagonists uniting, in the hope of victory. The only excuse they alleged was their devotion to monarchy and their desire to save the institution; which simply rendered them absurd, since, if you except a small portion of the old "temporal sovereignty" papal partisans, and the new organization of workingmen (both fractions abstaining from electoral agitation), no one dreams of overthrowing monarchy to establish a republic.

What is the net result of the elections it is yet difficult to say. Both parties have lost some of their best men, their defeat in most cases being due to the aforesaid coalition. The Pentarchists, so styled from the union of their five leaders, Crispi, Nicotera, Cairoli, Zanardelli, and Baccarini, are all reëlected, but have lost some splendid officers and brave soldiers. The old Moderates march in a compact phalanx of a hundred and fifty; the so-called Ministerial supporters, Transformists and Moderate Liberals, are returned in an equal number; the Radicals pure and simple number forty-eight. Social reform is the programme of these last; and as the Pentarchists and Progressists are pledged to present measures for the regulation of strikes, for the reform of the charitable institutions, for bonifications (*i. e.*, draining of marshes, the cultivation of waste soil, and similar measures), they can count safely on the adherence of the Radical party. Hence it is difficult to even form an idea as to the future Government. Signor Minghetti, the acknowledged head of the old Moderates, has said clearly: We are now in a position to say to Signor Depretis, "You must make your choice: either form a Ministry of Moderates and Moderate Liberals, when you may count upon us, or go back openly to the Left, and we range ourselves in opposition." Signor Bonghi, who has written another article in the *Nuova Antologia*, entitled "The Programme of the Elections," sides with him entirely. Up to the present moment Depretis has made no sign; as usual, he "lingers shivering on the brink and fears to launch away." At a Cabinet council held in the King's presence, Signor Coppino, Minister of Public Instruction, said distinctly that he would not remain in a Government composed of Moderate colleagues. Signor Depretis made no reply. He would evidently prefer forming a Ministry with Crispi and Nicotera, but these generals, who have each served to their cost under Depretis as generalissimo, decline entirely the honor of his leadership. If, therefore, he persists in remaining at the head of the Government, he must dismiss at least one half of his present colleagues and general secretaries, and make room for Minghetti, Bonghi, and other pillars of the Moderate Church. The Transformists, whose law of life is, "Be on the winning side," will join their ranks, while in the opposite camp Pentarchists, Progressists, and Radicals will unite to give battle. In order to increase his chances, Signor Depretis has decided on an *infornata*—an ovenful—of new Senators (to the amount of thirty, it is rumored). Of course, these will all be chosen from his own friends and supporters who have either been left on the battle-field, or who, by vacating their colleges, will make room for some of his wounded soldiers. To-day the few "ballots necessary" will take place between the two candidates who received the largest number of votes after those duly elected, but did not come up to half of the total of the electors. These, however, are too few to affect the results. Later on will come the supplementary elections. Some of the Liberals are elected in three colleges, *e. g.*, Cairoli at Pavia, his native city, and at Rome. As he will choose the former, there is place for a new Liberal in Rome. Nicotera has been elected in three colleges, so there are two openings for his friends. Pantano and Cavallotti have also two, and the fallen leaders of the Liberals will also "live to fight again."

One characteristic episode of this struggle cannot be passed over, and that is the double election of Amilcare Cipriani, the "galley slave." This really remarkable man is a native of Rimini, who deserted the regular army to join Garibaldi after the peace of Villafranca in 1859. He distinguished himself at Naples and Sicily in 1860. In 1862 he had a narrow escape, seven of his companions who were attempting to join Garibaldi in Aspromonte being shot to death without even a form of trial by Major Villato, who was immediately promoted by the Piedmontese Government. For some time he remained in exile in Alexandria, Egypt, and took a notable part in the scientific expedition of Miani. In 1865 he distinguished himself as a cholera nurse, and, after the war against the Austrians under Garibaldi in the Tyrol, returned to Italy and labored actively with the Mazzinian party during and after Mentana for the proclamation of "Rome, capital of *republican* Italy." In 1871, after fighting throughout the French war side by side with Flourens, killed by the troops of Thiers, he fell crippled with wounds, and was condemned to be shot on the plains of Satory, but was transported instead to New Caledonia. Amnestied, he returned to Italy, where he was arrested and tried for shooting two gendarmes in Alessandria in 1868. It was proved that the act was committed in self-defence, the gendarmes having seized and maltreated him by mistake for a Maltese whom they were seeking to arrest. Nevertheless, he was condemned by the court of assizes at Ancona to twenty-two years of hard labor at the galleys. The first jurisconsults of Italy, Ceneri, Busi, Villa, Pessina (late Minister of Grace and Justice), publicly affirmed that every rule of right and justice had been violated; that the sentence ought to be suspended and a new trial take place. This act of justice was refused, and Cipriani's fellow-citizens of Rimini, while he is languishing in the galleys, have elected him their representative in the House of Deputies. The city of Forli has done the same. Not a justifiable proceeding, you will say, in common with a considerable portion of the Liberal party here; but there is not the shadow of a doubt that Cipriani was condemned not because in a stand-up fight of two to one the gendarmes succumbed to his extraordinary strength, but because he was an open, active, uncompromising republican.

This province of Rovigo from which I write has carried off the palm of victory for the Radicals. It was here at Crespino that Foresti and his fellow-Carbonari commenced their conspiracies against the Austrians in 1820. Five of their accomplices were hung and shot. Foresti, with Confalonieri and Silvio Pellico, was entombed within the Spielberg. Liberated, the greater part of his life was spent in New York; and, regarding America as his second country, even on his return to Italy in 1856 he never forgot the land that had adopted him. The Polesine, true to her traditions, sent out all her young men to fight under Garibaldi, and in 1866, when Venetia was liberated, Garibaldi was elected representative of Lendinara, the birthplace of Alberto Mario. But very soon the Moderates, all proprietors and wealthy men, got the upper hand, and for sixteen years, in Parliament, in the provincial and municipal councils, they reigned supreme. In 1882, after the extension of the suffrage, Mario, heading a compact band of Radicals, charged all along the Moderate ranks, succeeding in demolishing their general and substituting Dr. Agostino Bertani, the great surgeon-soldier, the man who, after Garibaldi and Mazzini, had done most and best for the creation of one Italy, free and independent. Mario died in 1883. Bertani, in the breach to the last, the dauntless flag-bearer of his party, died on the very eve of the elections, April 30, with awful suddenness, just as he had penned an appeal to Italy's greatest poet, Carducci, to stand "for Pisa, the city where Mazzini died," and another to Aurelio Saffi, urging him to lend his valor to the combatants. The Radicals of the Polesine felt it doubly incumbent on them to give battle with the old flag unfurled, and proclaimed their intention openly. On this, Moderates, Transformists, and Progressists formed a *holy alliance*. Sani, an arch-Moderate; Marchiori, Transformist and secretary-general of the Minister of Finance; Parenzo, Progressist, whose order of the day unseated Depretis; and Cavalli, a Liberal, allowed their names to be united on the same list. The Radicals chose Badaloni, a young but most distinguished surgeon and doctor, as a worthy successor of Bertani; Marin, the son of an old conspirator, soldier, fellow-prisoner of Calvi, shot by the Austrians—a mild, gentlemanly man of letters; Villanova, a young but distinguished advocate, who so successfully defended the Mantuan peasants in their late trial; Achille Tedeschi, noted chiefly for his zeal in promoting associations among the peasants. The Radicals fought valiantly against desperate odds, the allied opponents having the prefects, the mayors, the tax-gatherers, all the Government officials, wealth, power, and landed interest on their side. *They*, at least, had no doubt of winning, though many of the electors, while promising their vote "for the sake of party discipline," confessed that they should be heartily ashamed of their victory. Up to the eleventh hour their security lasted, when, like a thunder bolt falling from a serene sky, the telegraph from Rovigo flashed to every city, village, and hamlet of the province the astounding tidings: Victory along all the line for the Radicals. The morrow confirmed the tidings. At the head of the poll stood Badaloni, with 6,300-odd votes, against the secretary-general, who had little over five thousand, and so on to the end of the list. Precisely the same scene was reënacted in Milan, where Cavallotti, the democratic poet, heads the poll with 10,000 votes, with three Radical colleagues, leaving the Moderates nowhere. Rovigo, Genoa, Milan, and Rome, where the Radicals fought on the "no-compromise" platform, have reason to exult in their victory so far. It remains now to be seen what measures they will propose and stand to in the next Parliament for the amelioration of the classes neglected by all the parties who have hitherto triumphed in the Chamber of Deputies.

J. W. M.

Correspondence.

THE AMERICAN SCHOOL AT ATHENS.

To the Editor of The Nation:

Sir: In Mr. W. J. Stillman's letter from Athens in the *Nation* of June 17, the principal argument seems to amount to this, that because the American School at Athens has not yet attained the outward form and the inward perfection which its founders anticipate, therefore it has no right to exist at all. This argument, which, if logically carried out, would exterminate the whole race of children from the earth, will be equally fatal to the British School at Athens in its early years, and is, to say the least, a very unpractical one. There is little or no real difference of opinion between Mr. Stillman and the managers of the School as to the ideal to be aimed at. Mr. Stillman's chief complaint against the School touches what is acknowledged on all hands to be its chief present weakness, the lack of a permanent director at Athens. For one, I am heartily glad to have this weakness "ventilated" and

kept before the public attention, even though I may regret the spirit in which this is done. I have myself repeatedly called attention to this defect, first, in my report as director of the School in 1882-83, and on many other occasions since, in language quite as strong as that now used by your correspondent. My own words were:

"Our school can never aspire to the rank which the French and German schools now hold, unless it can keep a director in Athens who can aspire to be the peer of Foucart and Köhler; and it is not too much to say that this can never be secured by sending a new man each year to take charge of the School. At the end of a year, our director will always feel that he has spent his whole time in preparation, and that he is just ready to begin his work in earnest; but he must then give place to his successor, who will repeat the same experience. But until we can secure our full endowment we must be content to remain under this disadvantage, and to depend a few years longer upon the annual directors with whom the liberality of our supporting colleges supplies us."

The last sentence states the only real difference between Mr. Stillman and ourselves. He would not be content to wait patiently a few years longer, but would shut up the School, or, rather, would never have opened it. We took the more practical view, that this was the only possible way of establishing an American School at Athens; and we have yet to see a man who really believes that we could have begun one in any other way. The French and German schools have behind them the French Republic and the German Empire, both of them ready and willing to pay whatever salaries are needed to secure the most accomplished scholars as directors. We have no public treasury to rely on; but we have a resource which has always in the end proved more efficient than even imperial bounty, the enlightened generosity of our own citizens, who are always eager to show that private munificence is a better foundation for learning than Government support, and take a noble pride in maintaining the scholarship of our country whenever it calls for help. The generous response which has just been made to our appeal for a building-fund is a renewed proof of this; and when the time comes for abandoning our present temporary system of annual directors, we are sure that there will be no lack of the means necessary for carrying out a better and more efficient plan of permanent organization. For this we must be content to wait, perhaps only a few years; but if we had begun with a declaration that we could not establish our school until we had a fund sufficient to build or hire a house and maintain a permanent director, it is absolutely certain that the nineteenth century would have seen no American School at Athens. The School, under its present constitution, far as it falls short of our wishes and our hopes, has still, we believe, more than justified our original expectations; and it will amply earn its right to existence and support if it leads the way to a school in the future with a more permanent organization and with higher aspirations.

WILLIAM W. GOODWIN.

CAMBRIDGE, MASS., June 19, 1886.

TO THE EDITOR OF THE NATION:

SIR: Mr. W. J. Stillman, in his letter of May 27, published in the *Nation* of June 17, expresses some opinions in regard to the American School at Athens which seem to me to demand, if not direct contradiction, at least qualification. Mr. Stillman says: "It is not purely on à-priori grounds that I judge the American School to be thus far a conspicuous failure, but on the testimony of the students themselves, who, so far as I have heard their evidence, have found it an utter disappointment and illusion." I fear Mr. Stillman has not taken great pains to hear the evidence of students, except in so far as some discontented members of the School may have poured their woes into his sympathetic ears. I was myself a member of the School during the year 1882-83, and derived the greatest benefit from it. I was, as indeed we all were, treated with the greatest kindness by the authorities of the German Institute and the Greek libraries; nevertheless, the library of the American School was the place where most of my work was done. The library was then much less complete than it is now, but, being open at all hours of the day and evening, it was the only available place for continued, persistent work. The meetings of the School, at which papers on various subjects were read (several of which were published in the first volume of 'Papers of the American School at Athens'), gave stimulus and direction to our work, which would have been entirely wanting had we been left to our own devices.

Mr. Stillman's comparison of the American School with the French and German schools may at some future time be justified; but at present it is simply absurd. The American students are, for the most part, graduates of American colleges, who know of Greek history, literature, and archæology what they have learned in college; that is, so much that if they were to work hard for two or three years, they might hope to take the degree of Ph.D. at a German university. The students or *Stipendiaten* of the German Institute have not only taken the degree of Ph.D., but have so distinguished themselves by their success in archæological studies as to obtain from the German Government a *Reisestipendium*, or travelling scholarship, which enables them to prosecute their studies and follow out lines of independent research. The members of the French School are of a similar character. The object of both these schools is the encouragement of original research in archæology. This is a point which we hope to reach, but have not yet attained. The primary object of the American School is, as I understand it, to aid young Hellenists, or even those who are as yet little more than would-be Hellenists, to acquire that familiarity with Greek topography and with the remains of Greek civilization, which shall enable and inspire them to prosecute their later studies with enthusiasm and success, and shall make them good and useful teachers at home. It is for this reason that the American School is called a school of classical studies, not simply a school of archæology. The directors of the School have been chosen from among the first Hellenists of this country; and, if not archæologists, they are men capable of assisting the students in the study of Greek polity, sociology, and letters. Judging from my own experience, I should say that it was the student's own fault if he failed to find the director useful.

Mr. Stillman is, however, not the first who has urged the necessity of a permanent director. Every one connected with the School has felt from the beginning that the present arrangement must be merely temporary, for, as the study of archæology gains ground in this country, it will be more and more necessary to have an archæologist in charge of the School at Athens. Such a director will undoubtedly be appointed as soon as the School has the necessary endowment; but meanwhile the School is doing, under great difficulties, work which entitles it rather to recognition and support from all true friends of Hellenic studies than to ungenerous fault-finding. I heartily concur in Mr. Stillman's praise of my friend Dr. Sterrett, and should feel as keenly as Mr. Stillman "the misfortune of losing him from the field where our national vanity, if not our national recognition of merit," might well desire to maintain him; but until the funds necessary for the support of a permanent director are obtained, the present arrangement offers greater advantages than any other. In this opinion I am sure that some if not all of the former members of the School agree with me.

Yours truly, HAROLD N. FOWLER.

CAMBRIDGE, MASS., June 19.

"NO MORE THAN HE CAN HELP."

TO THE EDITOR OF THE NATION:

SIR: Apropos of your correspondent's query, in the last number of the *Nation*, as to the omission of the logically required negative before "help" in such sentences as "he will not do any more work than he can help," I venture to suggest that it is due to confusion with the simpler, though almost identical form, "he will not do any work that he can help"—a confusion facilitated, so to speak, by the fact that the preponderating idea is felt to be really an affirmative one, viz.: "he will avoid all that he can," the expression of which by a comparison of inequality between two negative statements becomes altogether too subtle and puzzling for the ordinary mind. The case here is in a sense the converse of the French confusion of ideas in "you are stronger than I didn't think." But even the Frenchman says, "you are not as strong as I thought," avoiding the insertion of a second negative. It would be interesting to know whether the solecism "I should not be surprised if it didn't rain" (which I happen never to have heard), is of more than merely local occurrence.

Since the French construction has been made the point of departure by "A. H.," it may be worth while to call attention here to a peculiar Old French idiom involving a complete ellipsis of the idea "to help." In a *resverie* of the thirteenth century, for example, occurs the following;

> "ja par dieu, que nous puisson,
> n'i enterrez" (Bartsch, *Chrest.*, 365, 28).

I. e., "Never, by Heaven, that we can (help it), shall you enter there." The same idiom occurs in Old Provençal.—Respectfully, H. A. T.

BALTIMORE, June 19, 1886.

TO THE EDITOR OF THE NATION:

SIR: As to the expression, "I should not be surprised if it didn't rain this evening," meaning, "if it *did rain*," I can only say that I am assured by intelligent persons from Virginia, West Virginia, North and South Carolina, that the solecism is perfectly familiar to them. Nor can it be a recent thing, for an old Virginia lady, upwards of seventy, says she has heard it all her life.

No doubt the geographical limits of this irregular "not" might be approximately determined, in case the matter should be deemed worthy of discussion in "your valuable journal," as correspondents always say, when they desire to tickle the editor into printing anything for them.—Respectfully, A. H.

TARIFF REFORM.

TO THE EDITOR OF THE NATION:

SIR: The lobby has scored another triumph in preventing the tariff-reform bill from even coming to a discussion, and that in the face of the fact, which was pointed out in an editorial of the 15th in the *Evening Post*, that tariff reform was made a cardinal point in the platforms of both the Republican and the Democratic parties at the last Presidential election. So far as the people are concerned, therefore, they may be said to have approved unanimously the principle of that reform, and of course they cannot prescribe the details. Popular agitation on the subject of free trade is, therefore, superfluous and useless. The people have done all they can do towards an instalment of it, and it is Congress which blocks

the way. The truth is, that tariff reform is not a financial but a political question. The real issue is not what articles shall pay duty and what duty they shall pay, but who is to govern in this country. The favorite and sonorous phrase is "a government of the people, by the people, and for the people"; but there can be no greater misstatement. It is a government of the lobby, by the lobby, and for the lobby, and such it will continue to be so long as Congress, having usurped all the power of the Government, remains as helpless as a child which has got hold of a sharp knife and can do nothing with it but cut its fingers.

"Oh, yes!" some one says, "we know what you mean; but what good would it do to have the Cabinet on the floor of Congress?" As that is a very important question, suppose we try to think out a little what good it would do. It is the month of December, and Congress has just assembled. It has elected a Speaker who is engaged in making up the committees, and the President's message and the department reports have been received. One morning, a few days after the opening, in accordance with a vote passed at the close of the last session, the Secretary of the Treasury walks quietly into the House, and, bowing respectfully to the Speaker and to the House, takes a seat which has been provided near the Speaker's desk. Presently a member from a free-trade district rises: "Mr. Speaker, the Secretary of the Treasury has said so and so in his report. I desire to ask him whether he is prepared to submit to this House a statement of the leading changes which he thinks desirable in the tariff." The Secretary modestly replies that the subject is in the hands of the Ways and Means Committee, but that it will of course be his duty to meet any expressed wish of the House to the best of his ability. "Then, Mr. Speaker, I move that the Secretary be requested to name an early day on which he will make such a statement, and that the question on this motion be taken at once"—or whatever the parliamentary form may be. How many members would like to vote, in full view of their constituents, against giving the Secretary a hearing?

But suppose the majority of the House was opposed to the Administration and to tariff reform, and did refuse. The work of the free-traders would be clear. Instead of beating the air with abstractions to which the people have already assented, their point of attack would be the tyranny of Congress. It had refused a hearing, not only to the official head of the finances, but to Mr. ——, a man of approved ability, integrity, and technical knowledge. They would see how much more quickly public opinion responds to personality than it does to abstractions.

The outcry of the press and the platform having warned Congress of its false position, a similar motion later in the season has been carried, and the Secretary names the 15th day of February as the time for making his exposition. It is hardly too much to say that that day would be looked forward to by the country with greater interest than any Congressional event since the war. In the debate which would follow the address, all the methods of administration of the custom-houses would be sifted and discussed, as well as the effects of complex and contradictory duties, and not improbably the evil methods by which the lobby governs the committees and the houses. As the session wears on, and it becomes evident that the intention is as usual to defeat all action, the free-traders would depute one of their number to point out the fact, and to move that the Secretary be directed to submit at the opening of the next session a bill, in full and definite detail, providing for a first step in tariff reform. During the whole summer, then, the Secretary, with all the light he could obtain from experts and subordinates, and under the impending public responsibility, would be preparing such a bill, while the free-traders would be educating their allies and adherents to support that particular bill, not as a finality, but as in the right direction, and all that could be obtained at the outset.

We might follow out the process of carrying the bill and watching its administration, but these would be subject to modification by circumstances. The benefits of the initial step would seem to be obvious enough to justify our effort in its behalf. G. B.

Boston, June 17, 1886.

DR. WALDSTEIN AND M. DE VILLEFOSSE.

To the Editor of The Nation:

Sir: I enclose a letter from M. Héron de Villefosse which he has authorized me to publish. As I believe that it will finally make clear the position of the authorities of the Louvre and of myself with regard to the question raised by M. S. Reinach, I beg you to publish it in your columns.

Yours faithfully,

Chas. Waldstein.

King's College, Cambridge, June 6, 1888.

Paris, ce 27 mai 1886.

Cher Monsieur et très-honoré Collègue:

Je suis absolument étranger à l'article publié dans le journal *The Nation* de New York; je n'en ai connu l'existence que par votre lettre du 24 mai 1886. Je ne vous ai pas envoyé le Bulletin des Antiquaires; c'est une faute, ou plutôt un oubli, que je répare aujourd'hui. Je supposais que notre ami commun S. S. Lewis, qui le reçoit à Cambridge, vous aurait mis au courant de ma communication. Croyez bien que je n'ai jamais songé à vous reprocher d'avoir ignoré ma note, dont la portée était toute locale: elle s'addressait à ceux qui, en 1882, accusaient le Louvre, connaissant parfaitement la mention insérée dans le *Journal Officiel* du 22 juillet 1881. Vous avez bien raison de supposer que je n'ai pas voulu soulever une stérile question de priorité. Vous savez que le département des antiques était constamment et injustement attaqué au moment où j'ai fait ma communication aux Antiquaires de France. J'ai tenu à constater que la perspicacité des conservateurs du Louvre n'avait pas été en défaut; c'était mon droit et mon devoir. Je le faisais avec d'autant plus de liberté que je n'étais pas personnellement en cause, puisque l'acquisition avait été faite avant mon entrée dans le Comité consultatif des Musées nationaux. J'ai raconté les faits avec la plus rigoureuse exactitude, et je me permets de joindre à ma lettre les épreuves d'un article qui vient de paraître, et dont j'aurai le plaisir de vous adresser le tirage à part très-prochainement. Vous y verrez que je rends pleine justice à vos intentions, et que je constate votre découverte dans des termes qui ne peuvent laisser aucun doute sur ma pensée.

En ce qui concerne l'exposition de la tête du Lapithe dans une vitrine éloignée de la salle où sont les autres morceaux du Parthénon, vous devez vous rappeler que les marbres réunis dans cette vitrine étaient accompagnés d'une étiquette portant ces mots: *exposition provisoire*. Une partie de ces marbres provenait d'acquisitions récentes, et avait été, pour ce motif, exposée, selon l'usage, dans cette vitrine. On ne pouvait donc les considérer comme des objets définitivement classés.

Je n'ai pas besoin de vous redire les sentiments d'estime que j'ai pour vous: vous les connaissez de longue date. Je regrette cette discussion à laquelle je suis mêlé à mon insu, et je vous prie d'agréer la vive expression de mes sentiments les plus cordiaux et les plus affectueux.

Ant.-Héron de Villefosse.

Je vous aurais répondu dès hier si je n'avais été pris depuis deux jours par la vente de la collection Hoffmann.

Dans votre réponse, je pense que la date 1879 doit être une erreur du copiste, car la tête n'a été acquise qu'en 1880.

Notes.

A member of the family of the late Schuyler Colfax, J. O. Hollister, has, with the approval and assistance of Mrs. Colfax, written a Life of that once prominent politician, which Funk & Wagnalls will publish by subscription.

A memoir of the late Prof. J. Lewis Diman, in preparation by Miss Caroline Hazard, is, we are glad to learn, soon to appear.

Ticknor & Co., Boston, publish immediately 'A Moonlight Boy,' by E. W. Howe, author of 'The Story of a Country Town'; 'Romance and Revery,' poems by Edgar Fawcett; and 'An Epigrammatic Voyage,' by Denton J. Snider.

We should have mentioned last week, in connection with our review of the translation of Schopenhauer, that the work is published in this country by Ticknor & Co., Boston, by arrangement with Trübner & Co. One volume of the American edition is already out; the other two will appear during the present month.

"Monographs on Education" is to be the title of a series of pedagogic papers midway between magazine articles and books in length and style of treatment, published by D. C. Heath & Co., Boston. No. 1 will be 'Modern Petrography,' an account of the application of the microscope to the study of geology, by Geo. Huntington Williams, of Johns Hopkins University.

It is now ten years ago since we bestowed hearty praise on the first edition of Mr. Taswell-Langmead's 'English Constitutional History' (Boston: Houghton, Mifflin & Co.). Three years later a second edition was called for, and, the author having died meantime, a third has just been brought out by his friend and Oxford fellow-student, C. H. E. Carmichael. The editor has verified the text and annotated it freely, and supplied a list of authors and editions cited. Furthermore he has added several appendices on Frank-pledge, the early history of Tithes in Western Europe, the Convocations of Canterbury and York, etc. Appendix G discusses the monarchical principle in the Constitution of the United States, with the help of Sir Henry Maine's 'Popular Government,' an article in the *North American Review* by Mr. Wm. Beach Lawrence in 1880, and a Virginian pamphlet of 1884; and we need not be surprised to find Mr. Carmichael unable to "forecast with any safety" whether the supposed existing sentiment here in favor of an hereditary monarchy "is likely to be adopted as the expression of the views of a party in the United States." We counsel him, before he edits a fourth edition of this useful work, as we hope he may yet do, to make a visit to this country—and eliminate his appendix on his return.

Two readings of 'The Faust Legend,' by H. Sutherland Edwards (London: Remington & Co.; New York: Scribner & Welford), have left us with a decidedly unfavorable impression of the essay. In places Mr. Edwards's opusculum seems to show the work of a scholar measurably fitted for the task he has undertaken. In other places, however, it suggests the lucubrations of a sophomore who has been assigned the Faust legend as a theme to read up on, and who has incontinently published his notes without submitting them to pedagogical scrutiny. The pamphlet, while making some show of learning, teems with incredible literary crudities. A specimen will suffice. The author has been discussing the etymology of Mephistopheles. He has reviewed various derivations that have been proposed, and

pronounced them all unsatisfactory. So far so good, but he then adds: "It is a pity that Goethe himself was never questioned as to the derivation of the name Mephistopheles. . . . One looks in vain for a derivation of the name to the *Wörter Buch* of the brothers Grimm. Death caused that work to be abandoned before the letter 'M' had been reached."

Mr. Andrew Carnegie's 'An American Four-in-Hand in Britain' has been reissued in paper covers by Chas. Scribner's Sons.

'The Book of Berkshire,' issued by Clark W. Bryan & Co., Great Barrington, Mass., is the work of many hands, and fairly exhaustive in its details concerning every town and district in that most picturesque of Massachusetts counties. Occasionally the minuteness approaches to a house-to-house census. The book is freely illustrated in an inexpensive manner, and is accompanied by an excellent map for the high-road tourist.

Houghton, Mifflin & Co. send us a new and revised edition of their 'Boston Illustrated.'

The Smithsonian Report for 1884 has just emerged from the Government Printing-Office. It contains the usual scientific record for the year, and accompanying valuable bibliographies, with an abundance of archæological illustrations. All the gifts to the Institution here acknowledged were in objects or in services, but, as usual, there was no pecuniary endowment. A curious offer was made, however, of an indefinite but apparently small sum of money by a person who was afraid his will would be contested.

The sixteenth of the Tenth Census volumes is off the press. It is Part I. of the Reports on the Water-Power of the United States, and deals with eastern New England, the region tributary to Long Island Sound, the Hudson River basin, the Ontario, Erie, and Huron basins, the Middle and Southern Atlantic watersheds, and the Eastern Gulf slope. Views, plans, sections (as of dams), etc., are freely interspersed.

Mr. Griswold's *Monthly Index* to nearly sixty periodicals, American, English, and Continental, is precisely the sort of current guide librarians should desire to have on the tables of their reading-rooms. Any thoughtful person, however, given to the study of a special topic or topics, would be apt to find his account in "taking in" this broadside, as our English cousins say. It does measurably for him what the "bureaus of information and research" effect which furnish you newspaper clippings on any subject indicated. A glance down the alphabetized list shows if the periodicals of the last three months have treated of the topic in question, and in what issue—sometimes upon what page. The subscription price is but twenty-five cents a year. Address the publisher, at Bangor, Me.

The *Magazine of Art* for July (Cassell) returns to the subject of the menaced Charter-house, with capital illustrations of the wings, courts, and interior of this lovable old building. An illustrated paper on the St. John River will do something to draw the attention of American tourists to its beautiful shores and waters, so little known or appreciated. Some excellent engraving is bestowed on specimens of East Indian wood-carving, and process work has done its best in reproducing the Niké of Samothrace and the Hermes of Praxiteles.

The most important illustration in the June *Portfolio* (Macmillan) is an etching, by Charles Waltner, after a sketch by Hogarth, "The Shrimp Girl," of which it is the first copy in black-and-white. Mr. Beavington Atkinson's paper on Bernardino Luini is more interesting for its subject than valuable as research or criticism. Mr. Hamerton furnishes his fifteenth paper on "Imagination in Landscape Painting," discussing many things by the way, as why *old* poetry is a better stimulus to the imagination than new. He answers, because "the older the association with the experience and feelings of mankind, the more poetical everything becomes." But this is rather a restatement than an explanation. Is it not that the imagination is more stimulated by the unfamiliar than by the common and usual thing—whether it be mode of expression or of thought, mode of life, locality, scenery, nationality, etc.? An American novel, with the plot of Tolstoi's 'Anna Karenina,' should à priori be less entrancing than that story of Russian society in our day of locomotives and railway accidents. But 'Anna Karenina' in turn yields in this respect to the same author's 'War and Peace,' with no railroads to facilitate either the defence of Russia or Napoleon's retreat from Moscow, or to prevent our imagination from yielding wholly to the spell of Tolstoi's.

The Salon of 1886 is taken in hand by M. Paul Leroi in Nos. 527–529 of *L'Art* (Macmillan). In the midst of his discourse he tells with indignation of a recent slight upon the French sculptor, Auguste Rodin, by the Royal Academy, which gave him "leave to withdraw" a work submitted for the spring exhibition. M. Rodin, unhappily, does not understand a word of English, and M. Leroi found him cherishing his notice to take away his group as if an exhibitor's ticket of admission. A chapter on Wagner and "Lohengrin," extracted from the forthcoming sumptuous Life of Wagner by Adolphe Jullien, is given, in advance of publication, in No. 528. A portrait of the composer in 1857, a view of his birthplace in Leipzig, scenes from his operas, and caricatures from many sources, justify the editor of *L'Art* in making this readable selection. Among the customary number of etchings and facsimile reproductions, we remark a study of Pasteur's head on a large scale in charcoal, and two subjects from Millet. The *Courrier de l'Art* for April 30 copies from the *Débats* the Geneva letter giving an account of the exhibition of the pastelles of Liotard, the prolific portraitist of the last century, whose best-known work is the Dresden "Chocolate Girl." Mme. d'Épinay, Dr. Tronchin and his homely wife ("Que fait Mme. Tronchin? *Elle fait peur*," as Mme. Cramer said), Mlle. Vermenoux, who came near being Mme. Necker, M. and Mme. Thellusson, the latter a famous beauty, are some of the personages enumerated in this interesting and veracious portrait gallery.

The Pitt Press series of French publications is comparatively little known here (Cambridge, England; New York: Macmillan & Co.). It now numbers about twenty volumes, most of which are excellent, and the more worthy of being known to instructors since many of them are books not hackneyed as school texts. Thus we find two separate volumes by Mme. de Staël, the essay on Daru by Sainte-Beuve, and several plays of which it would be difficult to find suitable editions. There is also Voltaire's 'Siècle de Louis XIV.' in three volumes, with notes by M. Gustave Masson. All the publications have notes, many of which are very good. The last published is a very welcome addition to school classics, namely, Augustin Thierry's 'Lettres sur l'histoire de France,' containing numbers xii to xxiv, which treat specially of the progress of the communal movement in France in the middle ages. There are over forty pages of notes by MM. Masson and Prothero, and a very clear map of France of the period treated. In point of execution the books of the Pitt Press leave nothing to be desired.

Miss Kathleen O'Meara's 'Madame Mohl, her Salon and her Friends,' with which American readers are already familiar, both as it was first presented to them in the pages of the *Atlantic* more than a year ago and in its later book form, has just been published in a French translation under the title 'Un Salon à Paris: Madame Mohl et ses intimes' (Paris: Plon; New York: Christern). It is an agreeable and faithful translation as far as it goes; but there are many necessary omissions, often of long passages which had their excuse for being in the original, but which would have been out of place in a work written for a French public. With a certain literary dishonesty, there is nothing in the volume to indicate that this is not the form in which it first appeared.

'Au Tonquin' is the title of a very neatly done, concise description of the latest colonial acquisition of France, by Challan de Belval, "Médecin principal d'Armée" (Paris, 1886). It is introduced to the public only by these prefatory words: "Je dis seulement ce que j'ai vu"; and a glance over its pages easily produces the impression that this claim of the author is entitled to credit. The little book is divided into two chapters, the first of which treats, in separate sections, of geographical features, climatology, towns and villages, cultivation of the soil, industry, physical and moral traits, etc., religion and funeral rites, government, and festivals and public games. These descriptive parts contain much generally interesting information, plainly and briefly presented. The second chapter is entirely devoted to a survey of the various diseases prevailing in the country, and includes warnings as to the proper treatment of the army of occupation. On the heeding of these the writer makes the ultimate success of annexation to depend. His prognostications are, however, patriotically optimistic.

The *Journal des Débats* of June 2d announced that MM. Plon & Nourrit were to publish on the 4th inst. a new volume, entitled 'La Littérature russe,' by M. le vicomte Melchior de Vogüé.

The Music Teachers' National Association is to hold its tenth annual meeting in Tremont Temple, Boston, on June 30 and July 1 and 2. Dr. G. Stanley Hall will read an essay on "Music Teaching from a Psychological Standpoint," Dr. Wm. Mason one on "Touch" in playing the pianoforte, and Mr. Albert P. Parsons one on "The Proper Utilization of Practice Time." The programme embraces several other papers on Church Music, the Voice, Music in Public Schools, etc. Tonic sol-fa will of course come up for discussion. Various concerts are arranged for.

—Halliwell-Phillipps writes to an American friend: "Warned by my sudden break-down last year, I have neglected correspondence in my anxiety to devote myself as much as possible exclusively to the preparation of the sixth edition of my 'Outlines,' so as to get it completed with the Index you were very properly and considerately determined to have, before I was compelled to give up. This is now done, the last batch of copy having at length been despatched; and the new edition, now in two volumes, with considerable additions both in printed matter and illustrations, will, I hope, be ready in two or three weeks. But there is a new attraction in my home here that would reconcile you and all true United States Shaksperians to a fare of bread and water. By one of the most singular accidents of the kind that have ever occurred, the original title-deeds of Shakspere's estate at New Place have been discovered in the archives of a county family in Shropshire, and have found their way — *mirabile dictu* — to Hollingbury Copse. One of them is torn, but the other five, dating from 1532 to 1602, are as perfect as when they were in the poet's own rooms. They are inestimable personal relics, that are absolutely free from the doubts of authenticity that must inevitably be attached to other kinds of domestic memorials."

—The vast scope of our national economic

problems and their intricate nature are well illustrated by two articles in *Harper's* for July. One, the *pièce de résistance* of the number, is an exhaustive description of the domicile and organization of the New York Produce Exchange. In the course of the paper this business body is looked at from many points of view, and whether it be regarded with reference to the field of material interests it covers, or to the mass of its operations, or to the variety, elaborateness, and certainty of its routine methods, or to such adjuncts of itself as the Arbitration Committee and the Gratuity Fund, it must impress every observer as one of the most marvellous and successful creations of a commercial society relying upon private enterprise. It is, perhaps, the most complete and instructive example in this country of mind applied to business, on the old and well-established basis of individual self-interest organized in voluntary association for private gain. A little further on in the magazine is the first of Dr. Ely's "Social Studies," an introductory chapter on Railroads. In this he declares the problem of our iron highways to be preliminary to any real settlement of the tariff, coöperation, strikes, arbitration, profit-sharing, civil administration, municipal reform, etc.; and, as one reads, he begins to think that the natural conclusions to be drawn from the Produce-Exchange article must all be reversed, and the doctrine of the social utility of private enterprise be abandoned. The contrast of the two writers is hardly less in style than in matter: one straightforward, substantial, and English; the other spasmodic and veined with Continental modes of rhetoric. The remainder of the magazine is notable for a sketch of Gen. Sullivan's capture of the powder in Portsmouth harbor, December, 1774, and for a portrait of Hawthorne which, the Easy Chair writes, "Mr. Lowell thinks to be the best that he knows," and which is certainly very fine.

—The *Atlantic* continues the universal discussion by an article on the "Labor Question" by George Frederic Parsons, to whom we owe an apology for having, by a confusion of names, credited his patient paper upon Balzac, in the last number, to George Parsons Lathrop. His present essay, in so different a province, is a very conservative view, and partakes of the reactionary spirit against the working classes in complaint, which has been much more outspoken since the Anarchist riot than it was before. The writer displays a tendency towards Knownothingism, or "America for the Americans," insists on the social law of the survival of the fittest, and declares that the "laborers" had better leave off their drams before they find fault with their wages. In short, his view is that of "eminent respectability," not without humaneness, but chafed somewhat by recent events. The number, as a whole, is unusually entertaining. Dr. Holmes gives a chapter of reminiscences of his first voyage to Europe, which contrasts charmingly with the cable reports of his second visit. Mr. Hamerton begins a series of truly international criticism, since he contrasts the French and English nations for American readers; and this first instalment is frank, acute, and (one need not say) agreeable. Miss Preston treats "Ouida" to the unusual sensation (the subject will excuse the phrase) of a serious review; and "Sibyl the Savage" is a pleasant bit of artificial romance. Mr. John Fiske's paper on the "Failure of American Credit after the Revolutionary War" is written in the same readable style as the other historical reviews that have preceded it, and has the same novelty and surprising effect as those, due to his literary treatment of the facts.

—Mr. H. D. Traill, the author of 'Central Government' in the "English Citizen Series," contributes to the June number of *Macmillan's Magazine* a readable article upon "International Copyright." The first four pages are devoted to a review of the proceedings of the Berne Conferences of 1884 and 1885, and to a consideration of the provisions of the bill before the present Parliament, embodying such changes in the English copyright statutes as are necessary to enable Great Britain to become one of the States of the proposed international union for the protection of literary property. The remaining six pages contain a notice of the defunct "Hawley" bill, and of the hearing before the Senate Committee on Patents. Mr. Traill does not believe that the American public—recognizing as just the claim of the foreign author to some profit from his mental labor—is unwilling to pay the necessary advance of price, but rather feels "justified in saying that nothing now but the protection difficulty stops the way" to securing an equitable international-copyright measure. The inconsistency of the protectionists in regard to this measure is well set forth in the following paragraph:

"The real force of opposition to international copyright has for some time past transferred itself from the field of theoretical right to that of practical expediency. It has been argued that the American people get their books cheapened for them by a system which permits American publishers to appropriate, if they choose to do so, the works of English authors; and, with comical inconsistency in a protectionist nation, that it is not for the Legislature to enhance the price of books by 'taxing them for the benefit of foreign authors.' It is amusing to turn from an argument of this kind to a copy of the United States tariff, and to count the number of articles for which the American public is taxed, not, indeed, for the benefit of a foreign producer, but for the benefit of *a* producer, to whose support the American consumer can, it would seem, be legitimately made to contribute in every case. . . . But when it is pointed out that the introduction into the country of what corresponds to a contraband merchandise, namely, pirated English books, has had the effect of seriously reducing the demand for the products of another very important American industry, that of book-writing, to the great loss and discouragement of those that practise it, the economical conscience of American politicians has in some mysterious way become converted, *pro hac vice*, to the doctrines of free-trade, and they have sternly closed their ears against the 'bitter cry' of the native author. Yet, with a singular and even cynical elasticity of principle, they no sooner turn from the author's industry to any one of the other industries connected with the production of literature—to the paper-makers', the printers', or the bookbinders'—and the free-trade 'stop' is straightway pushed in and the protectionist 'stop' pulled out. The American publisher may import the English author's books in the sense of bringing over his written words for reprint and republication in America, but he must not think of honestly buying, paying for, and importing the book itself free of fiscal charge. That would be to attack the sacred interests of the mechanical trades connected with literature; and here, accordingly, America reverts to her normal economic policy, and protects the printers, stereotypers, binders, and others by an import duty."

—A copy of the Timucua grammar composed by the Franciscan Father Pareja was lately discovered by Mr. Charles Leclerc, of Paris, and has just been republished by the firm Maisonneuve Bros., of which he is a partner. When attending the meeting of the Congrès des Américanistes in Madrid (1881), he met with a small duodecimo volume containing eighty printed and seventy-five written leaves, all belonging to one continuous text worded in Spanish. It proved to be the 'Arte y pronunciacion en lengua Timuquana y Castellana, por el Padre Fray Francisco Pareja, etc.' (Mexico, 1614), the written part being in the chirography of the author himself. No bibliographer had ever seen a copy of the book, and of this and some other writings of that author only the title was known. Rejoiced at the recovery of this important literary treasure, Mr. Leclerc at once intrusted Mr. Lucien Adam and Prof. Julien Vinson with the editing of it. The volume will be the only means of disentangling the formidable maze of Timucua verbal conjugation, which exceeds the Cherokee and Iroquois in power of polysynthesis and complexity. Timucua seems to be extinct now; it was spoken in the peninsula of Florida as far north as the Oconee River (Oconi is mentioned as a dialect on page 88), and in its whole breadth from west to east. The text of the grammar was published by Lucien Adam, without annotations or alphabetic index, in 132 pages; Prof. Vinson has added a preface in French of 31 pages, which contains an ethnologic, literary, and historic introduction, with three texts of the language. On pp. 21-26 he also gives a short abstract of the language as far as it is reduced to grammatic rules. He thinks that many of Pareja's enormously long vocables are not real words, but "aggregations of adverbial or other particles, which cannot be called real conjugational forms" (p. 26). This is one of the points which future linguists will have to decide. The local name Machaua (p. 30) is wrongly copied *machana* from Vinson's original, for on the old maps of Florida we find only *Machaua* and *Machalla*. The terms quoted by Vinson from the authors of the sixteenth century who had visited Florida are partly Creek and not Timucua, as *hassez*, *hiatiqui*, *holata* (pp. 30, 31). They prove the presence of Creek tribes on the coast of South Carolina, where Charlefort had been erected by the French explorers in 1562. The term *paracoussi* means 'chief,' and is taken from the Yuchi language. The Timucua 'Arte' forms the eleventh volume of Maisonneuve's "Bibliothèque linguistique américaine."

GNEIST'S HISTORY OF THE ENGLISH CONSTITUTION.

The History of the English Constitution. By Dr. Rudolph Gneist, Professor of Law at the University of Berlin. Translated by Philip A. Ashworth, of the Inner Temple, Esq., Barrister-at-Law. London: William Clowes & Sons; New York: Putnams. 2 vols.

No student can read Gneist's work without gaining a new idea of English institutions. But many readers, it may be suspected, feel some difficulty in making clear to themselves the exact nature of Prof. Gneist's peculiar merit. His erudition is vast, but it is equalled by the erudition of Bishop Stubbs. His impartiality and calm judgment are noteworthy, but in these qualities he cannot surpass Hallam. His care in mastering the actual working of English politics is remarkable in a foreigner; but in this matter Gneist is inevitably surpassed by Bagehot, who knew his country and his countrymen not from books, but from actual experience. If it be said, as it may be said with truth, that the German professor gained something by surveying the English polity from a distance, exactly the same thing may be said of Montesquieu in the last and of De Tocqueville in the present century; and Gneist's warmest admirers must admit that in beauty of style and keenness of analysis Gneist falls far below his French rivals. He, again, treats of the English Constitution as a lawyer, and this is of great advantage; but it is an advantage which he shares with Hearn and with Prof. Hare of Philadelphia, whose printed but as yet unpublished lectures will one day take a high rank among the constitutional literature of the English people. Each and all of these writers have peculiar merits which Gneist cannot surpass; yet he assuredly contributes something to the knowledge of the English Constitution which is not to be found in the works of other authors. This special contribution consists in the prominence given by Gneist throughout the whole of his history to two leading ideas or principles, which afford the key to a number of the problems presented by the progressive de-

velopment of English institutions—a development, it may be added, quite as well marked on this side of the Atlantic as on the other. These ideas are in themselves rather legal than historical conceptions, and Gneist's extraordinary merit lies in the fact that he combines, as no other writer has as yet done, the ideas suggested by knowledge of law with knowledge accumulated by profound study of history.

The first of Gneist's leading conceptions is one which in different ages has been embodied in different forms and has received different names. What statesmen of the sixteenth and seventeenth centuries called the "royal prerogative," what a modern jurist calls the "sovereignty of Parliament," is in reality nothing else than an expression of the fact that the national Government in England has been for generations and still is supreme over every personal body throughout the state. Now Gneist, taking up this legal conception, shows in chapter after chapter that the strength of the central Government as the representative of the nation is the source not only of English law, but, though the assertion sounds paradoxical, of English freedom. This early acquired authority of the executive is, as every reader of Gneist's book sees, and as no merely legal treatise can show, due to a vast number of historical and social conditions. But (and this is the point which deserves to be emphasized) once let the full bearing be grasped of the early development in England of a central power, at once national and strong, and a number of peculiarities in the political and the social development of the country fall into their right place, and cease to appear unexplainable anomalies. To the power of the crown may be traced the early prevalence and almost unbroken continuance of a system of taxation which gave no room for the growth of that class of farmers-general who, in France, at once diminished the income of the state and increased both the weight and the hatefulness of the taxes. To the power of the crown is due, far more than might be suspected by careless readers of the current works on constitutional history, the happy failure of the English nobility to form a separate class, and the consequent fusion between the peerage and the commonalty. To the same source is due in great part both the striking fact that England went through the Reformation with far less social and political disturbance than was endured by the states of Continental Europe, and the less noticed but not less important fact that villanage was, in England, almost imperceptibly abolished generations before it had disappeared from other countries. It is, indeed, no exaggeration to assert that, before the beginning of the seventeenth century, the grievances which at the close of the eighteenth century made the *ancien régime* hateful to all France, were unknown to Englishmen; and if the relics of feudalism have never been detested in England, the reason is, that the authority of the nation represented by the crown prevented feudalism from ever reaching a noxious development. To the early power of the King, again, is assuredly due the predominance throughout the land of equal and uniform laws, and hence, also, that spirit of legality which has for ages characterized the English people.

Here we come across the second of Gneist's leading conceptions, namely, the determination of Englishmen to be ruled by law. This is a matter which many authors have noticed, but which few have understood. What is called the love of freedom, preference for self-government, the hatred of centralization, and the like, will be found to be a respect for law and a detestation of arbitrary or lawless authority. On this point Gneist has seen far deeper into English character and history than critics like De Tocqueville, who have assumed, in the face of the clearest facts to the contrary, that local administration in England is specially well developed, and that the English love of freedom means jealousy of a strong central Government. Neither in the middle ages nor in later times have Englishmen shown the least disposition to favor local autonomy, or the least jealousy of a strong ruler. The popular Kings—Edward I., Henry VIII., George III., and others—have been men who could assert their own will, and, but for the incompetent perversity of the Stuarts, there is every reason to suppose that the crown might have retained as much power under the English Constitution as is now possessed in Germany by the Emperor. What the nation has detested is a government wanting in strength, wanting sympathy with the nation, and lacking respect for the law. The political problem which tormented the statesmen of the seventeenth century was, how to combine a strong government with respect for the law which expressed the will of the nation; and if any one wishes to understand how difficult this reconciliation was, and how absolutely impossible it became that England should prosper till the reconciliation was effected, he should study Gneist's admirable chapter on the Republic, or, as Englishmen more generally call it, the Commonwealth. It consists of not twenty pages, yet it goes further to solve, at any rate from the political side, the curious problem offered by the combined triumph and failure of Puritanism than any work with which we are acquainted.

The solution is, briefly, this: Cromwell "represented the State with honor"; he anticipated under the form of a united commonwealth that "United Kingdom" which, until the time of Mr. Gladstone, every modern statesman has considered the triumph of English policy in the foundation of English power. He established a nearer approach to toleration than had as yet existed in any European state; his administration was the best that England had ever had; he accomplished, in short, the achievement of giving to the country a government which was at once strong and (at any rate, as regards foreign Powers) national. But, for all this, Cromwell and the Cromwellians were detested, and no principle is more certain than that a government which excites the distrust or detestation of all classes is untrustworthy and detestable. Gneist shows us well enough why the grandeur of the Commonwealth excited far more permanent unpopularity than did the meanness of the Restoration. Cromwell's rule was at bottom a military dictatorship. In spite of his own wish to rule according to law, his rule was essentially the triumph of the army over legality. With far more excuse, Cromwell failed as decisively as did Charles the First to reconcile authority and law. The one step by which power might have been made lawful would have been the assumption of the royal title. This was no matter of mere form. "A king of England can only succeed to a limited prerogative, and must govern according to the known laws. A protector, although with less nominal authority, has all that the sword can give him." This dictum of Thurloe's contains the sum of the whole matter. If Cromwell could have assumed the crown, he might have insured the stability by establishing the legality of his power; he would have ceased to be a dictator and have become a constitutional king, though a king with far greater authority than is possessed by a modern English sovereign. From whatever cause, Cromwell did not achieve the difficult transformation from a tyrant to a king, and, failing to accomplish this, he failed to solve the political problem of the day. He failed, also, as Gneist convincingly shows, even to establish a really effective despotism. His army kept him in power, but soldiers are not fit instruments of government, and the whole scheme of English administration, depending as it did in the seventeenth century on the willing coöperation with the executive of the chief landowners throughout the country, did not lend itself to the purposes of even enlightened tyranny. In this matter, the merits of the Commonwealth told as much as its defects against its permanence. The tone of the country was monarchical, and Puritanism itself was in one aspect a form of conservatism. An enlightened despotism gave to England benefits which Englishmen did not appreciate, and did not bestow upon them the one blessing which they did appreciate—the undisturbed supremacy of the law of the land. The Revolution of 1688 was not, as it is sometimes represented, the (so to speak) accidental triumph of inferior politicians, who, through some freak of fate, succeeded where statesmen of heroic genius had failed; but rather the final attainment by the nation of that legal form of government which Englishmen had always vaguely desired, but could not obtain at the hands either of the Stuarts or of Cromwell. This, at least, is the conclusion suggested, we may say established, by Gneist; it illustrates his general view of English constitutional history, and shows us how much this view does to remove historical difficulties which are never explained, and are rarely recognized, by even the best-known writers on the English Constitution.

The Mark of Cain. By Andrew Lang. Charles Scribner's Sons.

THERE is something about an inn so irresistibly attractive to a good story-teller that he is sure, sooner or later, to immortalize one. Perhaps it is there that he has the best opportunities to observe his fellow-men, and to test that love for them without which no one ever wrote the sort of story that lasts. In laying the opening scene of 'The Midge' in the Brasserie Pigault, Mr. Bunner clearly obeys destiny. The Brasserie Pigault was only a beer saloon on Houston Street or thereabout. The Brasserie Pigault in its pristine cleanliness and geniality is no more; it has been vulgarized past recognition by the influences of an age prolific of reformers, especially of those reformers whom the author characterizes as "estimable gentlemen wandering about this broad land, patronizing second-class hotels and denouncing in scathing terms the Demon Drink." But the spirit of the Brasserie Pigault has been caught and converted by a poet into an everlasting joy for the unregenerate who still dare to love romance better than reform. The story that radiates from the Brasserie is extremely simple; it is entirely romantic in incident, perfectly real in feeling. Nothing could be further from the commonplace than the coming together of a sober bachelor like Everts Peters and the

Midge, the child (metaphorically) of adventure and many sorrows; (literally) of a Polish actress and a vagabond British aristocrat. Nothing could be more natural to unconventionalized human beings than the affection born of dependence and trust on one side, of protective instinct on the other, which developed between these two; nothing could be more delightful than the author's manner of telling all about it. The Midge, in her childhood, may stand for vivacity beside "the Marchioness"—for piquancy, beside the little girls of such French authors as Halévy and Coppée; while she has a precocious dignity all her own. After she coils up her hair and lengthens her petticoats, she is less interesting. The author seems purposely to drop her, in order to concentrate sympathy in her self-appointed guardian, Peters. The interest of the later chapters is all in the man who deserved so much from life, who got so little, and who, we plainly see, is predestined to give up even that which he has. The end is in a way cruel; but it is the cruelty of nature, not a gratuitous stab from the author, and does not shock expectation. The only harshness for which the author is responsible is the incident of Paul Hathaway's South American escapade. It is a pity that some less jarring complication had not been devised. But this is a trifling defect in a story displaying within small compass those high qualities of imagination, intellect, and heart which, when sustained, make novelists great.

Though Miss Phelps has given the world many ingenious descriptions of Paradise, the title of her last story, 'Burglars in Paradise,' is somewhat startling to people reposing in the conviction that, in that celestial region, "thieves do not break through nor steal." It is a relief to find that the Paradise is situated on the Massachusetts coast; that it is that "Old Maid's Paradise" of which Miss Phelps has already discoursed in print. The sketch is intended to be funny, but there is not much careless jollity about Miss Phelps, and in forcing it she does herself grave injustice. She has selected legitimate subjects for making fun; there is a mine of it in the embarrassments of a lone woman who wants to buy a horse, in the perplexities of an unworldly spinster who has lost a bond and who is paying local police, State police, and private detectives to find it. The natural "funny man" would make his fortune out of such materials. But Miss Phelps is so far from being spontaneously funny that even her selection of situations with ludicrous features does not seem to be a quick intellectual perception of them, but a deliberate choice of things where, according to all laws, fun ought to be, with the purpose of producing literary effect. The result is a heavy and exaggerated pleasantry, which wears on patient people, and prompts the impatient to pronounce it largely pedantic, wholly affected, and very dull.

The funny business of 'John Bodewin's Testimony' is done by the miners of the "Eagle Bird" and the "Uinta." Like the popular rustics, mountaineers, and negroes of current fiction, they overflow with sententious philosophy, expressed in extraordinarily corrupted English. Their wise saws and surprising similes do not excite admiration; they fade into tame commonplace when subjected to the dreadful test of translation into ordinary conversational language. The fact that this coin is spurious might have been overlooked if Mrs. Foote had not cut off a source of amusement supposed to be inexhaustible. She has given us a girl from Kansas, prim and proper as a girl from Boston, and she seems anxious to convince us that this girl from Kansas is typical. What are we to do for glow, and dash, and the rapture of the irregular, if the star of conventionality has already travelled so far Westward? There is a place on the rim of the setting sun called Oshkosh. There is probably a girl in Oshkosh. Let us pin our hopes to her. It is to the propriety of Miss Newbold from Kansas, however, that we owe the story. If it had not been for her conscience, and her perfect assurance of the wishes of a woman long dead, whom she had never known, John Bodewin would have ridden away from the Eagle Bird, his evidence would have been lost to Mr. Newbold, and his name to the land and the novel reader. For he was a weak young man, for ever entangling himself with ridiculous promises, and, in spite of Miss Newbold's conscientious direction, coming out of the trial about the Eagle Bird claim in a worse plight than when he went on the witness stand. Still, he was not all to blame for that, since he was in the hands of the most eccentric counsel, jury, and judge ever imagined by a woman novelist. On the whole, the construction of this novel is so imperfect and its characterization so feeble, that one may fail to appreciate the author's graceful descriptions, or to give her enough credit for her easy, pleasant style.

It is a dangerous experiment to write two novels in rapid succession, with similar scene and characters. The second generally weakens a favorable impression, and never dispels an unfavorable one. 'John Bodewin's Testimony' is a dilution of 'The Led-Horse Claim,' and 'A Daughter of Fife' is a faint echo of 'Jan Vedder's Wife.' Maggie Promoter among the fishermen of Pittenloch is a more agreeable figure than Margaret Vedder, but not nearly so fine in conception or truthful in detail. When she leaves Pittenloch for more civilized surroundings, she ceases to be in any degree interesting, and we feel that for every reason she had better have staid "wi' her ain folk." Still here, as in the earlier story, Mrs. Barr hits off cleverly some peculiarities of Scotchmen. She knows that a Scotchman may be loyal and loving, yet harsh and pitiless towards the object of his loyalty and his love, especially if it be a woman who has departed from his own standard of duty and propriety, and who entreats his sympathy for a misery of the heart, of the imagination, of the emotions. This aspect of his character is skilfully shown in the little scene in Glasgow between Maggie and her brother, David Promoter. Maggie is the dearest thing in the world to him, yet when she bursts in upon him surrounded by his volumes of theology, and tells about the wrong done her in Pittenloch, he is simply scandalized:

"Then what will I do, Davie?" she cries. "What will I do? I am sae miserable. Do hae some pity on me."

"Do?" he answers. "Do your duty and you will be happy whatever wind blows. And as to my having pity on you, I would love you little if I gave way now to your impatience and your wounded pride."

In 'The Last of the MacAllisters' Mrs. Barr dips into Scotch history. She has well chosen those exciting days when the clans were listening for the word to strike for the last of the Stuarts. To-day no true Highlandman speaks of Prince Charlie without a tender inflection, and the romance of that most forlornly heroic episode of '45 can never be exhausted. Mrs. Barr conveys to the reader some understanding of the devotion to a name which commanded to the last the willing sacrifice of "heart and hand and siller and land and life itsel'." Though her semi-barbarous MacAllisters and roving Romanys are highly-colored, they are full of nature and life, and the plot in which they move is well knit together. Here again she has drawn one character which in its mixture of fire and caution, of enthusiasm and wary self-interest, is peculiarly Scotch. This is Fraser, the legal adviser and friend of the hot-headed MacAllister. Fraser can define rebellion and treason, and is perfectly familiar with the punishment for both enjoined by the law; so he declares that the gathering of the clans is a finable offence, and warns the MacAllister, "Ye maun break your ranks. I'll no be coerced into going for Charlie." But the ranks form and fight and win at Preston. The dark day of Culloden has not yet dawned when the news comes to the lawyer that young Donald Fraser had died for Charles Stuart. "Ah!" he says, drily, "he owes me a thousand merks, but I'm glad I let him hae them." But when he hears how bravely Donald died, the old man forgets his guard and bursts out: "I wish I had made him take 10,000 merks. He shall hae a monument, the best money can buy him, that shall he. Where is Charles Stuart now?"

In 'The Midnight Cry' there is an interesting description of the Millerite agitation of 1844. For months before the autumn of that year, several thousand fanatics were engaged in noisy and aggressive preparation for the coming of the Lord and the destruction of the wicked world. The author paints a graphic picture of the extensive disorder caused by the preaching about an event so certain to interfere with the ordinary affairs of life. She heightens it by the contrasted placidity of a Quaker community, where one of the later scenes is laid. If the construction and character-drawing were as strong as the presentation of separate episodes, the story would be an uncommonly good one. Unfortunately they are not. The author seems to have attempted a great deal and to have carried out very little. No sooner is the reader well on the track of one mystery than he is switched off to another. Just when he is becoming a little intimate with one person, a new acquaintance is thrust upon him, and, when he closes the book, he feels that he has had a surfeit of promising beginnings, but no satisfactory conclusion.

The most casual reading of the average English novel leads one to reflect that the family as a British social institution is demoralized, and that its total disintegration is more imminent than that possible disintegration of the Empire which harasses the legislators. The chief evil is in the despotism of the head of the family, generally a father, but if not a father, then a mother, grandmother, or aunt. Uncles seem to be inoffensive or insignificant, occasionally benevolent in their feeble way. Mr. Farjeon's 'Aunt Parker' is an awful example of the domestic miscreant. In the first interview with her orphaned niece, this lady shows her admirable qualification for bringing up a child in the way she should go. She shakes her violently and makes mysterious threats. The child, assuming indifference, is very speedily terrorized by a vivid narrative of the fate of the allegorical "Don't Care." Though Aunt Parker does not seem to need assistance in the congenial business of frightening a child to death, she speedily allies with a legal guardian, a person who has all her own prominent characteristics and a definite masculine brutality to boot. Together they decide that the child is mad, and hustle her off to a sort of private asylum, apparently presided over by Aunt Parker for the mere pleasure of the thing. Here the child grows to womanhood. Having escaped idiocy, she almost effects release from her keepers. But they are too sharp for her, and whisk her to the Continent, where, in the midst of an impenetrable forest, she, for several years, subsists on husks, and dresses in the skins of beasts. In the end Aunt Parker and her pal are very severely punished, but they have the consolation of knowing that they did their duty, according to their light, by the only child whom they ever had the chance to experiment on. As the story is peculiarly repulsive, we cannot but feel that Mr. Farjeon forced himself to write it, in order to direct public attention to the crying necessity

for the reformation of aunts or for their total abolition.

In 'Lord Vanecourt's Daughter' the monster of the hearth is a father, a peer of the realm, a gentleman of great personal beauty and of engaging manner. Lord Vanecourt's daughter is well grown before she makes her father's acquaintance. She has certain instinctive prepossessions in his favor, but when she sees him coolly permit her blind grandmother to walk into a pit and break her neck, she feels that, as a father or a friend, he is neither to be admired nor trusted. So she frankly declares, "No longer shall you be kith or kin of mine"; whereupon he smiles pleasantly, threatens solitary confinement, and mentally reflects that loneliness, grief, and despair will soon "do for" his daughter. The daughter, however, runs away, and Lord Vanecourt sets up a servant in her place, thus acquiring control of her fortune, which he very much needs. When the daughter, hearing of his ruse, returns and claims her own, Lord Vanecourt, still smiling affably, declares her to be a crazy impostor, calls the police, and has her committed to an asylum. The daughter has even a harder time than Aunt Parker's niece before she gets rid of her father, secures her lover, and comes into her own. If it had not been for mystics, Theosophists, and clairvoyants, she undoubtedly would have perished, and the world would never have known how much worse than one of the wicked it is possible for a British father, who is also a nobleman, to be.

In 'Self or Bearer,' a story that begins with a lost heir and ends with a forged check, Mr. Besant draws a picture of English *bonheur de famille* which makes us hope that the country may yet be saved. The Cronans are not absolutely abandoned to plotting each other's destruction, perhaps because they are equally poor, and the doctor can see no pecuniary advantage to be derived from maltreating his children. Then there is one really loving mother, but she is a shady person, a foreigner and an opera singer, who perhaps loved her son to keep her mind from contemplation of her numerous disadvantages. But even in this pleasant tale of innocent people the iniquitous parent finds a place. What but crime and shame can be expected from a boy whose father, a scholar and, in a way, a gentleman, brings him up on such axioms as "Despise common cant about Honor, Friendship, Justice, Charity. The world is full of creatures who live by eating each other. There is no other way to live"?

It is, however, when the British father is a rector that his tyrannical nature is seen in perfection. In 'Until the Day Breaks' there is a very fine specimen. The most amiable remark the Rev. Mr. Marsden can make to his daughter is, "I think you look rather less repulsive, Harriet, when you are sitting still than when you are playing tennis." The kindest act he can conceive of is to enclose to this daughter's husband a letter written in confidence to her mother, the contents of which were calculated to annoy the mildest husband, and to enrage a hot-tempered one. Mr. Marsden's ordinary demeanor in his household is that of a sulky savage. Many of his most disagreeable attributes are common to all the men in the story, excepting an Irish patriot. He is a radiant saint, and the obvious deduction is that the temper and manners of men can best be preserved by giving each one a turbulent nation instead of a well-meaning family to take care of.

Mr. Murray's 'First Person Singular' sustains the deduction. Here there is only one family man—a literary man with an adoring wife; and he behaves very decently. The rest of the men are Polish patriots, Russian patriots, Irish patriots, and Irish-American sympathizers—a lively, interesting, and fairly human set. The doings of these inflammable creatures are necessarily exciting, and are told with great spirit and energy. The novel adds to Mr. Murray's reputation as a vivid delineator of cosmopolitan life, and interpreter of the spirit of the world about him.

In 'Rainbow Gold' and 'Aunt Rachel' he is less successful. Neither is of his own time or of his own *genre*. 'Rainbow Gold' is a romance, full of adventure, with many fine touches of humor and pathos, entirely creditable, but not in the author's best manner. Mr. Ezekiel Round is a very bad father indeed, but his temper is an honest, old-fashioned one. He does not abuse his son habitually and out of pure malice, but, when Job defies him, he turns him out of doors, and stamps his foot, and vows nevermore to look upon his ungrateful child. 'Aunt Rachel,' described as a "sentimental rural comedy," is still further from Mr. Murray's natural vein. It has to do with a company of rustics who utter proverbs in dialect, and who are abandoned to playing upon stringed instruments. The character of Aunt Rachel is not a happy one for a pastoral. The whole story lacks the unconsciousness, the spontaneity, without which simplicity in fiction has neither grace, nor charm, nor value.

Mr. Lang, in 'The Mark of Cain,' gives both domestic and rural themes a wide berth. He revels in crime. He scrambles breathlessly from cheating at cards to murder, from murder to abduction, from abduction to attempted assassination and suicide, and he thrusts the burden of almost all the atrocities on the shoulders of one man. All the villains of history and fiction together pale before Mr. Thomas Cranby. If he were in the least interesting, his fame would be assured and eternal; but with all his talent he is not interesting, nor is the chain of destruction of which he is the first and last link. The story is a sequence of extravagances, and the author's consciousness of the extravagance rather aggravates than mitigates the fault. To the crimes of the cheap novelist Mr. Lang has added one only possible to the man-of-letters—the irrelevant display of much reading. He gives us a chapter on the literature of flying machines and several discourses on the *woorali* or arrow poison of the Macoushi Indians of Guiana. His black-leg tells us what Matthew Arnold says, as glibly as he lays down the laws of baccarat. The author is so crammed with quotations that he cannot describe a girl with a big nose in plain phrase. Even the frequenters of the *Hit and Miss* can scarce forbear to quote. And with all his quoting, he is occasionally surprisingly inaccurate. Macaulay did not write the couplet which introduces 'The Mark of Cain,' as it is there written, and we have never before heard the crackling of thorns under a pot compared to the laughter of the *wicked*.

A Popular History of Astronomy during the Nineteenth Century. By Agnes M. Clerke. Macmillan & Co. 1886.

WHAT manner of woman is this that, unknown in scientific literature, makes her first appearance as authoress of a work which the ablest astronomer would hesitate to undertake? Fifteen years ago we might have taken it for granted that such a writer would know nothing of the subject except what she had gleaned from the writings of Lockyer and Proctor, and from the publications of the Royal Astronomical Society. But the issues of *Nature* have since opened the eyes of England to the fact that other countries are doing work in science, and it has ceased to be a matter of pride with English writers to ignore everything done elsewhere. A very slight examination of Miss Clerke's work shows that she is no mere compiler, recording impressions at second-hand, but a really thorough student of the original works of the leading astronomers of the world, and, what is yet better, able to enter into the spirit of their labors. It is difficult to see how any one without going through a course of professional training at a German university could have seized upon the ruling idea of modern instrumental astronomy so happily as is done in the following sentences:

"His [Bessel's] introduction of a regular theory of instrumental errors might almost be said to have created a new art of observation. Every instrument, he declared in memorable words, must be twice made—once by the artist, and again by the observer. Knowledge is power. Defects that are ascertained and can be allowed for are as good as non-existent. Thus the truism that the best instrument is worthless in the hands of a careless or clumsy observer, became supplemented by the converse maxim that defective appliances may by skilful use be made to yield valuable results."

Are we, then, dealing with a prodigy who sees everything from the point of view of the trained astronomer? A mere study of scientific researches does not qualify one to write their history. Every investigation must be understood, not only in itself, but in its origin, relations, and surroundings. It originated because the author and his co-workers had reached a certain stage of knowledge; its treatment of the subject is suggested by a multitude of circumstances, and it reflects the personal peculiarities of each writer. Unless the investigation is seen as part of a whole, the view of the historian will be imperfect. Moreover, a large mass of the scientific research of the day is far from being either conclusive or complete, and no one who does not carefully follow it with a professional eye can see it in its true perspective.

There are in astronomy a few tests, varying from time to time, by which the popular writer can be easily gauged. Ten to twenty years ago the value of the solar parallax which he preferred afforded an extremely easy and simple test. If he knew nothing he assigned it a high figure, and the more thoroughly he was acquainted with astronomical research, the better he knew that it was probably overestimated, and that every improvement was reducing it toward the older value of Encke. But after the publication of a careful history of the subject by Dr. Daniel Gill, about 1879, there was no longer any excuse for the ignorance which English writers universally displayed, and we are not surprised to find Miss Clerke's history accurate in all essential points. But other tests of her quality, now available, show her to be human. She thinks "there can be no question" that Dr. Huggins has photographed the solar corona without an eclipse. She thinks the rotation of the planets Mercury and Venus on their axes was determined by Cassini and others, that Di Vico in 1841 identified the markings on Venus drawn by Bianchini 113 years earlier, and that something is known of the period of rotation of these planets. She deems "Baily's beads" worth a page of mention, and finds that no satisfactory explanation of these beads and of the related "black ligament" in transits of Mercury and Venus has yet been offered. She considers the occasional visibility of the dark hemisphere of Venus to be established. She even supposes that Mr. Pogson saw Biela's comet or some fragment of it in his noted observation of December 2, 1872. All these are examples of certain ill-founded ideas more or less current in astronomy, but understood to be ill-founded only by those most thoroughly familiar with the probabilities as well as with the facts of the case. That the authoress admits them does not seriously detract from the character of her work; it only shows that her powers of judgment are not superhuman. It is only fair to add that

there are plenty of other tests which she passes well; for example, she does not claim that Watson and Swift saw from two to four intra-Mercurial planets during the solar eclipse of 1878.

Altogether, we have here one of the best-written scientific books now in the market, clear in style, virile in expression, and accurate in statement. We have scarcely been able to find an important branch of research overlooked, which should have taken the place of any admitted. Slips of the pen must be rare, as the only one we have noticed is that the singular variable star η Argûs has recently regained much of its lost light. The most important improvement of which the book seems susceptible would be the insertion of important numerical results in tabular form, such, for example, as a little table showing the values of the parallaxes of stars and masses of the planets recently obtained. We shall hope to hear further from an author who has started with so noteworthy a production.

Hap-Hazard Personalities: Chiefly of Noted Americans. By Charles Lanman. Boston: Lee & Shepard. 1886.

MR. LANMAN has had a wide acquaintance with men—poets, artists, clergymen, journalists, statesmen, all kinds; and he has a taste for minute biography, and much experience therein. His present contribution is likely to be of most use in the case of those personages great in their own day and circle, but now rapidly passing from men's memories; and compilers of dictionaries of biography may gather at last what wheat there is in this volume. Of the famous men whom he had connections with he tells us nothing new, and the many letters he prints would never have been missed. But the accounts of such men as Joseph Gales and William W. Seaton, Peter Force, Charles Heavysege, and Clark Mills have a greater value, as knowledge of them is not easily accessible, supposing there should be any occasion for extended information regarding their careers. The history of American journalism and art may hereafter be indebted to these reminiscences for some details; but, as a whole, the volume contains the sort of facts that ought to be submitted to hydraulic pressure to be of any available use.

Consular Reminiscences. By G. Henry Horstmann. Philadelphia: J. B. Lippincott Co. 1886.

MR. HORSTMANN was Consul at Munich for over ten years, and at Nuremberg for nearly five years, and he can therefore speak with authority in respect to the trials, pleasures, and business of the office. His reminiscences contain the most heterogeneous mass of disconnected matter that it has been our lot to peruse. All that unites it is the flow of anecdote about the affairs of his multifarious clients. He finds opportunities to discuss fiddles and beer, Lola Montez, the King, the celebration of our Centennial at Munich, the Passion Play, and General Grant, at some length; the rest is a helter-skelter of personal experiences. He is, of course, a civil-service reformer, and puts in a word for that cause with the conviction of an official; but if the view of the consular duties he gives will not deter the ambitious, it is to be feared his political philosophy will be of no avail. If he had called his volume a consular scrap-bag, he would have hit it better; it is the waste-paper of his memory.

Der Korrektor. Szenen aus dem Schattenspiele des Lebens, vorgeführt von Heinrich Steinhausen. Leipzig: J. Lehmann; New York: Westermann.

CHRISTMAS literature—for this volume was published at the close of last year—is apt to be like imitation champagne: the original wine may be good enough, regarded as a simple every-day beverage, but the artificial infusion of the gas necessary to give it the proper Christmas sparkle spoils the good material it acts upon, as well as fails to produce a happy combination. But when the effect aimed at is cheerfulness and joviality, together with the passive good will, if not active charity, engendered by the Christmas dinner, with no attempt to excite any deeper feeling, there is no consciousness on the reader's part of being trifled with, such as is caused by made-up emotion and artificial pathos. 'Der Korrektor' is prettily printed and bound, and as it is already in its fourth edition, it may be supposed to suit the German taste. But it is only a very middle-class taste that could be pleased with so commonplace sentiments illustrated by a story consisting of hackneyed incidents, only connected by a preposterous series of coincidences. We suppose it is intended for ingenuous youth, but healthier food, even in contemporary German literature, might be put before them than is a tale whose pathos consists in the betrayal of the hero's trust by the friend whom he reveres as well as loves, aggravated by the latter's ruining his sweetheart; the whole ending in a reconciliation scene at the hero's deathbed, where the villain (who, naturally enough, is a materialistic philosopher) is converted from his wicked views and becomes the head of a united family; his should-be wife and unknown child having been providentially rescued by the hero so as to effect this happy transformation.

SECOND EDITION.

WHAT WE REALLY KNOW ABOUT SHAKESPEARE. By Mrs. Caroline H. Dall. 12mo, cloth. Price, $1.25.

"Mrs. Dall was led to the preparation of her handbook of Shakespearean information by the fact that such information has been heretofore scattered and inaccessible, and because the number and insistence of certain theorists (or historians) have tended to obscure all knowledge of the man Shakespeare in the attempt to disprove his claim to the authorship or the plays that will continue to bear his name long after all the world has been convinced that he did not write them. In addition to the outline of his life, the history of the family, the evidences of authorship, and other records are presented in accessible form and with no pretence to original research, the book contains enough material to satisfy the most exacting inquirer concerning extant knowledge of the dramatist as well as hints and references to more detailed sources of information."—*N. Y. Commercial Advertiser.*

Sold by all booksellers. Mailed, postpaid, by the publishers,

ROBERTS BROTHERS,
Boston.

"*I have had frequent occasion in the last few years to consult Morawetz on Corporations. I have found it to be a carefully prepared and very useful work.*"—Hon. JOHN F. DILLON, General Solicitor, Union Pacific Railway Company.

JUST READY: A New Edition of

MORAWETZ ON CORPORATIONS.

ENLARGED TO TWO VOLUMES.

The Latest and Best Book on the Subject.

A TREATISE ON THE LAW OF PRIVATE CORPORATIONS.

BY VICTOR MORAWETZ.

Second Edition. Two Volumes. 8vo, Law Sheep. Price, $11.00, net.

'Morawetz on Corporations' is one of the most successful law books which the publishers have ever issued. The author had not the advantage of being known to the profession as a law writer; and it is therefore a remarkable evidence of the great value of the work that, solely on its merits, within the short space of three years an unusually large edition has been sold.

The new edition contains large and important additions, and much labor has been spent in its preparation.

The entire work has been revised, and *the number of citations has been nearly doubled.*

In consequence of the important changes and additions, it has been found necessary to enlarge the work to two volumes.

"The first edition of this work was prepared," says Mr. Morawetz in his Preface to the new edition, "according to a plan differing, in some respects, from that followed in any previous treatise on the same subject. The author was of the opinion that the law relating to private business corporations could not be clearly understood unless the fact were recognized that such a corporation is really an association formed by the agreement of its shareholders, and that the existence of a corporation as an entity, independently of its members, is a fiction; and that while the fiction of a corporate entity has important uses and cannot be dispensed with, it is nevertheless essential to bear in mind distinctly that the rights and duties of an incorporated association are, in reality, the rights and duties of the persons who compose it, and not of an imaginary being. An attempt was therefore made to discuss and state the entire body of the law peculiar to private business corporations from this point of view."

The matters generally considered under the head of *Ultra Vires* are discussed chiefly in Chapters VI. and VIII. Chapter VIII. treats of "The Legal Validity of Corporate Acts." Under this head an attempt has been made to distinguish the different principles of law upon which the legal effect of corporate acts depends, and to deduce from the authorities a series of rules by which the validity of transactions entered into by corporations in violation of their charters can be determined. The question, what transactions corporations are authorized by their charters to enter into, is considered in Chapter VI., "The Construction of Charters."

"*It is a fitting supplement to Dillon's work on 'Municipal Corporations'; and higher praise I could not give.*"—Mr. JUSTICE MILLER, of the United States Supreme Court.

MOUNT DESERT.

FOR SALE.—The well-known and beautiful island called "Bald Porcupine" or "Round Porcupine," lying directly opposite Bar Harbor, half a mile from the Mt. Desert shore. This island, containing about twenty-five acres, lies under and commands a most magnificent and extended view of the mountains, bay, and open sea. On the southerly side is a bold perpendicular cliff about 150 feet high. The island from its level top falls away in a beautifully wooded slope to its northern shore. This property offers an exceptional opportunity for use for a gentleman wishing an independent private estate, or for hotel purposes, and will be sold at a price per acre far below the value of any adjoining shore lands within several miles of Bar Harbor.

J. MURRAY HOWE,

No. 5 Court St., Boston, Mass.

NONQUITT HOUSE,

NONQUITT, MASS. (near New Bedford),

Will open about June 20th. Nonquitt is one of the best places on the coast for families to spend the summer.

For rooms, cottages, &c., address
